			bend. Ash Lane is used as a “rat run” for Airbus, Sandycroft and Broughton Park workers attempting to avoid congestion on Chester Road East. It is believed that a traffic survey was undertaken during the period Ash Lane was closed to through traffic, it is my belief that the data collected is categorically incorrect and should not be used in the planning decision. At present the residents of Mancot and Hawarden have great difficulty in accessing Doctor’s and Dentist appointments due to a deficiency in local surgeries. Should hundreds more people live in the area there will be greater waits for appointments.	
420	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot This development will go against Flintshire Council’s policy to not coalesce settlements. If houses are built on this land there will be no distinction between Hawarden and Mancot. At present the two villages are disparate settlements with a narrow lane, only allowing one vehicle access at a time, connecting the two. Due to houses on both sides there is no way to increase the width of this lane. This development will also contravene the National Government policy of building on brown field sites before building on Greenfield sites. There are brown field sites within Flintshire which are not fully utilizes, one example is County hall in Mold. Access to the site is proposed to be from Ash Lane. This road and Cross Tree Lane already cause issues with weight of traffic. There is a school on Cross Tree Lane and parents park on the brow of the hills and force traffic onto the opposite side of the road, on a blind bend. Ash Lane is used as a “rat run” for Airbus, Sandycroft and Broughton Park workers attempting to avoid congestion on Chester Road East. It is believed that a traffic survey was undertaken during the period Ash Lane was closed to through traffic, it is my belief that the data collected is categorically incorrect and should not be used in the planning decision.	Removal of allocation at Ash Lane, Mancot
422	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot Loss of green belt land - need to consider using brownfield sites first Diverse wildlife within the area The Merging of communities Lack of infrastructure – doctors, schools and roads Road Safety – School routes Historical Impact on Ash Farm Listed building	Removal of allocated site at Ash Lane, Mancot
428	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot This proposal would exacerbate traffic problems through any direct access on to Gladstone Way, and increased use of Cottage Lane and Colliery Lane, both are narrow with no pavements in places. Increased use of Ash Lane via Cross Tree Lane which is already congested by school traffic, and its use as a by-pass/rat run to avoid Hawarden village. Welsh Government guidelines are against the coalescence of settlements, the use of green belt land and the threat of absorption of historic buildings, namely Grade 1 St Deiniol’s Ash This development would increase pressure on already over stretched local schools, medical services	remove allocation at Ash Lane, Mancot
430	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot Welsh Government has specifically declared in Planning Policy Wales that green belt land is to be maintained and that such land cannot be re-designated. Development should be on brownfield sites such as the airfield, Deeside, or re-look at former UDP allocations. Impact from air, light and sound pollution from the additional traffic generated from the site. Impact upon the listed building, Ash Farm and the historic character of Hawarden. Coalescence of settlements, which is against Flintshire’s own policies. Infrastructure unable to cope with new residents.	remove allocated site at Ash Lane, Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			Not enough capacity in local schools Safety of children travelling to school has not been considered. Not enough capacity in local doctor's surgeries without additional residents from the new site. Flooding issues – Pentre has already suffered from flooding, these additional houses would increase flood risk.	
436	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot I appreciate there is a need for housing in the County but the appropriateness of Ash Lane seems ill conceived and inadequately researched. The Greenfield site provides a clear gap between the villages and avoids creating urban sprawl. Greenfield sites such as this have a high importance in Welsh Government policies and preserving and protecting them is a major planning priority. Brownfield sites along the River Dee would be preferred.	Removal of allocation at Ash Lane, Mancot. Develop brownfield sites instead
440	HN1.8 Ash Lane, Hawarden	Object	Mancot Ash Lane Development: flooding, Schools oversubscribed, doctors full, increased traffic.	Removal of allocated site at Ash Lane Mancot
442	HN1.8 Ash Lane, Hawarden	Object	Objection to Ash Lane/Park Avenue development on the LDP for Flintshire and more specifically Mancot/Hawarden. The basis for my objections are:- (i) That the merging of 2 distinct villages, Mancot/Hawarden, that would lead to a 'Coalescence of Settlements', resulting in the use of Green Belt land. (ii) The lack of local knowledge and transparency regarding both of the communities in question and the already strained resources that are at breaking point. My wife has a life threatening lung condition that means frequent visits to our fantastic, but severely under-resourced, doctors surgery at the top of Cross Tree Lane. Our concern is that the availability of medical resource will be even more scarce given that 288 houses will no doubt involve circa 600 new residents drawing on the resource. (iii) The increase in vehicular traffic will also add to the pollution effect that is already a concern in the area, given the speed restriction that are in place on the A494 Aston Hill (iv) The development of the Ash Lane site will present undue burden on the drainage system that is also prone to frequent failure in the Mancot Lane/Hawarden Way area. (v) Insufficient consideration has been given to existing Brown Field Sites in pursuit of profit to be gained from a larger site.	Removal of allocated site at Ash Lane Mancot.
448	HN1.8 Ash Lane, Hawarden	Object	I am emailing you to object against the above development. Having lived in Hawarden for many years I know how this development will impact on the area. Firstly the land in question is Green belt land and in the Planning policy wales it basically states that any Green belt land will not be built on. Our back garden floods with normal rain fall so with the possibility of all these houses being built will only make matters worse. Also the traffic is bad several times a day down Ash Lane and Cross Tress Lane with parents/grandparents dropping off at school twice a day and picking up from school twice a day. It's not just school traffic it's also normal works traffic too. It's a safety issue for anyone that uses that area. I am a patient at the Stables Medical practice in Hawarden village and for many years it has been almost impossible to get an appointment, but again with the possibility of 280 plus houses where are all the extra patient's going to go. Our mp Mark Tami has more complaints about that Surgery than any other in	Removal of allocated site at Ash Lane Mancot.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			Flintshire, how is this going to help? More complaints, no appointments and if you do manage to get one you won't stand a change of seeing your actual doctor!.	
452	HN1.8 Ash Lane, Hawarden	Object	I am objecting to is the Ash Lane Development site HWN005. My concern is regarding the traffic problems around Hawarden Village Church School Cars are parked along the whole length of Cross Tree Lane making 2 way traffic flow difficult. The junction at Cross Tree Lane and Ash Lane is very unsafe to cross and there has been a prolonged advert for a new School Crossing Patrol but the post remains unfilled after over one year. An increase in traffic of new residents commuting to work and possibly doing school drop off will be detrimental to this already difficult situation. Please read the following specific objection. Policy STR4 iv: Ensure that the local highway network either has, or can be upgraded, to provide capacity to accommodate sustainable levels of development; Firstly it has been unclear in plan details regarding site access - "Just from Ash Lane" as stated by the Lead Planner or "Ash Lane and Gladstone Way road access without a through access" from a planner at the open evening in Mancot Hall). With 2 access points it would be expected that half of the traffic would be exiting onto Ash Lane, if it was just Ash Lane access then it would be all traffic. Ash Lane and Cross Tree Lane	The magnitude of this development exceeds the local road infrastructure currently and so the size of development needs reducing or stopping.
157	HN1.8 Ash Lane, Hawarden	Object	Objection Ash Lane: 1. Traffic Safety - Cross Tree Lane and junction with Ash Lane. Already a dangerous crossing area due to parked vehicles at the local school. Lane used constantly as short cut to village and parents on the school run. Adding 280 houses will greatly exacerbated this already serious problem. 2. Area classification - government policy states green belt land should be conserved as much as possible and if alternative sites are available then development should be directed to land of the lower grade. I understand alternative lower grade sites are available. 3. Ash Tree Farm. House of historic interest. The development would infringe great on this property. 4. Climate impact - the increase in traffic would inevitably increase traffic volumes thereby by reducing air quality.	Removal of allocated site at Ash Lane, Hawarden.
161	HN1.8 Ash Lane, Hawarden	Object	I am sending an objection to the proposal development between Gladstone Way and Ash Lane not only does it go against the policy of the Welsh Government on building on Green Belt land but you have not filled your other sites that you have ear marked for development.	removal of allocated site at Ash Lane, Hawarden
165	HN1.8 Ash Lane, Hawarden	Object	Ash Lane Mancot: I reside at Hawarden, which property was built by my grandparents and which has been lived in solely by members of my family for almost one hundred years. I wish to register my very strong objection to the proposal to allocate the above land for development, as set out in the Deposit Local Development Plan. Many and diverse objections will, I'm sure, be validly made by others, but I simply wish to place on record my firm belief that the already inadequate infrastructure in the vicinity will simply be unable to withstand the pressures caused by the proposed, or indeed any, intensification of use such as is contemplated. There are already times of the day when it is useless even to contemplate venturing out on to Gladstone Way , Ash Lane or Crosstree Lane unless you are prepared to tolerate gridlocked road conditions. I am particularly concerned at the wholly unsatisfactory visibility splay at the junction where Ash Lane joins Crosstree. All the above is without reference to the likely destruction of "village" life	Removal of allocated site at Ash Lane, Hawarden

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			currently enjoyed in the two vibrant though separate villages of Hawarden and Mancott, and the resultant semi suburban sprawl which would follow the coalescing of the two communities.	
171	HN1.8 Ash Lane, Hawarden	Object	I wish to object proposals to develop fields between Ash Lane: climate emergency very recently, enforcing speed restrictions in a bid to reduce emissions in the area. increased traffic on this road from will inevitably raise the air pollution levels here local infrastructure - schools are over subscribed, aren't the facilities to accommodate the new families in local schools I feel Ash Lane land between Gladstone Way & Park Avenue is not suitable for development as it would result in the coalescing of Hawarden and Mancot	Removal of allocated site at Ash Lane, Hawarden
173	HN1.8 Ash Lane, Hawarden	Object	I am writing to object against the Park Avenue/Ash Lane development. Being a resident in Hawarden, I know of the impact it will have on the existing problems in the area. The traffic in the area is terrible as it stands, the A55 and A494 was supposed to of taken a lot of the heavy vehicles away from the village when it was built, but that hasn't happened. So when 280 plus houses are planned to be built you are looking at least 280 plus extra vehicles on the road. This will lead to more emissions and as you are aware the speeds have been reduced on the bypass to lower them. Therefore this planned development will make matters worse and will defeat the object especially with the area being on amber. There is also safety issues as Cross Tree Lane and Ash Lane is very busy during the morning for the school drop off, the drop of and pick up in the middle of the day and the afternoon pick up. Cars are parked everywhere and it is dangerous for anyone. As for the schools we know from experience trying to get your children into your local school is hard enough at the best of times, as there are no longer feeder schools. Where are the extra children and/or the local children going to go as the schools are full. Transport isn't an option as it incurs costs which parents cannot afford. The land in question I believe is Green Belt Land. Planning Policy Wales states: (1) to check the unrestricted sprawl of large built-up areas, (2) to prevent neighbouring towns merging into one another, (3) to assist in safeguarding the countryside from encroachment, (4) to protect the setting and special character of historic towns, (5) to assist in urban regeneration, by encouraging the recycling of derelict and other urban land. (Brown Belt). Therefore I would like you to lodge my objection to this development.	Removal of allocated site at Ash Lane, Hawarden.
200	HN1.8 Ash Lane, Hawarden	Object	Mr Farrow, I am a resident of Park Ave Hawarden and have lived here for over 30 years and brought up my children here. I have seen many changes over these years and now are faced once again with the potential development of nearly 288 houses on the land at the rear of my property. This was quashed a number of years ago for various reasons and here we are again and nothing has changed. My objection is first and foremost that this is still a green belt area (Planning Wales) and should not be built on. How can you possibly therefore build on this. You appear to be making up your own rules as you go along not giving a dam about what is right and lawful and totally contradicting your own policies. It's a green belt area that can't be built on but you want to go ahead and build. You are just abusing your authority and position to do what you want and it all boils down to money. What about all of the wild life. What about our heritage and historic character of St Deniol,s Ash Farm? Please don't let this development go ahead.Its going to destroy the Mancot and Hawarden area.The current infrastructure can't cope at the moment so	Removal of allocated site at Ash Lane, Hawarden.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			it's going to be chaotic and an absolute nightmare for the schools, doctors surgeries to try to deal with another 600 people +. Traffic is bad enough at the moment but you are going to create absolute turmoil particularly on Ash Lane with Cross Tree Lane school. This will create more danger for the children and there no doubt will be a serious accident . You will have this on your conscience Do you have children or grand children? Think about it I am just a normal person who wants to preserve my village, heritage, my children and grandchildren and their children. This is their future. Please DONT DO THIS	
202	HN1.8 Ash Lane, Hawarden	Object	I am writing to object to the proposed building of hundreds of homes in the Mancot/Hawarden Ash lane area. There is insufficient access to the site, and would cause congestion on the local roads. It would merge the villages of Mancot and Hawarden by removing the greenbelt, which is against the council and government's housing criteria. The local amenities, namely schools, doctors, dentists are already overstretched and can not support further homes within the area. The removal of the grass would lead to flooding in Mancot.	Removal of allocated site at Ash Lane, Hawarden.
204	HN1.8 Ash Lane, Hawarden	Object	I would like my objections to the merging of Mancot and Hawarden on green belt be noted. My objection is negative impact on the local area There are already significant traffic and safety issues outside both Sandycroft Primary School and Hawarden Village Church School. GP surgeries and dentists in the area are "limited in number and are also over-subscribed and struggling to cope with demand locally." local transport services have already been cut substantially and "will struggle to cope with further demand." The land between Ash Lane and Park Avenue in Mancot "is categorised as a flood risk. So are most of the connected roads in Mancot leading down to Sandycroft." A recent 50 mile per hour speed enforcement on the a494 to help cut impact on the environment due to an already large population in area has just been put in place. The development goes against the climate emergency.	Removal of allocated site at Ash Lane, Hawarden.
216	HN1.8 Ash Lane, Hawarden	Object	I would like to register my objection to the planned development in Mancot between Gladstone way and Ash Lane. I have lived in Mancot for the last 12 years and for some time have been concerned around the levels of infrastructure within the area. Mancot is a fantastic family area, and has a choice of schools. However, both of these (Sandycroft and Harwden village) are currently at maximum capacity. With an additional 283 houses in the area, I see a greater strain on local schooling, risking the quality of tuition for children. Within the current Local Development Planning, I can see no plans or provisions for increasing investment in local schooling. Therefore feel this would lead to increased traffic and people are required to travel further for local schooling. In addition, within the local area there are already a number of over subscribed Doctors surgeries. With Hawarden and Deeside practices being full, it is always a source of distress trying to get an appointment locally. Plans need to be put in place to ensure infrastructure is enabled at the same rate and housing increase in the area.	Removal of allocated site at Ash Lane, Hawarden.
218	HN1.8 Ash Lane, Hawarden	Object	I am emailing you with my objections to the proposed development plans for Ash Lane/Park Avenue, Mancot, Deeside. My main objection is regarding the wildlife that is abundant in the area including hedgehogs which are, in law, a protected species. The British Hedgehog Preservation Society is a useful	Removal of the Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			guide which I refer you to for clarity. I know, without a doubt, that there are hedgehog nests in the hedgerows within the fields of the proposed development as I lived in The Paddock, Mancot close to the gated entrance to the fields up until last year's hibernation period. I fed hedgehogs every night throughout the year until their hibernation and when they emerged from it, studying in which direction they came and went. This nightly procedure confirmed to me that hedgehogs do live in those fields. There are also owls which regularly frequent the area which my husband and I used to listen to nightly. The fields are Green Belt land which is, as I understand, unable to be used for development to protect the area and its wildlife. My second objection is regarding the traffic which will be greatly exacerbated where the proposed entrance to the development will be. The amount of vehicles that use Mancot as a cut through from Hawarden to Pentre and Sandycroft, using Ash Lane, Mancot Lane and Hawarden Way is already too much. This is a danger to the villagers, their pets and wildlife. There is already major congestion at the top of Ash Lane and Cross Tree Lane twice a day which is absolute mayhem and extremely dangerous. Vehicles park on a blind bend and hill making it impossible to see traffic or people clearly from either direction and the only way to proceed in a vehicle is to mount the kerb or to be pushed into the hedgerow. This will only be made worse by the increase in traffic the proposed development will produce. Finally, our local doctors surgery and primary school are already struggling to cope. It is extremely difficult to get an appointment at the doctors surgery and parking is very limited. Flintshire Council itself has agreed to introduce traffic calming around the school due to the amount of vehicles that are already parked by the school so should already be aware of the surrounding area's capacity without the addition of the proposed development. Thank you in anticipation of your submission to the planning committee of my objections.	
227	HN1.8 Ash Lane, Hawarden	Object	Site 8 - Ash Lane, Hawarden development. The area is classified as Green Belt land. There is a national government reg. intended to limit the use of green belt land for development which has not been taken into account. There has not been, or any public consultation of, alternative sites for development, including brown field sites and those more suitable with regards to infrastructure. The area is liable to flooding, even in a period of rainfall in June 2019, the area was flooded, schools were closed due to drain surges and flood water and parts of Sandycroft were underwater. There is no rectification principle to relive the risk of flooding or risk assessment as to the additional impact of flooding in the local area given the additional demands on local drainage and surface water removal. Infrastructure: Given the scale, there is no conceivable way local roadways inc. access via Ash Lane are able to manage with the additional vehicle traffic. No traffic survey has been submitted, no impact survey on existing road infrastructure or alternatives to provide relief to the local roadways. Traffic increases are already a problem, from ongoing traffic issues on the A494 leading to a programme of repairs on the bridge crossing, to traffic delays on a constant basis at the Chester junction onto the A494 at Deeside. The number of vehicles in the area is already increasing, a significant increase in these numbers resulting from the proposed development will make this problem worse. The subsequent effect is also on pollution in the	Remove Development at Ash Lane

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			local area, something clearly important to Flintshire County Council given the recent speed limits imposed on the A494 cited as “pollution reduction” measures. During busy periods the local roadways are dangerously overcrowded, the proposed development would exacerbate this problem and create a dangerous-to-life situation on the local roads. Local schools are already over-subscribed & limited development opportunities at other schools in the area mean that there is almost nil capacity for additional intake. Helathcare, dentist, clinics are over-capacity, consistently no appointments available and no spaces for additions. There is no possibility for these services to absorb this additional burden. No recognition, provision or mitigation in the proposal.	
254	HN1.8 Ash Lane, Hawarden	Object	The area dedicated for the proposed development is classified as “Green Belt” land. There has not been, or any public consultation of, alternative sites for development, including brown field sites and those more suitable with regards to infrastructure to support the committed housing increase by Flintshire County Council.The area of the proposed development is liable to flooding, even in a period of rainfall in June 2019, the area was flooded, schools were closed due to drain surges and flood water and parts of Sandycroft were also underwater. Traffic increases are already a significant problem in the area, from ongoing traffic issues on the A494 leading to a programme of repairs on the bridge crossing, to traffic delays on a constant basis at the Chester junction onto the A494 at Deeside. Local schools are already over-subscribed. Local healthcare, doctors’ surgeries, dentists, medical practitioners, clinics etc., are already over-capacity.	Removal of Ash Lane allocation.
259	HN1.8 Ash Lane, Hawarden	Object	I am contacting you to express my concerns and to object to the proposed LDP between Mancot and Hawarden. My reasons and concerns are listed below. 1. My initial objection is regarding the use of Greenbelt Land and the ignoring of other Brown-belt Land in the area. The proposed site would impact on a historical farm, the result of which would coalesce two separate settlements. This action whilst being totally anathema to local residents who wish to keep their village identity, is I believe against Flintshire CC’s own stated policy regarding the issue of protecting community identity. 2. My second concern is regarding the local infrastructure. I am a patient at Hawarden Surgery, The Stables Medical Centre. As with most other surgeries in Wales and the rest of the UK, the Surgery are short of Doctors. The Surgery is struggling to provide adequate health care provision for their patients and is doing so by employing Nurse Practitioners and Prescribing Pharmacists. Having previously been treated by both, I recently had the need to book an appointment with a Doctor, had to wait three weeks for the appointment and travel to the branch surgery in Saltney. Many patients would not have been able to do that and would then have had to take an emergency appointment. I understand that Betsi Cadwaladr Health Board have been consulted and have said that the prosed development would not cause any problems that would impact on this Surgery but I ask the question ‘has anyone asked the Surgery if they feel that they could cope with the influx of patients that the proposed development would bring?’. When there is a shortage of GP’s nationally, how will BCHB suddenly manage to get an increase GP’s in Hawarden when they have not been able to for the last two or three years? Also the Surgery is small and is unable to expand so it would be unable to provide the extra space that an increase in population would need. 3. Again on the matter of	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			struggling resources, whilst the Education Authority say I believe, that local schools could cope, have the local schools been asked for their views? My understanding is that both Rector Drew Primary School and Hawarden High are struggling to cope with demand. I think that it would be totally unfair if the increase in pupil population that would inevitably result from the development had to go outside of their immediate vicinity. All of the above factors are compounded by my concerns that the extra traffic would pose problems	
295	HN1.8 Ash Lane, Hawarden	Object	This development will put increased pressure on a road that has primary schools at each end where there are already significant safety issues due to the volume of traffic exacerbated at school times. There are already issues at the top of Ash Lane, there has been no Lollipop person there since the last one resigned due to the dangerous nature of the job and the abuse she received from impatient drivers. The increased volume of cars will only make this junction more dangerous and increase traffic going past primary schools.	Remove allocation.
352	HN1.8 Ash Lane, Hawarden	Object	As a resident of Hawarden for my entire childhood, and now as a resident of Mancot, I do not believe we can sustain much massive future development. We already have a big water/drainage problem in my street and more development will no doubt increase that issue. Parking for Hawarden Village School creates massive issues for entrance into Mancot, not limited to picking up and dropping off times. Further development with egress on to Ash Lane will only increase those problems in this area but also in Sandycroft, Pentre and onto Cottage Lane. Development would see the district lines between Hawarden and Mancot blurred. As a former resident of Hawarden, I was lucky enough to be able to buy my terraced house in Mancot as an affordable option. I doubt that any future development would provide small houses for people in my position at that time, those who are not on the social housing register. Smaller houses do not bring in the same profit for the developer. The new houses at the top of Overlea Drive prove this to be the case! I would also like to register my objection to the Ewloe site by Green Lane being included in the LDP. My niece and nephew attend Ewloe Green School and aside from the increase in pupil numbers that would result in such a development, the traffic outside the school is already at an unacceptable level. I worry for their health due to traffic pollution, not only at drop off/pick up time but also whilst they are at play due to the proximity of the road. In both cases, Flintshire has already identified other smaller brown sites for development in the UDP. Why are these not developed first?	Removal of allocated sites at Ash Lane, Mancot and Ewloe
363	HN1.8 Ash Lane, Hawarden	Object	Objection to the allocated site at Ash Lane, Mancot the reasons for my objection are: It's green belt it is already difficult to get an appointment with the doctor It could lead to more flooding	Removal of allocated site at Ash Lane, Mancot
377	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. There will be only one way in and one out of the site onto Ash Lane causing another 200 to 400 cars onto an already extremely busy road where children are walking to and from school, which is a designated safe route by the Council. A lot of expense has been incurred to reduce the speed limit to 50 MPH to improve emissions, but surely with increased traffic the proposed	Removal of allocated site

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			carbon footprint is in doubt of ever improving what is saved on one hand is wasted on another. The stables surgery would struggle to take on new patients as it is already extremely hard to get an appointment. Even if promised more GPs, everyone knows there is a national shortage of GPs. As a very concerned resident of 69 years I would hope that all objections submitted show the great concern for the Countryside, Environment, climate impact, safety and future of your children.	
378	HN1.8 Ash Lane, Hawarden	Object	I wish to formally submit my opposition to allocation of land Ash Land and Park Avenue Hawarden. Should this development be approved it will be in direct contradiction to the Welsh Assembly's directive (Planning Wales) of not building on greenfield sites and also contravenes National Government policy on building on brownfield site before greenfield sites. There are brownfield sites in Flintshire, for example, the former site of County Hall Mold. Should this development go ahead it will completely destroy the historic character of St Deiniol's Ash Farm, part of its character is the rural surroundings. Allowing building of new houses on the land associated with this historic building will be a complete travesty.	Removal of allocated site at Ash Lane Mancot
382	HN1.8 Ash Lane, Hawarden	Object	Objection to Ash Lane, Mancot. The land is green belt land and under Planning Wales should not be built. Mancot will be at risk of losing its identity and will not be a separate settlement. I thought the Council had a policy not to merge two settlements. Also the road structure would be unable to cope with all the extra traffic. Ash Lane is bad enough now when a traffic census was done a few weeks ago it was done when there was road works and it was one way traffic and part of it was closed. Also where are the schools because there is no space now in Hawarden High or the primary Schools. Where are the doctor's surgeries going to be, you are unable to get an appointment now. Flooding in the area has increased since more houses have been built. So what impact will an extra 280+ have. Ash Farm building is 16th Century and the development will surround it. It is just too dangerous to pour all that traffic onto Ash Lane.	removal of allocated site at Ash Lane, Mancot
390	HN1.8 Ash Lane, Hawarden	Object	Objection to Ash Lane allocation. The road structure would not be able to cope with all the extra traffic, Ash Lane is bad enough now. When a census was done it was at a time road works were taking place and part was closed and the other was one way. The proposed land is green belt land and should not be built on. Ash Farm a 16th Century building stands on that land and would be surrounded. Also Mancot and Hawarden would merge it would take away the identity of both villages, I understand it was policy not to merge two settlements. Has any thought gone into where children are going to go to school, both primary and high school are full. Also doctors and dentists both are difficult to get appointments without this development. ~if this development is allowed to go ahead the impact it would have on the area would be devastating. The infrastructure just can't take it.	remove allocated site at Ash Lane
407	HN1.8 Ash Lane, Hawarden	Object	I would like to register my objections to the development of Ash Lane Mancot. 1.The proposed site only has one access and this alone will cause a great deal of difficultly for pupils attending local schools and other residents. 2. The site is on Green belt land and Planning Wales state that there should be no use of green belt land for the building of houses. 3. The infrastructure available cannot cope with the present drainage in Mancot. 4. The historic distinction between Mancot and Hawarden would disappear when the	Removal of allocated site at Ash Lane Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			two communities would be joined and the Grade 1 Listed St Deiniols Ash Farm should be considered. 5. The local schools are already over subscribed. 6 Traffic on Ash Lane would be increased making an already busy road a greater danger to pedestrians and residents. 7. There would be a greater number of people seeking employment. 8. The only doctors surgery is at Hawarden and it is difficult to get an appointment, the access is difficult which leads to on road parking making the junction dangerous.	
421	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot This site green belt land with Ash Farm a 16th Century building standing on it. Ash Lane would not be able to cope with extra traffic at the moment there are problems when its term time at the school and would become more dangerous with added traffic. Both Mancot and Hawarden would lose there identity at the two settlements would merge, it is just not acceptable. Where are the school places going to be for children moving to the area, both primary and high schools are struggling for places? Also a problem with doctors' surgeries. There are brownfield sites in the area why not use them to build on, this site would have a devastating effect on both villages with traffic etc.	Remove allocation at Ash Lane, Mancot
425	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot This proposal would exacerbate traffic problems through any direct access on to Gladstone Way, and increased use of Cottage Lane and Colliery Lane, both are narrow with no pavements in places. Increased use of Ash Lane via Cross Tree Lane which is already congested by school traffic, and its use as a by-pass/rat run to avoid Hawarden village. Welsh Government guidelines are against the coalescence of settlements, the use of green belt land and the threat of absorption of historic buildings, namely Grade 1 St Deiniol's Ash This development would increase pressure on already over stretched local schools, medical services	Remove allocated site at Ash Lane, Mancot
437	HN1.8 Ash Lane, Hawarden	Object	Mancot: Ash Lane • Schools – Both primary schools in the area are already over subscribed. • Doctors / Dentists– The practices in Hawarden, Saltney and Buckley cannot cope now. They are already over subscribed. • Environmental impact through the loss of wildlife havens such as hedgerows, ditches, mature trees would be unacceptable along with removal of further green space when brown belt land exists elsewhere. In a day and age when you are actively encouraged to get out and exercise, it is uplifting to walk and exercise my dogs past open green fields. • Vehicles / traffic – A proposed development of 288 houses will inevitably lead to increased pollution at a time when climate change should be the top of everyone's agenda. In order to combat this, one could argue that there is a drive to use public transport and not add to the environmental impact by using your vehicle. • Environment – Lower Mancot and Sandycroft were flooded this year.	Removal of allocated site at Ash Lane Mancot
456	HN1.8 Ash Lane, Hawarden	Object	OBJECTION TO ASH LANE/PARK AVENUE DEVELOPMENT Mancot is small village that sits alongside Hawarden - we are two villages that complement each other. Mancot village is a small community village with our own unique identities. You live in Mancot for the views and peaceful community with Hawarden complementing the village offering additional shops, countryside and of course places to eat. Mancot is an individual village with its own Pub and village shop. I have no children yet but having lived in Mancot for	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			the best part of 33 years I have seen it become a very busy village and packed with cars and traffic and the community is becoming very populated. This is resulting in local families not being able to have their childrens places in schools even though they live within the village and very congested around the school entrances - already very dangerous and will create more risk of accidents with children! Roads are already extremely busy and this is really starting to pollute our villages! we are already finding ourselves sitting in more traffic with families growing within the village so this development would have more negative impacts as we have minimum roads in and out of the villages as it is with many people using us as a cut through. The school parking and most of all the flooding! Being in Mancot we have seen more flooding over the last few years compared to others and since developments have been built! Hawarden being the historic would also no longer be the lovely village alongside Mancot as it would be almost be merged. This is a large development that would change the way the two villages would live. Doctors and Schools will also suffer as no room to expand so would be stretching our facilities even more to how we already are!!! Finally, how can you even start to think of such a large development with the flooding that has already been experienced with the most recent developments within the area. I STRONGLY OBJECT TO THIS DEVELOPMENT!!!!	
458	HN1.8 Ash Lane, Hawarden	Object	I'm emailing you direct to post my concerns about the current development plan for the site in mancot as a resident of mancot for 15 years I object to this as an extra 280 houses with an average of two cars per houses gives a possible extra 560 cars in the village this means more toxic exhaust fumes poisoning us and especially the kids walking to and from school. This in a time when the speed limit on Queensferry bypass has been reduced to try and limit the poisonous emissions from cars Hawarden village school is already really struggling with the traffic issues and safety issues that come along with it and it's also the same for the Sandycroft school also have you tired to get into the doctors and dentist around here the strain on these facilities is already at bursting point. Plus there is a lot wildlife in and around the planned site and we have always had a flood drainage problem in Mancot around the library as I can remember the houses opposite getting flooded quite a few times. So I'm voicing my concerns to this development as I think it will be disaster for the Mancot Hawarden Sandycroft community's.	Removal of Ash Lane allocation.
464	HN1.8 Ash Lane, Hawarden	Object	With reference to the Ash Lane Mancot and Park Avenue Hawarden building development I would like to formally object to this proposal on the following grounds. * This development would result in further loss of green belt land, currently used by tenant farmers, for both crops and livestock. * This development would also destroy a large wildlife habitat, killing wildlife in the process as hedgehogs etc are no match for a bulldozer. * The increased number of families in this area would have a major impact, on the existing population, with regard to community facilities such as GP’s services etc. * To combine the villages of Mancot and Hawarden, which this development would do, would destroy the individuality and character of these villages making one big sole less urban sprawl. * The increase in traffic because of the development would increase both pollution and noise and of course be an extra hazard to pedestrians and cyclists especially as most of the surrounding roads are village roads and not main roads. These are all valid objections which I hope you will consider very seriously.	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
468	HN1.8 Ash Lane, Hawarden	Object	Objection to the proposed development HWN005 Ash Lane The local school does not have capacity for more children and there is not the space on site to build greater capacity. Local traffic at present on the following roads at peak time became gridlocked and stay generally busy throughout the day The doctor's surgery is not able to provide an adequate service to local residents, In addition to the huge impact on an already struggling infrastructure Environmentally, this development would also be very damaging as I believe building houses on this site would have an impact on flood risk. The farmhouse and farm itself deserves protection, being a Grade 1 listed building and the oldest building in Hawarden. Given the speed of the consultation, the lack of communication with the community, the lack of information provided to the community and the difficulty the community has had in finding and understanding information, I find it impossible to believe the council has properly and adequately investigated this proposal in terms of suitability.	Removal of Ash Lane allocation.
470	HN1.8 Ash Lane, Hawarden	Object	I am writing to express my objection at the proposed development on Ash Lane, Mancot and Park Avenue, Hawarden as proposed in the Authority's Local Development Plan (LDP). Firstly, I would like it to be noted that I believe that the LDP itself is flawed as it is not compliant with other national policies, it is not locally specific nor is it accessible, clear or focused. I found it extremely difficult to read and access. 1. Merging Mancot and Hawarden coalescence 2. Green Belt Land 3. Magnitude of development 4. Lack of knowledge and transparency 5. Access to Ash Lane site 6. Infrastructure	Removal of Ash Lane allocation.
472	HN1.8 Ash Lane, Hawarden	Object	I am writing to object to the proposed plans to build 280+ houses on the land between Gladstone Way and Ash Lane. Having recently imposed a 50 mph speed limit along part of the A494 past RAF Sealand due to concerns of high levels of pollution due to traffic volume. The building of 280+ new houses would significantly increase vehicle numbers in excess of 500 (based on only 2 vehicles per household) subsequently increasing vehicle pollution in the area to even greater levels. This would also increase the volume of traffic along Ash Lane onto Cross Tree Lane which is already extremely dangerous for children going to school even more so since the school buses were taken away and this now being the proposed safe walking route for children to Hawarden High school and people going to and from the doctors and the graveyard etc. The local primary and high schools are already over crowded and with the recent withdrawal of funding for teaching assistants throughout the country the increase in more pupils going into the schools will create an even bigger strain on the facilities they have to use. Doctors appointments at the Stables medical centre are an absolute nightmare to make with no doctors being available to cover the volume of patients they have therefore this is putting a even bigger strain on the out of hours GP's and the hospitals with people having go there instead. I have lived in Mancot since 1995 and have seen the gradual decline of the villages identity due to the development of housing within the Ewloe, Hawarden, Mancot, Pentre and Sandycroft areas making them look more like one rather large town instead of individual villages. Parking is also another issue in the area especially at school times. When St Davids Park was built we were told new facilities e.g. doctors, schools, car parks etc. would be built and as of yet I have seen no evidence of this happening. This proposed large building plan will also take a large	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			proportion of green land that will be lost for ever. Before considering building on green belt land all efforts should be sort to use brown site areas as this would be in-line with current environmental thinking.	
474	HN1.8 Ash Lane, Hawarden	Object	I am writing to lodge an objection about the proposals to build on land adjacent to Ash Lane in Mancot/Hawarden. As a lifelong resident of Hawarden, I strongly object to the proposals for the following reasons: Increased traffic The development would also significantly impact upon access to Hawarden Village Church School. Impact upon local schooling I understand that Hawarden High School is also operating at maximum capacity. Access to medical provision The sole dentist in the village does not have NHS patients and the dental practice in Ewloe has limited availability. Hawarden Cemeteries Hawarden is an old village with historic roots. A short visit to the lower cemetery off Ash Lane in Hawarden and one can see that it is virtually full, making a total of three cemeteries in the village. Merging of Hawarden and Mancot boundaries The area under consideration is green belt and should not be considered for development.	Removal of Ash Lane allocation.
476	HN1.8 Ash Lane, Hawarden	Object	As a resident of Mancot, I am opposed to the building development being allocated nearby. This development will have negative effects on the area and environment around Hawarden. The local school and doctors are already struggling with demand. With some families sending children to separate schools outside of Hawarden as a result. The increase in housing will mean more traffic and noise pollution through Glynne Way at peaks times. Not to mention the construction of 250+ homes and transport routes, road works and traffic. Our village does not have the infrastructure to support this many properties and people. I hope that you take my concerns into consideration and the council remove the land from the local development plan.	Removal of Ash Lane allocation.
478	HN1.8 Ash Lane, Hawarden	Object	After moving to Hawarden in 1982, I have always lived in the area. I brought my daughter up here and it's an area I'm proud to live in. I spend a lot of time in Hawarden and my commute and access to shopping and local amenities is both in Hawarden, and accessing such amenities requires me to travel through it. It has come to my attention that you are hoping to push another housing development I was made aware of this development by someone who lives nearer to it and felt compelled to write an objection. This council is destroying our village and merging our smaller communities with total disregard for the residents and impacts on them. From what I've heard in local drop ins, it seems that no local knowledge has been utilized in the making of the plans. They demonstrate a lack of understanding of the local communities' identities. For example, you would be merging Hawarden and Mancot by building these houses. I have noticed that a 50mph limit has been implemented on the A494 due to air quality I'm a keen walker and enjoy the Hawarden area, in the farmland and fields surrounding it. This housing development would threaten the integrity of this historic building as it will be packed in with hundreds of houses, both destroying this building's historical value and the general ignoring of the need to protect our overall history. It is so incredibly disappointing to see this council trying to throw away both our history, and our future in one fell, profit wielding swoop.	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
480	HN1.8 Ash Lane, Hawarden	Object	I am writing to raise my objection to the development on Gladstone Way / Ash Lane. My objections are three-fold, as follows: 1. Your conduct as a council in this process 2. The use of green barrier land and it's impact 3. Merging of Hawarden and Mancot 4. The use of green barrier land	Removal of Ash Lane allocation.
482	HN1.8 Ash Lane, Hawarden	Object	I am writing to you to express my concerns and objections to the above proposal. I am a Hawarden resident, and for the past 20 years I have lived on Gladstone Way near the junction with Cross Tree Lane. My concerns and objections are as follows :- 1. The proposal will take away an existing green space which is understood to be designated as Green Belt Land for agricultural use. 2. The proposal will put more pressure on the already overrun Stables Medical Practice within Hawarden village which at present cannot fulfil appointment request expectations of patients without having to wait in some cases weeks. 3. Traffic congestion and parking issues along Crosstree Lane and at the Ash Lane junction around school drop off and pick up times is now at saturation. This would be exasperated during the construction phase of the housing development and add to an increase generally from the residents of the new housing. 4. In conjunction with item 3, the traffic situation generally on the B5125 through Hawarden Village during the normal day time period is now very heavy and is virtually at the levels it was back in the early 1980's before the A55 was redirected to the new Hawarden by pass. The proposal would inevitably increase the local traffic levels in and around Hawarden and Mancot with the added issues relating to vehicle exhaust emissions and the impact on air quality and the environment in general.. 5. The proposal would see modern housing and potentially new access roadways encroaching on the historic character of St Deiniol's Ash Farm which is a grade 1 listed building. 6. The distinction and separation between the communities of Mancot and Hawarden will be lost through building on the green space as these settlements would coalesce with the proposal.	Removal of Ash Lane allocation.
488	HN1.8 Ash Lane, Hawarden	Object	I would like to express my objection and concerns regarding the proposed development of the land between Ash Lane and Park Avenue. These are as follows: Increase in emission levels. Road safety. Already over stretched services, including schools and doctors surgeries. Drainage of flood plane area. Historic green belt land situated in a village location should not be built upon where there are other more suitable brownfield sites.	Removal of Ash Lane allocation.
490	HN1.8 Ash Lane, Hawarden	Object	I write to object to the proposed development in Mancot, (Being proposed as Hawarden). My Objections are; The land proposed is greenbelt, so should be maintained as greenbelt. The local highways will not support the increase in traffic, there is no scope for improving the Ash lane junction due to there not being sufficient space. There are schools at either end of Ash Lane. There are insufficient facilities to support the development, doctors, schools and dentists are already bursting at the seams, and need additional resource to manage the existing requirement. There are known issues with the area of the development area with regards to underground streams. Any development in this area is likely to increase the already high chance of flooding in the lower areas. The development merges the Hawarden and Mancot towns together, this should not happen according to your own planning rules. The development is being sold as a Hawarden development, whilst it is clearly in Mancot, this is likely due to the fact that the housing can be	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			sold at a higher price! I moved to Mancot in 1987 from Connahs Quay, due to the exact same type of planning regime. I moved because in Mancot I could walk in 3 directions and see countryside within 5 - 10 minutes. It will be a great shame if this development goes forward, as it will spoil the enjoyment of the area for a significant number of long term local people, and cause significant distress for people living in the Pentre area, already suffering due to over-development through flooding.	
492	HN1.8 Ash Lane, Hawarden	Object	Mancot: 1) This is green belt land. The national policy is that Green belts are not built on. 2) There has been no consideration of alternative sites for this development. Sites where maybe there is a better infrastructure to support such a development. No brownfield sites have been suggested? 3) The scale/magnitude of the development is huge. Therefore, the impact on local services/infrastructure is huge. 4) Access via Ash Lane is ridiculous. The amount of traffic and parked cars, especially at school times is already high. 5) Flooding in this area is already a huge problem. In June this year we had significant rainfall which resulted in floods. Sandycroft school closed due to drain surges and floods. Parts of Sandycroft were under water. Picture attached. 6) Local primary and high schools are already at full capacity. John summers high school was recently closed meaning some local children have to go to Buckley or Saltney high schools. Where will all of the new children to the area go to school? 7) Doctors surgeries are also at full capacity. I live in Mancot and use the stables in Hawarden. It usually takes over 100 phone calls to be told there are no appointments available. How will they cope with 300 extra families? Hospitals and dentists too are full to capacity. 8)Traffic will also be a problem. Mancot has seen an increase in the number of cars around and extra cars on the road will also increase local pollution. Something which Flintshire council seem to be keen to reduce with the new cameras on the A494 etc. The traffic on cross tree lane is already a massive problem particularly at school time.	Removal of Ash Lane allocation.
494	HN1.8 Ash Lane, Hawarden	Object	Ref: Development for housing on Gladstone Way and Ash Lane I am 81 years old and attend Hawarden doctors surgery on a very regular basis, I have difficulty getting an appointment at present, therefore I am worried and concerned with the increased numbers of houses, it will have a big impact on my health as I won't be able to get to see the doctor when I need to due to the high number of people also needing their service. 2. The increased traffic will drastically affect me as I can't park my car near the doctors at the moment anyway especially at school drop off and pick up times. Also I worry about the children's safety at Hawarden Church School and the safety of children walking to Hawarden High. 3. I am also concerned about the proposal being on green belt land and the loss of agricultural land, I request that the council look for other areas to develop on brown belt land.	Removal of Ash Lane allocation.
496	HN1.8 Ash Lane, Hawarden	Object	Ref: Development for housing on Gladstone Way and Ash Lane I am writing to object to the above planning application on the following grounds – 1. I know that the air quality is worryingly low in our area and its being monitored. The increased traffic that will come due to your proposed housing development will only exasperate the matter. I'm concerned that the council are ignoring this to gain profit. 2. I live next to the field on Ash Lane where you plan to build. I worry every time we have rain as it floods every time	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			and when it heavy rain full it comes onto our land. If there are housing it may come into the house as the drainage is poor now. Please look elsewhere for your development	
498	HN1.8 Ash Lane, Hawarden	Object	Ref: Development for housing on Gladstone Way and Ash Lane I am writing to object to the above planning application on the following grounds – 1. As a council I thought you were trying to protect agricultural land and green belt land. I hope you are not ignoring this important fact to benefit from building houses that would be classed as Hawarden therefore fetch a premium price tag for the developers. I live adjacent to the proposed site, I look onto the field where Deiniols Ash Farm is located. The housing development will have a large impact on my privacy, as I currently look onto an open field. Also depending on the actual housing plan, it could result in loss of light and overshadowing of my property. 2. I am concerned with the effects this could have on my health due to the increased traffic for example the increased noise pollution and increased emissions. 3. I work at the local primary school where places are very limited in all year groups at the moment even before your proposed development, but not only that in June 2019 due to heavy rainfall the school had to close as the drains could not cope and they were overflowing. When we have any severe rainfall the manhole covers and drain covers are lifting and overflowing as a result of to much water entering the system. This occurs now and your proposal of more housing would only exasperate the problems further for the school and local people.	Removal of Ash Lane allocation.
500	HN1.8 Ash Lane, Hawarden	Object	I would like to post my objections to the development of houses between Ash Lane and Gladstone way. The reasons for my objection are: 1. Safety - the congestion around this area during schools times and commuting hours is basically unsafe. Travel through cross tree lane on a daily basis is impossible to navigate and remain on the intended side of the road. This whilst trying to be observant for children is an accident waiting to happen. 2. Climate impact and radon gas zone - there is an unsafe level of pollution around this area which is being ignored for the sake of short term profit and increase in council tax gains. I would like to see a report on the radon gas zone for this area prior to any building works both in the proposed area and the school and local work places which is a legal requirement. in addition these points there are grazing wildlife and oak trees on the land in the area. 3. Green belt - there is a need for local communities to keep their identities. Blending Mancot and Hawarden and naming the are as Hawarden when aiming to gain entry through a Mancot cul de sac is clearly a council tax issue you wish to profit upon. This will directly affect the16th century farm on Ash lane and contravene the by law keeping community identity separate. 4. Community strain - I have personally struggled to get appointments at the local doctors. This will only get worse. I can only imagine the worry this may cause our older residents. There are many areas where additional housing developments would be acceptable and would not have detrimental community issues. I ask you to please consider my points above as I would hate to see our community suffer or a child be injured by an irresponsible development decision at its core.	Removal of Ash Lane allocation.
502	HN1.8 Ash Lane, Hawarden	Object	Objection to the proposed development HWN005 Ash Lane This proposal would be very damaging to community life in Hawarden which, according to the Council's own literature, Flintshire Council has a duty to protect and enhance. Hawarden is already at capacity in terms of the use of the infrastructure. The local	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			roads, particularly Gladstone Way, Ash Lane, Cross Tree Lane and Glynne Way become gridlocked at peak times and are generally busy throughout the day. The surgery is not able to provide an adequate service to local residents. In addition to the huge impact on an already struggling infrastructure, adding this land into the LDP and putting houses onto it would result in Hawarden losing its individual identity. Environmentally, this development would also be very damaging as I believe a development on that site would have a huge impact on flood risk. The farmhouse itself also deserves protection, being a Grade 1 listed building and the oldest building in Hawarden. Given the speed of the consultation, the lack of communication with the community, the lack of information provided to the community and the difficulty the community has had in finding and understanding information, I find it impossible to believe the council has properly and adequately investigated this proposal in terms of suitability.	
504	HN1.8 Ash Lane, Hawarden	Object	Please accept this letter as an objection to the above development. Ash Lane, Mancot. My main reason for objecting is the sheer size of the planned development, increasing the amount of houses in the villages by 288 is totally unacceptable. I have attended meetings locally and found that the information given to local residents has not been open and transparent. For example, information regarding the number of access roads into the development seems unclear. Flintshire county council representatives also admitted during one meeting that green belt land would not be built on. This is in fact green belt land! One such meeting was so well attended, information sheets printed by the council soon ran out and the only ones left were written in Welsh. This was unacceptable and confirms that the council have clearly underestimated the strong feelings of the villagers. The portal set up to object online is not user friendly and many local elderly people have found this impossible to navigate. I would suggest the council look at other areas in the vicinity, especially brown field sites, and not expect local residents to name them.	Removal of Ash Lane allocation.
439	HN1.8 Ash Lane, Hawarden	Object	After my mum explaining the proposals to me I wanted to write to say I do not want houses to be built on Ash Lane in Mancot because I am worried about the amount of traffic in the village. I use Ash Lane to get to and from school. The safe way we have been told to use by Flintshire County Council is using Ash Lane, it is already a busy road and with more houses it will only get busier. The speed and way some cars drive already is quite scary. I am also worried about the future in terms of the environment and building on fields. I like living in an area with lots of green space but if houses keep get built on the green land then there will be none left. My friend's house has also been flooded and I don't want this to happen again, which it might if they keep building.	Removal of allocated site at Ash Lane Mancot.
443	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot As a resident in this area for over 8 years, I am more than aware of the difficulty in securing an appointment to see a doctor. An extra 280 new homes will only make this even more difficult and whilst you might suggest more doctors are sought, I would suggest that there would not be the car parking facilities to accommodate extra appointments. Another issue I have is that the local primary school on Cross Tree Lane would also struggle to accommodate more pupils. Cross Tree Lane is already a no go area for me during term time due to the amount of parked cars making travel difficult and at drop off and collection times, this is complete worse still. More parents collecting mote	Removal of allocated site at Ash Lane, Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			pupils would be total carnage. I understand that Planning Policy for wales states that green belt land should not be built on.	
455	HN1.8 Ash Lane, Hawarden	Object	I am contacting you to express my concerns and to object to the proposed LDP between Mancot and Hawarden. My reasons and concerns are listed below. 1. My initial objection is regarding the use of Greenbelt Land and the ignoring of other Brown-belt Land in the area. The proposed site would impact on a historical farm, the result of which would coalesce two separate settlements. This action whilst being totally anathema to local residents who wish to keep their village identity, is I believe against Flintshire CC's own stated policy regarding the issue of protecting community identity. 2. My second concern is regarding the local infrastructure. I am a patient at Hawarden Surgery, The Stables Medical Centre. As with most other surgeries in Wales and the rest of the UK, the Surgery are short of Doctors. The Surgery is struggling to provide adequate health care provision for their patients and is doing so by employing Nurse Practitioners and Prescribing Pharmacists. Having previously been treated by both, I recently had the need to book an appointment with a Doctor, had to wait three weeks for the appointment and travel to the branch surgery in Saltney. Many patients would not have been able to do that and would then have had to take an emergency appointment. I understand that Betsi Cadwaladr Health Board have been consulted and have said that the prosed development would not cause any problems that would impact on this Surgery but I ask the question 'has anyone asked the Surgery if they feel that they could cope with the influx of patients that the proposed development would bring?'. When there is a shortage of GP's nationally, how will BCHB suddenly manage to get an increase GP's in Hawarden when they have not been able to for the last two or three years? Also the Surgery is small and is unable to expand so it would be unable to provide the extra space that an increase in population would need. 3. Again on the matter of struggling resources, whilst the Education Authority say I believe, that local schools could cope, have the local schools been asked for their views? My understanding is that both Rector Drew Primary School and Hawarden High are struggling to cope with demand. I think that it would be totally unfair if the increase in pupil population that would inevitably result from the development had to go outside of their immediate vicinity. All of the above factors are compounded by my concerns that the extra traffic would pose problems	Removal of Ash Lane allocation.
457	HN1.8 Ash Lane, Hawarden	Object	I am contacting you to express my concerns and to object to the proposed LDP between Mancot and Hawarden. My reasons and concerns are listed below. 1. All of the above factors are compounded by my concerns that the extra traffic would pose problems	
459	HN1.8 Ash Lane, Hawarden	Object	I would like to register my objection to the Ash Lane development, proposed in the LDP for Mancot. Specifically I am concerned about the addition of at least 280 cars to an already over burdened transport infrastructure (please look at Cross Tree Lane) and the amount of emissions concentrated in an area through which many school children walk to school.	Removal of Ash Lane allocation.
461	HN1.8 Ash Lane, Hawarden	Object	I am objecting to the proposed development because it removes Green Belt land from Mancot and more or less merges the village with Hawarden. This goes against Planning Policy Wales which argues that settlements should not be merged (coalescence). I do not feel that these are exceptional circumstances and that it would be in their words an "inappropriate development". The preferred Strategy Consultation Document also says that community identity must be protected and safeguarded. The new plan would effectively merge Hawarden, Ewloe, Mancot and Pentre into one massive bloc. Further concern to me is that Mancot and Ash Lane could not cope with extra traffic (hundreds off cars). It's also obvious that the schools are now at capacity with parking at Cross Tree Lane out of control and ever likely to increase. There are many other issues like access to Mancot through Colliery Lane which has no footpath and even now is a major and hazardous route into the village. Flooding in the Pentre area is not going to go away and with climate changes and more water not being absorbed naturally from your proposed site, what hope is there to solve it? Please take note of my concerns which I consider valid enough reasons to halt any development on this site.	Removal of Ash Lane allocation.
463	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot The proposed location for the new development will occupy a large greenfield site situated in the middle of an existing urban development. We currently hear from Government sources, including Planning Wales, that Green Belt land should not be developed on, especially if there are alternative sites and even more so if this causes coalescence of adjacent	Removal of allocated site at Ash Lane, Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			settlements such as Hawarden and Mancot. Flintshire's LDP includes many alternative sites that, on reading, appear to offer far better conditions. What is not stated in the plan is why the Mancot site was specifically chosen. The installation of new homes spread between several smaller sites would result in reduced overall impact. One of my main concerns with regard to the Mancot site is its effect on air quality and pollution. As a resident on Gladstone Way for 35 years we have seen a dramatic increase in the volume of traffic using the road as Airbus expanded. Appendix E if the LDP only mentions the impact on air quality during construction, which correctly states that there could be moderate increases in emissions to air. What is not mentioned are the far greater impacts imposed by extra vehicles using Gladstone Way and other roads in Mancot. With 288 properties there could be around 00 extra cars plus associated delivery, service and contractors vehicles. During peak times these vehicles will significantly impact on air and noise quality, more so than vehicles accessing the site during construction. Safety issues – risk to children walking to school from increased traffic. Public services – difficult to get a doctor's appointment now without the added residents. Education – Will need to increase capacity at local schools.	
465	HN1.8 Ash Lane, Hawarden	Object	I am writing to formally register my objection regarding the proposed Ash Lane development in Mancot/Hawarden. I object to this proposed development for the following reasons: 1) The proposed site is on a Green Belt, and a development of the proposed size will result in a merging of the 2 villages of Mancot and Hawarden. 2) Cross Tree Lane is already a dangerous road for most of each weekday. The school staff park along this road, and parents dropping or picking up their children are running a daily gauntlet that will end in an accident as the situation stands. With the addition of nearly 300 houses this dangerous situation will get worse.	Removal of Ash Lane allocation.
467	HN1.8 Ash Lane, Hawarden	Object	I strongly object to the proposed development on the fields between Park Avenue, Hawarden and Ash Lane, Mancot. Firstly, with the recent closure of John Summers High School, there are limited primary and secondary school spaces available and adding another housing development will increase the number of children in the area. Secondly, the facilities in the area (e.g Local Doctors) will be unable to cope with the influx of potentially 1000 people moving to the area. It is already difficult to get a timely appointment with our local GP. Thirdly, the fields in question are green belt land	Removal of Ash Lane allocation.
471	HN1.8 Ash Lane, Hawarden	Object	I would like to lodge an objection to the proposed development in Hawarden/Mancot on the green belt land between Ash Lane and Park Avenue. I have several concerns I would like to raise. Firstly adding 280 new homes to the area will cause many problems to the local infrastructure. It is already very difficult to get an appointment at the doctors surgery, the school is largely at full capacity, and the before and after school clubs which working parents like myself rely on are also fully subscribed. I live on Ash Lane and it is a very busy road, and can take several minutes to get out off the drive. I fear the extra traffic would cause severe congestion, especially around school pickup times, where to be frank it is crazy, and a real concern for the safety of both children and road users alike. I object to building on green belt as this sort of land is what a the character of semi-rural villages like Hawarden and Mancot are based on. I would like to know whether brown field sites have been considered first. Also using this field which you are classing as a Hawarden	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			development, with proposed access from Ash Lane will in effect merge the two villages, which I understand should not be done, under coalescence guidelines. I also worry that this development would add to potential flood risk in the area. My house backs on to the field and there is a ditch running along the boundary which is constantly flowing with water. With less land able to absorb the water due to the extra concrete I fear for the homes further down the hill which have already been effected by flooding. I understand from our house searches when we moved in that there was extensive mining in the area. There are some cracks on our house which I fear could be caused by subsidence. Another concern is pollution, if the council have had to reduce the speed limit on the bye-pass to 50mph, why would you add countless additional vehicles to the area? Also with mature hedges and trees, which I assume would have to be cut down to make way for the development, this would compound the issue further, as less fresh air would be created.	
473	HN1.8 Ash Lane, Hawarden	Object	Below I set out my objection to the development of the Ash Lane site as part of Flintshire's LDP. 1. Merging together of Mancot and Hawarden 2. Insufficient local facilities – particularly schools and doctors 3. Health and Safety Concerns regarding additional traffic, particularly outside local school 4. Difficulty in understanding the LDP process and documentation 5. Lack of promotion of the LDP to enable comment from the wider community.	Removal of Ash Lane allocation.
483	HN1.8 Ash Lane, Hawarden	Object	1. My initial objection is regarding the use of greenbelt land and ignoring brown belt land, the impact on the historical farm, the result of which would coalesce two settlements. Local residents want to keep their village identity and I believe this is against FCC own policies to protected community identity. 2. Local infrastructure - the Stables Medical Centre is short of doctors and is struggling to provide adequate healthcare provision. When there is a shortage of GP's nationally where will BCHB suddenly manage to increase the numbers of GP's also the surgery is small and unable to expand. 3. The education authority have said the schools can cope but have the local schools been asked for their views?. Both local schools are struggling to cope with demand. 4. Extra traffic would pose problems both for safety and congestion. Any increase in traffic will exacerbate an already existing problem. 5. Extra housing could be provided on the airfields site. 6. Why has the proposal been given a Hawarden and not a Mancot postcode?	Removal of Ash Lane allocation.
487	HN1.8 Ash Lane, Hawarden	Object	Ash Lane Proposed Development This development would change the village identity of Mancot and the infrastructure of the area will not cope with such a massive increase in population A recent proposed much smaller development was turned down for similar reasons so I would hope that the council would show the same respect to Mancot residents 1. Key areas of objection regarding this proposed site: 2. The LDP process itself is flawed because, using their own criteria:	Removal of Ash Lane allocation.
489	HN1.8 Ash Lane, Hawarden	Object	I would like to object to the proposed development off Ash Lane,Mancot ,my reasons are as follows: The roads that would have the access/exit points to the new development (Ash Lane,Gladstone Way,Hawarden Way,Leaches Lane) all converge ion dangerous junctions already over used at crucial times of the day, namely school start and finish times, shift changes at British Aerospace etc. There is no	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			easy solution or physical ability to widen the road at these points, the traffic has to navigate a narrowing at the top of Gladstone Way (Cenotaph),and Crosstree Lane onto the Highway made more difficult because of volumes of traffic from parents dropping children off at Hawarden Village School and In Leaches Lane specifically by Sandycroft C.P. School the traffic at these crucial times is increased with parents parking dangerously on areas with parking restrictions and over junctions creating situations which jeopardise the safety of our children. Whilst I welcome the introduction of the measures for 'Safe Routes' I am extremely concerned the effects of having an additional 280 houses and associated cars will contribute to an increased volume of traffic which will 'bottleneck' at the two points that feature our Primary schools. The lanes in Mancot are narrow and already attract drivers seeking 'short cuts' on daily travel to work,this would increase with the development Demands on our schools,drainage system, the effects of a merging of Hawarden and Mancot villages and the use of green belt land where there are brownfield sites available are reasons why Mancot is not a good choice for development. Our village does not have the infrastructure to support a development of this size.	
491	HN1.8 Ash Lane, Hawarden	Object	This letter is to show my objection to the proposed plans to build 280+ houses on the land between Gladstone way and Ash Lane, my reasons for objecting are that the facilities available to existing residents e.g. doctors, schools, transport etc are already over stretched and struggling to cope. The stables medical practice cannot cope with the amount of patients they have currently as getting an appointment there is near impossible resulting in its patients putting a strain onto out of hours and A&E for medical issues that should be seen to by their local GP, the car park for the stables medical practice is also insufficient for its patients currently as it's entrance and exit are the same meaning that drivers very often have to reverse onto a blind bend of the main road at busy times and the car park does not accommodate for more than a dozen cars at one time which also includes the practices staff cars. Cross tree lane is the main route used to get to local primary and high schools and is extremely dangerous with the volume of traffic it currently has on a daily basis. Therefore adding to the existing volume of cars within the area would make the safety of children walking to and from school at a higher risk.	Removal of Ash Lane allocation.
493	HN1.8 Ash Lane, Hawarden	Object	Mancot is semi rural village, this development will completely destroy this. The land to be developed is green barrier currently being used as agricultural land. The primary schools in Mancot and Hawarden already have large class sizes. Hawarden high school is also oversubscribed with local children unable to get a place and having to travel further. I cannot get a doctor or dentist appointment for at least three weeks. This development could increase the number of cars going through the village by at least 500. The roads simply cannot cope with this amount of traffic. Flooding. The road through Sandycroft is often flooded and the houses opposite the Coop are more frequently having to be pumped out.	Removal of Ash Lane allocation.
495	HN1.8 Ash Lane, Hawarden	Object	I write with reference to the above proposed housing development and to my strong objection to it! Both Hawarden village school and Sandycroft CP school are already over subscribed and have a traffic flow problem, These areas are already blackspots without and additional traffic could result in an accident involving a child! Local doctors and dentist surgeries are already saturated! Ash lane is a single track road	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			and couldn't cope with the increased traffic flow this would also have a significant impact on pollution! St Deiniols Ash Farm is Hawardens oldest occupied building and grade 1 listed. This development would build right up to the farm Andy therefore destroy the character of the farm house. The national policy Is that green belt land is not to be built on, this land IS green belt land ! Insufficient consideration of alternative sites, no brownfield sites have been considered! The area Is already suffering with traffic pollution, the A494 has recently seen a speed reduction being put into place to help ease this, more traffic on our roads would increase this and have an effect on our wildlife our health (asthma is already on the rise) and eradicate all being done in other areas. Thank you for taking the time to read my objections, I sincerely hope you take them into consideration before making any decisions.	
497	HN1.8 Ash Lane, Hawarden	Object	Ref: Development for housing on Gladstone Way and Ash Lane I am writing to object to the above planning application on the following grounds – 1. I live next to the field your proposed development will be on, on Ash Lane. I have many worries but my main one is flooding to my property as at present with nothing in the field the field floods and runs down to settle next to me, after heavy rain full it sometimes comes on my land. Therefore, with proposed houses you are going to build the drainage system would not cope and my property is at risk not just my land. I have spoken to the farmer who lives in Ash Lane farm who has confirmed that the fields have always flooded. 2. I am the care taker at Sandycroft CP school and when there is heavy rain the manhole covers raise and in the last heavy rain in June we had to close the school as excrement was coming up through the covers and the water level in the toilet was nearly over the top of the bowl. The drains can not cope now so with the increased houses you are adding 280 houses extra to a system that can't cope now. Will the education of our children be at risk as water finds its lowest point which unfortunately is our local school. It would be far better to use the areas available to you and not use the green belt land that will inevitably course major flooding to our area.	Removal of Ash Lane allocation.
499	HN1.8 Ash Lane, Hawarden	Object	I wish to object to this new planning proposal. We live in the area of Braeside Ave Hawarden & previously lived in Fieldside Hawarden for over thirty years.The last Redrow development has definitely stretched the areas facilities & this new proposal would make matters considerably worse. Also flooding will be more likely as the system is not strong enough to take on additional buildings. The traffic is already heavy & this would make things dangerously unsafe. I cannot see the need for a development of this size taking into account recent developments nearby so hopefully this decision can be turned down.	Removal of Ash Lane allocation.
501	HN1.8 Ash Lane, Hawarden	Object	I am writing to oppose to the development in ash lane Mancot. As with many other residents I object based on the following concerns. 1. Flooding is already a local concern and affects my property, this will only get worse. 2. Local schools are over subscribed. 3. I already struggle to get an appointment at my local doctors. 4. Pollution is a concern in the area and measures have been put into place on the A494 to combat this yet the development will add to it. 5. There is already too much traffic in the village which poses a risk to local children and their ability to access village life. 6. There are already developed houses close by that are derelict, this land could be redeveloped. 7. Green belt land should not be built on.	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
503	HN1.8 Ash Lane, Hawarden	Object	I wish to object to the proposed development in Mancot. Having seen the scale of the plans, it was clear the development exceeded the 8% to 15 % growth limit recommended for a category B settlement. It will completely alter the character of the place. I find it hard to believe Flintshire County Council would not wish to preserve this historic site. The village has grown significantly over the years and I accept infill development is sometimes required to build communities, however, I believe further development particularly into green barrier areas will be detrimental to the character of the village and transform it into a small town. The sprawl into adjoining villages, coalescence, was something I did not believe was accepted within planning laws however surely this large scale development would merge Mancot with the village of Hawarden. The council has only very recently agreed to, but not yet implemented, measures to relieve traffic congestion in the village around the local primary schools. Already at risk of flooding, the addition of 280 houses, will only exacerbate the problems we have seen already in the village.	Removal of Ash Lane allocation.
506	HN1.8 Ash Lane, Hawarden	Object	Ash Lane Mancot 1. My initial objection is regarding the use of greenbelt land and ignoring brown belt land, the impact on the historical farm, the result of which would coalesce two settlements. Local residents want to keep their village identity and I believe this is against FCC own policies to protected community identity. 2. Local infrastructure the Stables Medical Centre is short of doctors and is struggling to provide adequate healthcare provision. When there is a shortage of GP's nationally where will BCHB suddenly manage to increase the numbers of GP's? Also the surgery is small and will be unable to expand. 3. The education authority have said the schools can cope but have the local schools been asked for their views. Both local schools are struggling to cope with demand. 4. Extra traffic would pose problems both for safety and congestion. Any increase in traffic will exacerbate an already existing problem. 5. Extra housing could be provided on the Airfields site. 6. Why has the proposal been given a Hawarden and not a Mancot postcode?	Removal of Ash Lane allocation.
508	HN1.8 Ash Lane, Hawarden	Object	Re Plans to allocate land between Ash Lane Mancot and Park Avenue Hawarden. I wish to voice my objections to this disgraceful plan, this goes against WG own policy on not building on green belt land and would result in the coalescence of the two settlements which also goes against the policy. The infrastructure could not cope, we should be preserving the countryside for the sake of the environment and not causing more pollution with more houses and traffic. Traffic at school times is chaotic and dangerous as the roads are narrowed by parked cars at this times. I hope you will see common sense and cancel this absurd community wrecking plan.	Removal of Ash Lane allocation.
510	HN1.8 Ash Lane, Hawarden	Object	I am very disappointed to hear the fields between Ash Lane and Park Avenue have been put forward for development. Development should not be allowed on green barrier areas which would result of the merging of separate settlements which surely is the council's own policy. To even consider building new houses within 10metres of the Ash Farm listed building is criminal. The land is good agricultural land and a haven for wildlife. There are ancient trees and hedgerows. Flooding has been a problem and will only get worse. Schools in the area are at full capacity. Doctors, hospitals and dentists are also completely full. There are other sites with less impacts for example: Land off Aston Hall Lane, Queensferry and opposite	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			the (Hawarden) Farm shop plus brownfield sites. I trust you will consider what a devastating impact this proposal will have on every part of our lives and remove this proposals from the LDP.	
512	HN1.8 Ash Lane, Hawarden	Object	I am writing in connection to the Ash Lane Development in Mancot, and wish to object. I am Mancot born and bred and my extended family have lived here since the early 1960's. I have many reasons why I believe this development should not go ahead but will list a few as follows: I think one of the main reason is I cannot understand why we would want to build new houses which would surround such a beautiful historic building at Ash Lane Farm. This building has stood in the surrounding fields for centuries and I feel it would be criminal to put new build houses so close to it. The scale of the development would completely spoil this area which is so important to the residents of Mancot. Surely there are many other places within a few miles that would be more suited? I am wondering who has suggested this area in the first place, surely it can't be anyone with knowledge of the local area. Secondly, Flintshire County Council are fully aware of all the traffic problems that Mancot is experiencing at the moment. Traffic issues outside both local primary schools are creating problems for all residents and adding such a large new housing estate to this will have a massive effect. We cannot cope with the amount of new cars this development will bring. Thirdly, it is already impossible to get appointments at the local doctors surgery, and adding patients to this already stretched practice would be ridiculous. The surgery car park is too small and rarely has spaces and the area around Cross Tree Lane is unsuitable. My 88 years old father experiences regular problems parking! Finally, I think the development is far too large. Mancot and Hawarden have always been separate and this will join both villages. Planners need to look at other land within the area, which will have less impact on local people's lives.	Removal of Ash Lane allocation.
514	HN1.8 Ash Lane, Hawarden	Object	Ash Lane, Mancot. My husband and I wish to object to the proposed housing of the above properties. We live on Cross Tree Lane and the traffic is already chaotic, not only are child safety at risk but also the residents. The school can not possibly cope with more children and the doctors are definitely under pressure. I personally have had to wait 4 weeks to see a nurse let alone a doctor. Someone is completely out of their mind for even considering this. You need to think again, life is not all about money	Removal of Ash Lane allocation.
516	HN1.8 Ash Lane, Hawarden	Object	I would like to object the proposal to build 250 houses on the fields between Ash lane Mancot and Gladstone Way Hawarden. There are major concerns regarding the infrastructure in our small community. We haven't got enough school spaces to cope with amount extra children that would be needed. Class sizes would be impacted, thus affecting the education of our children. I live in Mancot and the area is prone to flooding which I have attached pictures to show my garden earlier this year. The drains are not up to standard. With building more at the top of Ash lane will put more strain on wastage and drains at the bottom of Mancot. Sandycroft School will be under more pressure of flooding and drainage issues. Earlier this year they were also affected as waste issues meant that they had to close. I can't see proposals to change drainage in Mancot. Not to mention the number of extra cars on the road CO2 omissions next to primary school. Not good for the environment.	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
518	HN1.8 Ash Lane, Hawarden	Object	I would like to register my objection to the proposed development of land on Ash lane,Mancot. Having lived in the village all my life I consider this development will have a negative effect on the area. My main objections are the destruction of greenbelt land which goes against The Wales planning policy & the increase of road traffic on already congested roads particularly during school term times. I also think the village will loose it's identity by effectively merging with Hawarden. Other considerations that have not been taken into account are the effects on local services that are already over subscribed, we have had our bus route axed by Arriva which forces more vehicles onto the local roads. Unable to access local Doctors/Dentists. Local children are forced to travel some distance to High schools which are not easily accessible on foot increasing traffic flow & pollution.	Removal of Ash Lane allocation.
525	HN1.8 Ash Lane, Hawarden	Object	I am writing to you today to object to the planned development on the green barrier between Ash lane & Gladstone Way I feel that this development would be extremely detrimental to the local community. Firstly, this would mean that Mancot and Hawarden would become homogenized into one village as it would eliminate the green barrier currently in place that separates the two. This would also become a merging of postcodes meaning that council taxes would increase in an already high rate area. Furthermore, it would have a devastating impact on the 16th century farmhouse on Ash Lane which has been a part of our local history for hundreds of years. The wildlife in that area would also take a severe knock. Not only is it a habitat for many, many birds & mammals, there are oak trees on that site which are over 100 years old. The environmental impact on our village of this new development would be crippling. Glynne Way is already being monitored for high levels of pollution. The traffic in & out of the village is already at critical levels at certain times of the day. This not only would exacerbate the levels of toxins local people breathe in, but also be an increased risk to the safety of our children who cross these already busy, dangerous roads. This development would add increasing strain on our already struggling local infrastructure (doctors/schools/bin collections etc). An extra 280 homes would add a possible extra 1000 people in our area who would need to access these services. They simply would not be able to cope. Please seriously consider NOT approving this project as I strongly feel it is an irresponsible decision that will be impossible to reverse once the damage has been done.	Removal of Ash Lane allocation.
527	HN1.8 Ash Lane, Hawarden	Object	Ash Lane - Mancot Increase risk of flooding Breaching boundaries between two villages Increasing traffic and emissions to an area which is already struggling to bring emissions down. Lack of infrastructure and concerns over health and education access in the area Risk to wildlife The loss of the beauty of the area and the setting for historic Ash Farm.	Removal of Ash Lane allocation.
529	HN1.8 Ash Lane, Hawarden	Object	I'm a Hawarden resident and local businessman of 9 years and I write to you to register my objection to the proposed Ash Lane / Park Avenue Development in Mancot. My objection is due to the following reasons; My son currently attends Hawarden Village Church School which is already oversubscribed and the traffic along Cross Tree lane during school drop off and pick-up times is horrendous. So I struggle to understand how the local schools could possibly manage an additional 500 or so children coming into the area. The local Doctors surgery struggles with the number of patients it already has and as a result, it's not	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			uncommon for patients to have to wait up to 3 weeks to get an appointment. An extra 1000 or so people would not help the current situation. The traffic along Gladstone Way is increasingly busy heading into Hawarden, which is a known bottleneck at the two key junctions at the top of Gladstone Way and Cross Tree Lane during peak times. Also speeding along this road is a real problem and having more cars and children crossing at school times is a real concern for safety. The sewerage system at the lower end of Hawarden and Mancot is notoriously troublesome with numerous issues over the last few years and I cease to understand how it would cope with an extra 250 homes without a major upgrade. Not to mention that the land the proposed development is going on is designated green belt land. I'm concerned about the impact this will have on the local environment, wildlife and farming. I hope you will seriously consider my reasons for the objection.	
531	HN1.8 Ash Lane, Hawarden	Object	Residential development at Ash Lane Hawarden for 288 dwellings. I write to object to the proposed plan under the headings: Education - local schools do not have capacity, travel to alternative schools will add to already chaotic traffic associated with the school run and capacity at more distant schools may also be limited. Health - the existing health service will struggle to absorb the influx of 900 new residents. Strong and cohesive Communities – the separate identities of Hawarden and Mancot will be blurred, coalescence of these two diverse communities should be avoided. A similar plan has been not previously been successful, why is this site larger site now being included on green belt land. Biodiversity- Whilst the plan includes mitigation for valuable habitats and protected species the best policy would be to leave the greenfield site alone, green belt land should not be built on and a brownfield site should be sought. Landscape and Townscape - nearly 300 dwellings is bound to increase night ljght pollution. Heritage – The close proximity of 288 houses to would do nothing to enhance the character of this building even with the green infrastructure it will have a detrimental effect, on St Deiniol's Ash Farm.	Removal of Ash Lane allocation.
535	HN1.8 Ash Lane, Hawarden	Object	I write to object to the proposed housing development proposal for 280 dwellings on Land off Ash Lane/Park Avenue, Deeside, Flintshire I have lived in Mancot, Deeside for 34 years, during this time have seen what was once a small village grow exponentially. My principal reason for objecting is that the proposed site is protected by Green Belt designation. The National Planning Policy Framework is clear that the Government "attaches great importance to Green Belt" and that decision makers should continue to afford the Green Belt the highest protection The protection of the Green Belt is one of the Core Planning Principles of the National Planning Policy Framework. "The fundamental aim of Green Belt policy is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence" The Green Belt at the location of the proposed development in my view does serve the five purposes of the NPPF • To check the unrestricted sprawl of the built-up areas of Mancot & Hawarden.; • To prevent the historic village of Hawarden from merging into the neighbouring village of Mancot • Assist in safeguarding the countryside from encroachment from further residential development. There is agricultural value in the farmland proposed for development from grazing and hay making; • To preserve the setting and special character of Mancot – which is a mixture of urban and rural land. St Deiniols Ash Farm, is Hawarden's oldest occupied building and grade 1 listed. The proposed	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			development would encroach on the farm house, destroying the character of the building. • To assist in urban regeneration, by encouraging the recycling of derelict and other urban land, of which Flintshire has a considerable amount	
543	HN1.8 Ash Lane, Hawarden	Object	I am writing this email to object to the Park Avenue/Ash Lane site (HWN005) “Safeguard and protect community identity,” “Review green barriers against the criteria in PPW in order to avoid coalescence,” “Focus initially on the availability and suitability of brownfield land,” “Ensure that the characteristics and features of the landscape are recognised and are considered,” “Safeguard the County’s rich and varied built and historic environment including listed buildings,” “Protect built heritage at risk and sensitively managing change in the historic environment,” None of the above points are being followed by going ahead with this development. They are in place to ensure that the human and physical aspects of communities are protected. To protect our communities and people living in them you must not let this development go ahead. Ash Lane site is not a suitable development site as it results in the absolute coalescence of Hawarden and Mancot.The planning department seem more focussed on maintaining a green barrier between ‘Historic Hawarden’ and the rest of Hawarden when ironically the oldest occupied building in Hawarden (Grade 1 listed) is St Deiniol’s Ash Farm. This development will spoil one of the most historical aspects of Hawarden when driving up from Ash Lane. This historical landscape is beautiful. ‘Planning for Wales’ document clearly states that green belt should not be built on to stop urban sprawl! A development of this magnitude will have a detrimental impact on Hawarden residents. Firstly he doctor’s surgery is already over stretched. When trying to make an appointment I can wait weeks to be seen. Secondly the local schools in the area (Hawarden and Sandycroft) do not have the capacity to accommodate more children and do not have the space to build more classrooms	Removal of Ash Lane allocation.
545	HN1.8 Ash Lane, Hawarden	Object	I’m writing to object to the Ash Lane development (HWN005) . I believe that this site is inappropriate for a development of this size. Firstly I believe that Hawarden infrastructure cannot cope with a development of this magnitude. The road layout and close proximity of the building already cause regular traffic jams. Two way traffic is unable to flow without interruption though the village past the Fox as the road is so narrow with over hanging buildings. On coming cars must stop to let buses through. A development of this magnitude will exacerbate this problem further as any traffic travelling south, east and west will drive into the centre of the village. The buildings though Hawarden make it impossible to widen these roads for increased traffic. Secondly I believe that you are ignoring the ‘Planning for Wales’ document which clearly states that green belt should not be built on to stop urban sprawl! On the ground Hawarden and Mancot do not feel joined. There is an alleyway at the bottom of Park Avenue and a small lane (cottage Lane) joining the villages. This development will fully join the settlements. Thirdly the air pollution increase that this development will cause is a massive concern for our young family. We have moved to this area to enable our child to grow up without significant air pollution. Please consider you own policy statements that are in place to safeguard the environment. such as ‘minimise the causes and impacts of climate change, addressing light, noise, air and other types of pollution within the county as part of identifying development sites’. Finally I hope you carefully consider my objection as I have lived in this area for nearly 20 years and	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			have a vested interest in it's future. Can I ask you what has changed in the last 10 years as 10 years ago this site was considered unsuitable for development?	
573	HN1.8 Ash Lane, Hawarden	Object	Ref: HWN005 I would like to know your solutions to the problems listed below that you will cause by turning the fields between Ash lane and Park Avenue into a residential zone. Education: Where are any young residents going to attend school? Local schools are currently high in numbers with very little space. By increasing school numbers it could lead to a poorer quality of education. Medical care How will you stop the local medical practice (The Stables Medical Practice) becoming even more under strain? With many of us local residents struggling to get the medical care we need with the practice not being able to provide appointments because of the amount of people using the practice already. The service will lack even more with added residents using it to. Mancot and Hawarden are currently sharing this practice leading me on to my next point. Mancot and Hawarden Mancot and Hawarden are two different places each having their own park, village hall and their own community. By creating a whole other housing area we may lose that individuality not to mention that they both have their own history which should be recognised. Wildlife Would you want your home to be destroyed? The planning area that you are planning to build on is currently a home to wildlife creatures. I am a resident of Park Avenue with the housing development due to be put into place behind my garden. I have lived here for 14 years and have always had wildlife in my garden from the field, such as squirrels. And more recently badgers and an owl has been seen. Our neighbours have frequent visits from hedgehogs. A baby fox has been heard too. Not to mention other wildlife that may also have their home there. What should happen to these creatures when the habitats are lost?	Removal of Ash Lane allocation.
585	HN1.8 Ash Lane, Hawarden	Object	I'm not in favour of developing land in Mancot for housing for the reasons below. Community deterioration / Lack of research in creating the LDP I would not wish to see a deterioration in the village of Mancot by merging it with Hawarden. Mancot is a separate village. This was noted in 1284 and indeed the name Mancot means "small insignificant places in areas of secondary settlement", that is, an insignificant area which is separate from Hawarden, the main settlement. I moved to Mancot in 1992 and have seen significant changes in attitudes and socially. I'm very proud to tell people that I live in Mancot. The community of Mancot will lose its unique status if it is merged with Hawarden. But, according to the UDP document, Flintshire argues that the villages of Hawarden and Mancot have already merged. Road Safety Cottage Lane has: • a 90 degree corner with cars often on the wrong side of the road. • the road only has small sections of pavement, at both ends of the road, and people have to walk on the road for a large part of the road. • houses on the side of the road with cars parking and exiting the houses. • a section were it turns into a track only suitable for one car. • a road - Kennedy Drive which joins Cottage Lane on the 90 degree corner which makes for very poor visibility. • a road - Brookleigh Avenue which exits onto Cottage Lane as Cottage Lane becomes a single lane. Visibility is very poor. • • a T junction at the end of the road (Mancot Lane). Due to the shape of Mancot Lane, visibility is poor. • a T junction at the end of the road (Mancot Lane). A number of the residents of Wilmslow Terrace park on the road which means that section of the road is only wide enough for one car.	Removal of allocation

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
609	HN1.8 Ash Lane, Hawarden	Object	I am writing to advise you that I strongly object to the planned housing development between Park Avenue and Ash Lane. The main points to my objection are the removal of important greenbelt land and the lack of services and infrastructure. This greenbelt provides a distinct separation between the villages of Hawarden and Mancot and with the proposed construction this will join the two villages and therefore the villages will use their own character and identity. Not only will the construction of this proposed housing development remove important green space but it will have a large impact on local wildlife. As a father, I have been taking my two children to the local schools for the last ten years. During this time, school numbers have increased which has had a negative impact on the roads leading to the schools. I have seen some “close calls” of childrens’ safety being at risk through irresponsible driving and sheer volume of traffic at both schools at drop off and pick up times. This development will put additional pressure on both the local road network and the schools themselves and to date I have not seen or read any proposals to alleviate these ongoing problems. I trust you will take into consideration my concerns when making any final decision for this development	Removal of allocation
615	HN1.8 Ash Lane, Hawarden	Object	It is now 26 years since I first wrote to the Council regarding flooding from the sewerage system in Mancot. Remedial work was carried out which alleviated the problem in the short term, but the Council were well aware of the shortcomings in the local sewerage system. Mr. Mark Tami MP became involved between 2001 and 2004, raising questions in Westminster, and chairing meetings between Welsh Water and Flintshire County Council regarding flooding in Alyn and Deeside. Properties and roads in the Pentre/Sandycroft area have been flooded this year. It could be argued that we live on the River Dee flood plain and should expect flooding to occur. Building 280 extra properties will only exacerbate the problem surely. In the 2003 Unitary Development Plan, it was proposed to build I think 105 houses on green belt land at Leaches Lane between Earle’s Crescent and Duckers Lane. It was stated that ”Mancot is a Category B settlement having an indicative growth potential of between 8 and 15%”. This development plus other builds since 2000 would yield a growth of just under 15%. The current LDP proposal to build 280 houses would be a growth roughly of the order of 25% at least, which far exceeds Mancot’s growth potential. A review of the UDP proposal was carried out if I remember correctly, and an alternative development similar to what is now being put forward in Ash Lane/Park Avenue/Gladstone Way was proposed instead. This naturally met with fierce opposition from residents in that area, and it was dropped, with the Leaches Lane development being adopted instead. Whilst I have no desire to see houses built in the fields behind my house, I would question why the LDP is proposing the Ash Lane development now when it was rejected by the UDP previously. I thought that the Council were opposed to building on green belt land. The Council has also been forced to act on traffic congestion issues outside Sandycroft Primary School, and there are also problems in Cross Tree Lane outside the Hawarden Village Church School. A Councillor who spoke with us claimed to have watched a bus have to wait for about 15 minutes to get past the Sandycroft School due to traffic congestion. At one of the first consultation meetings, the plans for the proposed development showed two access roads onto Ash Lane and Gladstone Way.	Removal of allocation

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
617	HN1.8 Ash Lane, Hawarden	Object	Ref: Ash Lane Proposed Development I write in connection with the above planning application. I have examined the plans and I know the site well as a Mancot resident. I wish to object strongly to the opposed development and I have made my reasons clear below in relation to the local schools, doctors surgeries and safety for local people. School Budgets / Full Schools: With Flintshire continuously cutting school budgets, where are the young people, living within the 280 apposed new build houses going to be educated? Taking into consideration, all the local primary schools are full. I am aware of families currently sending their children to separate primary schools (Hawarden Village School and Ewloe Green), as neither primary school can accommodate both their children. National Union of Teachers (NUT) You may state, that having more young people in schools will bring more money to the schools to resolve the finance crisis that Flintshire schools are in. However, with the current Flintshire deficit, I doubt this is possible? For your knowledge, I have included a copy of the NUT guidelines on class sizes to this objection letter. (Reference 1: Class sizes). Unsafe Road As a local resident of Mancot, I have noticed how unsafe the area is driving past Hawarden Village School during the start and end of the school day. It is only a matter of time, before an accident happens or a young person is knocked over crossing the road. Along Crosstree lane, all the cars park along the same side as the school and the graveyard down Ash Lane, traffic comes from both directions, as you pass Hawarden Village school and heading towards Ash Lane, you encounter a blind bend on a single track. Doctors My current doctors surgery is a nightmare to book an appointment. Their website quotes “We are finding that demand for appointments is increasing and may soon exceed what we can physically manage”, is your apposed housing development going to be the cause of collapse for this local GP surgery? I do hope you understand my concerns regarding the new housing develop and take on board the points I have made clearly in my letter. To conclude, I have bullet pointed my three main points below. • Local schools are FULL. • Crosstree Lane and Ash Lane are UNSAFE during the school run. • Local doctors surgeries are STRUGGLING to accommodate the local community.	Removal of allocation
635	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. Ten years ago this land was deemed unsuitable for this purpose. What makes it more suitable now? Recently Mancot has been subject to flooding. Capacity at the local Schools an issue. Everyone knows we need more housing, but the sort needed is not being built. Its all about how many can be squeezed in to make more money. What is needed is affordable rented accommodation for young couples and single adults who cannot get a mortgage to buy, but are still in their 30s and 40s and have worked since they left school. There are no one bedroom properties. They are just expected to pay extortionate rents to private landlords or live with their parents. Not fair. We do not need more 3 and 4 bedroom private properties. People on the housing ladder do not need more housing to choose from, there is already plenty.	Removal of allocated site
643	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot Should this development be approved it will be in direct contradiction to the Welsh Assembly’s directive (Planning Wales) of not building on green field sites. The development will also contravene the National Government’s Policy of building on brown field sites before building on Greenfield sites. There are brown field sites within Flintshire which are not fully utilized for building, one example is the former site of County Hall in Mold. Access to the site is proposed to be from	Removal of allocated site at Ash Lane, Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			Ash Lane. This road and Cross Tree Lane already cause issues with the weight of traffic. There is a school on Cross Tree Lane and parents park on the brow of the hills and force traffic on to the opposite side of the road, on a blind bend. Ash Lane is used as a “rat run” for Airbus, Sandycroft and Broughton Park workers attempting to avoid the congestion on Chester Road East between Queensferry and Airbus. It is believed that the traffic survey was undertaken during the period Ash Lane was closed to through traffic due to FCC re-surfacing the road. It is my belief that the data collected is categorically incorrect and should not be used in the planning decision.	
505	HN1.8 Ash Lane, Hawarden	Object	I am writing to object to the planned proposals to develop the land between Ash Lane in Mancot and Park Avenue in Hawarden. I believe that the local area could not support the size of the development. I already have to go to a doctor's and dentist out of the area as local practices are full. Schools are at capacity and this could be of detriment to my children who are of school age. I am also concerned about the council services such as bin collections which are already being reduced! I also believe that it shouldn't be built on green belt land.	Removal of Ash Lane allocation.
507	HN1.8 Ash Lane, Hawarden	Object	I wish to formally object to the proposed change of use at Ash Lane Mancot and Park Avenue, Hawarden. My objections are: if the development goes ahead it will go against FCC policy to not coalesce settlements. If houses are built there will be no distinction between Hawarden and Mancot. Properties in Lower Mancot and Pentre will suffer more frequent flooding events. Should the massive swathe of green belt land be concreted over less flood water will be absorbed by the land and will flow down the hillside to properties at the bottom of the village	Removal of Ash Lane allocation.
509	HN1.8 Ash Lane, Hawarden	Object	I am writing to object to the proposed development between Gladstone Way and Ash Lane Mancot you are not taking the impact that building these homes will have between Hawarden and Mancot you are merging two communities which is against your own policy of not merging separate communities .You have already done this in Hawarden and Ewloe so I ask you the cancel this development.	Removal of Ash Lane allocation.
511	HN1.8 Ash Lane, Hawarden	Object	Ash Lane, Mancot .My husband and I wish to object to the proposed housing of the above properties. We live on Cross Tree Lane and the traffic is already chaotic, not only are child safety at risk but also the residents. The school can not possibly cope with more children and the doctors are definitely under pressure. I personally have had to wait 4 weeks to see a nurse let alone a doctor. Someone is completely out of their mind for even considering this. You need to think again, life is not all about money	Removal of Ash Lane allocation.
513	HN1.8 Ash Lane, Hawarden	Object	I would like to complain about the planned housing development on the fields between Park Avenue, Hawarden and Ash Lane in Mancot. Firstly, the area in question is prone to flooding. Our neighbour's gardens have been flooded quite recently. Secondly, I wish to raise my concerns over the additional vehicles moving around Ash Lane, Cross Tress Lane and Gladstone Way. The parking situation outside both schools is a nightmare already. More cars are more hazardous, and there will be more emissions for the children walking to and from school to be subjected to. Thirdly, it is difficult enough already to get an	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			appointment at the local doctor's, with up to 1000 people living in the proposed developments the facilities we have will not be able to cope.	
515	HN1.8 Ash Lane, Hawarden	Object	I am writing to express my objection toward the prospective housing development of Hawarden in Mancot. When I bought my house in 2009 I was led to believe that the fields at the end of my road on Woodville were part of green belt land. I was hoping you could provide me with the evidence to say it's alright to build on this green belt. Also, could you explain to me how you think Ash Lane / Mancot (and its merged areas) will manage the extra traffic? When you consider the congestion on Cross Tree Lane, Ash Lane and Mancot Way during school times at present. I attended a meeting in Mancot some weeks back where the suggested area to be built upon came up to the farm, now I'm told it will be going right up to Cross Tree Lane. Could you clarify just how much green belt land is being considered for this development? I was also told by your colleagues that there were to be two access points, one on Gladstone Way and another on Ash Lane, could you possibly give me a clear idea of all these points? At the last meeting that I attended regarding this proposed development we were told we could suggest an area that we felt would be better suited. I should like your reason as to why the land between Moor Lane and Rake Lane is not being considered. There you have two good roads top and bottom and fewer people surrounding to object.	Removal of Ash Lane allocation.
517	HN1.8 Ash Lane, Hawarden	Object	Re: Proposed Development Ash Lane I write in relation to the proposal of a housing development at the site of Ash Lane, Mancot. I wish to inform you of my objections to any such proposal. The area around Ash Lane is very busy due to the proximity to Penarlag school. At peak times the traffic is heavy. Flintshire Council have also stopped transport to the local high school in Hawarden meaning that the children have to walk to school. The roads are dangerous to cross as it is due to the heavy traffic flow at school/commuter times. An addition of over 200 homes would mean that the children are put in more danger when walking to schools, which will also be over capacity due to the proposed houses. Traffic has increased greatly recently due to the bus service stopping. Most families nowadays have 2 cars, the additional traffic would cause great risk not only to pedestrians but also to the environment. The A494 is already subject to a reduced speed in order to limit emissions, adding not only extra traffic but the electricity/gas etc. used by the proposed homes would eradicate the benefit of this scheme. There is only one surgery in Hawarden, one in Queensferry and two in Shotton. Each surgery has over 5000 patients and are understaffed. Additional residencies will mean that getting an appointment and accessing healthcare will be nigh on impossible. This would also have an impact on the already overstretched public services. The area for the proposed development is green belt land. A development on this site would mean that there would be no distinct boundary between Hawarden and Mancot. These areas should be protected and Green Belt should only be considered as a last resort.	Removal of the Ash Lane Mancot allocation. .
519	HN1.8 Ash Lane, Hawarden	Object	With regard to the proposed planned development in Hawarden [but actually Mancot!] The proposed development will be directly next to Mancot, but separated from Hawarden [i.e. the outer reaches of Hawarden which is Upperdale], by a main road, Gladstone Way. This is a cynical manoeuvre which will increase the pressure on Mancot's traffic and resources while having further housing with the snob value	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			of a Hawarden address, Also affected will be the pressure on the resources used by the Mancot community. Rector Drew and Sandycroft schools will be hard-pushed to accept the extra children, and Sandycroft CP children already have an uncertain future regarding their secondary school, as feeder school status for Hawarden High was taken away many years ago and John Summers has been demolished. I have been registered at Queensferry medical practice for over 20 years, and getting an appointment is currently near to, or actually, impossible. With regard to the end of life, there will soon be nowhere nearby for our burials.	
524	HN1.8 Ash Lane, Hawarden	Object	Reference LDP / Ash Lane Mancot / Hawarden Development (HWN 005) This land is classed as green belt land it is currently in use for livestock grazing. The hedgerows and mature trees on this site support a large amount of varied species of common and rare bird species among them Goldcrest, Blackcap, Wrens and song thrush. On the ground I have witnessed badgers and hedgehogs. The fields in general and healthy trees help soak up vast amounts of rainwater helping stall the flow through streams and drains protecting lower land at Pentre and Sandycroft. At school start and finish times the top of Ash Lane, cross tree lane and Gladstone Way are a nightmare for traffic and currently very dangerous.	Removal of Ash Lane allocation.
526	HN1.8 Ash Lane, Hawarden	Object	I am writing to you today to object to the planned development on the green barrier between Ash lane & Gladstone Way I feel that this development would be extremely detrimental to the local community. Firstly, this would mean that Mancot and Hawarden would become homogenized into one village as it would eliminate the green barrier currently in place that separates the two. This would also become a merging of postcodes meaning that council taxes would increase in an already high rate area. Furthermore, it would have a devastating impact on the 16th century farmhouse on Ash Lane which has been a part of our local history for hundreds of years. The wildlife in that area would also take a severe knock. Not only is it a habitat for many, many birds & mammals, there are oak trees on that site which are over 100 years old. The environmental impact on our village of this new development would be crippling. Glynne Way is already being monitored for high levels of pollution. The traffic in & out of the village is already at critical levels at certain times of the day. This not only would exacerbate the levels of toxins local people breathe in, but also be an increased risk to the safety of our children who cross these already busy, dangerous roads. This development would add increasing strain on our already struggling local infrastructure (doctors/schools/bin collections etc.). An extra 280 homes would add a possible extra 1000 people in our area who would need to access these services. They simply would not be able to cope.	Removal of Ash Lane allocation.
528	HN1.8 Ash Lane, Hawarden	Object	Residential development at Ash Lane Hawarden for 288 dwellings. I write to object to the proposed plan under the headings: Education - local schools do not have capacity, travel to alternative schools will add to already chaotic traffic associated with the school run and capacity at more distant schools may also be limited. Health - the existing health service will struggle to absorb the influx of 900 new residents. Strong and cohesive Communities – the separate identities of Hawarden and Mancot will be blurred, coalescence of these two diverse communities should be avoided. A similar plan has been not previously been successful, why is this site larger site now being included on green belt land. Biodiversity- Whilst the plan	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			includes mitigation for valuable habitats and protected species the best policy would be to leave the greenfield site alone, green belt land should not be built on and a brownfield site should be sought. Landscape and Townscape - nearly 300 dwellings is bound to increase night ljght pollution. Heritage – The close proximity of 288 houses to would do nothing to enhance the character of this building even with the green infrastructure it will have a detrimental effect, on St Deiniol's Ash Farm.	
532	HN1.8 Ash Lane, Hawarden	Object	Subject: Ash Lane Park Lane Development I would like to express my strong objection to the above mentioned development. I live in Ashfield Crescent Mancot and have numerous concerns. My first objection is flooding. My garden has flooded this year and the council have been out today to try and sort out the issues that have caused this both for myself and my neighbours. If you allow this development to go ahead surely the risk of flooding will increase, my property will be lower down the hill that this new development. My second objection is an increase in traffic, it is currently virtually impossible to use Cross Tree Lane at the school opening and closing times, how can this road cope with any more traffic. How can it be considered Ok to build on Green Belt land, how can this be good for the environment? Please add my name and my wife's name to the list of unhappy council tax payers who would very much like our objections to be listened to.	Removal of Ash Lane allocation.
536	HN1.8 Ash Lane, Hawarden	Object	I am writing to object to the proposed plans to build 280+ houses on the land between Gladstone Way and Ash Lane, the traffic increase going along Ash Lane onto Cross Tree Lane is already extremely dangerous for children going to school more so since they took the buses away and this being the proposed safe walking route for the children, people going to the doctors , the graveyard etc. The local primary and high schools are already over crowded and with the recent withdrawal of funding for teaching assistants throughout the country the increase in more pupils going into the schools will create an even bigger strain on the facilities they have to use, doctors appointments at the Stables Medical Centre are an absolute nightmare to make with no doctors being available to cover the patients they have therefore this is putting a even bigger strain on the out of hours GP and the hospitals with people having go there to get seen. I was born and raised in Mancot I have always believed the farm on Ash Lane to be a listed building and therefore these houses would have to be built around this farm ruining the history of the building along with the fields and environment. Parking is also another issue in the area especially at school times. When St Davids Park was built we were told new facilities e.g. doctors, schools, car parks would be built and as of yet nothing has been done please can you show me the plans for all these new facilities, the expected completion date as well where the extra funding to cover it all would come from.	Removal of Ash Lane allocation.
538	HN1.8 Ash Lane, Hawarden	Object	Please find this as my refusal to accept Ash lane as a good site to plan a proposed development of possibly 288 houses. I have lived in Mancot 24 years and before that my childhood home was in Hawarden . We have not enough school places, hard to find doctors appointments, flooding locally and increasing traffic problems . How are we suppose to just get by with an already insufficient infrastructure to support is and our families locally ??? The green belt you plan to pass as an appropriate site is between Hawarden and Mancot and will join the two villages together ? I didn't think you could do this ?	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
542	HN1.8 Ash Lane, Hawarden	Object	We wish to strongly object to the proposed development for Ash Lane/Park Avenue on the following grounds: • The size of the development will have a serious negative impact on the infrastructure and will cause problems with provision of essential services in the local area. • The local schools are oversubscribed and the sites do not have the space to increase the size of their buildings. • It is very difficult to get an appointment with a doctor at the surgeries that cover the proposed development area. This has been the case for a long while for which there is no resolution so the situation will worsen if the proposed development plan goes ahead. • Local transport services have been cut substantially and are already inadequate for the number of local residents. • The road traffic bottle necks at the top of Gladstone Way and Cross Tree lane, especially at peak times. There is no space to widen the road so a large development increasing traffic significantly should be avoided. There are already concerns about the high air pollutants in the area. An increase in traffic and traffic jams resulting from the proposed development will exacerbate this problem. • There are traffic and safety problems outside both Sandycroft Primary School and Hawarden Village School. The proposed development will significantly worsen these problems. • The drainage system is antiquated and overloaded. Mancot and Gladstone Way already have problems with flooding and bursts and previous developments in the area have made this worse. The development will further add to this problem. • The national policy is that Green belts are not built on and this proposed development plan uses Green Belt land. Problems such as those mentioned above would be alleviated if smaller sites throughout Flintshire were considered, thereby sharing the increase on essential services and lessening the impact to small villages such as Hawarden and Mancot. In summary we consider the proposed development to be inappropriate in this location and for the reasons mentioned above we submit our objections for your consideration	Removal of Ash Lane allocation.
556	HN1.8 Ash Lane, Hawarden	Object	Objection to allocated site at Ash Lane, Mancot Local schools are full to capacity The parking on the road outside the primary school is horrendous at peak times Doctor's surgery is already full. The proposed development will stretch this further The roads are very busy, the proposed development would further add to stress, noise and pollution. The air quality is being monitored in a bid to reduce pollution and the Council are already taking precautions by reducing the speed limit on the A494 so allowing further traffic in the area will compound this existing problem. Building such a large estate will contribute to disruption on the roads I believe there are still brownfield sites that could be developed and the unique characteristics of the two communities would be swallowed up in a conglomeration of a non-specific community. Socially there are no opportunities to engage young people, which could increase potential for anti-social behavior and crime. I currently take my children outside of the area to participate in social activities. St Deniol's Ash Farm is a Grade 1 listed building, development plan should strive to protect this unique attraction. This development would have a negative impact on the locality, which would outweigh the supposed opportunities for work and local businesses, if this development goes ahead it would have a negative impact on my family life.	removal of allocated site at Ash Lane, Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
576	HN1.8 Ash Lane, Hawarden	Object	I wish to put in an objection to the proposed housing development at Ash Lane. Mancot as detailed below The Welsh Government Document Planning Wales Policy Edition 10 clearly states that rural spaces should be protected and no settlements should coalesce. In my opinion the village of Mancot would clearly be merging with Hawarden forming one mass of housing on Green Belt land. As you should be aware Mancot has very poor access to the surrounding main traffic routes. Both Cottage Lane and Colliery Lane have no footpaths or adequate lighting and are widely used by cars and pedestrians to get to the A494 and Queensferry where the main shopping centre is. Cross Tree Lane is already infamous as a “Rat Run” and with parking totally unacceptable at school times, despite what ever measures you have planned for it. I do not think that with the influx of so much extra traffic the road system could cope, not to mention the lack of schools, medical facilities and air quality deterioration. There may be a need for limited housing in the area but such large scale development will certainly damage the village of Mancot and it just will not survive with the pressure of so many cars, carbon emissions and pressure on services and schools. With the present situation of flooding and high river water levels it would appear to me that any extra housing development putting extra surface water into the system, and curtailing natural drainage, into what is already inadequate, would be a disaster just waiting to happen especially with us being daily warned about climate changes, and the Welsh Government “Adopting to Climate Change” clearly warns us of this. Pentre has flooding problems and at times even Airbus seems to be on alert. I am sure that when you have a detailed look at these proposals you will agree with the residents of Mancot and Pentre that the Ash Lane development are a non starter	Removal of Ash Lane allocation.
578	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot I am seriously opposed to the development as having lived here for 15 years and calling this home, bringing my children up to explore and experience a relatively safe place I believe this development would have a negative impact on the community and environment. Increasing the number of homes will have a negative impact on the already straining resources, schools, Doctors, roads, and it would change the dynamics of the two separate communities. By building around the Grade 1 listed building it will spoil the uniqueness of each community. At the moment we are privileged to see nature on our doorstep, watching buzzards overhead, observing sheep as they lamb. The insect population is diminishing as green fields and hedges are lost to development. The number one priority to protect our children's future is to recognise the environmental impact these building projects have. I recognise that we need new homes for an increasing population but not at the expense of our environment. I know many are objecting because they argue the schools, doctors surgeries, roads and services cannot cope with the influx of a huge estate and again my concerns are for the welfare of my children. There will be no increase in social opportunities for youngsters and Mancot has very poor opportunities for youngsters to engage in social activities so I worry what an extra 400-500 children will do and these is a potential for an increase in anti social behaviour and even crime rates may go up. I'm writing from a personal angle to protect my environment and family's future and I thank you for giving me the opportunity to voice my concerns.	Removal of allocated site Ash Lane, Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
592	HN1.8 Ash Lane, Hawarden	Object	Reference; Ash Lane development (HWN005) After examining the plans for this development and knowing the area so well, I wish to object strongly to the development of these houses in this location. I believe developing on this piece of land will cause more issues in our local area. We are already experiencing high traffic levels in this area especially during the school pick up and drop of times. My daughter attends Sandycroft CP and many parents have already expressed concerns over the traffic and concerns for the safety of the children walking to school. Due to all the parked cars on Leaches lane, Hawarden Way and Mancot lane the two way traffic is unable to flow safely. The size of this development will massively increase the traffic and put children at further risk of harm. Secondly I am concerned about overcrowding in the schools, since John Summers High school has closed down it has been identified that Hawarden High school and Connah`s Quay high school have become over populated, if the development goes ahead then this will increase schools capacity and have a big impact on the children`s education. Thirdly I want to raise the issue about increased surface water flooding, our area is well known for flooding. The officer at the initial meeting said they can put flood prevention measures in place and make sure the run off is the same as the green belt run off but I would like to know who is responsible for ensuring this happens? I believe it is easy to say you can do this but it's another thing making sure it works. Therefore, I ask that Flintshire County Council refuse this Planning Application and encourage the development to be resubmit in a more suitable location.	Removal of allocation
610	HN1.8 Ash Lane, Hawarden	Object	Objection to Ash Lane, Mancot I have several objections to these plans, as follows; 1. Lack of infrastructure to support extra homes. No consideration has been given to where these new inhabitants are going to go to school, visit the doctors, and how they are going to drive into the village. a. The local primary schools and high school are at capacity. Building new homes within their catchment area has a detrimental affect on the quality of education as resources are stretched and we do not want bigger schools. b. The Stables Medical Centre in Hawarden which covers both Hawarden and Mancot is already failing the residents it currently serves. It is not acceptable to bring more people into a surgery that it is already nearly impossible to get an appointment at. c. Local roads are simply not big enough to carry any more traffic. At peak times, the roads into the area in question are only effectively single track. 2. Merging of two built up areas. a. The area for proposed development is currently green space providing a separation of two villages. Building on this plot would effectively join up Hawarden and Mancot, there would be no separation the two. Hawarden is already joined to Ewloe and Drury and Mancot is already joined to Sandycroft, and to Pentre which is joined to Queensferry, then Aston and Connah's Quay. Merging Hawarden and Mancot will make what is currently a semi rural environment into one built up area like suburbia. b. Hawarden and Mancot are two separate communities both with their own history and character and should be kept as such. c. The green space between Hawarden and Mancot provides an ecosystem for which is essential for wildlife. Building upon it will cause destruction of habitats for badgers, foxes, hedgehogs etc. Please accept this letter as a formal complaint and objection to the LDP plans for this area. I await your reply.	Removal of allocation

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
612	HN1.8 Ash Lane, Hawarden	Object	I am writing to object to this proposed development in the strongest possible terms. The number of cars using the proposed entrance/exit on Ash Lane will significantly increase traffic to an unprecedented level. This coupled, with the already notoriously dangerous junction on Cross Tree Lane will potentially make the area even more unsafe for road users and pedestrians alike especially for children using this route to walk to school. If this proposal for 288 houses goes ahead, the resultant increase in residents will put untold strain on an already struggling infrastructure. It is already increasingly difficult to get an appointment in our local doctors surgery & in addition there is insufficient parking available to support a substantial increase in patients. The local bus service has already been significantly reduced providing no service at all at certain times of the day forcing residents to use cars instead for the daily commute to work etc. We are very proud of our local community & we would like our village to retain its own identify rather than be 'swallowed up' and become an extension of the neighbouring ward of Hawarden. Finally, this area of green belt land is of vital importance to the local residents providing a much needed green space in an area that is in danger of becoming overpopulated. I strongly beseech the powers that be to seriously consider the potential disruption & negative impact that this development would have on our village and to look at other brown field sites in the area as a viable alternative. Thank you for taking the time to read this objection & I look forward to your response.	Removal of allocation
651	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot I believe that, if it is approved, this development will go against Flintshire county Council's policy to not coalesce settlements. If houses are built on this land there will be no distinction between Hawarden and Mancot. At present the two villages are disparate settlements with a narrow lane, only allowing one vehicle access at a time, connecting the two. Due to houses on both sides there is no way to increase the width of this lane. At present the residents of Mancot and Hawarden have great difficulty in accessing Doctor's and Dentist appointments, due to the deficiency of such professionals at local surgeries. Should hundreds more people live in the area there will be greater waits for appointments.	Removal of allocation at Ash lane, Mancot
672	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. As a resident in this area for over 8 years I am more than aware of the difficulty in securing an appointment to see a doctor, an extra 280 new homes will only make this even more difficult. Parking facilities are not sufficient to facilitate extra appointments. The local Primary School will also struggle to accommodate more pupils. Planning Policy Wales also states that green belt land should not be built.	Removal of allocation at Ash Lane, Mancot
676	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. At present the residents of Mancot and Hawarden have great difficulty in accessing Doctor's and Dentist appointments. Should hundreds more people live in the area, there will be greater waits for appointments. I am concerned that if this development gets approved, properties in Lower Mancot and Pentre will suffer more frequent flooding events. Already in 2019 properties in Pentre were flooded. I have tried to find the report into this on FCC website but it does not appear to have been completed. Should the development go ahead and a massive swathe of green belt land be concreted over less flood water will be absorbed by the land and will flow down the hillside to	Removal of allocation at Ash Lane, Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			properties at the bottom of the village. Should hundreds more vehicles use Ash Lane to access and egress the proposed development I am concerned for the safety of pedestrians. Ash Lane and Cross Tree Lane have been designated as a safe route for students to walk to school, they have to cross busy roads and with more congestion and traffic this will be an accident waiting to happen.	
700	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot Because so many areas of Flintshire have been developed this is one of very few green areas still remaining and therefore must not be destroyed. The land in question is prime agricultural land. In addition it is supporting a haven of wildlife with badgers, bats and birds. Within this land there are a number of magnificent trees, some of which are subject to preservation orders. Concerns regarding flooding as a result of the loss of natural drainage. Dis-used mine shafts underneath land, which was resulted in a number of nearby properties suffering subsidence. Increase in the volume of traffic. No frequent bus service for Mancot. No infrastructure to accommodate increase in traffic. No capacity in local schools No capacity in local medical services Insufficient police presence in the area This site was dismissed as part of the UDP for the same reasons raised today, all of which still exist. The protection of this green barrier will serve to prevent coalescence of the Hawarden and Mancot communities, whilst the proposed housing would bring this about.	Removal of allocation at Ash Lane, Mancot
710	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. This site was removed from the UDP 10 years ago, why has it been allocated again? Surrounding road network will not be able to support this development. Roads narrow, issues with parking, congestion. Concerns for children's safety walking to and from school. Lack of capacity in local schools to accommodate additional pupils. Lack of capacity in doctor's surgery Coalescence of Mancot and Hawarden.	Removal of allocation at Ash Lane, Mancot
724	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ewloe Found the FCC Objective portal difficult. Found the language in the Deposit LDP difficult. Object to the proposal to invade a designated UDP green barrier area. The community has struggled for decades to live with the remnant poor design of dangerously congested "B" roads and junctions, connecting the A494 (A55) bottleneck, skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose. The roads are way to congested anyway. There is no consideration for the extra volume of traffic so close to a school. Doctor's surgery cannot cope with patients now so this will make it worse.	Removal of allocated site at Ewloe
1092	HN1.8 Ash Lane, Hawarden	Object	HN1 (8) Ash Lane Hawarden. The plans seems to fly in direct opposition to the Welsh Assembly reduction in carbon emissions, the building of this number of new houses will increase the number of cars by at the very least one per household. Has the concept of green belt/barrier between settlements been abandoned, in these cases the separation of settlements aim will cease. The construction of large scale housing developments requires a large number of new residents. These will become 'dormitories' for English cities as there appears to be insufficient work opportunities in North East Wales to support such large developments.	Removal of allocation

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
1096	HN1.8 Ash Lane, Hawarden	Object	HN1(8) Ash Lane Hawarden It is on green belt land which should never be built on. It would mean joining two villages which have always been separate. There has been mining in the area since 1800 which were not registered and I would draw your attention to the sink hole in Witton Road which a few years ago almost killing the lady who lived New housing in Mancot has caused flooding and increased traffic. There is a blind corner in Ash Lane. The schools do not have capacity nor do the doctors or dentists. Hawarden and Mancot are joined if this goes ahead then Mancot, Pentre Queensferry will also be joined. St Deniols Ash Farm is beautiful and full of history, surrounding it with houses will diminish it's status. Cottage Lane is a single track and is used as a rat run.	Removal of allocation
1098	HN1.8 Ash Lane, Hawarden	Object	HN1(8) Ash Lane Hawarden Petition signed by 996 people, 243 physical signatures and the remainder on an online 'Change.org' petition. 1. Local schools are oversubscribed. 2. There are already significant traffic and safety issues outside local schools. 3. GP and Dental surgeries are limited in this area are oversubscribed and struggling to cope. 4. Building on land prone to flooding could have devastating implications for existing dwellings and the environment, lower Mancot and Sandycroft flooded earlier this year. 5. Loss of green belt. 6. Growth beyond what is sustainable for a village. 7. Inadequate local transport services. 8. Limited facilities in the village. 9 Increased traffic will lead to greater pollution. 10 loss of wildlife. 11. Coalescence of two settlements. 12. other brownfield sites are available. 13. loss of agricultural land. 14. the LDP Preferred Strategy amber categorisation said the site had constraints. 15. Glynne Way is already a subject to air quality monitoring. 16. Local cemeteries are overstretched.	Removal of allocation
1109	HN1.8 Ash Lane, Hawarden	Object	Highly object to the proposed Ash Lane development. this would be disastrous for our small Mancot village. Surely there are more suitable sites elsewhere for such a large scale development. Our schools are at full capacity at the moment, they don't always have room for the current children in the village. Adding more children is just not doable. trying to get a doctors appointment at the moment as it stands without the extra houses is next to near impossible. Our small village is just not suitable for such a development.	Removal of allocation
1295	HN1.8 Ash Lane, Hawarden	Object	HN1.8 Ash Lane Mancot Objection to removal of the Green Barrier and the coalescence between Hawarden and Mancot. the site is too large, local services will not be able to cope land is currently used for agricultural uses already traffic issues within the area; congestion, air pollution and dangerous roads due to traffic Local schools are full	remove site
630	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. This land is green belt land and should be preserved as such. The impact that building on these houses in our already packed village would be devastating. Flooding has become a big problem in Mancot, Pentre and Sandycroft with the Primary School suffering last year and having to close for a few days. If 280 houses were built, that is potentially 560 extra cars coming in and out of our village, on an already extremely busy road. Ash Lane has recently been designated as part of the	Removal of allocation Ash Lane

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			safe walking route to Hawarden High School, how can this possibly remain so? Local schools are already full, with some being oversubscribed. Capacity issues at local GP Surgeries	
634	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. The proposal is alien to Welsh Government policy of not using green barrier land for housing development. There are many sites of brown lane available close by, which have not been referred to. The proposed development is less than a mile where a restriction on speeding has been imposed to aid air quality. As there is very limited transport arrangements in Mancot, this will be a thoroughly unsafe policy as proposed development would necessitate more cars and hence poorer air quality. Keep the green barrier green.	Removal of allocation Ash Lane, Mancot
652	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot Green space is essential for the well-being of existing residents, especially children. Alternatives such as building on brown site land fulfils the need for new housing with minimum adverse impact. The quality of air, light and noise will be materially affected by the construction. Pollution is inevitable with harmful emissions, not just during the building phase, but in perpetuity. Green issues cannot and should not be ignored. Heavy traffic and lorries thunder along the roads, even before the traffic caused by 280 plus homes is factored in. Another great concern is the lack of infrastructure to support these houses. The local surgery is almost at breaking point as patients experience difficulty in making an appointment with a GP. The local schools are full to capacity. The suggestion to bus children to schools further afield is a breach of ecological and moral principles. Flood damage is an increasing danger, the construction of 300 houses would increase the risk significantly. Mancot, Hawarden and Pentre are in danger of losing their individual character and becoming an urban, polluted sprawl.	Removal of allocation at Ash Lane, Mancot
654	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot I am concerned that, if this development gets approved, properties in Lower mancot and Pentre will suffer more frequent flooding events. Already in 2019 properties in Pentre were flooded. I have tried to find the report into this on FCC's website but it does not appear to have been completed, against FCC's policy of investigating all such flooding events. Should the development go ahead and a massive swathe of green belt land be concreted over less flood water will be absorbed by the land and will flow down the hillside to properties at the bottom of the village. Should hundreds more vehicles use Ash Lane to access the proposed development I am concerned for the safety of pedestrians, particularly school students. Ash Lane and Cross Tree Lane have been designated as a safe route for students to walk to school, they have to cross busy roads at some point and with more and more congestion and traffic this will be an accident waiting to happen. The road from Queensferry to Sandycroft, Chester Road East is already congested at peak times and busy during the day, to add hundreds more vehicles to an already busy road will cause misery for motorists and residents in the affected areas.	Removal of allocation at Ash Lane, Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
657	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot The pollution and reduced air quality that will be caused by hundreds of additional vehicles in the vicinity of the proposed development. FCC has recently taken measures to increase air quality by reducing the speed limit, why then propose a development that will reduce air quality for the residents of Hawarden and Mancot? Should this development be approved it will be in direct contradiction to the Welsh Assembly's directive (PPW) of not building on Greenfield sites. It will also contravene the policy of building on brown field sites before Greenfield sites. There are brownfield sites available, one example is County Hall, Mold. On this lane is a grade 1 listed building which has been a fixture of the area for many years. Should this development go ahead it will completely destroy the historic character of St Deiniol's Ash Farm.	removal of allocated site at Ash Lane, Mancot
673	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. At present the residents of Mancot and Hawarden have great difficulty in accessing Doctor's and Dentist appointments. Should hundreds more people live in the area, there will be greater waits for appointments. Access to thr site is proposed to be from Ash Lane. This road and Cross Tree Lane already cause issues with weight of traffic. There is a school on Cross Tree Lane and parents park on the brow of the hill and force traffic on to the opposite side of the road, on a blind bend. Ash Lane is used as a "rat run" for Airbus, Sandycroft and Broughton Park workers attempting to avoid congestion on Chester Road East. It is believed that the traffic survey was undertaken during the period Ash Lane was closed to through traffic due to FCC resurfacing the road. It is my belief that the data collected is categorically incorrect and should not be used in the planning decision.	Removal of allocation at Ash Lane, Mancot
677	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. At present the residents of Mancot and Hawarden have great difficulty in accessing Doctor's and Dentist appointments. Should hundreds more people live in the area, there will be greater waits for appointments. Should hundreds more vehicles use Ash Lane to access and egress the proposed development I am concerned for the safety of pedestrians. Ash Lane and Cross Tree Lane have been designated as a safe route for students to walk to school, they have to cross busy roads and with more congestion and traffic this will be an accident waiting to happen. The road from Quensferry to Sandycroft, Chester Road East, is already congested at peak times and busy during the day, to add hundreds more vehicles to an already busy road will cause more misery for motorists and residents in the affected areas.	removal of allocation at Ash Lane, Mancot
703	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot Because so many areas of Flintshire have been developed this is one of very few green areas still remaining and therefore must not be destroyed. The land in question is prime agricultural land. In addition it is supporting a haven of wildlife with badgers, bats and birds. Within this land there are a number of magnificent trees, some of which are subject to preservation orders. Concerns regarding flooding as a result of the loss of natural drainage. Dis-used mine shafts underneath land, which was resulted in a number of nearby properties suffering subsidence. Increase in the volume of traffic. No frequent bus service for Mancot. No capacity in local schools No capacity in local medical services Insufficient police presence in the area This site was dismissed as part of the UDP for the same reasons raised today, all of which still exist.	Removal of allocation at Ash Lane, Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			The protection of this green barrier will serve to prevent coalescence of the Hawarden and Mancot communities, whilst the proposed housing would bring this about.	
709	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot Removal of this green barrier would lead to the complete coalescence of Hawarden and Mancot, merging the two settlements and altering their character. The preferred strategy stipulates (1d) that community identity must be protected and safeguarded. The merging of the two settlements would contravene FCC own policies. It is also in contravention of PPW which states that green barriers should be reviewed in order to 912e) avoid coalescence and green belt boundaries should only be altered in exceptional circumstances (3.36) Proposed development is very large in relation to the present size of the village, resulting in a 20% increase. This is also a breach of FCC preferred strategy which outlines how any planning policy must “identify and deliver the right strategy sites – location, size, type to meet present/future needs a more informed view than the traditional approach of over allocation.” A large development such as this would stretch existing infrastructure beyond breaking point. Issues with traffic, congestion and pollution in the immediate local vicinity, particularly Cross Tree Lane and Glynne Way. This development would worsen a known air quality issue Local schools will be unable to cope with the additional pupils	Removal of allocation at Wrexham Road
711	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. Loss of green belt land – not compliant with PPW on not building on Greenfield land. What consideration has been given to brownfield sites? Infrastructure – Lack of capacity in local schools, doctors surgery. Lack of capacity in current road network, road at present cannot cope with the volume of traffic at school times. Road safety issues Historic impact – Ash Farm is a Grade 1 listed building. I strongly feel that the farm land around this historic building should be retained as part of the farms character. The merging of communities. This proposal will completely join the villages of Hawarden and Mancot with no definitive separation.	Removal of allocation at Ash Lane, Mancot
723	HN1.8 Ash Lane, Hawarden	Object	I would like to notify you of my objection to the proposed planning on the fields between Ash Lane in Mancot and Gladstone Way. I currently live on Hawarden Way in Mancot and have lived in Mancot for nearly 30 years. As you can imagine, I have seen many changes to my village in this time. Firstly, i have concerns of the impact that taking away more green land will have on the drainage in the area, after recently suffering a flood on our property. With no plans to address this, we could be facing more damage to our property and area in the future. 280 houses will of course add to the number of Mancot residents, and children attending local schools. I have two small children who I would like to attend a local primary school as I myself have done. After visiting, spaces are already limited and class sizes are rising. As a primary school teacher I know the detrimental effect that this can have on a child's education. Additionally, the strain this would have on the school and standards. With no intention to address this issue, I worry the impact this will have. This may also mean that children are forced to attend primary schools out of area and unable to socialise with their peers easily within the village.	Removal of allocation

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
729	HN1.8 Ash Lane, Hawarden	Object	It has been brought to my attention that land surrounding Ash Lane & Park Avenue has been placed on the local development plan. I strongly object to any development of this land. My five objections are detailed below: Historic Significance: Coalescence: Traffic and air pollution Greenbelt Land Local services	Removal of allocation
905	HN1.8 Ash Lane, Hawarden	Object	Green Belt Provision and Coalescence of Hawarden and Mancot The deletion of Green Belt land to make way for this proposed development is most problematic because of its dual role in breaching greenbelt policy and coalescing two distinctive settlements in Hawarden and Mancot. The Ash Lane / Park Avenue site is Green Belt land which acts as a Green Barrier between the settlements of Hawarden and Mancot. As such, the decision to include this site requires the moving, or deletion, of the Green Barrier and its constituent Green Belt land. This would lead to the total coalescence of the settlements of Hawarden and Mancot, completely eliminating the Green Barrier between the two settlements. This is in direct contravention of the Preferred Strategy Consultation Document which states that (12e) green barriers should be reviewed “against the criteria in PPW (Planning Policy Wales) in order to avoid coalescence”. Planning Policy Wales (PPW) explicitly states that Green Belt boundaries should (3.36) “only be altered in exceptional circumstances” and that (3.37) “to maintain openness, development within a Green Belt and a green wedge must be strictly controlled”. Further, PPW also states (3.69) “when considering applications for planning permission in Green Belts or green wedges, a presumption against inappropriate development will apply” adding that (3.71) “the construction of new buildings in a Green Belt or green wedge is inappropriate development” before listing a limited number of exclusions, none of which are pertinent to the proposals outlined for this site. In the document Qualitative Assessment of Ash Lane Site, reference is made to ‘Landscape/Townscape’, stating that (11) this development “would result in the loss of a greenfield site and has the potential to have a moderate adverse effect on landscape character”. It is our view that the classification of this as ‘moderate’ is a gross understatement – this is not simply a ‘greenfield site’. It is a Green Belt and as such, and as stated above, is not to be developed in normal circumstances. Failure to recognise this is a failure to (16a) ensure that the characteristics and features of the landscape are recognised and considered”. Road Networks and Environmental Impact Size of Proposed Site	Removal of allocation
1099	HN1.8 Ash Lane, Hawarden	Object	HN1(8) Ash Lane Hawarden. My objections to the development are 1. More pressure on the schools and doctors which are already struggling. 2. Pressure on the roads which are not fit for more traffic and safety of children going to local schools. 3. Drainage are already suffering from flooding.	Removal of Allocation
1110	HN1.8 Ash Lane, Hawarden	Object	Objection to Ash Lane Mancot To build on farm land where cattle and sheep are grazing now and have been for at least 100 years does not bode well. how can you justify this? To even consider building houses right next to St Deniols Ash Farm yard is of great concern to me and many others. animal feed is stored there so to have houses do close would be a huge hazard, hay and silage are very inflammable im sure you agree. St Deiniols Ash Farm is a grade I listed building and should not be in the middle of a housing estate The infrastructure is also a concern to Mancot residents, how will schools be able to cope with the influx of new children doctors are another concern, patients have to wait for weeks now so will doctors	Removal of allocation

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			manage another 280+ houses in Hawarden only has one doctors surgery. Roads Ash lane, as stated ash lane is a lane and not a road and not suitable for extra traffic. increase in traffic will have a detrimental impact on the environment.	
655	HN1.8 Ash Lane, Hawarden	Support	These representations are made on behalf of the Hawarden Estate and support the allocation in Policy HN1 of site 8 (Ash Lane, Hawarden). A location plan and Anwyl Homes' Illustrative Masterplan for this site are attached. The Estate considers that the LDP meets the tests of soundness for the reasons set out in this representation. The Hawarden Estate agree that the proposal to allocate 10.9 hectares of land between Ash Lane and Gladstone Way is appropriate and supported by robust evidence. This site provides for large-scale infill that will widen the range and choice of housing in the local area and create new Environmental Networks including a new landscape buffer and area of public open space between Ash Lane and Gladstone Way that will improve pedestrian links and encourage healthy interaction with the natural environment. The site is sustainably located adjoining a hub of community facilities including the library, church, bowling green, children's play area and football pitch. The post office and public house are within 200 metres of the site. Hawarden provides a local service centre with schools, shops and local employment. The site is well connected to public transport, with a range of bus services nearby and located less than 800 metres from Hawarden train station. A highly sustainable development can be achieved in this location. Ash Lane is highly deliverable, being located on the edge of a popular area as shown by the house price 'heat map' below. Discussions with a local housebuilder, Anwyl Homes, are at an advanced stage and the estate is confident of the site's deliverability. Anwyl Homes have a track record of housing delivery in Flintshire and are working towards a planning application for the site.	
1244	HN1.8 Ash Lane, Hawarden	Support	Ash Lane, Hawarden, 288 units A water supply can be provided for this site. A Hydraulic Modelling Assessment (HMA) will be required to determine the point of connection to the public sewerage system and potential developers would be expected to fund investigations during pre-planning stages. The findings of the HMA would inform the extent of any necessary sewerage upgrades, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). The proposed growth being promoted for the Queensferry Wastewater Treatment Works (WwTW) catchment would require improvements which would need to be funded through our Asset Management Plan (AMP) or potentially earlier through developer contributions.	

Council response
HN1.8 Ash Lane Mancot Not accepted. The Deposit LDP consultation has received over 1200 representations on various aspects of the plan strategy, allocations and individual policies. To ensure all points within this large volume of representations are answered the Council have grouped and summarised representations made on allocated sites together and

Council response
prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Petition A petition on behalf of 996 individuals was submitted which raised the following points: • Schools • Traffic and safety issues • Doctors / dentists • Flooding • Green belt (barrier) • unsustainable growth • pollution and air quality monitoring • wildlife • coalescence • other brownfield sites • agricultural land • Preferred Strategy 'amber' • Local cemeteries are all responded to in the sections below. The Council has grouped all representations on this site, including those on the petition, into topic or issue based groupings using the following headings: • Procedural • General • Community identify • Brownfield land / alternatives / agricultural land • Suggested alternatives sites • Green barrier • Drainage / flooding • Amenity • Services / infrastructure • Traffic / transport • Environment – natural • Environment – historic

Council response
• Mining • Supporting representations Procedural The Council refutes claims that its conduct is improper and addresses each point in detail: The Preferred Strategy consultation document was accompanied by a Background Paper which set out an initial broad brush assessment as to whether each candidate site complied with the Preferred Strategy. The actual wording used alongside HWN005 is 'The site complies with the Council's Preferred Strategy, however there are site constraints that would need to be overcome to allow the site to be developed'. It does not refer to 'significant' constraints and clearly references that the site complies with the Preferred Strategy subject to constraints being overcome. It is not clear what is meant by the 'speed' of the consultation. The preparation of the Plan has involved several stages of engagement and consultation and a mailing list has been added to at each successive stage to ensure that interested parties are notified of successive consultations. At each consultation stage advance notice has been given to Local Members and Town and Community Councils, including briefings to outline the purpose and broad content of the forthcoming stage in the plan process and what was expected in terms of responding to consultations. Each consultation has involved press notices, press releases, social media posts, consultation material on website and at consultation venues. The Deposit consultation stage is a formal stage and the Council has to work within legislative and other requirements. It is inevitable that the consultation will involve a considerable amount or background evidence and documentation to accompany the Plan itself. The Council summarised all the consultation and engagement stages undertaken with the preparation of the Plan in the Initial Consultation Report which was available for inspection during the Deposit consultation exercise. The Plan was made publicly available in the run up to being reported to Cabinet on 16/07/19 and Full Council on 23/07/19. It also remained available for public inspection on the Council's website until the start of the consultation on 29/09/19. The 'drop ins' were not an afterthought as suggested by objectors but part of a comprehensive consultation plan which included press notice, press release, social media posts, website, consultation documents at consultation venues, all documents at Ewloe and County Hall offices and a series of 9 permanent exhibitions. The details of the drop in sessions were publicized in advance of the start of the consultation including being part of the mail drop and on the website. Posters advertising the drop-ins were placed on noticeboards at each of the venues. An exhibition board was placed at the Mancot Community Library as well as key consultation documents. The drop in session at Mancot had the highest attendance of any of the sessions and in this context it is difficult to see how the consultation was 'minimal' or 'secretive'. The Council has used an industry leading specialist consultation portal which is used by a large and growing number of planning authorities in Wales and England. It is disappointing so many objectors found it difficult to use but the Council made it clear that the portal was not the only means of making representations as they could also be made via letter, representation form and e-mail. Of the 196 representations regarding the Ash Lane site 10 reps were via the portal, 73 by letter and 113 by e-mail, so there were clearly other means to objection than just the portal. It is disappointing that objectors have criticised the conduct of Officers at the drop in at Mancot Village Hall. Officers acted in a friendly and professional manner in the face of difficult circumstances involving a large number of residents where feelings were running high. In fact the Council received a complementary e-mail the next day from a member of the public who commented 'May I commend you on the professional manner in which your staff presented themselves'.

Council response
Officers were not dismissive but, sought to undertake their jobs to the best of their ability in terms of explaining and justifying the Council's LDP. Part of explaining the context for the site is the Inspectors recommendation for the site to be allocated in the UDP. This is a matter of fact. The assessment of candidate and alternative sites has quite properly involved a desk based assessment using known data sources and has involved consultation with a wide range of internal and external consultees. The approach was set out in a 'Candidate Sites Assessment Methodology Background Paper' which was consulted on in 2015 to ensure that there was consensus as to the manner in which sites would be assessed. However, the choice of allocated sites is not solely based on technical assessments but 'planning judgement' having regard to the 'fit' with the Preferred Strategy, factual references from the UDP, site visits and local knowledge. The culmination of this process is set out in the Background Paper 8 which provides a conclusion for each site. It is accepted that the IIA includes an assessment of 'reasonable alternative' sites but it is evident that these sites are not as sustainable as the chosen allocations. The Council has conducted a thorough and robust assessment of 700 plus candidate sites and nearly 100 alternative sites and published the summary of the assessments in Background paper 8. The Council also published the sustainability appraisal of sites in the Integrated Impact Assessment (IIA). There is no formal objection from any statutory consultee to the allocation. The Council made the Candidate Site Register publicly available in 2015 and the Alternative Sites publicly available in 2018. The Preferred Strategy consultation in late 2017 was also accompanied by a Background paper which set out the initial broad brush assessment of each candidate site against the preferred Strategy. This background paper was one of the consultation documents and interested parties were able to, and did in fact comment on it. The Council is aware that there is brownfield land in Flintshire but this is primarily along the R. Dee and is constrained by flood risk, contamination and proximity to international nature conservation designations. Such land is not suitable for residential development. Officers have clearly visited sites as part of the candidate site assessment process outline above. The Council has considered a large number of candidate and alternative sites in the locality - 12 in Hawarden, 25 in Ewloe and 7 in Mancot. It is a matter of fact that the UDP Inspector recommended the allocation of land at Ash lane for housing but that this was not carried over into the final adopted Plan for non-planning reasons. This is an important context for the site in that an independent Planning Inspector has previously looked favourably on the principle of developing the site and having been reassessed there has been no material change from the assessment and conclusion of the previous Inspector, and relative to other site options considered. Following the examination of the Plan by a Planning Inspector, the subsequent Inspectors Report and recommendations will be binding on the Council. Guidance on High Court Challenges are set out in para 7.3 of the Welsh Government Edition 3 of the Development Plan Manual. General The site was put forward by an objector as an 'omission site' as part of the UDP. In the Deposit UDP a site had been allocated at Lower Ash Farm on Leaches Lane but this was not looked on favourably by the Inspector who considered it would harm the green barrier and the rural character of this part of the settlement. Instead, the Inspector recommended that land at Ash lane be included in the Plan as a housing allocation. Following consideration of the Inspectors Report, 'Proposed Modifications' to the Plan were published and this resulted in objections to the sites inclusion. Following consideration of objections the report to Full Council on 09/03/10 contained a recommendation in respect of Ash Lane which was 'That MOD 11/63 be carried forward to adoption on the basis that the objections raise no substantive new issues that warrant a re-opening of the public inquiry of Further Proposed Modifications'. However, the Council subsequently resolved to consult on Further Proposed Modifications

Council response
involving 3 sites (including the non-allocation of Ash Lane). Following the consideration of consultation responses the Council resolved in Jan 2011 to adopt the UDP without the Ash Lane site. The rationale for the site's removal at the time was not based on evidenced planning related objections put forward by Members. At the time of receiving the Candidate Sites, this particular site was mapped as a Hawarden site. This is perfectly valid as the site adjoins the settlement boundary of both Hawarden and Mancot. This is has nothing to do with house prices. The omission site which the Inspector considered was some 13ha in size and the Inspector recommended the inclusion of a smaller 8ha parcel of land. The site recommended by the UDP Inspector would have had the whole site accessed off Ash lane and it was evident that there are concerns about Ash Lane and Cross Tree Lane. Therefore in assessing the candidate site, the allocation boundary was pushed further southwards in order to allow a vehicular access onto Gladstone Way, thereby enabling two vehicular access points. The allocated site therefore includes an additional field amounting to approx. 2.4ha. In the UDP the settlement of Hawarden had one housing allocation which was at 'Overlea Drive' whereas Mancot did not have an allocation. Over the 15 year UDP period Hawarden saw completions of 75 units which equated to a growth rate of 7.6% whereas Mancot saw completions of 58 units and a growth rate of 6.2%. Neither settlement reached the indicative 8-15% growth rate for a category B settlement. This does not represent a high level of growth. The LDP has moved away from a settlement growth rate approach and this came about as a result of earlier consultation on the Key Messages document, which informed the Strategic Options consultation. Similarly, neither Mancot nor Hawarden are a category B settlement in the LDP. Hawarden is a Tier 2 Local Service Centre whilst Mancot is a Tier 3 Sustainable Settlement. It is a normal occurrence of the housing market for properties to be for sale or to be empty. This is known as 'churn' and an allowance is made for this as part of preparing forecasts of population and household growth. When projected household growth is converted to dwellings an assumption is added about vacant properties and second homes in the stock of 3.1%. The 'Population and Housing Projections Technical Paper' in Nov 2017 which accompanied the Preferred Strategy explains that Welsh Government recommends a notional average allowance of about 4% with a range between 1.5% and 8% depending on local evidence. The UDP adopted a strategy of a larger number of smaller housing allocations spread across a larger number of settlements using a system of growth rates for settlements within each of the three tiers of the settlement hierarchy. Housing allocations therefore were made in all tiers of the settlement hierarchy and the UDP Inspector raised concerns about the sustainability of many smaller settlements. Smaller allocations also are not presently attractive to the main housebuilders who generally require larger sites to be sustainable, viable and deliverable. Therefore the LDP adopts a revised approach of only making allocations in the top three tiers of the settlement hierarchy and focusing on sustainable settlements and sites. It is not clear how having a larger number of small sites reduces impacts but why is clear is that smaller sites do not bring with them the same certainty of viability and deliverability. PPW does not specifically prevent the development of greenfield sites as it is clear in PPW that greenfield sites can be allocated as set out in para 3.40 'Where there is a need for sites, but it has been clearly demonstrated that there is no previously developed land or underutilised sites (within the authority or neighbouring authorities), consideration should then be given to suitable and sustainable greenfield sites within or on the edge of settlements'. The UDP Inspector commented 'PPW (MIPPS 01/2006) sets out a search sequence for identifying sites. The priority for development is brownfield land. In Flintshire because of various constraints brownfield sites are in short supply' and went on to comment 'PPW recognises that where there are no available brownfield sites and where there is no available land within built up areas, it may be necessary to accommodate growth in settlement extensions (9.2.8 MIPPS 01/2006)'. Using evidence from the LHMA and the Viability Study, the Plan requires 40% of houses on this allocation to be affordable as set out in policy HN3. Affordable housing must meet the definition set out within Welsh Government's Technical Advice Note 2 "Affordable Housing - housing provided to those whose needs are not met by the open market. Affordable housing should: meet the needs of eligible households, including availability at low enough cost for them to afford, determined with regard to local

Council response
incomes and local house prices; and include provision for the home to remain affordable for future eligible households, or if a home ceases to be affordable or staircasing to full ownership takes place, any subsidy should generally be recycled to provide replacement affordable housing". The allocation of land for residential development within the LDP is not the only mechanism the Council uses to deliver more affordable housing across Flintshire, as explained in Background Paper LDP07 Affordable Housing. The Council have a successful track record of developing affordable housing via the SHARP (Strategic Housing and Regeneration Programme) and NEW Homes (North East Wales Homes and Property Management). These two schemes specialise in the delivery of social and intermediate rental homes, the SHARP programme has a commitment to deliver 500 new affordable dwellings by 2021, please see details of completed and forthcoming schemes on the Flintshire Council website: https://www.flintshire.gov.uk/en/Business/Strategic-Housing-and-Regeneration-Programme/Strategic-Housing-and-Regeneration-Programme-(SHARP).aspx In addition to this the Council will continue to work with its Registered Social Landlord partners to deliver more affordable housing in Flintshire as part of the Social Housing Grant (SHG) programme funded by Welsh Government. Collectively these mechanisms of delivery alongside the development of affordable housing by private developers has resulted in Flintshire achieving the highest average annual delivery rate in North Wales over the last ten years. The majority of this delivery comes from RSLs and schemes such as the SHARP programme rather than private developers, therefore we do not rely on allocated private sites such as Ash Lane to deliver all of the affordable housing that Flintshire needs. In terms of smaller dwellings being less profitable to the developer, the LHMA highlights that the need for new housing is centred around smaller properties with 1, 2 and 3 bedrooms. The LDP contains policy HN2 to ensure that the mix of housing on development sites are in line with the need identified within the LHMA. This prevents schemes coming forward that are weighted more towards larger 4 and 5 bedroom homes, if the balance of housing types and sizes are not in line with the housing need identified within the LHMA, and cannot be justified, then they will be refused planning permission as they will fail to comply with HN2. Policy HN2 seeks to ensure an appropriate mix of units on allocated and windfall housing sites. The LHMA identifies that there is a need for smaller 1-2 bedroom units across the County and that there is also an ageing population. The provision of smaller units of accommodation and bungalows will serve both the first time buyer and retirement sector of the population. Policy HN3 seeks to ensure affordable housing as set out above. Community Identity Development Plans utilise settlement boundaries as a tool to identify recognisable settlements by identifying the limits of their developed or urban form by drawing a settlement boundary on the proposals maps. The drawing of settlement boundaries is not based on community identify or community character as these are separate concepts. In the case of Hawarden and Mancot, the two settlements have already physically merged. The settlement boundary of Hawarden includes the village itself as well as the block of development to the west and east of Gladstone Way. The two settlement boundaries co-join between Cottage Lane and The Paddocks. It is this continuous belt of development which surrounds the site on three sides which provides the context for the allocation. The allocation of the site for housing is not intended to prevent each settlement from having its own character and identity and community spirit. However, when looking at the nature of development which surrounds the site, it is predominantly suburban estate type development of different ages. There does not appear to be any protected or specific character that is so special that new development on the allocated site cannot be designed and laid out to successfully integrate with the present suburban context.

Council response
The bulk of the site, in its present form, is not green space as it is agricultural land and is private land. To the north of the allocation is the existing recreation ground comprising bowling green, playing field and playground and this will remain. A public footpath runs from Park Avenue past the end of The paddock and onto Ash lane, skirting alongside the playing field. However, there is no other public right of way through the allocated site or right of access as it is privately owned agricultural land. The development will include a green buffer alongside the listed building as well as well as green infrastructure through the site including play areas and a Multi Use Games Area (MUGA). There will also be suitable separation between new development and existing that borders the site and there is plenty of scope to design a scheme to protect this. The Council is not 'selling' the site and the issue of house prices is a matter for the house builder in the light of market conditions and the need to provide affordable housing as part of the wider development of the site. The site adjoins the settlement boundary of Hawarden and Mancot. Existing properties at Park Avenue, Kennedy Drive and streets on the western side of Gladstone Way all have a postal address of 'Hawarden'. It is not clear why Mancot will no longer be a village with the development in place. Given that only the existing properties between nos. 40 and 79 Ash lane will directly adjoin new housing, it is not explained by objectors how the character of the bulk of the village will be so affected by the development. It is the approach of existing communities to new residents that is the main determinant of the preservation of the ongoing character and spirit of a community. It is accepted that this site represents a large new development. However, given that the site sits between the two settlements it is not considered that it represents overdevelopment. Furthermore, the objection does not specify what the effects are of this overdevelopment. As previously explained the settlements of Hawarden and Mancot are already merged and the allocation is seeking a logical urban extension in the form infilling the wedge of land between existing development. Looking at the settlements listed, it is evident that there is a continuous belt of built development from Hawarden through Mancot and on to Pentre. However, each of these settlements sit within open countryside. Hawarden sits in an open countryside setting and the vast majority of its settlement boundary adjoins green barrier. The remainder is protected by the Hawarden Castle historic park / garden and its listed buildings and Scheduled Ancient Monuments. There will still be an open gap between Hawarden and the allocated site which is retained as green barrier. Mancot will still retain the open countryside setting along its eastern edge and between Sandycroft primary School and Pentre, and this remains as green barrier. Pentre will also retain its open countryside gap to development at Willow park and this remains as green barrier. A significant swathe of open countryside is also designated as open countryside to protect the gap between Ewloe, Hawarden, Pentre, Queensferry and Shotton / Aston. It is acknowledged that there is only a narrow gap between Ewloe and Hawarden in the immediate vicinity of The Highway. However, on the south side of The Highway there is still an undeveloped gap of 140m comprising school sports pitches set behind hedgerow and mature trees. On the north side there is a gap of 383m comprising the Gladstone Playing Fields. This gap is broken slightly by the day nursery and a bungalow but the overall impression is still of an open gap between the two settlements. The above analysis clearly shows that there is not a continuous urban form and that each settlement has its own open countryside context, as reflected by the green barrier which seeks to prevent coalescence. This must have been a consideration by the UDP Inspector who recommended the allocation of the site. It is agreed that Hawarden village centre has a particular character befitting of its historic nature. The village centre features a conservation area and has numerous listed buildings. Outside of the conservation area is Truemans Hill Motte which is a Scheduled Ancient Monument and to the south east of the conservation area is the Hawarden Castle historic park / garden, listed buildings and SAM's. One of the functions of the green barrier around Hawarden is to protect the setting to the settlement, as specified in

Council response
PPW. However, the allocated site does not contribute to the setting of the historic part of the village as it sits between estate type housing developments. Its development will not harm the broader function on the green barrier nor harm the setting to the village centre as it retains open land alongside Gladstone Way. Brownfield / Alternatives / Agricultural Land As set out above the Council has considered fully a large number of Candidate Sites and Alternative Sites both in the County as a whole and in the Hawarden area. In the next section of Reponses, the Council has commented on 14 specific sites suggested by objectors. Sites which were allocated in the UDP but which i) hadn't been developed or ii) hadn't had a planning application or developer interest, have been included within the list of Candidate Sites to ensure that they are freshly assessed. Two of these namely Well Street, Buckley and Highmere Drive, Connah's Quay have been carried over as allocations in the LDP, but others were not considered appropriate and not been carried forward. It is acknowledged that Welsh Government policy in PPW encourages the use of brownfield and previously developed land. However, it does not specifically prevent the development of greenfield sites. Para 3.40 states 'Where there is a need for sites, but it has been clearly demonstrated that there is no previously developed land or underutilised sites (within the authority or neighbouring authorities), consideration should then be given to suitable and sustainable greenfield sites within or on the edge of settlements'. The specific example of County Hall, Mold is responded to in the next section of the Council's response. As explained elsewhere in this response there are large areas of brownfield land in the County but these are constrained by flood risk, contamination and proximity to international nature conservation designations and are not suitable for residential development. Welsh Government explains in para 3.51 of PPW that 'Previously developed (also referred to as brownfield) land (see definition overleaf) should, wherever possible, be used in preference to greenfield sites where it is suitable for development' [The Council's emphasis in bold]. The paragraph goes on to say 'It is recognised, however, that that not all previously developed land is suitable for development. This may be, for example, because of its unsustainable location, the presence of protected species or valuable habitats, or industrial heritage, or because it is highly contaminated'. More general responses on the suitability of brownfield land in the County is made elsewhere in the Council's response. The Council is not aware of the existence of any brownfield sites nearby in terms of submitted Candidate Sites or Alternative Sites. One of the supporting documents to the Plan was an Urban Capacity Study which sought to establish that the Plan's conservative allowance, as part of the Housing Balance Sheet, for small and large site windfalls, was robust. It identified and assessed brownfield or underused land in settlements within the top three tiers of the settlement hierarchy. This work did not identify brownfield sites in the locality that could be considered either individually or collectively as being an alternative to the allocated site. The Northern Gateway site is specifically commented on in the next section of the Council's response. Agricultural land - The issue of green belt / green barrier is addressed elsewhere in the Council's statement. The guidance referred to is in relation to 'Best and Most Versatile Agricultural Land'. Paras 3.54 – 3.55 of PPW emphasises that in preparing development plans, considerable weight needs to be given to protecting BMV from development. The Welsh Government advises that BMV should only be used if there is an overriding need for the development and either previously developed land or land in lower agricultural grades is unavailable. The Council has had regard to this advice from the outset of the preparation of the Plan. The Council worked closely with Welsh

Council response
Governments agricultural unit in developing a system to assess the predictive loss of agricultural land on the 700 or so Candidate Sites. This process is now reflected in the present 'Predictive Maps' which are published on line by Welsh Government. An agricultural site – survey undertaken at the time that the UDP Inspector recommended allocation of the site showed that 0.2ha (5%) was grade 2, 3.0ha (49%) was grade 3a and 2.7ha (44%) was grade 3b. The Welsh Government Agricultural Unit confirmed that the Study findings were still soundly based and that the additional land allocated in the LDP would be likely to be a mosaic of grade 3a and 3b. Although the allocation does involve the loss of some Best and Most Versatile agricultural land this is not the case for the whole site as a large proportion is grade 3b. The Deposit Plan was accompanied by Background Paper 09 Agricultural Land which explained how the Council has sought to minimise the loss of BMV in preparing the Plan. The Welsh Government, in their formal response on the Plan, have supported in principle the approach taken and have not objected to the development of this site. Both the preparation of the UDP and the LDP has considered the suitability of brownfield land for housing development and this is commented on elsewhere. The Plan's strategy and allocations are not based on profit – the Council has no financial interest or involvement in the development of a site – this is a matter between the landowner, agent and developer. The Council is merely seeking to facilitate housing development by making sustainable, viable and deliverable allocations in the Plan. Objectors have identified / suggested a number of alternative sites and each of these are commented on in turn: i) Manor Lane, Hawarden – This site was put forward for housing at Preferred Strategy Stage as an alternative site (BROU020AS). Despite lying adjacent to employment development and historic housing, it does not relate to any existing settlement and has no facilities and services. Residents would have to travel to nearby settlements of Broughton, Hawarden or Sandycroft to access everyday facilities and services. The site would result in a block of free standing development which would harm a green barrier and is not a sustainable location or site for further housing development. ii) Airbus site, Drury – This site had been submitted as a candidate site (BUC021). During the candidate site assessments the site was still in employment use. A parcel of land to the north of the existing factory is allocated for employment use and both this and the existing unit are within a PEA. Although the southern part of the site is within the settlement boundary, the northern part of the site lies adjacent to SSSI/SAC. It is understood that the factory is presently empty and has been marketed and the site could be considered during the Plan period as a large 'windfall' development. iii) Mt Etna, Buckley – this area is predominantly a Country Park, managed by FCC Countryside Services. Much of the area is a SSSI and SAC and is neither available nor appropriate to be developed for housing. iv) RAF Sealand – this site forms part of the Northern Gateway allocation which is commented on in v) below. v) Northern Gateway – this is a mixed use allocation in both the adopted UDP and LDP. The site benefits from two outline planning permissions for employment and housing as well as community hub. It forms a key part of the Plans overall employment and housing provision over the Plan period. The key attribute of the site is that it is a sustainable mixed use site which is at the heart of regional growth initiatives. Approval of two phases of houses and one warehouse development is evidence that the site is now being delivered as demonstrated by Countryside Properties presently being on-site. To convert the employment element to housing, as sought by some objectors, would be to fundamentally harm the role of the site in delivering sustainable mixed use development and regional economic growth.

Council response
vi) Shotton Steelworks – part of the site is still in use as a steelworks, run by Tata. The site is designated as a Principal Employment Area, alongside the Deeside Industrial Park and the Northern Gateway Strategic Site allocation. Much of the steelworks site is within C1 flood risk zone and is likely to suffer from contamination due to its previous industrial use. The site also sits adjacent to the Dee Estuary and R. Dee which is designated as SSSI, SAC, SPA and Ramsar site. This is not a realistic or appropriate site for housing in the LDP. The site is also one of 18 sites shortlisted as possible logistics hubs for the Heathrow expansion. vii) South of Bennetts Lane, Hawarden – This site was put forward as a candidate site (HWN004). The site comprises grade 2 agricultural land represents a wedge of open countryside between two arms of built development. The prominent, rising nature of the site helps it provide an open setting to the historic core of Hawarden. Development of the site would harm the function and openness of the green barrier at this location and harm the character and appearance of the settlement and open countryside. Highways Development Management Officers consider that the site is unsuitable as the only highway frontage is onto Bennett's Lane and this is considered unsuitable for any significant additional traffic due to its limited width, alignment and lack of adequate pedestrian provision. viii) land adjoining A494(T) / Lower Aston Hall Lane – The site comprises 15ha of land in a rectangular shape running parallel with the A494(T) Aston Hill and extends from the rear of properties on Lower Aston Hall Lane north eastwards to Clay Hill Lane. The site comprises two candidate sites MAN003 and HWN001 which were submitted by separate parties. With the exception of the 'outlier' of development at Lower Aston Hall Lane (which forms part of the settlement of Shotton and Aston), the site forms part of a large swathe of land which prevents the coalescence of Shotton / Aston and Hawarden and Ewloe. The development of such a large block of land would significantly erode the green barrier gap between Shotton / Aston and Hawarden. The site does not relate well to the form and character of built development and is rather divorced from Shotton / Aston by the A494(T). The development of site HWN001would also result in the predicted loss of 3ha of grade 2 and 15ha of 3a agricultural land, whilst the totality of site MAN003 would result in the predicted loss of 37ha of grade 3a agricultural land. ix) Land between Pentre and Willow Park – The site comprises a block of land of 8.5ha which sits on the south side Chester Road East. It is bounded by the Dyfed Drive residential development and the Willow Park residential caravan park to the west (both of which form part of Queensferry) and residential development at Mechanics lane to the east. The site forms part of a larger 21ha candidate site – MAN002. The intervening land forms a block of open countryside which separates two distinct settlements which are not otherwise coalesced. Development of the site would result in the direct coalescence of two separate settlements. x) Land on north side Glynne Way /B5125 (adj Hawarden Village School) – The site comprises 3.7ha of land on the north eastern edge of Hawarden, on the north side of Glynne Way. A differently configured candidate site (3.9ha) was submitted as HWN006. The site suggested differs from the candidate site in that it cuts across open land and does not follow an existing physical feature on the ground. The site relates poorly to the built form and pattern of development and is an integral part of the agricultural landscape to the east of the settlement. Given the sloping nature of the site, built development on it would be prominent and visually damaging. Given that the green barrier here seeks to prevent the eastwards encroachment of built development into open countryside, the development of the site would undermine the objectives of the green barrier in protecting the open character and appearance of this open countryside. Part of the site forms part of the Hawarden conservation area. The site also suffers from a highways constraint in that a vehicular access would be dangerous given the limited forward visibility around the bend. A small part of the site (to the east of 43 Glynne Way) was put forward by an objector as an omission site for consideration as part of the UDP and the Inspector commented 'This heavily wooded area provides a distinctive approach to the settlement from the east. It is more closely related in character and appearance to the countryside than the built up area. Extending the settlement boundary to include it would result in unacceptable encroachment into the countryside. I do not consider including this land within the settlement boundary would serve any useful planning purpose. The site is within the green barrier and this further reinforces my conclusions'. xi) Land between Moor Lane and Rake Lane, Hawarden – This comprises a very large swathe of land to the east of Hawarden adjoining Glynne Way (B5125). The land is bounded by Moor Lane to the west and Rake Lane to the east. The land extends north eastwards up to B5129 Chester Road. This block of land amounts to some 100ha (objectors do not specify what the extent of the site is) and is completely divorced from Hawarden or any other settlement. It would comprise of a large block of land in

Council response
prominent open countryside which rises up to the edge of Hawarden and would undermine the function and integrity of the green barrier. The whole of this block of land involves predictive loss of grade 3a agricultural land. xii) County Hall, Mold – This site was considered as a candidate site – MOL017. The site is brownfield but it sits within a parkland landscape which comprises significant areas of green space, mature trees and a listed building. Any redevelopment of the site would need to work around not just these constraints but also the topography and protected species as well as the need to retain the law courts, the theatre and some FCC Council offices. The site is not an easy site to develop and will involve considerable demolition and reclamation costs and is unlikely to deliver housing until the latter part of the Plan period. In this context it is seen more realistically as a large windfall opportunity, in the form of additional flexibility, rather than as a housing allocation xiii) Land off Aston Hall Lane, Queensferry – It is not clear whether this refers to Upper Aston Hall Lane or Lower Aston Hall lane. However, from the Candidate Site Register it is clear that a number of candidate sites in this locality have been assessed including HWN001, 012, 013 and MAN003 and all discounted. xiv) Land opposite Hawarden Farm Shop, Glynne Way – this is the same parcel of land as in xi) above Green Barrier There are presently no green belts in North Wales. The draft National Development Framework refers to a possible green belt in the Wrexham / Deeside area but this is something that will need to be considered as part of the preparation of Strategic Development Plans which will sit between the NDF and LDP's. Even if a green belt were to be designated at some point in the future, its designation would still need to ensure that long term provision is made for future development. It would not simply be a case of re-designating every existing green barrier as a green belt. Instead lpa's designate green barriers or wedges in their development plans, in line with Welsh Government advice in PPW. Para 3.64 of PPW makes it clear that 'Green wedges should be proposed and be subject to review as part of the LDP process'. The Council has set out its review of green barriers in Background Paper 01. Welsh Government has not objected to the approach taken in respect of green barriers other than to reference to the use of the term 'barrier' as the terminology used in PPW is 'wedge'. It is the case that Hawarden and Mancot are separate settlements in the LDP as reflected in the settlement hierarchy in policy STR2. Each has its own settlement boundary. However the two settlements and their respective settlement boundaries are not divorced from each other. The two settlements physically adjoin each other and are already effectively 'coalesced'. This is recognised by some objectors who refer to a continuous line of development from Hawarden through Mancot to Pentre. To the west of the allocated site, built development extends along Park Avenue and to the east of the allocated site built development extends part way along Ash Lane, whilst the remainder is bounded by Ash Lane. To the north of the site is the recreation ground and existing built development at The Paddock, the library and community centre and built development at Mancot Lane. The allocation seeks to infill this wedge shaped gap between existing development (on three sides) in the form of a logical and well defined urban extension. This is complemented by the retention of a green barrier on the prominent and sensitive rising land between the site and Gladstone Way and therefore retains a green barrier around both Hawarden and Mancot.

Council response
The Council set out its review of the existing green barrier (GEN4-14) in Background Paper 1. The green barrier as a whole was considered to warrant re-designation in the context of the 5 purposes of a green barrier set out in PPW (para 3.63) although 3 amendments were proposed, of which one was the removal of the allocated site from the green barrier. Each of the 5 purposes o in PPW will be commented on in terms of the allocated sites: • prevent the coalescence of large towns and cities with other settlements – given that the two settlements are already coalesced it is not considered that the site performs this purpose. • Manage urban form through controlled expansion of urban areas – this is exactly what the allocation is seeking to do, to recognise the existing urban form and to infill the wedge of intervening land. • Assist in safeguarding the countryside from encroachment - whilst it is true that development will be extended into open countryside, the particular land sits within existing arms of built development. The site therefore does not extend significantly beyond the line of existing built development into the wider open countryside. Instead it has a largely enclosed character. • Protect the setting of an urban area – the land does not contribute to protecting the setting of the historic village of Hawarden. The site sits between arms of estate type built development and green barrier designation is not justified on this purpose alone. • Assist in urban regeneration by encouraging the recycling of derelict and other urban land – the land does not perform this purpose. Based on the above it is not considered that the site has the necessary attributes nor performs the purposes necessary for it to remain in the green barrier. Welsh Government affords a high level of protection to green barriers (or wedges) that are designated in adopted development plans. In such circumstances new housing development within a green barrier would be 'inappropriate' development and there would need to be 'very exceptional circumstances' to warrant harm to a green barrier. However, that is not the circumstances within which this site is being considered. In para 3.54 of PPW, Welsh Government advise 'Green wedges should be proposed and be subject to review as part of the LDP process'. That is exactly what the Council is now doing, by undertaking a review of the green barrier and assessing submitted Candidate and Alternative Sites as to their suitability for allocation and housing. The Council's considered opinion is that the site is a sustainable, viable and deliverable allocation that will not undermine the fundamental role and purpose of the green barrier. It is necessary to also have regard to the planning history of the site and this is set out earlier in the Councils response. In essence, the UDP Inspector considered the site to be suitable for housing and recommended that the green barrier be amended and the site allocated for housing. In respect of the green barrier the Inspector commented 'The land although allocated as green barrier is to my mind so contained by the built up area that it is not strategically important in separating settlements'. The Inspector further commented 'To the south I agree that it is necessary to maintain a strategic gap between Mancot and the historic/built up area of Hawarden. But because of the location of the smaller omission site and the topography with rising ground to the south, I do not consider the loss of the openness of the objection site would seriously compromise the strategic gap or the historic setting of Hawarden'. The settlement of Hawarden is a historic village with its conservation area, listed buildings, scheduled ancient monument as well as nationally recognised facilities such as St Deiniols library. Successive development plans have sought to prevent coalescence of Hawarden with other settlements, prevent further encroachment of development into open countryside and to protect the setting of the settlement by designating a green barrier which encircles much of the village centre. The only part of the settlement edge which is not protected by green barrier is the south western edge of the settlement which comprises Hawarden Castle and its historic park / garden, listed buildings and scheduled ancient monument which all afford a high degree of protection. The land between Ash lane and Park Avenue, for the most part sits between arms of existing built development, and will not undermine the primary function of the green barrier. This was clearly referenced by the UDP Inspector and remains valid now.

Council response
The planning history of the site is explained earlier in the Councils response. The Council ignored the clear and well-reasoned recommendation of the Inspector and the advice of its professional officers and did not carry forward the allocation into the adopted UDP without a planning rationale for its late exclusion. Given that the site was put forward by the landowner as a candidate site, the Council is duty bound to consider it afresh and in doing so, must have regard to the previous reasoning and recommendation of the UDP Inspector. The Council considers that the site is sustainable, viable and deliverable. Drainage Flooding Flood risk in Wales is mapped in the Development Advice Map produced by Natural Resources Wales and which accompanies Technical Advice Note 15 Flood Risk. There is no fluvial or tidal flood risk in the vicinity of the site. The nearest flood risk zones are an extensive C1 zone along the B5129 at Sandycroft, Pentre and the northern part of Mancot, and a narrow belt of zone C2 to the south of Hawarden. Accompanying the Development Advice Map is a map showing surface water flood risk. This shows a band of 'low' surface water flood risk running parallel with Ash Lane (to the west of St Deiniols Ash Farm) and smaller pockets of 'low' surface water flood risk along extreme north east and north west parts of site. This does not prevent development taking place on the site but means that the detailed layout and the design of the Sustainable Urban Drainage Scheme will need to have regard to these linear areas and pockets of surface water flood risk. It is the case that the field, in its greenfield state, will act as a store for water but that there will still be a run off from the site. Traditionally, development has been designed with engineering based systems which pipe water away from the site and which can have impacts on other areas. The rationale behind SuDS is that a less engineered approach is taken whereby the run off from the site is restricted to the same rate as a greenfield site. This could be achieved through underground storage tanks or through swales and surface water lagoons. These have the advantage of being able to be designed so as to have ecological, landscape and green infrastructure benefits forming a key part of the design of the scheme. If run off is therefore restricted to no more than the current run off from the site then it is unclear how the development of this site would exacerbate existing problems elsewhere in the area and may actually lead to betterment for existing residents. There is no objection to the site from natural Resources Wales. These features are marked on OS maps and will be taken account of as part of the detailed layout of the site and the development of a SuDS scheme. The occurrence of water leaks along Gladstone Way is not a reason to prevent the development of the site. This reflects that there some existing problems with existing infrastructure which is a matter for Welsh Water. As explained above the issue of surface water run off from the site can be controlled through a SuDS scheme. There are clearly existing problems in the locality but these will not be made worse by the development. Neither NRW nor Welsh Water has objected to the allocation. The LDP is supported by and informed by a Strategic Flood Consequences Assessment which was prepared in accordance with national guidance. The methodology included an allowance for climate change and has regard to Catchment Management Plans. The only action point arising from the assessment of this site is that a detailed Flood Consequences Assessment is undertaken to take account of surface water flood risk. Amenity

Council response
The Council, through its Public Protection service, is responsible for monitoring air quality and the levels of pollution across the County. This is done through a network of monitoring stations throughout the County. All North Wales authorities contribute to an Annual Air Quality Progress Report in fulfilment of Part IV of the Environment Act 1995. The Reports for 2018 and 2019 show that within Flintshire and indeed across North Wales, there are no Air Quality Management Areas (AQMA) and in consequence has not published an Action Plan. In [Hawarden / Ewloe] there are monitoring stations at [Hawarden High School (4), 20/22 Glynne Way, Harden (12/13), Sandycroft CP School (14), 28 Chester Rd, Pentre (30) and several stations from Ewloe to Queensferry. The conclusion of this evidence is that are no air pollution issues within the County. In addition to this, Welsh Government installed their own continuous monitoring station at South Bank in Aston prior to the consultation for the red/blue route and the Aston Hill improvement scheme prior to that. At no time has the Governments action level of 40 µg/m3 NO2 been exceeded in any year so the Council have not had to make this stretch of road or any other area in Flintshire an Air Quality Management Area. Nevertheless, Welsh Government have introduced formalised speed restrictions along the A494(T) in order to reduce air pollution, whereby speed limits have been reduced to 50mph from the DIP junction to Ewloe. It is the case though that speed limits for much of the route (River Crossing to Ewloe) have been 50mph for several years anyway. Welsh Government published the report 'Tackling roadside nitrogen dioxide concentrations in Wales - Welsh Government supplemental plan to the UK plan for tackling roadside nitrogen dioxide concentrations 2017 – Interim Data on NO2 Concentrations for the Motorway and Trunk Road' in September 2019. The report highlights that since 2017 air pollution has reduced at roadside locations and will continue to reduce. A further consideration is that in the longer term, the implementation of the Red Route will have the effect of reducing traffic levels on the A494(T) and will be likely to lead to further reductions in pollution. Continued reductions in petrol / diesel emissions through tighter controls, combined with increasing levels of electric vehicles will also have the likely effect of reducing pollution further. This clearly points to a context of reducing levels of pollution in the area / County over time. The Council's Pollution Control Officer considers it is unlikely that the allocation alone would contribute enough additional pollution to push the levels currently being measured above the government action level of 40 µg/m3. However, the developer will be required to investigate and provide thorough Noise and Air Quality assessments to support any applications in order to protect amenity and improve air quality in line with WG legislation and Future Generations Act. The report concludes that Monitored concentrations are compared with Air Quality Objectives (AQO) as detailed in Appendix B. In 2018 there were no exceedances of the NO2 annual mean AQO of 40 µg/m3. Having considered each pollutant and reviewed the new developments approved in 2018, it can be concluded that there is no requirement for any of the six North Wales local authorities to undertake a detailed assessment. The objector is correct that there is a monitoring station at 20/22 Glynne Way, but also stations at Hawarden High School, Sandycroft CP School and 28 Chester Rd, Pentre. It is unclear whether the objector is concerned about the impact of existing noise levels on the occupants of the new development or the impact of noise associated with the new development on the residents of existing properties. It must be stressed that this a quiet residential area and there is unlikely to be any existing sources or levels of noise which would prevent or be a constraints to development on the site. Welsh Government Noise maps from 2017 show that that there are noise levels arising from traffic along the A494(T) and A55(T) corridors but that there are no records mapped in the vicinity of the site. In terms of the effect of the new development on existing residents, apart from the obvious construction phase, it is not clear why residential dwellings would create noise to the levels that it would pose long term harm to nearby living standards. In terms of light pollution, the site sits between existing blocks of residential development and roads where there is existing lighting. New development can be designed so as to incorporate lighting that reduces glare and light pollution. It is highly unlikely that a well designed residential development conforming to the latest standards and good

Council response
practice would result in levels of light that would detrimentally harm the living conditions of nearby residents. For instance new development would need to have regard to the guidance on lighting in section 6.8 of PPW. Welsh Government places a great deal of emphasis in PPW on placemaking and creating well designed, attractive and safe places within which to live. Para 3.11 of PPW specifically mentions the need for new development to have regard to crime and the fear of crime by creating safe environments that can help create cohesive communities. If the problems raised by objectors do exist then it is ultimately for enforcement by the respective agencies. The site is presently agricultural land which is in private ownership and which has no public rights of way over it or indeed, any rights of public access on to it. Those persons using it for recreation and dog walking are doing so potentially without the permission of the landowner. Welsh Government places increased emphasis in PPW10 on placemaking and design to create attractive residential environments. The Council has existing Supplementary Planning Guidance which seeks to ensure sufficient space around both existing and new dwellings in terms of separation distances between windows, private amenity garden space so as to avoid overlooking or loss of light. This will be a matter for detailed consideration at planning application and the earlier Pre-Application consultations stage. Services / Infrastructure The preparation of the Plan has had regard to the levels of facilities and services in the form of some 80 settlement audits which sought to assess the sustainability of each settlement. This work, which was part of the earlier key Messages consultation document, informed the review of the existing UDP settlement hierarchy. The revised settlement hierarchy split settlements into 5 tiers having regard to their location, character, role, accessibility and level of facilities and services. Hawarden is identified as a Tier 2 Local Service Centre and Mancot is a Tier 3 Sustainable Settlement. The facilities and services are set out for each settlement in the Settlement Audits. The two settlements also sit in close proximity to other settlements and employment areas with Ewloe to the west, Broughton to the east and Sandycroft, Pentre, Queensferry and Deeside Industrial Park to the north. It is clearly a highly sustainable location as recognised in the previous Wales Spatial Plan and now the draft National Development Framework. In terms of other infrastructure the Plan has been prepared in close consultation with key infrastructure providers whether it be schools, health, water supply, sewerage, power among others. These were all invited to sit on the Key Stakeholder Forum which was instrumental during the earlier engagement phase of the Plan's progress, and have been consulted at each stage of the Plan's preparation. There are no formal objections to the Plan in terms of lack of infrastructure, particularly when mechanisms exist for infrastructure to be improved or delivered as part of new development. The Council has set out information on this in the Infrastructure Plan. The Council has worked with the Local Education Authority and Betsi Cdwaladr University Health Board throughout the preparation of the Plan. For instance, the Health Board were a key member of the Key Stakeholder Forum which met regularly during the earlier stages of engagement and consultation. It is important to stress that neither has objected to the Plan in terms of health and education capacity. There is no requirement for the lpa to consult with every school, doctors surgery or dentist practice, as this is the remit of the relevant governing authorities. Whilst it is acknowledged that the schools in the area are popular and well subscribed, there is no objection from the Local Education Authority. It must be stressed that the Hawarden site will not deliver completed houses until 2023-24 with 18 completions forecast in the first year and 45 per year thereafter. The impact of development will therefore not be felt in 'one hit' and there is sufficient time for the Education Authority to support the delivery of growth that is identified in the Plan.

Council response
This was also commented on in the Wrexham LDP Inspector's Interim Findings letter where she stated 'The final reason for reducing the housing requirement was that the level of growth identified was considered to place too much strain on infrastructure such as highways, education, schools, council services and health providers. Again, we are not convinced that this is relevant to the assessment of need. Moreover, it is always a requirement for developers to make provision, through planning obligations, for infrastructure to be provided where existing capacity would not meet the additional demands and needs of new development. This would be commensurate with the scale of development'. Betsi Cadwaladr University Health Board were a member of the Key Stakeholder Forum and have been involved in the preparation of the Plan from the first stages. The lack of appointments and inability to register is a common problem the County and North Wales. This is generally not a lack of premises and facilities but a lack of staff. Whilst the planning system can help to deliver new or expanded facilities it cannot contribute to staffing levels. In respect of the Wrexham LDP examination, the Inspector commented in her interim findings ''We heard during the sessions of the shortcomings in the County Borough in the provision of health facilities. The local Health Board, which does not object to the LDP, states in its consultation responses that it is not the provision of buildings for additional services which is the issue but the availability of the required workforce. We have little evidence, therefore, that the availability of health services is a compelling reason to prevent or limit residential development'. There is a general lack of NHS dental services and recent years have seen the growth of private dental practices. However, this not a matter which in the remit of FCC as lpa and is the responsibility of the Health Board. The Health Board do not object to any aspect of the deposit LDP. The LDP is a land use plan and has to balance many different considerations. The LPA cannot directly provide infrastructure as this is the remit and responsibility of other service providers. Throughout the Plans preparation, the Council has sought to work with internal and external service and infrastructure providers, commencing with the Key Stakeholder Forum. Following a long period of financial austerity measures it is not surprising that there are infrastructure pressures and capacity considerations. Also, it is inevitable that new development, wherever it is located, will to some extent place a pressure on infrastructure. The question is whether this pressure is to the extent that the impacts of development are unacceptable i.e. that they cannot be mitigated. This is not the case with the Plan, as demonstrated through the Infrastructure Plan and the lack of formal objections to it at Deposit consultation stage from providers. The cemetery is run by FCC and the preparation of the Plan provided an opportunity to address any need for additional land. Where a need has been identified then provision for this in the Plan has been secure through the safeguarding of land for instance cemetery extensions at Greenfield and Treuddyn. No such requirement has made requested of the LPA at Hawarden cemetery. The allocated site does not adjoin the existing cemetery as there is intervening land. Whilst the loss of the post office is regretful it is pleasing to see that the library is continuing to operate on a voluntary basis. It is unclear why the proposed housing development would adversely impact on this situation. Rather, new housing development could result in improved facilities such as new convenience store as this has happened elsewhere in the County. The provision of policing is not a matter for the LPA and any issues or concerns with regard to policing should be made directly to North Wales Police. The representations of Welsh Water reflect the position set out in the Council's Infrastructure Plan which accompanied the Deposit Plan.

Council response
The location and specifications for a substation will be a matter to be considered as part of the detailed design stage for the development. Traffic / Transport Policy HN1 sets out the Plans housing allocations in a tabular form and includes summary notes on each allocation. For this allocation the notes clearly state 'Access onto Gladstone Way and Ash Lane'. It is not clear why there is such uncertainty about this when it is referenced in the Deposit Plan. The site has two proposed access points and it is likely that the main access will be on Gladstone Way and a further access onto Ash Lane. This enables traffic to be dispersed more efficiently onto the surrounding highway network and to prevent the whole site being served off Ash Lane / Cross Tree Lane. A Transport Assessment was undertaken for the site in 2018 by the site owner and involved traffic counts for a 7 day period from 9th July 2018 which was before schools closed for the summer holidays. The Transport Assessment makes no reference of roadworks or any other traffic management measures that would have invalidated or affected normal traffic flows and patterns. The conclusion of the TA is 'In summary, this TA has shown that the traffic associated with a residential allocation at the proposed development site can be accommodated on the highway network with no detriment to operation, or road safety. As such, there are no traffic or transport planning reasons why the site should not be included within the LDP'. The southernmost extent of the site on Ash Lane is some 600m from Hawarden Village School and the northernmost part of the site adjacent The Paddock is 1km from Sandycroft Primary School. Via Ash lane the site is 750m from the Stables medical centre and 900m from the village centre, although this can be shortened to 750m by using the path from Cross Tree Close. The site is some 800m from village centre. From the village centre the railway station is some 450m to the west. The site is well placed to encourage walking to local services and facilities. In terms of Active Travel there is a proposed route shown in the Council's 'Active Travel Integrated Network Map from Buckley through Ewloe and Hawarden and on to Sandycroft. Route MA2/13 passes along Park Avenue and Mancot Lane and runs adjacent to the site. There is clearly potential for residents of the development to use this Active Travel route as part of day to journeys on foot or by cycle. The TA advises that a review of the site, the local highway network has been presented along with a sustainable access audit which found that the site is well placed to encourage walking, cycling and travel by bus. The TA also included an Outline Travel Plan with the commentary 'An outline Travel Plan has been proposed which seeks to confirm the suitability of the site with regard to access to sustainable travel choices for residents of the proposed development. A number of initiatives have been identified for inclusion into a Full Travel Plan sufficient to support a formal planning application'. It is accepted that a section of Leaches Lane is devoid of footways and has the character of a rural lane. It is also accepted that this is the same for Colliery Lane and much of Cottage Lane. However, the bulk of the road network in Mancot have footways on one or both sides. With the main vehicular access from Gladstone Way and a further access onto Ash Lane, it is not clear why cars would seek to use Colliery Lane as a short cut. The cemetery has its own car park on the eastern side of Ash Lane and it is not considered traffic levels arising from the cemetery are prejudicial to the free and safe movement of traffic.

Council response
Whilst it may be the case that if there are accidents on the A494(T) or A55(T), traffic diverts up Gladstone Way this is not a day to day occurrence. It must also be borne in mind that in the longer term the Welsh Government Red Route should lead to a reduction in traffic along the A494(T). Service 11 run by Arriva is between Chester and Prestatyn / Rhyl, running along the coast. From Chester the service calls at Broughton Shopping park, Hawarden and then runs down Gladstone Way to Queensferry and runs every 30 mins. Service 9 runs from Connah's Quay to Broughton Park and runs through Mancot but this is infrequent with 3-4 services per day each way. The site is within walking distance of The Highway / Glynne Way where service 4 provides services every 30 mins between Chester and Mold. The site is also within walking distance of Hawarden Station which provides train services between Wrexham and Liverpool. Despite the regrettable loss of bus serives in Mancot, the locality is still accessible by key bus routes and the train service. Environment Natural An ecological survey of the site has been undertaken by Clwydian Ecology and the County Ecologist considers this to be acceptable as a preliminary ecological appraisal of the site and is in line with Cofnod information. The County Ecologist considers that the habitats present on site are not of high ecological value and any protected species likely to be associated with these habitats can be taken into account within the development, following further surveys/impact assessment together with relevant avoidance and mitigation. Natural Resources Wales (NRW) have been consulted throughout the Plans preparation. NRW made no objection to the allocation at Deposit consultation stage. There are no Tree Preservation Orders within or adjacent to the site. Clearly, trees and hedgerows will be retained (as mentioned in policy HN1) and incorporated into detailed layout of the site as part of a green infrastructure network approach. Given that site sits between two arms of development it is not considered to have a significant effect on the wider landscape. The site is already considered to have an urban context and in this context the UDP Inspector commented 'The land although allocated as green barrier is to my mind so contained by the built up area that it is not strategically important in separating settlements'. The retention of open land to the south of and above the site will serve to retain an open countryside context to existing and proposed development. This was recognised by the UDP Inspector 'To the south I agree that it is necessary to maintain a strategic gap between Mancot and the historic/built up area of Hawarden. But because of the location of the smaller omission site and the topography with rising ground to the south, I do not consider the loss of the openness of the objection site would seriously compromise the strategic gap or the historic setting of Hawarden'. The designation of land as a green barrier is not based on landscape 'character' or 'quality' but on its openness and whether it contributes to the 5 purposes of a green barrier in PPW. A piece of land need not be inherently 'attractive' in order to perform a green barrier function. The landscape impacts of the proposed development are commented on above. The issue of agricultural land is commented on above. The implications of the development of the site for the tenant farmer is a matter for Hawarden Estates as landowner. However, Hawarden Estates have produced an Agricultural Statement from which the key points are:

Council response
• The 10.9ha site comprises part of the holding of Hawarden Estates which extends to 1,618 acres. • The site is currently let to a tenant farmer as part of Deiniols Ash Farm which extends to approximately 32ha and is used for low intensity cattle and sheep grazing – the tenant also farms other land owned by the tenant. • Deiniols Ash Farm is relatively poorly equipped in terms of fixed equipment and is not a commercial unit and does not have a long term future as an agricultural holding. • The holding is bordered by development on three sides and can be very challenging to farm due to trespass from local residents and their animals in addition to increasing occurrences of fly-tipping. • The remaining farm holding could remain as a lifestyle farm for the tenant for the time being or it could be added to an adjacent commercial unit. The UK Government introduced the Environment Bill in October 2019 and one of its measures is to set up a new independent Office for Environmental Protection. This will scrutinize environmental policy and law, investigate complaints and take enforcement action against public authorities, if necessary, to uphold environmental standards. The Government website states 'While the Bill applies only to England, more than half of its measures - such as those designed to drive up recycling rates - are designed to apply across the UK, with the consent of devolved administrations, helping the nation deal with the major environmental challenges we face together'. The Environment (Wales) Act received Royal Assent in 2016 and addressed the following: • Sustainable management of natural resources • Climate change • Charges for carrier bags • Collection and disposal of waste • Fisheries for shellfish and marine licencing • Flood and coastal erosion and land drainage. It is not considered that the proposed is contrary to the OEP or the Environment Act particularly given the lack of objection from the NRW. Environment – Historic The Summary Guidance within policy HN1 for this site clearly references the need for 'strategic landscaping buffer to provide setting to listed building'. The allocation is not proposing built development up to the site boundary with St Deiniols Ash Farm. The site boundary wraps around the outbuildings associated with Deinols Ash Farm but the Farmhouse itself lies further to the south. The farm buildings themselves therefore provide a buffer between the farmhouse and the site. Turning to the north west aspect from the farmhouse, there is an intervening field between it and the site boundary. The distance between the farm and the site boundary is between approximately 60m and 90m and serves to provide a buffer. In addition to the buffer provided by the outbuildings and the intervening field, it is proposed that a further landscaped area is provided within the site boundary to provide an additional open buffer to the listed building. In combination, this will ensure that the farmhouse retains an open setting. The existing open setting to the south west, south and east remains unaffected. A Heritage Asset Setting Assessment has been undertaken by specialist conservation consultants whose overall conclusions are that whilst there will clearly be a change to the context and setting of the listed building, this is not so severe as to cause unacceptable harm and that development of the adjacent site can take place with suitable

Council response
mitigation. The Assessment states “The general character of the area will be altered, by customary and acceptable elements of a residential development introduced to an environment with substantial suburbanised form. Residential development would be an introduction to the landscape, but it would not be a sui generis introduction and its characteristics are commonplace and familiar”. It goes on to state that “Much of the back-clothing of the existing sightlines, it should be noted, is residential in character, providing hard-edge to the margins of the open fields. Development on the Site would add to this existing element of the built-environment, and so the change in the setting of the asset represented by development is matter of degree, not principle”. The historic map of 1869-1895 shows the line of a railway line from a colliery adjoining Scotch Row and crossing Ash lane to the south St Deiniols Ash Farm. The line of the railway is not within the boundary of the allocation. Consultation responses from CPAT identified ‘The western end of the plot impinges on the remains of mining (various buildings, shafts and an engine house). This area will need to be evaluated prior to any development and may require mitigation thereafter’. If there were tunnels between the Farmhouse and the Church and castle then the line of these would fall outside the allocated site boundary. Mining The bulk of the site is within a ‘Coal Authority Standing Advice Area’. A strip of land from St Deiniols Ash Farm northwards parallel with Ash Lane together with the northernmost part of the allocation falls within a ‘Coal Authority Referral Area’. At the time that the site was recommended for inclusion by the UDP Inspector British Coal advised i) there are surface coal resources across the Mancot and Connah’s Quay area and a legacy of previous mine workings. Ii) the site contains surface coal resources and been subject to past mining activity and is within the zone of influence of 8 recorded mine entries (shafts or adits) and the northern part of the site has been subject to underground mining at shallow depth iii) record do not show any recorded incidents of subsidence or other related hazards on the land at Ash lane and iv) former mining activities and related hazards are not a strict constraint to development. Indeed, in general terms it would be preferable for appropriate development to take place in order to remove these public liabilities. The Coal Authority would therefore not wish to suggest that the site be excluded from allocation on the grounds of mining legacy. The Coal Authority advised that mine entries and shallow underground workings need to be fully considered prior to any development in terms of a) give full consideration to mining information b) assess the risks to development and c) design and implement appropriate mitigation measures. The presence of mine shafts and shallow workings does not therefore prevent the site being allocated or development. But, further work is needed in order to fully address these risks as part of the detailed layout and design of the development. The Councils website provides guidance at https://www.flintshire.gov.uk/en/Business/Health-and-Safety/Radon.aspx on radon. This explains that Radon is a natural radioactive gas and that North Wales is one of the areas in the UK which has generally higher levels of radon. The Health and Safety Executive website https://www.hse.gov.uk/radiation/ionising/radon.htm advises that the Building Regulations in Wales describe where new buildings and dwellings might need to incorporate protective measures installed during construction. The Council’s Development Management Officers have confirmed that radon is dealt with by the Building Control team. Support

Council response
Support for the site is noted.

Policy HN1.9

Due to the large number of representations received to this allocation, and the fact that a number of common issues were raised by objectors, a collective response has been provided at the end of this table which covers all of the points raised within each of the individual representations.

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
95	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	HCAC004/the settlement. The land is outside the settlement boundary. No housing on that side of the road. Adding 80 houses would add a 1/3 to the village - disproportionate. The land associates with open countryside. We've fought development before. Unfair to include it. Last time there was no developer on board which is a major consideration when choosing land that is appropriate, viable and deliverable. The land is green and a red in the Candidate Site Register it should be the last resort. The land is next to Abermorddu School which is outside the settlement boundary in line with the Flintshire Planning Department policy. This land use would put it in the boundary and surround it with housing. This land is needed for any future expansion. Development has already taken place on the Cymau Lane on the other side of the school and the settlement boundary altered. It's the only flat green land in Abermorddu especially useful for those with limitations. Land use would affect the green space - Cutting down trees, hedges and losing grass surface areas which all produces oxygen would be affected and impact of air quality. We are bordered by the railway on one side and the countryside on the other leading to hills to Hope Mountain. The public have used the land unencumbered for recreational purposes for over 40 years (via the legally/permitted stile on the Wrexham Road (now an unsecured gate) and also a stile on the land now built on Cymau Lane). The public regularly walk their dogs, play games and generally enjoy the open green space. We don't have other alternatives in the village and would need to travel to alternative sites (concerns re Willow which is under investigation). The A541 is an extremely busy main road. It is difficult to get into and out of our driveways. Also a lot of people park on the road outside their	Removal of allocated site

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				addresses which makes the road narrower. I am concerned about the impact of further housing/large development as it would make this dangerous situation worse. Any exits onto the road would also impact the flow of the main road. An increase in housing would add cars and add to pollution for residents and school children - affecting their wellbeing and health. The land and road are regularly liable to flooding. This would increase with development. Significant nature on the site - newts, bluebells, orchids. We have no shops, amenities, pubs or community centres. We have to travel for goods and services. Endorse HCC response and alternative sites. I don't think that the plan is a sound one for the reasons stated above. Re policy the land use offends policy regarding settlement boundaries and schools outside settlement boundaries. There are other sites that would proportionately distribute development in areas of the settlement better placed to accommodate it and with amenities, shops etc. This land use is disproportionate in the village of Abermorddu. Smaller developments in the settlement would form a more appropriate, viable and deliverable plan.	
277	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	I adopt and endorse the Hope Community Council response to the LDP draft plan and suggested alternative sites. I don't think that Flintshire Council's LDP plan is a sound one for the reasons stated above. Re policy the land use offends policy regarding settlement boundaries and schools outside settlement boundaries. There are other sites that would proportionately distribute development in areas of the settlement better placed to accommodate it and with amenities, shops etc. This land use is disproportionate in the village of Abermorddu. Smaller developments in the settlement would form a more appropriate, viable and deliverable plan. I also think that the other sites put forward as preferable by Hope Community Council using smaller developments which would limit the impact on the settlement and would be more deliverable, viable and appropriate for all the reasons outlined by them.	Remove site HCAC004 and I adopt and endorse the Hope Community Council response to the LDP draft plan and suggested alternative sites.

548	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	As joint owner of 31 Wrexham Road Abermorddu wish to object to inclusion of HCAC004 Wrexham Road development. We have seen changes in the locality during that time but Bluebell Fields against the backdrop of Hope Mountain have remained a constant scene of natural beauty, treasured by local residents. I would ask that you preserve these fields for future generations and not build on them for the following reasons: • Residents of Abermorddu and other members of the public have had access to these fields for generations. When I was a child in the 60s our school sports days were held on Bluebell Fields and my mother used to speak of football matches between local sides on the field when she grew up in Abermorddu in the 1930s. Residents continue to make regular use of the fields for recreational purposes. They offer a safe place for people to walk their dogs and to play. The loss of this recreational space would be huge for local people. • The proposed land is a greenfield location in open countryside full of well-established flora and fauna such as native bluebells and great crested newts. Development on this land would contravene FCC's commitment to promote biodiversity (STR4 vi). • Much of the land in Bluebell Fields is marshy with a stream flowing through it. Given the potential for flooding, this land is not suitable for development. • The traffic on the A541 in Abermorddu is very heavy, particularly at peak times. Residents are already concerned about the volume of traffic, the difficulty crossing the road and the pollution levels.	Removal of Wrexham Road Abermorddu,allocation.

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				Development on Bluebell Fields would exacerbate the traffic problems. • Increased levels of traffic pollution will have an impact upon the health and well-being of the local residents and on the pupils of Abermorddu primary school who play on the adjacent field. • The locality is not equipped to deal with an increase in population: The local schools are over-subscribed and the already busy health centre would struggle with an increase in demand.	
1093	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	Objections to HN1(9) Wrexham Raod HCAC.1. there is no information of the types of housing to be built. 2.No pavement on the Castle side of Wrexham Road will mean increased traffic will lead to danger for pedestrians even with a pavement there is danger from many heavy good vehicles. New footpaths should be provided as part of any development. 3. Bus services are limited. 4. Landscape and visual impact assessment, there is a need to conserve and enhance the historic environment of Caergwrle Castle and Conservation area. 5. The fields are marshy grassland and act as a sponge, development will increase food risk in the area. 6. There are problems with the sewerage capacity in the village. 7. Effect on wildlife, there are native bluebells newts and butterflies on these fields. 8. There is a limited demand for new housing and large development are going ahead in Mold Buckley and Penyffordd. 9 Local schools are full and it is difficult to get a doctors appointment.	Removal of allocation
1245	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Support	Wrexham Road, HCAC, 80 units Welsh Water has made representations on this proposed site through planning application 058163. Welsh Water does not supply water to this area. The public sewerage network can accept potential foul flows from this development site. Hope Wastewater Treatment Works (WwTW) can accommodate foul flows from the proposed development site.	
1259	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	There are inconsistencies in the way the council has assessed potential sites, with reference to the assessment of our client's site. Background Paper 9 'Assessment of Candidate Sites and Alternative Sites' (2019), which forms part of the LDP evidence base, discusses the site (ref: BROU001) and states:	Need to allocate more sites.

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				'The site is well defined by existing roads and wraps around existing residential development… Although the site is in close proximity to Bretton, the configuration of the site and its relationship with Bretton would ensure that development would not harm the present character and appearance of the settlement…' 'The site is considered suitable at present for consideration as an allocation.' [NJL Consulting emphasis] The evidence base is clear that the site is appropriate for residential development and should be considered for allocation, yet an allocation has not been taken forward. However, other less sustainable and less deliverable sites are allocated. For example, Northop Road (Flint) has no planning consent (two applications from September 2017 (ref: 057565) for 20 units and April 2018 (ref: 058314) for 145 units remain undetermined) and has identified constraints to delivery, yet the site is allocated. The same applies to the New Brighton (Cae Isa) site (Site 10), which is proposed to be allocated for 105 units but there is no clear evidence of delivery yet clear evidence of constraints. Two further sites are proposed for allocation despite previous planning applications being withdrawn or dismissed on Appeal. The Highmere Drive (Connah's Quay) allocation (Site 3) was promoted for 185 dwellings in 2005 (ref: 043873) but a subsequent Appeal was withdrawn in 2008 and there has been no progress on the site. The Wrexham Road (Hope) allocation (Site 9) was subject to a now withdrawn planning application from 2018 (ref: 058163), and there has been no further progress.	

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				Therefore, the council's assessment of sites is inconsistent. There is a need for additional sites to be allocated, such as Bloor's site BROU001.	
1283	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	There is genuine risk that proposed allocations cannot be delivered, either at all or in the timeframes envisaged. Several sites have been simply carried forward (rolled over) from the current LDP despite concerns with delivery. The Local Development Plan ('LDP') Manual (Edition 2) identifies the requirement for a new form of measuring the deliverability of sites, and whether they have a realistic chance of coming forward over the next 5 years. It states "When putting forward sites, developers and landowners should include sufficient data to allow a robust assessment to be made (see section 6.4.1&2) including affordable housing, community infrastructure and that the development is financially viable." The draft LPD Manual 3 (which was consulted on by Welsh Government in September 2019) then goes a step further. Table 18 in draft Manual 3 states that historic allocations should only be 'Rolled Forward' from previous plans where 'careful justification' is given that there has been a 'substantial change in circumstances to demonstrate sites can be delivered and justify being included again'. This is relevant as many of the proposed housing allocations have been simply 'Rolled Forward'. The table at Appendix 2 shows the housing allocations and our analysis of realistic deliverability. It identifies 6 of the 11 housing allocations are undeliverable in the next 5 years and a further 4 have questionable delivery over the plan period. This has significant implications for the 5-year supply position and overall delivery of the plan. For example, The Wrexham Road (Hope) allocation (Site 9) was subject to a now withdrawn planning application from 2018 (ref: 058163), and there has been no further	Allocation of additional sites.

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				progress. Evidently the delivery of these sites is very questionable and certain sites have been rolled forward from previous plans, despite no evidence they can be delivered. This is clear evidence that several proposed allocations are at obvious risk of stagnating and thus remaining undelivered for a further plan period. Therefore, the council's assessment of sites is significantly inconsistent and there is a need for additional sites. Land at Quarry Farm is such a site.	
94	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	HCAC004/the settlement. The land is outside the settlement boundary. No housing on that side of the road. Adding 80 houses would add a 1/3 to the village - disproportionate. The land associates with open countryside. We've fought development before. Unfair to include it. Last time there was no developer on board which is a major consideration when choosing land that is appropriate, viable and deliverable. The land is green and a red in the Candidate Site Register it should be the last resort. The land is next to Abermorddu School which is outside the settlement boundary in line with the Flintshire Planning Department policy. This land use would put it in the boundary and surround it with housing. This land is needed for any future expansion. Development has already taken place on the Cymau Lane on the other side of the school and the settlement boundary altered. It's the only flat green land in Abermorddu especially useful for those with limitations. Land use would affect the green space - Cutting down trees, hedges and losing grass surface areas which all produces oxygen would be affected and impact of air quality. We are bordered by the railway on one side and the countryside on the other leading to hills to Hope Mountain. The public have used the land unencumbered for recreational purposes for over 40 years (via the legally/permitted stile on the Wrexham Road (now an unsecured gate) and also a stile on the land now built on Cymau Lane). The public regularly walk their dogs, play games and generally enjoy the open green space. We don't have other alternatives in the village and would need to travel to alternative sites (concerns re Willow which is under investigation). The A541	Removal of allocation

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				is an extremely busy main road. It is difficult to get into and out of our driveways. Also a lot of people park on the road outside their addresses which makes the road narrower. I am concerned about the impact of further housing/large development as it would make this dangerous situation worse. Any exits onto the road would also impact the flow of the main road. An increase in housing would add cars and add to pollution for residents and school children - affecting their wellbeing and health. The land and road are regularly liable to flooding. This would increase with development. Significant nature on the site - newts, bluebells, orchids. We have no shops, amenities, pubs or community centres. We have to travel for goods and services. Endorse HCC response and alternative sites. I don't think that the plan is a sound one for the reasons stated above. Re policy the land use offends policy regarding settlement boundaries and schools outside settlement boundaries. There are other sites that would proportionately distribute development in areas of the settlement better placed to accommodate it and with amenities, shops etc. This land use is disproportionate in the village of Abermorddu. Smaller developments in the settlement would form a more appropriate, viable and deliverable plan.	
185	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	We are responding, in an individual capacity only, to the current LDP consultation with specific reference to the inclusion of candidate site HCAC004 (Land off Wrexham Road, Abermorddu) as a site for housing development. If, and only if, HCAC004 is approved as a site for housing we would request that the following conditions be imposed on developers: 1. That the speed limit along Wrexham Road be reduced to 30m.p.h.; 2. That appropriate S106 payments be made for relevant projects at local primary and secondary schools; 3. That the Local Planning Authority insist on an allocation of 30% housing for affordable homes and gives consideration to their possible acquisition by the local authority considers options so that they can be rented out as social housing to meet local needs; 4. That the developers be asked to invite and	Removal of Wrexham Road Abermorddu allocation.

376	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	RE: HN1.9 Proposed New Housing Development off Wrexham Road, Abermorddu I object to the proposed new housing development off Wrexham Road beside Abermorddu CP School. My objection is based on the increase traffic use that this will cause on the already busy road. The footpath on Wrexham Road is used by pupils going to the primary school in Abermorddu and the secondary school in Hope. The inevitable increase in traffic will I fear increase the lightly hood of an accident between Abermorddu and Caergwrle as already the cars and lorries routinely break the speed limit, which we observe on the flashing speed indicator outside our property. Additionally in the mornings we frequently have traffic backed up from the traffic lights at Abermorddu passed the entrance to Castle Grange on Wrexham Road. A new entrance feeding directly onto the road can only increase the frequency of these traffic delays. The increase in traffic on this road will inevitably increase the amount of air pollution. As the proposed location is very close to the primary school it will cause increased health risks to the children from the local area. Based on the increase in traffic use on Wrexham Road outlined above I object to the proposed new housing development. Yours sincerely, James Keegan	Leave the HN1.9 area as a recreational area for the local community which will increase peoples health instead of increasing air pollution and potential accidents on Wrexham Road.
438	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	Bluebell fields, Wrexham Road, Abermorddu. My husband, son and I would like to object very strongly to any development of the above they should be preserved and not never built on. 1. The council's own development plan states that new housing should not join two settlements together, there should be green barrier between Caergwrle and Abermorddu. The amount of houses will make it feel claustrophobic..2. Welsh Government says this area should not be developed as a dormitory for Chester. 3. The law of supply and demand suggests that there is no shortage of houses locally as the prices are so much lower that elsewhere. 4. The bluebell fields are outside the settlement boundary and should not	Removal of allocated site at Wrexham Rad Abermorddu

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				be considered nor should the boundaries change. Permission has been refused before, this decision should stand and local people should not have to live under this constant the threat of the planning dept changing its mind. 5. The fields have been used for many years by dogwalking and provides a flat area for such use. 6.The fields are home to a great many plants and animals, great crested newts, badgers, toads and native bluebells. 7. The area is prone to flooding. Smaller sites wlil be developed more quickly and better received, especially in areas are not used regularly by the public. 8.There is a lack of infrastructure in terms of schoolplaces. 9.Pollution is a factor Flintshire is already Wales' most polluted county. Mold road is very busy and this development will make a severe addition to the load on local roads. 10. The Council have stated that land adjacent to a school should not be used for development. There are many trees which help with pollution and should not be removed. Medical provision in the village is already stretched.	
708	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	Objection to allocation at Wrexham Road, Abermorddu Proposed land use is inappropriate as it is outside the settlement boundary The Land is adjacent to Abermorddu School. This land would allow for expansion if necessary in the future, with adequate outdoor space, that being the only remaining direction of expansion. The public have used the land unencumbered for recreational purposes for over forty years. It is used regularly for people to walk their dogs, play games and generally enjoy the open space. Wrexham Road is an extremely busy main road which is already dangerous for residents. Further housing would exacerbate that. Any exits onto that road would also cause issues and affect the flow of the main road. Such land use contravenes SR4 protecting recreational space green spaces agenda, health and well-being agenda, community agenda and the well-being of future generations Wales Act 2015.	Removal of allocation at Wrexham Road

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
1086	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	Objection to the HN1 (9) Wrexham Road Abermorddu Housing Allocation This LDP flies in the face of the 'Future Generations in Wales Act 2015' which highlights the need for open space for recreation for all. This development would destroy The Blue Bell fields which are used for recreation by all ages, especially the elderly as it is flat safe route for walking and recreation. The development would lead to an additional road a junction to the A541 which is already a busy road and would put children in danger. It would increase 'car to school' trips when Welsh Government are encouraging 'Walk to school' initiative. It is claimed in the LDP that there is a need for new housing but there is no one on the Council House wasting list for HCAC. There have been large housing developments in Penyffordd, Mold, Buckley, Llay, Wrexham and Chester. Infrastructure does not keep pace with these developments. There is a shortage of doctors, school places, no longer a full time post office, library or bank in Caergwrle. Building on Blue Bell fields will create further pressure on existing facilities. Nature struggles everywhere and destroying an area known to have newts and native blue bells with rare low lying marshland will be a detriment to the local community. The fields are right under the foothills of Hope Mountain and act as a natural sump for water coming down off the hills, so that the area is liable to flooding. If the fields are included in the LDP there will be unbroken ''ribbon development'' from Cefn Y Bedd to Kinnerton Road Hope and it is the only flat area of recreational land between Hope and Caergwrle.	Removal of allocation.
1111	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	HN1(9) Wrexham Road Abermorddu I object to this development because, 1. it is the only accessible open space left in our community and has been accessible for as long as I can remember . 2 the land is a wildlife habitat, with various species spotted. 3.Parts of this land could be used for the school expansion. 4.the site is outside the settlement boundary, why is this land targeted when there are other suitable sites available, there is a brownfield site in Cefn y Bedd. 5.The Bluebell field have flooded recently. There is a large man made pond nearby which	Removal of allocation

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				could breach and would lead to much damage and possible loss of life. I fully support the objections raised by the ACCH Community Group.	
1191	HN1: New Housing Development Proposals	HN1.9 Wrexham Road, HCAC	Object	Land at Bryn Tirion, Caergwrle, Candidate Site HCAC029 for inclusion as a housing allocation. Objection to HCAC004. Please refer to attached document	Removal of allocation

Council response
HN1.9 Wrexham Road HCAC Not accepted. The Deposit LDP consultation has received over 1200 representations on various aspects of the plan strategy, allocations and individual policies. To ensure all points within this large volume of representations are answered the Council have grouped and summarised representations made on allocated sites together and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General The site was allocated by the Council as a Proposed Change to the Deposit UDP. Following a public Inquiry into the Plan the UDP Inspector recommended that the site be allocated in the Plan for housing. Following consideration of the Inspectors Report, 'Proposed Modifications' to the Plan were published and this resulted in objections to the sites inclusion. Following consideration of objections the report to Full Council on 09/03/10 contained a recommendation in respect of Wrexham Rd which was 'That MOD 11/60 be carried forward to adoption on the basis that the objections raise no substantive new issues that warrant a re-opening of the public inquiry of Further Proposed Modifications'. However, and contrary to this recommendation, the Council subsequently resolved to consult on Further Proposed Modifications involving 3 sites (including the non-allocation of Wrexham Rd). Following the consideration of consultation responses the Council resolved in Jan 2011 to adopt the UDP without the Wrexham Rd site. In preparing the Plan the Council undertook a Call for Candidate Sites and this site was submitted by the owner for housing development (HCAC04) and the site was also submitted as a candidate site (HCAC011) seeking its protection as open space. The Council fully assessed each of the submissions and the outcome of this process is set out in Background Paper 08 'Candidate / Alternative Sites' which provides a

Council response
summary conclusion on the assessment of each candidate site. The assessment process concluded that the site was still considered to be a sustainable site and that the Council's previous allocation of the site and the Inspectors recommendation were both material considerations. There is no guidance in either PPW10, the Wales Spatial Plan or the draft National Development Framework which specifically references Chester. The Plan is seeking to meets its own needs for housing but is also seeking to embrace a regional growth agenda and this is an integral part of the draft NDF which clearly recognises Wrexham and Deeside as a growth areas. There is clearly a stock of existing houses in HCAC and development has taken place on the two allocated sites in the UDP. At any point in time it is to be expected that houses will be for sale and also vacant and this is part of the normal 'churn' in the operation of the housing market. However, the Council is preparing a development plan for a new plan period (2015-2030) and has to meet a new need for housing which needs to be delivered through new housing allocations. Within the Plan's spatial strategy and settlement hierarchy HCAC is considered to be a sustainable location for further development over the Plan period. The allocated site has been promoted for development in both the UDP and now the LDP and a planning application was also submitted which was withdrawn at the time that para 6.2 of TAN 1 was temporarily revoked by TAN1. The planning application was accompanied by a comprehensive set of background documents aimed at demonstrating its deliverability, which included: • Design and Access Statement • Ecology Report • Flood Consequence Assessment • Further Ecological Assessments • Hydraulic Modelling Report • Landscape and Visual Impact Assessment • Masterplan • Planning Statement • Pre-Application Appendix • Pre-Application Consultation Report

Council response
• Surface Water Drainage Strategy • Topographic Survey • Transport Assessment • Transport Technical Note • Tree Survey and Arboricultural Impact Assessment The comprehensive set of background papers demonstrates a commitment from the site promoters to its availability and deliverability. The objection has provided no evidence that smaller sites can be developed more quickly, or which smaller sites cumulatively could provide the equivalent level of housing provision. The experience from the UDP is that the allocation of a greater number of smaller sites is less certain in terms of delivery to meet the overall housing requirement, and the LDP has therefore sought to allocate larger sites which are viable and deliverable. The site is viable and deliverable and the Council understands that developers are in discussion with the landowners and their agents, who in turn have sought to discuss with the council options for the best site layout. It is also considered to be rather naïve to suggest that smaller sites will be better received by the community particularly if they are simply anywhere else bar this location. Experience shows that wherever housing proposals are proposed, of whatever scale, there will be objections from local residents. The Council has assessed all the Candidate Sites and Alternative Sites and considers that the Wrexham Rd site is the most suitable and sustainable. It is also of note that the site does not directly adjoin existing residential development as it is separated from existing houses by the adopted highway. Whereas most of the suggested alternative sites directly adjoin existing residential development. The settlements of Hope, Caergwrle, Abermorddu and Cefn y Bedd have been grouped together as a single settlement with a single settlement boundary in successive development plans. In the UDP settlement hierarchy the settlement was included as a Category B settlement and in the LDP a revised settlement hierarchy has been identified wherein the settlement is identified as a Tier 2 Local Service Centre. This was informed by the Settlement Audits which accompanied an earlier consultation exercise on the Key Messages document. The categorization of settlements in a hierarchy and the delineation of settlement boundaries are both planning ‘tools’ whereby the Plan’s strategy can be expressed spatially ‘on the ground’. Neither of these tools takes away the individual identity of settlements or communities which remains intact. The UDP Inspector commented on this in para 11.73.4 of the Inspectors Report ‘A settlement boundary is a planning tool and does not necessarily define a community. In this case it encompasses 4 different areas/communities and parts of different community council areas. For planning purposes it defines an area considered as a single contiguous urban area in planning terms. This a reasonable approach and it is on that basis that I consider this and all other allocations within this settlement boundary’. In January 2020 Welsh Government published a series of explanatory notes on the NDF, including a note on housing need. This states that “The national and regional estimates do not reflect the impact of future policies or events and are not a Housing Requirement for Wales or the Regions. However, the estimates do provide part of the evidence and context on which Housing Requirements can be based. While it is

Council response
expected that there will be a clear alignment between the estimates of housing need and the Housing Requirements set out in LDPs and SDPs, they are not the same and therefore are not expected to match" As stated above the Council needs to consider a wider evidence base to determine the housing requirement within the LDP, and it would be contrary to Welsh Government advice to simply revise the LDPs housing requirement in line with the NDF and projections data. In their formal representations on the Deposit Plan, Welsh Government have supported in principle the level of growth in the Plan and confirmed that the Plan is broadly in conformity with the draft NDF. The site adjoins the settlement boundary of a Tier 2 Local Service Centre. It sits opposite existing residential development and adjacent to a school and recent new residential development. It is within walking distance of facilities and services in Caergwrle and two railway stations, with a further railway station at Hope. Further facilities and services, including a proposed new Coop and a secondary school are available in Hope. It lies at the junction of two key A roads which provide key communications between Wrexham and Mold and Wrexham and Buckley / Deeside. It lies in a sustainable and appropriate location. The site is considered to be one of a limited number of readily identifiable sites without overriding constraints to development such as flood risk and rising topography of the Alyn Valley within which the settlement is located. The Human Rights Act 1998 (the Act) brought the conventions set out in the European Convention on Human Rights (the Convention) into UK domestic law and, amongst other matters, introduced specific powers to certain prescribed UK courts to make declarations of incompatibility, where necessary, between UK law and the Convention rights. The Schedule to the Act sets out the Convention rights. The objector references Article 4 of the Act, which may be a reference to Articles contained in the Convention, but Article 4 is concerned with freedom from slavery and forced labour. In terms of the objection therefore, it appears more likely that the objector is concerned with Article 8 of the Convention, which protects a person's rights to a private life, family life and home and correspondence. It refers to the right of a person to enjoy their home peacefully. Further, Article 1 of the First Protocol to the Convention protects a person's right to enjoy their property peacefully, whereby a public authority cannot take away that property, or place restrictions on its use, without good reason in the general public interest. In this context the Council is not seeking to interfere with the peaceful enjoyment of existing properties by residents. Rather, the Council is preparing a development plan in the context of relevant legislation and procedures and is consulting on its Plan. The assessment of candidate sites and the allocation of the site in a Deposit Plan is a legitimate action in terms of the function of the planning system. The Planning Inspector will be the ultimate arbiter in terms of whether the Plan and this allocation is 'sound' and this will include any impacts on the living standards of existing residents in the area. It is not considered that the Plan is in any way in breach of the Human Rights Act or the Convention. Environmental The Council has reviewed existing green barriers and also assessed suggested green barriers proposed as part of candidate site submissions. No proposal for a green barrier was submitted here during the Call for Candidate Sites. The allocated site only extends part way along the western side of Wrexham Road and there remains a further field which would ensure a gap of some 200m between the site and the property 'Kimberley Lodge' on the edge of Caergwrle. On the eastern side of Wrexham Rd there is a substantial gap of some 400m from Hillcrest Bungalow to the Old Police Station. This gap is notable in that it contains Caergwrle Castle and is within the Caergwrle conservation area and partly designated as a Scheduled Ancient Monument. The UDP Inspector commented 'Whilst development of the land would reduce the area of undeveloped land between Abermorddu and Caergwrle, it would not result in the two merging into one another'. Even with the development of

Council response
the site there would be a sizeable gap between Caergwrle and Abermorddu and it is not necessary for or appropriate for such a small green barrier to be designated. Visually the site is strongly contained by virtue of a belt of mature trees along its western boundary, beyond which there is steeply rising ground leading up to Hope Mountain. The proposal includes the retention of hedgerows/creation of an attractive development frontage/layout to be sensitive to wildlife and break slope along western edge of site. Despite being greenfield, the site is not considered to be of any significant landscape quality. The loss of grade 2 agricultural land it is not considered to be significant in terms of the amount, nor in terms of its relationship with adjoining agricultural land given the topography of the area. Furthermore the land is not used for arable crop production but rather appears to be used periodically for grazing land and there has been no objection to is loss by Welsh Government in the context of the approach taken in the Background Paper on agricultural land. The site is bounded to the west by the Caeau Abermorddu wildlife site. Considerable attention has been paid to the ecology of the site and the adjacent wildlife site. The previous planning application included a Preliminary Ecological Appraisal and a further Ecological Assessment. The Council's Ecologist notes that the site features semi-improved and unimproved grassland of ecological value with overgrown, ancient, species rich hedges, and has two streams which flow across the site from the eastern boundary merging at the south western corner of the wet woodland. The agent for the site promoter has continued to work with the Council's Ecologist to establish a layout which is acceptable. Ecology surveys were carried out in 2016 and 2019, the surveys illustrated that there are no protected species on the site. The reptile survey illustrated that there are no reptiles at the site. Habitats at the site are not considered to be of optimal value for reptiles. The bulk of the site comprises of open, closely grazed pasture however suitable refuge habitat is offered within scrub habitats around the fringes of the site with suitable basking location offered near the scrub/grassland interfaces. No evidence of badger has been recorded at the site during either the 2016 or 2019 surveys. Nevertheless, badgers are known to be present in the surrounding countryside. It is recommended that further badger sett surveys are conducted immediately in advance of any development of the site. Birds recorded at the site were generally commonly occurring woodland and garden bird species however some birds listed as Birds of Conservation Concern (BoCC) were recorded at the site. This included house sparrow, starling and song thrush on the BoCC Red List; plus dunnock, mallard, swift and tree creeper recorded from the BoCC amber list. The grassland habitats are considered to be relatively species-rich albeit with some organic enrichment due to cattle grazing. The greatest species richness is considered to be within the northern half of the larger pasture field at the site (Target Note 1) where plant species present within the adjacent Local Wildlife Site extend into the study site itself. The recommendations within the Ecology surveys 2016 and 2019 include the provision of bat and bird boxes at the site, the timing of vegetation clearance works to avoid the nesting bird season, the

Council response
retention of appropriate buffers around boundary features, the production of a bat friendly lighting plan and a requirement to undertake further bat assessments of any mature trees should their removal be envisaged. With regards to air pollution, The North Wales Authorities Collaborative Project '2019 Air Quality Progress Report' states that 'The North Wales Authorities have not declared any Air Quality Management Areas (AQMAs) and as a result, have not published an Action Plan'. There is a monitoring point at Llys Alun, Wrexham Road, Cefn Y Bedd. The IIA discusses air pollution in great depth and makes the point that the longer term trend towards low emission vehicles can work towards bringing down pollution levels. The trees are all located along the field boundaries and are an important feature of the site and locality. The development will seek to retain these subject to their condition being assessed through an Arboricultural Study. It is accepted that the development will have some impact on landscape through the loss of open countryside. However, the site has an irregular boundary as it follows hedgerows. The undulating nature of the site plus the provision of landscaping and green infrastructure can help to soften the appearance of the development. The UDP Inspector commented 'I acknowledge that the allocation will result in encroachment into the countryside. However, I do not find the area to be of such ecological or landscape value to outweigh the need to allocate the land to meet the future housing needs of the County and this defined settlement'. Neither the site itself nor Hope Mountain is recognised as being of any particular landscape importance and the views of Hope Mountain will remain. An Agricultural Assessment was carried out and the findings concluded that at the time of the survey the land was under grass and not being grazed. There was evidence of dog walking on the land at the time of the survey. The land is classified as Grade 2 and Subgrade 3b, but no objection has been made to the loss of BMV by Welsh Government in their formal representations on the Plan. Additionally, the previous planning application included a Landscape and Visual Impact Assessment. The report identified that landscape and visual harm would occur with the development of housing at this location. It has however concluded mitigation measures such as landscaping, retention of boundaries and green infrastructure would reduce effects'. It is not known what the objector means as the 'green plan'. The issue of whether the site should be designated as a green barrier is addressed above. The Plan also designates 'green spaces' and there are several of these within HCAC but these are predominantly within settlement boundaries where particular parcels of green space warrant protection. Even if the site was not allocated in the Deposit Plan, it would not have been appropriate to have designated as i) it is outside the settlement boundary, ii) is agricultural land and iii) does not have the character, role of attributes to be recognized as a 'green space'. Additionally, the land is privately owned and does not have a public right of way. The use of the site for recreation is commented on elsewhere in this response. It is accepted that there may have been a stile on Wrexham Road, the gate referred to is as a result of planning permission (052895) being granted on 12/01/2015 for a vehicular access onto agricultural land. There is no public right of way across the site although it is understood that the public do walk across the site to gain access to the hillside, but the Council is unaware whether this is with the consent of the land owner. This link to the open countryside could be retained as part of the detailed layout of the site, along with the provision of a play area and open space as part of green infrastructure strategy for the site.

Council response
The site is not green space. It is presently agricultural land. The site is a relatively flat area of land used for grazing and is considered to be undistinguished in landscape terms, with the exception of an established hedgerow containing mature trees running across the southern part of the site. Development would seek to retain trees and hedgerows with the exception of loss of hedgerow to accommodate vehicular access. The previous outline planning 058163 suggested two vehicular access, however the Council considered the position and layout of the main access was appropriate however the secondary access appeared superfluous. The value of a secondary access cannot be defined at this stage, where the main concern is the principle of development and the knowledge that a safe and compliant access can be provided. Given that there is no air quality management areas in the County it is not considered that development of the site would harm air quality to the extent that it falls below acceptable levels. There is no objection to the site from the Council's public protection team. Flooding In terms of flood risk, Natural Resources Wales have been consulted as part of the allocation process and they have not raised any concerns and neither have they made a formal objection at Deposit stage to this allocation. Using the NRW online flood maps it is clear that the proposal is not located within a flood zone. Some surface water flooding exists however this does not cover the whole site and is mainly categorized as low risk. Mitigation measures can be put in place to ensure that any development will not flood or increase flooding in the surrounding area. The development of the site will also be required to embrace a SuDS scheme in order to ensure that surface water run-off from the development is no greater than the run off from greenfield land. This could for instance involve the use of lagoons to store surface water but the design of an appropriate drainage scheme is a matter for SAB approval at the time of a planning application. Sustainability / infrastructure The Health Board and Education Authority have been engaged with from the earliest stages of the Plan's preparation, with the Health Board being a member of the Key Stakeholder Forum, and the Education Authority key internal consultees. Each has been formally consulted to ensure that any future development would not have a negative impact on the health centres and schools and to ensure that all services could cope with an increase in demand. No objection to the Plan or allocation has been made by the Local Education Authority or by Betsi Cadwaladr University Health Board. The settlement of HCAC has a newly developed state of the art health centre. The issues experienced by residents is one of lack of staffing rather than lack of facilities. Whereas the planning system can assist with the provision of facilities through obligations placed on new developments, this is not the case for the funding of staff as this is the sole remit of the Health Board. There is ample time for the Health Board to consider how it intends to meet the health care needs of the Plan's growth levels, as the site is not projected to see completions until 2022/3 and will be developed over 3 years, as set out in the trajectory in Background Paper 10 Housing Land Supply. There will therefore not be one 'big hit' on health or education capacity in terms of new demand from the site, and there is time for capacity to be addressed through mitigation measures. The Council continues to work with the Health Board in assisting in securing a way forward. In relation to concerns regarding the

Council response
public footpath these has been addressed in a point above. It has been confirmed that there is sufficient external space to increase the capacity of the school should there be future demand for additional pupil places. The housing development site on Cymau Lane was developed by Anwyl and the completions from this development have taken place since 2015 and therefore contribute to meeting the Plan's housing requirement. Amenity The site is considered to be a logical urban extension being sequentially well related to the existing form of development of this part of the settlement. It is situated alongside an accessible and frequently serviced public transport corridor along the A541 Mold to Wrexham Road. The site is allocated for 80 dwellings which is the second smallest allocation in the LDP. It is not clear whether the objection is concerned that it will make existing residents feel claustrophobic or whether this is a concern for the residents of the new development. In terms of the former, the development will be separated from existing properties by the A541 Wrexham which is relatively wide and where the separation distances between existing and proposed houses will be well in excess of the Council's standards for separation distances. The new development will also be laid out and designed so as to meet the same standards and will also involve open space and green infrastructure and embrace the Welsh Governments emphasis on 'placemaking' in PPW10. It is not considered that the development will result in a feeling of claustrophobia either for existing or potential new residents. Although the site appears to have been used for walking etc. there is no evidence of express permission from the landowner to do so. The site is in private ownership and is agricultural land. It is also the case that other objectors have claimed that the site is waterlogged, that it is of ecological value yet other objectors claim is able to be used for recreation. It is difficult to reconcile such conflicting views from the community. The new development will be required to provide a play area and open space as part of a green infrastructure strategy for the site. The Plan has identified a housing requirement figure to meet the needs of the County and to support a regional growth agenda. Welsh Government, in their formal representations on the Plan, are generally comfortable with the amount of growth provided for in the Plan as well as the spatial strategy. It is the Council's view that given the relative modest levels of development experienced by this settlement during the UDP and in the early years of the LDP, it is not considered that this sustainable site will result in unsustainable levels of growth given the settlements position in the settlement hierarchy and the range of services available? Welsh Government through PPW10 and the draft NDF does not prescribe the housing requirement that each Local Planning Authority and their LDP should include. As set out in PPW10 para 4.2.15 it is a matter for each Local Planning Authority to determine the housing requirement figure using the Welsh Government population and household projections and a range of other considerations. As stated above Welsh Government have not objected to the Plans provision of housing in the County and also consider the plan to be in general conformity with the NDF.

Council response
The site does not have any recognized recreational status or designation. It is not laid out as open space and neither is it maintained as recreation space. It is agricultural land in private ownership. As explained above, it does not have the characteristics necessary for it to be designated in the Plan as a green space. PPW10 advises in para 1.11 that 'The Well-being of Future Generations Act places a duty on public bodies to carry out sustainable development'. The Well-being Act identifies seven goals which are: a globally responsive Wales; a prosperous Wales, A resilient Wales, a healthier Wales, A more equal Wales, A Wales of cohesive communities and A Wales of vibrant and thriving Welsh Language, and it is necessary to consider these as a whole, rather than in isolation. PPW10 recognises that the planning system and in particular the development plan system is central to achieving sustainable development in Wales and that 'It provides the legislative and policy framework to manage the use and development of land in the public interest so that it contributes positively to the achievement of the well-being goals'. The identification of a housing allocation on a site which does not result in the loss of recreation space, but which will provide play space, open space and green infrastructure as part of its layout to ensure an attractive and healthy environment, is clearly not in contravention of the Well-being goals. Traffic The planning application was accompanied by a Transport Assessment which demonstrates that the road network is capable of accommodating the development. As stated above, the previous planning application included two points of vehicular access but a single access is preferred. Further consideration will need to be given, as part of working up detailed layouts, to securing improved pedestrian and cycling. Development assurances Whilst all of these matters are more appropriately dealt with at the Planning Application stage there is nothing to say that these requirements could not be considered or provided as part of a sustainable detailed development scheme. Highways Development Management has stated that Frontage onto a 40 mph restricted area, 2.4x120 visibility splays will be required but appears achievable. There is potential for more than one point of access, direct access to properties opposite may prevent the provision of a ghost island and right turn lane. A footway fronting the site will be required. As part of wider speed review across the County, a reduction in speed limit to 30mph on the A541 at Abermorddu formed part of the Members' requests back in 2018. Due to development on only one side of the road, it was felt at that time that the current 40mph speed limit was appropriate. If this site is developed, it would be likely to qualify for a reduction in speed limit to 30mph and so the Council would request that a sum is secured through the development in order to carry out a speed limit review and introduce any subsequent changes. As a change in speed limit is subject to review, consultation and Member approval, it is recommend that visibility splays for 40mph rather than 30mph should be required until any change is confirmed.

Council response
• S106 agreements – Policy STR6 in the Deposit Plan explains that any impacts of new development on infrastructure will be mitigated and this includes education facilities. The Council has an existing SPG on Education Contributions which sets out the Councils approach to addressing school capacity issues, but this will be a matter for the Local Education Authority to advise on. • % affordable housing – Policy HN3, as supplemented by Background Paper 07 Affordable Housing, specifies an affordable housing requirement of 30% for this site which equates to 24 units. Consideration could be given with regards to include a heritage board including information of the history of Abermorddu. Alternative sites suggested: HCAC21: Despite the entire eastern boundary adjoining the settlement boundary the site relates better to the open countryside as the site slopes upwards to the heavily wooded steeply sloping Alyn Valley sides. It is crossed by a footpath which leads to an extensive network of footpaths in the wooded area beyond the site. Removal of trees on the fringes of the site to accommodate approximately 40 dwellings would have a significant visual adverse impact on this elevated and prominent site. In any event highways object to the development of this site due to there being no direct access to the adopted highway furthermore roads in the vicinity are generally inadequate to serve a development of this size. Despite the site being submitted as a candidate site, it has not been the subject of a representation to the Deposit LDP by the owners or a developer, and in this light, the objectors' assertion that the owners are in a position to begin building, and that the site is viable and deliverable appears unfounded. The site is not a suitable replacement, either in whole or in part, for the allocated site. HCAC023: Due to is small size and likely maximum number of dwellings being 6 units, this site is classes as a small Site and is not appropriate to be allocated in the Plan- The site is located at the southern end of dwellings on Plas y Bwl. The site lies in an elevated location and rises up from the rear of no. 17. The site sits behind existing houses which lie at the head of Plas y Bwl and is in an elevated position with land running steeply downward to the east to the A542 Wrexham Road. The site has similar characteristics to the open countryside and is considered to have little relationship with the form and pattern of built development, given that there is housing only on its northern side. The inclusion of the site in the settlement boundary would result in a block of development in an elevated and prominent position which would be harmful to the character and appearance of open countryside and also relate poorly to existing built development.

Council response
Highways officers consider this site is unsuitable as there is no direct access to the adopted highway. Plas y Bwl is considered unsuitable to cater for any additional traffic due to its alignment, limited width and inadequate junction with Bryn Yorkin Lane. Despite the site being submitted as a candidate site, it has not been the subject of a representation to the Deposit LDP by the owners or a developer, and in this light, is not considered to be a viable and deliverable site. The site is not a suitable replacement, either in whole or in part, for the allocated site. HCAC025: This site abuts the settlement boundary on two sides - to the west and to the south where there is existing residential development at The Beeches and Almond Way. The site is considered to relate well to the urban form of the settlement where there is a large area of residential development to the south and which is well contained by by Stryt Isa to the west and the A550 Wrexham Road to the east. Wat's Dyke and a footpath is situated within the eastern edge of the site which would require measures to safeguard these should the site be developed. Previously the site was allocated in the UDP but removed on account of access concerns, and the de-allocation of the site was also recommended by Inspector, who also expressed concerns about access constraints. Similarly the Highways Officer considers this site to be unsuitable as there is no direct access to a public highway and a transport assessment would be required in terms of access through The Beeches. At the time of writing no such Transport Assessment has been provided and the site has not been resubmitted by the landowner in the form of a representation at Deposit consultation stage. However, It could be considered further if a vehicular access could be secured through land to the southwest which has outline planning permission four housing (053445 – land at Ty Carreg for 19 dwellings). Although discussions have taken place to achieve this, no agreement has been made known to the LPA and the latest application for reserved matters approval on the site (060970) shows a layout which makes no provision for vehicular access through to HCAC025. Although the development of the site is considered appropriate in terms of relationship with settlement and open countryside, it is not appropriate to allocate land for housing when there is no certainty of securing a suitable vehicular access. The site is not considered suitable as a replacement for the Plan’s allocation either in whole or part. HCAC026: With the exception of the 4 bungalows to the south of the site the bulk of the settlement form at this location is on the opposite side of the A55O Wrexham Road. This long straight road marks a strong physical demarcation between the built up area and the open countryside. The site relates poorly to the main built form of the settlement and is better related to the open countryside to the north and east. Development of the site would result in urban encroachment extending beyond a well-defined and defensible edge. Highways consider access to be unsuitable as there is Inadequate junction visibility to the right on exit due to the horizontal and vertical profile of the road.

Council response
Despite the site being submitted as a candidate site, it has not been the subject of a representation to the Deposit LDP by the owners or a developer, and in this light, is not considered to be a viable and deliverable site. The site is not a suitable replacement, either in whole or in part, for the allocated site. HCAC028: With the exception of the ribbon development to the south of the site the bulk of the settlement pattern and form at this location is on the opposite side of the B5373 Gresford Road. This together with the long straight A55O Wrexham Road to the north marks a strong physical demarcation between the built up area to the west and the open countryside to the east. The site relates poorly to the main built form of the settlement and is better related to the open countryside to the north and east. The eastern boundary of the proposed site follows no physical features on the ground and is not a firm and defensible boundary. Development of the site would result in urban encroachment in the form of a large block of development extending beyond a well-defined and defensible edge. Despite the site being submitted as a candidate site, it has not been the subject of a representation to the Deposit LDP by the owners or a developer, and in this light, is not considered to be a viable and deliverable site. The site is not a suitable replacement, either in whole or in part, for the allocated site. HCAC029: Between the access track leading to the Hall is a tapering intervening gap of land before reaching the well-defined settlement boundary which is formed by the residential development at Edinburgh Avenue and alongside the A541 to the south of the site. This frontage development gives the appearance of ribbon development stretching out along the A541 in a northerly direction from the main patter of development to the south. Development of this prominent site would in effect continue this ribbon development and result in a fragmented and illogical development away from the centre of Caergwrle. It would be poorly related and visually damaging to an area of attractive open countryside. Highways have raised objections to development at this site on the basis that the site is in a relatively remote location and limited/substandard pedestrian connectivity. The horizontal alignment of the road and bounding hedges, restricts forward visibility along the road. It would be possible to provide an appropriate junction layout (right turn lane potentially required) however this would require the full removal of the hedgerow fronting the site. Delivery The Council have assessed the Wrexham Road site as part of the candidate site stage and have not identified any issues which would prevent the delivery of this site within the plan period.

Council response
An outline application (058163) for the site was withdrawn in 2018 around the time of changes to TAN1 when Welsh Government temporarily suspended paragraph 6.2 which gave significant weight to the lack of a five year housing land supply as a material consideration when determining speculative applications such as this one. The candidate site assessment process has involved significant scrutiny of the sustainability and deliverability of sites to ensure they are capable of delivery within the LDP period. Also the LDP takes a different approach to the UDP. Whereas the UDP had a more dispersed distribution of allocations with many smaller sites, the LDP has a more focused approach to distributing allocations to the most sustainable settlements. The aim of this strategy is to ensure that allocations are in the most sustainable locations and of a scale to be attractive to house builders so that they are likely to be more deliverable. The Wrexham Road site is located within a strong housing market area where there is significant demand for new homes, the objector does not provide any evidence to support their objection to the delivery of this allocation, and the Council have not identified any constraints as part of the candidate site assessment process that would prevent the delivery of the site. The Council have only allocated sites within the plan where they are confident of delivery within the lifetime of the LDP

HN1.10

Due to the large number of representations received to this allocation, and the fact that a number of common issues were raised by objectors, a collective response has been provided at the end of this table which covers all of the points raised within each of the individual representations.

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
183	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Object	I write on behalf of Argoed Community Council who, having viewed the Deposit Plans and Maps, wish to make the following comments with regard to New Brighton. It is considered that the proposal to allow development on the area referred to as HSG48, to the south of New Brighton Road is without merit. If allowed, this would lead to a significant increase in development of the area, wholly out of proportion to the infrastructure available. It is noted that under the previous UDP (2010), a Welsh Inspector rejected the then proposal to develop part of this area on the grounds that there was a lack of facilities, drainage, water supply, schools and travel facilities for walking and cycling (Active Travel Network). None of these facilities have improved in the last 9 years and, in fact, the village is now significantly worse off as there is no longer any shop, post office or public house.	Removal of allocated site at Cae Isa, New Brighton.
353	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Object	The Cae Isa site, the majority of which is outside the settlement boundary, should not be considered for development. HN1 - New housing proposal Ref 10 Cae Isa A5119 New Brighton. This site is not appropriate for our village and should be deleted from the Plan. The Cae Isa site has been allocated 105 houses. Since 2015 New Brighton has had an 11% increase. If we now add 105 houses this would give an increase of 43%. Since the UDP New Brighton has lost facilities (Post Office, Store and Public House). We are therefore only left with a Church and Community Centre. This proposal would be a massive over development of New Brighton and is not sustainable. As mentioned above New Brighton has lost facilities, therefore we do not agree with it's classification as a Tier 3 sustainable village, it is debatable if we are even a Tier 4 Defined Village. We are not sustainable and new development should not be directed to our location. The proposed allocation for housing in New Brighton has no	The Cae Isa site should be deleted from the plan.

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				services or facilities and is not part of the Flintshire Active Travel Network. It will not reduce the reliance on private cars as it cannot incorporate travel by walking and cycling. Indeed the site is flanked by New Brighton Road which has failed a Safe Walking Route to School assessment and is therefore deemed a hazardous route. From our own experiences of drainage concerns reported to and recorded by Welsh Water, we have no confidence or evidence that the site can be drained successfully. Indeed the Welsh Government UDP inspector stated, 'The area is liable to flood/has a marshy nature and is close to newt habitat'.	
1121	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Object	Objection to allocation at Cae Isa, New Brighton A report produced on behalf of developer Stewart Milne Homes, by Brownfields Solutions Geo-Environmental Engineering Excellence, identified candidate site reference number NEW013 being at moderate risk from coal mining subsidence. This is due to the coal seam, anticipated to be underlying this allocation being identified as likely to be locally worked. Additionally, it was calculated that there was likely an insufficient thickness of rock cover above the coal seam for subsidence not to affect the surface of this allocation. Therefore this site should be removed from the LDP as it is unsuitable for development and contradicts LDP policy EN17 and PPW. Risk of contamination from previous landfill use on the site. According to NRW the site is in a high risk surface water runoff area. The ground surrounding Cae isa is predominantly clay based, permanently wet and large deep ponds form regularly. The site cannot sustain the amount of water falling on it, hence the permanent ponds and marshy grounds. The foul water drains in Cae isa, in general, have the capacity to cope with flows under normal circumstances. However, the speed and volume of rainwater during times of intense or prolonged rainfall creates surface run off and according to Welsh Water a hydraulic overload occurs within the system resulting in sewage outflows. Therefore this site should be removed from the LDP	Removal of allocation at Cae Isa, New Brighton from LDP

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
321	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Object	Objection to HN1.10 Cae Isa, New Brighton. A report produced on behalf of developer Stewart Milne Homes, by Brownfields Solutions Geo-Environmental Engineering Excellence, identified a moderate risk from coal mining subsidence due to the coal seam anticipated to be underlying candidate site reference number NEW013 being identified as likely to be locally worked. Additionally, it was calculated that there was likely an insufficient thickness of rock cover above the coal seam for subsidence not to affect the surface of candidate site reference number NEW013. In addition the report produced on behalf of Stewart Milne Homes, by Brownfields Solutions Geo-Environmental Engineering Excellence, identified the possibility of candidate site reference number NEW013 being an historic landfill site. In addition Natural Resources Wales request Condition 3 - NLQ C 04: Unsuspected contamination if consulted on an application for full planning permission as given the history of the site it is considered possible that there may be unidentified areas of contamination at the site that could pose a risk to controlled waters if they are not remediated. A Flood Consequences Assessment (FCA) has been prepared in support of this statutory pre-application request by Sutcliffe (ref: LRD2994 dated May 2019). The report states that surface water flooding poses some risk to the site due to a low-lying section in the eastern portion of the site. The potential for the proposed development to affect other interests, including environmental interests of local importance. Therefore, site reference number HN1, Ref 10, Cae Isa, A5119, New Brighton (NEW013) should be removed from the Flintshire County Council Local Development Plan Deposit Draft September 2019 as it contradicts the following LDP policies; EN 16 a b c d e Site HN1, Ref 10, Cae Isa, A5119, New Brighton (NEW013) is a high surface water flood risk area according to Natural Resources Wales	Removal of allocation

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				and should be removed from the Flintshire County Council Local Development Plan	
544	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Object	Objection to the allocated site in New Brighton, on behalf of the steering committee of the New Brighton Residents Group. Deletion of allocated candidate site NEW013 from the Deposit LDP as a major part of the site is outside the current settlement boundary. A small part was proposed for housing in the UDP, in the Welsh Government Inspectors report this piece of land was deleted by the inspector: (Page 402, under 11.80.7) "Commitments and HSG1 (47) would amount to 9.5% growth in the settlement, add to that HSG1 (48), the level of growth would rise to almost 19%, which is above the indicative level. Given the range of facilities actually within the village, I do not consider development of this level should be encouraged unless it can be justified on the grounds of housing need in line with my recommendations to HSG3." The inspector on page 401 under 11.80.3 says of New Brighton: "It has a shop/post office, public house, hotel with leisure facilities and a community centre" the inspector deleted HSG1 (48) as it would give a growth rate of 19%, which is above the indicative level. And given the range of facilities within the village, development should not be encouraged. Since the inspectors report we have lost facilities, the shop/post office and public house have now gone, in the DP pages 150/151 – NEW013 has an allocation of 105 houses. The FCC 2014 Housing Land Study states that the number of dwellings in New Brighton is 328, since this date we have had 37 houses built this was the above mentioned HSG(47), this gives an 11% increase since 2015, if we now add 105 houses as allocated to NEW013 we have an increase of 43%. The inspector also says "HSG1(48) is liable to flood/has a marshy nature and is close to newt habitat" The statement in BP8 assessment of candidate sites is untrue, the UDP inspector did not recommend that land at Cae Isa should be withdrawn from the green barrier, the land was already removed in the UDP by FCC, what the inspector actually said was: (page 134, 4.84.3) "The lack of green barrier protection for this land should not be seen in any way sanctioning development. It is a matter which must be fully explored as part of the LDP. In the interim period the site forms part of	Deletion of allocated site Cae isa, New Brighton

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				the open countryside and is subject to the restrictive policies of GEN3 which would not permit further growth on this undeveloped land. In these circumstances the sites lack of green barrier recognition should not be seen as a precedent for development."	
596	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Support	Stewart Milne SUPPORTS Policy HN1 (10) which allocates land under its control at New Brighton for 105 dwellings. As noted in Chapter 1 Stewart Milne is committed to delivering this development site. 6.2 By way of background it is material to note that part of the site is located within the Settlement Boundary in the UDP and part is located outside of it in what is in effect the open countryside. However, the UDP Inspector drew back the Green Barrier to exclude the site (unlike all of the other undeveloped land around New Brighton). The site clearly has a close physical relationship with the settlement rather than the wider countryside and it does not perform the separation of settlements role that other Green Barrier land around New Brighton performs.	
1118	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Object	Objection to allocation at Cae Isa, New Brighton. The Cae Isa, New Brighton allocation is a high surface water flood risk area according to NRW and should be removed from the LDP as it is unsuitable for development and contradicts the following LDP policies EN14. The site will require SuDS. FCC state that development will not be allowed if expensive engineering projects, which have implications for the public purse will be required. PPW also sets out that government resources for flood alleviation works are only directed at existing development and not for areas of future development.	Removal of allocation at Cae Isa, New Brighton
1122	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Object	Objection to allocation at Cae Isa, New Brighton. A major part of the New Brighton allocation is outside the current settlement boundary (UDP). A small part of the site was proposed for housing in the UDP, it was termed HSG1(48). Welsh Government inspectors deleted it due to the level of growth. “Commitments and HSG (47) would amount to about 9.5% growth in the settlement, add to that HSG1(48), the level of growth would rise to almost 19%, which is above the indicative level. Given the range of facilities actually within the village, I do not consider development of this level should be encouraged unless it can be justified on the grounds of housing need in line with my	Removal of allocation at Cae isa, New Brighton

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				recommendations to HSG3." The inspector on page 401 under 11.80.3 says of New Brighton: "It has a shop/post office, public house, hotel with leisure facilities and a community center" the inspector deleted HSG1(48) as it would give a growth rate of 19%, which is above the indicative level, and given the range of facilities within the village, development should not be encouraged. Since the Inspectors Report we have lost facilities, the shop/Post Office and public house have now gone. The FCC November 2014 Housing Land Supply states the number of new dwellings in New Brighton is 328, since this date we have had 13 houses built behind Argoed View and 24 houses at the former Argoed Service Station this was above HSG1(47). This gives an increase of 11% since 2015, if we now add 105 as allocated in the LDP we have an increase of 43% The inspector deleted HSG1(48) with a level of growth of 19% and the facilities of New Brighton at that time. The LDP is proposing a level of growth of 43% with the facilities of New Brighton reduced to a Church and Community Centre, this would result in massive over development. The inspector also says on page 402 under 11.80.8 "HSG(48) is liable to flood/has a marshy nature and is close to newt habitat. This site is not part of the Flintshire Active Travel Network, I will not reduce the reliance on private cars as it cannot incorporate travel by walking or cycling, indeed the site is flanked by New Brighton Road which has failed a safe walking route to school assessment. The site would not conform to LDP policies PC4, PC5, PC6. Drainage issues – the site would not conform to LDP policy EN15. A report produced on behalf of Stewart Milne Homes identified the possibility of a historic landfill at the site.	
1247	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Support	Cae Isa, A5119, New Brighton, 105 units Welsh Water has made representations on this proposed site through planning application 060220. Potential developers need to be aware that this site is crossed by sewers and an easement width would be required which may impact upon the housing density achievable on site. A Hydraulic Modelling Assessment (HMA) will be required to determine the point of connection to the public sewerage system and potential developers would be expected to fund investigations during pre-planning stages. The findings of the HMA would inform the extent of any necessary	

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				sewerage upgrades, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). Mold Wastewater Treatment Works (WwTW) can accommodate the foul flows from the proposed development site.	
1257	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Object	There are inconsistencies in the way the council has assessed potential sites, with reference to the assessment of our client's site. Background Paper 9 'Assessment of Candidate Sites and Alternative Sites' (2019), which forms part of the LDP evidence base, discusses the site (ref: BROU001) and states: 'The site is well defined by existing roads and wraps around existing residential development… Although the site is in close proximity to Bretton, the configuration of the site and its relationship with Bretton would ensure that development would not harm the present character and appearance of the settlement…' 'The site is considered suitable at present for consideration as an allocation.' [NJL Consulting emphasis] The evidence base is clear that the site is appropriate for residential development and should be considered for allocation, yet an allocation has not been taken forward. However, other less sustainable and less deliverable sites are allocated. For example, Northop Road (Flint) has no planning consent (two applications from September 2017 (ref: 057565) for 20 units and April 2018 (ref: 058314) for 145 units remain undetermined) and has identified constraints to delivery, yet the site is allocated. The same applies to the New Brighton (Cae Isa) site (Site 10), which is proposed to be allocated for 105 units but there is no clear evidence of delivery yet clear evidence of constraints.	Need to allocate more sites

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				Two further sites are proposed for allocation despite previous planning applications being withdrawn or dismissed on Appeal. The Highmere Drive (Connah's Quay) allocation (Site 3) was promoted for 185 dwellings in 2005 (ref: 043873) but a subsequent Appeal was withdrawn in 2008 and there has been no progress on the site. The Wrexham Road (Hope) allocation (Site 9) was subject to a now withdrawn planning application from 2018 (ref: 058163), and there has been no further progress. Therefore, the council's assessment of sites is inconsistent. There is a need for additional sites to be allocated, such as Bloor's site BROU001.	
1281	HN1: New Housing Development Proposals	HN1.10 Cae Isa, New Brighton	Object	There is genuine risk that proposed allocations cannot be delivered, either at all or in the timeframes envisaged. Several sites have been simply carried forward (rolled over) from the current LDP despite concerns with delivery. The Local Development Plan ('LDP') Manual (Edition 2) identifies the requirement for a new form of measuring the deliverability of sites, and whether they have a realistic chance of coming forward over the next 5 years. It states "When putting forward sites, developers and landowners should include sufficient data to allow a robust assessment to be made (see section 6.4.1&2) including affordable housing, community infrastructure and that the development is financially viable." The draft LPD Manual 3 (which was consulted on by Welsh Government in September 2019) then goes a step further. Table 18 in draft Manual 3 states that historic allocations should only be 'Rolled Forward' from previous plans where 'careful justification' is given that there has been a 'substantial change in circumstances to demonstrate sites can be delivered and justify being included again'. This is relevant	Allocate additional sites.

ID	Title	allocated site - Allocation:	Support or object	Summary of representation	Summary of changes being sought/proposed
				as many of the proposed housing allocations have been simply 'Rolled Forward'. The table at Appendix 2 shows the housing allocations and our analysis of realistic deliverability. It identifies 6 of the 11 housing allocations are undeliverable in the next 5 years and a further 4 have questionable delivery over the plan period. This has significant implications for the 5-year supply position and overall delivery of the plan. For example New Brighton (Cae Isa) site (Site 10), which is proposed to be allocated for 105 units but there is no clear evidence of delivery	

Council response
HN1.10 Cae Isa, New Brighton Not accepted. The Deposit LDP consultation has received over 1200 representations on various aspects of the plan strategy, allocations and individual policies. To ensure all points within this large volume of representations are answered the Council have grouped and summarised representations made on allocated sites together and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General The eastern part of the site was previously included as an allocation within the Deposit UDP, HSG1 (48) but was recommended for removal by the Planning Inspector following the inquiry into objections to the Flintshire UDP. The Planning Inspector concluded that HSG (48) should be removed from the UDP as the completions, commitments and the allocation of HSG1 (47) to the Rear of/and New Brighton Service Station would result in a level of growth of almost 19% within this category B settlement, which had an indicative growth band of between 8 and 15%. The Planning Inspector recommended that HSG1 (47) be retained as an allocation within the UDP ahead of HSG1 (48) as it scored higher against the criteria set out in PPW (9.2.8 and 9.2.9 MIPPS 01/2006) at the time. The inspector cited the potential for flooding and the proximity to a newt habitat amongst the reasons for preferring HSG1 (47), which was also a partially Brownfield site.

Council response
The Inspectors Report does not raise issues which would prevent the allocation of HSG1 (48) in future development plans, and it would have been left within the UDP if HSG1 (47) had not been available instead. The Inspector purposely left an area of white land on the proposals map by not drawing back the Green Barrier, however the settlement boundary was redrawn to exclude the majority of the allocation, leaving a small parcel of land as a potential windfall site. The Inspector states that "I do not consider the lack of green barrier recognition should be considered as a precedent for development in the LDP. Any changes to designations will need to be the subject of thorough review and consultation as part of that process." Notwithstanding this, the lack of a green barrier designation clearly allowed the consideration of this land for inclusion in the LDP. Objectors appear to have misinterpreted the Inspectors report, perceiving it to resist the allocation of this site in future development plans. An early stage in the preparation of the LDP involved a Call for Candidate Sites. A number of candidate sites were submitted including NEW013. Each site has been assessed on its merits against a candidate site assessment methodology which itself was previously the subject of consultation. The LDP has involved a thorough assessment of the site, including consultation with statutory consultees. As part of this assessment the fact that part of the site was already in the settlement boundary and not within the green barrier were material considerations. The site was considered to be a logical rounding off of the settlement within well-defined physical limits and was considered to be a sustainable, viable and deliverable allocation. A speculative planning application (060220) was submitted to develop 97 dwellings on this site in July 2019 in advance of the publication of the Deposit Plan. This application is still under consideration at the time of writing and has not been determined. Access to Facilities / Services All sites within the LDP have been assessed in terms of their access to local services and facilities. New Brighton has been categorised as a Tier 3 sustainable settlement within the settlement hierarchy under Policy STR2, using evidence from the earlier Settlement Audit. Sustainable settlements benefit from some services and facilities and are sustainably located in terms of access to these. It is noted that New Brighton has lost its shop / post office and public house. However, it still has a large hotel / bar / conference facility, village hall, place of worship, car sales and service and a nearby petrol filling station and convenience store. The settlement hierarchy is informed not just by the level of services and facilities but also by its character, role and location. In this context New Brighton is on a key communication route between Mold and Deeside and also sits close to settlements of Mynydd Isa and Buckley and Sychdyn. Its nucleated development pattern set around the crossroads and with the large hotel, gives it a distinct urban rather rural character and appearance. Despite the unfortunate loss of some facilities, it is still considered to be a Tier 3 Sustainable Settlement. The UDP inspector stated that 'New Brighton is a category B settlement with an indicative growth band of 8 - 15%. Since the start date of the plan there have been relatively few new houses either permitted or built. It has a shop/post office, public house, hotel with leisure facilities and a community centre whilst schools can be found nearby in Mynydd Isa, employment and leisure at the County Hall complex and in Mold generally, and shopping at Mold and Mynydd Isa. I am told the village is served by a regular bus service and I share the view of the Council that it has

Council response
capacity for some growth'. The Council are still of the view that New Brighton has sufficient access to services and facilities to be classed as a Tier 3 Sustainable Settlement, despite the loss of the shop/post office and pub, and can sustainably accommodate growth. The allocation at (HN1.10) Cae Isa New Brighton is within the recommended 800m of a single shop, the Shell Garage is located 470m of the site. There are a number of schools within close proximity to the site including Ysgol Mynydd Isa which is 1200m from the site, Argoed high school which is within 1500m and Sychdyn Primary school which is within 1500m, which is below the recommended 2000m distance. New Brighton also benefits from a Community Centre and recreational areas which are located within 500m walking distance of the allocation. The recreational areas include a Bowling Green, children's play equipment and a football pitch off Moel Famau Road. The Beaufort Park Hotel & Conference Centre is located just outside the UDP settlement boundary on Bryn Offa Lane but is easily accessible to the community and incorporates "The Orchard" restaurant and bar, there is also a coffee shop available. In addition S.M. Auto Car Sales and Services is located on the crossroads of Bryn Lane, New Brighton Road and the A5119. The larger 'Main Service Centers' of Mold and Buckley and the Local Service Centre of Mynydd Isa are also in close proximity to New Brighton, providing residents with access to other services and facilities unavailable within New Brighton. In addition to the existing facilities New Brighton benefits from a regular bus service, with bus stops on Mold Road and Bryn Lane. There is a direct bus service to Mold from 06:30 until 23:50 approximately every thirty minutes, in addition services run to Connah's Quay and Flint providing links to the rail network. Settlement growth The UDP used growth bands to distribute growth across the majority of settlements. The LDP has moved away from this approach, distributing growth spatially towards the most sustainable settlements in accordance with the settlement hierarchy in Policy STR2. The housing level within the LDP has been calculated based upon a range of evidence including the latest Welsh Government household projections, alongside the latest Local Housing Market Assessment (LHMA) as recommended by PPW10. These two pieces of evidence have formed the starting point for calculating the housing targets within the LDP, further considerations need to be taken into account including the appropriateness of the projections for the individual local authority area and any other relevant evidence including the job growth ambition for the County and the wider North Wales region. This evidence led to the selection of a growth option for the provision of 6,950 dwellings over the plan period, and when the contingency allowance is added to this it equates to an overall provision for 7,950 dwellings. The Welsh Government in their formal comments on the deposit Plan support the level of housing growth in the Plan and the spatial strategy, which therefore acknowledges that sites such as that allocated at Cae Isa, New Brighton (HN1.10) have been allocated to accommodate the Plan's strategic requirement within the most sustainable locations. The assessment of this site demonstrates that it would represent a logical rounding of the settlement form and would not represent an overdevelopment of New Brighton, given that there is sufficient access to facilities, services and public transport to support the development this site sustainably.

Council response
New Brighton saw only 3 housing units completed over the15 year UDP Plan period which amounted to a 0.9% growth (in the context of 8-15% growth band for a category B settlement) largely because the allocated site did not come forward for development before the end of the Plan period. In the first few years of the LDP Plan period completions have occurred at the allocated service station site (24 units) as well as a windfall site within the settlement at Rock Bank (13 units). Taken in conjunction with the allocated Cae Isa site it is acknowledged that cumulatively there appears to be a relatively high growth level. However, a high numerical growth level is not sufficient in itself to resist development as it is necessary to look at the specifics of the settlement and the site itself. The settlement has a range of services and facilities and is close to a number of nearby settlements and is seen as a sustainable location for growth. The site is physically well defined and will not harm open countryside nor green barrier, and site constraints relating to surface water flood risk and ecology are capable of being addressed and mitigated through the development management process. It is unclear as to the specific harm that the level of growth will result in as objectors have not set this out in relation to the perceived level of growth. Drainage / Flooding Issues The preparation of the Plan and the assessment of candidate sites has involved consultation with Natural Resources Wales. The publication of the Deposit LDP was also accompanied by a Strategic Flood Consequences Assessment which demonstrated that there is no tidal or fluvial flood risk to the site but that a Flood Consequences Assessment would be necessary to address surface water issues. At Deposit consultation stage there was no objection to the allocation by NRW. As part of the recent planning application on this site (060220) a Flood Consequence Assessment (FCA) has been undertaken by the developer. The FCA confirms that the site is not at risk of tidal or fluvial flooding, with a less than 1 in 1000 (0.1%) annual probability of flooding in any given year. The Development Advice Map shows that there is a slight risk of surface water flooding, with a low risk hazard from rainfall with a return period between 1 in 1000 and 1 in 100 chance of occurring in any given year, which is generally above the required parameters but the potential for flooding should be considered during the site design. Therefore the application on this site proposes raised finished floor levels and the inclusion of SUDs for the discharge of surface water runoff. The FCA concludes that the site is at low risk of flooding, and that through the management of surface water runoff there is no increased flood risk elsewhere (off site) as a consequence of the development. The site is not in a flood risk area according to the Development Advice Maps, and the Planning Authority is not required to impose conditions that draw attention to flood risk. Therefore the Authority are satisfied that there are no flood risk issues with the site that would prevent it from being allocated within the LDP. Any potential surface water flooding can be mitigated through SUDs as part of a detailed scheme of development for the site and by seeking advanced/in tandem SAB approval for such a scheme. Active Travel

Council response
The purpose of the Active Travel Act (Wales) 2013 is to enable more people to undertake active travel such as walking or cycling for short journeys instead of using motorized vehicles. Welsh Minsters designated fifteen Active Travel localities within Flintshire, including Mold, Buckley and Connah's Quay. New Brighton was not identified as an Active Travel locality due to its size. Section 2(5) of the Act provides that the Welsh Ministers may, in particular, specify a locality, or description of a locality, by reference to: a) density of the population, b) size, c) proximity to densely-populated localities above a particular size, d) position between such localities, e) proximity to community services and facilities, f) potential for other reasons to be a locality, or a description of locality, in which more travel is undertaken by walkers and cyclists by active travel journeys The fact that New Brighton has not been designated as an Active Travel area does not mean that's it is not suitable for development. Active Travel routes are proposed in close proximity to New Brighton, from Mold to Northop Hall and Mold to Ewloe. The Active Travel Integrated Route Map shows that New Brighton sits between two strategic 'connecting settlements' routes. Route F6 lies to the south of New Brighton and seeks to link, Mold, Mynydd Isa, Buckley and Ewloe. Route F5 lies to the north of New Brighton and provides a link from Mold to Northop Hall and Connah's Quay. A further route F4 links Mold with Sychdyn, Northop and Flint. Although there are presently no Active Proposals for New Brighton there is potential to link in with these other routes. Traffic There has been no official Safe Route to school assessment carried out on New Brighton Road, however it is a hazardous route in its current state due to the lack of a continuous footway. The Council's Highways Strategy Team have advised that mitigation measures can be implemented to make the route safe. This could involve the developer providing a footway and a pedestrian crossing at the traffic lights. The details of this would be more appropriately dealt with at the planning application stage, and the Council are therefore satisfied that this issue can be overcome and the allocation is suitable for residential development. Landfill Planning constraints information shows that there are small landfill sites to the north of New Brighton Rd adjacent to 2 Mynydd Bychan and that the bulk of the allocated site is within a 250m buffer. As part of the current planning application on this site the applicant has commissioned a

Council response
Geo-Environmental assessment, which concludes “No elevated contaminants are present within the shallow soils on-site. Evidence for the on-site historic landfill identified within the desk study was not encountered.” Coal Seam As part of the current planning application on this site the applicant has commissioned a Geo-Environmental assessment, which concludes that the overall risk from coal mining is considered low, “Due to the thickness of superficial strata the risk from unrecorded mine entries on site is considered low, particularly in light of the lack of evidence of mine workings from the rotary open holes. Therefore the overall risk from mining is considered low.” The Coal Authority have not objected to the allocation of Cae Isa in the deposit LDP. They have responded to the recent planning application on the site to confirm that it does not fall within the defined development high risk area so any historic mining/site stability issues are not considered to be applicable to this site. Infrastructure Welsh Water have not objected to the development of the Cae Isa site and have provided the following supporting representation on the Deposit LDP which demonstrates that the site can be connected to the public sewerage system. "A Hydraulic Modelling Assessment (HMA) will be required to determine the point of connection to the public sewerage system and potential developers would be expected to fund investigations during pre-planning stages. The findings of the HMA would inform the extent of any necessary sewerage upgrades, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). Mold Wastewater Treatment Works (WwTW) can accommodate the foul flows from the proposed development site.” Delivery The Council have assessed Cae Isa as part of the candidate sites stage and have not identified any issues which would prevent the delivery of this site within the plan period. A planning application (060220) has already been submitted for this site which demonstrates the landowners and developers commitment to the delivery of this site. Although Cae Isa was originally included within the UDP, it was removed by the Inspector due to the level of growth already proposed within New Brighton at that time. This site has therefore not been simply rolled forward into the LDP. The candidate site assessment process has involved significant scrutiny of the sustainability and deliverability of sites, particularly sites that have previously been considered as part of the UDP process to ensure they are capable of delivery within the LDP period. Also the LDP takes a different approach to the UDP. Whereas the UDP had a more dispersed distribution of allocations with many smaller sites, the LDP has a more focused approach to distributing allocations to the most sustainable settlements. The aim of this strategy is to ensure that allocations are in the most sustainable locations and of a scale to be attractive to house builders so that they are likely to be more deliverable.

Council response
Cae Isa is located within a strong housing market area where there is significant demand for new homes, the objector does not provide any evidence to support their objection to the delivery of this allocation, and the Council have not identified any constraints as part of the candidate site assessment process that would prevent the delivery of the site. The Council have only allocated sites within the plan where they are confident of delivery within the lifetime of the LDP.

				Habitats Directive 1992 - Nesting Birds Directive.		
18	HN1: New Housing Development Proposals	Bryn Glas, Flint	Object	These comments are made in relation to the site identified on the plan at appendix a of the attached PDF version of these comments. The comments are made on behalf of the land owner. See recent planning history of the site below: 2010 – Residential Development – Permitted – REF: 046250 2013 – Variation of condition to allow an extension of time for the submission of reserved matters for residential development – Permitted – REF: 050304 2015 – Variation of condition no1 attached to planning permission ref 050304 to allow further period for the submission of reserved matters – Permitted – REF: 053003 The site is an ideal site for housing and has historically been given permission on many separate occasions. The site is on the outskirt of Flint, and it has been noticed that it has not been included in the green barrier allocation in the Proposals Map, neither has it been included as	New allocation: We are of the view, that given the site's location in close proximity to the settlement of Flint and it's history as being deemed acceptable for housing development, that further thought should be given to its allocation for land that could add to the supply of housing.	Not accepted. The site was allocated in the Deposit UDP for housing under policy HSG1. It was the remnant of the Northop Rd, Flint housing site that was not recommended by the Inspector to be allocated. Despite the sites allocation in the Plan and having planning permission since 2010 no firm proposals have come forward for development. The site has therefore not been included in the settlement boundary in the Deposit Plan. The site first received outline consent (046250) on 06/01/10 for affordable housing. A variation of condition (050304) to allow further time for submission of reserved matters was approved on 07/03/13. A further variation of condition to allow further time for submission of reserved matters was approved on 09/01/15. This latest renewal required the submission of reserved matters planning application by 08/01/16.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				a housing allocation. Personal circumstances of the land owner have now changed and he is very keen to move the site forward – previous attempts to develop the site have been scuppered by personal circumstances that are no longer a problem. We are of the view, that given the site's location in close proximity to the settlement of Flint and it's history as being deemed acceptable for housing development, that further thought should be given to its allocation for land that could add to the supply of housing.		It is the Council's understanding that the site has been considered by a number of developers including housing associations but none have chosen to pursue their interest. It is not clear what the reasons for this are but it is evident that the steep topography of the site makes it a difficult site to develop. If there is a genuine renewed impetus to develop the site then the sites allocation within the adopted UDP provides the necessary context. However, the objection contains insufficient evidence to establish beyond doubt that the suite is available, viable and deliverable. In any event, Flint is considered to have sufficient land for housing with the Croes Atti development (commitment) and the allocation at Northop Rd. It is not considered that further flexibility in the form of an allocation or settlement boundary change is either necessary or appropriate.
19	HN1: New Housing Development Proposals		Support	As a resident of Greenfield and having studied the Flintshire LDP I wish to support your decision not to develop the surrounding land of Tan-y-Felin.		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				I wish to state that I do not want to see a housing development built on the existing fields surrounding Tan-y-Felin, Greenfield for the following reasons: An increase in population will place a strain on local services. There is already a current lack of doctor/NHS facilities and dentists in the area and this would overburden and be disproportionate to the existing resources in Holywell. There is no capacity in the existing school near Tan-y-Felin to cope with an influx of school age residents. Would the property developer or local education authority be prepared to build another school and would the council also be prepared to advertise and employ new teachers and ancillary staff ? The noise and safety impacts from construction would be detrimental to the existing community. There will be a great number of traffic movements everyday within our village. There will be more congestion at all the exits onto Greenfield Road. To facilitate building work, hg's machinery etc would have to be		Greenhill Farm, Bryn Celyn have not been allocated within the plan, your support is noted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				driven through an established housing estate creating several environmental nuisances (noise, dust, mud etc) The wildlife of the area will be negatively affected thus leading to a decrease in badgers, bats, other mammals and insects which are crucial to the ecosystem. There is the question any proposed access road at the top of Tan-y-Felin which, I believe, is currently owned by 3 local residents. The area people live in often forms part of their identity. Residents' objections can be rooted in the anxiety that new development will change the character of the place they call home.		
23	HN1: New Housing Development Proposals		Support			Support Noted.
24	HN1: New Housing Development Proposals			I support the LDP which does NOT allow planning for the development of these fields for the following reasons :- 1. Increased traffic to any development would not be sustainable 2. Lack of infrastructure of Schools, dentists, doctors etc. 3. There are many 'brownfield'		Support noted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				undeveloped sites without building on 'Greenfield' sites. 4. there is already major development underway which will meet any future requirements.		
28	HN1: New Housing Development Proposals		Support	Local development of tan y felin field's for housing development Further development on this site would overstretch resources already in place. There are many issues it would create, to name a few The main road through tan y felin which is also on a hill, more through traffic is unsafe to children as well as access for residents up and down this road. Other alternative routes locally would also have the same problem if traffic numbers significantly increased. Local services such as dentists, doctors and schools are already at great capacities so increasing the populations around greenfield would add extra strain on these services. Least we not forget that we have a duty to protect our Greenland and wildlife, at the moment we have protected species and areas of natural beauty. There are plenty of brown land sites which with proper investment could be potential areas to use.		Noted .The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan, your support is noted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
31	HN1: New Housing Development Proposals		Support	I am against planning permission for the above fields Tan y Felin for the following reasons: 1. there are no facilities (schools, doctors, etc) 2. Increased traffic would be dangerous to housing already on the estate.		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan, therefore your objection will be noted as support to the exclusion of these sites from the LDP.
35	HN1: New Housing Development Proposals		Support	The LDP identifies Warren Hall (bordering on Higher Kinnerton - 300 homes). This will have a significant impact on Higher Kinnerton. I object to any future development to Higher Kinnerton itself in the foreseeable future and beyond the lifetime of this Local Development Plan. The LDP assessments and recommendations in respect of the candidate sites for Higher Kinnerton (HK003-013) I note that all of the sites (with the exception of HK008) have been recommended as not suitable for development. HK008 has been recommended as “not allocated”, which suggests that it is a possibility that development could take place after the end of the current plan (2015-30). I would ask that the LDP is amended to state that HK008 “is not suitable for development” as all the other		Noted. Candidate sites HK008, HK010 and HK011 have not been allocated within the LDP for development.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Candidate Sites in Higher Kinnerton. Reasons are given below:- 1. HK008 is outside the Settlement Boundary. 2. I note that site HK011 is virtually the same as HK008 (fractionally smaller site) and that the same narrative is used for both HK008 and HK011, but the recommendation for HK011 is “not suitable for development” whereas that for HK008 is “not allocated”. This seems illogical to me. I would ask that the LDP be amended to state that HK008 is also “not suitable for development”. 3. In assessment HK010 issues regarding pedestrian links to the village centre are raised. These issues are also raised in assessment of HK008 and therefore suggest that the status for KH008 be amended to “not suitable for development”. 4. In the Higher Kinnerton Village Plan 2018-30 it states that the rural approach to the village is of great importance. This to me suggests that no building should be allowed on HK008 as the main approach to the village from Chester.		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				5. HK008 is on the northen end of the village away from the centre of the village which means it would be isolated and become long and sprawled out if any future development where to be allowed here. The huge impact that Warren Hall will have on Higher Kinnerton. The school (overcrowding); the village hall which is far too small to accommodate events that are held there at present. Higher Kinnerton is a village which will lose its character as a village if any further housing development is allowed. Dodleston and Lower Kinnerton (Cheshire) have still managed to keep their charm with little housing development going on. How many villages can you say that about in Flintshire? We need to retain our village as a village before it becomes dominated by yet another sprawling housing development. There are many housing developments going on within the close proximity to Higher Kinnerton (Penyffordd, Penymynydd, Hope, Broughton, Buckley etc). Villages		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				which have lost their charm as a village and now just become a long sprawled out housing development area. The people of Higher Kinnerton live here because it is a village. We still want Higher Kinnerton to be a self-contained village surrounded by green fields. The impact on the extra traffic that will be coming through the village. Flintshire is building all these houses but what about the amenities that also need to be built to support them. For example doctors surgeries, schools, hospitals etc. There is a great strain on all these amenities at present so how are we going to cope with the vast number of housing that is proposed.		
41	HN1: New Housing Development Proposals	TLD001(or part) on land opposite Erw Wen, London Rd, Trelawnyd	Object	HN1.Only two sites are allocated in Tier 3 settlements at New Brighton and Penymynydd(again in the east). Also all other allocated sites in the table are in the eastern half of the County. This imbalance should be tweaked by allowing more allocations in the west and amendments to settlement boundaries in Tier 4 settlements to provide more opportunities for cross	The settlement boundary in Trelawnyd should be changed to include part of site TLD001 and policies STR2,11 and HN1 amended accordingly to	Not accepted. Trelawnyd is a defined village located in the rural north west of the County. The settlement of Trelawnyd has a relatively compact shape with development to the north and south of the A5151 London Rd. The southern part of the settlement features a conservation area and to the west and north of the settlement is the Clwydian

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				subsidy. Specifically site TLD001(or part) on land opposite Erw Wen, London Rd, Trelawnyd could be included. Appendix 1 of Background Paper 8 should be reassessed as the site is already surrounded on two sides by existing development and has a road frontage at London Rd equating to existing development on the northern side. With good design the character of Trelawnyd or the countryside would not be Harmed if the site was developed. This could be facilitaed by tweaking the settlement boundary to include the site frontage allowing the potential for cross subsidy to the rear.	allow more flexibility of housing opportunities in Tier 3 and 4 settlements especially in the west of the County.	Range and Dee Valley AONB which is a landscape of national importance. The LDP does not seek to apportion development spatially in an even manner across the County. Rather, it seeks to distribute growth towards the most sustainable settlements and sites in accordance with the settlement hierarchy which is embodied in policy STR2. The site does not comply with the LDP Strategy as Trelawnyd is a 4th tier Defined Village where new allocations will not be made and where new housing development will only be permitted related to the scale, character and role of the settlement and which delivers local needs affordable housing. The LDP aims to steer development within the first three tiers, within a hierarchy system whereby the plan seeks to distribute development in a sustainable way having regards for the settlement hierarchy and by identifying the most sustainable settlements and sites. The Settlement Audits which were published as part of the earlier Council response Key Messages document alongside options in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						terms of categorizing settlements, established that the most sustainable settlements are generally those in the eastern part of the County. Further details can be found in response to Policy STR2, ID 39 and Policy STR11, ID 40. Although the site abuts the existing settlement boundary the site is an intrinsic part of the open countryside which lies within the Clwydian Range AONB and forms part of the attractive setting of Trelawnyd. The settlement is focused around its historic core which is designated as a Conservation Area. This is a statutory landscape of national significance where PPW states 'National Parks and AONBs are of equal status in terms of landscape and scenic beauty, and must both be afforded the highest status of protection from inappropriate developments'. There is a firm defensible edge to existing built development and the site forms an integral part of the wider agricultural landscape which affords far reaching views across the AONB.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Inclusion in the settlement boundary would result in harm the character and appearance of the locality. Development on any part of the site would have a detrimental impact on the surrounding area. The objector fails to identify what "part" of the site they feel could be developed, or how this could sensibly be delineated. Additionally the Council's highways development management team have been consulted on the proposed development and have stated that visibility to the west of the site is limited by the road alignment but a junction with 2.4x43m visibility should be available from the eastern portion of the site. The provision of a footway will be required across the full site frontage. Other constraints include that there is limited public transport within the area and limited facilities. Additionally the proposal is located within the Mineral safeguarding area. A key principle in PPW is that allocations are viable and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						deliverable yet the objection provides no assurances or evidence that a satisfactory access can be provided. Development of this prominent site would result in residential development which would be poorly related to existing development and visually damaging to an area of attractive open countryside. The site is an intrinsic part of the open countryside which lies within the Clwydian Range AONB and forms part of the attractive setting of Trelawnyd. Therefore, the site is not considered to be necessary or appropriate as an allocation.
46	HN1: New Housing Development Proposals		Support	Having looked at the LDP we are pleased to read that the Coppy Farm site is unsuitable for such a housing development in the village of Gwernaffield, and that the boundary therefore should not be extended to include it.		Support Noted.
88	HN1: New Housing Development Proposals	Candidate Site HCAC029 for inclusion as a housing allocation.	Object	Objection two (id88): Access issues can be resolved by design and detailed matters as all the frontage is within the ownership and control of the landowner. Additional land is owned to the North West if additional visibility is required. New hedgerows and	Land at Bryn Tirion, Caergwrle, Candidate Site HCAC029 for inclusion as a housing allocation. Objection to HCAC004. Please	Not accepted. A key principle in PPW is that allocations are viable and deliverable yet the objection provides no assurances or evidence that a satisfactory access can be provided. It should be noted that there is presently no pavement fronting the site, nor is there a pavement fronting the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				enhanced indigenous planting would be carried out under the requirements of any planning permission granted to safeguard landscape character. Development would not constitute 'ribbon development' in the accepted sense of the term. Ribbon development refers to single frontage development whereas this site would accommodate a well-designed built form of new streets which is typical of the existing settlement pattern. It is therefore incorrect and misleading for the planning authority to describe the proposed candidate allocation as "ribbon development". All new development, by definition, has an impact and the whole area can be described as attractive countryside. The site is well located to the access public transport with a bus stop at Porch Lane within 100m and the Fagl Lane bus stop at 350m. Caergwrle railway station is 1.5km to the south There are local facilities in the centre of Caergwrle 0.6m to the south.	refer to attached document	lodge and adjoining stone constructed dwellings. This would necessitate pedestrians having to cross the road to reach the pavement opposite in order to walk into Caergwrle to access facilities and services. The access to Bryn Tirion is difficult as it is located just beyond a bed, in front of the adjacent lodge, and requires the provision of a 'mirror' on the lamppost opposite. It is accepted that the reference to 'ribbon development' in the Council's response on the candidate site assessment is not fully reflective of the proposal. As confirmed by the objector, the proposed site has 'depth' extending to the access track, and would result in 'estate type' development. However, this block of development would not represent a logical extension to the existing form and pattern of development in the settlement. Firstly, there is a gap comprising the land on the south side of the curved access track, which falls outside the boundary of the objection site. Secondly, the only built development linkage between the settlement and the site is the short ribbon of stone constructed dwellings to the south of the site.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				There are no known protected species on the land and there are no additional landscape value designations. Site would be a more suitable alternative to HCAC004. Other than some highways issues, which can be overcome, the authority has not identified any additional constraints that need to be overcome.		These form a distinct character break between the public sector housing and the open countryside to the north. The site does not therefore read as a logical urban extension but as a divorced block of development, poorly related to the settlement. The site is at the extreme northern edge of Hope. It is separated from the settlement boundary by a narrow access road leading to Bryntirion Hall and alongside which there is a belt of mature trees. To the north it is bounded by an access track which leads to Bryntirion Farm to the west. A well-established hedgerow, with trees, characterises the whole length of the eastern boundary which fronts the A541 Mold Road. The land rises up gently from the A541 to the Hall and Farm. The proposed site is located between the access track leading to the Hall is a tapering intervening gap of land before reaching the well-defined settlement boundary which is formed by the residential development at Edinburgh Avenue and alongside the A541 to the south of the site. The lodge located alongside the existing

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						access track was clearly associated with and serving the former Bryn Tirion Hall and the tree lined curved access track gives a sense of a large country house with grounds. The proposed development does not sit comfortable with the character of the site and open countryside. The Council's Highways Development Management Team have raised objections to development at this site on the basis that the site is in a relatively remote location and limited/substandard pedestrian connectivity. This is commented on further above. The horizontal alignment of the road and bounding hedges, restricts forward visibility along the road. It would be possible to provide an appropriate junction layout (right turn lane potentially required) however this would require the full removal of the hedgerow fronting the site. Significantly impacting the character of the surrounding area. Although it is recognised that there are services and facilities within the settlement it is considered that there are negative factors which outweigh this, particularly the poor pedestrian linkages to and from

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the site. The objector claims that there are no known protected species on the land at this present time, but has provided no ecological survey to establish whether this is the case or not. The proposed development is agricultural grazing land which Welsh Government has categorized as a predicted loss of 0.77ha grade 2 and 0.37ha grade 3a providing a total predicted loss of 1.14 BMV land. Again, the objector has submitted no site-survey to demonstrate what grade the land actually is. The Plans allocation at Wrexham Road, Abermorddu is backed up by and informed by a large number of background and technical studies which demonstrate that the site is viable and deliverable. Despite the objector's statement that the site is preferable to the allocated site, there is no submitted background / technical evidence to show that this is the case. Development of this prominent site would result in a detached block of residential development which

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						would be poorly related to existing development and visually damaging to an area of attractive open countryside. The site is not considered to be necessary or appropriate as an allocation either to replace or be in addition to the Wrexham Rd allocation. In conclusion, the Plan has made provision for growth in HCAC with the allocated site. The objection site is not appropriate to be allocated as it relates poorly with the built form of the settlement and would harm open countryside, and also is not backed up by any evidence.
89	HN1: New Housing Development Proposals	land at Wood Green, Mold. Candidate site MOL004	Object	Candidate site MOL004 is a highly sustainable site. Identified constraints can be easily overcome without material harm to local amenity and landscape character. An amendment to the settlement boundary would not compromise or prejudice green barrier aims and purposes. It is acknowledged that the site access is restricted to the extent that it would not be suitable to maximise housing density. However, this could change at some point in the future and despite this the site could provide up to 5 dwellings using the existing access. There are some constraints on the site but these can	Land at Wood Green, Mold. Candidate site MOL004. Objection to HN1 new housing proposals and to green barrier EN11(10).	Not accepted. The site measures 0.86ha and was submitted by this agent as a candidate site for between 5 and 20 dwellings depending on access arrangements. The first option was for a development of 5 dwellings served off a private driveway and the second option referred to alternative access arrangements to serve 20 dwellings including a) existing properties (24 and 26 Wood Green and land alongside 2 Wood Green) or land to the west being promoted by others as a candidate site. At Preferred Strategy stage a different agent

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				be overcome and a modest, but valuable, contribution to housing land supply can be provided in a very sustainable location.		made 'supporting' representations that the site should be developed as a low density development of 5 dwellings off a private driveway. The Councils Highways Development Management Officers considered the site to be unsuitable as the access via a private drive had poor alignment and limited visibility that is considered unsuitable for any additional traffic. In this objection to the deposit plan the request is for the site to be allocated for housing. The Plan is quite clear that it will only be appropriate to allocate sites which could meet with the definition of a 'large' site ie for 10 or more units. Given the accesses constraints the site cannot be realistically be allocated for housing in the Plan. Despite earlier references to alternative access scenarios, no further evidence has been produced in terms of securing additional land. The objector is therefore asking for land to be allocated which presently has no means of being accessed. In terms of flood risk the northern part of the site is located within a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						C1 flood risk on the Development Advice Map. In terms of the total site area some 16% is within the C1 zone. Given that the site is green field land it cannot pass the justification tests in TAN15 as the site is not brownfield. The agent seeks the allocation of land for a highly vulnerable use without any technical evidence that the site can be satisfactorily developed in terms of flood risk. The site also sits within the green barrier between Mold and the outlying villages. It forms part of a swathe of open countryside comprising fields and recreation land adjoining the edge of the built up area on the south side of the R. Alyn. The southern half of the field immediately to the west of the site was promoted for development in the form of an omission site as part of the UDP and the UDP Inspector commented 'The objection site forms part of a larger field and whilst it abuts development on 2 sides, by its character and appearance, is clearly part of the countryside which in this location is designated as green barrier in order to protect the open land around Mold and prevent the coalescence of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						settlements. Given its value as, albeit a small part of the green barrier and the adequate supply of housing land both in the town and the County, I see no reason to either allocate the site for development or draw back the green barrier'. The UDP Inspectors comments sets a clear context for the consideration of this objection site. Given that Mold will achieve considerable growth in the Plan period as a result of completions (156 in first 3 years of Plan period), commitments (188 as at 2018) and the allocations at Maes Gwern (160 units - already under construction) and on land between Denbigh Rd and Gwernaffield Rd (246 units), none of which encroach into green barriers, there is considered to be no need to draw back the green barrier in this instance. Given the combination of uncertainty over flood risk, the provision of a suitable vehicular access and the green barrier, it is not considered appropriate to include the land in the settlement boundary. The consideration of the site as, in effect' a 'small' site

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						of 5 units on a site of 0.86ha would represent a density of just 17 dwellings per hectare which is not making the most efficient use of land. In conclusion, the site is not necessary or appropriate to be allocated or included in the settlement boundary of Mold having regard to its green barrier location and uncertainty over flood risk and access and in the light of provision for growth in Mold.
90	HN1: New Housing Development Proposals	NAN001	Object	Support for Candidate Site NAN001 and objection to Policy STR2. Adjustment of the settlement boundary would allow much needed housing in the local community. Detailed matters can be resolved through design and the benefits significantly outweigh any identified harm. There are no other sites in the village which could provide open market and affordable housing for the benefit of the local community. Adjustment of the settlement boundary would allow much needed housing in the local community. Detailed matters can be resolved through design and the benefits significantly outweigh any identified harm. There are no other sites in the village which could provide open	Adjustment of the settlement boundary would allow much needed housing in the local community. Detailed matters can be resolved through design and the benefits significantly outweigh any identified harm. There are no other sites in the village which could provide open market and affordable housing for the	Not accepted. The LDP has focused growth towards the higher tier settlements of the plan (Tiers 1, 2 and 3) where it is more sustainable to allocate sites close to existing services and facilities, and reduce the need to travel in line with national planning policy (PPW10). Nannerch is a Tier 4 'Defined Village' which benefits from some services and facilities to sustain local needs. Policies within the plan enable small scale local needs housing within rural areas such as Nannerch, either as windfall sites within the settlement boundaries or as small exception sites on the edge of settlement boundaries for affordable housing. Windfall

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				market and affordable housing for the benefit of the local community. The Plan follows the failed policies of the UDP in relation to delivering housing, including affordable housing, in the rural villages. Despite clear evidence having been put to the Council it has failed to monitor the effectiveness of these policies and by repeating them it will not be able to meet local housing needs. It ignores local evidence of need and is contrary to Welsh Government's clear goals as set out in PPW10 and the Well-being of Future Generations Act.	benefit of the local community.	market housing will only be permitted on sites when it is essential to delivering affordable housing. Policies STR2 and HN4-D specifically provide the opportunity to develop local needs housing within Tier 4 Defined Villages such as Nannerch therefore it is not necessary to allocate a site to meet future needs. The Council's Highways Development Management Officer has commented on this site that it is 'Not suitable for development – access is not adopted and is of insufficient width to serve the site'. The presence of highways constraints was clearly referenced in the assessment for this site in Background Paper LDP08. Despite this the objector / agent has produced no technical evidence to demonstrate how a satisfactory vehicular access can be provided. It would be entirely inappropriate to include land within a settlement boundary when vehicular access is not possible. In addition to this there are concerns over the impact of built development on the character and appearance of the location, given its location within the AONB and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						also the relationship with existing built form which is single storey.
96	HN1: New Housing Development Proposals		Support	In summary, I support the LDP's recommendations in respect of the candidate sites in Higher Kinnerton, with the exception of that for HK008. Given the level of infrastructure that would be needed (as identified by the LDP in its assessment of the site), together with other points raised in my response, I would ask that the LDP be amended to state that HK008 be 'not suitable to be allocated' and this would eliminate possible future development speculation.		Support Noted. HK008 has not been allocated within the plan.
104	HN1: New Housing Development Proposals		Support	The fields at the top of Tan-y-Felin, Greenfield, Holywell. I am against the development of the fields at the top of Tan-Y-Felin, Greenfield for a number of reasons. Firstly, I do not feel further housing here would create a sustainable community due to the already limited resources in Greenfield. There are no medical provisions and so residents must already register in Holywell. Also, the closure of the vet means petcare must also be sourced further afield - more residents in the area would mean more pets. It is also not sustainable economically in my opinion, particularly in terms of		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				retail. Neither Greenfield nor Holywell provides opportunity for shopping and there is little to attract either small, local business or larger, national companies. I believe that issues concerning the local economy need to be resolved before further housing is considered for the area. Then there is the suggestion that access would be likely from Ffordd Dwyfor, which would be unsuitable. We moved here last year due to the family oriented neighbourhood, where children can play happily and safely in the street and the play area (recently updated). Ffordd Dwyfor is already crowded with parked cars and is narrow enough as a cul-de-sac without the prospect of becoming a busy thoroughfare for residents of a potential new estate. The construction of a new estate in the area would also cause disruption to current residents of Tan-Y-Felin, Woodland Drive, Cae Dderwen and other surrounding roads due to increased traffic and noise levels, construction vehicles and delivery of materials. Well Hill is not suitable for its current usage with oversize lorries and speeding cars causing accidents on what is a narrow and steep road. Adding new homes the suggested site in Greenfield would increase risks on Well Hill as more traffic, congestion and construction vehicles		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				utilised it to get to the site initially, and then to new residences upon completion. I also believe it would be a shame to lose more of our green space, especially one such as the Tan-Y-Felin fields which is home to a number of protected species. Please do not allow for the planning bid for the fields at the Tan-Y-Felin, Greenfield to be passed!		
120	HN1: New Housing Development Proposals		Support	Reference:- The fields at the top of Tan Y Felin, Greenfield, Holywell. The plan to develop the fields up Tan Y Felin in my opinion, should NOT be approved!!!!!!! I've lived here for 8 years now and love it here. It is a very quiet estate and one myself and my daughter feel very safe in. We never have trouble and the road itself is pretty quiet apart from residents vehicles. I have a major issue with this residential development taking place as all the things stated above, will cease to exist! I will no longer feel safe allowing my daughter to play out in the street with her friends, for fear of the amount of traffic that will be passing my house. Not only that but we will be linked up to other housing estates in Greenfield which will not help with the anti social behaviour they have in the likes of school lane and other areas attached to the field.		Noted .The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				We live in a lovely quiet road and I want it to stay that way. We dont have very many amenities in Greenfield as it is and yet you want to take what we do have away from us! Because that is what is going to happen if the houses get built. We will have to fight for every school and doctor place we currently already struggle to get! Why should new people coming into the area cause the already stable tenants of Greenfield to lose out! We are not big enough to hold extra people and extra traffic! Not to mention the lack of greenery we will be losing! I love that I am Welsh and I love our countryside but money grabbing developers are happy to see me lose that just so they can make a few quid! Wales is a beautiful country, please dont let greedy developers ruin what we have. The wildlife prosper around here and the kids love to see all the badgers, foxes and other wildlife. It helps teach them about nature and living habitats. I urge you to reject the plans for development. There are other sites being used for housing in holywell, where sustainability of amenities can be upheld. For the sake of our children and the future generation, please dont turn our countryside into a residential area		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				full of houses with no way to support the people inside of them.		
131	HN1: New Housing Development Proposals		Support	The fields at the top of Tan-Y-Felin, Greenfield, Holywell I don't want a new estate being built behind my house as I enjoy the green space that we have & it's home to bats, badgers, owls etc. My daughter attends Greenfield School which is almost full & I do not want to be competing for a primary school in the future for our 10 month old as well the roads are busy as they are an increase in traffic means increased congestion & pollution.		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.
134	HN1: New Housing Development Proposals		Support	We are writing in support of the Deposit LDP, and would like to specifically mention the following: 1. We support the LDP Objectives (Page 17) specifically that “housing development takes place in sustainable locations where sites are viable and deliverable and are supported by the necessary social, environmental and physical infrastructure”. We also support the LDP’s purpose to protect the open countryside from inappropriate housing development. 2. We agree with the Spatial Strategy previously consulted upon and the sustainable and flexible approach to distributing growth in the upper three tiers of the		Support Noted

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				sustainable settlement hierarchy. Specifically we support the assessment of the village of Gwernaffield as a Tier 4 Defined Village and believe this to be an accurate assessment. 3. We support the comments in Background Paper 8 (Assessment of Candidate Sites and Alternative sites - September 2019) specifically in relation to the speculative planning application for land at Coppy Farm, Gwernaffield (GFD001) in that the site does not comply with the Council's Preferred Strategy wherein housing allocations are NOT made in Tier 4 settlements, and that the site is not considered to be suitable to be allocated or included in the settlement boundary. 4. We are pleased to note that housing completions in the first three years of the Plan period are on track in terms of enabling delivery and the the Council plan to bring forward the significant land bank of undelivered permissions, although we do have some reservations about whether this is achievable. Specifically we trust this will enable the Council to resist speculative planning applications by developers who believe that every settlement in every tier must contribute towards growth through having a housing allocation. 5. We agree that development should take place in		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				sustainable locations whereby people can reduce private care usage and thereby reduce the harmful effects of carbon emissions. However, we would have preferred the LDP to contain a more positive and ambitious commitment to carbon neutral targets for housing development such as the inclusion of electric car charging points, solar panels and rain collection for toilet flushing, etc. in all new housing developments effective from the date the LDP is adopted.		
143	HN1: New Housing Development Proposals		Support	'Reference: The fields at the top of Tan-y-Felin, Greenfield, Holywell' Greenfield road is already extremely busy throughout the day and an extension to the estae would cause a greater deal of pollution both through noise as well as through emissions. The Increased building activity would cause potential damage to the roads and would limit the ease to access places of work. Increased activity and traffic would also present a great danager to children especially after the new park had been built which will be on one of the roads effected. The increased housing would also have a detrimental impact on both the valuation of current property as well as resources such as school places and access to health care.		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The roads are also impacted severely by poor weather so further transport would lead to increased risks and potential further damage to property. Increased housing would add pressure to already stressed services. Greenfield would also lose an area of significant natural beauty and a large amount of natural habitats will be destroyed. Tan y felin fields are designated as green barrier spaces by the council and a change to this would have a negative impact upon the environment. Increased housing could potentially lead to a significant rise of current occupied houses being up for market having an overal decline in the local housing market There is also limited shop infrastructure in greenfield to support the development There would be increased congestion on the coastal road as well as that into and around holywell The Impact of increased housing also creates a greater risk to school children due to the locality of the primary school in greenfield Local residents would have lesser chance of accessing local education for their children due to further stretches to resources		
144	HN1: New Housing Development Proposals		Support	The fields at the top of Tan-y-Felin, Greenfield, Holywell'		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Firstly, I cannot believe that it has been suggested to build houses on the Greenfield fields. This estate is a safe and comfortable area in which children play out in the park and people walk in the fields. With the success of house building on the fields, children will not be able to play outside, people will not be able to walk on the fields, it will be busy and will disrupt the quietness and safety of this estate (one of the main reasons I decided to live here). Greenfield road can be very busy in the mornings, especially with road works and children waiting for the busses. Also there have been some terrible tragedies on well hill in past years and more traffic would mean more congestion and more importantly increased danger. Greenfield school is nearly full, adding more houses would mean that they would be full and the current residents of this estate would not get their first choice of school. Residents of this estate already have to go to doctors and dentists in Holywell or further away- as we don't have any in greenfield. Increased houses would put so much pressure on other services even those in Holywell. One of the most beautiful things with greenfield is the fact you can walk and see natural beauty everywhere. There are so much		land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				wildlife that lives on our hill- why disturb them who have been here longer than the houses here already? What I find disgraceful is that there is already so many houses being built around the area - more than double the required new housing. Building more is very greedy and profit driven. There is barely any shops in greenfield already without building more houses. Greenfield wouldn't be able to support the new housing. The estate can be hazardous in the snow, ice and Greenfield Road with flooding. Why increase the danger with adding more houses and cars to the equation? The new park is often busy with children enjoying themselves - it was only build recently. Why build a safe place for children to play to then add a busy junction next to it with more houses and cars passing? The house prices will decrease if you build more houses and I am certain some current residents will move away if this estate is built. This estate is a lovely place to live (I've lived here all of my life and decided to move to another house recently on the estate). So please don't destroy what it a safe, calm road to live on to a busy estate - clearly built to make profit.		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
166	HN1: New Housing Development Proposals	NEW002, in New Brighton	Object	I wish to submit a representation regarding our Candidate Site NEW002, in New Brighton village. In the current draft LDP, our field, which is between houses, is marked as outside the area for residential development. The land directly across the road, Candidate Site NEW004, is rapidly moving towards being built on. The developers are Stewart Milne Homes, and they imminently plan to build 98 new dwellings there. I therefore submit a representation that I consider that you should re-examine our site candidacy for the following reasons. 1. The land opposite (NEW004) has now been cleared for building, with an agreement to build 98 dwellings. 2. In view of this, it would seem that our site (NEW002) would now form part of the same natural extension of the village as NEW004. 3. A geographically natural boundary to the development on this side of the road would be Lake Offa and Wat's Dyke. 4. Both our site and NEW004 are within the existing street lit area and 30mph (built up area) speed limit area. 5. Our land lies at the head of a natural ditch / stream system, which is already used to drain surface water from Cae Isa. It would therefore have adequate surface water drainage.	Allocate Candidate Site NEW002, New Brighton for housing.	Not accepted. New Brighton lies to the North East of Mold and immediately to the North West of Mynydd Isa. The bulk of the village lies on the Southern side of the A5119 although small residential developments and commercial development lie on the North side of the A5119. The site is located on the Northern side of the village within the open countryside, it is detached from the main settlement form and to allocate the site would result in sporadic built development within the open countryside, and green barrier. The allocation immediately across the road from this candidate site will provide 105 new dwellings for New Brighton, in addition there is a commitment of 23 dwellings on the former New Brighton Service Station, and 13 dwellings have recently been completed at Rock Bank. This will provide sufficient growth for the settlement therefore an additional site in New Brighton is not needed. The allocated site is more favourable than candidate site NEW002 as the A5119 provides a definitive boundary to the village, therefore the site has not been allocated within the LDP as it would result in a harmful

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						intrusion into the open countryside. The allocated site is well defined by existing development to the west at Argoed View, to the south by the A5119, to the east by Cae Isa and to the north by the line of New Brighton Road. The development of the site represents a logical rounding off of the settlement. In contrast there is only a small amount of fragmented development on the north side of New Brighton Rd and the development of the objection site would result in a free standing small block of development which would harm both open countryside and the green barrier between New Brighton and Sychdyn. Watt's Dyke scheduled ancient monument (SAM) is approximately 60m north of the site set within a woodland corridor. The objector has not included a heritage impact statement as part of their submission, therefore the Council cannot fully assess the impact of the site on this SAM. In conclusion, adequate provision has been made for development within New Brighton without the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						need to include land which would intrude into open countryside and the green barrier, therefore this site has not been allocated within the LDP or included in the settlement boundary.
174	HN1: New Housing Development Proposals		Support	I am emailing to raise my concern regarding proposed development plan the extend the Tan Y Felin estate. The Ffordd Dwyor road could not be used as an access point. This road is dangerous as it stands now with limited traffic going down. There is only single track due to cars parked which is sometimes only wide enough to just about fit a car through. Wider vehicles such as emergency services will struggle. This road has a hill creating a blind spot to people coming and if people approach at speed this can be dangerous and would cause chaos if any more cars were trying to squeeze along there. Alongside this the park is in bottom corner of this road and there is often children playing and crossing road by this area so higher level of traffic would not be good. There is no infrastructure for more houses in this area & no suitable access points		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.
192	HN1: New Housing	Leeswod SE site County Road, Leeswood	Object	Allocation of the site : Land SE of Leeswood: Policy STR1 and PC1 too restrictive on development	Policy STR1 and PC1 need to allow for looser	Not accepted. It is disappointing that the objector has sought to put forward the site at this late stage

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development Proposals			boundaries to allow for window fall development on tier 3 settlements - Leeswood	development boundaries around Tier 3 settlements to deliver windfall development, and the allocation of land South East of Leeswood.	in the Plan's preparation. An earlier submission at candidate site stage or at Alternative Sites (Preferred Strategy) stage would have enabled a full assessment and comparison alongside other sites. It is disappointing that the site is submitted without a Sustainability Appraisal as required by Welsh Government in the Development Plan Manual 3 in Diagram 8 'Any new sites proposed at Deposit stage will be required to submit an SA with their site submission'. The proposed site is located outside the settlement boundary of Leeswood and is therefore located within open countryside. The proposed is approximately 2.23ha and the objector is proposing between 40-60 dwellings. Leeswood is designated as a Tier 3 sustainable settlement where policy STR2 directs that housing development must be related to the scale, character and role of the settlement. Leeswood has seen completions of 15 units in the first three years of the plan period and at April 2018 (Housing Balance Sheet base date) there were commitments for 6 units. A

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						planning application (058946) on the former Laura Ashley units on Pontybodkin Hill, which is allocated in the UDP, is presently under consideration for 26 units. Leeswood must also be considered in the context of the adjoining settlement Coed Talon / Pontybodkin where there is provision for growth on the UDP allocation, the bulk of which now has detailed planning permission (49 units) and an undetermined application on the remaining part of the site. There is clearly scope for growth in the locality and the focus in this LDP should be on delivering existing brownfield sites, rather than allocating additional green field sites. This south eastern part of Leeswood has a ribbon of development extending along both side of County Road which has a well define end at Ty Lila. The development of the site would extend a narrow belt of development 250m from the edge of the settlement boundary along the northern edge of County Road. It is considered that the development would form an illogical extension to the existing settlement and would harm the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						character and appearance of open countryside. Highways were consulted and have objected to the proposal on the following grounds. 'Due to limited width and restricted forward visibility, County Road and Constitution Hill are considered unsuitable to cater for significant levels of additional traffic. Whilst there are opportunities to improve the road fronting the site, these are limited by Cefn y Wern. It is important to note that no Preliminary Traffic or Transport Assessment was provided'. There is no continuous footway link between the site and village centre; there would appear little opportunity to provide one. Water Supply: With regards to water supply within the area, Welsh Water does not supply water to this area. The public sewerage network can accept potential foul flows from this site. The proposed growth being promoted for Buckley Wastewater Treatment Works (WwTW) catchment would require

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						improvements which would need to be funded through our Asset Management Plan (AMP) or potentially earlier through developer contributions. Ecology: The Council's ecologist has been consulted and the following constraints have been identified. 'The site, itself, is Improved Agricultural land with hedgerows and trees and few species records other than hedgehog, but with potential for other species such as amphibians, badgers and nesting birds'. Any development would need to assess the Ecology of the site and provide an Ecological Impact Assessment with measures to avoid, mitigate, compensate, enhance and manage wildlife features. Additionally, the site is within 100m of Ancient Woodland and may affect priority or protected species, as it is agricultural (e.g. breeding birds) or contains existing structures (e.g. bats). Site is a large (>0.4ha) greenfield site. Development here could adversely

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						affect habitat connectivity. Development here could have an adverse effect on the character and result in the loss of important features such as Green Infrastructure. Environmental Protection were consulted and had some objections to the proposal. The proposed site would need a land contamination assessment due to Coal mining within the area. Traffic noise and air quality Pollution Control does not support this proposal. This site is accessed by a narrow lane and background levels of noise are particularly low. The development of this site for housing would certainly result in a significant and unacceptable increase in background noise for existing properties on County Road, as a result of an increase in traffic and vehicle movement. The development of this site would result in a significant reduction in air quality for County Road, as a result of an increase in traffic and vehicle movement. A land contamination assessment would be required.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Additionally, the Coal Authority identify that the proposal is located within a Development High Risk Area. Mine entry, recorded and probable unrecorded shallow coal workings. Welsh Government have commented stating that there is no detailed ALC survey information for this site. However, the Predictive ALC Map for Wales (Version 2 – 2019) notes the site to be mainly Subgrade 3b with some (approx. 0.5ha) Grade 2. The advice provided includes the recommendation that, if the site is to be considered further, a detailed ALC survey of the sits is undertaken to determine if the land is 'Best and Most Versatile' (BMV) agricultural land and the proportion of grades identified. Although some information has been provided: one Location Plan, SA and Site Assessment. There have been no background studies or technical reports provided to illustrate how the development may overcome the above mentioned constraints. It is disappointing that, having undertaken these background studies, the objector has not

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						provided an indicative layout or even a masterplan type outline for the site in order for the Council to properly assess impacts. A key principle in PPW is that allocations are viable and deliverable yet the objection provides no evidence that the site can be adequately developed. Therefore, it is considered that development of this prominent site would result in residential development which would be poorly related to existing development and visually damaging to an area of attractive open countryside. The site contains constraints, specifically vehicular access that has not been addressed. The site is not considered to be necessary or appropriate as an allocation.
193	HN1: New Housing Development Proposals	BUC047-AS Megs Lane, Buckley	Object	The site is well placed in relation to Buckley, a main service centre, and a principal location for new housing development which reinforces and contributes to sustainable settlements. An outline planning application for residential development (059387) was refused on the 11th March 2019. This application sought to address issues raised in a previous	Allocate the site for housing development	Not accepted. Buckley is a sustainable settlement and has been categorised in the settlement hierarchy as a Tier 1 Main Service Centre. During the UDP plan period Buckley grew by 17.4%, as a Category A settlement the aim for growth to be within 10% to 20% was therefore fulfilled. The LDP makes provision for growth in Buckley through the allocated site at Well Street and as a result of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				application (057056) which was refused by Flintshire Council on the 19th July 2018 showing a potential development for up to 85 dwellings. The site is genuinely capable of being delivered and could be brought forward rapidly subject to planning approval. Notwithstanding the apparent over-supply of housing land within the County Council area that has now miraculously being identified in the Deposit Plan, it has been the case for some considerable time that the Council has not been able to demonstrate a 5 year housing land supply, nor produce any Joint Housing Land Availability Study to evidence any land supply. The historic shortfall in housing delivery does not appear to have been taken into account in assessing the current need and future supply. The Deposit Plan acknowledges there is a lack of suitable and appropriate brownfield land in the County (11.2). Greenfield sites are therefore required to fulfil future housing requirements.		175 completions in the first three years of the Plan period and commitments of 138 units as at the Plans Housing Balance Sheet date of April 2018. This shows that for the first 3 years of the LDP plan period there is an appropriate level of development for a Tier 1 settlement and a healthy number of commitments coming forward. The objector mentions recently refused planning permissions on this site, and these recent decisions are material to the assessment of this alternative site given it is the same site as refused twice, and where the policy context in the UDP used to refuse the site is the same as set out in the deposit LDP. As TAN1 has now been revoked and with it the requirement to demonstrate a 5 year land supply, the Council have clearly demonstrated via the deposit housing trajectory that there is sufficient housing provided by the plan and that it is being delivered in the first four years of the plan at the rate envisaged by the plan's trajectory. There is therefore nothing materially different to the two recent refusals

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The uncertainty over actual potential housing land supply is evidenced by the inclusion of large windfall sites in the overall mix. Whilst some allowance for small windfall sites is to be expected - and arguably would not materially impact on overall supply levels – relying on a contribution from large windfall sites highlights the likelihood that allocated sites may be expected to incur delays or limitations in delivery; and also that other potentially allocate-able sites (given the apparent scale of available sites) are also constrained. The site is capable of fulfilling the various other development criteria set out in the Deposit Local Plan. The site does not materially harm or undermine the Green Barrier. The Green Barrier to the south of Buckley seeks to prevent coalescence of Buckley with built development at Padeswood and to prevent encroachment into open countryside, which provides a setting to the built form of this part of Buckley. However, the Padeswood Cement		that should warrant coming to a different view now. The majority of the site is within open countryside and green barrier. The only part of this site within the settlement boundary and not within the green barrier is a small gap between frontage ribbon development onto Megs Lane, but it is too small for an allocation. The area is characterised by a patchwork of varied sized fields bounded by mature hedgerows. The topography of the site is gentle sloping south towards Spon Green Farm. The site has an open aspect affording wider views of the surrounding countryside to Hope Mountain and Moel Fammau, contributing to an overall sense of openness. The frontage development along the southern side of Megs Lane forms a definite physical feature on the ground which creates a strong edge to the settlement boundary and to the green barrier designation. The site relates better to and forms an integral part of the open countryside and green barrier. The function of the green barrier designation is to retain the open

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				works is an isolated development within a much larger swath of countryside, over 1km distant from the site. The next nearest settlements to the south and south-east for which the barrier might conceivably be relevant are several kilometeres away. This part of Buckley is not as sensitive as other parts of the County where the need for a such a barrier is more evident. The substantial block of Green Barrier designated to the south of Buckley in considered excessive and the deposit plan makes no longer term provision for the managed expansion of this main service centre. The need for the Green Barrier in this location is therefore debateable over normal countryside policies. Even if the site is not to be treated as a formally allocated site, the Deposit Plan nevertheless requires a supply of large windfall sites in order to fulfil its housing requirement over the plan period. This is an appropriate site from which to achieve such a contribution. The Deposit Plan acknowledges there is a lack of suitable and appropriate brownfield land in the		nature of the countryside around Buckley to prevent urban encroachment and to prevent coalescence of Buckley with Penyffordd and Padeswood. Built development in this location would undermine the function and openness of the green barrier. The site is 3.8 ha and although the objector is suggesting that 85 dwellings could be built on the site, a density of 30 dwellings per hectare means up to 114 dwellings could be accommodated. Adjoining this site to the east there were Omission Sites considered at the UDP Inquiry. The Inspector considered that the land should not be developed and in referring to the land at Spon Green stated in paragraph 11.96.10 of the Inspectors report:- ‘’The objection site has a poor relationship with the settlement. It would be a significant encroachment onto an area of green barrier in a prominent area of countryside to the south of the settlement. It would be the first extension beyond the well defined existing line of built development,

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				County (para 11.2). Greenfield sites are therefore required to fulfil future housing requirements. By virtue of the extent of the Green Barrier surrounding Buckley, some release of Green Barrier land will be required.		result in the coalescence of Buckley and Padeswood/the cement works and effectively sever the strategic green barrier.'' It is also important to note that there is continued significant pressure for development on the area to the south of Buckley. This is demonstrated by the planning application adjoining this site to the east, submitted at Spon Green, for 435 dwellings and 450sqm of retail,(ref 058237) which was also refused permission in July 2018. The main reasons for refusal were the fact that the site was in the open countryside and green barrier and represents a consistent assessment of this location in line with the previous recent refusals on this site. As the objection references, another more recent application was refused on this Resubmitted site, on Land South of Megs Lane, Buckley (Ref 059387, March 2019) and again its location within the open countryside and green barrier were the main reasons for refusal and that planning context is the same in terms of the designation of the land in the LDP

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						as it is in the UDP. In this way the Green Barrier designation has been tested and has been found to be reasonable and justified in this location. It is also interesting to note that there has been no appeals lodged against these decisions. These decisions and the UDP Inspector's comments give added strength to the continued Green Barrier designation in this location. The Megs Lane planning application (the same site as BUC047-AS) was submitted by Leith Planning Consultancy, with no mention of developer involvement. There is no mention in the submission or in the extensive Planning Statement that there was a preferred developer or that a particular developer was involved in the scheme. The objector needs to do more than simply provide a lengthy planning statement at the stage reached, by providing clear evidence of the deliverability of this site in line with soundness test 3, but no such evidence has been provided.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						The objector looks backwards to the UDP to make the point that in their view the under-delivery from that plan should be added to the requirement for the LDP, notwithstanding its different time period. Whilst the Council do not accept this proposition, the objector provides no evidence to justify or quantify this apparent 'shortfall' or why it should be 'transferred' from one plan period to another. No reference is given to where in national planning guidance this provision is set out as government policy and there is no evidence of where else in a Welsh LDP context such an argument has been accepted. Also when the objector references an historic shortfall in housing delivery they seem, without explanation, to limit this to just the UDP where more logically such historic shortfall's may have occurred for other previous plan's. The flaw with such an argument therefore is how far back does one go to apply an apparent 'historic shortfall' and why should this just be limited to the UDP? This unsubstantiated information cannot be considered in any other way by the Council and carries little weight. There is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						no requirement by Welsh Government either in PPW10 or Development Plan Manual 3 to 'add on' part of a previous plan housing requirement to the housing requirement in a new development plan. Whilst the Council has been unable to undertake a formal JHLAS it has continued to produced yearly Housing Land Monitoring Studies which form part of the Plans evidence base and which also demonstrate that housing is being delivered in the early years of the Plan. The Council is not clear as to what is meant by the identification of an apparent "over-supply of housing land" in the deposit plan and rather than rely on 'miracles' the Council prefers to use clear facts and evidence. The objector is also now reminded that references to a lack of a five year supply and JHLAS are no longer relevant with the revocation of TAN1 in March 2020. The objector should also note that the system of monitoring supply against a housing trajectory now set out in Development Plans Manual 3 is the same approach taken in the deposit LDP where reference to this monitoring

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						system was used from the draft DPM3 available at the time. Rather than identify an over-provision against the plan's housing requirement which would be illogical, the plan identifies a housing requirement with a 14.4% flexibility allowance added in and as required by the DPM, and demonstrates via a housing trajectory how this will be met throughout the plan period. The trajectory also clearly demonstrates that housing delivery in the early years of the plan period is directly in line with the rate of housing provision identified in the plan. They also fail to acknowledge that a development plan does not actually deliver housing, it makes provision for the housing requirement to be built. Missing from the objector's argument is the interaction of the market, economic conditions, the capacity of developers to build, and the actual level of demand coming forward. These are all factors that are outside of the Council's control. Paragraph 4.2.3 of PPW states

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						"As part of the development plan process planning authorities need to understand their local housing market and the factors influencing housing requirements in their area over the plan period [the Council's emphasis in bold]". The operative phrase would appear to the Council to be that highlighted – over the plan period. The plan period for the UDP was 2000-2015 whereas the LDP period is 2015-2030 and there is no overlap. Equally the LDP evidence base is logically based at 2015 including the Local Housing Market Assessment, as the plan aims to cater for needs during its 'plan period'. Also, even if it is accepted that there was a UDP 'shortfall' that should somehow be incorporated, which the Council do not, and given that the UDP housing requirement adopted the projected amount of household growth at the time from Welsh Government projections, as the LDP provision is two to three times the present level of projected growth, then it can be said that any alleged shortfall has been catered for by the LDP. It also needs to be stressed that Welsh Government have no

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						fundamental objections in their formal response on the Plan and comment 'The Welsh Government is generally supportive of the spatial strategy and level of homes and jobs proposed and has no fundamental concerns in this respect'. The Council does not accept that too much reliance is placed on the contribution of large and small windfall sites in the LDP housing land supply. BP10 (section 2.5) explains that an analysis of past trends has been carried out and this is detailed in Section 4.3 of the Flintshire Urban Capacity Study (June 2019) undertaken by Arcadis. This approach accords with the latest National guidance as contained in Development Plans Manual Edition 3 (March 2020). The Manual advises (para. 5.63) that 'an urban capacity study can inform the identification of site allocations and assist to demonstrate delivery of windfall allowance in the Plan'. Both the Arcadis Study and BP10 explain that large and small windfall site contributions used in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the Plan are significantly lower than the level of past completions achieved from these sources. It is also the case that the representative body of the development industry, the HBF, agree that the allowances are appropriate. Furthermore, no objection has been made to the level of windfall allowances by Welsh Government in their formal representations. This is a very broad statement which is not supported by any detailed assessment of relevant policy compliance. It is also the case that all development sites will have to adhere to the policies and requirements in the plan. The objector has submitted a separate objection to the Green barrier designation and a full response has been made to that (id195) in relation to Development Management policy EN11 Green Barrier. For completeness a brief summary of that response is included here. Clearly the two recent refusals of permission on this site also contain a green barrier assessment and reason for refusal and are materially relevant.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						In relation to this site land South of Buckley / Padeswood, the green barrier seeks to prevent coalescence of Buckley with built development at Padeswood and seeks to prevent encroachment into open countryside which provides a setting to the built form of this part of Buckley. The land clearly fulfils the purposes for green barrier designation and should be retained. The settlement and Green Barrier boundary follows the line of the houses along Megs Lane and forms a significant physical feature on the ground making it very clear the extent of Buckley. Built development will breach this clearly defined southern limit of the settlement and affect the openness of the green barrier and will set a precedent for further pressure for development in an area where there is already significant pressure as has been as detailed above, but which would be difficult to resist if this site were included in the Plan. As the UDP Inquiry Inspector pointed out '' It would be the first extension beyond the well defined

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						existing line of built development, result in the coalescence of Buckley and Padeswood/the cement works and effectively sever the strategic green barrier.'' The conclusion of the UDP Inspector in supporting the retention of this barrier along the southern edge of Buckley is still considered to apply to the present situation and provides a strong context for continuing to resist harmful development in this location. The site is not necessary or appropriate to be allocated or included in the settlement boundary of Buckley having regard to its green barrier location access and in the light of provision for growth in Buckley. The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a contingency to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify specific contingency sites, and there is presently no requirement

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						in PPW10 or the Development Plan Manual to do so. A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility / contingency to ensure a sufficient housing supply and Welsh Government in their formal comments on the plan have no concerns about the housing growth provided. Given that the site is not considered to be suitable for allocation in the Plan for the clear reasons given, it would not be logical for the Council to consider it as a windfall site as it is simply not a suitable location for development on any basis. Some greenfield land has been allocated in the plan that avoids encroaching on green barriers which is sequentially preferable to considering green barrier land as a first principle, as advocated by the objector. Also as part of the Green Barrier Review land around Buckley has been removed from the green barrier designation in a less sensitive location to provide potentially more sustainable future growth opportunities beyond this

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						LDP timeframe. Land between Bannel Lane and Chester Road is enclosed on 3 sides by development and it was felt that it did not contribute to the purposes of the Green Barrier designation and the review therefore concluded it should be removed. There are therefore occasions when the boundary of the Green Barrier are drawn back and where development may be allowed in the future. In conclusion it is considered that the Plan makes sufficient provision for development as a whole and also within Buckley, and that it is not necessary or appropriate for a site to be allocated where it would cause clear harm to a green barrier. The site is not considered appropriate to be allocated in the Plan.
197	HN1: New Housing Development Proposals		Support	Greenfield: I am against the development plan in Greenfield. I live on Tan Y Felin and have raised numerous times about the volume of traffic the speed of vehicles and before long there will be a serious accident/danger to life. I cant believe you would be willing to add to the increased volume of traffic causing		Noted .The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				more congestion and increasing the potential of accidents. We already experience a vast amount of accidents on Greenfield Road. Myself was in a near miss with cars parked by parents collecting children off the bus service where they park on both Greenfield Road / Tan y Felin & the speed of vehicles considering it's a 30 mph speed limit. We have so many HGVs using this route too. I think individuals need to come out and see first hand and not sit behind desks and just complete forms. Come and see the real life struggles with volumes of traffic, speeding & parking. We also will be losing our limited green land. You already have housing developments underway in Holywell with the old hospital and the big development near the old police station. This screams pure greed and not considering the health & safety for us your huge tax paying constituents. You cant even fix the leaks from the drains as there is always a wide stream between Tan y Felin & school lane which has been like that for years as the drains cannot cope with the volume. I hope you take onboard & make the right decision.The wrong decision will be down to you when the community have already highlighted the daily issues with an overstretched community, traffic &		LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				near misses. Any injuries or fatalities will be down to pure greed!		
201	HN1: New Housing Development Proposals		Support	I am writing this e-mail with concerns to the proposed development Tan Y Felin Greenfield. Our 11 year old is crossed over the road every morning to catch the bus to Flint as the amount of traffic is dangerous and unfortunately there are a lot of idiots who drive recklessly which has led to injuries and loss of life unfortunately. The Tan Y Felin estate is unsafe with the amount of parked cars and vehicles travelling up and down this road meaning our children cannot safely walk to school. The few remaining fields that we do have are vital for us to walk our children with safety being our main priority and for them to enjoy the wildlife. The pollution will also be at an all time high.		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.
205	HN1: New Housing Development Proposals		Support	Candidate Site HCAC021 and HCAC022 I am pleased to see the recognition of site HCAC021 as, matching the prefered strategy for Hope and Caergwrle. It has all the benefits of transport and ease of access to all village facilities and minimises the loss of best and versatile agricultural land. HCAC022 - It is good to see this scheme finally omitted from the		Candidate site HCAC021 and HCAC022 have not been allocated within the LDP. Support noted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				LDP. All the residents who have been blighted by this proposal will be immensly relieved having lived under this particular cloud for more than fifty years.		
217	HN1: New Housing Development Proposals		Support	Proposed Development-Tan-Y-Felin Fields Greenfield GREENFIELD ROAD Greenfield Road, which would take all the traffic from this development, is already a very busy road including School Buses, Cars, Lorries and Vans and pedestrians walking to Holywell and takes a lot of the Traffic from the A55 going to Mostyn Dock Area. ACCESS TO THE NEW DEVELOPMENT SCHOOLING - As the current Primary School in Greenfield is almost full it is difficult to see where the children from the new development would go to school, HEALTH SERVICES - The pressure on health services in the area such as Doctors, Dentists and other Health Services are presently over-stretched and the increase of people requiring such services from this development would seriously affect the services that could be provided. GREEN AREA The immediate area surrounding the new development is already built up and the Tan-Y-Felin Fields are already designated as a Green Barrier Space by Flintshire County Council		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
221	HN1: New Housing Development Proposals	Candidate sites HK007	Object	During the 'Call for Sites' stage of the LDP, a number of candidate sites were put forward on the edge of the settlement of Higher Kinnerton. These sites proposed residential development in a sustainable location being a settlement that is closely located to the Cheshire and Wrexham borders. It is an area known to be occupied by commuters given its accessibility and some time ago, during the UDP examination, the Inspector recognised that there is a lack of constraints on these parcels of land. The candidate sites referenced above are HK007, HK008, HK011 and HK012. When assessed, HK007 and HK012 were considered to be 'green' sites under your traffic-light system, before being downgraded to 'amber'. HK008 and HK011 were considered to be 'amber' throughout this process. The 'amber' sites are categorised as 'The site complies with the Council's Preferred Strategy, however there are site constraints that would need to be overcome to allow the site to be developed'. It is, therefore, recognised that these sites are suitable for development subject to acceptable assessment of site constraints, i.e., Ecological Survey,	Allocate land at Higher Kinnerton. Candidate sites HK007, HK008, HK011 and HK012	Not accepted. The objector seeks the allocation of two candidate sites within the village of Higher Kinnerton, HK007/HK012 On land South of the Grange and HK008/ HK0011 also off Sandy Lane for approximately 100 dwellings. This response covers both sites. Higher Kinnerton is a tier 3 settlement in the LDP (STR2) and previously a category C settlement in the UDP. The UDP provided growth for the village through the allocation at HSG1(40) with a capacity for 40 units. The final 6 units were completed by 31st March 2015 according to the 2014/15 Land Availability Study. A speculative site on land at Kinnerton Lane has also been granted planning permission on appeal with capacity for 56 dwellings. According to the 2019/20 Land Availability Study 31 units have been completed, with 13 under construction and 12 not yet started. It is anticipated that these remaining units are due to be completed by April 2021. Given that Higher Kinnerton is a Tier 3 sustainable settlement where housing development must be

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Transport Statement, Arboricultural Survey etc. My client is currently preparing a full planning application for these sites for residential development of approximately 100 no. dwellings and as such, will be assessing the site for any constraints and ensuring the commission of appropriate reports. The settlement of Higher Kinnerton has recently lost community amenities such as the Post Office and bus services, yet, residential development could have increased the population and therefore, made these services a viable option in the future to serve the whole community again. Strangely, the Authority chooses not to provide any opportunity to improve the offerings of an existing settlement and focusses all attention on a strategic site that, as discussed in the above section is considered difficult to deliver and would create an unsustainable development.		related to the scale, character and role of the settlement, it is considered that the speculative site at Kinnerton Lane will provide sufficient growth for the village over the plan period, and no allocations are needed within the village. The allocation of both HK007/HK012 and HK008/ HK0011 would amount to an additional 100 dwellings, Higher Kinnerton is a Tier 3 Settlement and does not have sufficient facilities to sustainably accommodate the level of growth proposed by the objector. The objector refers to the loss of services in Higher Kinnerton such as the Post Office and bus services, and points to the need to increase the village's population to support these services. Higher Kinnerton has in fact seen the completion of 40 dwellings on UDP site HSG1(40) and 31 units on the speculative site at Kinnerton Lane, with a further 25 yet to be completed. Therefore residential development has taken place, yet services have continued to decline. This is the case in many rural and urban settlements

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						across the Country, and is not unique to Flintshire. It is a sign of the times as demand shifts towards more online shopping and services. Simply building more houses is clearly not guaranteed to safeguard services and the proposition that if more housing is provided then facilities will return is both naive and un-evidenced in terms of how and when such facilities would be provided. In addition HK007/012 and HK008/HK011 have not been allocated within the LDP as the Warren Hall strategic site has been identified as the focus for growth and is central to the North Wales Growth Deal, receiving considerable public sector investment over recent years including junction improvements at the interchange of the A5104 and the A55. The site has outline planning permission as a business park however this will be extended through its strategic allocation within the LDP to incorporate a mixed use development which will include a business park, a commercial hub including leisure facilities, a hotel and some retail opportunities.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						UDP Inspector's comments; The two resubmitted candidate sites by Caulmert are also omission sites from the UDP. The UDP Inspector removed the site from the plan for the following reasons; "(11.119.4.) The objection site measures some 4.6 ha which would potentially produce growth in the region of 20%. Excluding HSG1(57), in total this would result in over 25% growth within the plan period which is well over the indicative growth for even category A settlements such as Mold and Flint. I have seen no substantive arguments which justify that level of growth in what is a relatively small rural village with limited facilities in comparison to the larger settlements. (11.119.5.) Should more growth be required and Higher Kinnerton was judged to be a suitable location to accommodate that growth then the lack of constraints on the site would no doubt mean development could take place. Similarly road improvements, recreational facilities and affordable housing above and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						beyond the requirements of UDP policies would bring community benefits, but they are not good reasons to allocate greenfield land unnecessarily. To do so would be contrary to the sustainable objectives of the plan. (11.119.6.) The site consists of fields, is open in nature and forms an integral part of the countryside. It is not part of the built up area in either character or appearance. It follows from the above that I do not consider the land should be included within the settlement boundary where there would be a presumption in favour of development." HK008/ HK0011 HK008/ HK0011 is on the North Eastern edge of the village. It is outside but adjoining the settlement boundary along its Southern edge which is formed by the well-defined rear curtilages of properties on Deans Way. Of all the Candidate Sites submitted for Higher Kinnerton this relates relatively well to the settlement as opposed to the open countryside beyond Main Road to the north and Sandy Lane to the east. At

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						2.47 ha approximately 75 units could be accommodated. The Council's Highways Development Management Team stated that pedestrian facilities along the Main Road frontage are inadequate and there would not appear to be any opportunity to provide improvement. It would appear possible however to access the site from Sandy Lane; this would provide an opportunity to restrict pedestrian access from the site to the village, to the use of the bridleway. Development will necessitate a road improvement scheme on Sandy Lane to include road widening, improvements to the Main Road/Sandy Lane junction, the provision of pedestrian footways and improvements to the bridleway. Given the comprehensive highways improvements required it is not considered appropriate to allocate this site at the present time. Furthermore as a scheme for 56 dwellings has been allowed on appeal on land south of Kinnerton Lane this is considered to be sufficient as a commitment to meet the housing requirement for the village.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						There are also other factors which make the site less favorable to develop including the predicted loss of 2.48ha of grade 3a agricultural land. HK007/012 This irregular shaped 3.1 ha of land is located outside of the settlement boundary, on the Eastern edge of the village comprising gently sloping grade 3a agricultural land. It incorporates and is bounded by the dismantled railway line to the South East, a rural lane (The Green) and a dwelling (The Grange) together with a barn conversion scheme to the North. Whilst the site is outside of the village confines the Western boundary lies adjacent to the settlement boundary which runs along Sandy Lane beyond which is residential development at Beeston Road, Deans Way and Greenfield Avenue. The rear curtilages of these properties back onto Sandy Lane. However development of this site would not relate well to the existing pattern and form of development of the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						village the bulk of which is located to the West of Sandy Lane and the dismantled railway line. Sandy Lane is considered to be a logical and well defined boundary for this part of the settlement. Development of the site would create an illogical change to the boundary that does not constitute a rounding off of the village but rather would represent an unacceptable incursion into the countryside which would result in the predicted loss of 2.26ha of grade 3a agricultural land. Highways Development Control have stated that alterations would be required to improve the operation of the Sandy Lane/Main Road junction along with improvements to the bridleway link into the village. Provision of a footway along the site frontage would also be required. Given the comprehensive highways improvements required it is not considered appropriate to allocate this site at the present time. In conclusion, the two proposed sites would result in a level of growth that is not sustainable for this tier 3 settlement. Higher Kinnerton has already

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						experienced growth in the UDP and during the early years of the LDP. An additional 100 dwellings would not be appropriate for the scale, character and role of this settlement, particularly when there is a strategic allocation for 300 dwellings at Warren Hall in close proximity to Higher Kinnerton. The Warren Hall site provides a unique opportunity to embody placemaking principles, and to develop a sustainable mixed use site that will bring significant economic benefits to the area, rather than just taking housing only approach as with the two objection sites. Consequently there two candidate sites have not been allocated within the plan as it is not needed in addition to the residential units at Warren Hall and the existing commitments within the village. In conclusion, adequate development is provided for in Higher Kinnerton over the Plan period and the site is in close proximity to the Warren Hall Strategic Site where provision is made for mixed use development. It is not necessary or appropriate for an additional allocation.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
222	HN1: New Housing Development Proposals	BRYN003	Object	Objects to the non inclusion of Candidate Site BRYN003 within the settlement boundary. The land lies to the east of the Gables on the B5121 and I do not consider it a fair reflection to call it ribbon development when there is a natural boundary with the A55 expressway which hasd been there since the early 1990's, the opposite side of the road is fully developed. The plot should be included for future development which could include affordable development.	The plot should be included for future development which could include affordable development.	Not accepted. The site lies at the north eastern edge of Brynford at the end of a ribbon of development on the eastern side of the B5131. The inclusion of the site within the settlement boundary would result in the creation of further ribbon development extending outwards from the village centre, contrary to established national guidance. It would therefore be inappropriate to extend the settlement boundary to include this site. A larger omission site (incorporating this site) was considered by the UDP Inspector '… Even if development were to be confined to the B5121 frontage it would extend the ribbon of development and so be contrary to advice in PPW (9.3 MIPPS 01/2006). It follows I do not consider the site to be suitable for development within the plan period'. When approaching Brynford from the north east along the B5121 the present edge of built development (The Gables) is softened partly by the hedgerow set behind the roadside verge and also by the topography. The site is considered

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						to relate much more closely with open countryside than to the built development. . The proposed site would create ribbon development which would be visually prominent and damaging to the character and appearance of the locality. It could also set a precedent for further ribbon development extending out of Brynford. Additionally the land is underlain by lead bearing geology and in area of historical lead mining. Land contamination assessment required. Similarly, there may be land stability issues due to the site being located above mine shafts further assessments may be needed prior to any development. With regards to affordable housing, STR2 / HN3 allows for small scale affordable housing sites but this objection would qualify as it is not acceptable in planning terms. Additionally, planning permission has been granted to north of site at the former Llyn y Mawn Inn.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Developing this site would result in harm to the open countryside and have a detrimental impact upon the character of Brynford. Development also appears technically unacceptable in terms of land contamination and stability issues. The site is not considered necessary or appropriate to be allocated for housing, nor included within the settlement boundary. Therefore the site has not been allocated within the plan. In conclusion, the site is not considered appropriate to be allocated in the Plan.
223	HN1: New Housing Development Proposals	GYM003 Llys Newydd Gwernymynydd	Object	Proposed development to include site at Gwernymynydd Llys Newydd Wildbanks Conservation was instructed in May 2019 to undertake an Ecological Appraisal, in relation to the proposed residential development at Llys Newydd, Gwernymynydd., Mold, CH7 5LN. This Ecological Appraisal combines the results of various desk-top and field surveys undertaken in 2019 and provides recommendations for the mitigation measures required to enable the development to proceed with minimal impacts on protected species. The Site has been subject to ecology surveys in 2019. These revealed that the Site is used for	Allocate Candidate site GYM003 Llys Newydd Gwernymynydd.	Not accepted. The site has been the subject of a separate objection (id 15) from the same agent seeking the inclusion of the site within the settlement boundary under PC1. This objection seeks the allocation of the site for housing. It is noted that an outline planning application has been submitted (Feb 2020) under code 069696 and that discussions will take place between the applicant / agent and case officer, particularly

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				foraging and commuting by low numbers of bats and will highly likely be used by nesting birds. Bat Transect surveys are continuing into the autumn as per the request of NRW and these will be reported within this document upon completion. It must be noted that recommendations may change depending upon the results of the transect surveys.		in terms of background studies and evidence. Not accepted. The settlement boundary for Gwernymynydd in the vicinity of the site has not been previously incorrectly drawn. At the time of the UDP public inquiry there was sufficient land within the settlement boundary to deliver housing development and the Inspector did not recommend that the site be included in the settlement boundary. It must be borne in mind that in the UDP Gernymynydd was a category B settlement and that the spatial strategy allowed for planned growth through allocations in category A, B and C settlements. As part of the preparation of the LDP a review of the settlement hierarchy was undertaken and this was informed by a comprehensive set of settlement audits to assess the sustainability of settlements. This was set out in the Key Messages consultation document and this informed the subsequent Strategic Options and Preferred Strategy consultations. The Plan's spatial strategy is based on a 5 tier settlement hierarchy where planned growth is only directed to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the top three tiers. Gwernymyndd is designated as a Tier 4 Defined Village, on account of its general lack of facilities and services. Policy STR2 permits new development in the form of windfalls within the settlement boundary provided that it delivers local needs affordable housing or in the form of small scale exceptions affordable housing schemes on the edge of the settlement. The site adjoins the settlement boundary of a Tier 4 Defined Village where policy STR2 identifies that new allocations will not be made. Instead, policy STR2 permits windfall developments (where local needs housing is delivered) and small scale exceptions schemes for wholly affordable housing. The proposed development does not comply with the Preferred Strategy of the LDP. It is also not considered that there is any need for land to be included in the settlement boundary as there is already land in the settlement boundary in several locations which has permission or is under construction / complete. In the early years of the Plan

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						period the settlement is seeing growth through development at the former Rainbow Inn for 17 dwellings. Outline planning permission also exists for 10 dwellings at Siglen Uchaf and for 3 units on an adjacent site at Fernleigh. Growth clearly is and can be delivered within the Plan period within the settlement. The site is close to Mold, which is a category A settlement in the UDP and a Tier 1 Main Service Centre in the Deposit LDP. Mold saw actual growth of 10.1% over the UDP period and is presently seeing development at Broncoed (86 units) and Maes Gwern 160 dwellings. In the Deposit LDP a new allocation has been made on land between Denbigh Rd and Gwernaffield Rd for 246 units. The application site lies only 1.5km from the Maes Gwern site, which is under construction. In this wider context it is not considered necessary for additional provision for growth to be made at Gwernymynydd. Although the site adjoins the settlement boundary and has development to either side, the development of the site is not

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						considered to represent a logical rounding off or infill of the settlement. The estate type development at Minffordd Fields is separated from the site by a line of mature trees which is a distinct landscape feature and the lodge which also represents a character break. At the south western edge of the site the existing ribbon development is low density and set back from and above the A 494(T), being accessed from a private driveway. The frontage of the site and adjoining land has an undeveloped appearance and creates a green strip alongside the main road. The site adjoins Coed Fron Newydd Wildlife site The site has been considered as a Candidate site and has been rejected as a housing allocation or a settlement boundary change. It is considered that the site relates more closely to the open countryside than the built form of the settlement. In addition to this there is an earthwork which would need assessment and Environmental Health have advised that there is likely to be lead and heavy metals on the site from former mining

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						activities. In terms of access, the site would have to be accessed via the trunk road and this would require agreement from the Welsh Government. In conclusion, provision for growth exits within the settlement boundary of Gwernymyndd and in nearby Mold. It is not considered necessary or appropriate for an additional allocation in Gwernymynydd particularly on a site where there are concerns about its impact on the form and character of the settlement and in the light of concerns over ecology and topography and uncertainty over access. Despite acknowledging that the present planning application may address some of these concerns, the site is not considered to be appropriate to be allocated.
244	HN1: New Housing Development Proposals	FLI005 Manor Estate, Flint	Object	We ask that you reconsider the above site as being worthy of inclusion in the LDP for housing development. Having read the reasons given for " non inclusion " we wish to make the following comments: 1. This site cannot be said to be located in open countryside as it is	Allocate Land adjoining Manor Estate Flint for housing.	Not accepted. 1. The site adjoins a block of estate type development on its eastern edge and part of its southern edge. The remaining part of the southern boundary is bounded by a paddock and small outbuildings and greenhouses which appear to be associated with two dwellings. To the north of the site is a small group of residential properties but these are

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				surrounded on three sides by housing development. To the North East boundary there are three dwellings and their gardens. To the South East and half of the South West boundary is the Manor Estate, this comprises about 75 dwellings. To the remainder of the South West boundary there is a childrens playground and a loose development of eight or nine dwellings. These houses having a direct access, via Coleshill Road, to the A548 / Holywell Street. Coleshill Road forms the North West boundary to the site. 2. What is the relevance in your reasoning of the statement that '' the field parcel on the other side of Coleshill Road is associated with Bedol Farm'' ? 3. You further state '' Development of the site on its own would consolidate the free standing residential development....which is contrary to national planning guidance '' (planning guidance, not law !!) This site is not '' on its own '' it is , as stated above, surrounded on three sides by housing development. This		set within wooded grounds. Beyond the western boundary are fields extending up to the edge of Bagillt. Rather than having the appearance of being part of a built up area, the site has a rural character as part of the wider block of open countryside. In planning terms the site is outside of a settlement boundary and open countryside in both the Unitary Development Plan (UDP) and the Local Development Plan (LDP). The open countryside designation often 'washes over' existing built development. Development of the objection site, on its own, would result in enlarging an existing small 'outlier' block of built development which would be detached from the existing form and pattern of development at Bagillt. There is also a green barrier designation adjoining the site extending to the South towards Flint and Bagillt, the purpose of these designations is to maintain the break in development between the two settlements. There are parcels of development within that gap but it is not a continuous form of development. These designations are planning 'tools' to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				site is therefore an infill site on poor quality agricultural land. 4. "Highways consider the site unsuitable as direct access is not available from Oak Grove." Even if there was direct access, the Oak Grove roadway is far too narrow for any additional traffic. However, with our initial submission for this site we included a suggested alteration, to realign Holywell Street and move it closer to the A 548. This will give the necessary visibility splay to both sides of the new access / junction to Hollywell Street. Our suggestion also shows Coleshill Road joining the proposed new access road within our site. This will greatly improve access to the highway system and make it much safer. (Copy of the proposal is attached.) Were Highways made aware of our suggestions ? 5. The number of houses surrounding the site is probably larger than many of the settlements within the county. 6. This site is poor agricultural grazing land. It is not an important landscape site nor a site of nature conservation. It has no historic or public amenity value. It is well		ensure controlled growth of settlements. In order to have sustainably allocated sites and sustainable growth of settlements, allocated sites should be sites which adjoin existing settlement boundaries to ensure the natural expansion of the built up areas and close proximity to facilities. In the UDP the area of land to the west of the site towards Bagillt was designated as Green Barrier, as part of the LDP all Green Barriers have been reviewed and this parcel of land has been removed from the green barrier. Background Paper 1: Green Barrier explains the changes to the designation in this area and states :- ''Modest (42.94ha) green barrier to south of A548 Coast Road between Bagillt (Bedol) and Flint to the east. This designation protects small but important open gaps between Bedol Farm and Coleshill Road and between Ash Grove and Bryn Farm. The objective of the green barrier is to prevent a continuous built up frontage between Bagillt and Flint alongside the A548.''

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				screened form the estuary area and other locations inland. It does not constitute or extend any ribbon development and does not create fragmented development. 7. You write about developments being contained within a settlement boundary, yet the Manor Park Industrial Estate practically joins together the towns of Flint and Bagillt. 8. The site is located adjacent to a Principal Employment Area - Manor Park Industrial Estate and therefore its workers could live on this site and easily walk or cycle to work , thus reducing vehicle pollution and traffic movements in accordance with Council Policies. 9. The site is adjacent to a regular bus service giving access to all the neighbouring towns, villages and employment areas. 10. Access from the site can also be easily gained to the Wales Coastal Path and many other scenic walks for the enjoyment and healthy exercise of the new occupants.		The paper goes on to say 'The settlement of Bagillt is somewhat constrained in terms of identifying potential future growth its by topography. Furthermore, existing allocations e.g. at Wern Farm have not come forward for development. An opportunity exists for longer term growth to the south east of the settlement in the vicinity of Coleshill Road. It is therefore considered that the green barrier should be drawn back to the eastern side of the existing block of development comprising Oak Grange and Manor Drive. This would allow for a possible urban extension from Tyddyn Messham south eastwards up to that existing block of development. However, an open gap would still be maintained between Bagillt and Flint, alongside the A548. It is also considered that the present green barrier extends further inland than is necessary to fulfil its primary function of preventing the coalescence of Bagillt and Flint. It is therefore considered that the green barrier should be drawn back slightly to focus on a more tightly defined gap along the A548 Coast Road. The green barrier should broadly follow a line following the southerly edge of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				11. The community facilities of both Bagillt and Flint are easily accessed. 12. We consider that this site complies with the majority of the relevant parts of the "Tests of Soundness " We therefore hope you will be able to reconsider this site and allocate it for inclusion in the LDP.		Aber Park and a point just to the west of Trebor Avenue alongside Nant y Moch Farm. The land alongside the playground at Trebor Avenue is elevated and rising where development would be prominent in the landscape and harm urban form and the gap between the settlements.'' As this paper explains the green barrier has been drawn back to provide for a longer term development opportunity, that is beyond the remit of this LDP. The objection site and the adjoining field could be looked at together in terms of securing road improvements and an appropriate access arrangement for a logical extension of Bagillt in a future plan period. This objection site on its own cannot be easily developed due to access constraints. Also it is important to consider that the LDP does have enough allocated sites and includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a buffer to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						specific contingency sites, and there is presently no requirement in PPW10 or the Development Plan Manual to do so. A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility/contingency to ensure a sufficient housing supply and Welsh Government in their formal comments on the plan have no concerns about the housing growth provided. 2. There is no particular relevance to the reference to the field parcel associated with Bedol Farm is merely a factual statement that there is an adjoining field which is part of the Bedol Farm 3. LDP's are required to be prepared in the context of Planning Policy Wales (PPW) which is the planning guidance produced by Welsh Government. This guidance clearly states that a search sequence approach should be taken when allocating new housing sites, choosing brownfield sites within settlements in the first

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						instance and then as stated in paragraph 3.40: 'Where there is a need for sites, but it has been clearly demonstrated that there is no previously developed land or underutilised sites (within the authority or neighbouring authorities), consideration should then be given to suitable and sustainable greenfield sites within or on the edge of settlements. The identification of sites in the open countryside, including new settlements, must only be considered in exceptional circumstances and subject to the considerations above and paragraph 3.46 below'. Therefore in planning the growth of settlements, the focus is on the built up area of an existing settlement. The Manor estate and residential development around that are considered to be 'free standing' development within an open countryside setting rather than being an individual settlement itself and should therefore not be developed further because it is encroaching into the open countryside. The consideration of these issues against the above guidance also draws on the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						various Planning Acts but ultimately the decisions taken and rationale for them are a matter of planning judgement. 4. The Councils Highway officer has been re consulted for more detailed comments and has stated, ‘’The proposed re-alignment of Holywell Street and Coleshill Road would address the issue of previously raised visibility concerns however this raises further concern in relation to the potential impact on the operation of the A548. Removal of the separation distance and natural obstruction to visibility has the potential to create an interaction between drivers travelling on the two roads. This could be a particular issue during the hours of darkness with drivers of westbound vehicles on the A548 being distracted by the headlights of the eastbound vehicles on Holywell Street. Without a reasonably detailed design exercise, fixing the levels and alignments of the re-alignment and the completion of a road safety audit, it is not possible to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						determine the full extent of the impact of one road on the other. The cost of the re-alignment is likely to be significant and would be borne by any potential developer; I am not qualified to comment but these re-alignment costs may impact on the viability/deliverability of the site. The suggested re-alignment is onto land that is within the control of the highway authority however it would result in the loss of a significant number of trees; others may wish to comment on this aspect.'' The suggested highways solution is therefore not ideal as it creates other highway issues and the significant cost of the work may affect the viability of the proposal. The trees are a significant landscape feature and there loss would harm the character and appearance of the locality. 5. It is not doubted that there are houses adjoining the site. There are 83 houses surrounding the site and some of the smaller villages in the county do have this number or fewer houses. However these

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						houses do not make up a village or a settlement in its own right, it is simply a freestanding block of an estate type development without a village centre or focus and does not have the character or appearance of a village or settlement. In the first three years of the Plan period, Bagillt only saw one house completed but as at April 2018 there were commitments for 28 units. In addition to this there is also scope for development on the Wern Farm former UDP allocation (45 units) which remains within the settlement boundary. Clearly there is scope for growth in Bagillt in the Plan period. In the first three years of the Plan period Flint saw completions of 310 units and at the April 2018 base date had commitments for a further 404 units, mostly at the Croes Atti site. The Plan therefore provides sufficient growth at Flint, alongside the Northop Road allocation. In the context of the two settlements, sufficient growth is provided for in this Plan period, and a further allocation is not

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						considered necessary or appropriate. 6. According to the Agricultural Land Classification Post 1988 Survey over half of the site has been classified as Grade 2 Agricultural Land. Welsh Government Agricultural Unit worked closely with the Council in providing predictive agricultural land use loss on every candidate site. The spreadsheet shows in this case that the land quality on this site is 1.01ha based on actual survey results and 0.48ha based on predictive data. The site therefore represents the loss of BMV. Development of the site would consolidate a fragmented block development in the open countryside. 7. The whole point of open countryside and the green barrier designations is to control development to ensure that settlements do not coalesce. The Manor Estate is located between Flint and Bagillt but it does not join the two settlements together and this is why further development is not acceptable. The industrial estate comprises a physically well defined narrow strip of land

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						between the railway and A549 dual carriageway. The objection site is separated by trees and vegetation on the north side of the A548 and on the land between south side of A548 and Holywell Street. Given this visual separation the industrial estate does not set a precedent for the development of the objection site. 8. 9, 10. 11. It is not doubted that the site is within cycling distance of employment areas, close to a bus service, within walking distance of the coastal path. However, it would result in a detached block of residential development that is not well related to nearby settlements, services and facilities. 11. There are employment uses in close proximity to the site. In terms of community facilities the site is approximately 750m from the nearest small convenience shop in Bagillt and a mile /1700m to Flint retail park. The nearest school Merllyn primary school is approx. 1400m/0.88 mile and Flint High school is approx 3330m/2 miles away. Therefore there are community facilities in the vicinity of the site but not in close proximity. Nevertheless, the site

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						does not represent a logical extension to either settlement and will operate as a detached block of housing which relates poorly to settlements in terms of social cohesion. 12. The objector does not explain which Tests of Soundness are failed nor the reasons why. The objector does not explain why the Plan is sound by including this site within it. The site is within open countryside, does not adjoin an existing settlement boundary in terms of being a logical urban extension and would consolidate a detached block of development. Highways constraints mean that there is doubt that the site is viable and therefore deliverable. In conclusion, the site would add to a detached block of development in open countryside and would not represent a logical urban extension. There is also no evidence that the sites can be accessed. The site is not necessary or appropriate to be allocated in the Plan.
253	HN1: New Housing Development Proposals		Object	Objection to no development within Holywell -Lack of consultation at both initial preferred plan and LDP stage and non at deposit. - LDP	Allocate land for housing in Holywell.	Not accepted. Holywell is a Tier 1 Main Service Centre, on account of its size, character and level of services and facilities and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				should have more development in the West of the county - Holywell has the infrastructure in place in terms of schools, doctors and community hospital to accommodate development.		represents a sustainable location for development. The LDP does not seek to apportion development spatially by the use of numerical methods or growth bands. The plan seeks to distribute growth in a sustainable manner having regard to the settlement hierarchy, this means that not all settlements will have allocated sites, including the Tier 1 Main Service Centres such as Holywell. As part of this approach it is necessary to have regard to the character and role of each settlement and the circumstances prevailing at the present time. In this context it does not mean that, in the absence of an allocation, Holywell will not experience growth during the plan period, as completions in the first three years of the Plan period of 36 units and committed sites which already have planning permission will provide sufficient growth for the town. The Lluesty Hospital site is committed for 89 dwellings, with permission for a further 69 units on the southern part of the former hospital site, the Ysgol Fabanod site at Perth Y Terfyn will provide 55 units and the land East of Halkyn Road will

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						provide 45 dwellings. This will provide a total of 294 dwellings over the plan period, which is sufficient growth for Holywell without the need for a further allocation. A further consideration is that the Lluesty Hospital site is an important listed building and gateway to the town. The refurbishment and conversion of the listed buildings and redevelopment of other parts of the site will not be aided by a further greenfield allocation which would only serve to divert market interest away from the hospital site.
270	HN1: New Housing Development Proposals		Support	I support the Planning Officer's refusal of development of the Tan y Felin fields in Greenfield. I support the refusal for the following reasons: • Greenfield Road is already very busy at key times throughout the day, especially when local children are waiting for or returning on school buses. There have been accidents on the narrow Well Hill which is used by enormous heavy lorries as well as domestic traffic., increased traffic here and on School Lane would mean increased congestion and pollution, increased danger and		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				decreased safety for our children. • Access: developers have suggested access near the new cemetery which would have a major impact on residents in School Lane and Woodland Drive. • Greenfield School is almost full. A significant increase in the population in Greenfield will mean overcrowding and greater competition for school places in the future with parents facing the possibility of not getting their first choice of primary school and having to sen their children to schools further afield in Holywell. • No doctors or dentists: residents are already forced to visit Holywell or elsewhere to access a surgery and getting an appointment is already often difficult. Increased housing would put even more pressure on services. • Insufficient shop infrastructure in Greenfield currently exists. Existing insufficient drainage issues on Greenfield Road leading to flooding and traffic hazard		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				in heavy rain. • Existing insufficient drainage issues on Greenfield Road leading to flooding and traffic hazard in heavy rain. There is already passed development underway for more than DOUBLE the required new housing in Flintshire.		
271	HN1: New Housing Development Proposals		Support	The Fields at the top of Tan-y-Felin, Greenfield, Holywell I agree that the fields at the top of Tan-y-Felin in Greenfield, Holywell should NOT be considered for housing. This land is home to various protected species such as owls, bats and badgers. There are also kytes, badgers, foxes and numerous small mammals as well as various other birds, amphibians and insects which all rely on this green space. Greenfield is a village with limited amenities. There is no dentist or doctor's surgery and few shops. Greenfield school is also almost full as so many young families already live in this area. Access to this area is via a steep road which is already very busy with established housing. Many homes have multiple cars which are often parked in the road		Support Noted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				making it difficult to drive up and down the hill, especially when the road is icy. More housing would mean increased traffic with the increased potential for accidents. The sewers and drains struggle to cope and regularly have to be attended to by the Dwr Cymru. This village has reached saturation point so all further housing development in Greenfield should be suspended. Thank you!		
280	HN1: New Housing Development Proposals		Support	I support the Planning Officer's refusal of development of the Tan y Felin fields in Greenfield. I support the refusal for the following reasons: • Greenfield Road is already very busy at key times throughout the day, especially when local children are waiting for or returning on school buses. There have been accidents on the narrow Well Hill which is used by enormous heavy lorries as well as domestic traffic., increased traffic here and on School Lane would mean increased congestion and pollution, increased danger and decreased safety for our children. • Access: developers have suggested access near the new cemetery which would have a major impact on residents in School Lane and Woodland Drive.		Support Noted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				There is already passed development underway for more than DOUBLE the required new housing in Flintshire.		
291	HN1: New Housing Development Proposals		Support	The proposed LDP document would appear in my mind to be a balanced proposal and those involved in its creation should be commended. However there are a few observation I have made that I would like explanations for :- i) With regard to "Candidate site " maps on your web site, example being NH008 WELLFEILD FARM Northop hall (outlined in red) , NH017 WELLFEILD FARM Northop Hall (out lined in Green) and NW020 WELLFEILD FARM Northop Hall (out lined in red) . This I find very confusing as to what classification the council has give to any given candidate site , when so many near identical proposals are published with differing statuses . Could we not have a clearer system to show the councils stance on a given candidate site ? ii) Myself and other have read the proposal and fine that the proposed LDP does not appear to show how a given piece of land is allocated for developement. Could it be made		Candidate sites NH008, NH017 and NH020 have not been allocated within the plan, your support is noted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				clear the process the council go through to come to a conclusion as to whether or not a piece of land should be considered for developement .		
293	HN1: New Housing Development Proposals		Support	I would like to give my support to not developing the land adjacent to the Tan - Y - Felin estate in Greenfield, Flintshire. I understand an application has been made by developers to build new housing on this area of green space and I whole heartedly feel this would be a big mistake if this were approved. The fields in this area are home to wildlife such as badgers, bats, owls and red kites and offers green space for nature and the local residents to walk. Greenfield does not have the infrastructure to support additional housing. There is no doctor or dentist in Greenfield, the school is at capacity and the road system around Greenfield is not suitable for more traffic. There have already been tragic accidents on the main road into Greenfield and additional traffic would increase the dangers for local residents. There are several more appropriate sites in the area which could be developed for housing such as the old Lluesty Hospital site.		Support Noted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Please bear these comments in mind when deciding whether to approve or decline any new building in this area. Many thanks		
296	HN1: New Housing Development Proposals		Support	I would like to give my support to the non- development of the fields adjacent to the Tan y Felin estate in Greenfield. I believe that the developers have resubmitted a plan to build on in this area of green belt, if this is passed this would not be good for the area or Greenfield as a whole. There is already a problem with the amount of traffic going up the well hill towards Holywell, if passed there needs to be work done modernising the road up to Holywell before any building starts.The road up to Holywell over the years has had accidents, with the extra volume of traffic this will unfortunately increase. There are no dentists , doctors or vets or mid sized supermarkets in the village, also the only school in the village is nearly full to capacity.There also are a lot of school children at the moment catching buses to High Schools, with the new houses built this would lead to extra pedestrian traffic on an already busy Tan - y Felin hill.		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan, your support is noted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				While the houses are being built there would be construction traffic on the Tan - y Felin hill, leaving mud on the road, which would be a safety hazard, at the moment the gritting of the Tan -y Felin hill in winter is poor, and there have been accidents on the hill, with the extra mud on the hill and not being gritted, this would make the hill lethal. The area itself is an area of great natural beauty, witch is home to a number of protected species, and is also used by ramblers. The area has also been designated by the council as a green barrier space. Are the Developers willing to pay for the above improvements ? Please can you take my comments into consideration before making a decision.		
317	HN1: New Housing Development Proposals		Support	Reference: Tan-y-felin/Cae-Y-Dderwen Fields, Greenfield, Holywell,CH8 I fully support the Planning Officer's decision against the proposed building development for the following reasons:		Support noted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				TRAFFIC:Tan-Y-Felin has inadequate parking spaces for existing households,many have to resort to parking on the road and/or the pathways outside their homes.The traffic narrows to single lane in many places as a result with some vehicles parked on blind bends.It greatly increases the danger for both pedestrians and other motorists alike.Lots of children live on Tan-Y-Felin and it is down to luck that none have been seriously injured as a result of the existing traffic problems both near the playground and higher up the estate.The new development will bring an increase in vehicle pollution.There is considerable congestion on the main road through Greenfield in both directions already and another estate consisting of approx.184 houses and many 2 vehicle (or more) families will add to this and over the long term could potentially affect the health of local residents.Studies have shown the toxic effect on human health vehicle emissions have and not everyone can afford green vehicles that have things like 'stop,start' etc.ICE:When there is snow/ice on Tan-Y-Felin it's nigh on impossible to drive up there.In bad weather that would mean even more vehicles parking on the main Greenfield road as a		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				result.AMENITIES:There are limited shops and amenities within Greenfield and no doctors or dentists surgeries.Greenfield school is also close to capacity.There is already tremendous pressure on local services within Holywell and the new development is clearly going to add to that.WILDLIFE:The fields and surrounding woodland have many kinds of wildlife that are a joy to see.Our family have seen bats, buzzards, foxes, badgers and squirrels to name but a few they would surely suffer at the hands of any development.The local community should be able to enjoy such a lovely environment as do the many ramblers and other groups.DRAINAGE:I do not feel that the drainage on Tan-Y-Felyn is capable of handling another 184 homes.Last year Welsh Water came out to fix an issue with the drains next door and that involved digging up their front garden to fix a broken pipe.EXISTING PLANS:There is a sufficient number of developments already passed by planning in Flintshire, so why do we need another 184 homes?There is an incomplete development on Greenfield road already,it would be better to complete that first.I do not believe there is any motive other than profit for this		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				development.There are many more reasons to strongly oppose this than I can fit within the 2500 character limit here.		
328	HN1: New Housing Development Proposals	CAR001 Carmel, Land at Halfway Field	Object	The plan should identify for development Land at Halfway Field Carmel. The site comprising 2.17ha of land should be brought forward for housing. The site is suitable for development. The landowner is willing and able to bring the site forward for development.	Allocation of land for housing at Halfway Field Carmel	Not accepted. Whilst Carmel is identified as a Sustainable Village the site relates poorly to the main built form of the settlement which apart from development on Mertyn Lane is confined between the A5026 along the northern edge and Carmel Road along the southern edge of the settlement. The site is better related to the open countryside to the west and beyond Golch Farm to the north. It is considered that the land is generally open in character and it is not necessary to include this area within the settlement boundary. With the exception of the housing on Mertyn Lane and the sporadic dwellings north of the A5026, development in Carmel is to the south of the main road. This long straight road marks a strong physical demarcation between the built up area and the countryside and forms the logical limit for the settlement boundary.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Development of the site would result in significant and unacceptable urban encroachment extending beyond a well-defined edge. The site may not be actively used at present but Welsh Government has provided information which identifies the site is in agricultural use as grazing land, with a predicted loss of 2.17ha categorised grade 3a Best and Most Versatile land. In the absence of a site specific survey to determine the actual quality of the agricultural and whether it represents BMV it is not considered appropriate to allocate the site. The site is located outside the settlement boundary and is therefore designated as Open Countryside. The candidate site was ranked as 'amber'. Potential constraints on the site include that there are relatively high levels of lead contaminants within the area, further investigation would be required. Additionally, the site is located 500m of Ancient Woodland and this may have a negative impact on local species, this is discussed in more detail

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						below. The site is also crossed by the hypothetical line of a Roman road. It may require assessment prior to development. The submission is lacking in terms of detail as to how various constraints including noise, air pollution, vehicular access, ecology and trees would impact on the suitability and capacity of the site for residential development. Site would result in the loss of a greenfield site. Development here could have an adverse effect on character and result in the loss of important features such as GI. The site was proposed for housing in the deposit UDP but was rejected by the UDP Inspector who commented "The land is in agricultural use and is a greenfield site. Although the area to the east of the field is urban in character that is not true of the land to the north and west. The adjacent farm complex is not so visually dominant that it separates the field from the adjacent countryside. Development on the allocated site would further consolidate the existing development to the north of the A5026 thereby extending

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the urban form into the countryside". Although it is noted that there are no tree preservation orders on the site. No landscape or visual impacts reports have been provided to illustrate that the development would not have a negative impact on the surrounding area. The UDP Inspector considered that the development of the site would 'result in an unacceptable intrusion into the countryside which would be incongruous and poorly related to the built form of the settlement'. The submission provides no detail as to the proposed access arrangements including indicative maps. The site is within 500m of Ancient Woodland. This may affect priority or protected species, as it is agricultural (e.g. breeding birds) land. Site is a large greenfield site (>0.4 ha). Development at this location would reduce habitat connectivity by increasing distances between habitats or agricultural areas.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Further work would be required to investigate whether there are any presence of newts in the vicinity and to what extent the proposed development would impact the local ecology. A key principle in PPW is that allocations are viable and deliverable and free from constraint, yet the objection provides no assurances or evidence that a satisfactory access can be provided or that the other issues covered above can be successfully addressed or mitigated. Site is adjacent to a working farm. The UDP Inspector noted that this may lead to conflict but the two uses would not be entirely incompatible provided appropriate measures such as adequate separation distances and screening are provided. However there has been a lack of detail regarding the proposal in this submission. It is considered that no further work has been submitted to address and overcome the inspector's initial concerns regarding the site.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Despite the objector's statement that the site is deliverable no background and technical studies have been submitted which demonstrate that the site is viable and deliverable. In conclusion, this prominent site would result in residential development which would be poorly related to existing development and visually damaging to open countryside. The site does not therefore read as a logical urban extension. Additionally, in the context of uncertainty as to a number of constraints which might affect the site. The site is not considered to be necessary or appropriate as an allocation.
329	HN1: New Housing Development Proposals	CAR001 Carmel, Land at Halfway Field	Object	The plan should identify for development Land at Halfway Field Carmel. The site comprising 2.17ha of land should be brought forward for housing. The site is suitiable for development. The landowner is willing and able to bring the site forward for development	Allocation of land for housing at Halfway Field Carmel	Not accepted. Whilst Carmel is identified as a Sustainable Village the site relates poorly to the main built form of the settlement which apart from development on Mertyn Lane is confined between the A5026 along the northern edge and Carmel Road along the southern edge of the settlement. The site is better related to the open countryside to the west and beyond Golch Farm to the north. It is considered that the land is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						generally open in character and it is not necessary to include this area within the settlement boundary. With the exception of the housing on Mertyn Lane and the sporadic dwellings north of the A5026, development in Carmel is to the south of the main road. This long straight road marks a strong physical demarcation between the built up area and the countryside and forms the logical limit for the settlement boundary. Development of the site would result in significant and unacceptable urban encroachment extending beyond a well-defined edge. The site may not be actively used at present but Welsh Government has provided information which identifies the site is in agricultural use as grazing land, with a predicted loss of 2.17ha categorised grade 3a Best and Most Versatile land. ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						considered appropriate to allocate the site. The site is located outside the settlement boundary and is therefore designated as Open Countryside. The candidate site was ranked as 'amber'. Potential constraints on the site include that there are relatively high levels of lead contaminants within the area, further investigation would be required. Additionally, the site is located 500m of Ancient Woodland and this may have a negative impact on local species, this is discussed in more detail below. The site is also crossed by the hypothetical line of a Roman road. It may require assessment prior to development. There are inconsistencies within the representation report to how many dwellings are being proposed. The report mentions both up to 50 and up to 60 units. The submission is lacking in terms of detail as to how various constraints including noise, air pollution, vehicular access, ecology and trees would impact on the suitability and capacity of the site for residential development. The submission also lacks an

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						indicative or schematic layout to indicate the broad principle of how 50/60 units would be accommodated on the site. Additionally, the details submitted in regards to a concept style masterplan appears to have all the open space away from the residential part of the site. This doesn't represent good planning. Site would result in the loss of a greenfield site. Development here could have an adverse effect on character and result in the loss of important features such as GI. The site was proposed for housing in the deposit UDP but was rejected by the UDP Inspector who commented "The land is in agricultural use and is a greenfield site. Although the area to the east of the field is urban in character that is not true of the land to the north and west. The adjacent farm complex is not so visually dominant that it separates the field from the adjacent countryside. Development on the allocated site would further consolidate the existing development to the north of the A5026 thereby extending

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the urban form into the countryside". Although it is noted that there are no tree preservation orders on the site. No landscape or visual impacts reports have been provided to illustrate that the development would not have a negative impact on the surrounding area. The UDP Inspector considered that the development of the site would 'result in an unacceptable intrusion into the countryside which would be incongruous and poorly related to the built form of the settlement'. From what the objector has said, the degree to which the site would need to be landscaped if developed clearly suggests its prominence as part of the open countryside and the clear difficulties of introducing an urban context to the present open, rural context. Highways were consulted and provided the following feedback stating that Holway Road past the site is subject to a 30mph speed restriction; the provision of appropriate visibility splays appears possible. Care needs to be taken with the location and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						design of the site access especially in relation to Allt Y Goch, the Halfway House car park access and gradients. The submission provides no detail as to the proposed access arrangements including indicative maps. Although it is recognised that there are services and facilities within the settlement it is considered that there are negative factors which outweigh the few factors which meet the criteria. Noted, however the submission provides no detail as to the proposed access arrangements. Noted, the site is within EA Flood Zone A - low risk. Site is not at risk of surface water flooding. It is unclear the extent to which replacing greenfield at the site with hard standing would alter surface water flood risk. Further investigation would be required, as limited information has be provided. The objector claims that there are no potential adverse ecological, but has provided no ecological

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						survey to establish whether this is the case or not. The site is within 500m of Ancient Woodland. This may affect priority or protected species, as it is agricultural (e.g. breeding birds) land. Site is a large greenfield site (>0.4 ha). Development at this location would reduce habitat connectivity by increasing distances between habitats or agricultural areas. Further work would be required to investigate whether there are any presence of newts in the vicinity and to what extent the proposed development would impact the local ecology. A key principle in PPW is that allocations are viable and deliverable and free from constraint, yet the objection provides no assurances or evidence that a satisfactory access can be provided or that the other issues covered above can be successfully addressed or mitigated. Site is adjacent to a working farm. The UDP Inspector noted that this may lead to conflict but the two

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						uses would not be entirely incompatible provided appropriate measures such as adequate separation distances and screening are provided. However there has been a lack of detail regarding the proposal in this submission. It is considered that no further work has been submitted to address and overcome the inspector's initial concerns regarding the site. Despite the objector's statement that the site is deliverable no background and technical studies have been submitted which demonstrate that the site is viable and deliverable. In conclusion, development of this prominent site would result in residential development which would be poorly related to existing development and visually damaging to an area of attractive open countryside. The site does not therefore read as a logical urban extension. Additionally, in the context of uncertainty as to a number of constraints which might affect the site. The site is not considered to be necessary or appropriate as an allocation.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
383	HN1: New Housing Development Proposals	SAL002	Object	Watersmeet in Context Watersmeet offers a strategic location of the scale and physical characteristics that can help to deliver identified housing and infrastructure needs of Flintshire. The site is uniquely positioned to accommodate a new residential-led community; well connected to major employment hubs in Deeside and Chester and the wider region; bounded by urban influences which physically and visually provide important context to the character of the site; accessible by a range of public transport providing future residents with opportunities for sustainable travel; and a deliverable site of a scale where significant social benefits can be secured such as new and improved infrastructure, including supporting the CBGC. 1. Safeguarded we request that FCC safeguard Watersmeet within the Plan for future residential-led development. This will ensure that in the event that identified sites do not come forward during the Plan Period, Watersmeet support the long-term growth of the County, meeting a wide range of housing needs to offset any shortfall. This will also strategically position the site to support the delivery of the CBGC,	Inclusion of candidate site SAL002	Not accepted. The objection appears not to be actively promoting the site for allocation in this Plan period, but is seeking: i) The site safeguarded in the Plan as a contingency site in the event that other allocations do not come forward ii) The site identified as a location for future growth iii) Deleted from the green barrier The Plan has sought to identify an aspirational yet realistic growth strategy in terms of employment and housing and has identified allocations to help deliver this based on a spatial strategy as set out in policy STR2. Watersmeet site comprises a patch work of flat agricultural fields covering a very large area of 159.8 ha. Adjoining the border with Chester and England the site actually extends into the other county and country. The site is in the open countryside and in a C1 Zone of flood risk. The area forms the south eastern end of an extensive green barrier between the River Dee and the Cheshire

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				via either contributions towards and/or land to deliver this important infrastructure priority 2. Broad Location for Growth If not to be safeguarded, we consider that the area to the north of Saltney and to the west of Chester (including the Watersmeet site) should be identified within the plan as a 'Broad Location for Growth' shown illustratively on the proposals maps and showing an indicative alignment of the CBGC. 3. It is recommended that the LDP better reflects the importance of the CBGC in the proposed infrastructure policies of the Plan, recognising the potential for the CBGC to be delivered during the next Plan Period (to 2030) and, importantly, recognising the importance of key strategic sites in delivering FCC and wider sub-regional infrastructure priorities. It is important that both FCC and CWaC engage as part of their respective Local Plan processes to ensure that strategic and cross-border opportunities are fully and consistently reflected in emerging Development Plans.		border. The land is a significant and important part of the green barrier and is best and most versatile agricultural land. Furthermore, because of its scale and location, the implications of developing it are of sub regional significance. The Plans Preferred Strategy seeks to direct growth to the most sustainable settlements in the top three tiers of the settlement hierarchy. The proposed site would in effect remove most if not all of the Plan's housing allocations and focus development on the edge of industrial development at Chester. It would have a poor relationship with Saltney being separated by the River Dee. To develop such a large site would also take a long period of time to be started and delivered and would do little to assist the Plan in achieving its housing land supply and trajectory in the early years of the Plan period. The site is clearly contrary to the Plan's Strategy and is not appropriate or suitable to be allocated.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				4. The Case for Amendment to the Green Barrier Boundary It is considered that the release of the site for development would have a limited impact on the purposes of the wider Green Barrier as set out in the PPW. It is not considered that Watersmeet is required to retain the openness of the Green Barrier and will not significantly impact the character of the countryside. The design response for Watersmeet provides the opportunity to create a new settlement that is a natural and logical extension to the urban form and that can support defensible and permanent boundaries on all sides. 5.Environmental and Technical Considerations Initial site investigations demonstrate that the site is deliverable and that there are no identified impediments to the development of the site that cannot be mitigated. The site sits within Flood Zone C1 and is served by significant infrastructure including flood defences; Whilst further mitigation is likely to be required, it is		The site has been promoted for development in previous development plans. Most recently it was submitted as an omission site as part of the UDP and considered by the Inspector who did not recommend allocation of the site or drawing back of the green barrier. The Inspector commented: 'The objection site measures about 25ha and lies to the north of the A548 Sealand Road. Its northern boundary is contiguous with the County's boundary with Chester. It is Grade 2 agricultural land within a C1 flood zone which forms an intrinsic part of the countryside between Chester and the Deeside conurbation. The Council's spatial strategy seeks to concentrate development within the defined towns and villages with their wider range of goods and services. I conclude in Chapter 3 of this report that such a strategy is satisfactory to guide development in a sustainable way. Whilst the objection site may be close to Chester and its amenities, it is only partly contiguous with

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				considered that this is feasible, given the flood defence measures put in place at Northern Gateway. 6. Illustrative Masterplan An illustrative masterplan has been prepared, the proposed area to be developed amounts to 45% of the overall site (74ha of 166ha). This enables 55% of the site to remain open and be devoted to green infrastructure. On this basis, the site can accommodate approximately 1,700 dwellings across 50 ha (43ha of residential land within Wales and 7ha within England), which equates to a density of 34 dwellings per hectare. Each neighbourhood within the development is designed to have easy access to greenspace The site is large enough to support a local centre which would provide a primary school, local shops, leisure and communities uses. The employment element at the site		and relates poorly to Blacon. Across the boundary in Cheshire the land abutting the site is for the most part green belt. Allocation of the site for development would therefore result in a satellite of new building within a strategic area of countryside whose openness is protected by green barrier/green belt designations in order to prevent the coalescence of settlements. It would result in an illogical boundary which would compromise the strategic function of the protected area. The objector has provided scant details of what development would be appropriate on the site. The UDP makes adequate provision for housing and employment growth. If there is no justification, which is the case in this instance, PPW does not support mixed use development of greenfield sites in the countryside. In addition given the sensitive border location where the objections indicate there is pressure, as opposed to need, for development it seems to me that should in the future it be determined there is a need for development in the locality it should be investigated as part of the LDP

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				would extend to approximately 18 ha.		process with cross border cooperation, not in an arbitrary way in response to an objection to the UDP. The SRSS does not support such a development at the present time'. The Inspector firmly resisted the site and considered it to be inappropriate and the Inspectors comments are still considered relevant to the present consideration of the site. Given the non-compliance with the LDP strategy, it would be illogical to designate the land in such a vague and imprecise manner as suggested by the objector. There is as yet no definitive outcome from the ongoing work relating to the Chester Broughton growth Corridor study to determine the transport infrastructure options that could be considered, let alone any development opportunities that may be related to this, either at this site or elsewhere. It would be premature to even broadly outline an intention to look at growth on this site at some future point, particularly in the context that the site has significant constraints that would count

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						against its sustainable development potential. It is evident that Chester West and Chester City Council is meeting its own housing needs, in particular through a large green belt release to the south of the city on Wrexham Rd. It is also evident that Flintshire is seeking to meet its own needs for housing. In this broader context there is no requirement to release a substantial part of a green barrier to accommodate development that is not required in either County. The LDP already recognises the importance of the two strategic sites allocated at Northern Gateway and Warren Hall, where there is clear direction of travel for the development of each site, and where they are positioned in a wider economic ambition context of taking forward the North Wales Growth Deal. The same cannot be said for this site. The green barrier in this location is an important designation. Following a review of all green barriers in the County it is proposed to make two minor changes to the extent of the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						designation in this area. Results of the green barrier review are found in Background Paper 1: Green Barrier Review – September 2019. In summary this is the largest green barrier in the County and comprises a flat and open agricultural landscape on the north side of the River Dee. It mirrors the green belt mirrors the green belt in Cheshire and is essential in seeking to protect open countryside on both sides of the national boundary. The green barrier meets all of the functions set out in PPW and new development would be extremely prominent and conspicuous. The green barrier is justified given its open character and appearance and the level of development pressure in and around the city of Chester, and despite the overall scale and extent of the green barrier, the area covered by this site, and due to its relationship with Chester and its green belt, is a critical part of maintaining this relationship in terms of protecting the openness of the area from inappropriate development. There are number of key constraints affecting the objection site:

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						• Agricultural land – Welsh Government have undertaken on-site surveys and confirmed that the site represents grade 2 agricultural land. PPW clearly sets out to protect BMV agricultural land and specifies that it should only be developed where there is an overriding need. In the context of development plans on both side of the national boundary, there is no overriding need for this development. • Flood risk – the site sits within C1 flood risk zone. PPW10 seeks to direct development, particularly highly vulnerable development away from zone C1. TAN15 advises that residential development can only take place in zone C1 where it satisfies the justification tests. Given that one of the tests is that a site comprises brownfield or previously developed land, the proposed development cannot be justified. In any event, no FCA has been submitted by the objector. • Ecology – the site lies adjacent to the Afon Dyfrdwy (R. Dee) SSSI and the River Dee and Bala Lake SAC. No ecological surveys have been undertaken and submitted as

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						part of the objection in order to assess impacts on ecology • Transport – no Transport Assessment has been submitted as part of the objection to demonstrate that the site can be satisfactorily access. The Council's Highways Development Management Officer has highlighted the need for major road improvements and that the only access is cross-border, necessitating the involvement of Cheshire West and Chester City Council. There is no evidence that the site is technically deliverable nor evidence to demonstrate that it is a viable proposition. It would also be inappropriate for the site to be identified in the Plan as a future area of growth as requested by the objector. It will be necessary for the objector to put forward the site as a candidate site as part of the LDP review. The objection is accompanied by a Development Statement which includes an illustrative masterplan. It points to 50ha of residential development, a 6ha local centre

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						comprising schools, leisure and community uses as well as 18ha of commercial development. In effect the objector is portraying the site as, a new settlement. This also reflects the reality of its location being separated from existing residential areas in Chester by industrial development and being located adjacent to a sewage treatments works. PPW10 advises that new settlements must only be considered in exceptional circumstances and there are clearly no exceptional circumstances in this case. In conclusion, the Plan has provided for growth through the allocation of two strategic sites and a range of other employment and housing sites and a further strategic site is not necessary or appropriate particularly as it does not comply with the Plans spatial strategy. The site suffers from major constraints including grade 2 BMV, C1 flood risk, ecology and transport and no evidence has been provided to address these. The site is not necessary or appropriate to be allocated in the Plan, or excluded from the green barrier, or identified as an area for future growth.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
427	HN1: New Housing Development Proposals		Object	Whilst has no specific comments on the proposed allocations, we make some general points on a number of housing supply matters. the council should maximize housing supply to the widest possible range of sites. Supporting the 15% flexibility allowance however query whether given the uncertainties regarding the two key strategic sites and the reliance placed on the delivery of these whether this flexibility allowance should be increased.	15% Flexibility of housing land supply should be increased.	Not accepted. Representations on the Strategic Sites (STR3) have been dealt with under (id424 and id1271). The Council do not agree that the flexibility allowance needs to be increased, the LDP exceeds the flexibility allowance recommended by Welsh Government's Development Plan Manual 3.
454	HN1: New Housing Development Proposals	BUC018	Object	We wish to express our disappointment and submit this representation as an objection to your decision on the grounds of 1. The site BUC018 is on the edge of a sustainable settlement. 2. Developing this site would mirror development on the opposite side of the road and as such we do not believe that this does constitute ribbon development but a squaring off of the development to mirror that allowed on the opposite side of Bannel Lane. 3. Examples - There are examples of similar developments in the Buckley area where development has been given approval when it extends into the open country side (we are happy	Allocation Candidate Site BUC018 for housing.	Not accepted. Buckley is a sustainable settlement and has been categorised in the settlement hierarchy as a Tier 1 Main Service Centre. During the UDP plan period Buckley grew by 17.4%, therefore as a Category 'A' settlement, the aim for growth to be within 10% to 20% was fulfilled. The LDP makes provision for growth in Buckley as a result of the allocated site at Well Street and growth as a result of 175 completions in the first three years of the Plan period and commitments of 138 units as at the Plans Housing Balance Sheet date of April 2018. This shows that for the first 3 years of the LDP plan period there is an appropriate level of development for a Tier 1

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				to share our view of these and welcome a discussion about the sites) 4. Landscape – the building of the incinerator at Castle Cement has undoubtably had a detrimental effect to the views of the open countryside and undermines the green barrier classification of the area and it is our opinion that development on this site would actually enhance the views of open countryside by screening the unsightly view of Castle Cement (see App 1) 5. Under Flintshire County Councils Planning guidance you are able to approve limited infill for development outside of settlement boundaries where the land in question: • is not an important landscape, nature conservation, historic or other amenity feature which this site is not, and would provide a clearly identifiable small group of house within a continuously developed frontage to square of development as approved on the opposite side of Bannel Lane. • It does not constitute, or extend existing ribbon development. (see point 2)		settlement and a healthy number of commitments coming forward. Whilst it is acknowledged that the site proposed adjoins the settlement boundary of Buckley, the site has a narrow rectangular shape and extends away from the settlement boundary along the southern side of Bannel Lane. Beyond the properties 'Dovecote and Viandra' the land on the southern side of Bannel Lane features a sporadic, scattered pattern of development. Given the shape and configuration of the site, it relates poorly to the existing form and pattern of built development and forms an integral part of the open countryside and green barrier. The houses along the northern side of Bannel Lane opposite to the site are a clear example of historic ribbon development, with a row of properties facing on to the road with individual access points. The existence of ribbon development on one side of a road does not lead to a presumption that developing on the other side of the road is acceptable, as it is necessary to look at the individual characteristics of each. In this

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				• Any development on the land would respect adjacent properties.		case the proposal would result in a narrow block of development extending into open countryside away from and beyond the well defined settlement boundary along this part of Buckley i.e. to the south of Spon Green. It would harm an area of land which has an open aspect and which also provides a setting to urban edge and as such development of the site would consolation / perpetuate the existing ribbon development along Bannel Lane thereby confirming that further development is not sustainable in this location. The objector has not included any specific examples to consider. The site is still an important part of the green barrier regardless of the view from the site of the Cement works. All the Green Barriers in the UDP were reviewed as part of the Deposit LDP and the results of that review are found in Background Paper 1: Green Barrier Review – September 2019. The Green Barrier in this area is designated to form a break

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						between residential development at Buckley and the Padeswood / Castle Cement works which although is not a settlement, does comprise a large built up form in the landscape. The green barrier is not designated on the basis of protecting views or landscape quality per se, but in terms maintaining the openness of the land defined by it. Adding built development within the area as proposed, would reduce the openness and is therefore harmful in planning terms to the purpose and function of the green barrier in this location. The area has seen significant development pressure over successive development plans. The site was considered for development at the UDP Inquiry where the Inspector noted that ''By its character and appearance the site has more in common with the open countryside than the built up area and is included within the strategic green barrier which protects the rural area to the south of Buckley'' This conclusion is still relevant today.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						It is also important to note that there is still significant pressure for development on the area to the south of Buckley. This is demonstrated by the planning application submitted at Spon Green, for 435 dwellings and 450sqm of retail,(ref 058237) which was refused permission in July 2018 and is located directly to the south east of this site. The main reasons for refusal were the fact that the site was in the open countryside and green barrier. Another more recent application was refused at Land South of Megs Lane Buckley (Ref 059387, March 2019) and again its location within the open countryside and green barrier were the main reasons for refusal. In this way the Green Barrier designation has been tested and has been found to be reasonable and justified in this location. It is also interesting to note that there has been no appeals lodged against these decisions. These decisions and the inspectors comment give added

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						strength to the continued Green Barrier designation in this location. The green barrier seeks to prevent coalescence of Buckley with built development at Padeswood and seeks to prevent encroachment into open countryside which provides a setting to the built form of this part of Buckley. The land fulfils the purposes for green barrier designation and should be retained. The objector is referring to policy HSG5 in the adopted UDP and Policy HN4 – C Infill Development in Groups of Houses in the LDP. It is inappropriate to use this policy with reference to this site and proposal since land does not need to be in the settlement boundary to be considered against the infill policy. This policy is specifically in relation to small scale infill development outside settlement boundaries in rural areas where there are clearly defined groups of houses. Only a single house or a semi-detached pair of houses would be permitted in a small gap between existing dwellings and the resultant house would also be for local housing need. This policy is to allow some development in rural areas where there is an

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						absence of housing allocations or the possibility of other sites coming forward within settlements. By contrast Buckley is a Tier 1 settlement where there are housing allocations, completions, brownfield sites and existing commitments yet to be built so there are many opportunities for development negating the need to use this policy. It is also not applicable to this case as there is not a clearly defined group of houses nor a small infill plot. In conclusion the Plan made provision for growth in Buckley and it is not necessary or appropriate for a further allocation to be made, particularly where it would harm a green barrier. The site is not appropriate to be allocated to be allocated in the Plan.
481	HN1: New Housing Development Proposals	Bryn Y Pys, Well Street, Buckley	Support	Support for the Well Street allocation, Buckley Including my land in the development would give easy road access from Well Street and into the development site which could be taken right around to the playing fields in Bod Offa, and this possibly would ease the proposed site access and exit. The playing fields would be moved and redeveloped into the new site and	Inclusion of additional site adjacent to Well Street allocation	Support for the Well Street allocation is noted. Not accepted. The additional site put forward by the objector, lies on the south western edge of Buckley to the south of the A549 Mold Road and is split into two distinct parts. The first part is at right angles to Well Street and is bounded to the north east by a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				modernized. The utility services would be more accessible through the playing fields on Bod Offa. This would also decrease the costing of the development and the impact on the surrounding neighborhood to the minimum, at the same time the public footpath could be moved and enhanced making it more wheelchair and pushchair accessible, and making it more inviting for people to visit the Countryside. One of the paddocks at the moment has pigs. I am concerned for the safety of these rare breed pigs, with the increase and proximity of the population on the development and people feeding the pigs food which is not suitable for their consumption. I am willing to move and find another farm to carry on my conservation work with rare breed pigs and other animals.		public right of way and hedgerow beyond which are two agricultural fields comprising the Well Street housing allocation. The site is partly bounded to the north by residential development off Silverstone Drive and a detached property The Meadows. A vehicular access onto Well Street is located alongside the eastern boundary. To the west the site is bounded by open countryside. The second part of the site forms a strip of land along Well Street with a hedgerow and some mature trees along the frontage. A riding school with an extensive block of stabling and car parking runs along much of the northern boundary. In terms of the of the two distinct areas, the first is a narrow neck of land extending westwards along Well Street, where development would result in ribbon development which is not well related to the settlement form now and will not be even after the Well street allocation is built out. The second part of the site comprises several irregular shaped parcels of land either side of the farm complex, alongside the western edge of the allocation. From the public right of way

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						pleasant views are afforded across the site of the wider open countryside beyond. The allocation of the objection site would not represent a logical extension to the Well Street allocation, given the strong physical boundary represented by the hedgerow and public footpath. Development of the objection site would extend built development further into open countryside in a harmful manner and act as a precedent for further releases of land. The Highways DM officer has commented that the only feasible access would be through the proposed adjacent allocated site (HN1.1) given that the rural section of Well Street (beyond the allocated site) is considered unsuitable for additional traffic and protection of hedgerows prevents further improvements. Whilst it is acknowledged that the UDP Inspector allocated the Well Street site now reassessed and allocated in the LDP, there are limitations in terms of capacity on the local highway network and any extension to the allocated site would require a full Transport

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Assessment which has not been provided. The objector suggests that the track leading to Bod Offa could be an access point however the highways officer comments ''The track, as described, is not recorded as public highway; I am not aware of any public access rights. Property boundaries either side of the track, at the junction onto Bod Offa, would prevent the provision of appropriate junction radii and will restrict the visibility available to drivers of vehicles exiting the track. The width of the track appears inadequate to accommodate a road and footways (or service margins) of appropriate width.'' The use of the track leading to Bod Offa Farm and The Meadows is not a suitable access point. The play area land is in third party ownership which means there is no guarantee that this land would be available for an access. Also the play area is a valuable community asset in close proximity to the housing estate, and unnecessarily moving it to a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						location further away would not be acceptable. Footpath No 54 runs along the boundary of the site with the Well Street allocation. It is noted that footpaths can be re-routed to take account of new developments. Development of the allocated site will ensure that the footpath will remain the same and although there may be increased numbers of people using the path, steps can be taken to make sure people do not feed the pigs such as adequate fencing and signage provided by the farm owner. The site was promoted as an omission site as part of the UDP and the Inspectors comments from the UDP public Inquiry (to ref P1044 R1376 HSG1) are still valid, as follows: ''The site has two distinct parts. A ribbon of land fronting Well Street and a farmstead/land contiguous with the south western boundary of HSG1(3). The strip fronting Well Street would result in a narrow ribbon of development extending out into the open countryside and be contrary to UDP and national policies which seek to avoid such development. The larger portion could well prove a logical extension to HSG1(3) if

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						more housing was required and the local highway network could cater with the traffic, but that is not the case. There is no necessity to make further releases of greenfield land to meet housing need.'' The comments of the UDP Inspector are considered to be relevant to the present consideration of the site. It is not considered to represent a logical extension of the allocated site and would harm the character and appearance of open countryside. The Well Street allocation as it stands is a sustainable development which extends the settlement within an enclosed field up to a well defined physical boundary on the ground. The allocated site extends as far down Well Street as is reasonable to go and is contained along its southern boundary by mature hedges and public right of way, these provide a clear and distinct break point to the farm and countryside beyond. Further encroachment into the countryside is not necessary or required at this location.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Consultation Responses from Internal / External consultees: FCC Pollution Control There are objections from the Council Pollution Control on this site for a variety of reasons. 1. 'That the use of the narrow part Well Street as an access point to the site will lead to increased levels of noise and air pollution as a result of an increase in traffic and vehicle movement in an area where there are low levels at the present time'. However, highways comments on the allocated site adjoining this site makes it very clear that access to the objection site could only be taken from the Well Street allocation only, stating that ''whilst the principle of residential development has been accepted, a junction layout that will limit additional movements onto the rural section of Well Street will be required along with roads laid out to adoptable standard and appropriate cycle provision.'' Any access would have to be through the allocated site and arrangements would need to be put place to ensure that drivers

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						are discouraged from using the narrow part of Well Street. 2. 'That the site is also located immediately adjacent to a working livery (equine). Any new properties would likely suffer statutory nuisance from noise and odour as a result of their proximity to the stable blocks, manege and middens. Human health assessments and noise impact assessments would be required'. 3. 'That the ground conditions at the site make it very likely unsuitable for soakaways for either surface or foul water. There is no mains foul drainage to the site and the site is too small to accommodate septic systems'. 4. 'Surface water and groundwater drain from Well Street and the surrounding land into ditches along Well Street. Without this provision for drainage, properties are susceptible to flooding'. Developments are now required to incorporate SuDS. 5. 'The site has been used for agriculture and the grazing of pigs. Pig manure is very high in metals and can result in concentrations of metals in the soil capable of a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						detrimental impact upon health. A land contamination assessment would be necessary'. Welsh Water/Dwr Cymru commented: ''A water supply can be provided for this site. The public sewerage network can accept potential foul flows from this development site. The proposed growth being promoted for Buckley Wastewater Treatment Works (WwTW) catchment would require improvements which would need to be funded through our Asset Management Plan (AMP) or potentially earlier through developer contributions.'' FCC ecologist: The site consists of various farm buildings, Improved Agricultural land with hedgerows, trees, ponds within and adjacent to the site. The pond within 60m to the west of the site has known GCN records, but the site has potential for amphibians, reptiles, badgers and nesting birds Hedgehog

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						records occur within the housing estate to the north. Any development would need to assess the Ecology of the site and provide an Ecological Impact Assessment with measures to avoid, mitigate, compensate, and enhance and manage wildlife features. FCC Minerals and Waste: The majority of the site is underlain by secondary shallow coal. PPW 10 states that safeguarding of coal is no longer required. In line with national policy, Policy EN23 of the Deposit Draft LDP does not intend to safeguard coal and therefore the site is not underlain by mineral of economic importance. Regardless of this, the mineral resource is already constrained/sterilised by other residential development. Furthermore, the site is too small to warrant prior extraction. Coal Authority: - Not in development high risk area. Welsh Government Agriculture:

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						The Department does not hold detailed ALC survey information for this site. The Predictive ALC Map for Wales (Version 2 – 2019) notes the site to be Subgrade 3b. In conclusion, the site is not considered to represent a logical extension to the Well Street housing allocation, would take development too far south along Well Street, and would result in development which would harm the character and appearance of the locality. The site is not appropriate to be allocated.
484	HN1: New Housing Development Proposals		Support	I wish to objected about the plans to build a massive estate of Tan-y-Felin and please see my comments below made in July 2014 which has never been acknowledged or replied to! My comments in that e-mail remained unchanged and I would like to add the following:- 1. Wildlife – We have frequent visits from badgers & foxes into our garden and cross Ffordd Dwyfor road between our property and the sub-station, the increase of traffic will result in these animals being killed! 2. Playground – this will become an accident waiting to happen with the increase of traffic, sat on a very busy junction into Fford Dwyfor & Tan-y-Felin. This area is ready a race track and cars speed		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				up & down these roads (video evidence can be provided if required) 3. Greenfield School – I understand this school is almost full now, so where will these new pupils go to school?		
486	HN1: New Housing Development Proposals		Support	I would like to register my concerns and objections to the proposed development of a housing estate off Tan Y Felin fields in Greenfield. I do not believe that the local area has the necessary infrastructure for such a development and I have major concerns about the increase in traffic on Tan Y Felin Road that this would bring. Such a development would put an increasing strain on local services such as schools, doctors, dentists and public transport which are already stretched.		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfield and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.
530	HN1: New Housing Development Proposals		Support	I am writing to express my concern on the recent planning application to extend the Tan y Felin estate in Greenfield. I have lived in or around Greenfield all of my life. I have 3 children under 8 with 2 attending Ysgol Maes Glas and my youngest attending the playgroup. I am a committee member for the local football team and assist with the youth set up as well as the general operations of the community club. The current highway network is already saturated with domestic		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfield and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				traffic, Busses and HGVs especially during peak times. Ysgol Maes Glas and playgroup - The school Has some of the highest class sizes in Flintshire already. Services - There is no Doctors surgery anymore and no Dentist. The residents currently have to travel to Holywell or Flint which again are already saturated with long waiting lists for both. Environment and Wildlife - Historically Greenfield has suffered with drainage issues and to add further stress to an already faltering system would again be hazardous to the environment. The disruption post heavy rainfall is ever present and is hazardous to the already heavy traffic flow. Increased volume of cars would also increase the air pollution. The proposed building site is currently home to Bats, Badgers, Foxes not to mention the numerous species of birds of pray such as Buzzards, Owls and Red kites.		
533	HN1: New Housing Development Proposals		Support	I'm a resident of the Tan Y Felin estate in Greenfield and I writing to express my concerns about the proposed new development. > > I have 3 children, 2 of which attend Ysgol Maes Glas (of which Im a Governor) and 1 attends Greenfield Playgroup (of which I'm a committee member and provide accounting support). > > Greenfield is already		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfield and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				very densely populated and I cannot see how there is any scope for local services to cope with the demand associated with the increase in population. > Both the school and playgroup are regularly at full capacity. > There is already no Drs or Dentist in the village. > I drive my children to and from school everyday and the roads are already busy. > The area around the school is already dangerous as the school has no parking, therefore, the residential areas already sees cars parked on the no parking zig zags, blocking drives or on the pavement. All of which is a safety hazard to pupils and residents. > > The proposed plans mention access via Ffordd Dwyfor. This is extremely concerning as the Tan y Felin play area is on the corner of this junction. This is already a problem area, as cars drive at speed around this blind bend into Ffordd Dwyfor and children (mine included) must cross just before the junction just to access the playground. Any increase in traffic is an RTA with children waiting to happen. > Similarly, to get to this access, cars must drive up Tan y Felin. A road which already sees drivers speed up and down through the blind bends. > Children's safely must be considered before profit. > > The area proposed is such an area		LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				of natural beauty and wildlife. Local children play in the fields and woods proposed for development because they cannot access Greenfield Valley without crossing the busy Well Hill (for which there is already insuffient crossing support provided to residents of Tan Y Felin wanting to access from the estate). > Building on this green area would leave local children and residents with no green area that had any safe access. > Greenfield needs investment and improvement for its existing community, not to damage existing services in order to profit developers. > > I absolutely oppose these plans due to concerns for the welfare and safety of the children already living in Greenfield.		
537	HN1: New Housing Development Proposals		Support	Many residents tell me that this area..FL1003 was rejected once by planning inspectorate..I seem to recall this.. so we object once again to this land being included in the LDP..talk about overdevelopment!!! If this land was to be included it would basically become another village WITHOUT any further infrastructure...and as you may be aware the current Croes atti development did include...shops...medical centre..community hall and a school..well Residents haven't had		Noted. Candidate site FLI003 has not been included within the LDP for development. The area of land remains outside of the settlement boundary therefore your objection to the LDP has been noted as a support to the exclusion of this site from the plan.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				any of this yet and don't think any of this likely (maybe school..Welsh..) but we aren't holding our breath. The impact of the two roads which will soon be opened up..Prince of Wales and Coed onn are in our opinion a recipe for disaster and will just be a cheap bypass for the inadequate A548...I will say I told you so. This was given the ok by the planning inspectorate a few years ago after it was rejected by planning committee if you remember, but we hope the planning inspectorate will once again realise that this extra parcel of land is a step too far and not include it.		
551	HN1: New Housing Development Proposals	Candidate Site MOL040	Object	LAND BETWEEN UPPER BRYN COCH AND LLYS AMBROSE, OFF RUTHIN ROAD, MOLD - MOL040 I write on behalf of my client company, Llay Hall Investments, to object to the Council's decision not to include the above site as a housing allocation in the emerging Flintshire Local Development Plan and to register a concern that the Council's approach to meeting the projected housing requirement is not entirely 'sound'. It is considered that the current approach to the delivery of housing is not sound because of an over-reliance on small and windfall sites,	Allocate Candidate Site MOL040 for housing.	Not accepted. Welsh Government, in Development Plans Manual 3, advise that a Plan must include a flexibility allowance and that 10% is a starting point. In this context a flexibility allowance of 14.4% is considered to be sufficient particularly given that the Plan is on track in terms of completions in the first 4 years of the Plan period delivering the Plans requirement. The Plan's Housing Balance Sheet does not show all of the Northern Gateway housing as being delivered within the Plan period, with 331 units being discounted from the Plans supply. The two strategic sites are both

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				a small number of large allocations and two very large strategic sites (which do not relate to Tier 1 settlements), and insufficient allocations in Tier 1 settlements such as Mold. The flexibility allowance is also considered to be a conservative estimate. As a result, there is serious risk that the housing requirement will not be delivered within the plan period. Unclear why the allocated site on HN1-6 is deemed a more appropriate location for residential development as it is relatively remote from the town centre and the majority of local services and reliant on private car. MOL040, is well connected to the town centre the bypass and is a more sustainable location. In addition, the proposed allocation encroaches into open countryside and does not have such clear or defensible boundaries as Candidate Site MOL040, which is contained by a trunk road. You will be aware that in 1991, the Local Plan Inspector opined '3.116 Moreover, in the interests of proper and effective development of the land south of		previous UDP allocations which have planning permission and it is not considered necessary for them to relate to a Tier 1 settlement, as they represent mixed use developments. In focusing on allocations the objector fails to consider the Plan's total housing land supply as clearly within Tier 1 settlements there will be growth as a result of completions to date and commitments, as well as possible small and large site windfalls. In fact, in Mold there is part of the County Hall site which is highly likely to come forward as a windfall site later in the Plan period. As commented on above the Plan delivers housing from other sources of supply and not just new allocations. However, the Plan sought to move away from the UDP practice of a large number of small to medium sites dispersed across the County in favour of a new approach of larger sites which are more attractive to the development industry and more capable of being viable and deliverable.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Ruthin Road, and in the interests of the adjoining Green Barrier, it is clearly important that the boundary between the two should be obvious and defensible. I conclude that the most suitable boundary lies along Upper Bryn Coch Lane'. Aside from the Green Barrier designation (and the LDP proposes to remove other sites from the Green Barrier in order to be designated as housing allocations such as HN1-7), it is asserted that there is no logical reason as to why Site HN1-6 is preferred over and above sites at the south-western end of Mold such as Candidate Site MOL040. To this end, Candidate Site MOL040 offers the following benefits: • The site is well related to Mold Main Service Centre, which is one of the largest settlements within the County; • The site makes a very limited contribution to the purposes of including land within a Green Barrier, given its position on the inner side of the bypass. The bypass is considered to be the logical defensible barrier which clearly defines the end of the settlement of		The Plan has focused on housing allocations which are in sustainable locations and which are viable and deliverable, being supported by a significant amount of background studies and evidence. The objector offers no such evidence of the promoted site being viable or deliverable yet considers it preferable to the Plans allocations. It is of note that the HBF is supportive of the Plans approach to windfalls and commitments and there is also on objection from Welsh Government in terms of this aspect of the Plan. The allowance is conservative and realistic and the Urban Capacity Study findings demonstrates that the Plans figures of 60 per annum for small sites and 50 per annum for large sites is realistic. The early years of the Plan period is clearly demonstrating that the Plan's housing requirement is being achieved in terms of completions. The housing trajectory in Background Paper 10 demonstrates that the Plan can deliver its housing requirement figure.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Mold and the development of the site would amount to logical infilling. • The site has no insurmountable physical or technical constraints which would prevent residential development of up to 30 dwellings; and • There is no reason why the site could not be developed in the short term, thereby making an immediate impact on the 5 year housing supply.		As the objector states, Mold already has two allocated sites, one of which is already under construction (Wates at Maes Gwern) and only 300m the objection site. However, growth in Mold will also take place as a result of completions (156 completions in first 3 years of the Plan period) and commitments (177 commitments as at April 2018). The allocated site HN1.6 is sequentially preferable to the objection site as it does not lie within a green barrier in the adopted UDP. The allocated site is also not remote from the town centre and is actually closer to The Cross than is the objection site. The allocated site does enjoy access to a local bus service and is a short walk from the local shops on Elm Drive. Contrary to the objectors claim, it is considered that the allocation site is actually more sustainably located than the objection site The allocated site HN1.6 benefits from the creation of a new road and junction with Denbigh Road which is acceptable to Highways

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Officers and also an access onto Gwernaffield Rd. By contrast the objection site is considered unsuitable for development as Highways Officers have identified that there is a lack of adequate junction visibility onto Ruthin Rd. Highways Officers consider that the site could only be reconsidered if the speed limit of Ruthin Road is amended. The objector has provided no technical evidence to demonstrate that a suitable vehicular access can be created. Contrary to the alleged benefits of the site diverting traffic away from the town centre, there is no evidence that the site can be satisfactorily accessed. The allocated site is clearly not in breach of PPW as it is in a sustainable location accessible to a range of services and facilities and the town centre. It has the potential to facilitate journeys on foot, by cycle and by public transport. The existing built development is considered to represent a firm and defensible settlement boundary in this part of Mold. The site sits at a significantly higher level than the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						existing residential development at Llys Ambrose. When viewed from Upper Bryn Coch only the rooftops of properties at Llys Ambrose are visible. Built development on this elevated site would be prominent in the landscape. The creation of a vehicular access onto Upper Bryn Coch (even if technically possible) would require the removal of stone boundary wall and hedgerow and mature trees and harm the rural character and appearance of the locality. Similarly, even if a vehicular access were possible onto Ruthin Rd, it would require the removal of grass embankment and trees and harm the present rural approach into and out of Mold along the A5119. In both cases the creation of a vehicular access would have an urbanizing effect. The site relates more closely to the character and appearance of open countryside than it is does the existing form and pattern of development. It therefore forms an integral part of the wider open countryside wrapping around the south western edge of Mold which forms an integral part of the green barrier between Mold and Gwernymynydd. The development

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						of the objection site would clearly harm the openness of the green barrier and extend built development onto visually prominent land. It is noted that the objector refers to a quote from the Delyn Local Plan Inspector which is some considerable time ago now and planning policy at the national and local level has changed significantly since then. More recently the UDP Inspector considered the site as an omission site, alongside the [then] allocation of land at Llys Ambrose (HSG1-18 West of St Marys Park) in the Deposit LDP. The Inspector commented on the omission site 'Whilst this site lies to the south of HSG1(18), the change in levels marked by mature trees means that the site relates better to the open countryside than the allocation to the north and also provides a firm defensible settlement boundary. The higher ground levels makes the site more prominent than the allocation and it is seen in the context of Bryn Coch Hall to the east and Bryn Coch House to the south which are set in agricultural land. They have a different character to the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						more tight knit housing in the settlement'. In respect of the green barrier the Inspector commented 'The site forms part of a narrow neck of prominent open countryside which serves to preserve the openness of the countryside between Mold and Gwernymynydd. Whilst, as part of the production of future plans, the green barrier will need to be reviewed (to accord with national policy), it seems to me that at present where there is no need to identify more greenfield sites for development, where the land by its character and appearance is better related to the countryside, and where the openness of that countryside is worthy of protection by a green barrier designation in order to prevent encroachment into the rural area/the coalescence of settlements, the objections do not justify any modification to the plan'. In the context of the Inspectors comments it is evident that the provision for allocated sites in the LDP has been made without the need to release land from green barriers. The site

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						remains an integral part of the green barrier between Mold and Gwernymynydd. As demonstrated above growth in Mold has been achieved and will be achieved as a result of completions, commitments and possible windfalls and it is not necessary or appropriate for a further site to be allocated, particularly when that site would fundamentally weaken the purpose of a green barrier, and harm the character and appearance of the locality. . The points within this summary section of the objection have been addressed above. However, in addition to the green barrier response above, it is evident that the objection site has the same character as the remainder of the green barrier which wraps around the south western edge of Mold. Development in this broad location would result in encroachment into countryside, weaken the gap between Mold and Gwernymynydd, and harm the setting to the settlement of Mold. This part of Mold is particularly sensitive given the presence of the former prison which contains

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						several listed buildings and the listed walls. The agent acts for clients who promote land for development on the eastern side of the prison (MOL006) and argues that its development should be in conjunction with the adjoining site MOL052, with the result being that the former prison would be engulfed by development and losing entirely its present open setting. The Council disagree with the assertion that there are no insurmountable constraints to development given that there is no evidence that a satisfactory vehicular access can be provided. Furthermore, other than to say that the site can be developed within a 5 year period, there is no indication as to a timescale for development in terms of the Council's published housing trajectory. In conclusion, sufficient growth has been provided for in Mold over the Plan period and it is not necessary for a further site to be allocated, particularly when it would harm a green barrier and where there are constraints which have not been overcome.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
558	HN1: New Housing Development Proposals		Support	More houses needed in Flintshire.	Larger houses are needed for people to move up into, to free up smaller homes for others. 15% affordable housing is more acceptable.	Support noted. The LDP makes provision for the development of 7,950 dwellings over the plan period, to meet an identified need for 6,950 dwellings.
559	HN1: New Housing Development Proposals	FLI018 Land West of Leadbrook Drive, Flint	Object	The site at Quarry Farm, to the east of Flint, is being actively promoting for residential development and is subject of a live Outline planning application for 120 dwellings (ref: 052566) (the site referred to in the Local Development Plan ('LDP') Candidate Sites Paper as land west of Leadbrook Drive, Flint (Site FLI018)). As a means of seeking quick delivery (subject to planning permission) the owners are in discussions with a reputable housebuilder, having previously complied a shortlist of preferred bidders. As such, the site is suitable for housing and should be identified as such in the LDP. The 4.8ha site is to the south of Chester Road and west of Leadbrook Drive, Oakenholt (east of Flint). Immediate site boundaries include Leadbrook Drive and associated housing to the east, grassland to the south, Croes Atti housing development to the west	Allocate Candidate Site FLI018 for housing	Not accepted. The planning application 052566 which was submitted in 2014 is no longer live. Since the application was made CADW have designated the scheduled ancient monument within the site boundary. The Council approached the applicant's agent to request further information as the application would need to be amended in light of the CADW designation. The agent requested that the application remain live, however they were advised by the Council that they must submit further information within a set time period for the application to remain live. The agent failed to provide this information within the given timeframe therefore the case has been closed. The failure of the agent to provide further information demonstrates that there are significant issues with site deliverability, therefore it

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				and Chester Road north. The site is therefore effectively bound on 3 sides by existing and emerging development. It has multiple potential points of access, either through the adjacent housing development or a dedicated access off Leadbrook Drive. In terms of public transport, there bus stops (Buses 10A, 11, 11A, 11D, D1, D2 and D3) located on Chester Road and Flints railway station is 2km north-west. There site is not subject to any statutory designations (such as listed buildings or conservation designations) and there are no locally sensitive uses. The site is predominantly in Flood Zone A and therefore at the lowest risk of flooding, as shown on the Welsh Flood Map for planning. Flint is the third largest town in Flintshire and has a range of accessible amenities and facilities including employment, shopping, cultural and leisure offers. However, future growth of the town is significantly constrained. To the north, the Dee Estuary provides a physical constraint, while a Green Barrier designation is to the south. The west and north-west of the town is characterised by employment development. Consequently, the only		could not be considered suitable for allocation within the plan. The Council's assessment of the site also highlights that it is subject to a number of constraints which are likely to impact upon viability and delivery and the promoter has had more than sufficient time to provide a more than superficial case to support the site. There are allocated sites within the LDP with undetermined applications, these however are supported by strong evidence which demonstrate the sites deliverability during the plan period. The applications on the allocated sites referred to by the objector have been under consideration for a considerably shorter timescale than the objection site. The fact that a planning application was under consideration for over 5 years with no tangible progress or submission of substantiating evidence hardly demonstrates viability and deliverability in the context of being allocated in the LDP. Flint is a Tier 1 Settlement which is recognised as a sustainable location for growth in both the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				logical areas of growth are to the south-east (in direction of the subject site). As such, Flint, as a town with accessible, established and wide ranging local facilities and amenities is a logical location for further growth. We therefore go on to identify inconsistencies in the way the council has assessed potential sites, with reference to the assessment of our client's site. Background Paper 9 'Assessment of Candidate Sites and Alternative Sites' (2019), forms the LDP evidence base, discusses the subject site (ref: FLI018) and states: 'A planning application (052566) for 120 dwellings was validated on 22/08/14 and is still under consideration and this must question the viability and deliverability of the site. In this context it is not considered suitable to be an allocation.' The evidence base therefore assumes that a site is undeliverable simply because a planning application remains undetermined. However, this conclusion is directly at odds with the conclusions made on similar sites which have been allocated. For example, Northop Road (Flint) technically has no		UDP and the LDP, Tier 1 settlements have a strategic role in the delivery of facilities and services across Flintshire. Flint has already seen growth in the earlier years of the plan period with 308 dwellings completed in the early years of the plan period (2015-2018). There are also committed sites in Flint which will provide further growth for the town including an additional 378 dwellings on the adjacent Croes Atti site, 73 units on the Earl Lea site, 19 units at Ystrad Goffa Court and 15 units on the Flint Working Men's Club site. In addition to these commitments the allocated site at Northop Road will provide 170 dwellings which is a logical extension in a sustainable location. Collectively the committed sites and Northop Road will deliver a further 655 dwellings in Flint over the plan period, this is sufficient growth for the town therefore candidate site FLI018 is not needed. Given the amount of land available with planning consent at Croes Atti, in close proximity to the site, there is no justification for extending built development

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				planning consent (two applications from September 2017 (ref: 057565) for 20 units and April 2018 (ref: 058314) for 145 units remain undetermined) yet is allocated. The same applies to the New Brighton (Cae Isa) site (Site 10), which is proposed to be allocated for 105 units but there is no clear evidence of delivery. Two further sites are proposed for allocation despite previous planning applications being withdrawn or dismissed on Appeal. The Highmere Drive (Connah's Quay) allocation (Site 3) was promoted for 185 dwellings in 2005 (ref: 043873) but a subsequent Appeal was withdrawn in 2008 and there has been no progress on the site. The Wrexham Road (Hope) allocation (Site 9) was subject to a now withdrawn planning application from 2018 (ref: 058163), and there has been no further progress. Evidently the delivery of these sites is very questionable and certain sites have been rolled forward from previous plans, despite no evidence they can be delivered. This is clear evidence that several proposed allocations are at obvious risk of stagnating and thus remaining undelivered for a further plan period. Therefore, the council's assessment		further to the south and east and into open countryside. This site forms part of a larger candidate site submission (FLI003 refers). Despite adjoining the settlement boundary to the north west, the site forms an integral part of the open countryside on the south eastern edge of the town and part of the wider open countryside to the south of the access track leading to Little Leadbrook Farm. Development would therefore result in an incursion which would be harmful to the character and appearance of the open countryside. The Council's Highways Development Management officer has stated that access to the site is potentially suitable subject to a transport assessment, and that it is assumed that this site would be accessed through the approved Croes Atti development. Leadbrook Drive is considered unsuitable as a means of vehicular access to the site but may be required as an emergency access point along with foot and cycleway provision.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				of sites is significantly inconsistent and there is a need for additional sites. Land at Quarry Farm is such a site Highways and Accessibility An appropriate access can be achieved off Chester Road. The local highway network has the capacity to accommodate the proposed residential development of this site. The site is easily accessible by bus, rail, walking and cycle. The same modes of transport can be used to access the excellent amount of facilities and services in Flint. Ecology In ecological terms the site is considered to be suitable for residential development. Mitigation measures will be incorporated where possible to minimise any impact upon the ecological value of the site. There may be scope to enhance the ecological value of the site through careful planting and retaining of key features. Landscape & Visual Impact When considering the evolution of the surrounding area, in particular		It is noted that the site is well served by public transport. The site is located in close proximity to the Dee Estuary SAC, SPA, SSSI and RAMSAR all of which are within 160m of the site. In addition the development would result in the significant loss of the best and most versatile agricultural land contrary to national planning policy. The objectors submission identifies that the majority of the site is classified as grade 2. The site will have a significant visual impact on the landscape as it will result in the spread of development from the Croes Atti site across to the row of existing houses along Leadbrook Drive, filling in this important gap which is within the open countryside. This site formed part of a larger housing ommission site within the UDP, the Inspector made the following comments as to why it should not be included within the UDP. “This open field is part of the countryside around the edge of the Flint settlement boundary. Whilst it is adjacent to the Croes

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				the Croes Atti development, the landscape and visual impact of the site is diminished. It is considered a carefully designed scheme can integrate within the Arboricultural Impact Although the final layout of the scheme is yet to be prepared; this document highlights residential development which retains the most valuable trees on site can be delivered. Flood Risk The site is within Flood Zone A and therefore considered to be at little or no risk of fluvial or coastal/tidal flooding. An appropriate site layout can be achieved which prevents flooding both on and off the site. Archaeology Archaeological surveys on the site have found the remains of a Roman Road to the north of the site. In line with the Council's recommendation, this area will be excluded from development. This will ensure development can come forward		Atti commitment it does not follow that it should be allocated for housing development. To allocate it would extend the urban form into the countryside and result in consolidation with part of the ribbon development along Leadbrook Drive. I do not support the allocation or the suggested extension to the settlement boundary." Because of the archaeological need to retain the northern part of the site as public open space, the proposed development of the site does not relate well to the existing form and pattern of development and does not represent a logical urban extension. The access road appears convoluted and the development wraps around the outside of the southeast corner of development at Croes Atti and blurs the clear distinction between the modern estate type development and the historic ribbon development along the eastern edge of Leadbrook Drive. Noted. Noted. The site is located in close proximity to the Dee Estuary C1 & C2 zones, however it is located

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				without any detrimental impact in archaeological terms. The assessment identifies there are no significant technical constraints which would prevent delivery of this site. Any development would be designed in consideration of all the identified opportunities and constraints to deliver an efficient and appropriate scheme. It is considered the site is deliverable within the next 5 years.		outside of these. Noted. Because of the archaeological need to retain the northern part of the site as public open space, the proposed development of the site does not relate well to the existing form and pattern of development and does not represent a logical urban extension. The access road appears convoluted and the development wraps around the outside of the southeast corner of development at Croes Atti and blurs the clear distinction between the modern estate type development and the historic ribbon development along the eastern edge of Leadbrook Drive. The objector claims that the site is free from significant technical constraints, so it is unclear why a planning application has been unable to be determined for over five years. The objection contains little evidence to suggest that the site is viable, free from constraint and deliverable. There has been sufficient growth within the earlier years of the plan period with 478 dwellings already completed within Flint. There is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						also sufficient growth planned for the town on existing commitments and the allocated site at Northop Road, which is considered to represent a more logical urban extension. Therefore candidate site FLI018 is not required, particularly when it would result in an illogical extension to the settlement and intrude awkwardly into open countryside, resulting in the loss of best and most versatile agricultural land. In conclusion, the LDP has provided for a substantial amount of development in Flint and it is not considered that an additional allocation is necessary or appropriate, particularly where there are clear concerns about its viability and deliverability.
561	HN1: New Housing Development Proposals	MOL004 Land North of Wood Lane, Mold	Object	In relation to the comments made for the land at Wood Green, Mold, please see my arguments in relation to the same. Modest in size - In relation to the comments that the land is modest in size, the close location of the site to the Town Centre of Mold does not appear to have been taken in to account in any way. In light of the close proximity to the Town Centre, this makes the site more appealable to family's that are required to live local to all Town	Allocate Candidate site MOL004 Land north of Wood Lane Mold for housing.	Not accepted. A separate detailed response has been provided to the representation (id663) by the site promoters agent. The site may well be modest in size but it lies outside a well defined settlement boundary, within a green barrier, partly within a C1 flood risk zone with no Flood Consequences Assessment and with no agreed means of creating a vehicular access to the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Centre amenities. Public Footpath - With a view to the public footpath and the comments that this would result in visual harm, there is currently a very well established hedgerow which already obscures the view from the land so therefore by leaving the hedgerow in situ any development would not interfere with the hedgerow at all and would therefore not cause any visual harm whatsoever. This can be further demonstrated in view of the fact that further down the footpath in question, planning permission has already been granted and properties have been built. Flooding - Agreeably, the Environmental Agency has categorised the part site as C1. However, in reality, as can be seen from the enclosed photograph taken on 13th June 2019 whilst the land to the right of the development site is quite clearly flooded, the site is in fact free from any flooding whatsoever. Further, if the site was to be the subject of inspection one could quite easily see that if the site was to flood then the whole of Mold would need to be under water, this owing to the fact that the development site is elevated above the Mold area. Restricted Access - Firstly, the access issue could be addressed by reference to fewer dwellings being built. Secondly, there		site. The site is bounded by a public right of way and despite the presence of a hedgerow, would harm the present open character and the Alyn Valley. The site is not appropriate to be allocated or included within the settlement boundary.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				is the option to purchase the garden area at the end of Wood Green which would allow a greater access. Finally, there is a possibility of development on the adjoining site next to the rugby club. This would open up greater opportunities for access.		
571	HN1: New Housing Development Proposals	Candidate Site MOL006 Land South of Haven, Off Upper Bryn Coch, Mold	Object	LAND SOUTH OF THE HAVEN, OFF UPPER BRYN COCH, MOLD MOL006 I write on behalf of the landowner, to object to the Council's decision not to include the above site as a housing allocation in the emerging Flintshire Local Development Plan and to register a concern that the Council's approach to meeting the projected housing requirement is not entirely 'sound'. It is considered that the current approach to the delivery of housing is not sound because of an over-reliance on small and windfall sites, a small number of large allocations and two very large strategic sites (which do not relate to Tier 1 settlements), and insufficient allocations in Tier 1 settlements such as Mold. The flexibility allowance is also considered to be a conservative estimate. As a result, there is serious risk that the housing requirement will	Allocate Candidate Site MOL006 for housing.	Not accepted. Welsh Government, in Development Plans Manual 3, advise that a Plan must include a flexibility allowance and that 10% is a starting point. In this context a flexibility allowance of 14.4% is considered to be sufficient particularly given that the Plan is on track in terms of completions in the first 4 years of the Plan period delivering the Plans requirement. The Plans Housing Balance Sheet does not show all of the Northern Gateway housing as being delivered within the Plan period, with 331 units being discounted from the Plans supply. The two strategic sites are both previous UDP allocations which have planning permission and it is not considered necessary for them to relate to a Tier 1 settlement, as they represent mixed use developments.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				not be delivered within the plan period. Unclear why allocated site HN1.6 is deemed a more appropriate location for residential development as it is relatively remote from town centre and majority of services and reliant on private car. MOL006 is well connected to the town centre and the bypass and is a more sustainable location. Aside from the green barrier there is no logical reason why HN1.6 is preferable over MOL006 particularly when considered alongside MOL052 which together amount to a logical rounding off, leaving a significant and distinctive separation between Mold and Gwernymynydd. To this end, Candidate Site MOL005 offers the following benefits: • The site is well related to Mold Main Service Centre, which is one of the largest settlements within the County; • When considered alongside Candidate Site MOL052, it amounts to a logical infilling of the settlement within the defensible boundary of the trunk road;		In focusing on allocations the objector fails to consider the Plans total housing land supply as clearly within Tier 1 settlements there will be growth as a result of completions to date and commitments, as well as possible small and large site windfalls. In fact, in Mold there is part of the County Hall site which is highly likely to come forward as a windfall site later in the Plan period. As commented on above the Plan deliver housing from other sources of supply and not just new allocations. However, the Plan sought to move away from the UDP of a large number of small to medium sites dispersed across the County in favour of a new approach of larger sites which are more attractive to the development industry and more capable of being viable and deliverable. The Plan has focused on housing allocations which are in sustainable locations and which are viable and deliverable, being supported by a significant amount of background studies and evidence. The objector offers no such evidence of the promoted

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				• A significant and distinctive separation would remain between the extended settlement of Mold and the settlement of Gwernymynydd, thereby ensuring that no coalescence would take place; • The site has no insurmountable physical or technical constraints which would prevent residential development; and • There is no reason why the site could not be developed in the short term, thereby making an immediate impact on the 5 year housing supply. The Council is respectfully requested to reconsider its approach to housing supply and also reconsider the merits of designating Candidate Site MOL006 as a housing site.		site being viable or deliverable yet considers it preferable to the Plans allocations. It is of note that the HBF is supportive of the Plans approach to windfalls and commitments and there is also on objection from Welsh Government in terms of this aspect of the Plan. The allowance is conservative and realistic and the Urban Capacity Study findings demonstrates that the Plans figures of 60 per annum for small sites and 50 per annum for large sites is realistic. The early years of the Plan period is clearly demonstrating that the Plans housing requirement is being achieved in terms of completions. The housing trajectory in Background Paper 10 demonstrates that the Plan can deliver its housing requirement figure. As the objector states, Mold already has two allocated sites, one of which is already under construction (Wates at Maes Gwern) and only 200m the objection site. However, growth in Mold will also take place as a result of completions (156

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						completions in first 3 years of the Plan period) and commitments (177 commitments as at April 2018). The allocated site HN1.6 is sequentially preferable to the objection site as it does not lie within a green barrier in the adopted UDP. The allocated site is also not remote from the town centre and is actually closer to The Cross than is the objection site. The allocated site does enjoy access to a local bus service and is a short walk from the local shops on Elm Drive. Contrary to the objectors claim, it is considered that the allocation site is actually more sustainably located than the objection site The allocated site HN1.6 benefits from the creation of a new road and junction with Denbigh Road which is acceptable to Highways Officers and also an access onto Gwernaffield Rd. By contrast the objection site is considered unsuitable for development as Highways Officers consider the lane leading up to Upper Bryn Coch to be unsuitable to carry any additional traffic. Highways Officers would require a Transport

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Assessment in order to comment further. The land between the site and the public highway Upper Bryn Coch is outside the boundary of the objection site. In the absence of an access through the adjoining candidate site MOL052 to the west, there appears to be no means of securing a vehicular access. Contrary, to the alleged benefits of the site diverting traffic away from the town centre, there is no evidence that the site can be satisfactorily accessed. The allocated site is clearly not in breach of PPW as it is in a sustainable location accessible to a range of services and facilities and the town centre. It has the potential to facilitate journeys on foot, by cycle and by public transport. The objection site is presently poorly related to existing residential development as it sits back from and above the built development at Upper Bryn Coch and Maes Gwern, being separated by an intervening field. The objector has provided no evidence as to how a technically feasible vehicular access can be

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						provided and the development of the site appears reliant on adjoining land to the west MOL052 which is much larger at 4.4ha. The two sites together would remove a large proportion of the open green barrier alongside the A494 leaving only the 1.7ha of land directly alongside the roundabout as being green barrier. However, this isn't the only land being promoted for housing development in this south western corner of Mold as land to the north of Upper Bryn Coch was also submitted as a candidate site (MOL040 – 1.6ha). The three sites together would virtually remove the whole of the green barrier to the east of Ruthin Road and the north of the A494(T). On its own it represents an 'outlier' block of development divorced from the existing form and pattern of development. The sites destiny is therefore not in its own hands and is dependent on another landowner / developer to be implemented. The site immediately adjoins the western boundary of the former prison, as defined by the stone walls which are a grade II listed building. The former prison

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						gatehouse and governor's residence and the former prison workshop are also grade II listed buildings. The objector has provided no assessment of the impact of development on the setting of the prison walls. This is of particular concern As the objector promotes the development of the objection site in conjunction with MOL052 which would wrap built development around the former prison. Despite sitting within the line of the A494(T) bypass, the site has a distinct feeling of open countryside with the narrow hedge lined lane, mature trees and hedgerows and does not feel part of the built form the settlement. As demonstrated above growth in Mold has been achieved and will be achieved as a result of completions, commitments and possible windfalls and it is not necessary or appropriate for a further site to be allocated, particularly when that site would fundamentally weaken the purpose of a green barrier, and potentially harm the setting of the listed prison. The points within this summary

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						section of the objection have been addressed above. The Council disagree with the assertion that there are no insurmountable constraints to development given that there is no evidence that a satisfactory vehicular access can be provided, and lack of an assessment of the impact of development on the setting of the former prison. Furthermore, other than to say that the site can be developed within a 5 year period, there is no indication as to a timescale for development in terms of the Council's published housing trajectory. In conclusion, sufficient growth has been provided for in Mold over the Plan period and it is not necessary for a further site to be allocated, particularly when it would harm a green barrier and where there are constraints which have not been overcome.
574	HN1: New Housing Development Proposals	Candiate Site MOL05, Land North of Junction of A494 and Ruthin Road, Mold	Object	I write on behalf of the landowner, to object to the Council's decision not to include the above site as a housing allocation in the emerging Flintshire Local Development Plan and to register a concern that the Council's approach to meeting the	Allocate Candiate Site MOL05 for housing	Not accepted. Welsh Government in Development Plans Manual 3 advise that a Plan must include a flexibility allowance and that 10% is a starting point. In this context a flexibility allowance of 14.4% is considered to be sufficient particularly given that the Plan is on track in terms of completions in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				projected housing requirement is not entirely 'sound'. It is considered that the current approach to the delivery of housing is not sound because of an over-reliance on small and windfall sites, a small number of large allocations and two very large strategic sites (which do not relate to Tier 1 settlements), and insufficient allocations in Tier 1 settlements such as Mold. The flexibility allowance is also considered to be a conservative estimate. As a result, there is serious risk that the housing requirement will not be delivered within the plan period. Unclear why allocated site HN1.6 is deemed a more3 appropriate location for residential development as it is relatively remote from town centre and majority of services and reliant on private car. MOL005 is well connected to the town centre and the bypass and is a more sustainable location. Aside from the green barrier there is no logical reason why HN1.6 is preferable over MOL005 particularly when considered alongside MOL002 which together amount to a logical rounding off, leaving a significant and distinctive		the first 4 years of the Plan period delivering the Plans requirement. The Plan's Housing Balance Sheet does not show all of the Northern Gateway housing as being delivered within the Plan period, with 331 units being discounted from the Plans supply. The two strategic sites are both previous UDP allocations and the Northern Gateway site has planning permission and development has commenced. The Warren Hall site has outline planning permission for a business park and although the housing element is new, this is for 300 dwellings and is not excessive in size. Both sites are strategic mixed use developments in sustainable locations and it is not considered necessary for them to relate to a Tier 1 settlement as they represent mixed use developments. In focusing on allocations the objector fails to consider the Plan's total housing land supply as clearly within Tier 1 settlements there will be growth as a result of completions to date and commitments, as well as possible small and large site windfalls. In

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				separation between Mold and Gwernymynydd. To this end, Candidate Site MOL005 offers the following benefits: • The site is well related to Mold Main Service Centre, which is one of the largest settlements within the County; • A significant and distinctive separation would remain between the extended settlement of Mold and the settlement of Gwernymynydd, thereby ensuring that no coalescence would take place; • The site has no insurmountable physical or technical constraints which would prevent residential development; and • There is no reason why the site could not be developed in the short term, thereby making an immediate impact on the 5 year housing supply. The Council is respectfully requested to reconsider its approach to housing supply and also reconsider the merits of designating Candidate Site MOL005 as a housing site.		fact, in Mold there is part of the County Hall site which is highly likely to come forward as a windfall site later in the Plan period. As commented on above the Plan delivers housing from other sources of supply and not just new allocations. However, the Plan sought to move away from the UDP approach of a large number of small to medium sites dispersed across the County in favour of a new approach of larger sites which are more attractive to the development industry and more capable of being viable and deliverable. It is unclear though why the objector is objecting to the Plan's identification of 'large' allocations when the site being promoted by the objector is 8.3ha and capable of accommodating well over 200 units. This is larger than many of the allocations criticized by the objector. The objector appears to be promoting the objection in the context of it being a 'small' site of less than 100 units but this would represent a poor use of land given its size. The Plan has focused on housing allocations which are in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						sustainable locations and which are viable and deliverable, being supported by a significant amount of background studies and evidence. The objector offers no such evidence of the promoted site being viable or deliverable yet considers it preferable to the Plan's allocations. It is of note that the HBF is supportive of the Plan's approach to windfalls and commitments and there is also no objection from Welsh Government in terms of this aspect of the Plan. The allowance is conservative and realistic and the Urban Capacity Study findings demonstrates that the Plan's figures of 60 per annum for small sites and 50 per annum for large sites is realistic. The early years of the Plan period is clearly demonstrating that the Plan's housing requirement is being achieved in terms of completions. The housing trajectory in Background Paper 10 demonstrates that the Plan can deliver its housing requirement figure. As the objector states, Mold already has two allocated sites,

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						one of which is already under construction (Wates at Maes Gwern) and within 500m of the objection site. However, growth in Mold will also take place as a result of completions (156 completions in first 3 years of the Plan period) and commitments (177 commitments as at April 2018). The allocated site HN1.6 is sequentially preferable to the objection site as it does not lie within a green barrier in the adopted UDP. The allocated site is also not remote from the town centre and is actually closer to The Cross than is the objection site. The allocated site does enjoy access to a local bus service and is a short walk from the local shops on Elm Drive. Contrary to the objectors claim, it is considered that the allocation site is actually more sustainably located than the objection site. The allocated site HN1.6 benefits from the creation of a new road and junction with Denbigh Road which is acceptable to Highways Officers and also an access onto Gwernaffield Rd. By contrast the objection site is only considered

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						suitable for limited development unless linked to the adjacent MOL002 site. Highways Development Management Officers note that there is no direct connection to the trunk road boundary and that a capacity assessment will be required for an access onto the A5119. Highways Officers would require a Transport Assessment in order to comment further. Contrary, to the alleged benefits of the site diverting traffic away from the town centre, there is no evidence that the site can be satisfactorily accessed. The allocated site is clearly not in breach of PPW as it is in a sustainable location accessible to a range of services and facilities and the town centre. It has the potential to facilitate journeys on foot, by cycle and by public transport. The objection site is presently divorced from the settlement boundary of Mold and is dependent on the delivery of the intervening site (MOL002) in order for it to represent a logical extension to the settlement. On its own it represents an 'outlier' block of development divorced from the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						existing form and pattern of development. The site's destiny is therefore not in its own hands and is dependent on another landowner / developer to be implemented. Whatever scenario, the site would represent a significant weakening of the green barrier between Mold and Gwernymyndd. To the west of the site boundary it would leave a green barrier gap of only 290m. If, as the objector argues, the site should be developed in conjunction with MOL002, then only a third of the green barrier gap alongside the road would remain, which would significantly undermine its function and purpose. As demonstrated above growth in Mold has been achieved and will be achieved as a result of completions, commitments and possible windfalls and it is not necessary or appropriate for a further site to be allocated, particularly when that site would fundamentally weaken the purpose of a green barrier. The points within this summary section of the objection have been addressed above. The Council

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						disagree with the assertion that there are no insurmountable constraints to development given that there is no evidence that a satisfactory vehicular access can be provided and there is a lack of supporting documentation in respect of ecology. Furthermore, other than to say that the site can be developed within a 5 year period, there is no indication as to a timescale for development in terms of the Council's published housing trajectory. In conclusion, the Plan has made sufficient provision for growth in Mold and it is not necessary for appropriate for a further allocation to be made, particularly when it relates poorly to the settlement and would harm a green barrier.
575	HN1: New Housing Development Proposals	Green Space EN2.89 GRO001	Object	I write on behalf of my client company, who owns the land which is allocated as a Green Space within the Tier 3 'Sustainable Settlement' of Gronant as defined by the emerging Local Development Plan (LDP) (Site EN2.89). The site is designated as a Green Space - L3(82): 'Land at east end of village' within the adopted but time expired Flintshire Unitary Development Plan (UDP).	Removal of Green Space - EN2.89: 'Land at east end of village' designation, and allocate for housing.	Not accepted. The site is located within the settlement boundary at the eastern edge of the village. Generally new development may be acceptable in principle, however there are site specific considerations in this case which made development unacceptable. Although in principle, the site could be allocated for and accommodate 30 dwellings the whole site is a designated green

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Supporting this representation is a Landscape and Visual Impact Assessment, an Arboricultural Pre-Planning Feasibility Study, a Bat Activity Survey and a Preliminary Ecological Appraisal. Summary of findings The LVIA observes that whilst the site is identified as Green Space in the UDP it would be more appropriate to re-designate the site as a Housing Allocation, with confidence that development would be brought forward within the plan period. The LVIA observes that whilst the site is identified as Green Space in the UDP, the majority of the site comprises bare ground which would not be sensitive to development and it performs badly against the associated criteria used to identify such Green Spaces. The LVIA concludes that the site does not perform well against any of the associated criteria; whilst it does not meet some of the criteria of policy L3 at all. Re-designate land from Green space to allow for residential development. Propose of up to 34 units, could be delivered, which would include some		space L3 (82) in the UDP and is therefore protected by virtue of Policy L3 and the site also contains landscape features whereby it is not a typical development site. No objections were made in relation to this designation as part of preparing the UDP. An outline planning application (044858) was refused in 2008 on the basis of loss of greenspace/lack of information regarding impact upon on site wildlife habitats and lack of provision of affordable housing as required by UDP Policy HSG10. In addition from the candidate site assessment the Council's highways development management team stated that Llanasa Road is subject to a 30mph speed restriction but it does not appear possible to provide appropriate (2.4x43m) visibility splays from the site. Due to the limited width and lack of pedestrian facilities, Llanasa Road is considered unsuitable for a significant increase in vehicular traffic. No technical evidence has been produced to demonstrate that a suitable vehicular access

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				affordable housing for local people with an identified need, as required. Landscape quality: Most of the Site is bare ground. The majority of trees within the Site have been surveyed as being Category B 'moderate' quality, with some Category C 'low' quality. The landscape quality of the Site is not of note Value as a character feature in a locality: The Site does not have any wider value beyond its immediate surroundings. It is not distinct in terms of aesthetic qualities, nor does it contain any features within it that are distinct. The Site cannot reasonably be described as a character feature. Visual break in a developed area: The Site is not widely visible, and as such it does not provide any obvious function as a visual break. Surrounding properties tend to have large gardens, which in themselves		can be provided. In this context it is considered that the site should remain within the settlement boundary as a green space. Landscape quality: The objector has sought to assess the site against the five criteria specified in policy L3 of the adopted UDP in terms of green space designation: With regards to landscape quality, the green space contains a number of mature trees within the site. The two belts of trees form a distinct character feature in the local landscape. The site was previously 'green' in appearance, as confirmed by aerial photographs, and the Council is aware from phone calls from the public that clearance works were undertaken at the site. This has clearly had the effect of changing the appearance of the site and without further maintenance the site is likely to naturally regenerate once again. This however does not harm the role of the land as a green space.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				provide separation from neighbouring plots. Buffer between incompatible uses: The Site is small in extent and is surrounded by residential development, and does not therefore perform a buffer function between different land uses Importance as part of an existing or proposed network of open areas, or as a link to open countryside: The Site is crossed by two footpaths, but is otherwise not accessible and does not form part of a wider network, or in itself provide a link to the open countryside. Since the Site does not form part of a wider network or provide a link to the countryside, this criterion would be unaffected. The public footpaths would be retained, and hence their link function would be unaffected. Supporting Documents: Supporting this representation is a Landscape and Visual Impact Assessment, an Arboricultural Pre-Planning Feasibility Study, a Bat		Value as a character feature in a locality: The objection site sits within two arms of ribbon development comprising Abbey Drive along the northern edge of the site and Llanasa Road to the south, whilst to the east is a looser pattern of built development. The open character of the site and the trees do form an important character break between the historic pattern of development in this part of the settlement. Visual break in a developed area: The value of the site is not that it is highly visible although the site has an open frontage onto Llanasa Rd and glimpses of the trees from other vantage points in the locality. However the public rights of way passing through the site enhance its value as a character break in accessing the wider open countryside to the east. Buffer between incompatible uses: It is considered that every bit of green infrastructure provides multiple benefits and can reduce the risk of flooding, keep towns

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Activity Survey and a Preliminary Ecological Appraisal.		cool during heat waves and aid the reduction of air pollution. As well as providing many physical and mental health benefits to members of the public who use the space. It is accepted that the site does not perform this function but it is not necessary for a piece of land to meet every criteria in order for it to be appropriate to designate as green space. Clearly the proposer is suggesting that over 30 units could be built on this site which means the site is not 'small' as described, and development at that density would certainly radically alter the character of the site, and the interaction with neighbouring existing land uses. Importance as part of an existing or proposed network of open areas, or as a link to open countryside: Two footpaths cross the site that enable members of the public to use and provide local residents with access to the natural environment and a quick egress from the built up area. The first (no.85) runs diagonally north east from Llanasa Rd across the site to Abbey Drive. A shorter path

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						(no.49) runs northwards from llanasa Rd to join path 85. The value of these paths is that they provide a link from the village to the open countryside to the east of the village and the network of paths: • Byway open to all traffic (no48) which runs along the westerern edge of the grounds of Talacre Abbey • Bridleway 47 which leads to three further footpaths (no. 42, 43 and 44) The open and undeveloped nature of the site provides an attractive link between the developed are and the open countryside. This network of paths is also important as it leads to the Talacre Abbey Conservation Area and the Talacre Valley Historic Park and Garden which lie only a few metres to the east of the objection site, clearly demonstrating that these and the land are part of a wider network of green infrastructure. The Council would also note that planning permission exits (058304) for 41 units at Nant y

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Gro which forms part of the Council's SHARP scheme and all units will be affordable housing. In this context the Plan will clearly see development over the Plan period which is considered to be appropriate given the scale and character of this Tier 3 settlement. It is not considered that an additional site is either necessary or appropriate. Supporting Documents: Although supporting documents were received illustrating limited visual impacts and ecological effects on the site. There is a lack of consistency in the background documents. The represents mentions 25 units, the landscape appraisal mentions 34 units and the ecology appraisal mentions 20 units. Additionally, It is disappointing that, having undertaken these background studies, the objector has not provided an indicative layout or even a masterplan type outline for the site in order for the Council to properly assess impacts on trees, ecology and trees and the public rights of way.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						With regards to the trees located on the site, we are awaiting a response from the Forestry Officer. The Council's in-house ecologist reviewed the relevant backgrounds studies and stated that: 'The Talacre Abbey and Woods Wildlife Site occurs approx. 100m to the north east of the site – not referenced in the report. Until relatively recently (Feb 19), the site was well vegetated. The adjacent Parkfield bungalow has a recorded Soprano and Common Pipistrelle maternity roost and this development includes a mitigation bat roost located adjacent to the northern boundary hedgerow & PROW. The retention and protection of the existing hedge boundaries and their connectivity are considered key to the success of the proposed bat mitigation. The Preliminary Ecological Appraisal (03.19) and Bat Activity report (05&06.19) both concluded that the key features were the remaining habitats namely: • the hedgerows on the western

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						boundary; • mature trees on the eastern boundary • scrub adjacent to the PROW; • Mature trees dividing the northern fields and • Woodland in NW corner The reports recommend the retention of the above features with suitable mitigation for any losses. The bat flight path plan illustrates the importance of the western and eastern natural boundaries in the south of the site, the scrub habitat adjacent to the PROW crossing the site and the field to the north west sheltered by the woodland and trees. While there is no layout, the retention of all these features particularly the scrub adjacent to the PROW is unlikely. Appropriate mitigation depends on suitable space to provide new hedgerows and trees and then whether they will be retained by householders in the long term – secure fencing is usually preferred.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Lesser horseshoe bats and Brown long eared bats are canopy feeders and may be using the dark site boundaries enroute to the larger woodlands at Talacre Abbey. To continue using the site they will require dark natural corridors. However the main concern, is the combined impact of the Parkfield development with this proposal on the Soprano Pipistrelle maternity roost. As referenced in the Bat Activity report, the long term impact through the loss of flight lines/direct links to foraging habitat may well be significant. The most likely impact is that it will cause the roost to disperse. Increased lighting will compound this issue'. Ecology Conclusion 'Development of this site will impact foraging bats, how much will depend on the retention of those features listed above and especially retention as unlit habitats. However while foraging sites are not protected, individual bats and their roosts are. So the main concern is that this proposal will have a significant impact on the adjacent Pipistrelle maternity

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						roost due to the loss of local foraging habitat and connecting flight lines. Monitoring of the Parkfield bat mitigation post development should demonstrate whether that mitigation is successful and if so where the majority of bats fly to feed. Development of this proposed LDP site may need to consider relocation of the bat mitigation and associated corridor planting.' Additionally, the Site is within 500m of Dee Estuary SSSI and SPA. Site is also within 500 m of Ancient Woodland. Development at this location may reduce habitat connectivity by increasing distances between habitats or agricultural areas. The site could affect priority or protected species as it contains woodland and agricultural (e.g. breeding birds) land. It is considered that when assessing the proposal for the re-designation of the Green Space to allow for residential units, given that the proposal is likely to cause significant harm to the favourable conservation status of protected species, there is no overriding case to change the designation of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						this land from a green space. Additionally, there are significant highways access constraints coupled with concerns regarding the loss of greenspace from a general amenity perspective, which together lead to the conclusion that the site should be retained as a green space rather than considered as a housing allocation in the LDP. The Council's in-house Tree Officer reviewed the relevant backgrounds studies and stated that: 'It is important to note that the trees on and adjoining the site do not preclude the development of it however the density of trees, which are mainly Category B, severely restrict the site's scope for residential development. Whilst, a BS5837 tree survey and other surveys have been commissioned no layout plan has been provided to demonstrate how the site could be developed and ensure adequate tree retention in accordance with planning policies. The LVIA carried out on behalf of the site's owner mentions a layout of up to 34 two storey houses. It is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						very difficult to foresee how a development at this density could be achieved without resulting in the unacceptable loss of trees and hedgerows. In the absence of a layout plan to demonstrate how a potential development would be sympathetically designed around the trees the allocation of the site for residential use should be resisted and its status as Green Space unchanged, especially because the trees are a principle element of the Green Space designation'. In conclusion, growth has been provided for in Gronant with the Nant y Gro planning permission which will deliver affordable housing during the LDP plan period. It is not considered that it is necessary or appropriate to include land which has a green space value, has ecological value and where there are additional concerns about the impact of development on the local highway network. The site is not considered appropriate to be allocated.
579	HN1: New Housing Development Proposals	PEN050-AS Land East of Vounog Hill, Penyffordd	Object	Land-Use and Description The land is currently in agricultural use, primarily for grazing. It extends	Allocate Lane at Vounog Hill Penyffordd, PEN050-AS	Land-Use and Description Not accepted. The Welsh Government Predictive

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				to 4.35 hectares across three fields, the smallest of which borders Vounog Hill to the west. Existing trees and vegetation on the land are limited to the field boundaries which border and run through it. The high point to the land is along Vounog Hill to the west and on open land to the south. From these points the land slopes broadly downhill to the north and east towards Black Brook. There is no existing laid out, formal vehicular access into the land from Vounog Hil, albeit there is an existing gated access with dropped kerbs which is used for agricultural purposes at present. A public right of way runs broadly west to east from Vounog Hill to Terrace Lane to the south. Location The land is located to the east of Penyffordd close to the central part of the village. It is bounded by Vounog Hill to the west, with existing dwellings and Station Way to the north, and agricultural land to the east and south. The southern boundary is demarked by two further dwellings. A further recent residential development at Min Y Ddol is located approx. 240m to the south of the southern boundary of the land.		Agricultural land Classification Map shows the site as being grade 3a which represents BMV. However, the objection is not accompanied by an on-site survey to determine the exact quality of the land. Location Only the smaller front (western) part of the site adjoins the settlement boundary for approximately 40m along the site frontage and approximately 100m alongside development at The Pastures. The remainder of the site is 'backland', being separated from the settlement boundary at Cambrian House by an intervening field and with an awkward 'pinch point' almost dividing the proposed site into two separate entities. The site would not represent a logical extension to the settlement as it would result in a disjointed pattern of development which is not well related to exiting built form. The site was promoted for development in the form of an omission site as part of the UDP. The Inspector commented in respect of the front part of the site '4835 Vounog Hill provides a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The location of the land in relation to Penyffordd is shown on Figure 1 above; the development of the land would provide for a logical and natural extension to the eastern edge of the settlement. Designation The land is located outwith the adopted settlement boundary of Penyffordd and is within the open countryside. It is not subject to any formal ecological, landscape, recreational, or historical designation. It is located within an area of low probability for flood risk, with part of the land experiencing a low probability of surface water flooding. Potential Uses and Capacity The land has the potential to accommodate a mix of market and affordable housing together with associated landscaping and public open space. Assuming a net developable area of 80% and a density of 30 dwellings per hectares, the land could accommodate in the region of 105 - 120 dwellings split across the three fields. The allocation of the land for housing is considered by our Client to be		strong physical boundary between the built up area to the west and the countryside to the east. This extensive elongated site along the eastern side of Vounog Hill disregards the existing field boundaries and would result in an illogical incursion into the countryside. Furthermore, it would result in an unacceptable ribbon of development that would be poorly related to the existing urban form'. Turning to the rear part of the site the Inspector commented '1924 - This land is part of the countryside on the edge of the settlement and is rural in character. Allocating this site would result in a significant incursion into the countryside. Furthermore, given the shape of the objection site it would isolate undeveloped land to the north and result in an incongruous settlement boundary.' Designation Although the site may not fall within any designated areas the submission has not included ecological survey information to establish ecological interests in the site. The Development Advice Map shows a wide band of low risk of surface water flood risk running north south across the site

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				responsive to Penyffordd's identification as a Sustainable Village within the settlement hierarchy, and the scope provided within the Deposit Plan for new housing development to be delivered in the settlement during the Plan period. As a minimum, the land immediately fronting onto Vounog Hill (i.e. field 1) could be allocated in isolation should it considered that the release of the wider land parcel is not required as part of the proposed LDP period. The three fields which make up the land have the potential to come forward as part of a comprehensive scheme, or alternatively on a phased basis. Collectively and separately, any development is capable of meeting spacing standards, high quality design, a mix of house types, and delivering new public open space and landscaping (including a landscape buffer). The scale of development and potential to phase delivery would ensure that the village is not overwhelmed by new development and residents. The scale of development which can be accommodated on the land is proportionate to the wider settlement, ensuring that the settlement is not subject to		and is notable because it covers the narrow 20m 'link' between the two parts of the site. No information has been provided to demonstrate whether this constraint can be overcome to enable development. Potential Uses and Capacity The Plan has a spatial strategy which seeks to direct sites to the most sustainable settlements and sites and is not based on each settlement having a housing allocation. It must be noted that there are two sets of more sustainable settlements above the Tier 3 settlements and also that there are another 21 Tier 3 Sustainable Settlements. The settlement of Penyffordd / Penymynydd has already taken a significant level of the growth apportioned in the Deposit Plan to Tier 3 settlements as a result of two commitments at Rhos Road South (40 dwellings) and Hawarden Rd (32 dwellings) and the allocated site at Chester Road (186 dwellings). In addition a further planning permission for 36 no, over 55's retirement apartments was granted on appeal on 27/04/20. This represents some 296 dwellings in the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				overdevelopment over the duration of the Plan period. The development of this land would contribute towards the sustainable distribution of development, whilst also supporting the vitality of Penyffordd's services and facilities. Accessibility The land lies within 800m walk of the local primary school, village shop, playground, community hall, post office, and pharmacy, promoting access via foot and bicycle and limiting car journeys by car. Its proximity to the existing public footpath network will also help promote access of the countryside beneficial for the health and recreation of new residents. In terms of bus and rail linkages, the nearest bus stop is located within 200m of the land which is served by the hourly no.28 bus service to Mold, Holywell and Wrexham. Travel to Mold and Wrexham is possible via bus during rush hour, providing a suitable alternative to the car in accessing employment from the Site in these nearby larger centres. The journey to Mold takes approximately 17 minutes, whilst to Wrexham it is approximately 23 minutes.		settlement which is on top of the completions during the first few years of the Plan period arising from UDP allocations. Although the LDP has moved away from settlement growth rates for different tiers of the settlement hierarchy, it is useful to look back at the context in the UDP which identified a growth band of 8-15% for category B settlements. Over the UDP period the settlement saw actual growth of 21% as a result of 282 completions which was well in excess of the growth band. In the first 4 years of the LDP period the completions of 77 units equated to a 5.7% growth. As at April 2019 there were commitments of 267 units on the three earlier appeal sites which increases growth over the Plan period to 21%. The recent appeal decision for the over 55's apartments increased growth to 23.4% and the inclusion of say 100 units on the objection site would increase growth further to 31%. This settlement has more than made a reasonable contribution of housing in the LDP Plan period. The references to various

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Penyffordd railway station is within 1km of the land and is within walking distance. From here, hourly services are available to Wrexham and Bidston. Highways/Traffic The land could be served by a single access point from Vounog Hill along its western boundary. Any access road from Vounog Hill would provide for a 5.5m wide carriageway, with 2m footways on both sides. Visibility standards at the junction would be consistent with Manual for Streets. The impact of any development on the land would be minimal. Flood-Risk and Drainage The land is located wholly within Flood Zone A as defined on the Development Advice Map. The majority of the land is considered to have a “very low” risk from surface water flooding, though an area of “low” surface water flooding extends north to south across the land. Infiltration may provide a viable surface water treatment. Should infiltration not be feasible then water could instead be discharged in to Black Brook to the north of the land.		background studies are noted as is the reference to the developer, but this does not change the fundamental concerns about the level and pace of development which this settlement is and will experience and disproportionate amount of development having regard to the Plans spatial strategy. Policy STR2 sets out the hierarchy of growth to the tiers in the settlement boundary. Tie 1 Main Service Centres are the ‘main’ locations for new development, Tier 2 Local Service Centres are the locations for more modest levels of development whilst Tier 3 Sustainable Settlements will be the locations for ‘housing development related to the scale, character and role of the settlement’. The policy clearly adopts a sliding scale of growth appropriate to each tier and the level of growth proposed by the objector in this settlement is not considered acceptable. Accessibility It is acknowledged that the site is well related in terms of proximity to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Welsh Water sewer records identify public sewer infrastructure crossing the land. A 150mm diameter public combined sewer is located adjacent to the northern boundary. Investigations will be necessary to consider whether connection will be possible by way of a gravity solution. If not, then a pumped solution may be required. Ecology The land is not subject to any formal international, national or local ecology designation which might prevent or limit its suitability for housing. It is distant from designations in the wider area, with only the potential for indirect effects (as with any location). The land holds limited ecological value, albeit a detailed Habitat Survey would need to be undertaken. The key ecological features of the land are the hedgerows and trees within and bordering it; the majority of these features should be capable of retention as part of any development. Where removal of any features is required, this loss could		facilities and services and public transport. Highways/Traffic The Highways Development management Officer has advised that a Transport Assessment is required in order to fully consider the site and proposal. However, it is questioned whether an appropriate access road junction design can be developed given the location of Wats Dyke Road opposite. Flood-Risk and Drainage The issue of flood risk and drainage is commented on above. Ecology Ecology is commented on above. Landscape and Visual Impact The site does not relate well to the existing form and pattern of development and would appear as a block of built development largely detached from the settlement and having an impact

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				be compensated for by replacement planting. Landscape and Visual Impact The land does not sit within a designated landscape area. The land is considered to have a moderate impact taking into account the relationship of its built surroundings and potential for mitigation once planting matures within any landscape buffers, particularly along the southern edge of the Site. Any adverse effects on visual receptors would likely be limited to those nearest to the land. Deliverability Our Client's land interests have been subject to previous promotion through the LDP process, as demonstrated by its inclusion as a Candidate Site. The land is in single ownership, and is immediately available and deliverable within the Plan period (over a phased basis), or indeed within a five-year period in its entirety. There are no overriding technical or land assembly constraints which would preclude its		on landscape and open countryside, particularly given the public rights of way bordering the site. Deliverability The objector has provided no indication as to the timescales for the site to be delivered in terms of the Council's housing trajectory as set out in the Background Paper LDP10 Housing Land Supply. In view of the settlements position in the hierarchy, the level of development already permitted and the poor relationship of the site it is not considered necessary or appropriate for either the whole or smaller part of the site to be allocated in the Plan. Soundness: The Plan has formulated its housing requirement figure in line with advice in PPW and subsequent versions of PPW and the Development Plan Manual and objections relating to historical unmet need have been comprehensively dealt with in responses to representations to policy STR1. There is no

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				development. In view of the above, it is our Client's consideration that their land interests should be allocated for housing in the LDP for up to 120 dwellings. In the event that the Council considers that only the single field fronting on Vounog Hill should be allocated, this could deliver up to 30 dwellings. Soundness: PPW10 is clear in Section 4.2 as to how local planning authorities should plan to meet their housing needs through Local Development Plans. This includes the identification of a robust housing requirement which can be met in full during the LDP period by ensuring that a sufficient supply of deliverable housing land is available to bring forward development which is sustainable in line with the overarching aspirations of national planning policy. For the reasons set out in this Representation, our Client is concerned that the Deposit Plan evidence base is lacking in detail in terms of whether it is planning to address any housing shortfall from the UDP period, whilst continuing to place reliance on some previous UDP housing allocations which have		requirement either in PPW or DPM for the unmet housing requirement from a previous development plan to be merely added on to the next development plan. Welsh Government submitted formal representations on the Deposit LDP and have not commented on any shortfall from the UDP. Welsh Government state 'The Welsh Government is generally supportive of the spatial strategy and level of homes and jobs proposed and has no fundamental concerns in this respect'. The Plan's housing requirement is considerably in excess of the Welsh Government base population and household projections as the Plan seeks to support regional growth strategies. The Plan is clearly aspirational and the objector has identified no challenge in respect which would question the Plans soundness. The objector ignores the fact that the LHMA methodology produces an inflated need as it assesses the backlog of need but only has a lifespan of 5 years. It is therefore incorrect to transpose the annual need over the Plan period. It is also the case that affordable housing will be delivered through

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				historically failed to come forward and deliver as expected. The LDP needs to be sufficiently aspirational to meet the needs of the County for current and future generations; recent rates of housing delivery in the County since 2015 demonstrate a strong demand for housing in Flintshire and provide confidence that any previous shortfall can be met during the LDP period if sufficient land is made available. Test 2: The housing requirement should take account of the identified affordability needs across the County as set out in the LHMA such that they are provided for in full during the LDP period; Any historic housing delivery shortfall from the UDP period should be planned for and met during the LDP period; this would justify a housing requirement of at least 7,350 dwellings as per the upper figure set out under Option 6 of the Preferred Strategy Growth Options; Whilst the Council is continuing to rely on windfall sites moving forward, it should be noted that historic windfall trends have taken account of		other initiatives and strategies and not just through the planning system. The point about UDP shortfall has been commented on in the previous section. The Plan has a conservative and realistic allowance for small and large site windfalls, having regard to previous trends. The allowances have also been informed by an Urban Capacity Study which demonstrates that the Plans allowance figures are realistic. It is of note that the HBF is supportive of the approach taken regarding windfalls. Also, Welsh Government in their formal representations on the Plan have made no comments about an over-reliance on windfalls. The Plans vision is meant to encapsulate the whole Plan strategy and purpose and is not meant to focus in detail on housing only. The Plan has identified a robust but aspirational housing requirement figure, well in excess of forecasts. In the absence of a formal objection from Welsh Government it is not

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				the fact that a large number of speculative housing applications have been granted planning permission in the absence of a five-year housing land supply. This would not be the Council's intention once the LDP is adopted, and this duly could impact on windfall delivery rates owing to the lack of available brownfield development opportunities within the settlement boundaries of a number of the Tier 1, 2 and 3 locations in the settlement hierarchy; And The LDP Vision is lacking in detail, with no commitment to meeting the full minimum housing and employment needs of the County during the LDP period. test 3: The proposed housing allocations contain two sites which were previous allocations in the UDP, and which have failed to come forward. There is no evidence to offer any certainty that they will come forward		considered that the Plan fails soundness test 2. The objector fails to explain why smaller sites in Tier 3 settlements are more capable of early delivery than the Plan's allocations, particularly given that the Plans allocations are backed up by a considerable amount of background studies and work. By contrast, the objector has submitted not a single background study or piece of technical evidence to show that it is capable of early delivery. The two sites carried forward from the UDP were reassessed by the Council by putting them through the candidate site assessment process. The Highmere Drive allocation is backed up by a number of background studies by the owners and a renewed commitment to deliver the site and the Well Street allocation is in the process of being sold by Welsh Government to Clwyd Alyn Housing Association who are intending to submit an early planning application. On both of these sites, planning applications can come forward ahead of LDP

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				in the future. Accordingly, our Client is concerned that by continuing to rely on these sites and extant commitments in the short-term (given the timescales for delivery of the larger allocations), the Council may be unable to demonstrate a five-year housing land supply given the lack of any smaller site allocations in the Sustainable Villages which would be capable of early delivery;		examination as they are already allocated and within the settlement boundary. It is not accepted that the Plan is unsound in terms of test 3. In conclusion, the settlement of Penyffordd/ Penmymynydd will significant growth as a result of four speculative appeal decisions. It is not necessary or appropriate for a further allocation to be made, particularly where it would not represent a logical extension to the settlement.
581	HN1: New Housing Development Proposals	Land to the north east of Issa Farm, MYN015-AS	Object	Proposed Additional Site Allocation The site to the north east of Issa Farm (MYN015-AS) should be allocated as a housing site to meet the additional need identified. In the alternative, it should be identified as a contingency site which could be brought forward for development should the LDP fail to deliver appropriately against its trajectory or should the Council fail to be able to substantiate a 5 year housing land supply. The Council's initial assessment against the Preferred Strategy was that the site was coded "amber" against their traffic light system. This category indicated that the site complies with the Council's Preferred	Allocation of additional sites to meet housing demand. The site to the north east of Issa Farm (MYN015-AS) should be allocated as a housing site to meet the additional need identified. In the alternative, it should be identified as a contingency site which could be brought forward	Not accepted. In response to the objector's other objections the Council does not consider that there is a need for the Plan's housing requirement to be increased, nor is there a need for further allocations to be made. There is no provision or requirement within PPW or Development Plan Manual 3 for the Plan to include contingency sites. Rather, the Plan has made provision for a 14.4% flexibility allowance to allow for sites not coming forward as quickly as anticipated in the trajectory. The objection site was not submitted as a candidate site and therefore the Council didn't

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Strategy but that there may be constraints which need to be overcome to allow sites to be developed. The Council's Background Paper 8 (Assessment of Candidate and Alternative Sites) acknowledged that the site adjoins an existing development which was allowed on appeal and that this confirms that the acceptability of development in this location has now been established in principle. However, the Council rule out allocation of the site until the speculative site to the south west has been developed as, in the absence of the development of that site, the development of site MYN015-AS would be major incursion into the open countryside. We understand that the site which was subject to the appeal is now being developed by MacBryde Homes and that the site sales office is now open and phase 1 is progressing. Completion of this site is therefore likely in the early part of the plan period. The Council's only reason for resisting the allocation of this site (i.e. that there should be no further extension of the settlement until the site allowed on appeal has been developed) will therefore be	for development should the LDP fail to deliver appropriately against its trajectory or should the Council fail to be able to substantiate a 5 year housing land supply.	undertake an initial assessment of this site as part of the Preferred Strategy. The objection site was submitted as an Alternative Site as part of the Preferred Strategy consultation/ In preparing Background paper 8 as part of the Deposit consultation documentation, a colour coded 'assessment' against the Preferred Strategy was undertaken to ensure that alternative sites were treated similar to candidate sites. The Background Paper acknowledged that the appeal decision established the broad principle of development in this location. However, it also referenced that sufficient provision existed in Mynydd Isa in the form of commitments. The site is a large rectangular shaped parcel of land which adjoins the settlement boundary at the Parc Issa housing estate off Bryn Road to the north of Mynydd Isa. The site comprises open fields bounded by mature trees and hedgerows. The site adjoins an existing development site which was put forward as a housing allocation as

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				removed in the early part of the plan period as the site is completed. In such circumstances, the Council have raised no other reasons why this site should not be allocated. There are no technical reasons why it would be unsuitable for development. Indeed, Mynydd Isa is identified as a Local Service Centre in the Draft LDP. Local Service Centres are the second tier of settlements (out of 5) in the LDP. Mynydd Isa is therefore considered to be a sustainable location for residential development to accommodate between 35% and 40% of housing growth over the plan period. The site represents a logical extension to the settlement following the completion of the Phase 1 site allowed on appeal. Mynydd Isa contains a range of services and facilities and benefits from regular bus services to nearby towns. It includes two primary schools and a secondary school as well as a range of shops, employment opportunities, pubs, a doctors surgery, a pharmacy and a library.		part of the UDP which was not included by the inspector but was later allowed on appeal. Despite the fact that the principle of development in this location has now been established, this does not automatically mean that candidate site MYN015AS is suitable for development. The UDP Inspector removed this site from the UDP stating “I find because of its location, shape, landscape and the surrounding topography, it would be poorly related to the existing pattern of development and a significant unnecessary incursion into the rural area.” Part of the site has now been allowed on appeal, however this does not mean that the remaining site is favorable for development at this time. Mynydd Isa is a Tier 2 Local Service Centre settlement and is considered to have adequate housing commitments, negating the need for further greenfield allocations. The appeal site was allowed at the scale it was on the basis of making an exception to policy under TAN1 that has now been revoked in recognition by the Minister that it was promoting unplanned speculative

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The Council's own Settlement Service Audit, which was produced as part of the previous Preferred Options Consultation, identified that there had been a slight decline in population between 2001 and 2011 with a very modest increase in the number of dwellings between 2000 and 2014 from 1920 to 1992. This is an increase of only 72 dwellings over a 14 year period (or only 5 dwellings per year). Indeed, it is of note that in the previous UDP covering the period from 2000 to 2015, Mynydd Isa was identified as a category B settlement which was intended to provide growth up to 15% over the plan period. The Council's own settlement growth schedule for the UDP plan period indicates that Mynydd Isa only provided a 7.2% growth rate against the 15%. Mynydd Isa has therefore provided significantly less development than was expected over the previous plan period despite being a sustainable location for residential development. The settlement clearly therefore has capacity to accommodate additional development over the next plan period.		development that was harmful to communities such as Mynydd Isa. The objection now in effect seeks an exception to the exception which is disingenuous and seems to simply be an exercise in adding value to land, rather than seeking sustainable development. Development of this candidate site will create a major incursion into the open countryside, at a time when Mynydd Isa has two sites which have been allowed on appeal, land North of Issa Farm for 59 dwellings and at Rose lane for 58 dwellings. Both of these sites have yet to be completed, but will provide 117 dwellings for Mynydd Isa over the plan period. The site has an area of 2.2Ha and has the potential for over 60 dwellings (at 30 per Ha). The site has no direct access to the adopted highway however it is presumed that the proposal is for it to be accessed via Llys Gwynant and the development that is currently under construction. Highways have raised concerns regarding candidate site MYN015AS. The current development site adjacent to the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						candidate site includes 59 dwellings; the addition of a further 60 dwellings from the candidate site is considered to be a cause for concern, related to the joint impact on the safe operation of Llys Gwynant and the Bryn Road junction. The close proximity of the Argoed High School impacts on the operation of the Llys Gwynant/Bryn Road junction which becomes congested during the periods at either end of the school day. Highways therefore require the submission of a Transport Statement in order to enable any further consideration of this site. Candidate site MYN015AS has not been allocated within the LDP due to concerns raised by Highways and the Council's view that the development of this site would result in harm to the open countryside. The two appeal sites within Mynydd Isa will provide sufficient growth for the settlement over the plan period, with 117 dwellings committed, representing a further 6% growth of Mynydd Isa since 2014. There are also sites allocated in nearby settlements including New Brighton, Mold and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Buckley which will provide growth to support the wider area. In conclusion, the Plan will provide sufficient growth in Mynydd Isa and a further allocation is not necessary or appropriate at present.
586	HN1: New Housing Development Proposals	PEN037	Object	We have set out under policy STR1 our views as to why the housing requirement figure in the LDP will not adequately meet housing needs over the plan period and should therefore be increased. This therefore leads to the need to allocate additional sites for residential development to meet identified housing needs over the plan period. In order to meet the test of soundness (particularly Tests 2 and 3 that the Plan must meet assessed needs, must deliver and be viable and flexible), additional allocated sites are therefore required. In the context of PPW10 it is of note that, other than the 2 strategic sites set out in policy STR3, the Council rely on only 11 allocated sites in policy HN1. These 11 sites in total amount to 1874 new dwellings. When the contributions from the 2 strategic sites in policy STR3 are added this gives a total number of units on allocated sites of 3499	Proposed Changes a. Site PEN037 should be allocated for housing over the plan period; b. If the site is not allocated it should be identified as a contingency site to provide additional flexibility should the Councils delivery against the LDP fall short; or c. In the alternative if the site is not allocated or identified as a contingency site,	Not accepted. The objectors concerns in relation to the Plans housing requirement figure are fully addressed in respect of responses made to Policy STR1. The conclusion is that the Plan has provided an appropriate level of housing and it must be stressed that Welsh Government in their formal submissions to the deposit plan are “generally supportive of the spatial strategy and level of homes and jobs proposed and has no fundamental concerns in this respect’. The Plan’s total housing supply, as set out in the Housing Balance Sheet comprises a number of elements including completions to date, commitments, allowances for small and large site windfalls and allocations. The Plan therefore incorporates sufficient flexibility in terms of size and type of site and different types of builders. There has previously been criticism of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				dwellings against the requirement of 7950. Only 44% of the housing requirement over the LDP period is therefore proposed to be delivered through allocated sites. This does not amount to a "plan led approach" as required by PPW. Additionally, of those 11 sites, all but 1 are over 3.5 hectares in area with only 3 sites being below 5 hectares. This does not meet the requirements of PPW 4.2.12 in relation to providing a range of sites for all sectors. Additionally, it fails to meet the soundness Test 3 from Background Paper 11 in that the Plan is not sufficiently flexible to meet this requirement of PPW. In Background Paper 10 (Housing Land Supply and Delivery) the Council acknowledge that not all allocated sites will be delivered in the time scales anticipated and they have sought to build in an element of flexibility in the overall housing figure. However, they have not sought to allocate any additional sites or even allocate any contingency sites to deal with such a situation. It is of note that (excluding the 2 strategic sites) 2 of the 11 sites	it should be included within the settlement boundary of Penyffordd to be consistent with the change on the adjoining site (PEN036).	the large number of sites allocated in the UDP and non-delivery and the LDP has sought to take a more focussed approach by identifying sites that are viable and deliverable. The objector is also incorrect in saying that the housing requirement is 7,950 as the published requirement set out in policy STR1 is 6,950. Whilst their case focused on the need for more sites to achieve the housing figure, they have also failed to acknowledge that there is already 14.4% flexibility in the amount of provision made for housing in the plan, over and above the housing requirement figure. In their terms, "additional land" has already been made available. Completions achieved to date, which accord with the Plans proposed overall provision, are a matter of fact. The commitments have been reviewed to include only sites which are considered to be deliverable. The small and large site windfall allowances are a conservative estimate having regard to past trends and the Urban Capacity Study. It is of note that it is established practice for a housing balance sheet to include all these elements. It should also

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				allocated in policy HN1 are sites which have been carried over from the UDP. Together these amount to 309 units. These sites have therefore already been allocated for development for over 19 years yet they have delivered no dwellings whatsoever. Whilst the Council say they are "confident" that they will deliver housing over the plan period, they give no evidence to test this other than reference to "information obtained from developers and land owners". None of the allocated sites, as far as we can see, have been subject to viability testing (as required by National Policy). On this basis there must at least be significant doubt that these sites that have been allocated for more than 20 years and have delivered nothing will deliver over this current plan period. In this regard it is of note that the Council have not undertaken any Viability Appraisals of the allocated sites. Indeed, even in assessing the level of affordable housing proposed for the Plan, the Viability Study made no allowances for ecological factors or other potential site remediation costs even though the Report acknowledged that many sites are greenfield so such issues could be		be noted that HBF are comfortable with the approach regarding commitments and level of windfall allowances. As referenced above the objector only considers provision through 'allocations' and not the total provision in the Housing Balance Sheet which includes other sources of supply. Also, the Council finds the objector's point about site size somewhat contradictory as whilst the objector complains that many LDP sites are above 3.5 hectares, they themselves are promoting a site which is very close to this threshold at 3.48ha and cannot be considered 'small'. Welsh Government advice in para 5.59 of Development Plans manual 3 requires that 'a flexibility allowance must be embedded into the plan'. WG advises that the starting point could be 10% flexibility with any variation robustly evidenced. Experience shows that flexibility allowances are typically between 10 and 20% and the Plan has incorporated a 14.4% flexibility allowance. However, there is no reference or requirement from WG for Plans to incorporate contingency or reserve

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				expected to arise. These were excluded on the basis that they would be "very site specific issues". The Report suggests that any such matters on specific sites, coming forward for development, would need to be taken account of the specific viability test at application stage. However, this is contrary to national advice in PPW. This indicates at paragraph 4.2.21 that, where up to date Development Plan Policies have set out the community benefits expected from development, planning applications which comply with them should be assumed to be viable and it should not be necessary for viability issues to be considered further. It is either for the applicant or the Local Planning Authority to demonstrate that particular exceptional circumstances justify the need for a Viability Assessment at the application stage. This indicates that assessment of viability is a factor which should be considered at Local Development Plan stage rather than being left to planning application stage. As the Council have carried out no Viability Assessments of the proposed allocated sites, this requirement of National Policy has not been met and the Plan is therefore unsound as		sites as that would be counter to the principle of producing a sound and deliverable plan in the first place. All undeveloped UDP sites have been included in the candidate site register to ensure that are assessed alongside submitted sites. Two of these i.e. Highmere Drive Connah's Quay and Well Street, Buckley have been re-allocated after careful consideration. The Highmere Drive site has not been developed as the owners had been unwilling to release the site to the market. However, as a result of discussions between the owner, agent and lpa, a number of background studies have been completed and the owners are in discussions with house builders. The site has no constraints and only a small level of objection and is considered to be viable and deliverable. The Well Street has not come forward due to delays with Welsh Government releasing the site to the market. However, Clwyd Alyn Housing Association are in the final stages of purchasing the site

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				it cannot demonstrate that sites are viable or that allocated sites can be delivered (Test 3 of soundness in Background Paper 11). Indeed, paragraph 4.2.21 of PPW indicates that the weight to be given to a Viability Assessment as part of a planning application is a matter for the decision maker and that in making such a decision, the decision maker will have to have regard to all circumstances in the case including whether the Development Plan and viability evidence underpinning it are up to date. Such an approach is also contrary to the emerging Development Plans Manual (Edition 3). This indicates at paragraph 5.8.1 that one of the key tests of "soundness" of a Plan is to demonstrate it is deliverable and viable. The hierarchy indicates that at deposit stage, key site specific viability appraisals should be undertaken. Paragraph 5.8.5 indicates that for the Development Plan Viability Testing includes high level testing required to give certainty that the Plan and its policies can be delivered, taking account of affordable housing policies, infrastructure and other policy requirements. The document indicates (in bold) that only in		with a view to submitting a planning application in the first half of 2020. The site has no constraints and only a modest level of objection and is considered to be viable and deliverable. Given that both sites are within the settlement boundary and allocated, a planning application can come forward at any time, and ahead of adoption. The Council has undertaken a comprehensive viability study via the District Valuation Service. The Study looks at a number of site typologies in terms of site size and looks at different submarket areas in the County. It is of note that Welsh Government has made no objections in respect of the Viability Study in terms of compliance with PPW or the Development Plans Manual. It is noted though that the objector has provided no viability evidence in respect of the objection site. Ecological mitigation measures are not applicable to all housing sites. They have not been identified on allocated sites to the extent that they would affect their

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				exceptional circumstances should further Viability Appraisals be undertaken at the planning application stage. In failing to undertake Viability Assessments (particularly when relying on so few allocated sites) the Development Plan currently fails to meet the Test of soundness as it fails to comply with advice in PPW and the Development Plans Manual and the requirement for viability testing as part of the Development Plan process. In summary therefore there is a need to allocate additional sites under policy HN1 for the following reasons:- 1. To meet the correctly identified need for housing over the plan period in policy STR1 (see our comments in relation to this policy); 2. To provide flexibility as required by National Policy; 3. To provide a range of sites not just to rely on a small number of large sites as to fail to do so would not comply with PPW;		viability or delivery. The objectors reference to 'site remediation' costs seems to indicate that there are fundamental issues associated with most sites and in particular the Council's allocated sites. The Council's allocated sites are not 'problem' or 'exceptional' sites and do not require 'abnormal' site remediation works. Clearly, the same matters apply to the objection site and the objector has failed to provide sufficient evidence to demonstrate that there are no constraints to the development of this site that affect viability and deliverability. In terms of the objectors reference to para 4.2.21 of PPW10, this clearly states 'It is for either the applicant or the planning authority to demonstrate that particular exceptional circumstances justify the need for a viability assessment at the application stage'. If unforeseen costs arise on an allocated site then there is the scope to adjust the percentage affordable housing requirement based on detailed viability evidence. But this is not the present scenario with the allocated sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				4. To account for the small number of allocations which are predominantly on large sites and some of which have been allocated for a considerable period without delivering any units; 5. To avoid the situation where the Plan itself acknowledges that it will not be able to demonstrate a 5 year land supply towards the end of the plan period. In order to meet these requirements additional sites should be allocated. In the alternative, if additional sites are not allocated, there is clearly a requirement for the Council to identify contingency sites which would be brought forward should the Plan fail to deliver against its trajectory or against a 5 year housing land requirement (see our comments in relation to policies STR11 and Section 13 on Monitoring). 2. Proposed Additional Site Allocation Candidate site PEN037 (land north of Wood Lane Farm, Penyffordd) should be allocated for housing to assist in providing the additional		Despite criticising the Council for lack of detailed viability assessments on its allocations, the objector has not provided viability evidence for the proposed site. It is unclear whether the objector is arguing that the proposed site can or cannot meet the affordable housing requirements set out in policy HN3 for example. See above comment. Whilst not disagreeing with the broad principle in PPW, it is not always going to be the case that all viability issues are capable of being dealt with at the development plan stage, where detailed and final designs and layouts for sites are not required and unlikely to be available. The absence of any attempt at a viability assessment for the objection site seems to be totally at odds with the principle set out in PPW of dealing with the issue at the development plan stage. In their representations on the Plan, Welsh Government comment 'The Council has undertaken a significant amount of work in respect of place making, delivery and infrastructure to inform the Deposit Plan in line with

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				numbers and flexibility over the plan period. It is important to note, in this regard, that as part of the Council's earlier traffic light system in identifying sites which met with their settlement strategy and had no known development constraints, the site was identified as "green" indicating that, in the Council's view, the site complies with the Council's Preferred Strategy and is not considered to be affected by any fundamental constraint and has potential to meet the Plan's Growth Strategy subject to satisfactory technical assessments. The site is under option to a developer with experience of developing sites in the local area who have undertaken the appropriate technical assessments. Full copies of these assessments can be provided to the Local Planning Authority. However, they are summarised below:- • A full Tree Survey has been undertaken which identifies important trees. The important trees identified would not adversely affect the ability of the site to deliver housing overall. A full Tree Constraints Plan has been prepared by the consulting Arborist and will be		the DPM (Edition 3). This is supported' (Council's emphasis in bold). As referenced earlier, no objection has been made in respect of the Viability Study. In the context of preparing a development plan and evidencing 'allocations' the Council do not consider that it reasonable, in the absence of detailed layouts and the level of detail associated with a planning application, to be able to undertake detailed viability assessments of each allocated site. The Council has worked closely with the proposers of each allocated site in terms of viability and deliverability, within the framework provided by the Viability Study. Given the objectors focus on viability it is surprising that a viability study has not been provided as part of the objection and following the objector's own logic, the objection site cannot be found sound either in the absence of a study. The points have been commented on above. In respect of point 5 given that the minister has revoked the guidance in TAN1 there is no longer a requirement to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				taken into account in the preparation of any residential layout. • An Ecological Assessment has been carried out by TEP which identifies no implications for designated wildlife sites and no protected or invasive flora species present within the site boundary. The Report identifies no implications for amphibians or reptiles, hares, hedgehogs, badgers or water voles and otters as a result of the proposals. A number of the trees are identified as having potential for bat roosting and the Report recommends reasonable avoidance measures. • A Ground Investigation Report has been prepared by Earth Environmental and Geotechnical which identifies low potential risk. • A Transport Statement has been prepared by Curtins which concludes that, from a traffic and transportation perspective, there are no reasons why the development of the site proposed should not be granted planning approval. • A Drainage Strategy has been prepared by Waterco which advises that surface water run off can be discharged to a watercourse subject		provide or maintain a 5 year housing land supply thereby totally negating this part of the objector's case. The objector is directed to the now adopted Development Plans Manual ed3 which sets out the basis to monitor housing land supply against a housing trajectory. A trajectory was produced and made available as part of the deposit LDP consultation which demonstrated how the provision in the plan would meet the plan's housing requirement throughout the plan period. Housing delivery, as per the DPM, is monitored against the trajectory and, post adoption, via an Annual Monitoring Report. Any consistent variation in provision away from the trajectory will be one of the indicators that may prompt the need for a plan review where, in terms of housing supply sites can be reviewed at that stage. With reference to the deposit trajectory and later update following the 2019 Housing Land Statement produced by the Council, it is a matter of fact that in the first 4 years of the plan period, the annual rate of housing delivery

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				to greenfield run off rate using sustainable drainage systems and that, subject to a surface water removal scheme, foul sewage can be connected to mains and that this solution has been agreed in principle with DCWW. • A Landscape Strategy has been prepared by Tirlun Barr Associates. This indicates that the LAND MAP identifies the site visually as being classified as "urban land" with the identified urban character including road noise, movement and loss of tranquillity as well as visible presence of street lighting and urban elements such as housing. The document sets out a strategy for landscape design which respects the presence of existing trees and hedgerows and recommends additional planting. • Agricultural Land Classification which identifies the site as being Grade 3B. The technical assessments referred to in relation to the Council's traffic light system have therefore been undertaken. There are no technical reasons why the site could not deliver housing over the plan period. Indeed, the fact that the site is		exceeds the average housing requirement, and very closely aligned to the average rate of plan provision indicating the plan is on track to meet its housing requirement and that there is no shortfall in supply that should warrant the need to add more sites to the plan. The updated Development Plan Manual contains no requirement for contingency sites to be allocated in the Plan. The Council accepts that in terms of comparison with the Preferred Strategy and based on the detailed assessment of candidate sites, this site scores well. It is potentially a logical urban extension for future consideration, between existing built development, the consented site to the north and roads forming strong physical boundaries to the east and west. However, the Plan has a spatial strategy which seeks to direct sites to the most sustainable settlements and sites and is not based on each settlement having a housing allocation. It must be noted that there are two tiers of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				subject to an option agreement with a local developer means that, subject to being allocated, it would be likely to deliver in the early part of the plan period. It is of note in particular with regard to Penyffordd that this site was only 1 of 2 given the "green" notification in the traffic light system. The other site was more isolated from the settlement. This site was therefore effectively identified as the best site within Penyffordd to meet the Council's Preferred Strategy by the Council's own document. The Preferred Strategy Consultation Background Paper commented that:- "Delivering the Preferred Strategy is a critical purpose of the LDP and the Council needs to be confident that any allocated site has a realistic prospect of being developed for its intended use within the plan period up to 2030…. In the event that there are more candidate sites than needed, only those sites which would not undermine the Preferred Strategy and perform best following the planning and technical assessments will be allocated in the Deposit Plan".		more sustainable settlements above the Tier 3 settlements and also that there are another 21 Tier 3 Sustainable Settlements. The settlement of Penyffordd / Penymynydd has already received a significant level of the growth apportioned in the Deposit Plan to Tier 3 settlements as a result of two commitments at Rhos Road South (40 dwellings) and Hawarden Rd (32 dwellings) and the allocated site at Chester Road (186 dwellings). In addition a further planning permission for 36 no, over 55's retirement apartments was granted on appeal on 27/04/20. This represents some 296 dwellings in the settlement which is on top of the completions during the first few years of the Plan period arising from UDP allocations. Although the LDP has moved away from settlement growth rates for different tiers of the settlement hierarchy, it is useful to look back at the context in the UDP which identified a growth band of 8-15% for category B settlements. Over the UDP period the settlement saw actual growth of 21% as a result of 282 completions which was well in excess of the growth

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				This comment is important in relation to the evolution of sites within Penyffordd. Clearly, site PEN037 was considered suitable for development in accordance with the Council's Preferred Strategy by the Council. The appropriate technical assessments have been undertaken. The Council have given no technical reason for not allocating the site. The Council acknowledge in Local Development Plan 08 (Candidate Site Assessments) that "The site would represent a continuation of the principles embodied in the Wood Lane Farm scheme whereby, in this location, the A550 is considered to represent a firm and defensible outer edge to the settlement. A similar principle was also applied in the Rhos Road (north) site which was allowed on appeal. Development would not harm the wider open countryside nor would it harm the character and form of the settlement". The Council have given no technical reasons why the site could not come forward as an allocation. However, they have ruled it out on the basis of the level of commitments in the settlement of Penyffordd and on that basis they suggest that it would be		band. In the first 4 years of the LDP period the completions of 77 units equated to a 5.7% growth. As at April 2019 there were commitments of 267 units on the three earlier appeal sites which increases growth over the Plan period to 21%. The recent appeal decision for the over 55's apartments increased growth to 23.4% and the inclusion of say 100 units on the objection site would increase further to 29.5%. This settlement has more than provided a reasonable quantum of housing in the LDP Plan period. The references to various background studies are noted as is the reference to the developer, but this does not change the fundamental concerns about the level and pace of development which this settlement is and will experience and disproportionate amount of development having regard to the Plans spatial strategy. The approach taken to this site at this time by the objector, given the very clear context of considerable development having happened and planned to take place in this settlement via the UDP and LDP, is less aligned to making a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				inappropriate to allocate this site in the current plan period. Community cohesion and the capacity of Penyffordd to accommodate additional development was recently addressed by an Inspector in relation to land at Chester Road (APP/A6835/17/3174699) (Site PEN038 referred to above). Indeed it was one of the reasons for refusal by the Council. The issue was addressed in paragraphs 205 to 227. The Inspector concluded on this issue that:- "No compelling evidence has been provided to demonstrate that the proposal would not be accessible to or accommodated by the existing facilities in Penyffordd, such that would render the scheme incompatible to the WBGA or PPW in terms of community cohesion" (paragraph 222). He went on to say that:- "I have found no compelling evidence to suggest that existing services and facilities in Penyffordd could not accommodate the proposal, which would also increase patronage to such services, facilities,		sustainable development proposition, and more in line with a further speculative approach that seeks to capitalise on previous recent developments and is more akin to simply adding value to land in that context, than planning sustainably for this community without causing further development harm. Policy STR2 sets out the hierarchy of growth to the tiers in the settlement boundary. Tie 1 Main Service Centres are the 'main' locations for new development, Tier 2 Local Service Centres are the locations for more modest levels of development whilst Tier 3 Sustainable Settlements will be the locations for 'housing development related to the scale, character and role of the settlement'. The policy clearly adopts a sliding scale of growth appropriate to each tier and the level of growth proposed by the objector in this settlement is not considered acceptable. The objection fails to identify

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				as well as to local clubs and associations. Whilst the proposal would be a material expansion of the village, the objections relating to social cohesion have not been made out. I conclude, therefore that the proposed development would not cause significant harm to the community or undermine the principle of the creation of cohesion communities, which forms the basis of the Welsh Government's Planning Policy" (paragraph 227). These conclusions addressed the concerns of the Local Authority and the community in this regard based on considerable evidence presented and cross examined at a Public Inquiry. The conclusions also relate to the immediate future (as it was a Section 78 Appeal) rather than a 15 year plan period. The Council have produced no new evidence on capacity to accommodate development over the plan period. The Council's only reason for ruling out the allocation of this site is therefore not borne out by full tested examination of the evidence. In terms of the requirement for a plan led approach it is also therefore necessary to examine how the 2 commitments have come about. The		where in the trajectory the site would be delivered in terms of start, finish and number of units per annum. The objector has misinterpreted the colour coded assessment of candidate sites, published alongside the Preferred Strategy. The background paper should not be interpreted as green sites being better than amber sites, green sites being allocated or amber sites not being allocated. It was a broad brush assessment as to whether each site accorded in principle with the Plans Preferred Strategy. It was clearly to be followed up by a more detailed site assessment and to be considered against a variety of other material planning considerations as part of a planning balance. Given that there were a large number of 'green' sites identified, it is a false logic to assume all green sites would then be allocated as clearly that hasn't happened. The Council has clearly explained in Background Paper LDP08 why candidate site PEN037 was not considered suitable or appropriate to be allocated or included in the settlement which was based on the level of development already

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				2 main commitments are the immediately adjoining site (PEN036) and also the site to the north west of Penyffordd (PEN038). Both these sites where classified as amber in the Council's initial Preferred Strategy Consultation. However, the owners/developers came forward with applications on the sites which were refused by the Council. Both were taken to appeal and were successful at appeal on the basis of the Council's lack of housing land supply. Therefore, by virtue of the Council's inability to provide a 5 year housing land supply through the previous UDP, these other two sites (which are clearly less suitable for development than site PEN037) now have planning permission and, on the basis of these planning permissions, the Council are now seeking to exclude site PEN037 as an allocation and indeed from the settlement boundary. The implications of this are threefold; 1. The "best" site in Penyffordd, as assessed by the Council in their traffic light system, is now excluded as an allocation as a result of the		committed in the settlement. The earlier appeal decisions in the settlement are premised on the [then] 'significant' weight to be attached to increasing housing land supply as set out in para 6.2 of PPW. The most recent appeal decision was for a specific type of development comprising over 55's apartments, for which a specific need had been identified locally by the community. Both sets of decisions are a different context than is now presented by the preparation of the development plan. Also TAN1 has now been revoked in recognition of the harm excessive unplanned growth was having on communities like Penyffordd and this principle is no more clearly applied than in this settlement and the LDP, in terms of not perpetuating such potential harm by further excessive growth in one plan period. The early years of the Plan period has demonstrated that housing land is being delivered at the rate envisaged in the Plans housing requirement and there is therefore no lack of supply. Welsh Government in its formal representations on the Plan have

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Council's inability to demonstrate a 5 year supply; 2. As the Council are proposing no housing allocations within Penyffordd, residential development within the plan period will not have been plan led but will have resulted from the Council's failure to provide adequate housing land supply over the previous plan period and to date. The Council's approach in excluding site PEN037 only serves to perpetuate this trend. Residential development in Penyffordd over the period of the LDP will therefore not be plan led; 3. Should the Council's delivery against the LDP trajectory fall short, it is likely that additional sites will be required. As the site at PEN037 is acknowledged by the Council to be the most suitable this could potentially lead to a breach of the settlement boundary over the plan period.		no objections to the level of growth proposed. The development plan is also concerned with meeting the needs of the County in terms of its spatial strategy and housing distribution. The Plan apportions most growth to the top three tiers of the settlement hierarchy and within Tier 3 there are a large number of settlements, apart from Penyffordd / Penymynydd. The Plan is not concerned with just this one settlement and there are many other representations seeking the allocation of sites in other Tier 3 settlements. In terms of a balanced approach to the provision of new housing the Plan should provide an element of choice in terms of location. By contrast, the objectors case is premised on previous proposals have been "OK" so this proposal should be as well. See comment above. See comment above The Preferred Strategy was published for consultation between 09/11/17 and 21/12/17. The Rhos Rd site was allowed on appeal

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				As a result, without the allocation of this site, the Plan will fail to meet the Test of soundness in relation to the overall level of housing (as set out above) and specifically in relation to Penyffordd, will mean that there is no plan led development over the plan period contrary to PPW. The Plan would therefore fail to meet the tests of soundness as it would not be consistent with other Plans and would not meet assessed needs nor be sufficiently flexible. 3. Proposed Changes a. Site PEN037 should be allocated for housing over the plan period; b. If the site is not allocated it should be identified as a contingency site to provide additional flexibility should the Councils delivery against the LDP fall short; or		06/09/16, the Hawarden Road planning application was validated on 13/03/17 and the appeal was determined on 14/02/18 and the Chester Rd planning application was validated 30/06/16 and the appeal allowed on 23/02/18. All of the planning applications were submitted ahead of the publication of the colour coded assessment of the candidate sites. Clearly the applications were submitted on the basis of the Council's inability to demonstrate a 5 year housing land supply in the light of the [then] TAN1. This requirement no longer exists or the 'significant weight' that should apply to speculative sites. The objector has misinterpreted the colour coded assessment of candidate sites, published alongside the Preferred Strategy. The background paper should not be interpreted as green sites being better than amber sites, green sites being allocated or amber sites not being allocated. It was a broad brush assessment as to whether each site accorded with the Plans Preferred Strategy. It was clearly to be followed up by a more detailed site assessment and to be considered against a variety of other material planning

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				c. In the alternative if the site is not allocated or identified as a contingency site, it should be included within the settlement boundary of Penyffordd to be consistent with the change on the adjoining site (PEN036).		considerations as part of a planning balance. As commuted above the objector misinterprets the earlier colour coding of candidate sites in coming to the conclusion that the site is the 'best' in the settlement. As part of a plan led approach a development plan will need to consider all sources of housing supply as part of meeting the Plans housing requirement figure, as set out in the Housing Balance Sheet. The Plan therefore quite rightly includes completions, commitments and allowances for windfalls (large and small) as well as new allocations. The Council has demonstrated delivery in its housing trajectory and there is no objection from Welsh Government. The Plan does allocate land in Penyffordd / Penymynydd as the appeal decision on the Chester Rd site was after April 2018 base date for the Housing Balance Sheet and so it is perfectly acceptable to reflect this speculative decision as

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						part of planned provision in the way set out in the plan. The Council's trajectory establishes that additional sites will not be required. It is not accepted that the objector's site has been identified by the Council as the 'most' suitable site, or "best". Even if new sites were deemed necessary by the Inspector then, following the Plan's spatial strategy, Tier 1 and then Tier 2 settlements would be sequentially preferable. Furthermore, if the Inspector considers that there is a need for additional sites in Tier 3 settlements, then there are another 21 settlements to consider alongside Penyffordd / Penymynydd, where there is already a significant imbalance in the contribution this settlement makes (due to appeal decisions) as opposed to the remaining tier 3 settlements. In the light of Welsh Governments formal representations it is not considered that there fundamental soundness issues associated with the Plan. Given the level of provision through an allocation and commitments (and the recent

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						appeal decision) it is not accepted that the exclusion of the objection site results in the whole Plan being sound. In conclusion, the settlement of Penyffordd/ Penmymynydd will significant growth as a result of four speculative appeal decisions. It is not necessary or appropriate for a further allocation to be made.
602	HN1: New Housing Development Proposals	Land off Church Road, Northop	Object	We object to the proposal to retain green Barrier on land off Church Road Northop and therefore exclude it from the list of potential sites in Policy HN1. The site is unconstrained by other local or national designations that would rule out housing development. It is in an accessible location with services and facilities nearby plus access to public transport. Development can be achieved without harm to the landscape or biodiversity and there are no technical reasons to prevent development for housing. Retention of the Green Barrier is not supported by robust proportionate and credible evidence. If the plan is to meet assessed needs and contribute to the achievement of sustainable development it needs to take a more cautious approach to the designation of Green Barriers and add more housing sites to increase the scope	Amend green barrier to include site as allocation for residential development.	Not accepted. Northop has been categorized as a Tier 3 Sustainable Settlement in the LDP. Policy STR 2 sets out that Sustainable Settlements will be the locations for housing development related to the scale, character and role of the settlement. The plan also clearly states in paragraph 5.13 that ''The Plan intentionally avoids creating the perception that every settlement in every tier must contribute towards growth through having a housing allocation.'' Although there have been no development completions in Northop in the first three years of the LDP, during the UDP period Northop grew by 21.9%. (80 dwellings) This was a very significant level of growth considering Northop was a Category B settlement with an

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				for new residential development during the plan period. Unless this happens it cannot be described as positive and sufficiently aspirational. Hence it would fail the soundness test 2.		indicative growth rate of between 10% and 15%. There is some opportunity for development in the village, as a small parcel of undeveloped land has been included within the settlement boundary towards the end of Church Road. The site comprises 7 fields of varying sizes and adjoins the settlement boundary along the rear of properties on Church Road to the south and along A5119 Northop Rd to the west. The broadly triangular shaped wedge of land is bounded by the A55 to the north. Although the site has distinct physical boundaries it has the character and feel of open countryside which is important in providing an open setting to this part of the settlement of Northop. To the east the site is bounded by a sewage works and to the west by a cemetery and cricket ground so the whole area enclosed by the A55 is open land. To the south of the cricket ground is the boundary of the Northop Conservation Area and a number of listed buildings in the vicinity of and including St Eurgain and St Peters Church.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						The site is a large area of land extending to the north of Northop and at 6.9 ha could accommodate 208 dwellings which is a significant level of development. Such a scale of development is considered to be out of keeping with the relatively small size, character and form of this tier 3 sustainable village. In particular, whereas the cricket ground presently has an open setting, it would be engulfed and encircled by built development if the site were developed. This would fundamentally alter in a harmful manner the character and appearance of this part of the settlement and the setting of the historic core. The site was submitted as an omission site for housing as part of the UDP. The Inspector did not recommend the inclusion of the site and commented 'Although the site is well contained by existing development, the A55 and the A5119, it is an area of countryside which contributes to the rural setting of Northop. Moreover because of its open nature it is designated as part of the green barrier in order to protect a major road junction from visually

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						intrusive development. In a situation where there is no need to release more greenfield sites to meet housing need, where the land meets the purposes of green barrier designation and contributes to the rural setting of Northop, I see no reason to allocate all or part of the site for housing purposes or to include the land within the settlement boundary where all things being equal there would be a presumption in favour of development'. The Inspector also noted that 'The objection site is over 7ha in extent and could accommodate a significant level of development'. In the context of the LDP where the provision for growth has been made in other sustainable locations, as demonstrated in the Housing Balance Sheet and policy STR3 and HN1, it is considered that the comments of the Inspector are still relevant and applicable. The objection refers to there being no technical reasons to prevent development yet there are a number of constraints yet to be resolved as no further background

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						evidence has been submitted with the evidence. On the original candidate site, Highways Development Management Officers considered that the site was suitable subject to a Transport Assessment. Further comments were that 'Additional vehicular traffic generation onto Church Road should be limited due to the nature of the road and the limited available visibility from the existing access road. A ghost Island and right turning lane is likely to be required on Northop Road, the A5119'. In a subsequent planning application (055807) which was refused on 21/03/17 one of the reasons for refusal related to a lack of evidence leading to uncertainty relating to the impact of development upon the A55(T). Dwr Cymru/Welsh Water requested clarification of surface water drainage details and the submission of an Odour Assessment given the site's proximity to the Northop Waste Water Treatment Works and the need to assess impact on occupiers of proposed development. Natural Resources

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Wales also requested the submission of a Revised Flood Consequences Assessment in order to assess whether the consequences of flooding can be acceptably managed. A reason for refusal on the application related to concerns about surface water drainage scheme, FCA, and odour assessment being unresolved. Despite these clearly being in the public domain, no further technical information has been provided as part of the objection to demonstrate that these concerns can be overcome. Green barrier designations have all been reviewed as part of the LDP Deposit Plan the results of which is contained in the Background Paper 1: Green Barrier Review. This objector has submitted a separate objection to the Green Barrier and this is dealt with in full under objection ID 603 to policy EN11 Green Barrier. In the context of the purposes of a green barrier in PPW, the justification for this green barrier is: to manage urban form through controlled expansion of urban areas, assist in safeguarding the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						countryside from encroachment and to protect the setting of an urban area. The countryside setting for the historic village of Northop is important as it protects the setting of the conservation area and various listed buildings. It is a very important function of the green barrier in this location. The green barrier will therefore be an important planning tool in managing urban form, and protecting the open countryside setting of this settlement. It will also assist in resisting the inevitable future pressure for development associated with the Red Route although the timescale is presently unclear. The LDP review provides the opportunity to re-assess this once the route and implications of the Red Route are more fully understood. Rather than taking a cautious approach to the designation of green barriers, the objector's stance to allocating housing seems cavalier and not based on sound sustainability principles, the allocation of land for housing for housing's sake, to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						simply add value to land. In conclusion, Northop is a relatively small Tier 3 settlement where the scale of development proposed is too great for Northop and the location of the site is in a very sensitive area of Green barrier. Protection of the green barrier is vitally important to retain the open setting for the historic character of the village. A number of unresolved constraints also question the viability and deliverability of the site. All these matters make this site unsuitable for a housing allocation in the LDP.
607	HN1: New Housing Development Proposals		Support	It has been brought to my attention that yet again I see Developers have submitted a bid for planning in the Tan-Y-Felin fields area. The reasons against this development 5 years ago have not changed in any way. Please find my objections below. I have lived here for 27 years, during the winter months this road becomes impassable, the gradient of this estate has made it unfriendly for the majority who live here, unfortunately for us who live here selling our homes in an area not desired is extremely difficult. The road is a dangerous now before any extra traffic is added. Adding more homes		Noted. The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				to an already bleak and impassable area is the most illogical idea I know. Whatever one does the gradient of Tan Y Felin will always remain the same. I feel that adding more houses to this area will eventually cost lives during the winter months. The water pressure in this area has always been extremely bad, and the sewers to not cope with the houses that are already here. There is other useable land in the area that is not at the top of a hill, why make life difficult during the winter for more families! Apart from the obvious in the area regarding schools, doctors, shops, recreational facilities, if these aren't sufficient for the people in the area then adding more houses/homes will not solve those problems. For an area that doesn't have an abundance of employment available why build here, when people will have an increased carbon footprint caused by commuting to work. Climate change is happening now, we are supposed to be addressing this situation not adding to the problem!		
616	HN1: New Housing Development Proposals		Support	I am a resident of Tan Y Felin in Greenfield. I have lived on this estate since it was first constructed back in 1990. Over the years we have see the estate grow from a quiet estate to a busy one. I am concerned about		Noted.The LDP does not include an extension to the Tan Y Felin estate as an allocation within the plan. Candidate sites GRE002 land at Tan Y Felin, Greenfiled and GRE008 Land west of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				the possibility of the development at the fields at the top for the reasons listed below. • Access to the top of the estate has become very busy and congested with cars needed to be parked in the road outside properties on both sides. This causes blind spots, for both drivers and pedestrians and often makes negotiating the hill difficult for homeowners and emergency services. • The main access road, Greenfield road is already busy without extra traffic and whilst there is already a 30 mph speed limit this road can be difficult to pull out on. The same applies to the coast road if access was to be gained from there. • Local amenities are not fit for more residents. Yes we have plenty of supermarkets but the local Doctors are difficult to get appointments in. Fortunately I have not had to register with a GP for a while but believe finding a new surgery is difficult. Holywell town centre is going through a period of change but still has a long way to go for providing for the town. Leisure and Library facilities are no longer Council run and despite being run well would need to extend which isn't financially viable. • The local primary school is practically full and would certainly not be able to cater for the amount of children extending this estate would		Greenhill Farm, Bryn Celyn have not been allocated within the plan therefore your objection to the LDP has been noted as a support to the exclusion of these sites.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				bring which would result in parents being forced to take their children to schools not in their catchment area. • There have been new developments (Tir Glas on the coast road), construction on Greenfield road opposite Mae Y Dyffryn (although remaining half built) and plans for the old LLeusty hospital, Workhouse and Natwest Bank being earmarked for residential development. • The fields at the top of Tan Y Felin are home to various forms of wildlife such as bats which would be lost if development went ahead. I would appreciate my comments and objections being taken into account during the public consultation. Holywell and the surrounding area has been through a period of decline over recent years and it is finally beginning to feel as though positive action is taking place, I feel that to build more houses in the area would knock the regeneration of the town back. Please let us get Greenfield and Holywell back to it's former glory without further pressures.		
618	HN1: New Housing Development Proposals	BUC047 (AS) Megs Lane, Buckley	Object	The site is well placed in relation to Buckley, a main service centre, and a principal location for new housing development which reinforces and contributes to sustainable settlements.	• The site should be allocated for residential development in Policy HN1. Consequential	Not accepted. Buckley is a sustainable settlement and has been categorised in the settlement hierarchy as a Tier 1 Main Service Centre. During the UDP plan period Buckley grew by 17.4%, as a Category A settlement the aim

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				An outline planning application for residential development (059387) was refused on the 11th March 2019. This application sought to address issues raised in a previous application (057056) which was refused by Flintshire Council on the 19th July 2018 showing a potential development for up to 85 dwellings. The site is genuinely capable of being delivered and could be brought forward rapidly subject to planning approval. Notwithstanding the apparent over-supply of housing land within the County Council area that has now miraculously being identified in the Deposit Plan, it has been the case for some considerable time that the Council has not been able to demonstrate a 5 year housing land supply, nor produce any Joint Housing Land Availability Study to evidence any land supply. The historic shortfall in housing delivery does not appear to have been taken into account in assessing the current need and future supply.	Changes Required • The settlement boundary for Buckley should be adjusted to encompass this site (Policy PC1). • The Green Barrier policy boundary should be amended to exclude this site (Policy EN11). • The Proposals Map(s) should be adjusted accordingly. SUMMARY OF REASONS • The site is well placed in relation to Buckley, a main service centre, and a principal	for growth to be within 10% to 20% was therefore fulfilled. The LDP makes provision for growth in Buckley through the allocated site at Well Street and as a result of 175 completions in the first three years of the Plan period and commitments of 138 units as at the Plans Housing Balance Sheet date of April 2018. This shows that for the first 3 years of the LDP plan period there is an appropriate level of development for a Tier 1 settlement and a healthy number of commitments coming forward. The objector mentions recently refused planning permissions on this site, and these recent decisions are material to the assessment of this alternative site given it is the same site as refused twice, and where the policy context in the UDP used to refuse the site is the same as set out in the deposit LDP. As TAN1 has now been revoked and with it the requirement to demonstrate a 5 year land supply, the Council have clearly demonstrated via the deposit housing trajectory that there is sufficient housing provided by the plan and that it is being delivered in the first four years of the plan at the rate envisaged by

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The Deposit Plan acknowledges there is a lack of suitable and appropriate brownfield land in the County (11.2). Greenfield sites are therefore required to fulfill future housing requirements. The uncertainty over actual potential housing land supply is evidenced by the inclusion of large windfall sites in the overall mix. Whilst some allowance for small windfall sites is to be expected - and arguably would not materially impact on overall supply levels – relying on a contribution from large windfall sites highlights the likelihood that allocated sites may be expected to incur delays or limitations in delivery; and also that other potentially allocate-able sites (given the apparent scale of available sites) are also constrained. The site is capable of fulfilling the various other development criteria set out in the Deposit Local Plan. The site does not materially harm or undermine the Green Barrier. The Green Barrier to the south of Buckley seeks to prevent coalescence of Buckley with built development at Padeswood and to	location for new housing development which reinforces and contributes to sustainable settlements. • The site is genuinely capable of being delivered and could be brought forward rapidly subject to planning approval. • The site is capable of fulfilling the various other development criteria set out in the Deposit Local Plan. • The site does not materially harm or undermine the Green Barrier.	the plan's trajectory. There is therefore nothing materially different to the two recent refusals that should warrant coming to a different view now. The majority of the site is within open countryside and green barrier. The only part of this site within the settlement boundary and not within the green barrier is a small gap between frontage ribbon development onto Megs Lane, but it is too small for an allocation. The area is characterised by a patchwork of varied sized fields bounded by mature hedgerows. The topography of the site is gentle sloping south towards Spon Green Farm. The site has an open aspect affording wider views of the surrounding countryside to Hope Mountain and Moel Fammau, contributing to an overall sense of openness. The frontage development along the southern side of Megs Lane forms a definite physical feature on the ground which creates a strong edge to the settlement boundary and to the green barrier designation. The site relates better to and forms an integral part of the open

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				prevent encroachment into open countryside, which provides a setting to the built form of this part of Buckley. However, the Padeswood Cement works is an isolated development within a much larger swath of countryside, over 1km distant from the site. The next nearest settlements to the south and south-east for which the barrier might conceivably be relevant are several kilometeres away. This part of Buckley is not as sensitive as other parts of the County where the need for a such a barrier is more evident. The substantial block of Green Barrier designated to the south of Buckley in considered excessive and the deposit plan makes no longer term provision for the managed expansion of this main service centre. The need for the Green Barrier in this location is therefore debateable over normal countryside policies. Even if the site is not to be treated as a formally allocated site, the Deposit Plan nevertheless requires a supply of large windfall sites in order to fulfill its housing requirement over the plan period. This is an appropriate site from which to achieve such a contribution.	• Even if the site is not to be treated as a formally allocated site, the Deposit Plan nevertheless requires a supply of large windfall sites in order to fulfil its housing requirement over the plan period. This is an appropriate site from which to achieve such a contribution. • The Deposit Plan acknowledges there is a lack of suitable and appropriate brownfield land in the County (para 11.2). Greenfield sites are therefore required	countryside and green barrier. The function of the green barrier designation is to retain the open nature of the countryside around Buckley to prevent urban encroachment and to prevent coalescence of Buckley with Penyffordd and Padeswood. Built development in this location would undermine the function and openness of the green barrier. The site is 3.8 ha and although the objector is suggesting that 85 dwellings could be built on the site, a density of 30 dwellings per hectare means up to 114 dwellings could be accommodated. Adjoining this site to the east there were Omission Sites considered at the UDP Inquiry. The Inspector considered that the land should not be developed and in referring to the land at Spon Green stated in paragraph 11.96.10 of the Inspectors report:- ‘’The objection site has a poor relationship with the settlement. It would be a significant encroachment onto an area of green barrier in a prominent area of countryside to the south of the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The Deposit Plan acknowledges there is a lack of suitable and appropriate brownfield land in the County (para 11.2). Greenfield sites are therefore required to fulfill future housing requirements. By virtue of the extent of the Green Barrier surrounding Buckley, some release of Green Barrier land will be required.	to fulfil future housing requirements. By virtue of the extent of the Green Barrier surrounding Buckley, some release of Green Barrier land will be required.	settlement. It would be the first extension beyond the well defined existing line of built development, result in the coalescence of Buckley and Padeswood/the cement works and effectively sever the strategic green barrier.'' It is also important to note that there is continued significant pressure for development on the area to the south of Buckley. This is demonstrated by the planning application adjoining this site to the east, submitted at Spon Green, for 435 dwellings and 450sqm of retail,(ref 058237) which was also refused permission in July 2018. The main reasons for refusal were the fact that the site was in the open countryside and green barrier and represents a consistent assessment of this location in line with the previous recent refusals on this site. As the objection references, another more recent application was refused on this Resubmitted site, on Land South of Megs Lane, Buckley (Ref 059387, March 2019) and again its location within the open countryside and green barrier were the main reasons for

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						refusal and that planning context is the same in terms of the designation of the land in the LDP as it is in the UDP. In this way the Green Barrier designation has been tested and has been found to be reasonable and justified in this location. It is also interesting to note that there has been no appeals lodged against these decisions. These decisions and the UDP Inspector's comments give added strength to the continued Green Barrier designation in this location. The Megs Lane planning application (the same site as BUC047-AS) was submitted by Leith Planning Consultancy, with no mention of developer involvement. There is no mention in the submission or in the extensive Planning Statement that there was a preferred developer or that a particular developer was involved in the scheme. The objector needs to do more than simply provide a lengthy planning statement at the stage reached, by providing clear evidence of the deliverability of this site in line with

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						soundness test 3, but no such evidence has been provided. The objector looks backwards to the UDP to make the point that in their view the under-delivery from that plan should be added to the requirement for the LDP, notwithstanding its different time period. Whilst the Council do not accept this proposition, the objector provides no evidence to justify or quantify this apparent 'shortfall' or why it should be 'transferred' from one plan period to another. No reference is given to where in national planning guidance this provision is set out as government policy and there is no evidence of where else in a Welsh LDP context such an argument has been accepted. Also when the objector references an historic shortfall in housing delivery they seem, without explanation, to limit this to just the UDP where more logically such historic shortfall's may have occurred for other previous plan's. The flaw with such an argument therefore is how far back does one go to apply an apparent 'historic shortfall' and why should this just be limited to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the UDP? This unsubstantiated information cannot be considered in any other way by the Council and carries little weight. There is no requirement by Welsh Government either in PPW10 or Development Plan Manual 3 to 'add on' part of a previous plan housing requirement to the housing requirement in a new development plan. Whilst the Council has been unable to undertake a formal JHLAS it has continued to produced yearly Housing Land Monitoring Studies which form part of the Plans evidence base and which also demonstrate that housing is being delivered in the early years of the Plan. The Council is not clear as to what is meant by the identification of an apparent "over-supply of housing land" in the deposit plan and rather than rely on 'miracles' the Council prefers to use clear facts and evidence. The objector is also now reminded that references to a lack of a five year supply and JHLAS are no longer relevant with the revocation of TAN1 in March 2020. The objector should also note that the system of monitoring supply against a housing trajectory

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						now set out in Development Plans Manual 3 is the same approach taken in the deposit LDP where reference to this monitoring system was used from the draft DPM3 available at the time. Rather than identify an over-provision against the plan's housing requirement which would be illogical, the plan identifies a housing requirement with a 14.4% flexibility allowance added in and as required by the DPM, and demonstrates via a housing trajectory how this will be met throughout the plan period. The trajectory also clearly demonstrates that housing delivery in the early years of the plan period is directly in line with the rate of housing provision identified in the plan. They also fail to acknowledge that a development plan does not actually deliver housing, it makes provision for the housing requirement to be built. Missing from the objector's argument is the interaction of the market, economic conditions, the capacity of developers to build, and the actual level of demand coming forward. These are all factors that are outside of the Council's

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						control. Paragraph 4.2.3 of PPW states "As part of the development plan process planning authorities need to understand their local housing market and the factors influencing housing requirements in their area over the plan period [the Council's emphasis in bold]". The operative phrase would appear to the Council to be that highlighted – over the plan period. The plan period for the UDP was 2000-2015 whereas the LDP period is 2015-2030 and there is no overlap. Equally the LDP evidence base is logically based at 2015 including the Local Housing Market Assessment, as the plan aims to cater for needs during its 'plan period'. Also, even if it is accepted that there was a UDP 'shortfall' that should somehow be incorporated, which the Council do not, and given that the UDP housing requirement adopted the projected amount of household growth at the time from Welsh Government projections, as the LDP provision is two to three times the present level of projected growth, then it can be said that

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						any alleged shortfall has been catered for by the LDP. It also needs to be stressed that Welsh Government have no fundamental objections in their formal response on the Plan and comment 'The Welsh Government is generally supportive of the spatial strategy and level of homes and jobs proposed and has no fundamental concerns in this respect'. The Council does not accept that too much reliance is placed on the contribution of large and small windfall sites in the LDP housing land supply. BP10 (section 2.5) explains that an analysis of past trends has been carried out and this is detailed in Section 4.3 of the Flintshire Urban Capacity Study (June 2019) undertaken by Arcadis. This approach accords with the latest National guidance as contained in Development Plans Manual Edition 3 (March 2020). The Manual advises (para. 5.63) that 'an urban capacity study can inform the identification of site allocations and assist to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						demonstrate delivery of windfall allowance in the Plan'. Both the Arcadis Study and BP10 explain that large and small windfall site contributions used in the Plan are significantly lower than the level of past completions achieved from these sources. It is also the case that the representative body of the development industry, the HBF, agree that the allowances are appropriate. Furthermore, no objection has been made to the level of windfall allowances by Welsh Government in their formal representations. This is a very broad statement which is not supported by any detailed assessment of relevant policy compliance. It is also the case that all development sites will have to adhere to the policies and requirements in the plan. The objector has submitted a separate objection to the Green barrier designation and a full response has been made to that (id195) in relation to Development Management policy EN11 Green Barrier. For completeness a brief summary of that response is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						included here. Clearly the two recent refusals of permission on this site also contain a green barrier assessment and reason for refusal and are materially relevant. In relation to this site land South of Buckley / Padeswood, the green barrier seeks to prevent coalescence of Buckley with built development at Padeswood and seeks to prevent encroachment into open countryside which provides a setting to the built form of this part of Buckley. The land clearly fulfils the purposes for green barrier designation and should be retained. The settlement and Green Barrier boundary follows the line of the houses along Megs Lane and forms a significant physical feature on the ground making it very clear the extent of Buckley. Built development will breach this clearly defined southern limit of the settlement and affect the openness of the green barrier and will set a precedent for further pressure for development in an area where there is already significant pressure as has been as detailed above, but which

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						would be difficult to resist if this site were included in the Plan. As the UDP Inquiry Inspector pointed out '' It would be the first extension beyond the well defined existing line of built development, result in the coalescence of Buckley and Padeswood/the cement works and effectively sever the strategic green barrier.'' The conclusion of the UDP Inspector in supporting the retention of this barrier along the southern edge of Buckley is still considered to apply to the present situation and provides a strong context for continuing to resist harmful development in this location. The site is not necessary or appropriate to be allocated or included in the settlement boundary of Buckley having regard to its green barrier location access and in the light of provision for growth in Buckley. The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a contingency to enable

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify specific contingency sites, and there is presently no requirement in PPW10 or the Development Plan Manual to do so. A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility / contingency to ensure a sufficient housing supply and Welsh Government in their formal comments on the plan have no concerns about the housing growth provided. Given that the site is not considered to be suitable for allocation in the Plan for the clear reasons given, it would not be logical for the Council to consider it as a windfall site as it is simply not a suitable location for development on any basis. Some greenfield land has been allocated in the plan that avoids encroaching on green barriers which is sequentially preferable to considering green barrier land as a first principle, as advocated by the objector. Also as part of the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Green Barrier Review land around Buckley has been removed from the green barrier designation in a less sensitive location to provide potentially more sustainable future growth opportunities beyond this LDP timeframe. Land between Bannel Lane and Chester Road is enclosed on 3 sides by development and it was felt that it did not contribute to the purposes of the Green Barrier designation and the review therefore concluded it should be removed. There are therefore occasions when the boundary of the Green Barrier are drawn back and where development may be allowed in the future. In conclusion it is considered that the Plan makes sufficient provision for development as a whole and also within Buckley, and that it is not necessary or appropriate for a site to be allocated where it would cause clear harm to a green barrier. The site is not considered appropriate to be allocated in the Plan.
626	HN1: New Housing	land adjacent to Maes Celyn, Holywell Road,	Object	The whole site is assessed under reference NOR37 in the Candidate Alternative Sites report (LDP08).	We therefore consider that additional	Not accepted. The original candidate site submission NOR037 covered an extensive

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development Proposals	Northop NOR037		8.10 In response, we have set out our objections on the distribution of development to Policy STR2. We consider that the Tier 3 Sustainable Settlements, and in particular Northop, should accommodate a significantly higher level of development. There are unique economic opportunities available at Northop which justify a higher than proportionate level of growth. Notwithstanding this, we have previously made clear that the site could be allocated in part to a scale that the Council considers is appropriate for the village. We have addressed the points in relation to Green Barrier in our response to Policy STR11.	flexibility should be provided within the supply, by increasing the proportion of development to be distributed to the rural areas, and specifically the Tier 3 Sustainable Settlements. We have proposed an omission site as an allocation for development. Submission of additional site at Land adjacent to Maes Celyn, Holywell Road, Northop. The site comprises approximately 21.44 hectares of agricultural land which is predominately used for haylage. It is situated to the rear of the former pig farm at Maes Celyn, which has been developed	area of land of 22.88 ha for a mixed use development. However in a subsequent representation in relation to the Preferred Strategy, it was suggested by the representor that a much smaller part of the site, land between Maes Celyn and edge of settlement could be considered for development. This smaller part of the site was also put forward by another representor as Candidate Site NOR027 but for protection as Green Barrier rather than for development. This response will consider both the whole and the smaller site. The objection site comprises a patchwork of large fields to the west of Northop, which surrounds and extends beyond Maes Celyn to the South and North to link up to Coleg Cambria. The sites covers a large area of open countryside and part of the site is within the Green Barrier. Development on this scale would surround Maes Celyn which relates better to the countryside and not to the village. It would change the rural character of that conversion scheme and result in an overdevelopment of Northop. Its topography is that of land rising

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					for housing. Access is achievable from Holywell Road. The site could accommodate a residential led mixed use development, which would represent a sustainable extension to the village.	from Holywell Road and development would be extremely prominent in the landscape. Development of the site would merge Coleg Cambia with Northop village and encompass Maes Celyn. It would be a significant encroachment into the countryside and would not represent a logical extension of the village. Although the southern part of the site is not within the green barrier it is important open countryside and agricultural land. A smaller parcel of land between Maes Celyn and The Bays/ Belgrave House has been suggested by the objector as an alternative site. This site is a large rectangular shape, of approximately 2.6 ha, and forms part of a larger field and as such there is no physical boundary along its southern edge. Holywell Road forms the northern edge, Maes Celyn to the west and the properties The Bays/ Belgrave House to the east. The site is an open field at a higher level than the road in an elevated prominent position, Northop has been categorized as a Tier 3 Sustainable Settlement in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the LDP. Policy STR 2 sets out that Sustainable settlements will be the locations for housing development related to the scale, character and role of the settlement. The plan also clearly states in paragraph 5.13 that ''The Plan intentionally avoids creating the perception that every settlement in every tier must contribute towards growth through having a housing allocation.'' Although there have been no development completions in Northop in the first three years of the LDP, during the UDP period Northop grew by 21.9%. (80 dwellings) This is a very significant level of growth considering Northop was a Category B settlement with an indicative growth rate of between 10% and 15%. There is some opportunity for development in the village, as a small parcel of undeveloped land has been included within the settlement boundary at the end of Church Road. The objector explains that the unique economic opportunities for Northop are i) the Coleg Cambria Campus and ii) the proximity to the A55 and the proposed New link road to the A494(T). In respect

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						of i) the College Cambria campus has its own adjoining land holdings should it wish to bring forward development proposals. In respect of ii) proximity to the A55(T) alone is not sufficient to warrant such a large scale of development. Despite the Red Route road scheme being protected within the Deposit LDP there is no certainty over timescales as the scheme still needs to be the subject of public inquiry. It is unlikely to be developed until the latter part of the Plan period and it is not understood how this provides any development 'hook' for the proposed scale of development. Furthermore, the objector refers to 'any development would be phased and it is likely that to come forward over a number of years' and it is queried how the site would therefore address the housing land supply shortages referenced at length by the objector, if it is proposed to be developed in phases. The submission makes reference to a variety of possible uses on the larger site. Some of these are questioned as set out below:

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						• Community building – given that there is already a village hall on High St it is unclear whether there is an expressed community need for a further facility • Allotments - given that there are already allotments within the St Peters Park Estate it is unclear whether there is an expressed community need for a further facility • Health Centre – the provision of health centres is a matter for the Betsi Cadwaladr University Health Board and the Council is unaware of any expressed need for a health centre in Northop • Small scape employment uses – The Employment Land Study has concluded that the County has a healthy portfolio of employment land in the Plan and that further additional allocations were not required. The objector has put forward no explanation why business units are appropriate in this location except for a possible link to the college, yet the college has its own land holdings. • Delivery of a significant proportion of affordable housing – Policy HN3 of the Deposit Plan

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						already requires 40% affordable housing in this location. It is unclear whether 'significant' means a level of affordable housing in excess of 40%. If so, it casts doubt over the viability and deliverability of the scheme. There is considerable uncertainty over the lack of evidence to justify the need for several proposed elements of the scheme, whether these are to be funded by the scheme itself or by others and ultimately cast doubt on whether the scheme is viable and deliverable. This contrasts sharply with the objector's view that the only constraint preventing delivery of the site is its current designation as green barrier. Green barrier designations have all been reviewed as part of the LDP Deposit Plan, the results of which is contained in the Background Paper 1: Green Barrier Review. This review has taken a robust approach to reconsider all the green barrier designations using the requirements of PPW 10. In this location, the Green Barrier designation seeks to prevent the coalescence of Northop with

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Coleg Cambria and the isolated outlier of development at Maes Celyn and to prevent urban encroachment into the open countryside. In the context of the purposes of a green barrier in PPW, the justification for this green barrier is: to manage urban form through controlled expansion of urban areas, assist in safeguarding the countryside from encroachment and to protect the setting of an urban area. This particular part of the green barrier serves to prevent coalescence between Maes Celyn / Coleg Cambria and Northop. This is justified as there is continued pressure for development illustrated by the candidate sites which have been put forward on land adjoining Northop and Maes Celyn in both the UDP and LDP. A full response has been made in relation to this issue in respect of EN11 Green Barrier. The Council's Highways Development Management Officer comments on the larger site that such a development is likely to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						require more than one point of access. Provision of a T junction with a ghost island and right turn lane appears practical to the west of Maes Celyn, a simple T junction could be provided to the east of Maes Celyn but a difference in ground levels and gradients make this location impractical. In respect of the smaller site area the Highways DM Officer comments that without the benefit of a transport statement and provision of access details, the site is presumed unsuitable for residential development. The Officer states 'It would appear possible to construct a T junction with adequate visibility to serve the site but significant earthworks would be required to provide an access road of appropriate gradient. Provision of visibility splays would require removal of the majority of hedgerows and trees along the highway boundary' and ' Existing footways are considered to be of inadequate width and site access provision does not conform to the requirements of Active Travel Wales legislation; there does not appear to be any

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						reasonable opportunity for improvement'. There are therefore objections to both the large and smaller site on highways grounds and the objector has not provided a Transport Assessment with which to demonstrate that suitable access can be provided. This site was promoted as an omission site as part of the UDP but the Inspector concluded that the site related better to the open countryside and should remain as green barrier. The inspector comments 'The site forms a small but effective gap designated as green barrier between the village and college. Its topography rising to the south means it does not relate well to the built up area. Allocation of and development on it would merge the 2 areas, be a significant encroachment into the countryside and to my mind result in an unacceptable extension of the village to the west.'' This conclusion is still relevant and applicable to the present consideration of the site. Originally, predictive data from the Welsh Government Land, Nature

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						and Forestry Division indicated that 10.39 ha of the 22.88 ha site is Grade 2 BMV agricultural Land. The objector references that a further more detailed study shows that the majority of the land is Grade 2 or 3a. Welsh Government Land, Nature and Forestry Division have carefully considered the study provided by the objectors carried out by Land Research Associates and have stated, 'The department has validated the October 2019 survey (Ref: 1623/1), and can confirm it has been undertaken in accordance with the 'Revised Guidelines and Criteria for Grading the Quality of Agricultural Land' (MAFF 1988). This survey can be accepted as an accurate reflection of land quality on the site. This confirms that the site, if allocated, would involve the loss of 18.6ha of BMV land (10.1ha of ALC Grade 2 and 8.5ha of Subgrade 3a).' The study can therefore be accepted as accurate and the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						department goes on to say that the potential loss of BMV is unjustified because: • ' The applicant has not applied BMV agricultural policy (PPW3.54 and 3.55) in justifying overriding need and application of the sequential test. • The recent progress of developing the proposed LDP identifies sufficient land to deliver the required growth. • The proposed development is not allocated for development under the UDP or the proposed LDP. The allocation, if granted, would raise significant questions regarding the soundness of the proposed Flintshire LDP in terms of BMV agricultural land policy application (PPW 3.54 and 3.55). • The proposed LDP has considered the losses of BMV agricultural land in allocations for the whole plan, over the plan period (LDP Background Paper 9 – Minimising the Loss of BMV Agricultural Land). This site has not been considered for allocation and therefore has not been considered as part of that process. A number of non-BMV sites have

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						been put forward within the un-adopted LDP. Lower grade agricultural land is available and the planning statement conflicts with PPW.' The department concludes by stating, ''Under TAN 6 Annex B5, the Department objects to the proposal on the basis that it conflicts with BMV Planning Policy.'' PPW edition 10 states clearly that: '3.54 Agricultural land of grades 1, 2 and 3a of the Agricultural Land Classification system (ALC)15 is the best and most versatile, and should be conserved as a finite resource for the future. 3.55 When considering the search sequence and in development plan policies and development management decisions considerable weight should be given to protecting such land from development, because of its special importance. Land in grades 1, 2 and 3a should only be developed if there is an overriding need for the development, and either previously developed land or land in lower agricultural grades

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						is unavailable, or available lower grade land has an environmental value recognised by a landscape, wildlife, historic or archaeological designation which outweighs the agricultural considerations. If land in grades 1, 2 or 3a does need to be developed, and there is a choice between sites of different grades, development should be directed to land of the lowest grade'. The assessment of agricultural land quality as carried out by Land Research Associates on behalf of the objector shows that the majority of the larger site is Grade 2 and Subgrade 3a. This extended site also has Subgrade 3b and Grade 4. The smaller site comprises Grade 2, Subgrade 3a and Subgrade 3b with a large part of the site being Subgrade 3a. It is therefore clear from national guidance that BMV should be protected from development and only be considered when there is an overriding need for development. This is obviously not the case as Plan has provided for growth elsewhere in the County without the need to lose such large amounts of grade 2

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						agricultural land. The Council has demonstrated in its Background Paper on agricultural land how it has sought to minimise the loss of BMV land. In the context of Policy STR2 which directs that development in Tier 3 settlements will be 'related to the scale, character and role of the settlement', it cannot be the case that there is an overriding need for such a scale of development in this Tier 3 settlement. Comments from WG agricultural land quality advisors have supported this approach and have clarified that they would strongly object to the allocation of this land. In conclusion, the scale of the original site is totally out of character and is excessive for the size of Northop village, in terms of a Tier 3 Sustainable Settlement which specifies 'locations for housing development related to the scale, character and role of the settlement'. Presently there is a distinct gap between the college / Maes Celyn and the edge of the settlement. Maes Celyn has its own character and the development would not only join

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						but also engulf Maes Celyn within built development. Therefore such a scale of development is in excess of what is considered sustainable for a settlement the size of Northop. There are also highways objections to the scale of development and the feasibility of creating suitable vehicular access. As demonstrated by the objector themselves and clarified as accurate by WG, the development of the site would result in the significant loss of BMV versatile agricultural land. Although the objector has also proposed a much smaller site, it could accommodate 78 dwellings which would still represent a significant level of growth for Northop and would remove part of a green barrier which protects an important gap between Maes Celyn and Northop village. There is also uncertainty over the creation of a suitable vehicular access and development would again result in the loss of BMV. Given the extreme range of land originally put forward for development, this appears to be simply an exercise in adding value to land rather than proposing a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						sustainable form of development that would in any way accord with the Plan's strategy. Neither site is considered necessary or appropriate to be allocated in the Plan.
636	HN1: New Housing Development Proposals	MYN018AS Ffordd Fer, Mynydd Isa	Object	Strategic Sites With reference to the comments made in Policy STR3, TW has concerns over the ability of the large strategic sites to deliver the required housing numbers within the plan period. As such, the allocation of additional non-strategic sites, such as TW's site at Mynydd Isa would assist in meeting the shortfall. TW is aware that there are a number of housing allocations that have been brought forward from the UDP. TW has concerns on the deliverability of some of these sites, particularly as they have not come forward since the last Plan was being prepared, before 2011. Windfall Sites TW also has concerns over the reliance on windfall sites (19% of housing requirement) as this is not appropriate. Windfall sites have not yet obtained planning permission	The Council should allocate additional sites for residential development to ensure that it can meet its full objectively assessed need. Additional sites should include TW's site at Mynydd Isa which is the subject of these representations.	Not accepted.The Council has responded separately in respect of objections to the two strategic sites and concluded that they are capable of delivering in line with the trajectory. It is surprising to see that the objector is objecting to the 'large' strategic sites in the Plan when the housing proposed at Mynydd Isa is almost double the 300 units proposed at the Warren Hall Strategic Site. In comparison with Warren Hall and the Plan's allocations in policy HN1 the objection site represents a 'strategic site'. The objector states that there is too much reliance on windfall sites. With reference to the background evidence provided to support the LDP, the allowances made for small and large windfall sites are set at 50% of the 18 year trend for development in these categories and therefore take a modest and conservative

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				and will take time to come forward through the planning process and progress to completion. They are an uncertain source of housing supply. TW considers that the Council should be planning positively to ensure that it is has adequate allocations to meet and sustain its housing need. Sustainable Location Ffordd Fer, Mynydd Isa would represent a sustainable location for new development because, in the absence of suitable local previously developed land, PPW states that appropriate greenfield sites on the edge of existing settlements represent the next best option for housing development. The site is supported by excellent local infrastructure and well located to access the existing services and public transport facilities in Mynydd Isa. The site also falls entirely within Flood Zone A so is not considered to be at risk from flooding as detailed in the supporting Delivery Statement. The development of this Site will form a sustainable urban extension to Mynydd		approach to the future delivery from these sources. This is considered to be sensible and realistic, a point fully supported by the Home Builders Federation in their comments on policy STR11 of the plan as follows “The HBF supports the Councils approach to windfall sites and commitments as identified with the Housing Balance sheet and the level of flexibility proposed. The HBF also supports the spatial strategy and the mix of both larger and smaller sites proposed”. The Council has also produced an Urban Capacity Study as part of the evidence to support the plan’s approach to the provision of housing, which confirms that there is a realistic future supply of both potential small and large windfall sites to support the assumptions made. The inclusion of windfall sites in the housing supply of the LDP is supported by advice contained within Welsh Government’s DPM3. The site is located in open countryside to the west of Mynydd Isa, adjoining the settlement boundary at the northern part of the site. The rest of the site

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Isa, which has a wide variety of existing services and facilities. The settlement is located close to two Category A settlements, Mold and Buckley, both which provide an extensive range of services and employment opportunities. The Site and wider area are served by a good network of highways and public transportation infrastructure. The proposed development site is in a strategic location for access to key road networks across Flintshire and North Wales. The Site sits adjacent to the Mold Bypass which connects it to the A541, A494and A549. The A541 connects Mynydd Isa directly to Wrexham and the A494 connects the village to the North		appears disconnected from the existing settlement. The western edge of Mynydd Isa is presently well defined by a clear line of built development and this forms a firm and defensible settlement boundary. The site has not been allocated as the development of the site would create a detached form of built development within the open countryside, resulting in significant urban sprawl which would harm the character and appearance of the open countryside. From the well defined edge of development, the objection slopes downwards generally in a southerly direction towards the A494(T) and Wylfa roundabout. Development on the objection site would be visually prominent and harmful. The site is located within the green barrier which seeks to protect the open gap between Mold and the outlying settlements. At the eastern edge of Mold there is only a narrow gap between built development at Mold and Mynydd Isa. Development would cause significant harm to the function of the green barrier which is designated to protect the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Wales Expressway which provides a direct link to Chester and the north and east Welsh coastline. The City of Chester and town of Wrexham provide a more extensive range of services, amenities, employment and education opportunities. Access to Services The Site is well situated to take advantage of existing public transport infrastructure, which will reduce reliance on the car and help reduce carbon emissions in the long term. Mynydd Isa is served by several local bus routes connecting it to Mold, Chester and Ellesmere Port. The closest bus stop is located 50m to the east of the proposed northern site access on Bryn-Y-Baal R0ad. There is a further bus stop 100m to the south of the site on Mold Road. The closest railway station is Buckley (c.4km) which provides an		openness of this swathe of open countryside and prevent coalescence of settlements. Development in this location and of this size would fundamentally weaken the gap between Mynydd Isa and Mold/New Brighton, and would be an unacceptable extension of the settlement. There is a Grade II listed building on the Eastern edge of the site, Argoed hall. The objector proposes to develop to the immediate rear of Argoed Hall, but not to the North of the building. The objector has provided no Heritage Impact Assessment of the proposed development on the listed building. Mynydd Isa is a tier 2 settlement according to the LDP settlement hierarchy (STR2). Tier 1 settlements are seen as the main locations for development as they play a strategic role in the delivery of services and facilities for the County. Tier 2 settlements such as Mynydd Isa are the locations for more modest levels of new development. The scale of the development proposed on MYN018AS is far larger (580 dwellings) than the Strategic

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				hourly service to both Wrexham and West Liverpool. Argoed High School and Ysgol Mynydd Isa provide the future residents of the Site with good educational options within a walkable commute. A supermarket, free houses, sports club and a selection of cafés are located in the settlement and cater for the leisure needs of future residents across all age ranges, as well as providing further employment opportunities. The Site forms a sustainable extension to Mynydd Isa which supports pedestrian and cycle connectivity within the settlement, ensuring local amenities can be accessed without a need for motorised transportation.		allocation at Warren Hall (300 dwellings) and at any of the HN1 allocations. The site alone would result in Mynydd Isa increasing in size by a third, which is not considered to be related to the scale, character and role of the settlement. Given that provision for growth exists in Mynydd Isa in the form of the Rose Lane commitment which will provide 58 dwellings, and Isa Farm which will provide 59 dwellings, and the allocation nearby in New Brighton on a site which has previously been released from the green barrier for 105 dwellings, it is considered unnecessary and inappropriate to make a major incursion into a strategic green barrier when there is sufficient growth already planned within the area. Highways have also raised significant concerns with the site and advise that “Ffordd Fer/Heol Fammau are considered suitable to serve only limited additional development. Whilst this route would provide a useful emergency access, it must be assumed that

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the primary access would be from Bryn Y Baal Road. The layout and provision of such an access would require detailed consideration; a simple T junction is unlikely to be adequate. A Transport Statement submitted with another site in the area highlighted significant capacity and operational deficiencies with the nearby Bryn Lane/A5119 traffic signal controlled junction. That TA identified potential opportunities to deliver improvements suitable to accommodate traffic generated by approximately 100 additional dwellings but I see no opportunity to deliver improvements adequate to cater for a development of 580 dwellings. Consideration would be required of the impact of generated traffic on the operation of the A5119/A494 junction and the capacity of the A494 between that junction and the A55. The A494 is a trunk road where Welsh Government are highway authority; their input into the scoping of any TA will be required.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Other studies have indicated that there is inadequate spare capacity in the local primary school; whilst this is not in itself a highway concern, the identification of safe routes to an appropriate school should be considered. The proposed allocation could be given further consideration following the submission of a detailed Transport Assessment but suitability for a development of this scale is considered unlikely." Despite the objector submitting a vision and delivery statement for the proposed site, they have not provided a transport assessment for a strategic site of almost 600 dwellings, yet maintain that it is a viable and deliverable site. There is considerable doubt as to whether the local highway network can accommodate this scale of development. The Objector's vision statement for the proposed site includes an area of the site for a 'community hub' which will include community facilities and amenities concentrated around a village green. The objector does not include any detail of what these

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						facilities will include, if this doesn't include a retail element for convenience shopping, then parts of the site will be approximately 1.3km from the nearest shop on Mercia Drive, which is considerably in excess of the recommended walking distances. It is acknowledged that Mynydd Isa is a Tier 2 settlement and would be a sustainable location for growth given its access to services, however the proposed site would not be a sustainable option given the size of the proposed site in relation to the character and role of the existing settlement, highway constraints and the undetermined impact on the Grade II listed building, Argoed Hall, together with the significant loss of green barrier and open countryside, therefore candidate site MYN018AS is not considered suitable for allocation. The objector previously submitted a smaller version of this site as an alternative candidate site. The site that the objector is now proposing at Deposit stage is much larger. Given the late submission of this larger site and the objector's lack of earlier engagement with the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						plan process, as well as their request to extend the plan period, there is significant doubt about the ability to deliver such a large greenfield site from a standing start within the timeframe of the LDP, when so little due diligence work has been done to justify development or give expression to the needs that are to be met. This seems more akin to just a speculative exercise in adding value to land rather than genuinely proposing a sustainable form of development that will achieve positive place making. In conclusion, sufficient growth has been provided for in the Plan for Mynydd Isa. A further allocation of such a strategic scale is out of accord with the Plans spatial strategy for Tier 3 settlements and will significant undermine a key green barrier between Mold and Mynydd Isa. There are also concerns about the capability of the road network to accommodate a development of this size.

Policy HN1 – Other Sites

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
653	HN1: New Housing Development Proposals	MOL056 Pen Y Bont Farm	Object	Welsh Government's Department of Economy, Skills and Natural Resources (ESNR), seek the allocation of land at Pen-Y-Bont Farm, Chester Road, Mold for housing. Consideration of LDP Housing Strategy The overallocation within policy STR1 which provides a 14.4% flexibility allowance is acknowledged. However, in light of the nature of the new allocations included in the plan which are generally of a small to medium scale (over and above the strategic sites), it is considered that the inclusion of a larger-scale (yet nonstrategic) site which is capable of delivering key place-making objectives will add a further degree of certainty to the delivery of the Plan's housing	It is considered that the Deposit LDP should allow for additional land (namely the Welsh Government's land at Pen-y-Bont Farm) to be allocated to allow for flexibility should the actual housing numbers delivered on allocated sites be reduced or the viability of sites altogether is called into question. allocation of site at Pen Y Bont Farm (MOL056)	Not accepted. The Plan has already provided a 14.4% flexibility allowance which is in excess of the minimum 10% required in Development Plans Manual 3. The Plan has made a range of viable and deliverable allocations in sustainable locations and there is not considered to be any justification for an additional allocation, and certainly not of the scale proposed. In the case of Mold, a significant amount of growth will take place over the Plan period. Based on the Housing Balance Sheet as at April 2018 there had been 156 completions in the first three years of the Plan period, commitments of 188 units and the allocations at Maes Gwern (160 units - already under construction) and on land between Denbigh Rd and Gwernaffield Rd (246 units), none of which encroach into green barriers. In this context there is considered to be adequate provision for growth in Mold and certainly no need to draw back the green barrier in this instance. It is accepted that in terms of proximity to services and facilities the Pen y Bont site is slightly close to the centre of the town at The Cross, than the HN1.6 allocation. However, the HN1.6 allocated site is closer to the community hospital than is the Peny Bont site. In the context of a town the size of Mold,

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				growth strategy. The land at Pen-Y-Bont Farm, which is confirmed as viable and deliverable by the Welsh Government, provides an opportunity to deliver up to 330 units (including up to 50% affordable units) on a highly sustainable site directly adjacent to the Tier 1 'Main Settlement' of Mold. Policy STR2 'Location of New Development' specifies that "Tier 1 – Main Service Centres will be the main locations for new housing development which reinforces and contributes to sustainable settlements". In the context of Plan objective 12, it is considered that the Pen-y-Bont Farm site represents one of the most suitable and sustainable sites available across the County Borough. It is considered that the site		both sites are considered to be in sustainable locations. In terms of the spatial distribution of growth this was first referenced in the Preferred Strategy document and confirmed in the Deposit Plan within policy STR2. The Plan has a five tier settlement hierarchy with planned growth through allocations being made in the top three tiers and all of these settlements are considered to be sustainable locations for development. However, the objectors approach appears to be that no allocations should be made in Tier 2 or Tier 3 settlements and that all growth should be within Tier 1 Main Service Centres such as Mold. This would not represent a balanced approach to distributing growth across the County. It is of note that there is no objection from Welsh Government who have stated 'The Welsh Government is generally supportive of the spatial strategy and level of homes and jobs proposed and has no fundamental concerns in this respect'. Given that the placemaking principles are fully embodied in PPW10 they will be applied to all allocated site in the LDP. This does not therefore set the Pen y Bont site apart from the allocated sites or any other site. It is also disappointing to see an arm of the Welsh Government targeting green barrier land for development when other land in their ownership that has been presented in development plans for some time now, has

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				at Pen-y-Bont Farm represents a more sustainable option for housing when compared with the significant number of units that have been allocated within the County's lower tier settlements i.e. a total of 666 units are allocated within Tier 2 Settlements, and furthermore, a total of 291 units are allocated within Tier 3 Settlements. The allocation of circa 330 units at land at Pen-Y-Bont Farm directly adjacent to a 'Main Settlement' represents a more sustainable option for the delivery of housing growth, and as such the inclusion of land at Pen-y-Bont Farm should be considered for inclusion in the Plan in advance of or in addition to allocations within less sustainable settlements. The allocation of Land at Pen Y Bont Farm presents an opportunity		not until recently been made available to the market. This unexplained landbanking does nothing to support the principle of sustainable development or set the right example for the delivery of land in private ownership. The objection site is referred by the objector as being able to deliver up to 330 units and appears to be no different to other Plan allocations, whereby a SuDS scheme has yet to be fully designed and may therefore impact on that capacity. The issue of SuDS has been considered in terms of the allocated sites. Scope exists for SuDS to be combined with open space and green infrastructure in the form of multi-purpose parts of the site. The provision of SuDS need not affect the number of units on allocated sites and it is inappropriate to make general assumptions for every site as each site must clearly be considered on its individual merits. In particular, the site between Denbigh Rd and Gwernaffield Rd does not include any built development (with the exception of new access road) on the part of the site to the north of Pool House Lane and this provides scope for SuDS without impacting on the number of units. Even if an allowance was made for 10% of the units on those allocations without planning permission in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				to create a residential community of up to 330 units that achieves key placemaking objectives in line with PPW10. In light of the size of the site at Pen Y Bont Farm the site's sustainable and accessible location within walking and cycling distance of a significant number of local services, facilities, employment and open space, as demonstrated in the Sustainability Appraisal. Matters Regarding 'Deliverability' of Housing Numbers In regard to the independent assessment of each site, it is not clear whether the Plan's housing allocations have been thoroughly assessed to confirm that the proposed capacity of each site is in fact deliverable specifically in regard to the requirement to incorporate SuDS on-site. It is questionable as		HN1, this would amount to 150 units which is well below the 330 units promoted at Pen y Bont. See response in EN11 (id1285) The Council does not consider that additional housing allocations are required in order to deliver the Plans Housing Requirement Figure. The reasons put forward by the objector for the sites suitability to be allocated are commented on in turn below: The Highways Development Management Officer considers that the key consideration is the capacity on the A494(T) trunk road junctions i.e. the Wylfa roundabout and signalized Pinfold Lane crossroads at Alltami – the TA hasn't considered for instance the Alltami signalized crossroads. Further comments will require the input of Streetscene and also Welsh Government should be consulted. At the southern edge of the site the boundary alongside (and including) the line of the former railway does not extend as far as the junction of Woodlands Road and Bromfield Lane. Alongside the dwelling 'Crossing House' it falls short of the adopted highway by approximately 20-25m. The site boundary alongside Woodlands Road also falls short of the adopted highway by approximately 30m. In the absence of an agreement with adjoining landowners there appears to be no

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				to whether the Authority's assessment of housing sites has taken into consideration the implications of the incorporation of SuDS measures in terms of developable area and number of units. In light of the above, it is considered that the Deposit LDP should allow for additional land (Pen-y-Bont Farm) to be allocated to allow for flexibility should the actual housing numbers delivered on allocated sites be reduced or the viability of sites altogether is called into question. Matters Regarding Re-designation of 'Green Barrier' Land This is recorded under policy EN11 Overview of Suitability of Pen-y-Bont Farm Site for Residential Development In light of the overview of the Plan's housing		means of securing pedestrian or cycle access to the site, except at the north of the site off Chester Road. This does not aid the permeability of the site, nor its integration with the existing community, let alone set an exemplar for place-making following the Welsh Government's own planning policy. NRW have been consulted on the objector's FCA and have objected to the sites allocation on the basis that the site boundary includes land within flood zone C2 and is for highly vulnerable development. NRW also consider that the FCA fails to adequately demonstrate that the risks to, and arising from the development, can be adequately managed in accordance with TAN15. The Council's Ecologist considers the report has identified the habitats present with hedgerows, mature trees, woodland and wetland the key features together with existing records in the locality for Pipistrelle bats, badger, otter, GCN and associated amphibians and reptiles (sewage works pond) but the lesser horseshoe bat roost at the Pen y Bont pub was not referenced. The recommended management includes reference to Invasive species control of Japanese knotweed and Himalayan Balsam but not sure if this has been undertaken. There is no mention of the surveys that would be required to assess impacts from a planning application and the associated

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				strategy / settlement hierarchy / and housing allocations set out above, it is considered that in order to ensure a greater degree of certainty in terms of the delivery of the LDP's housing strategy, the Welsh Government's land at Pen-Y-Bont Farm, Mold should be given due consideration for inclusion as a highly suitable and sustainable allocation. A number of assessments have been commissioned to consider the viability and deliverability of a housing allocation at Pen-y-Bont Farm. A summary of the site's suitability for development from a technical perspective is provided below. Transport Assessment The key findings of the Transport Assessment are summarised as follows:		requirements e.g. open space plus the proposed active travel route along the disused railway, or mitigation required e.g. for GCN (sewage works pond) and the retention of dark corridors used by the lesser horseshoes from Pen y Bont as well as the provision of biodiversity enhancement. The site was the subject of two candidate site submissions MOL019 and MOL056. No submissions relating to this site were made at the Alternative Sites (Preferred Strategy) stage. MOL019 was submitted by a third party and included the strip of land alongside Woodlands Rd whereas MOL056 submitted by the objector excluded this strip of land. Countryside status: With the exception of the northern part of the site and the southern part alongside the railway line, the site boundary does not directly adjoin the settlement boundary along Woodlands Rd, being separated by a strip of land some 30m in width. The site has a slightly elevated position, sloping down to the bypass and Chester Road and affords far reaching views of the surrounding open countryside. The fields within the site are of a similar character to that wider agricultural landscape, being dissected only by the line of the A494(T) bypass. The site has the feel of open countryside and this was something recognized by the UDP

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				• the site provides opportunities to integrate into the local pedestrian / cycling network offering the opportunity for sustainable travel around the local area. • the sustainable location of the site will assist in encouraging future users to travel by sustainable modes, reducing the site's impact on the local road network. • Numerous services and facilities to support local residents are provided within the immediate vicinity of the site, including a number of employment opportunities, public transport links, local schools, leisure, healthcare and grocery facilities within convenient walking and cycling distance. • Nearest bus stops to the site are within just 350m and 390m west of the site along Chester Road.		Inspector who commented 'With regard to the objection site I accept the green barrier is severed by the bypass, but given the scale of the site and its rural appearance I do not agree that it is seen as an integral part of the built up area. It is clearly part of the countryside and contributes towards the gap between settlements. Despite its street lighting and petrol filling station my site visit confirmed that the roundabout is perceived as a being within the rural not urban area'. Although additional development has taken place with the conversion of the former farmhouse into a pub and additional development at the petrol filling station, this is not considered to be to the extent that it completely alters the context of the site in its surroundings. The site remains as open countryside in character and appearance with a visual link to the wider open countryside. The UDP Inspector went on to say 'I indicate above that at some time in the future the land may prove suitable for development, but that does not to my mind justify its deletion from the green barrier given the present circumstances where it forms an integral part of the gap between settlements and prevents encroachment into the rural area. Until such time as the situation is reviewed the development off Woodlands Road provides a firm defensible boundary'. The Council have reviewed the green barrier and consider that it still performs a green barrier function and that

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				• Vehicle access to the site will be gained via the existing access on Chester Road, with an entrance into the site provided off the existing access road. The proposed access is shown in Drawing A110576-SK01 (enclosed as part of the TA) where the layout provides priority to the site access, with the public house access proposed to give-way. There will be no material changes to the junction with Chester Road, with road marking improvements proposed. The detailed technical assessments undertaken as part of the Transport Assessment show that the residual cumulative impact of the development of up to 330 units at the site will not be severe and as such the development is considered acceptable from a traffic and highway perspective.		additional land for development has been in Mold which does not impinge on a green barrier. Land ownership issues: With the exception of the northern part of the site, the site boundary does not actually extend up to the settlement boundary. With an intervening 30m strip of land, the site does not represent a logical extension to the settlement as it would not relate well to the existing form and pattern of development. Also there appears to be limited opportunities for pedestrian and cycle links from the site, with the exception of the proposed access on Chester Road. The development of the site, in the absence of the adjoining strip of land, would represent poor planning as the design and layout options for the intervening strip of land would be limited. This would not represent positive place making. It is considered that developing the two sites together would be necessary to ensure a comprehensive approach to placemaking and proper integration with existing built development. Site constraints: Although it is considered unlikely that ecology will be a constraint to development, subject to further work been carried out, it has not been possible to response definitively in respect of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Flood Consequences Assessment The findings of the Flood Consequences Assessment are summarised as follows: • All sources of flood risk have been reviewed and further hydraulic modelling on the River Alyn and culverted tributary to the west of the site have been undertaken. • In summary, safe site access and egress is achievable during all modelled events. Ecology Appraisal The findings of the Ecological Appraisal and Site Management Plan (which includes an extended Phase 1 habitat survey) are summarised as follows: • Use of site by amphibians and reptiles		flood risk and access. Sequentially Preferable sites: In the event that additional land were required to be allocated in Mold, there is land on the north western edge of Mold which is not constrained by green barrier designation. The points within the site summary have been addressed in the response above. Whilst it is accepted that the site is in a sustainable location, the site is sequentially less preferable than the allocated site due to the green barrier. The site, in the absence of the strip of land adjoining Woodlands Rd is not considered to represent a logical urban extension and would not be well integrated with the existing form and pattern of development. The Plan sets out a spatial strategy in STR2 which is used to distribute development based on a sustainable settlement hierarchy. The Plan seeks to make a balanced approach to making allocations in sustainable settlements in line with that strategy. The removal of allocations from Tier 2 and Tier 3 settlements and replacement with allocations in Tier 1 would skew the Plans spatial strategy. Each allocation is considered to be sustainable in its own right and it is too simplistic to say that the Pen y Bont site is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				is unlikely, especially due to the isolation of the site from suitable breeding habitat in the wider area by adjacent busy roads and residential areas. • The silage fields provide limiting nesting opportunities for ground nesting species such as skylark, however due to the small field size, this is unlikely. • Trees, woodland, hedgerows, tall ruderal vegetation and swamp provide foraging and commuting habitat for bats. • Badgers appear to use the site, although no badger setts were identified. • Woodland, hedgerows, tall ruderal vegetation and field margins will provide suitable habitat for hedgehogs to forage and shelter, albeit the adjacent busy roads and residential may deter		more sustainable than allocations in lower tier settlements. If reductions in site capacities arise through the development of SuDS then this is unlikely to be significant or of a scale necessary to warrant the allocation of such a large site. The Plan embodies a flexibility allowance of 14.4% which can absorb any lost units. In the context of the objector's assertions, and the responses above, the Plan is not considered to fail Test 2 nor Test 3.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				hedgehogs from accessing the site to some extent. • In summary, there are no ecological issues which would prevent development, subject to appropriate mitigation and management. The technical survey/assessment work provides a detailed baseline against which the site's development potential (and thus the soundness if allocated) is assessed. In summary, it is confirmed that there are no known constraints to development and that the Welsh Government would be capable of bringing forward the delivery of up to 330 units (including up to 50% affordable housing) on the site over the Deposit Plan period. It is the case that the Welsh Government are committed to the delivery of the Pen-y-Bont Farm		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				site and can provide certainty that the site will come forward for development if allocated. Council's Assessment of Development Potential of Land at Pen-Y-Bont Farm It is understood that land at Pen-y-Bont Farm has been put forward as a Candidate Site (Site Ref. MOL019, 13.4 ha for cattle market / hotel), and as an Alternative Site (Site Ref. MOL056, 11.66 ha for mixed use). The Council's assessment of the land is set out within LDP Background Paper Background – each point within their response is addressed below: 'Countryside' Status Our Response on the Council's commentary re 'countryside status: The site is located directly adjacent to the settlement boundary of		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				the main settlement of Mold (a 'first tier' settlement). It does not appear or function as part of the 'open countryside' as such, with defensible boundaries located along the north and east in the form of existing highway (and the large urban settlement of Mold to the south and west). Furthermore, as the Council highlight, development focusing around the Wylfa roundabout has served to visually extend the urban/built form of Mold. The site cannot therefore be considered to have the appearance of open countryside, and its enclosure by existing built form/highway to the north and east fundamentally prevents encroachment towards Mynydd Isa – the development of this site will therefore not result in coalescence of settlements and the gap between Mold and Mynydd Isa will be		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				retained. Furthermore, the LDP strategy recognises the need to identify greenfield allocations in light of the lack of appropriate brownfield opportunities, and specially states that such allocations should be located sustainably including at the edge of settlements. It is the case that the land at Pen-y-Bont Farm is located directly on the edge of Mold one of the County's most sustainable settlements in terms of its size, form, character, role and level of services and facilities. Land Ownership Issues Our Response to the Council's commentary on 'land ownership' issues: The Welsh Government's land (30.13 acres – see enclosed Site Location Plan) can come forward as a viable housing site		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				without the necessity to include the strip of land alongside Woodlands Road. The Welsh Government confirm that the 30.13 acres is within their ownership and that there are no land ownership issues preventing the delivery of this area of land for development. Site Constraints Our Response to Council's commentary on site constraints: A number of studies have been carried out to investigate potential development constraints, as set out above. The FCA confirms that the site is deliverable from a flood risk perspective; the Ecology report suggests the site can be brought forward for housing without significant impact upon ecological interest		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				subject to commonplace mitigation; and the results of the Transport Assessment confirms that the site can secure satisfactory vehicular access and is appropriate in all highways/transport regards. In regard to adjacent listed buildings, the development of the site for housing would have no direct impact on the Grade II Listed Pen-y- Bont Farmhouse (as the listed building is not included within the site boundary), and any indirect impact would be minimised through appropriate screening/buffers. Sequentially Preferable Sites Our Response to Council's commentary on 'sequentially preferable sites': It is acknowledged that there may be additional greenfield sites located		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				within the Mold area which are not located within green barrier. However, it is the case that the Pen- Y-Bont Farm site (notwithstanding its green barrier designation) is unconstrained, viable, and deliverable, which in the context of the need to ensure certainty of deliverability, is a key consideration in favour of its allocation. In summary, the Welsh Government are able to demonstrate through technical assessment that the issues identified by the Council do not represent constraints to development, and that the site is suitable for inclusion in the plan as fully viable and deliverable, sustainable housing allocation adjacent to a Main Settlement. Site Summary A summary of the site's		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				suitability for inclusion as a housing allocation in the LDP is set out below: • The development would provide a logical extension to the sustainable settlement of Mold, with the proposals providing homes which promote sustainable living and well-being in accordance with the key placemaking objectives set out within the plan (and stipulated within PPW v10). • Although currently indicated as being positioned within 'Green Barrier' within the Deposit LDP, the allocation of the site for housing would not result in the coalescence of settlements in light of its enclosure by existing built form/highway. • The site is located within a highly accessible and sustainable location within walking and cycling distance of		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				numerous local facilities within the sustainable settlement of Mold. • The site is highly accessible by public transport, including bus stops within circa 350m. • The residual cumulative impact of the development of up to 330 units at the site will not be severe, and appropriate and safe vehicular access has been demonstrated as achievable onto Chester Road. • The size of the site results in no unacceptable impact on the capacity of services and infrastructure, in light of Mold's status as a Main Settlement. • No physical or environmental constraints which would constrain development are known to exist on the land. • There are no restrictive		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				designations relating to the site (other than the Green Barrier status – discussed above). • Appropriate vehicular access and can be provided into the site, with no significant impact on the surrounding road network. • The site is deliverable and unconstrained – the site is within the Welsh Government's ownership and they are committed to the delivery of the site and confirm its viability. Conclusions & Tests of Soundness Summary It is considered that land at Pen-y-Bont Farm represents one of the most suitable and sustainable sites available across the County. The site at Pen-y-Bont Farm represents a more sustainable option for a housing allocation than the 957 units allocated within		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				less sustainable Tier 2 and Tier 3 Settlements. The allocation of c.330 units at land at Pen-Y-Bont directly adjacent to a 'Main Settlement' represents a more sustainable option for the delivery of housing growth. In addition, in light of the potential (considerable) reductions in housing numbers that may in fact come forward on allocated sites in light of the implications of SuDS legislation, the available, viable and deliverable land at Pen-Y-Bont Farm provides certainty to bring forward circa 330 units (including up to 50% affordable units). In summary, in light of the above, it is considered that the Deposit LDP fails Soundness Test No. 3 ('Will it deliver?') in that it is questionable as to whether the housing numbers listed within Policy HN1 are		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				deliverable in light of unassessed SuDS constraints on developable area and scheme viability. In addition, it is considered that the Deposit LDP fails Soundness Test No. 2 ('Is the Plan appropriate?') in that the plan includes a substantial number of housing allocations which are located within less sustainable locations/settlements in comparison to land available at Pen-y-Bont Farm.		
658	HN1: New Housing Development Proposals	HCAC021 Land west of Gwalia / Bryn Yorkin	Object	Land west of Gwalia / Bryn Yorkin - 40 houses. Our reasons for putting forward this site for development in the LDP are as outlined below: The owners are in a position to begin building, therefore making this site viable and deliverable having a builder on board.	Removal of allocation	Not accepted. Despite the site being submitted as a candidate site, it has not been the subject of a representation to the Deposit LDP by the owners or a developer, and in this light, the objectors' assertion that the owners are in a position to begin building, and that the site is viable and deliverable appears unfounded. The site is not a suitable replacement, either in whole or in part, for the allocated site. Despite the objector's statement that the site is preferable to the allocated site, there is no submitted background / technical evidence to show that this is the case.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				This land runs alongside the settlement boundary. It runs alongside existing dwellings. The owner has vehicular access to the site therefore there is a means of access that can be altered and utilised accordingly. The owners have looked into how to gain access to such a development on their site. There has been a dwelling on the site in the past. The family have used it for personal recreational purposes but now wish to develop the site. Therefore the public have not had lawful or permitted access to the site. This land runs alongside the settlement boundary. It runs alongside existing dwellings. The site is not wooded and is simply fields bounded on one		Despite the entire eastern boundary adjoining the settlement boundary the site relates better to the open countryside as the site slopes upwards to the heavily wooded steeply sloping Alyn Valley sides. A key principle in PPW is that allocations are viable and deliverable yet the objection provides no assurances or evidence that a satisfactory access can be provided. In any event the Council's highways development management officer objects to the development of this site due to there being no direct access to the adopted highway, and furthermore roads in the vicinity are generally inadequate to serve a development of this size. Additionally, Gwalia is narrow in width with dwellings immediately abutting the highway, parked cars and the lack of footway illustrate this is unsuitable to accommodate additional traffic. The fact that there may have previously been a dwelling on site does not mean it is suitable to be allocated for housing, as it is necessary to look at a wide range of considerations relating to the site. The objector is comparing this proposed site with the Wrexham Rd Abermorddu allocation where there is an alleged permitted public access. This is not an appropriate way in which to be informing the suitability of sites. There is no public right of way across the site although it is understood that the public do

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				side by housing and on the other by woods leading steeply up to Hope Mountain. There are already dwellings around this location. The site would therefore associate with development on three sides. - Any development on this site would not exceed the boundary line of existing housing on Bryn Yorkin and Gwalia. It would in fact bring it into line and fill in the gap. It is submitted that this site is ideal and appropriate for housing. This site is for 40 houses which presents as a large development as but smaller than the 80 proposed on the Bluebell Fields in Abermorddu. It is submitted that this smaller development would therefore lessen the impact on the community with 2 smaller developments of 30-40 being utilised in two locations. This would		walk across the site to gain access to the hillside, but the Council is unaware whether this is with the consent of the land owner. The site may adjoin the settlement boundary along its eastern edge but the site does not relate well to the form and pattern of existing development. The fields are crossed by a footpath which leads to an extensive network of footpaths in the wooded area beyond the site. Removal of trees on the fringes of the north western part of the site to accommodate approximately 40 dwellings would have a significant visual adverse impact on this elevated and prominent site. Built development would not integrate well with the existing form and pattern of development in this part of the settlement. The proposed site is located within open country and does not form part of the settlement. The surrounding area is heavily wooded with numerous footpaths for public to enjoy the open countryside. The land is graded highly for agricultural use and there is a predicted loss of 0.18ha grade 3a. Additionally, due to the heavily wooded area there potentially may be bats in the area and further assessments would be required. The site, given its rising and prominent location, and the existing pattern of development would not represent a logical extension to the settlement. Instead, as outlined above, it harm the character and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				also make these sites more appropriate, viable and deliverable. - Due to its location, this site would have a low/no impact on the surrounding area as it is behind existing development and a natural progression of existing and commitment housing. The general infrastructure for such a development is already in place and easy access to nearby shops and schools and other amenities and activities. - In relation to 40 houses on this site, there are 86 dwellings on Bryn Yorkin Lane, Conway Close, Plas Yn Bwl, 45 on Bryn Yorkin. At present a total of 130 houses using the entrance to the main road. This site would either be accessed at the top of Bryn Yorkin or from Bryn Yorkin Line via Conway Close.		appearance of the locality. It is too simplistic to a make an assertion that a site will have a lesser impact than another site just because it is smaller. It is necessary to look at the particular merits of each site and its particular surroundings. It is also not necessarily the case that two sites each of 40 will have any less impact on services, facilities, or the highway network overall, than one site for 80. Although it is recognised that there are services and facilities within the settlement and in close proximity to the site, it is considered that there are negative factors associated with the site which outweigh this. As commented above Highways Development Management Officers note that there is no direct access to the adopted highway and that the roads are generally inadequate to serve the development. The site is physically separated from both Bryn Yorkin and Conway Close by existing houses and intervening land. There is no clear means of securing an acceptable vehicular access. In conclusion, development of this prominent site would result in a detached block of residential development which would be

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Therefore there is a good filter system for traffic rather than all coming out on one road before meeting the main road. If one were to add 40 on this site that would take the total to 170. Such an overall development is not excessive for the infrastructure particularly when you compare with other sites e.g. Chester Road, Penyffordd • 186 houses and one entrance; Silverbirch Way, Penyffordd • 200 houses and one entrance.		poorly related to existing development and visually damaging to an area of attractive open countryside. The site is not considered to be necessary or appropriate as an allocation either to replace or be in addition to the Wrexham Rd allocation.
675	HN1: New Housing Development Proposals	ALLT 006 Land adj Tavern Public House, Alltami	Object	We identify our development as of strategic importance to the sustainable growth of Flintshire. It's primary focus on General Needs Housing including affordable housing. Adjoining the site is the A494 (T) defined as a	Allocation of additional residential allocation at ALLT006 Land adjacent to Tavern Public House, alltami	Not accepted. As a Tier 3 Sustainable Settlement Alltami was designated due to its proximity to Mold and Buckley rather than because it was a self-contained settlement. This site is not a strategic location for growth and Policy STR2 makes it clear that Tier 3 settlements will be the location for housing which is related to the scale, character and role of the settlement, in this case it is important to recognize that only small scale development would be suitable in Alltami. This resubmitted site is considerably larger

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Strategic Hub and Corridor, a key Strategic Road and a sustainable transport route. Both score positively on the housing and access objectives, and is also aligned with the Planning Policy Wales. Alltami is designated Sustainable Village in the Preferred Strategy given its context and functional relationships to Main Service Centre Buckley and Mold and adjacent settlement cluster. Most of the proposed ALLT006 will be contained within the Settlement Boundary further, the proposed allocation includes a Brownfield site soon to be vacated. The site will integrate well with the established pattern of development. Sustainable village status scores positively for growth to meet settlement and County needs. Spatial relationship to local and		than the original candidate site and is out of scale with the size of Alltami. Candidate Site ALLT006 is a small site of 0.27 ha the bulk of the site sat behind an existing property Woodbank on the north side of A494 and could accommodate up to 8 dwellings. This resubmitted site, includes the original Candidate site and is a much larger area of land extending along behind the Tavern pub car park to the west, the rear boundaries of the houses facing onto the A494 to the south and by the Cobblers and Stoneybeach wood along a valley to the north and the hedgerows along the field boundaries along its eastern edge. This sites is 1.76ha and could accommodate up to 50 dwellings. To the west of the site there is an existing gated vehicular field access off the minor side road. The road is narrow with grassed verges and trees with the canopy creating a rural character and appearance. The bulk of the site forms part of a larger paddock sitting between the ribbon frontage development along the A494 and StoneyBeach Wood. The site is considered to relate more closely to open countryside than it does to the form and pattern of built development. The representor states that most of the ALLT006 site is within the settlement boundary, this is incorrect. None of the original Candidate site is within the settlement boundary and only a small portion of the resubmitted site, the land

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				wider employment sites, and other larger settlement enables settlement to service to promote the economic growth and transport strategies. The site allows adjoining land within Settlement boundary to be accessed. Crime - The site is currently partly brownfield/greenfield so new developments could be a target for crime. Crime maybe mitigated via the Master planning Stage utilising the initiative "Secure by Design". Creation of safe and well designed Place of integration reviewed by initial and subsequent master planning exercises. With this level of mitigation including the detailed design and aspirations for the site, the IIA objectives on crime have been scored		around the property Woodlands, is within the settlement boundary. The majority of the site therefore is outside the settlement boundary. The extended site would result in a form of development which is poorly related to the settlement and would harm the rural character and appearance of the settlement. It is not considered that the site is appropriate for inclusion within the settlement boundary or as an allocated site. The objector has submitted the objection in the form of Sustainability Appraisal, as such each point will be addressed in turn. Noted but this is the case for all proposed allocations in the plan and does not therefore set the objection site above any of the allocated sites on the basis of this issue. There is no school in Alltami and in terms of walking distances to nearby schools, Mynydd Isa and Southdown Primary schools are approx 2500 m, the Argoed High School is 1850m and the Elfed High school is 2300m from the site however these cannot be reached along safe walking routes since the roads leading to these schools do not have footpaths. The location does not lend itself to active travel journeys to school as there is probably little opportunity to provide footway through developer contributions due to other third party ownership. It should not fall on the highway authority to come along after

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				relatively low. Education - Local Development Plan will forecast education needs during plan period and set out policy basis for mitigation on a site by site basis subject to viability. Potential for on site construction training opportunities. Education will benefit from LPG Education Contribution via Section 106. Health - Reduce reliance on car borne access modes. Provision of onsite play/ fitness equipment. Connectivity to major employment and retails zones. Potential noise receptors from A494 mitigation through active and passive acoustic measures. Location within 2km to new Buckley Healthcare Facility. Housing - Delivering General Needs and		development and either look at land acquisition for footway improvements and the cost of the scheme or to provide a bus service at the cost of the public purse. Also the ever increasing issue of parking and congestion around primary schools because parents are driving their children to schools is becoming a major issue. Unless there is an opportunity for the potential developer to be able to contribute to footway provision for access to schools then the development of the site will be a burden on the Authority in future years. Education, Supplementary Planning Guidance Note No 23. Developer Contributions to Education gives advice on contributions to education for any of the allocated sites in the plan. The site is within walking distance of employment areas. However in terms of community facilities the nearest shop is a convenience shop at the garage at New Brighton over 1km away, nearby schools are not along walkable routes and Buckley Health centre is 2.2km. The settlement is classed as a sustainable location due to its proximity to facilities in Buckley and not because it is a self contained settlement. It is for this reason that only small scale growth, in fitting with the size of Alltami would be considered suitable. The site is within 320m of green space designation in the UDP, also open space provision is a requirement for all development sites. Affordable housing contributions will be sought on development of 10 or more units.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Affordable Housing within a sustainable location. Capable of delivery in a location attractive to market and deliverers. No physical constraints to hinder delivery. Viable site and scores positively against the housing and access objectives. Allows access to undeveloped land both within and outside settlement boundary. Good use of Brownfield site. Access - Highways to adoptable standard, Active routes to and from site and adjacent public transport corridor. Proximity to Active Travel routes linking North Wales Metro offers significant off site enhancement benefits. Liaison with Arriva Transport for reduced		Alltami is within the Mold and Buckley Submarket area so a 40% affordable housing units would be expected. Only a very small part of the site is brownfield and within the settlement boundary. The Highways officer comments that there is no objection to the indicative layout (subject to minor amendment) and subject to an acceptable drainage solution we would be in position to adopt such a road layout. However, the Technical Note acknowledges the relatively remote location of the site, the lack of public transport provision, the limited pedestrian/cycle provision, the limited local employment opportunity and lack of accessible education facility (the availability of a safe route to school is unlikely). Based on this, the site is not considered to be in sustainable. Access is proposed directly onto the A494 trunk road for which Welsh Government are highway authority; their views should be sought. Welsh Government may have concerns related to access details. Visibility splays of 2.4x120m are indicated; Welsh Government tend to assume a minimum X distance of 4.5m for a development of this nature and will only accept a relaxation to 2.4m following a successful application for dispensation. 120m visibility is shown to be achievable in plan but the vertical alignment of the road may limit the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				fares for affordable house occupancy. Social Cohesion - Growth over UDP period exceeds “crude” measure of percentage growth. Delivery of strategic site allows comprehensive and cohesive development, with strong urban design principles, that are viable, deliverable and meets community or County aspiration formality and diversity including high proportion of affordable homes. Reduces risk of smaller unviable development not delivering. Employment - Potential for on site construction training opportunities. Rural Life - Green Barrier in UDP. Located on edge of urbanised settlement area, contained within existing form of adjacent		extents of available visibility. The A494 in this location, close proximity to the Alltami Road junction, is subject to stationary queuing traffic during peak periods; this may also cause concern for Welsh Government. There are therefore obvious concerns over the access from the site onto the A494. It is considered that the addition of 50 houses to Alltami would be an excessive number of dwellings for the size to the settlement. Policy STR2 recognises that only small scale development is appropriate on the smaller settlements such as Alltami. The proposal would represent a block of development and appear incongruous in terms of built form. This may bring about concerns about ensuring cohesiveness between existing and proposed development and settlement which are separated by the A494. Noted. However, this could apply to the construction of any built development already allocated in the plan as part of gaining social value from the development allocated. The area is not within the green barrier in the UDP but is in open countryside. The site is an open field which is bounded by trees and mature hedgerows and gently slopes down to the adjoining Cobblers and Stoneybeach Ancient wood and wildlife site, which creates a wooded backdrop to the west of the site. To the east and south of the site the houses

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				development. Logical extension to settlement and of scale capable of integration and to assist in retaining existing village services with limited intrusion into settlement edge. Moderate but non strategic loss of agricultural land graded as 3b. Biodiversity - Tests of over-riding need can be demonstrated to meet social economic objective of plan whilst delivering environmental mitigation and management. Landscape - Detailed landscaping strategy to inform development of scheme. Heritage - No impacts on Heritage, Listed Buildings or Monuments. Water - Water conservation measures in design.		along the A494 are well screened by trees and hedges making the site well related to the open countryside rather than the urban form. Site is not designated but it is in close proximity to Deeside and Buckley Newt Sites SAC, 300m to the south and 600m to the north west. In addition it is adjacent to Cobbler's and Stonybeach Woods Wildlife Site, which is an Ancient semi-natural woodland and the adjacent woodland is in the process of being transferred to a Conservation Body as a Nature Reserve in compensation for other development within Alltami. The site itself is predominantly agricultural grassland but a native hedgerow with mature trees crosses the site and another forms the northern boundary. Any development would need to assess the Ecology of the site itself as well as impacts on the nearby designated SAC, Wildlife Site and ancient woodland, and provide an Ecological Impact Assessment with measures to avoid, mitigate, compensate, enhance and manage wildlife features. In addition the ancient woodland and nature reserve would need to be buffered from negative impacts in particular development edge effects eg 50m woodland buffers. These buffers can be planted and can be used for

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Flooding - SW can be connected to Mains surface water discharged into local watercourse via attenuation. Energy - Can incorporate low/zero carbon technologies in design and reduced energy consumption by aligning places to live with school, facilities and place of work and access to high speed broadband. Reducing out commuting. Welsh Language - Local Schools with Welsh Language on the Curriculum. Positive measures to enhance through e.g. affordable housing to retain younger people and connect them to work, on site mitigation through street/development naming.		amenity purposes but should remain as dark corridors. There is no overriding need for development in this area, the allocated sites in the LDP are in more sustainable locations and provide for growth for the county without the need for this site. All development sites will need to incorporate a detailed landscaping strategy. Noted Noted A SUDS scheme will be required for all new development sites and cannot simply connect into the existing piped SW network Noted Noted although as set out above, the local schools cannot be reached along safe walking routes. In conclusion, the site is considered to represent a scale and form of development which does not accord with the Plans spatial strategy in STR2 in terms of a Tier 3 sustainable settlement and will harm the character and appearance of the locality. The site is not considered necessary or appropriate for allocation in the Plan.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
689	HN1: New Housing Development Proposals	NH024 Llys Ben Northop Hall	Object	The Llys Ben site is in close proximity to the community facilities at Northop Hall including education and recreational facilities and within walking distance of other facilities within the village. It is contained on three sides by the existing residential development of the village and its recreational and educational facilities. It is in the long-term ownership of an experience house builder, Morris Homes, and is therefore capable of delivery. An indicative layout for the site illustrates how it can be developed in a sustainable manner whilst retaining existing rights of way and trees that are protected by a Tree Preservation Order and forming a suitable green edge to the open countryside beyond. Its development for the reasons stated will not adversely impact upon	In order to meet the test of Soundness the following changes are required. (i) Increasing the overall level of housing provision to at least 10,500. (ii) Increase in the number of new allocated housing sites by at least 2500. (iii) The removal of Llys Ben site at Northop Hall from the Green Barrier (iv) The inclusion of Llys Ben site at Northop Hall within the settlement boundary of Northop Hall. (v) The allocation of Llys Ben site at Northop Hall for housing development.	Northop Hall is a tier 3 settlement where housing development should be related to the scale, character and role of the settlement. Allocations have not been made in all settlements as the LDP does not seek to apportion development spatially by the use of numerical methods or growth bands. The plan seeks to distribute growth in a sustainable manner having regard to the settlement hierarchy. As part of this approach it is necessary to have regard to the character and role of each settlement and the circumstances prevailing at the present time. In this context it does not mean that, in the absence of an allocation, Northop Hall will not experience growth during the plan period, the village has already seen the completion of 85 dwellings in the early years of the LDP (2015-2018) and further growth is planned on the committed site at Cae Eithin for a further 9 dwellings. This will provide sufficient growth for the settlement over the plan period. The site is located on the northern edge of Northop Hall. It is bounded by residential development off Gardd Eithin to the south and Cae Haf / Trum yr Hydref to the east. Llys Ben bounds the site to the west and provides vehicular access to the community centre and playing fields which are located to the north of Northop Hall CP School. A thick belt of vegetation and trees (Woodland TPO) marks the northern boundary of the site. A number of public rights of way cross the site which is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				the wider purposes of the Green Barrier whatsoever. There is a need to allocate additional land for housing otherwise Northop Hall risks ceasing to be a sustainable tier settlement. There is only one housing commitment identified in Northop Hall and that is at Cae Eithin which is only for 9 units and has been available for some consideration time but has not been delivered. The plan therefore fails to meet local housing needs within Northop Hall. The allocation of the site at Llys Ben as Green Barrier and outside of the settlement boundary of Northop Hall is not appropriate and fails to accord with National Guidance and is therefore contrary to test 1 and test 2. The site is suitable and available for development and can be		relatively level and comprises an area of regenerating scrubland. The site has built development on its southern and eastern boundary. With the exception of the community centre building, the objection site has an open aspect to the north and west and forms part of an important swathe of open land. The site is open in character and affords views of the wider open countryside. Following a period of natural regeneration it has a scrubland appearance which is considered to relate more closely to open countryside and the other open land - playing fields to the west than it does to built development. The site forms part of a larger area of green barrier and in the case of land to the north and east of the village, there is a fundamental need to afford it additional protection through the retention of the green barrier designation as it acts as a strategic gap between Northop Hall and Connah's Quay. An appeal in relation to the refusal of a planning application for 36 dwellings was dismissed in 2015 with the Inspector commenting on the harm to the openness of the green barrier. A fuller response on the green barrier is given in policy EN11. The landscape and informal recreational value of the site would be lost if the site was to be developed. The UDP Inspector stated that the site "has recreational value from its network of public footpaths which link through

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				developed in a way which is consistent with the existing built form of Northop Hall and which helps support its sustainable future as a tier 3 settlement.		to the formal recreational area/community centre to the west and the countryside to the north. Whilst it has built development on 2 sides, because of the links through it and its open nature it relates well to the rural area. Visually the site is seen as part of the open land surrounding the settlement. It is not part of the built up area and it is not required for development during the plan period." The Council's Highways development Management Team have stated that access to the site is unsuitable as there is no connection to the adopted highway. There is a commitment at Cae Eithin, on Village Road for nine dwellings which will provide some growth for the village. Northop Hall has already seen development in the UDP, and during the early years of the LDP plan period with the completion of 85 dwellings between 2015 and 2018. There is also a further 9 dwellings planned at Cae Eithin. This is considered to be sufficient growth for the village at this time. There are also allocated sites nearby at both Connah's Quay and Ewloe which will provide further growth for the wider area. The objector considers that the Plan's housing requirement figure is too low and that the Plan's housing supply will not deliver the requirement, resulting in in the need to make further allocations. The Council has

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						responded to these points separately and considers that the Plan's housing requirement is sufficiently aspirational and that the Plans housing supply will deliver the requirement, particularly in view of the 14.4% flexibility allowance. The Council does not consider that further allocations are required. Even if further allocations were deemed necessary there are Tier 1 and Tier 2 settlements which would be sequentially preferable in terms of the Plans spatial strategy and also another 21 Tier 3 sustainable settlements. In this context it is not clear why it is necessary for further growth in Northop Hall and also on land which has been recommended against by two Planning Inspectors in terms of its contribution to the green barrier. In conclusion, growth will occur in Northop Hall and it is not necessary or appropriate to allocate a site particularly where it would have a green barrier and remove a valued green space resource.
693	HN1: New Housing Development Proposals	MOL004 Land at Wood Lane Mold	Object	Candidate site MOL004 (land at Wood Green, Mold) should be allocated for housing to assist in providing the additional numbers and flexibility over the plan period. The site was identified as amber in the Council's earlier traffic light system meaning it is capable of meeting the	Site MOL004 should be allocated for housing over the plan period; b. If the site is not allocated it should be identified as a contingency site to provide additional	Not accepted. The site measures 0.86ha and was submitted by this agent as a candidate site for between 5 and 20 dwellings depending on access arrangements. The first option was for a development of 5 dwellings served off a private driveway and the second option referred to alternative access arrangements to serve 20 dwellings including a) existing properties (24 and 26 Wood Green and land alongside 2 Wood Green) or land to the west being promoted by others as a candidate site. At Preferred Strategy stage a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Council's Preferred Strategy. Background Paper LDP08 confirms that it was ruled out as a suitable allocation due to impact on a public footpath and flood risk. Retention of the public footpath could be achieved at detailed design stage and is therefore not a reason for rejecting an allocation. Indeed many of the allocations suggested by the Council are also crossed by or bordered by public footpaths. The second reason is that part of the site is C1 Flood Risk. As set out in our initial submission, only a small part of the site lies within a Flood Risk Zone (the north eastern boundary). The bulk of the site is not identified as being subject to flood risk. If allocated the scheme would be able to avoid any development in the C1 Zone so this is not a legitimate reason for rejecting the allocation of the remainder of the site.	flexibility should the Councils delivery against the LDP fall short.	different agent made 'supporting' representations that the site should be developed as a low density development of 5 dwellings off a private driveway. The Councils Highways Development Management Officers considered the site to be unsuitable as the access via a private drive had poor alignment and limited visibility that is considered unsuitable for any additional traffic. In this objection to the deposit plan the request is for the site to be allocated for housing. The Plan is quite clear that it will only be appropriate to allocate sites which could meet with the definition of a 'large' site ie for 10 or more units. Given the accesses constraints the site cannot be realistically be allocated for housing in the Plan. Despite earlier references to alternative access scenarios, no further evidence has been produced in terms of securing additional land. The objector is therefore asking for land to be allocated which presently has no means of being accessed. In terms of flood risk the northern part of the site is located within a C1 flood risk on the Development Advice Map. In terms of the total site area some 16% is within the C1 zone. Given that the site is green field land it cannot pass the justification tests in TAN15 as the site is not brownfield. The agent seeks the allocation of land for a highly vulnerable

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				No other technical reasons have been given by the Council for not allocating this site. Site MOL004 should be allocated for housing over the plan period. If the site is not allocated it should be identified as a contingency site to provide additional flexibility should the Councils delivery against the LDP fall short.		use without any technical evidence that the site can be satisfactorily developed in terms of flood risk. The site also sits within the green barrier between Mold and the outlying villages. It forms part of a swathe of open countryside comprising fields and recreation land adjoining the edge of the built up area on the south side of the R. Alyn. The southern half of the field immediately to the west of the site was promoted for development in the form of an omission site as part of the UDP and the UDP Inspector commented 'The objection site forms part of a larger field and whilst it abuts development on 2 sides, by its character and appearance, is clearly part of the countryside which in this location is designated as green barrier in order to protect the open land around Mold and prevent the coalescence of settlements. Given its value as, albeit a small part of the green barrier and the adequate supply of housing land both in the town and the County, I see no reason to either allocate the site for development or draw back the green barrier'. The UDP Inspectors comments sets a clear context for the consideration of this objection site. Given that Mold will achieve considerable growth in the Plan period as a result of completions (156 in first 3 years of Plan period), commitments (188 as at 2018) and the allocations at Maes Gwern (160 units - already under construction) and on land

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						between Denbigh Rd and Gwernaffield Rd (246 units), none of which encroach into green barriers, there is considered to be no need to draw back the green barrier in this instance. Given the combination of uncertainty over flood risk, the provision of a suitable vehicular access and the green barrier, it is not considered appropriate to include the land in the settlement boundary. The consideration of the site as, in effect' a 'small' site of 5 units on a site of 0.86ha would represent a density of just 17 dwellings per hectare which is not making the most efficient use of land. In conclusion, the site is not necessary or appropriate to be allocated or included in the settlement boundary of Mold having regard to its green barrier location and uncertainty over flood risk and access and in the light of provision for growth in Mold.
698	HN1: New Housing Development Proposals	DRU011 Land North of Holmleigh/ Lower Farm	Object	We identify our development as of strategic importance to the sustainable growth of Flintshire. It's primary focus on General Needs Housing including, low level care bungalows (existing of which adjoin the site) and a possible Retail element close to the	Additional allocation at Drury (DRU011 candidate site)	Not accepted. This objection site for the most part covers the area of the original Candidate site DRU011, although at the Preferred Strategy stage of the plan that site area was increased by 1.9 ha to 11.5 ha to include land to the south east of the site. This objection submission includes a site assessment, The Foursite Report, where the size of the site is noted as approx. 11.36 ha, however another part of the submission incorporates a Masterplan which shows the plan area to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Main Service Centre of Buckley. Adjoining the site is the A55 (T) a sustainable transport route. Both score positively on the housing and access objectives and is also aligned with the Planning Policy Wales (2016). Crime - The site is currently greenfield so new developments could be a target for crime. Crime maybe mitigated via the Master planning Stage utilising the initiative "Secure by Design". Creation of safe and well designed Place of integration reviewed by initial and subsequent master planning exercises. With this level of mitigation including the detailed design and aspirations for the site, the IIA objectives on crime have been scored		include the Alternative Site DRU013-AS creating an area of 11.8ha. It would be useful if the objector had made it clear what is the exact size and extent of the site. As at the moment it is unclear and somewhat confusing as to what land the objector has control over and what is in third party ownership as this will affect the likely deliverability of the site. During the UDP plan period from 2000 to 2015 Drury/Burntwood, saw a 26.7% level of growth, which as a Category B settlement with a growth band of between 10% and 15 %, is a very significant level of growth. In terms of the LDP period a recent application (ref 058212) for the demolition of 1 and 2 Woodside Cottages and erection of 23 new dwellings, adjoining this site was allowed on appeal. The site cannot be included as a housing commitment as planning permission was granted after the base date of 01/04/18 for the Plans housing balance sheet. The site therefore represents a windfall site and will form part of the Plans overall housing land supply for the Plan period. Also, another adjoining site at Bank Lane has been subject to various applications in recent years (058489 – outline 66 dwellings refused, 090160 – outline 66 dwellings refused). At present a full planning application (060587) for the demolition of 81 Drury Lane and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				relatively low. Education Education - Primary, High and Further education requirement likely to arise from increased population. Welsh, English and Faith schooling are within the catchment of the site. Health Health - Location, design and layout enhance health through promoting Active lifestyles and connectivity to nearly local employment zones. Potential to support walking & cycling to promote healthy lifestyles. Safe and high quality houses and living environment improve wellbeing and foster community integration across mix of housing types		construction of up to 56 dwellings has been refused and an appeal is ongoing at the present time (May 2020). Rather than devise a housing scheme which functions within the settlement boundary, as recommended by the UDP Inspector, the applicant has sought to extend the application site boundary beyond the settlement boundary in order to increase on-site housing density by siting open space to the east of the settlement boundary. Given that there are concerns about the manner in which the site was being proposed for development in the planning applications it was not considered appropriate for the site to be allocated in the Plan. Both these examples demonstrate that there are development opportunities within the settlement boundary of Drury/ Burntwood as a windfall sites, provided that appropriate development schemes are put forward. It is anticipated that these will provide for an adequate level of growth for Drury/ Burntwood over the Plan period. The masterplan layout which accompanies this submission shows the boundary of the site but also indicates various proposals outside that boundary, such as a nature reserve, car parking and play area on the wedge of land between the site and Bank lane. (It also shows the Bank lane Muller Ltd 66 houses pending site despite it not yet having planning permission). Although there are some open spaces shown within the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Housing Housing - Accords with search sequence at PPW Para 9.2.8 and 9.2.9. Deliverable, site free from significant constraints and accessible by a range of modes and connectivity. Capable of providing 200+ dwellings in a mix to achieve market and affordable needs across all types and age sectors. Allows access to undeveloped land within settlement Boundary on Bank Lane. Substantial initial appraisal undertaken. (Highways, Drainage, Ground Investigation and Ecology Surveys). On site constraints include - public footpaths, A55 and Overhead line however, no impediment to delivery. Capable of delivery in a location highly attractive to market and deliverers. Of scale and location essential to secure investment and		proposed site area, it is not clear how siting open space provision on a masterplan outside the proposed site area will help to show that it is a viable scheme, conversely it seems to demonstrate that the site is unable to accommodate enough open space and still be a viable proposal. The site comprises a large swathe of land between the A55(T) and the settlement of Drury /Burntwood. It comprises large fields dissected by a farm track which leads to a bridge over the A55 dual carriageway. The eastern part of the site includes Lower Farm and the associated buildings and extends beyond the farm to a line of a drain between Drury Lane and the A55. The site now also includes a field to the south of Vestalia (DRU013-AS). However the site barely adjoins the settlement boundary, only to the south of the site at the Lower Farm complex and to the rear of the properties Homeleigh, Nodffa and Holly house. The site does not extend up to the rear of the properties along Dinghouse Wood which forms a definite physical feature on the ground, creates a strong edge to the settlement boundary and to the green barrier designation. There is an abrupt change in character from the densely built up area within the settlement boundary to the open fields leading to the candidate site. The site is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				confidence to deliver via national house builder. Viable site. Access Access - Sustainable village location with potential for one or more vehicles access points. Public footpath crosses. Links to bus route and Active Travel route from site edge to school and Buckley Railway Hub. Well located to maximise benefits of investment Regional Growth Bid and Welsh Government promotion of North Wales Metro. Liaison with Arriva Transport for reduced fares for affordable house occupancy. Potential to include and adopt positive measures to encourage non car modes including retention of footpaths and add new cycles links to existing pubic		therefore separated from the settlement boundary by a strip of land extending from Dinghouse Wood road accross an open paddock field with 4 houses located to the south end of the field. The alternative site area DRU013- AS is now part of this site however there is still an area of woodland and the rectangular parcel of land to the east of Bank Lane which means there is open countryside between the site and the settlement boundary. There are open fields between the site and the settlement boundary, the site is therefore not directly related to the existing pattern of development. Bank Lane forms a definite physical feature on the ground which creates a strong edge to the settlement boundary and to the green barrier designation. Taking into account the settlement boundary and the site boundary, the site appears poorly related to the existing form and pattern of development in this part of the settlement. The site has an open character and has the feel of open countryside, particularly given the presence of Lower Farm, and is considered to relate better to the open countryside and green barrier. The objective of the green barrier designation is to retain the open nature of the countryside around Drury/Burntwood to and to protect the open countryside between Drury/Burntwood

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				highways as exemplar development. Social Cohesion Social Cohesion - Community cohesion policies to be delivered by providing a managed and master planned extension to a sustainable settlement, well related to wider context and adjacent settlements. Physically well related to existing form and delivers growth to support existing services and retail activities. Iterative and open process of dialogue, liaison and consultation (from the Preferred Strategy stage) to inform community of purpose. Self contained settlement which currently meets its own needs and serving wider retail catchment area for adjacent settlements. Can deliver community integration, accessible		and Ewloe from further encroachment. Built development in this location would undermine the function and openness of the green barrier. The UDP Inspector noted the character break represented by Bank Lane and the difference in character of the land included in the settlement boundary from the open countryside beyond. There remains considerable uncertainty over what the proposed allocation seeks to deliver. The objectors IIA is headed as '190-250' houses plus retail and refers to a site area of 9.67ha (the site area of the original candidate site). However the masterplan shows up to 280 dwellings on the extended site. In the detail of the objectors IIA under section 4 reference is made to 200 plus dwellings. The accompanying 'Foursite Report' refers to 250 dwellings but in section 4 refers to 150, 200 and 250 dwellings. There is a clear disconnect between the various references and it is unclear exactly what the site area is and what the quantums of development are. In addition, the masterplan has the logo of Taylor Wimpey whereas the 'Foursite Report' refers to it being commissioned for Bellway Homes. The objector's submission does little to back up the claims that the promoted site is viable and deliverable. The scale of development proposed is considered inappropriate given the scale and character of this Tier 3 sustainable settlement, particularly when there are still

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				homes for life to encourage community integration, valuing difference and focusing on the shared values that join people together. Economy Economy - Residential development promotes economic development and increases employment opportunities, skills and supporting local trades. Co-locating homes and jobs scores positively against Preferred Strategy and SA. Benefits other local businesses and promotes investment in the local area and adjacent settlements such as Main Service Centre Buckley and Local Service Centre Broughton. Significant positive for the economy objective. Further, our development is located near to existing key		opportunities for housing development within the settlement boundary (land at Bank lane and recent planning permission at Woodside Cottages). It is acknowledged that the site adjoins the A55(T), but there is no direct access on to the dual carriageway. The nearest junction on to the A55(T) is at the Dobshill interchange 1 km (0.7 miles) to the south of the site which would necessitate vehicles travelling along Drury New Road, which Highways Officers have concerns about, as explained later in this response. The objector has submitted the objection in the form of Sustainability Appraisal, as such each relevant point will be addressed in turn: Crime Noted. However, this will apply to all development sites and is not unique to this proposals. Education Drury Primary school and the Elfed High school are within walking distance Whilst the Elfed High School currently have some unfilled places, projections indicate across the secondary sector that there is likely to be an increase in the overall pupil numbers. This and the fact that the primary school in Drury is currently oversubscribed will mean that

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				employers within Broughton Retail Park and Airbus UK and indeed Chester, this could reduce the necessity to travel long distances for employment and utilising Cycle and Public Transport. See also proposed local businesess within BUC006 Employment - Short term community benefit during construction phase and longer terms support and delivery against employment strategy including Retail Green Barrier rural Life - Green Barrier in UDP. Located on edge of urbanised settlement area, contained within existing form of adjacent development and A55 (T). Logical extension to settlement and of scale capable of integration and to assist		developers will be expected to provide S106 contributions to address any shortfalls. Health All new development will be required to achieve these design standards. The site is within walking distance of Active Travel Route BUC14 along Beech Road, Drury. The site is located adjacent to the A55 main traffic route through Flintshire, it is therefore possible that noise and particularly air pollution may have an effect on the health of future residents. Housing LDP's are required to be prepared in the context of Planning Policy Wales Edition 10 (PPW) which is the latest planning guidance produced by Welsh Government. This guidance states that a search sequence approach should be taken when allocating new housing sites, choosing brownfield sites within settlements in the first instance and then as stated in paragraph 3.40 '' Where there is a need for sites, but it has been clearly demonstrated that there is no previously developed land or underutilised sites (within the authority or neighbouring authorities), consideration should then be given to suitable and sustainable greenfield sites within or on the edge of settlements. The identification of sites in the open countryside, including new settlements, must only be

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				in retaining existing village services with limited intrusion into settlement edge. Moderate but non strategic loss of agricultural land. Biodiversity - Initial assessments indicate limited likelihood of protected species. SSSI Buckley, Newts SAC proximate but no impact. Land/Townscape Land/Townscape - No statutory landscape designation. UDP policy designation as Green Barrier - a non permanent policy designation. PPW requires GB review as part of plan. Support given early review alongside Deposit LDP. UDP inspector indicated long term need to review GB to address		considered in exceptional circumstances and subject to the considerations above and paragraph 3.46 below.'' Applying the PPW search sequence guidance therefore, within the settlement boundary there are two possible development sites yet to be completed. One of the sites is at Woodside Cottages which has permission for 23 dwellings. Also there is an ongoing appeal for 56 dwellings at the Bank Lane site, which sits within the settlement boundary. The site is capable of being developed with an appropriate and suitably configured scheme. Relative to the size of Drury there are therefore sufficient development opportunities over the plan period for an adequate level of growth for the settlement without the need for further allocations. Access In terms of Active Travel route the site is close to route ref BUC14. Buckley railway station is 1.6km (1mile) from the site. However, it is important to note that Flintshire Council Highways Development Management officers considered the original candidate site to be unsuitable 'It would appear possible to create a vehicular access to the area from Drury Lane however this would require removal of farm buildings and Drury Lane is considered unsatisfactory to cater for significant levels of additional traffic. Access

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				future growth requirement. Site adjoins settlement and contained within built form and Strategic Transport Route A55 (T) as physical barriers. Predict nil-limited strategic openness loss. Predicted Grade 3a land subject to survey. Comparative impact to other candidates e.g. Warren Hall Heritage Heritage - No identified Heritage Assets on site or in context. Water Water - Mains water capacity and access to mains foul &SW sewer via attenuation to local watercourse. Flooding - Site lies outside any Development Advice Flood		onto Ding House Wood is considered unsuitable for an allocation site of this size'. Although the objector has submitted the 'Foursite Report' which includes additional information relating to access, but this does not represent a Transport Assessment. The Highways Officer has looked at this submission and commented that the sites is ''Presumed unsuitable for development of this magnitude due to limitations imposed by the width, alignment and nature of Drury Lane. Drury Lane has significant capacity limitations especially to the west of the Burntwood Road junction. The submitted highway statement fails to make any assessment of the scale of traffic generation associated with such a development or to consider the implications of this additional traffic. An indicative layout indicates both residential and retail uses served through a single point of access; it is unlikely that a single point of access would be appropriate to serve a development of this size. The provision of a mini roundabout is suggested however current design standards recommend against the use of mini roundabouts simply to serve new development. A potential emergency access is indicated on the submitted plan however dependent upon the location of any incident, the proposed location has the potential to exclude a large

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Zone identified by NRW. The increased urbanisation of the area could increase the amount of surface run off in the area if not appropriately mitigated. Air - The site is located near a Strategic Transport Route at A55 (T), therefore potential for airborne noise and poor air quality, negatively impacting on the air quality objective. Energy Energy - The resulting development and associated increase in population is also likely to lead to an increase in water use, energy use, waste production and natural resource use. However, a comprehensive mitigation programme		proportion of any development. An emergency access should be capable of serving as a secondary access to the site in event of an emergency and not simply an access for emergency vehicles. In general, facilities in the vicinity of the site fail to conform to the requirements of Active Travel Wales. The submitted report identifies that a number of existing footways within the vicinity of the site are of substandard width; routing via Clydesdale Road is suggested. Although this could provide a suitable access to the primary school; the route links with few other destinations. The report fails to consider safe access between the site and local secondary school. There is no separate cycle provision in the area and the generation of additional traffic on roads in the vicinity of the site would have a detrimental impact on any current users. It is suggested that additional bus stop facilities should be provided closer to the site entrance however the existing bus route does not pass along Drury Lane past the site. The width and continuity of the pedestrian facility linking between the site and the rail station are considered to be inadequate when compared to the requirement of Active Travel Wales'. It is clear that Drury Lane is not suitable to serve a site of this scale.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				would help to reduce this impact that promotes recycled material and innovative low carbon design and sustainable energy use should help. Natural Resources - No strategic impacts identified. Welsh Language Welsh Language - Current levels of Welsh Speaking can be maintained. Reducing risk of loss of welsh speakers to other locations through alignment of housing to schools, facilities and places of work.		Social Cohesion The size of the site varies from 9.66 ha to 11.8ha with a density of 30 dwelling per hectare this site could yield from between 290 to 354 dwellings which is a very large level of growth for the size of Drury/Burntwood. That level of growth is not justified in what is a relatively small village with limited facilities in comparison to the larger settlements. In terms of access to facilities, it is relevant to note that the proposed retail element is poorly located on the furthest eastern fringe of the site rather than in a central location. Also the same objector proposes retail activities on another resubmitted site (BUC006) only approximately 500m from this site, on the southern edge of Drury. The proposed site is totally out of scale with the size of Drury/ Burntwood. Economy Noted, however the site has highways constraints, is located in an area of important green barrier and there are adequate development sites within the settlement negating the need for any new housing allocations. It is unclear from the submission what jobs are to provided as part of the development (other than construction). The fact that the site is promoted as being near to Broughton and Chester does not represent the co-

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						location of homes and jobs. Green Barrier The site is located in an important area of Green Barrier, between Buckley - Little Mountain - Drury - Hawarden and Ewloe. All the Green Barriers in the UDP were reviewed as part of the Deposit LDP and the results of that review are found in Background Paper 1: Green Barrier Review – September 2019. The Green Barrier in this location is designated to prevent the coalescence of Hawarden with Ewloe, Buckley with Drury and Drury with Ewloe and Buckley with Penyffordd in the south. The Green Barrier in this location seeks to protect the land to the east of Drury, the land slopes gently down from Drury to the A55(T) is very prominent to passing traffic. In the case of Drury there are already opportunities for development within the existing settlement boundary in the vicinity of Bank Lane and Dinghouse Wood. The land between Drury and the A55 seeks to protect a prominent parcel of land alongside the A55.The green barrier therefore serves to prevent encroachment into prominent open countryside and the setting of this part of the settlement. Furthermore it seeks to facilitate the development of existing land, already within the settlement boundary.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Land/ Townscape See previous comments regarding the Green Barrier. The Plan has undertaken a review of all green barriers and has made amendments to green barriers where necessary and appropriate. The Plan has clearly provided a growth based strategy where the housing requirement is in excess of the Welsh Government population and household projections and has met this requirement through a variety of sources of supply as set out in the Housing Balance Sheet. It is not considered necessary or appropriate for further large scale 'strategic' releases of green barrier. Heritage Noted The site overlies the remains of a limekiln. It may require assessment prior to development prn name 103793, Hollins Limekiln Water Noted. Natural Resources Wales Maps show areas of surface water risk. The Foursite Assessment accompanying this submission notes in paragraph 3.5.15'' It is recommended that sustainable methods of attenuation are implemented where possible; this can be achieved using a combination of ponds, permeable paving with high voids sub-base/percolation pipes, swales, and filter strips. Other forms of attenuation that could

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						be utilised are oversized pipes, oversized manhole chambers and below ground tanks. 3.5.16 Additional methods of sustainability could be provided by use of rainwater harvesting tanks, rainwater butts or green roofs for the Building elements.'' As such, a suitable surface water attenuation scheme will need to be approved by Flintshire County Council as the SUDs Approving Body (SAB). Despite the objector recognising the potential for adverse effects given the sites location adjacent to the A55(T), no technical evidence has been submitted to demonstrate that this is not a constraint to development nor whether mitigation measures are possible. Energy The objector recognizes potential for noise and pollution from A55 but offers no evidence of proposed, only a short distance away on edge of Ewloe it is understood that Welsh Government have installed acoustic fencing due to the noise from the A55, Welsh Language See previous comment re Education In conclusion, the scale of development proposed is considered inappropriate given

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the scale and character Drury/ Burntwood particularly when there are still opportunities for housing development within the settlement boundary The green barrier serves to prevent encroachment into prominent open countryside and the setting of this part of the settlement, it also seeks to facilitate the development of existing land, already within the settlement boundary. There are highways objections to the access arrangements. The objector has not put forward a well thought out convincing scheme and there are doubts over the viability of the proposal. The site should not therefore be allocated in the LDP or included in the settlement boundary for Drury/ Burntwood and should be retained as Green Barrier.
699	HN1: New Housing Development Proposals	BUC006 Land north of A 549	Object	BUC006 - Buckley Main Service Centre Land North of A549 Chester Road & Dirty Mile, Buckley. We identify our development as of strategic importance to the sustainable growth of Flintshire. It's primary focus on General Needs Housing to the North and Commercial Offices, Industrial and Retail close to the Main Service Centre of Buckley to the South. Adjoining the site is the Strategic Hub, Buckley Railway Station	Additional residential allocation on candidate site BUC006.	Not accepted. It is noted that the objection seeks a mixed use development with two elements. The south western part of the proposal is for commercial and employment development with an access off the A549 adjacent to Old Cross tree Farm and the larger remainder of the site being for housing with access from Drury Lane The size of the site is 14.5ha,and it is suggested by the objector that the site could accommodate 190 to 250 dwellings and although there is no indication on how much employment land is proposed it is suggested by the objector that 800 to 1000 new jobs could be created. Without the benefit of a masterplan it is difficult to determine how

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				and A549 leading to the A55 (T), a sustainable transport route. Both score positively on the housing and access objectives, and is also aligned with the Planning Policy Wales (2016). A strategic Rail link Hub for access to Flint, North & West Wales, Chester, Cheshire, Crewe and London. Crime Crime - The site is currently greenfield so new developments could be a target for crime. Crime maybe mitigated via the Master planning Stage utilising the initiative "Secure by Design". Creation of safe and well designed Place of integration reviewed by initial and subsequent master planning exercises. With this level of mitigation including the detailed design and aspirations for the site, the IIA objectives on		these quantums of development can be accommodated on the site. This size of development would amount to significant growth for Drury / Burntwood and Buckley. This site is a large area of open countryside, part of an important Green barrier designation and there are constraints in terms of highway objections and biodiversity. The site relates poorly to the form and pattern of built development in Drury Burntwood and forms an integral part of the open countryside which is designated as a green barrier between Drury and Buckley to the south and towards Dobshill to the east. Built development would undermine the important function and openness of the green barrier in this location, by contributing to the coalescence of two settlements thereby conflicting with the requirements of PPW10. This large site extends from the southern extent of the Drury settlement boundary to join up with the Buckley settlement boundary at Little Mountain and up to the railway line to the east. Only a very small part of the site adjoins any settlement boundary the majority of the site is some distance from Drury or Buckley. The area comprises 4 large field parcels in agricultural use and is poorly related to the built form of either of the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				crime have been scored relatively low. Education Primary, Higher and Further education requirement likely to arise from increased population. Welsh, English and Faith schooling are within the Mold, Mynydd Isa, Buckley catchment areas. Employment Employment elements to support training and delivering against high quality workforce objectives. Employment - Potential for on site construction training opportunities. Proposed Commercial Premises, Industrial Units and Retail areas generate long term employment. Health Health - With Proximity to Buckley Railway		settlements and is more closely related to the surrounding open countryside. The extent of the site is also somewhat contrived, as it struggles to gain any suitable foothold on the highway network to achieve suitable access for the scale of development proposed. The objector has submitted the objection in the form of Sustainability Appraisal, as such each relevant point will be addressed in turn: Crime Noted but this applies to all new development and is not a unique preserve of this proposed site. Education In terms of walking distances to school Public Footpath No 31 adjoins the site and leads to Drury Primary school approx 215m from the site, although this may not be a safe route to school. At the closest point of the site to Buckley, Mountain Lane Primary school is 1500m and the Elfed High School is 2300m. The site is a linear shape extending away from the settlements so that at the far end of the site those distances increase to 2500m and 2950m. One of the criteria used to assess whether a site is in a sustainable location is whether there are range of facilities such as schools within 2000m of a site. Only

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Station close-by layout should promote Active lifestyles and connectivity to nearly local employment zones. Potential to support walking and cycling to support healthy lifestyles. Safe and high quality houses and living environment improve wellbeing and foster community integration across mix of housing types and employment together with retail & commercial offices. Housing Housing - Accords with search sequence at PPW Para 9.2.8 and 9.2.9. Deliverable, site free from significant constraints and accessible by a range of modes and connectivity. Capable of providing of 200+ dwellings in a mix to achieve market and affordable needs across all types and age		part of the site is therefore within a reasonable walking distance of schools. Employment Noted Every development site could suggest there might be onsite construction training opportunities. Also the objector mentions employment, commercial and retail uses and vaguely indicates these maybe located to the south of the site but there are no details of how much land would be put aside for such uses. There is no indication that there are any firm proposals for such uses. Further comments on the employment part of the site are found below. Health The site is within walking distance of Buckley railway station, close to a bus route, some employment areas and is close to Active Travel Route No BUC7. The nearest shops are the Drury Farm Shop walking along public footpaths is 600m from the north of the site and the nearest small convenience store is on Chester Road Buckley approx 990m from the southern part of the site. Although the objector mentions the possibility of retail uses, there are no details of where this would be located or any firm proposals for a retail use. Depending upon the type and scale of retail development, these proposals may also be in direct conflict with the Town Centre First principle and the desire to sustain retail

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				sectors. No impediment to delivery. Capable of delivery in a location highly attractive to market and deliverers. Of scale essential to secure investment and confidence to deliver to national house builder model. Viable site. Access Access - Sustainable location with potential for one or more vehicles access points. Public footpath crossing with potential for enhancing and connecting to Rail, Bus and Active Travel routes from site edge to schools, offices and workplaces via Buckley Railway Station. Access to Flint and Chester via Railway Hub. Well located to maximise benefits of investment Regional Growth Bid and Welsh Government promotion of North Wales Metro. Potential to include and adopt positive measures to		provision within the existing Buckley Town Centre. Housing The site is not free from constraints being in an area of open countryside, Green Barrier, in close proximity to the SAC and SSSI designated sites and having inadequate access arrangements. The site is within the green barrier so sequentially this site is not more suitable than the allocated site in Buckley. No evidence has been presented as part of this submission to demonstrate which housing developers are due to develop the site or provide timescales. This is important evidence to prove viability and deliverability to comply with the Soundness Test 3. Access Highways officers comment that the site is unsuitable. There would appear to be insufficient frontage length onto Dirty Mile to construct an access. A single simple T junction is unlikely to be suitable to serve a development of this size and it would not appear possible to construct a roundabout or ghost island junction on Drury Lane. Given the size of the site it is disappointing that no Transport Assessment has been submitted to demonstrate that the local highway network can accommodate the development.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				encourage non car modes including retention of footpath and cycles links to pubic highways as exemplar development. Social Cohesion Social Cohesion - Community cohesion policies to be delivered by providing a managed and master planned extension to a sustainable settlement, well related to wider context and adjacent settlements. Physically well related to existing form and delivers growth to support existing services and retail activities. Iterative and open process of dialogue, liaison and consultation (from the Preferred Strategy stage) to inform community of purpose. Self contained settlement of currently meeting own needs and serving wider retail		Social Cohesion Although in close proximity to both settlements, the site is not physically well related to the settlement form of Drury or Buckley. Where the site joins the settlement boundary of Drury, the site extends to the east leaving large areas of open countryside between it and the main built up area of Drury. The only potential linkage with Drury is the public footpath providing access to the school but which may not be a safe route to walk to school. Future residents of the north eastern part of the site would be faced with walking along Drury Lane, which has no streetlighting or pavements, to access Drury. In terms of Buckley the site barely adjoins the settlement boundary at Little Mountain and there is a gap of open fields between Buckley's eastern extent and the site. The site does not make a logical extension to either Buckley or Drury. The objector also mentions that the site will be as ''a self-contained settlement'' which seems counter-intuitive to community cohesion and successful integration of new development with the existing settlement. Also it is possible that potentially competing retail uses could detrimentally affect Buckley town centre. Economy A Joint Employment Land Review was

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				catchment area for adjacent settlements. Can deliver community integration, accessible homes for life to encourage community integration, valuing difference and focusing on the shared values that join people together. Economy Economy - An opportunity to Develop a Business Hub for the Main Service Centre of Buckley via the Strategic Rail Hub. With proposed Commercial Offices, Industrial Premises (to the South) and General Need Housing (to the North) delivering circa 800-1,000 jobs. Residential development promotes economic development and increase employment opportunities, skills and supporting local trades.		undertaken jointly for Wrexham County Borough Council and Flintshire County Council by consultants, BE Group, to help inform the Deposit LDP and was published as part of the consultation on the plan. This review showed that there is a surplus of employment land in Flintshire and therefore no need to allocate any additional employment land for the LDP plan period. The focus of the Plan is on the delivery of the two Strategic Mixed Use Sites and the Plan also has a number of other employment allocations as well as additional flexibility provided by a large number of PEA's. The objector has provided no evidence of a realistic need for additional offices and industrial premises in this location. Although the site is in close proximity to Buckley Railway Station it is not a Strategic Rail Hub. Existing Employers Noted. However, there is a major strategic allocation comprising mixed use development at Warren Hall which has public backing through the North Wales Growth Deal, which is closer to Broughton than is the objection site. The objector fails to evidence the need for additional employment land in addition to the plans existing provision. Construction Phase Noted. However, the benefits arising from the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Co-locating homes close to jobs of choices of living environment and scores positively against Preferred Strategy and SA. Development could be of scale to deliver local convenience retailing on site to meet local needs. Benefits to other local businesses and promote investment in the local area and adjacent. Significant positive for the economy objective. Existing Employers Further, our development is located near to existing key employers within Broughton Retail Park and Airbus UK and indeed Chester, this could reduce the necessity to travel long distances for employment and utilising Cycle and Public Transport. Construction Phase Employment - Short term community benefit during construction phase and		construction phase could apply to any site and is not unique to this proposed site. Green Barrier As part of the Deposit LDP a review of the Green Barrier was carried out, the results of which were published, as part of the consultation on the plan, in the Flintshire Local Development Plan 2015-2030 Background Paper 1: Green Barrier Review – September 2019,. One of the main functions of the green barrier in this area is to prevent to coalescence of Buckley and Drury. The gap between the two settlements is dissected by Drury New Road. The land on either side of Drury New Road is prominent and has a feeling of openness, despite the proximity of the two settlements. However, the removal of the green barrier would erode the openness of this swathe of land to the point where there would be only a very narrow or negligible gap between the two settlements. Drury is also a relatively small settlement when compared with Buckley and the green barrier helps in retaining its present scale, character and form. The green barrier is justified in terms of preventing the near coalescence of the two settlements and preventing urban encroachment into open countryside.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				longer term via Retail, Office and Industrial Employment. Green Barrier Rural Life - Green Barrier in UDP. Located on edge of urbanised settlement area, contained within existing form of adjacent development and A549. Logical extension to settlement and of scale capable of integration existing village services within limited intrusion into settlement edge. Moderate but non strategic loss of agricultural land. Biodiversity Biodiversity - Initial assessments indicate limited likelihood of protected species. SSSI Buckley Newts SAC proximate. Land/Townscape		Development on the proposed site would also encircle the gap between Buckley and Drury, so that development extending from the rear boundaries of Oakwood Grove to the Old Cross Keys Farm will join the two settlements. As the site also spreads east into open countryside, it extends development away from the built form of Buckley and Drury and this would have a significant impact on the openness of the green barrier. The elongated shape of the development site in the open countryside does not relate at all to the existing form of development. In the case of Drury there are already opportunities for development within the existing settlement boundary in the vicinity of Bank Lane and Dinghouse Wood (the latter recently secured planning permission for housing).The green barrier therefore serves to prevent encroachment into prominent open countryside and the setting of this part of the settlement. Furthermore it seeks to facilitate the development of existing land, already within the settlement boundary. During the UDP Inquiry an omission site was submitted for the Old Cross Keys Farm to be included in the settlement boundary. At that time the inspector commented :- ‘’By its character and appearance the site relates better to the open countryside and is included within the green barrier which separates Buckley from Dobshill and Drury. Including the land within the settlement would result in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Land/Townscape - No statutory landscape designation. UDP policy designation as Green Barrier - a non permanent policy designation. PPW requires GB review as part of plan. Support given early review alongside Deposit LDP. UDP inspector indicated long term need to review GB to address future growth requirement. Site adjoins settlement and Railway as physical barriers. Predict nil-limited strategic openness loss. Predicted Grade 3a land subject to survey. Comparative impact to other candidates e.g. Warren Hall. Potential to retain gap to Drury Lane. Heritage		an illogical boundary as no other land on the eastern side of the road, apart from the developed area at the northern end in Drury, is included within the settlement.'' The situation now remains the same as then and this adds justification to the decision not to develop this site. Biodiversity Natural Resources Wales identifies that there are records of Great Crested Newts on the site and that the site is within approx. 100m of the Deeside and Buckley Newt Site SAC and Buckley Claypits and Commons SSSI. The objector has provided no ecological survey to establish what ecological importance the site has. Land/Townscape See comment above in relation to the Green Barrier. Whilst the site has a firm physical boundary along its southern edge formed by the railway line, the site as a whole relates poorly with adjoining settlements. Buckley is located to the west of Drury New Road and the Old Cross Keys Farm provides a distinct character break from the residential and employment land to the west. Drury expands outwards from the junction of Drury New Rd and Drury Lane and has a spur of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Heritage - No identified Heritage Assets on site or in context. Potential (non statutory) archaeology resource to be investigated. Water - Mains water capacity and access to mains foul & SW sewer via attenuation. Flooding Flooding - Site lies outside any Development Advice Flood Zone identified by NRW. The increased urbanisation of the area could increase the amount of surface run off in the area if not appropriately mitigated. Air pollution Air - Potential for airborne noise and air		development extending southwards to wrap around Drury Primary School. The proposed site does not represent a logical extension to Buckley and does not represent a logical extension to Drury as it adjoins only this small spur of development. Not only does it join up the two settlements but also extend built development into open countryside in a manner which is unrelated to the form and pattern of development. Built development would not relate well and would not be integrated with existing development in terms of social integration. Heritage There is a listed building, White Cottage, Drury Lane outside the site to the north of the site. Flooding Noted Air pollution Noted Energy Noted Natural Resources

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				pollutants from adjacent to railway line. Energy Energy - The resulting development and associated increase in population is also likely to lead to an increase in water use, energy use, waste production and natural resource use. However, a comprehensive mitigation programme would help to reduce this impact that promotes recycled material and innovative low carbon design and sustainable energy use should help. Natural Resources Natural Resources - No strategic impacts identified. Welsh Language Welsh Language - Current levels of Welsh Speaking can be maintained. Reducing		See NRW comments above. Welsh Language Noted Conclusion In conclusion therefore a development of this size would be out of scale with the size of Drury. There are highways objections and ecological concerns neither of which have been addressed by the objector. Employment, commercial and retail uses are all promoted but with no justification nor details of any firm proposals within this submission. Including the site within the settlement boundary would be illogical as the site extends away from the built form of Drury and Buckley and relates better to the open countryside. More significantly the site forms part of a crucial gap between the two settlements in an important area of green barrier. One of the functions of this designation is specifically to avoid the coalescence of the settlements and to protect the open countryside from development. The green barrier will also facilitate the development of existing land, within the settlement boundary of Drury. For all the above reasons therefore, the site is not suitable to be allocated for development or included within the settlement boundary.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				risk of loss of welsh speakers to other locations through alignment of housing to schools, facilities and places of work.		
701	HN1: New Housing Development Proposals	NEW010 Land Adj Argoed View	Object	We identify our development as of strategic importance to the sustainable growth of Flintshire. It's primary focus on General Needs Housing close to the A494, a sustainable transport route, scores positively on the housing and access objectives, and is also aligned with the Planning Policy Wales (2016). New Brighton scored well in the LDP Settlement Audit (December 2015) with a mix of services and facilities. Third tier status as a sustainable village support growth to meet settlement and wider spatial needs.	Allocation of additional site at Argoed View New Brighton	Not accepted. New Brighton lies to the North East of Mold and immediately to the North West of Mynydd Isa. New Brighton has been categorised as a sustainable village on account of its size, accessibility and level of facilities and services and because of its proximity to larger settlements. The bulk of the village lies on the Southern side of the A5119 although small residential developments and commercial development lie on the North side of the A5119 along with this site. Candidate site NEW010 includes the western half of the allocated LDP site known as Cae Isa and an additional area of land North of the site known as land at Argoed View. The site effectively wrapped around the rear of the dwelling Crestlea (and included Crestlea), extending up to the recent Leason Homes development 'Oaklands'. In the objection to the Deposit LDP the objector has amended the boundary by excluding all land except that which adjoins the allocated site and extends alongside and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Accords with search sequence at PPW 9.2.8 and 9.2.9. Deliverable site free from significant constraints and accessible by a range of modes and connectivity. Capable of providing between 20-30 dwellings in a mix to achieve market and affordable needs. Viable site and scores positively against the housing and access objectives. Site is located next to existing key employers within Mold & Buckley and could reduce the necessity to travel long distance for employment and utilizing cycle and public transport. Edge of settlement site, but contained within existing form of adjacent development. Logical extension to settlement and of scale to assist retain existing village services within limited		to the rear of Crestlea. The site measures just under 1ha in area and could in theory accommodate 20-30 dwellings. In this context it is difficult to understand how the objector promotes the site as being of strategic importance to the sustainable growth of Flintshire. Highways Development Management have assessed the site and concluded that it would be unsuitable. Although access may be possible either off New Brighton Road or through the allocated site, the objector does not offer a preferred access arrangement or any evidence to support that it is acceptable. It is noted that the site lies outside of flood zones. The UDP Inspector recommended that land at Cae Isa should be withdrawn from the green barrier and that the southern part of the site be included within the settlement boundary. This is considered to represent a clear context and direction of travel for considering the sites potential as part of the LDP. The Cae Isa site performed well sequentially and provides a logical 'rounding off' development to New Brighton in keeping with the built form of the settlement. The revised additional area of land known as Argoed View extends from the Cae Isa site and intrudes into the Open Countryside and Green Barrier, wrapping partly around the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				intrusion into settlement edge. No loss of BMV. Biodiversity – initial assessment indicate limited likelihood of protected species. Site lies outside any Development Advice Flood Zone. Our development is located near to existing key employers within Mold & Buckley and could reduce the necessity to travel long distance for employment and utilizing cycle and public transport.		dwelling Crestlea at the end of Argoed View. This proposed pattern of development would erode the Green Barrier between New Brighton and Sychdyn and create an illogical extension of the settlement that would be harmful to the open countryside. This appears more an exercise in simply adding value to land in attempting to capitalize on the sustainable allocation made in the Plan, but where the proposed 'extension' is clearly not sustainable. The allocation at Cae Isa will provide 105 new dwellings for New Brighton, in addition there is a commitment of 23 dwellings on the former New Brighton Service Station, which is nearing completion, as well as the 13 dwellings at Rockbank developed by Leason Homes. This will provide sufficient growth for the settlement therefore an additional site in New Brighton is not needed. The objector does not provide sufficient justification for the inclusion of this additional area of land to the allocated Cae Isa site, therefore the extended area should not be allocated within the LDP. In conclusion, the Plan has provided sufficient growth in New Brighton and a further allocation is not necessary or appropriate particularly when it would relate poorly to the pattern of development and harm a green barrier.
702	HN1: New Housing	BROU001 Bretton Road, Bretton	Object	BROU001 -Land between Retail Park, Bretton Road and A55,	Allocation of additional site on lane between	Not accepted. The objector's submission is in the form of a sustainability appraisal which

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development Proposals			Broughton Broughton scored well in the LDP Settlement Audit (December 2015) and is a designated Local Service Centre in the Preferred Strategy. Bretton is a Sustainable Village which relies on Broughton and adjacent settlement for services. The site integrates well with the established pattern of development of Broughton and Bretton. Second tier status scores positively for growth to meet settlement and County needs. Spatial relationship to high quality retail/ employment/airport and other larger settlements enables a service to promote the economic growth strategy. Housing - Accords with search sequence at PPW Para 9.2.8 and 9.2.9. Deliverable, site free from significant constraints and accessible by a range of	Broughton Retail Park and the A55, Broughton.	promotes the site as suitable for allocation within the plan. Candidate site BROU001 was assessed as part of the original call for sites. As part of the Integrated Impact Assessment the site was identified as one of a number of 'reasonable alternative' sites. However it was not allocated within the LDP due to the ongoing cross border study to identify improved vehicular access from the A55 to the Broughton area and Western part of Chester. Until the findings of Broughton Chester Growth Corridor study are known it would be premature to allocate the site and it is understood that further traffic modelling is being undertaken. It is understood that further traffic modelling is currently being undertaken which should determine if the site will be needed for the new slip road or not. Clearly, and as set out in the Plan strategy, the focus for growth in this area is on the development of the strategic site at Warren Hall to allow this long standing commitment to come forward and deliver strategic mixed use growth in a sustainable location, rather than just adding more housing to more housing as proposed by the objector. In addition BROU001 has not been allocated within the LDP as the focus on growth within the Broughton area is at the allocated Strategic Site, Warren Hall. The Warren Hall is central to the North Wales Growth Deal, receiving considerable public sector

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				modes and connectivity Capable of providing 100+ dwellings in a mix to achieve market and affordable needs across all types and age sectors. No identified physical constraints to delivery. Capable of delivery in a location attractive to market and deliverers. Viable site. Access - Sustainable location with potential for one or more vehicular access points. Public footpath crosses. Links to local bus route and adoption of positive measures to encourage non car modes including retention of footpaths, and new cycle links to public highway and Aerospace.		investment over recent years including junction improvements at the interchange of the A5104 and the A55. The site is allocated in the adopted UDP and has outline planning permission as a business park however this will be extended through its strategic allocation within the LDP to incorporate a mixed use development which will include a business park, a commercial hub including leisure facilities, a hotel and some retail opportunities as well as housing. The Warren Hall site provides a unique opportunity to embody placemaking principles, and to develop a sustainable mixed use site that will bring significant economic benefits to the area. The Council have allocated Warren Hall as a strategic mixed use site in order to support the objectives of the North Wales Economic Ambition Board and the Mersey Dee Alliance, and boost the economy within North East Wales. This allocation is supported by Welsh Government. The development of the AMRC was clearly compliant with the present policy framework for Broughton and the wider area, and did not need to be factored into the deposit LDP or await the outcome of the LDP Examination to secure such important investment. This also illustrates that there is a sufficiently flexible framework to allow for such development, which does not simply concern itself with a housing only approach to sustainable development in this location.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Broughton is a Tier 2 Local Service Centre and has seen a large amount of development during the Plan period with 189 units completed on the site to the south of the Retail Park in 2017/18, 24 units completed on the 'compound site' immediately to the west of the retail park (adjacent to Aldi) in 2017/18, and 36 units completed on Chester Road (Park Jasmine) also in 2017/18. In addition there are also 300 dwellings planned on the allocated strategic site at Warren Hall. This is considered sufficient growth within the Plan period. Given the extensive amount of new housing already added to Broughton predominantly by the objector, it would be short sighted and an unsustainable form of development to prevent wider strategic infrastructure issues from being worked through, before simply allow further housing speculation. The present green barrier sits tight against Bretton Road and the shopping park and the settlement boundary for Bretton and offers no scope for future growth. The gap between Bretton and Saltney is 2.1km and the green barrier is considered to be larger than is necessary to prevent coalescence. It is therefore considered appropriate to draw back the green barrier which removes candidate site BROU001 from the green barrier. This would allow for some expansion in the future.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						It is acknowledged that the site is well located in terms of access to facilities and services, and is well served by public transport. It is also free from constraints such as flooding. However, the site is part of the Broughton Chester Growth Corridor Study. The allocation of BROU001 could potentially threaten future economic growth within the wider area, as the site may be needed as a possible new slip road from the A55 into Broughton. Until the results of this study are finalised it would be premature to allocate this site for development as it could block an important infrastructure project, which would have wider implications for the local economy. Consequently the land at Bretton Road has not been allocated within the plan as it is not needed in addition to the allocated site at Warren Hall, and the results of the Broughton Chester Growth Corridor Study are not available yet. In conclusion, the site is considered premature to be considered as an allocation until the Broughton Chester Growth Corridor Study has been published, and the aim of bringing forward the strategic site at Warren Hall has been achieved.
736	HN1: New Housing Development Proposals	BRYN002 Land North of Hiraethog Brynford	Object	We would like to make an appeal regarding the exclusion of the site at Hiraethog, Brynford (Site Plan No BRYN002) from the LDP.	Inclusion of additional sites within sustainable villages, namely BRYN002 candidate site at	Not accepted. Brynford is a classified as a sustainable settlement in the LDP on account of its proximity to Holywell where there is a range of services and facilities But also recognising that Brynford has a school and some facilities of its own. Brynford is categorised as a Tier 3 sustainable

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				This site went as far as the Preferred Strategy category, but with the exclusion of any sites outside the Settlement Boundaries.0 being considered, we wondered if there cou0ld be certain exceptions. With the idea of 14% of the Housing units being planned for Sustainable Villages, which in my rough calculation being over 900 units. Please see list below for just a few benefits of new houses in this village 1. The field itself is adjacent the Hiraethog House and is no longer being used for agricultural/Farming. 2. More housing (Including Affordable Housing) needed in the immediate and surrounding areas 3. It is in a secluded area and will not spoil the luck	Hiraethog, Brynford.	settlement. The LDP aims to steer development within the first three tiers, within a hierarchy system whereby the plan seeks to distribute development in a sustainable way having regards for the settlement hierarchy and by identifying the most sustainable settlements and sites. In this case Tier 3 settlements will be the location for housing that at related to the scale, character and role of the settlement in this case small scale development. The spatial strategy is not based on every settlement having an allocation. Growth can also occur through completions, commitments, windfalls and small scale exceptions schemes. Reviewing the completions for the first three years of the LDP illustrates that there are six dwellings that are commitments in 2018 two were built and a further 4 awaiting to be built. The land is categorised as Grade 3a agricultural land and therefore will result in the loss of the best versatile land. The site is also located within a Minerals safeguarding area. The site is located within close proximity (within 200m) to a site of International importance – Halkyn Mountain SAC and Halkyn Common and Holywell Grasslands SSSI. Additionally, NRW record that there may potentially be Great Crested Newts within the area. The Environmental Health section have reported that the site contains lead and heavy

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				of the village, as it will be hardly visible from the main roads. 4. A good bus route. 5. Near to the A55 and A541 6. A very good School in the village (Which I believe is being extended in the near future), also Shop and Church which includes a Community Centre.		metals and that the site overlies mine shafts. Further assessment may be needed and a land contamination assessment would be required but has not been provided as part of the objection.. Additionally, Chester Road, Penymynydd 186 Mold is a tier 3 settlement and has already been granted permission for 27 units of affordable housing. Therefore it is considered that additional sites are not needed within the tier 3 settlement for affordable housing. Growth within the Tier 3 settlements, including affordable housing, will occur in a large number of settlements as a result of completions and commitments. In Bryford, policy STR2 allows for small scale affordable housing exceptions schemes and further guidance is set out in policy HN4D. Brynford is of small size and has a rural character and feel to it being located within the elevated Halkyn and Holywell Common. Despite the dwelling and outbuildings in the south west corner, the site is better related to the area of open countryside to the north and east as it is located within a backland area and is not located within the settlement boundary. Additionally, the development of the site would be at odds with the linear character of development along Brynford Road. Although the site may be close to a bus route, the site does not appear to have a frontage

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						with an adopted highway and therefore highways have objected on the grounds that both means of access to the site are unadopted. Developing this site would result in harm to the open countryside and have a detrimental impact upon the character of Brynford. Development also appears technically unacceptable in terms of the lack of a suitable vehicular access to serve a site of this size and the potential dwellings it could accommodate and no evidence has been submitted to show how a suitable access can be provided. The site is not considered necessary or appropriate to be allocated for housing, nor included within the settlement boundary. The above discusses concerns regarding the proposed land for development and therefore the site has not been allocated within the plan. In conclusion the site is not considered appropriate to be included in the Plan.
755	HN1: New Housing Development Proposals	SAL002	Object	Watersmeet in Context Watersmeet offers a strategic location of the scale and physical characteristics that can help to deliver identified housing and infrastructure needs of Flintshire. The site is uniquely positioned to	LDP needs to have a greater regard for the Chester Broughton Growth Corridor. The allocation of the Watersmeet Strategic Site at Saltney would	Not accepted. The objection appears not to be actively promoting the site for allocation in this Plan period, but is seeking: i) The site safeguarded in the Plan as a contingency site in the event that other allocations do not come forward ii) The site identified as a location for future growth

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				accommodate a new residential-led community; well connected to major employment hubs in Deeside and Chester and the wider region; bounded by urban influences which physically and visually provide important context to the character of the site; accessible by a range of public transport providing future residents with opportunities for sustainable travel; and a deliverable site of a scale where significant social benefits can be secured such as new and improved infrastructure, including supporting the CBGC. 1. Safeguarded we request that FCC safeguard Watersmeet within the Plan for future residential-led development. This will ensure that in the event that identified sites do not come forward during the Plan Period,	support the CBGC.	iii) Deleted from the green barrier The Plan has sought to identify an aspirational yet realistic growth strategy in terms of employment and housing and has identified allocations to help deliver this based on a spatial strategy as set out in policy STR2. Watersmeet site comprises a patch work of flat agricultural fields covering a very large area of 159.8 ha. Adjoining the border with Chester and England the site actually extends into the other county and country. The site is in the open countryside and in a C1 Zone of flood risk. The area forms the south eastern end of an extensive green barrier between the River Dee and the Cheshire border. The land is a significant and important part of the green barrier and is best and most versatile agricultural land. Furthermore, because of its scale and location, the implications of developing it are of sub regional significance. The Plans Preferred Strategy seeks to direct growth to the most sustainable settlements in the top three tiers of the settlement hierarchy. The proposed site would in effect remove most if not all of the Plan's housing allocations and focus development on the edge of industrial development at Chester. It would have a poor relationship with Saltney

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Watersmeet support the long-term growth of the County, meeting a wide range of housing needs to offset any shortfall. This will also strategically position the site to support the delivery of the CBGC, via either contributions towards and/or land to deliver this important infrastructure priority 2. Broad Location for Growth If not to be safeguarded, we consider that the area to the north of Saltney and to the west of Chester (including the Watersmeet site) should be identified within the plan as a 'Broad Location for Growth' shown illustratively on the proposals maps and showing an indicative alignment of the CBGC. 3. It is recommended that the LDP better reflects the importance of the CBGC in the		being separated by the River Dee. To develop such a large site would also take a long period of time to be started and delivered and would do little to assist the Plan in achieving its housing land supply and trajectory in the early years of the Plan period. The site is clearly contrary to the Plan's Strategy and is not appropriate or suitable to be allocated. The site has been promoted for development in previous development plans. Most recently it was submitted as an omission site as part of the UDP and considered by the Inspector who did not recommend allocation of the site or drawing back of the green barrier. The Inspector commented: 'The objection site measures about 25ha and lies to the north of the A548 Sealand Road. Its northern boundary is contiguous with the County's boundary with Chester. It is Grade 2 agricultural land within a C1 flood zone which forms an intrinsic part of the countryside between Chester and the Deeside conurbation. The Council's spatial strategy seeks to concentrate development within the defined towns and villages with their wider range of goods and services. I conclude in Chapter 3 of this report that such a strategy is satisfactory to guide development in a sustainable way. Whilst the objection site may be close to Chester and its amenities, it is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				proposed infrastructure policies of the Plan, recognising the potential for the CBGC to be delivered during the next Plan Period (to 2030) and, importantly, recognising the importance of key strategic sites in delivering FCC and wider sub-regional infrastructure priorities. It is important that both FCC and CWaC engage as part of their respective Local Plan processes to ensure that strategic and cross-border opportunities are fully and consistently reflected in emerging Development Plans. 4. The Case for Amendment to the Green Barrier Boundary It is considered that the release of the site for development would have a limited impact on the purposes of the wider Green Barrier as set out in the PPW. It is not		only partly contiguous with and relates poorly to Blacon. Across the boundary in Cheshire the land abutting the site is for the most part green belt. Allocation of the site for development would therefore result in a satellite of new building within a strategic area of countryside whose openness is protected by green barrier/green belt designations in order to prevent the coalescence of settlements. It would result in an illogical boundary which would compromise the strategic function of the protected area. The objector has provided scant details of what development would be appropriate on the site. The UDP makes adequate provision for housing and employment growth. If there is no justification, which is the case in this instance, PPW does not support mixed use development of greenfield sites in the countryside. In addition given the sensitive border location where the objections indicate there is pressure, as opposed to need, for development it seems to me that should in the future it be determined there is a need for development in the locality it should be investigated as part of the LDP process with cross border cooperation, not in an arbitrary way in response to an objection to the UDP. The SRSS does not support such a development at the present time'. The Inspector firmly resisted the site and considered it to be inappropriate and the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				considered that Watersmeet is required to retain the openness of the Green Barrier and will not significantly impact the character of the countryside. The design response for Watersmeet provides the opportunity to create a new settlement that is a natural and logical extension to the urban form and that can support defensible and permanent boundaries on all sides. 5.Environmental and Technical Considerations Initial site investigations demonstrate that the site is deliverable and that there are no identified impediments to the development of the site that cannot be mitigated. The site sits within Flood Zone C1 and is served by significant infrastructure including		Inspectors comments are still considered relevant to the present consideration of the site. Given the non-compliance with the LDP strategy, it would be illogical to designate the land in such a vague and imprecise manner as suggested by the objector. There is as yet no definitive outcome from the ongoing work relating to the Chester Broughton growth Corridor study to determine the transport infrastructure options that could be considered, let alone any development opportunities that may be related to this, either at this site or elsewhere. It would be premature to even broadly outline an intention to look at growth on this site at some future point, particularly in the context that the site has significant constraints that would count against its sustainable development potential. It is evident that Chester West and Chester City Council is meeting its own housing needs, in particular through a large green belt release to the south of the city on Wrexham Rd. It is also evident that Flintshire is seeking to meet its own needs for housing. In this broader context there is no requirement to release a substantial part of a green barrier to accommodate development that is not required in either County. The LDP already recognises the importance of the two strategic sites allocated at Northern Gateway and Warren Hall, where there is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				flood defences; Whilst further mitigation is likely to be required, it is considered that this is feasible, given the flood defence measures put in place at Northern Gateway. 6. Illustrative Masterplan An illustrative masterplan has been prepared, the proposed area to be developed amounts to 45% of the overall site (74ha of 166ha). This enables 55% of the site to remain open and be devoted to green infrastructure. On this basis, the site can accommodate approximately 1,700 dwellings across 50 ha (43ha of residential land within Wales and 7ha within England), which equates to a density of 34 dwellings per hectare. Each neighbourhood		clear direction of travel for the development of each site, and where they are positioned in a wider economic ambition context of taking forward the North Wales Growth Deal. The same cannot be said for this site. The green barrier in this location is an important designation. Following a review of all green barriers in the County it is proposed to make two minor changes to the extent of the designation in this area. Results of the green barrier review are found in Background Paper 1: Green Barrier Review – September 2019. In summary this is the largest green barrier in the County and comprises a flat and open agricultural landscape on the north side of the River Dee. It mirrors the green belt mirrors the green belt in Cheshire and is essential in seeking to protect open countryside on both sides of the national boundary. The green barrier meets all of the functions set out in PPW and new development would be extremely prominent and conspicuous. The green barrier is justified given its open character and appearance and the level of development pressure in and around the city of Chester, and despite the overall scale and extent of the green barrier, the area covered by this site, and due to its relationship with Chester and its green belt, is a critical part of maintaining this relationship in terms of protecting the openness of the area from inappropriate development.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				within the development is designed to have easy access to greenspace The site is large enough to support a local centre which would provide a primary school, local shops, leisure and communities uses. The employment element at the site would extend to approximately 18 ha.		There are number of key constraints affecting the objection site: • Agricultural land – Welsh Government have undertaken on-site surveys and confirmed that the site represents grade 2 agricultural land. PPW clearly sets out to protect BMV agricultural land and specifies that it should only be developed where there is an overriding need. In the context of development plans on both side of the national boundary, there is no overriding need for this development. • Flood risk – the site sits within C1 flood risk zone. PPW10 seeks to direct development, particularly highly vulnerable development away from zone C1. TAN15 advises that residential development can only take place in zone C1 where it satisfies the justification tests. Given that one of the tests is that a site comprises brownfield or previously developed land, the proposed development cannot be justified. In any event, no FCA has been submitted by the objector. • Ecology – the site lies adjacent to the Afon Dyfrdwy (R. Dee) SSSI and the River Dee and Bala Lake SAC. No ecological surveys have been undertaken and submitted as part of the objection in order to assess impacts on ecology • Transport – no Transport Assessment has been submitted as part of the objection to demonstrate that the site can be satisfactorily

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						access. The Council's Highways Development Management Officer has highlighted the need for major road improvements and that the only access is cross-border, necessitating the involvement of Cheshire West and Chester City Council. There is no evidence that the site is technically deliverable nor evidence to demonstrate that it is a viable proposition. It would also be inappropriate for the site to be identified in the Plan as a future area of growth as requested by the objector. It will be necessary for the objector to put forward the site as a candidate site as part of the LDP review. The objection is accompanied by a Development Statement which includes an illustrative masterplan. It points to 50ha of residential development, a 6ha local centre comprising schools, leisure and community uses as well as 18ha of commercial development. In effect the objector is portraying the site as, a new settlement. This also reflects the reality of its location being separated from existing residential areas in Chester by industrial development and being located adjacent to a sewage treatments works. PPW10 advises that new settlements must only be considered in exceptional circumstances and there are clearly no exceptional circumstances in this case.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						In conclusion, the Plan has provided for growth through the allocation of two strategic sites and a range of other employment and housing sites and a further strategic site is not necessary or appropriate particularly as it does not comply with the Plans spatial strategy. The site suffers from major constraints including grade 2 BMV, C1 flood risk, ecology and transport and no evidence has been provided to address these. The site is not necessary or appropriate to be allocated in the Plan, or excluded from the green barrier, or identified as an area for future growth.
756	HN1: New Housing Development Proposals	MOL024 , MOL046 Gwerrnaffield Road Mold	Object	Gwernaffield Road - Land on the western edge of Mold (Mol024 & MOL046) The site represents a logical development opportunity on the edge of a Main Service Centre which is highly sustainable and close to existing services, employment opportunities and is well served by public transport and the surrounding road network.	Allocation of additional residential sites at Gwernaffield Road - Land on the western edge of Mold (Mol024 & MOL046).	Not accepted. The objection site submitted comprises11.8ha of land and is configured differently to several candidate sites. It comprises a mix of: • MOL046 submitted by the landowner • MOL047 submitted by the landowner and which lies to the west of 046 (but the objection site excludes the western part of MOL046). • MOL024 submitted by a third party (but the objection site excludes the southern part of MOL047). The objection is accompanied by two different options. The first is for 130 dwellings on 6.2ha (the north eastern part) and the second is for 240 dwellings on the whole of the site.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Given the proposed location to the north of this Site (Allocation HN1-6), this Site also provides an opportunity to deliver additional high-quality family housing. Importantly, Anwyl Land own much of the land promoted in these representations and have control over the remainder and therefore the highest of certainty can be given that housing (both market and affordable) will be delivered from this site from a very early stage of the Local Plan. This Site offers the opportunity to make a very significant contribution to the Council's five-year housing land supply and delivery of the LDP. Our client's site is a sound choice to be allocated for development within the plan period. Additional evidence has been provided as part of these		The objector has made objections to several Plan policies in terms of the Plan's housing requirement figure, its housing land supply and spatial strategy and these are responded to in the context of relevant policies. The Council's conclusion is that the Plan makes a sufficiently aspirational growth strategy and a soundly based spatial strategy, both of which are supported by Welsh Government. The Housing Balance Sheet sets out a housing land supply which is considered to be robust and deliverable, particularly given the level of completions over the Plan period. The Plan also has a flexibility allowance at 14.4% which is above the minimum 10% required by Welsh Government in development Plans Manual 3. As a result of this assessment it is not considered that additional or replacement sites are necessary or appropriate. The Council have clearly identified through the allocation of land (HN1.6) between Denbigh Rd and Gwernaffield Rd that it considers the north west of Mold to be the logical direction for future growth. This takes account of the green barrier, the firm and defensible boundary (for much of Mold) formed by the A494(T), flood risk to the north and east and the green barrier between Mold and the outlying settlements. Taking these considerations into account, the north western part of Mold offers scope for growth as it is not affected by flood risk or green barrier. The

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				representations to outline how the Site is deliverable and can contribute promptly to providing much needed housing in Flintshire. A number of benefits will also be brought to the borough as a result. Given the need for a more ambitious housing requirement, a greater degree of flexibility and the need for contingency sites, we politely request the Council to review the new and additional evidence submitted as part of this representation which demonstrates the site can be delivered in the plan period.		approach was also recognized by Mold Town Council in the Mold Town Plan. Mold will see growth over the Plan period from a number of sources. Based on the Housing Balance Sheet date of April 2018 Mold had seen completions of 156 units over the first three years of the Plan period and had commitments of 177 units. In addition to this the Plan has allocated site HN1.5 at Maes Gwern (160 units) where Wates are presently under construction and the allocated site HN1.6 at Denbigh Rd / Gwernaffield Rd for 246 units. In combination this is a significant level of growth for Mold over the Plan period and it is not considered that additional allocations are necessary. The Council accepts that the objection site may represent a logical site for development but are of the opinion that it is more appropriately considered as part of the review of the adopted LDP. It is noted that the landowner / objector for this objection site is also in control of the allocated site HN1.6 immediately to the north. This enables a longer term approach to be taken in terms of considering further releases of land in this part of Mold in the first review of the Plan. In conclusion, the Plan has provided sufficient growth in Mold and it is not considered necessary or appropriate for further allocations to be made.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
783	HN1: New Housing Development Proposals	CAR001 Land North of Holway Road Carmel	Object	It is our Client's consideration that their land interests at Carmel should be allocated for housing in the Flintshire LDP for up to 60 dwellings. The release and allocation of this Site would not result in over-development in Carmel. The Site is located to the northern edge of the settlement of Carmel. In respect of its surroundings, to the immediate north of the Site lies an existing farm and associated agricultural buildings. To the east lies residential development, whilst the A5026 forms the southern boundary to the Site. Agricultural land lies beyond the western boundary of the Site. Accordingly, the Site is naturally well-contained and a logical development opportunity. Whilst it would result in the loss of land designated as Open Countryside, it	Allocation of additional residential sites to increase supply.	Not accepted. Whilst Carmel is identified as a Sustainable Village the site relates poorly to the main built form of the settlement which apart from development on Mertyn Lane is confined between the A5026 along the northern edge and Carmel Road along the southern edge of the settlement. The site is better related to the open countryside to the west and beyond Golch Farm to the north. It is considered that the land is generally open in character and it is not necessary to include this area within the settlement boundary. With the exception of the housing on Mertyn Lane and the sporadic dwellings north of the A5026, development in Carmel is to the south of the main road. This long straight road marks a strong physical demarcation between the built up area and the countryside and forms the logical limit for the settlement boundary. Development of the site would result in significant and unacceptable urban encroachment extending beyond a well-defined edge. The site may not be actively used at present but Welsh Government has provided information which identifies the site is in agricultural use as grazing land, with a predicted loss of 2.17ha categorised grade 3a Best and Most Versatile land. In the absence

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				would not result in significant encroachment by virtue of its containment. There are already urbanizing influences on the Site by virtue of the presence of dwellings to the immediate east and the A5026 to the immediate south. Further, the A5026 is not a barrier to development as there is already existing development to the north of the road. Site Use: The gross Site area extends to 2.17 hectares. The Site comprises greenfield land. The current use of the Site is agricultural. There are a limited number of existing trees and hedgerows at the perimeter of the Site. There are no Tree Preservation Orders within or at the perimeter of the Site.		of a site specific survey to determine the actual quality of the agricultural and whether it represents BMV it is not considered appropriate to allocate the site. The site is located outside the settlement boundary and is therefore designated as Open Countryside. The candidate site was ranked as 'amber'. Potential constraints on the site include that there are relatively high levels of lead contaminants within the area, further investigation would be required. Additionally, the site is located 500m of Ancient Woodland and this may have a negative impact on local species, this is discussed in more detail below. The site is also crossed by the hypothetical line of a Roman road. It may require assessment prior to development. There are inconsistencies within the representation report to how many dwellings are being proposed. The report mentions both up to 50 and up to 60 units. The submission is lacking in terms of detail as to how various constraints including noise, air pollution, vehicular access, ecology and trees would impact on the suitability and capacity of the site for residential development. The submission also lacks an indicative or schematic layout to indicate the broad principle of how 50/60 units would be accommodated on the site.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Designation: The Site is designated as Open Countryside on the Flintshire UDP Proposals Map. It is not subject to any other statutory designations. It is one of the few development opportunities for housing around Carmel given the Green Barrier and Minerals Safeguarding policy constraints which currently preclude development on large swathes of countryside surrounding the settlement. Indeed, it was the only “green’ ranked Candidate Site in Carmel. Potential Uses and Capacity: The Site has potential for the development of up to 50 no. dwellings, comprising 30% affordable housing. The development could accommodate a mix of 2, 3 and 4 bed properties,		Additionally, the details submitted in regards to a concept style masterplan appears to have all the open space away from the residential part of the site. This doesn’t represent good planning. Site would result in the loss of a greenfield site. Development here could have an adverse effect on character and result in the loss of important features such as GI. The site was proposed for housing in the deposit UDP but was rejected by the UDP Inspector who commented "The land is in agricultural use and is a greenfield site. Although the area to the east of the field is urban in character that is not true of the land to the north and west. The adjacent farm complex is not so visually dominant that it separates the field from the adjacent countryside. Development on the allocated site would further consolidate the existing development to the north of the A5026 thereby extending the urban form into the countryside”. Although it is noted that there are no tree preservation orders on the site. No landscape or visual impacts reports have been provided to illustrate that the development would not have a negative impact on the surrounding area. The UDP Inspector considered that the development of the site would 'result in an unacceptable intrusion into the countryside which would be incongruous and poorly

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				detached and semidetached. The Site could also accommodate public open space and other land-uses (roads and footpaths). Environment: The development of the Site may require the minimal loss of some existing landscape features in the forms of trees and hedgerows. Any loss would be kept to a minimum; replacement tree and hedgerow planting could be implemented across the Site as part of a comprehensive scheme of soft landscaping. There are no Tree Preservation Orders within or at the perimeter of the Site. The Landscape Impact associated with the development of the Site would be Substantial to Moderate at most. The Visual Impacts associated with the		related to the built form of the settlement'. From what the objector has said, the degree to which the site would need to be landscaped if developed clearly suggests its prominence as part of the open countryside and the clear difficulties of introducing an urban context to the present open, rural context. Highways were consulted and provided the following feedback stating that Holway Road past the site is subject to a 30mph speed restriction; the provision of appropriate visibility splays appears possible. Care needs to be taken with the location and design of the site access especially in relation to Allt Y Goch, the Halfway House car park access and gradients. The submission provides no detail as to the proposed access arrangements including indicative maps. Although it is recognised that there are services and facilities within the settlement it is considered that there are negative factors which outweigh the few factors which meet the criteria. Noted, however the submission provides no detail as to the proposed access arrangements. Noted, the site is within EA Flood Zone A - low risk. Site is not at risk of surface water

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				development of the Site would be Moderate to Moderate to Slight adverse post-construction, and provided that a robust landscape scheme is implemented across the Site and once it becomes established. Access: Access to the Site, both vehicular and pedestrian, can be secured from the A5026 along the southern boundary of the Site with appropriate visibility splays achievable. The access road would be 5.5m in width, with 2m internal footways through the Site. The internal footways can provide for the safe movement of pedestrians, and to encourage non-car travel in view of the Site's locational sustainability and excellent access to public transport services.		flooding. It is unclear the extent to which replacing greenfield at the site with hard standing would alter surface water flood risk. Further investigation would be required, as limited information has be provided. The objector claims that there are no potential adverse ecological, but has provided no ecological survey to establish whether this is the case or not. The site is within 500m of Ancient Woodland. This may affect priority or protected species, as it is agricultural (e.g. breeding birds) land. Site is a large greenfield site (>0.4 ha). Development at this location would reduce habitat connectivity by increasing distances between habitats or agricultural areas. Further work would be required to investigate whether there are any presence of newts in the vicinity and to what extent the proposed development would impact the local ecology. A key principle in PPW is that allocations are viable and deliverable and free from constraint, yet the objection provides no assurances or evidence that a satisfactory access can be provided or that the other issues covered above can be successfully addressed or mitigated. Site is adjacent to a working farm. The UDP Inspector noted that this may lead to conflict but the two uses would not be entirely

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The Site is sustainably located benefiting from very good access to local primary education, shops and services, open space and recreation, and bus services all of which are within walking distance. Highways: There are no highway or road safety reasons why the Site could not be developed. A policy compliant quantum of car parking would be provided within the Site. Flood Risk: The Site lies within Flood Zone 1. Sustainable Urban Drainage Systems would be utilised across the Site to manage surface water run-off (i.e. infiltration where feasible). Ecology: The development of the Site would not give rise		incompatible provided appropriate measures such as adequate separation distances and screening are provided. However there has been a lack of detail regarding the proposal in this submission. It is considered that no further work has been submitted to address and overcome the inspector's initial concerns regarding the site. Despite the objector's statement that the site is deliverable no background and technical studies have been submitted which demonstrate that the site is viable and deliverable. Development of this prominent site would result in residential development which would be poorly related to existing development and visually damaging to an area of attractive open countryside. The site does not therefore read as a logical urban extension. Additionally, in the context of uncertainty as to a number of constraints which might affect the site. The site is not considered to be necessary or appropriate as an allocation.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				to any significant adverse ecological impact; there would be the potential to employ mitigation measures where necessary. Deliverability: The Site is being actively promoted. As a leading housebuilder in North Wales, the site would advance a detailed planning application with a view to completing the development within 24 months from commencement. Accordingly, the Site is deliverable in its entirety within five years. There are no land ownership/land assembly constraints which would preclude its development, and the developer has entered into a formal Option Agreement with the landowners to purchase the Site on the receipt of planning permission.		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
786	HN1: New Housing Development Proposals	Land NE of Holywell Road, Ewloe	Object	A Private Developer have submitted representations in relation to policies STR1 and STR11 which, together, conclude that the overall housing requirement should be increased, but that, whether this happens or not, additional housing allocations are, nevertheless, required in order to achieve appropriate housing delivery. 2. In order to increase the allocated sites appropriately, an additional housing site is proposed on land to the north-east of Holywell Road at Ewloe. This representation is accompanied by the following documents: a. Site location plan. b. An illustrative masterplan. c. Preliminary Traffic and Transport Statement (PTTA) The site has a total area of 11.4 hectares, however, the illustrative masterplan envisages that development would be	Additional residential allocations required. Land to the North East of Holywell Road, Ewloe is proposed as an additional allocation to increase supply.	Not accepted. The Council has responded separately to representations relating to the need to increase the overall housing requirement figure and the need for additional houses in order to ensure delivery, irrespective of what the requirement is. The Council's conclusions are that it has pursued a growth based strategy and that the Plans housing requirement figure is significantly in excess of Welsh Government projections. It is noted that Welsh Government are comfortable with the level of growth proposed by the Plan and that the Plan is in broad conformity with the draft National Development Framework. It is disappointing that the objector has sought to put forward the site at this late stage in the Plans preparation. An earlier submission at candidate site stage or at Alternative Sites (Preferred Strategy) stage would have enabled a full assessment and comparison alongside other sites. It is disappointing that the site is submitted without a Sustainability Appraisal as required by Welsh Government in the Development Plan Manual 3 in Diagram 8 'Any new sites proposed at Deposit stage will be required to submit an SA with their site submission'. The Council recognises the importance of housing being delivered through the development plan system. The Deposit LDP was accompanied by Background Paper 10 Housing Land Supply which included a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				limited to that area of the site which sits behind existing development on Holywell Road and Old Aston Hill, it would be adjoined on its north-western boundary by Shotton Lane and by Church Lane on its north-eastern boundary; the remainder of the land ownership, to the north east, is not envisaged as a site for built development, rather, it would be laid out as open space. In the above terms the proposed development would be within an area that is already defined by its strong boundary features and it would be largely obscured from view behind existing development. In physical and visual terms the site, is, therefore, a logical site for residential development. In accordance with the illustrative masterplan, the potential capacity of the proposed development has been		housing trajectory. This was informed by feedback from developers and site owners. The allocations in the Plan are considered to be available, viable and deliverable and each of the objectors concerns on a number of allocations will be addressed below: The site is in two ownerships where the residential element of each part is being released in phases to multiple interests. The Deposit Plan was accompanied by a 'Northern Gateway Masterplan and Delivery Statement' which provides a progress statement on the southern part of the site. It clearly references that residential development is being released in phases as illustrated in the document. The Northern Gateway Masterplan and Delivery Statement for the northern part of the site also explains that the residential element of the site is being released in phases. The site will be developed by a number of house builders and it is stressed that Countryside Properties are already on site commencing a permission for 300 homes. In addition, a further reserved matters application was approved for 120, subject to a section 106 agreement. The Council has already accepted that part of the housing element may not be delivered until after the end of the Plan period, but the amount included in the Housing Balance Sheet is considered to be deliverable. A more detailed set of responses on Northern Gateway is set out regarding STR3A. It is also understood that a number of developers

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				assessed as being 140 dwellings.		are showing strong interest in the site, as well as Housing Associations. The housing element of this strategic mixed use site can be commenced ahead of the business park. The site forms a key part of the Plans growth strategy and the delivery of the business park element will be assisted by Growth Deal funding as the site is a key part of the regional growth strategy. A fuller response in relation to this site is set out regarding policy STR3B. The fact that the site is in Welsh Government ownership and is clearly identified for infrastructure support funding as part of the Growth Deal both add a degree of certainty about the site's availability and deliverability, removing concerns about land banking which can occur for land in private ownership or developer control. The Well Street site is within the settlement boundary of Buckley and is already allocated in the adopted UDP. A planning application could be submitted at any time as the site need not await the outcome of the Plans examination. It is acknowledged that Welsh Government have been slow in releasing the site to the market but Clwyd Alyn Housing Association are presently in advanced negotiations to buy the site and are working on a planning application for a mixed market and affordable housing scheme. The site is considered to be viable and deliverable as the objector acknowledges given the point about the site's position in the trajectory. The site's

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						ultimate delivery does not therefore appear to be in dispute. In BP10 the Council identifies in a summary in Table 3 that the 150 units for the Highmere Drive allocation will be delivered between years 6 and 10. In appendix 3 the Council sets out a more detailed trajectory for the allocated sites where the Highmere Drive site is shown as delivering 30 units per annum over 5 years from 2020/21 (year 6) to 2024/25 (year 10). There is no inconsistency within the Background Paper for this site. The site is already within the settlement boundary and allocated in the adopted UDP and a planning application is likely in the near future as the owner is in competitive discussions with several developers to option the site. An early delivery of housing on the site is therefore realistic. The site is in two ownerships and discussions have taken place with both parties who are committed to making the site available. The two parties have liaised over background studies to inform the suitability of the site for allocation. Both landowners are continuing to work together and have entered into discussions with a number of housebuilders with a view to identifying a preferred developer for the whole site. The delivery of the site as set out in the trajectory is realistic and achievable.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						The site owner has an agreement with a preferred house builder in place. The delivery of the site as set out in the trajectory is realistic and achievable. It is not accepted that there are 'significant' concerns relating to the delivery of these allocations, nor is there considered to be a need for additional allocations. The objector's reference to the early years of the Plan is interesting as in the first 4 years of the Plan period the delivery of completions is slightly ahead of what the Plan is seeking to achieve. In addition, no information is provided about the ability of the objection site to delivery early homes from a standing start and so the site would not address any issues of a 'delivery gap' even if the Council were to accept such a principle, which it does not. The objector has also failed to recognise that at least 5 of the LDP allocated sites are capable of, or already are delivering early housing. The Highways Development Management Officer has commented on purely the site boundary / area as follows: 'Unsuitable as a significant application site due to limited access opportunities and capacity concerns at the Holywell Road/Mold Road junction and the interchange roundabout. There may be some opportunity for limited development served from Holywell Road but

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						limitations on the extent of the site frontage and the proximity of other nearby accesses restrict suitable junction locations / arrangements. The application site excludes land either side of the track leading to Old Aston Hill; the existing track is unsuitable for use by additional vehicular traffic and there appears no opportunity to improve this'. In respect of the submitted proposal for 140 dwellings on the site and the Preliminary Traffic and Transport Assessment the Highways Development Management Officer has commented: 'The TA included a draft junction layout onto Holywell Road that appears appropriate but restrictions within the proposed layout would justify a requirement for a Road Safety Audit. The main concern related to allocation of further development in the area however is the limited capacity of the Holywell Road/Mold Road junction and the A494, St David's Interchange. The Preliminary TA suggests that a capacity assessment of the Holywell Road/Mold Road junction, the St David's roundabout and the site access may be required; information of this nature is considered essential to enable

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						any detailed consideration of the proposed allocation at this late stage. There are two potential LDP residential allocations in the area EWL007 and EWL020 with a total of 300 dwellings. They passed through the initial assessment process and include 200 houses served from Holywell Road and an additional 100 off (an improved) Green Lane but both accesses will impact on traffic flows at the Holywell Road/Mold Road junction. An assessment was undertaken with the developer recommending that the following improvement would be required in order to provide adequate capacity at the junction. The capacity analysis indicated existing issues but with the development traffic added and including an allowance for background growth, the proposed improvements show an overall improvement to capacity/operation of the junction even though RFC's will remain greater than 1.0 (an RFC of 1.0 is the maximum theoretical capacity; a new junction would be designed with an RFS of 0.85). Based upon the above; I would suggest that there is little opportunity for the allocation of another significant site in the area. It may be possible for consultants to design-in additional junction capacity improvements; possibly the introduction of signals but the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						junction is in close proximity to the roundabout and signals would impact on its operation. The previously submitted TA also undertook a capacity analysis of the roundabout; the assessment identified no great concern however I am not certain that this is borne out in reality. Since the previous assessment, short term, am peak queuing has been observed on the A494 eastbound off-slip and pm peak congestion on the roundabout (this however is possibly linked to the Holywell Road junction capacity issue). A further assessment of the operation of the roundabout would be required as part of any future submission. The Active Travel Integrated Network Map has been published since consideration of the previous TA; any additional TA should consider the required improvements of the walking and cycling infrastructure in the vicinity of the site especially the delivery of a safe route to Hawarden High School'. There is also a further site proposed for allocation within HN1 which is EWL007 Old Aston Hill / Church View (id1208) which will add additional traffic on to the A494(T) roundabout. The site area measures 11.4ha which at 30 dwellings per ha could accommodate some 340 dwellings yet the suggested site is limited

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						to 140 dwellings. The submitted masterplan shows that no development is envisaged on the north eastern part of the site beyond Dee View and Aston Hill Farm, but no reasoning is given for this, except for a general reference to land being laid out as open space. The deletion of that part of the site (approx. 2.7ha) leaves some 8.7ha on the main part of the site which could accommodate some 260 dwellings. The proposed development appears to be at a low density which does not make the most efficient use of land and is contrary to a key principle in PPW 10 of making best use of resources, including land. Again, there is no explanation as to why such a low gross density of 16 dwellings per ha is proposed. The northern part of the site sits quite high in the landscape and this is presumably the reason why it was the location for the RAF wireless station and masts. This part of the site has an openness with views of the surrounding landscape. The site forms part of the green barrier between Ewloe, Shotton / Aston and Connah's Quay and development and development would harm its openness and would contribute to coalescence. The Council is also conscious of further development pressure in the locality with candidate and alternative sites in close proximity to Sea View Farm (EWL011 and EWL026AS).

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						It is acknowledged that the site is, for the most part, set behind existing development along Holywell Road and along Old Aston Hill, and partly by the narrow lane leading to Aston Hill Farm. However the north part extent of the site does not extend as far as Old Aston Hill and would leave an intervening field. This part of the proposed site would appear as a detached block of development, poorly related with the existing built form. Other issues identified from internal and external consultation responses are set out below: Agricultural land – The Welsh Government Predictive Agricultural Land Classification Map identifies the site as being grade 3a which represents 'Best and Most Versatile Agricultural Land'. Welsh Government consider that a further detailed ALC survey of the site is undertaken to determine if the land is BMV. Welsh Government further advises that the inclusion of any further allocated sites involving the loss of BMV would need to be fully justified in line with PPW. It is unclear whether the objector has undertaken an on-site survey to identify the actual land quality nor undertaken to justify the loss of agricultural land when compared with the Council's Background Paper.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Built heritage – the part of the site which lies to the south of Aston Hall Farm contains a number of buildings formerly used as part of the RAF Hawarden Wireless Station, along with a number of other archaeological features, largely relating to former masts. The submission is silent on how this archaeological and historic interest would be dealt with. The proposed vehicular access off Holywell Rd passes over an archaeological record relating to the former Stockholm Colliery. Wildlife – Although there are no wildlife or ecological designations within the site, it is within approximately 300m of the Deeside and Buckley Newt sites SSSI and SAC primarily designated for Great Crested Newts. It is noted that there is a permanent pond marked on OS maps to the south of Dee View. The Council's Ecologist has noted that the field pond is a recorded Great Crested Newt breeding pond and there have been other ponds / flooded areas recorded in the past with potential for amphibians. The site has potential for badgers, bats, reptiles and nesting birds. Any development would need to assess the ecology of the site and impacts on the nearby designated SAC. Also needed would be an Ecological Impact Assessment with measures to avoid, mitigate, compensate, enhance and manage wildlife

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						features. NRW also state that the proposal has the potential to have indirect adverse effects on the SAC. No ecological background studies have been submitted with the objection. Landfill – The site boundary at its northern end sits adjacent to the 'Land rear of Transport Yard' landfill site and the 'Sea View Farm 1' landfill site, to the rear (north) of which is the 'Sea View Farm 2' landfill site. The northern part of the site sites within a 250m buffer zone for these landfill sites. The Council's Pollution Control Officers identify that the site includes a landfill site. It is considered that a detailed land contamination assessment, including at least 12 months data and a detailed remediation proposal would be required. The submission is silent on the acceptability of residential development in such close proximity to landfill sites. Mining – Land adjoining the proposed access and to the rear of the dwelling Stockholm is identified as a Coal Referral Area as is an area of land on Shotton Lane. The Coal Authority have identified that the site lies in a Development High Risk Area and that there is a recorded mine entry just off the site. Contamination – Public Protection have identified that the site is situated on a Secondary A aquifer with suspected

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						contamination (adjacent to a historic landfill site). As part of any planning application for this site we would advise planning conditions be imposed to ensure that risks associated with any contamination at the site are appropriately managed. It is unclear why the development of the site is limited to 140 dwellings or why such a low density, in the context of making the best use of land, is justified. It is noted that the objector has undertaken a preliminary traffic and transport assessment but site analysis and consultation responses shows that there a number of constraints and issues where there appears to be little clarity on how these will be addressed. The objector expresses concerns about the delivery of the nearby allocated site, but equally there are a number of concerns which question the appropriateness of the objection site being allocated for housing as well as its delivery.
788	HN1: New Housing Development Proposals	Chester Road , Penyffordd	Object	A developer have submitted representations in relation to policies STR1 and STR11 which, together, conclude that the overall housing requirement should be	Additioal allocations required. Land at Daisy Bank Penyffordd should be considered as an additional residential	Not accepted. The Council has responded separately to representations relating to the need to increase the overall housing requirement figure and the need for additional houses in order to ensure delivery, irrespective of what the requirement is. The Council's conclusions are that it has pursued a growth based strategy and that the Plans

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				increased, but that, whether this is accepted or not, additional housing allocations are, nevertheless, required in order to achieve appropriate housing delivery In addition to the above, the assumptions with regard to the delivery of a number of the allocated sites are also queried. It is noted that Welsh Government is looking to place greater emphasis on housing being delivered through the development plan system and, in this context, it is particularly important that the assumptions made with regard to delivery are robust. a.Northern Gateway – It is understood that this site is being delivered by a single developer. Whilst the developer in question has, it is accepted, delivered 100 dwellings from a site in a	allocation within the LDP.	housing requirement figure is significantly in excess of Welsh Government projections. It is noted that Welsh Government are comfortable with the level of growth proposed by the Plan and that the Plan is in broad conformity with the draft National Development Framework. It is disappointing that the objector has sought to put forward the site at this late stage in the Plans preparation. An earlier submission at candidate site stage or at Alternative Sites (Preferred Strategy) stage would have enabled a full assessment and comparison alongside other sites. It is disappointing that the site is submitted without a Sustainability Appraisal as required by Welsh Government in the Development Plan Manual 3 in Diagram 8 'Any new sites proposed at Deposit stage will be required to submit an SA with their site submission'. The Council recognises the importance of housing being delivered through the development plan system. The Deposit LDP was accompanied by Background Paper 10Housing Land Supply which included a housing trajectory. This was informed by feedback from developers and site owners. The allocations in the Plan are considered to be available, viable and deliverable and each of the objectors concerns on a number of allocations will be addressed below:

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				single year, this has been in relation to a particular product, extrapolating such a level of performance over an entire Plan period, and in an untested market area, appears unduly optimistic, as does the completion of 94 units in the year 2020/21 from a standing start. b.Warren Hall – The notes within BP 10 emphasise that the housing allocations are made in order to improve the viability of the already established employment allocations. It, therefore, follows that in order for the housing development to proceed, it will first be necessary to secure a commitment to the employment development coming forward, there would be no logic in the housing development being allowed if it did not achieve this objective. Consequently, until this		The site is in two ownerships where the residential element of each part is being released in phases to multiple interests. The Deposit Plan was accompanied by a 'Northern Gateway Masterplan and Delivery Statement' which provides a progress statement on the southern part of the site. It clearly references that residential development is being released in phases as illustrated in the document. The Northern Gateway Masterplan and Delivery Statement for the northern part of the site also explains that the residential element of the site is being released in phases. The site will be developed by a number of house builders and it is stressed that Countryside Properties are already on site commencing a permission for 300 homes. In addition, a further reserved matters application by Keepmoat was approved for 120, subject to a section 106 agreement. The Council has already accepted that part of the housing element may not be delivered until after the end of the Plan period, but the amount included in the Housing Balance Sheet is considered to be deliverable. A more detailed set of responses on Northern Gateway is set out regarding STR3A. It is also understood that a number of developers are showing strong interest in the site, as well as Housing Associations. The housing element of this strategic mixed use site can be commenced ahead of the business park. The site forms a key part of the Plans growth strategy and the delivery of the business park element will be assisted by Growth Deal funding as the site is a key part

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				commitment is in place, this housing allocation should not be relied upon. c.Well Street, Buckley – As a site that has been allocated in the present UDP, but which has not been released, considerable caution needs to be exercised in relying on its delivery within the next plan unless or until it is in the hands of developers – BP 10, Table 3 indicates that it is a "likely" housing association development which only emphasises that its future still remains uncertain. In such circumstances an assumption of delivery between 2020 and 2023 is unduly optimistic and delivery should at the very least be delayed in the trajectory. d.Highmere Drive – BP10 Table 3 and Appendix 3 conflict with one another as to when		of the regional growth strategy. A fuller response in relation to this site is set out regarding policy STR3B. The fact that the site is in Welsh Government ownership and is clearly identified for infrastructure support funding as part of the Growth Deal both add a degree of certainty about the site's availability and deliverability, removing concerns about land banking which can occur for land in private ownership or developer control. The Well Street site is within the settlement boundary of Buckley and is already allocated in the adopted UDP. A planning application could be submitted at any time as the site need not await the outcome of the Plans examination. It is acknowledged that Welsh Government have been slow in releasing the site to the market but Clwyd Alyn Housing Association are presently in advanced negotiations to buy the site and are working on a planning application for a mixed market and affordable housing scheme. The site is considered to be viable and deliverable as the objector acknowledges given the point about the site's position in the trajectory. The site's ultimate delivery does not therefore appear to be in dispute. In BP10 the Council identifies in a summary in Table 3 that the 150 units for the Highmere Drive allocation will be delivered between years 6 and 10. In appendix 3 the Council

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				this site will be released. However, the site has not come forward through the UDP where it has previously been allocated, it may be that the power lines running along the site frontage are seen as a significant constraint. However, the commencement of delivery of housing in 2020/21 (Appendix 3) certainly appears optimistic and, indeed, it is not considered that the site should be relied upon at any stage until it is in the hands of a developer. e.Holywell Road/Green Lane, Ewloe – Recent discussions have established that this site is in two ownerships and there is not at present any collaboration or any commitment to release the site to a developer. Until this situation changes, it is unduly optimistic to rely on it		sets out a more detailed trajectory for the allocated sites where the Highmere Drive site is shown as delivering 30 units per annum over 5 years from 2020/21 (year 6) to 2024/25 (year 10). There is no inconsistency within the Background Paper for this site. The site is already within the settlement boundary and allocated in the adopted UDP and a planning application is likely in the near future as the owner is in competitive discussions with several developers to option the site. An early delivery of housing on the site is therefore realistic. The site is in two ownerships and discussions have taken place with both parties who are committed to making the site available. The two parties have liaised over background studies to inform the suitability of the site for allocation. Both landowners are continuing to work together and have entered into discussions with a number of housebuilders with a view to identifying a preferred developer for the whole site. The delivery of the site as set out in the trajectory is realistic and achievable. The site owner has an agreement with a preferred house builder in place. The delivery of the site as set out in the trajectory is realistic and achievable. It is not accepted that there are ‘signficant’ concerns relating to the delivery of these

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				being brought forward, and especially by 2023/4 f.Ash Lane, Hawarden – Commencement of delivery of housing from this site in 2023/4 seems optimistic, in order to be robust it is suggested that the assumptions with regard to delivery are put back by at least one year. Whilst it is not suggested that none of the above sites will come forward in the Plan period, it is clear that there are significant concerns in relation to a number of the sites and particularly in relation to the assumptions on timing and rates of delivery. These concerns impact on the overall number of allocations that are required, and particularly so in the early years of the Plan period where additional sites that can make an early		allocations, nor is there considered to be a need for additional allocations. The objector's reference to the early years of the Plan is interesting as in the first 4 years of the Plan period the delivery of completions is slightly ahead of what the Plan is seeking to achieve. In addition, no information is provided about the ability of the objection site to delivery early homes from a standing start and so the site would not address any issues of a 'delivery gap' even if the Council were to accept such a principle, which it does not. The objector has also failed to recognise that at least 5 of the LDP allocated sites are capable of, or already are delivering early housing. It is acknowledged that Chester Rd and Lower Mountain Rd could represent firm physical features. However, the question as to whether this is a logical extension to the settlement depends on i) whether there is a need for further development and ii) whether the site represents the most sustainable site. In respect of i) the settlement is one which has seen a significant amount of development. The settlement of Penyffordd / Penymynydd has already taken a significant level of the growth apportioned in the Deposit Plan to Tier 3 settlements as a result of two commitments at Rhos Road South (40 dwellings) and Hawarden Rd (32 dwellings) and the allocated site at Chester Road (186 dwellings). In addition a further planning permission for 36 no, over 55's retirement apartments was granted on appeal

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				contribution are considered necessary. The site has a total area of approximately 3.85 hectares. Land to the immediate west of this site was granted planning permission on appeal in May 2018 and is currently being developed. This site is, therefore, the final parcel of land within the logical settlement boundaries of Chester Road and Lower Mountain Road in this locality and would, therefore, represent a logical extension of the settlement. In accordance with the illustrative masterplan, the potential capacity of the proposed development has been assessed as being 107 dwellings. The Preliminary Traffic and Transport Assessment provides		on 27/04/20. This represents some 296 dwellings in the settlement which is on top of the 77 completions during the first three years of the Plan period arising from UDP allocations. Although the LDP has moved away from settlement growth rates for different tiers of the settlement hierarchy, it is useful to look back at the context in the UDP which identified a growth band of 8-15% for category B settlements. Over the UDP period the settlement saw actual growth of 21% as a result of 282 completions which was well in excess of the growth band. In the first 4 years of the LDP period the completions of 77 units equated to a 5.7% growth. As at April 2019 there were commitments of 267 units on the three earlier appeal sites which increases growth over the Plan period to 21%. The recent appeal decision for the over 55's apartments increased growth to 23.4% and the inclusion of 37 units on the objection site would increase growth further to 30%. This settlement has more than provided a significant contribution of housing in the LDP Plan period for a Tier 3 settlement. The references to various background studies are noted as is the reference to the developer, but this does not change the fundamental concerns about the level and pace of development which this settlement is and will experience and disproportionate amount of development in one settlement having regard

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				detail in relation to the following: a. A principal access to the development from Chester Road is envisaged, the required visibility splays can be achieved, although discussions with the Highway Authority may indicate a preference for reduced splays following a reduction in the speed limit on Chester Road. b. There is a good network of public footpaths within the area including those running through the site itself and through neighbouring residential areas to access facilities in the Village centre which include a supermarket, several other shops, drinking and eating establishments, a primary school and community facilities. c. The bus stop on Chester Road is within walking distance of the		to the Plan's spatial strategy. Previous appeal decisions dealt with proposals individually and without reference to the cumulative effects that such decisions were having on this settlement which this proposal simply seems to be an attempt to further capitalise on. It is a comfort that prompted by the situation in settlements such as Penyffordd/Penymynydd the Welsh Government recognised the harm that such cumulative speculative development was having and initially suspended the key element of TAN1, and has following receipt of evidence revoked that policy in full. Given a key part of the objector's case is centred on plan led delivery, it is very disappointing that they have not engaged positively in the plan making process over sites such as this at an earlier and more appropriate stage in the process. Policy STR2 sets out the hierarchy of growth to the tiers in the settlement boundary. Tier 1 Main Service Centres are the 'main' locations for new development, Tier 2 Local Service Centres are the locations for more modest levels of development whilst Tier 3 Sustainable Settlements will be the locations for 'housing development related to the scale, character and role of the settlement'. The policy clearly adopts a sliding scale of growth appropriate to each tier and the level of growth proposed by the objector in this settlement is not considered acceptable. In terms of ii) there are a large number of candidate sites and alternative sites promoting development in the settlement. Land at Wood lane Farm is considered to be sequentially preferable as it

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				site and provides regular services to Chester, Broughton, Buckley and Mold. d. Penyffordd railway station is located at the southern end of the Village and provides services to Bidston (with links to Liverpool) and Wrexham. e. A preliminary highways assessment concludes that traffic generated by the proposed development would have no more than a minor impact on the existing highway network. In granting planning permission for development on the adjacent land, the Welsh Ministers concluded that the development was in a sustainable location, there was no compelling evidence of unacceptable impacts on local economic, social and environmental		is adjoined by the settlement boundary on three sides and by the A550 to the west and is closer to the village centre than the objection site. In contrast to this clear case of infill development, the objection site is bounded by the settlement boundary on only one side and represents an extension into open countryside. Nevertheless, it is the Council's strongly held view that no further development is necessary in this settlement in the LDP. The indicative capacity of the site of 107 units is noted. Highways Development Management consider that the site is potentially suitable subject to the outcome of a full Transport Assessment but consider that there are limited local facilities available within walking distance. '..due to the limited nature of the document, it fails to fully address a number of issues. The location of the proposed site access and available visibility splays is discussed in relation to the plan format but does not consider the vertical profile of the Chester Road. A crest in the road has the potential to limit visibility splays. It is however considered likely that the provision of an associated speed survey and/or an additional speed restriction, will enable the identification of a suitable access location (or locations). It is likely that the local highway network has adequate capacity to accommodate traffic

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				infrastructure, and the proposal would not undermine the principles of sustainable development or the creation of cohesive communities (indeed, it was noted that the development contributed towards the Welsh Ministers' objective of building resilient communities, culture and language). The present proposed site would represent a modest addition to the settlement for the period through to 2030, there is no reason why the conclusions in respect of the adjacent appeal site are not equally applicable to the proposed site. For all of the above reasons it is concluded that development on this site could deliver sustainable development in line with the objectives of proposed Policy STR11. Having regard to the criteria within Policy STR2, it is clear that this		generated by the development but this can only be verified by the capacity assessments identified in the report. Seemingly unrealistic TRICs traffic generation rates have been quoted; appropriate rates should be agreed. Due the relatively remote location of the site, future residents are more likely to rely on the use of private cars for access to community facilities in comparison to those living in more urban developments. Although walking and cycling isochromes have been provided, these make no reference to the quality of the provision and the suitability for use. Further consideration should be made to the provision/improvement of on-site facilities and those external links listed on the Active Travel Integrated Network Map. Crash Map has been used in the identification of the traffic accident history in the area; whilst there is no objection to this use, the scope of the search should be extended to a ten year period. The usually accepted five year period omits a fatal incident and other recorded incidents at the Chester Road/A5104 junction'. As commented on above, the Council is preparing a Plan for the County and not just this settlement. If the Inspector decides that additional development is necessary through additional allocations then there are two tiers of settlements above which sequentially preferable locations for development. If the Inspector considers that additional allocations

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				proposed development would result in a development that would be well related to the character, scale and role of Penyffordd. It is considered that there is a need for additional housing allocations and this site is an appropriate site on which such an allocation should be made.		are required in Tier 3 settlements then are a large number of other settlements which could accommodate development. The objector offers no explanation as to why Penyffordd / Penymynmydd is preferable to these other settlements. There is also nothing to indicate or make the assumption that the Welsh Ministers would have come to the same view if they had been presented with a single development proposal for almost 300 homes, rather than the incremental approach taken and that from a speculative development perspective, has been recognised as harmful by the deletion of TAN1. It is not considered that further allocations are either necessary or appropriate in this settlement in the light of growth as a result of completions and commitments and the recent appeal decision at Rhos Rd (south). If the Inspector considers additional allocations are necessary there are other sites available in higher order settlements and in other settlements in Tier 3. Even in the context of Penyfordd / Penymynydd there is considered to be a sequentially preferable site. The following stakeholder consultation responses have been received on this proposed new site: Ecology: The Ecologist has commented 'Improved Agricultural grassland with trees and hedgerows and limited protected species

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						records but with potential for bats, amphibians, badgers and nesting birds. GCN occur within 250m at the White Lion Nature Reserve and wildlife corridors were designed into the adjacent development; there are also numerous Hedgehog records associated for the locality. Depending on the proposal, the farm and associated buildings have potential for roosting bats and nesting birds such as swallows, house sparrow, starling and barn owl. Any development would need to assess the Ecology of the site and provide an Ecological Impact Assessment with measures to avoid, mitigate, compensate, enhance and manage wildlife features. It would also need to link to the mitigation/provision of associated green corridors associated with the adjacent development. Reference should have been made to FCC Planning Guidance SPG No 8 Nature Conservation and Planning and specifically for this site SPG No 8a Great Crested Newt Mitigation Requirements: http://www.flintshire.gov.uk/en/Resident/Planning/Supplementary-planning-guidance.aspx '. However, no ecological survey has been submitted with the objection.
813	HN1: New Housing Development Proposals	BUC026 Adj Viandra Bannel Lane Buckley	Object	1. The site BUC018 (BUC026) is on the edge of a sustainable settlement. 2. Developing this site would mirror development on the opposite side of the road	Allocation of candidate site BUC026	Not accepted. Buckley is a sustainable settlement and has been categorised in the settlement hierarchy as a Tier 1 Main Service Centre. During the UDP plan period Buckley grew by 17.4%, as a Category 'A' settlement, the aim for growth to be within 10% to 20% was therefore fulfilled. The LDP makes provision for the future growth in Buckley through the allocated site at Well Street and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				and as such we do not believe that this does constitute ribbon development but a squaring off of the development to mirror that allowed on the opposite side of Bannel Lane. 3. Examples - There are examples of similar developments in the Buckley area where development has been given approval when it extends into the open country side. 4. Under Flintshire County Councils Planning guidance you are able to approve limited infill for development outside of settlement boundaries where the land in question: a. is not an important landscape, nature conservation, historic or other amenity feature which this site is not, and would provide a clearly		as a result of 175 completions in the first three years of the Plan period and commitments of 138 units as at the Plans Housing Balance Sheet date of April 2018. Whilst it is acknowledged that the site proposed adjoins the settlement boundary of Buckley. However, the site has a narrow almost rectangular shape and extends away from the settlement boundary partially along the southern side of Bannel Lane and to the field boundary to the south. Beyond the properties 'Dovecote and Viandra' the land on the southern side of Bannel Lane features a sporadic, scattered pattern of development. Built development in this location would undermine the function and openness of the green barrier. Development would also consolidate and perpetuate the existing ribbon development along Bannel Lane. Given the shape and configuration of the site, it relates poorly to the existing form and pattern of built development and forms an integral part of the open countryside and green barrier. All the Green Barriers in the UDP were reviewed as part of the Deposit LDP and the results of that review are found in Background Paper 1: Green Barrier Review – September 2019. The Green Barrier in this area is designated to form a break between residential

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				identifiable small group of house within a continuously developed frontage to square of development as approved on the opposite side of Bannel Lane. b. It does not constitute, or extend existing ribbon development. (see point 2) c. Any development on the land would respect adjacent properties and the surrounding area in terms of its siting, form, design and scale which could be controlled by any planning conditions applied to the site. I therefore believe this site should be re-considered for the latest LDP		development at Buckley and the Padeswood / Castle Cement works which although is not a settlement, does comprise a large built up form in the landscape. The area has seen significant development pressure over successive development plans. The site was considered for development at the UDP Inquiry where the Inspector noted that ''By its character and appearance the site has more in common with the open countryside than the built up area and is included within the strategic green barrier which protects the rural area to the south of Buckley'' This conclusion is still relevant today. It is also important to note that there is still significant pressure for development on the area to the south of Buckley. This is demonstrated by the planning application submitted at Spon Green, for 435 dwellings and 450sqm of retail,(ref 058237) which was refused permission in July 2018 and is located directly to the south east of this site. The main reasons for refusal were the fact that the site was in the open countryside and green barrier. Another more recent application was refused at Land South of Megs Lane Buckley (Ref 059387, March 2019) and again its location within the open countryside and green barrier were the main reasons for refusal. This demonstrates that the Green Barrier designation has been tested and has been

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						found to be reasonable and justified in this location. It is also interesting to note that there has been no appeals lodged against these decisions. These decisions and the inspectors comment give added strength to the continued Green Barrier designation in this location. The green barrier seeks to prevent coalescence of Buckley with built development at Padeswood and seeks to prevent encroachment into open countryside which provides a setting to the built form of this part of Buckley. The green barrier is not designated on the basis of protecting views or landscape quality per se, but in terms maintaining the openness of the land defined by it. Adding built development within the area as proposed, would reduce the openness and is therefore harmful in planning terms to the purpose and function of the green barrier in this location. The land fulfils the purposes for green barrier designation and should be retained. The houses along the northern side of Bannel Lane opposite to the site are a clear example of historic ribbon development, with a row of properties facing on to the road with individual access points. The existence of ribbon development on one side of a road does not lead to a presumption that developing on the other side of the road is acceptable, as it is necessary to look at the individual

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						characteristics of each. In this case the proposal would result in a narrow block of development extending into open countryside away from and beyond the well defined settlement boundary along this part of Buckley i.e. to the south of Spon Green. It would harm an area of land which has an open aspect and which also provides a setting to urban edge and as such development of the site would consolation / perpetuate the existing ribbon development along Bannel Lane thereby confirming that further development is not sustainable in this location. The objector has not included any specific examples to consider. The objector is referring to policy HSG5 in the adopted UDP and Policy HN4 – C Infill Development in Groups of Houses in the LDP. It is inappropriate to use this policy with reference to this site and proposal, since land does not need to be in the settlement boundary to be considered against the infill policy. This policy is specifically in relation to small scale infill development outside settlement boundaries in rural areas where there are clearly defined groups of houses. Only a single house or a semi detached pair of houses would be permitted in a small gap between existing dwellings and the resultant house would also be for local housing need. This policy is to allow some development in rural areas where there is an absence of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						housing allocations or the possibility of other sites coming forward within settlements. By contrast Buckley is a Tier 1 settlement where there are housing allocations, completions, brownfield sites and existing commitments yet to be built so there are many opportunities for development negating the need to use this policy. It is also not applicable to this case as there is not a clearly defined group of houses nor a small infill plot. In conclusion the Plan made provision for growth in Buckley and it is not necessary or appropriate for a further allocation to be made, particularly where it would harm a green barrier. The site is not appropriate to be allocated to be allocated in the Plan.
815	HN1: New Housing Development Proposals	PEN047AS	Object	Our client has significant concerns at the heavy reliance on the two strategic sites, Northern Gateway and Warren Hall. The 1,294 homes forecast for these sites comprise 16% of the total plan requirement and 37% of the current residual requirement (overall requirement minus completions during the plan period to date and commitments). Our client is of the opinion that despite the Council's newly-found	In order to help ensure the soundness of the LDP so that it will deliver against its housing requirement, our client considers that the Council could retain the Northern Gateway and Warren Hall allocations but reduce the numbers of homes these sites are expected to bring forward by	Not accepted. The Council does not accept that the Plan is over-reliant on the two strategic sites in terms of its housing supply. The Warren Hall site involves 300 homes and this is on a par with several of the Plans housing allocations in terms of scale. It is acknowledged that the Northern gateway represents a significant part of the Plan's housing land supply, but it is evident that significant recent progress has been made with the granting of reserved matters applications for both housing and employment development, which are the "galvanizing" factors sought by the objector. Countryside properties are now on site building 280 homes and use a method of construction which can bring about high levels of annual completions. The commitment of Countryside

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				confidence, the deliverability of the site is far from guaranteed and there does not seem to be any compelling argument or reason advanced by the Council that sites that have failed to deliver over a prolonged period will suddenly be galvanized. In order to help ensure the soundness of the LDP so that it will deliver against its housing requirement, our client considers that the Council could retain the Northern Gateway and Warren Hall allocations but reduce the numbers of homes these sites are expected to bring forward by 2030. The Council should reapportion the homes from the two strategic sites to alternative, more immediately deliverable sites which accord with the plan's overarching strategy, including the allocation of additional sites in Tier 3 sustainable settlements.	2030. The Council should reapportion the homes from the two strategic sites to alternative, more immediately deliverable sites which accord with the plan's overarching strategy, including the allocation of additional sites in Tier 3 sustainable settlements. Allocating the site for residential development in the LDP would require a minor modification to draft policy HN1 and the village's settlement boundary, but would assist in the deliverability of the plan's overall housing requirement and contribute to the soundness of the plan.	Properties to the site has brought about a confidence factor and enquiries and pre-apps are being received on subsequent phases. A further resolution to grant reserved matters consent for 120 homes was granted on the Pochins-owned part of the site for Keepmoat, a housing developer, subject to a S106 agreement. Both of the strategic sites have seen significant investment with Welsh Government funding the junction upgrade at Warren Hall and flood risk measures and construction of spine road at Northern Gateway. These two sites are unique in that they comprise mixed use development in sustainable locations and are a key component of the Government's Growth Deal for the region, with further funding of infrastructure provision. The sites are quite rightly a key part of the Plan's strategy for employment and housing growth and will bring about significant economic benefits which the objector's site simply will not do. The Council has already undertaken an assessment of the delivery from the Northern Gateway site and identified units that will be delivered beyond the Plan period and these are not included in the Plans Housing Balance Sheet. The delivery of 300 units in an attractive location alongside a high quality business park with a local commercial hub, is not considered to bring about delivery issues,

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Allocating the site for residential development in the LDP would require a minor modification to draft policy HN1 and the village's settlement boundary, but would assist in the deliverability of the plan's overall housing requirement and contribute to the soundness of the plan. Seeks the allocation of land to the east of Vounog Hill, Penyfford based on the following points (summarized): The site is situated immediately adjacent to the current settlement boundary of Penyffordd The site is bound to the east by housing development built on the former Meadowslea hospital site, Min y Ddol; to the south by properties along the Wrexham Road and Min y Dol; to the west by properties along Vounog		as set out in the Councils housing trajectory in LDP10 Housing Land Supply. Even if the Inspector (or indeed the Council) did consider that there should be additional allocations in the Plan, there are two tiers of more sustainable settlements in terms of a sequential approach. In the scenario that there was considered to be a need for additional sites within Tier 3 settlements, there are another 21 other sustainable settlements in Tier 3. The objector offers no explanation as to why this settlement should accommodate such a high proportion of growth relative to other settlements. It is also counter intuitive to reduce the amount of housing delivery on strategic sites that have consent, that have had infrastructure investment, that have developers on site, and that bring about multiple benefits for communities and the economy, that the objector's site cannot hope to replicate. It is unclear how a site with a housing only use and capacity for just 45 units can mitigate and compensate for strategic site under-delivery in the way speculated by the objector. Each of the objectors points are addressed in turn: The site adjoins the settlement boundary, but only on its western edge. The present settlement boundary represents a firm and defensible boundary to existing development,

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Hill; and to the north by undeveloped land between the appeal site and built development in Penyffordd The site topography slopes upwards north to south, across the site towards higher ground where the Min y Ddol access road and associated houses east of the appeal site are present. There is an existing public right of way across the site which will be retained, improved and incorporated into the proposed development The settlement is well connected to surrounding towns with regular bus services to Chester, Wrexham and Mold and good train services The Adopted Flintshire Unitary Development Plan classifies Penyffordd as a Category B settlement		whereas the objection site relates poorly with that existing form and pattern of development. The site is bounded by existing development to the east comprising Min y Ddol. This residential arose as a result of a policy in the Deposit UDP which identified two former hosptial sites as being available for development. The site has no development for some 260m to the north and to the south of the Min y Ddol access road is only sporadic houses and clusters of houses. The predominant built form of this part of the settlement is on the western side of the settlement, to which the site relates poorly. The site was promoted for development as an omission site (for a larger portion of land extending northwards along the eastern side of the road) as part of the UDP. The UDP Inspector did not recommend inclusion of the site commenting 'Vounog Hill provides a strong physical boundary between the built up area to the west and the countryside to the east. This extensive elongated site along the eastern side of Vounog Hill disregards the existing field boundaries and would result in an illogical incursion into the countryside. Furthermore, it would result in an unacceptable ribbon of development that would be poorly related to the existing urban form'. The potential harm was clearly recognized by the UDP Inspector.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				(main village) which has the potential for further growth, a view shared within the draft LDP which classifies the village as a Tier 3 Sustainable Settlement. Background Paper 8 'Assessment of Candidate Sites and Alternative Sites', September 2019 rates the site as 'amber' - the Council's assessment focusses on a potentially harmful landscape impact of any future development. The site is currently the subject of an appeal against the Council's refusal in October 2019 of an outline application for 37 dwellings with all matters reserved except for access. The application was accompanied by an indicative masterplan and a comprehensive package of technical reports prepared by specialist consultants.		The site forms part of an agricultural landscape which generally slopes downwards to the north. It has an open aspect and far reaching views. The development of the site would result in a block of development which relates poorly to the built form of the settlement and would harm that character and appearance of open countryside and the settlement. Noted It is accepted that the settlement is seen as a sustainable settlement within the context of the settlement hierarchy in the UDP and Deposit LDP. However, the Plan strategy is not based on every settlement having an allocation. Clearly the Plans housing provision is met through a variety of sources of supply including commitments, completions and windfalls, as well as allocations. The Council's concern is related to the poor relationship of the site with existing built form as explained above. Noted The Council maintains, as explained above, that the site relates poorly with the existing pattern of built development and will harm the character and appearance of the locality. In conclusion, the settlement of Penyffordd/ Penmymynydd will significant growth as a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				A Landscape and Visual Impact Assessment was prepared which concluded that the permanent adverse landscape and visual effects are not at such a scale (e.g. major adverse or major to moderate adverse) that the identified landscape or visual harm would be sufficient to prevent development.		result of four speculative appeal decisions. It is not necessary or appropriate for a further allocation to be made, particularly where it would not represent a logical extension to the settlement.
817	HN1: New Housing Development Proposals	NH003 Land off Bryn Gwyn Lane, Northop Hall	Object	Under the LDP strategy Northophall is identified as a tier 3 "sustainable village" where the plans states inter alia, housing land will be allocated. Despite that, no allocation is provided in Northophall. Indeed the plan makes provision for a mere 2 no housing allocations in the 22 Tier-3 settlements the plan identifies. Of those 1 (Chester Road, Penymynydd) is in fact a a committed site following a success appeal. The consequence of that is	Amend the boundary of the Green Barrier to delete candidate site NH003 from it and allocate this site for housing within the LDP.	Not accepted. Northop Hall is a tier 3 settlement where housing development should be related to the scale, character and role of the settlement. Allocations have not been made in all settlements as the LDP does not seek to apportion development spatially by the use of numerical methods or growth bands and neither, "inter-alia", does the plan say that all settlements will have allocations. That would neither be logical, necessary, or sustainable. The plan seeks to distribute growth in a sustainable manner having regard to the settlement hierarchy. As part of this approach it is necessary to have regard to the character and role of each settlement and the circumstances prevailing at the present time. In this context it does not mean that, in the absence of an allocation, Northop Hall will not experience growth during the plan period, the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				unless a site is a current commitment (Cae Eithin) the settlement boundaries drawn round NorthopHall are such, when taking account the Housing Trajectory, that there will be very limited if zero opportunity for further housing development over the remaining plan period unless of very modest scale on existing urban redevelopment sites. The evidence of need for the Green Barrier in this location is questioned. Were the land to be allocated for housing, its loss would be insignificant to the size and scale of the Green Barrier retained. My client considers there remains significant doubt and risk to the delivery of the quantum of housing on Strategic Sites and other housing sites in the LDP with the housing trajectory set out. Not least, the Council has a record of not delivering		village has already seen the completion of 85 dwellings in the early years of the LDP (2015-2018) and further growth is planned on the committed site at Cae Eithin for a further 9 dwellings. This will provide sufficient growth for the settlement over the plan period. The site is situated on the north eastern edge of the settlement and contains a large pond in the northern portion of the site. The western boundary and a small part of the southern boundary are adjacent to the settlement boundary which contains residential development along Bryn Gwyn Lane and Primrose Close. Tracts of open countryside are located to the north, east and majority of the southern boundary. The development of this site would result in the predicted loss of 3.15ha of grade 3a agricultural land. The site is an integral part of an area designated as Green barrier between Northop Hall and Connah's Quay to the east and this is commented on in more detail in the representation regarding EN11. Development would encroach in to the green barrier and result in a reduction in the narrow gap between the two settlements which would harm the open character and appearance of the green barrier and undermine its function. The southern part of the green barrier (EN11.4) seeks to protect the narrow neck of land between Northop Hall and Connah's

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				planned-for housing targets. Welsh Government Housing Policy is increasingly based on and requires delivery. The site could be delivered such that it excludes that part of the former railway line designated as SSS1 and additional buffer zone to reinforce the site edge and enhance biodiversity. The only other key constraint to the site not being allocated is access according to the Candidate Alternative Site Assessment document. It would be possible to access the site from Bryn Gwyn Lane using an option to acquire an existing dwelling on that road. This would facilitate delivery of the site. My client for the reasons outlined above considers the site suitable for		Quay. This is the most important part of the green barrier given the narrow gap. There is clear development pressure as demonstrated by the objection site and candidate site CON011 and CON021 (the latter site has been submitted multiple times). The implication of these sites together would result in the direct coalescence of Connh's Quay and Northp Hall. The release of the objection site would significantly erode the gap and increase the likelihood of coalescence. The ribbon of development along Bryn Gwyn Lane marks a firm and defensible boundary for both the settlement boundary of Northop Hall and the green barrier. Only part of the settlement is protected by a green barrier. Therefore, even if there were a need to make provision for planned growth in Northop Hall (which is not the Council's case) then there are other options on the western edge of the settlement. Adopting a sequential approach to site selection, it must be the case that a site outside of a green barrier is preferable to a site within a green barrier. Part of the site contains the former dismantled railway line which is of ecological importance of national significance (SSSI). The northern boundary of the site is also adjacent to the Pentre Moch Pond Wildlife Site and in close proximity to the Connahs Quay Ponds and Woodlands SSSI and SAC. The objector has

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				allocation for housing to meet the growth needs of the NDF and LDP.		not submitted an ecological survey in support of the site. The objector does not provide any technical evidence to show how the site can be accessed. Although reference is made to demolishing a dwelling to enable a vehicular access, no evidence has been provided to identify which dwelling this would be or to demonstrate that this would be not affect viability. Highway Development Control have states that the site is "Considered unsuitable. The site was initially considered unsuitable due to the limited width of the site frontage onto Bryn Gwyn Lane and an inability to provide appropriate access and visibility splays. The Applicant has suggested that the demolition of one of the existing properties would provide appropriate access but fails to identify which property. Most properties fronting onto Bryn Gwyn Lane have a frontage width of approximately 13m and are considered too narrow to accommodate an adoptable road that would include footways and appropriate entry radii. Wayside and Strathcraig are located either side of the access track; this could provide an additional width but still considered inadequate. The only location that would appear suitable to provide access would be the existing access track combined with Norberry House, no.22 Bryn Gwyn Lane; an

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						access in this area would have implications for the public footpath Pentre Mach and an area of trees. Apart from the difficulties in providing an appropriate vehicular access, limited width and discontinuous footways and lack of any off road cycle provision throughout Northop Hall and the surrounding area, suggest that it would not be possible to provide off-site links conforming with the requirements of the Active Travel Wales guidance. It would be difficult to access the limited community facilities available within the village with no opportunity to safely access the closest secondary school." The objector does not provide sufficient justification for the inclusion of this candidate site, it will significantly reduce a narrow green barrier and there are significant constraints to the deliverability and viability of the site in terms of ecology and access. Northop Hall is a tier 3 sustainable settlement which has already seen growth through the development of 85 dwellings since the start of the plan period, with a further 9 dwellings planned at Cae Eithin. This will provide sufficient growth for Northop Hall therefore no further sites have been allocated within this area at this time. In conclusion, growth has occurred in Northop

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Hall and it is not necessary or appropriate to make an allocation, particularly when the proposed site would harm a green barrier and where there are constraints which have not been addressed.
831	HN1: New Housing Development Proposals	HK003 Land Adj/ S of Kinnerton Lane	Object	Suitability of KH003 for allocation. The site was identified amber (according wth the Plan Strategy in 2017) and noted as being compliant with the Council's Preferred Strategy, however there are site constraints that would need to be overcome to allow the site to be developed. LDP Background Paper 08 (Candidate Alternative Sites) September 2019 states: "Development of the site would relate poorly to the nucleated built form of the settlement and result in an illogical pattern of development. This site of approx 16ha could accommodate about 500 dwellings and would amount to a very high level of growth for Higher Kinnerton. In addition	Inclusion of candidate site HK003 as an allocation	Not accepted. This site of approximately 16ha could accommodate about 500 dwellings and would amount to a very high level of growth for Higher Kinnerton. The submission IIA states that the site would include 300 dwellings which is a sizeable site. The objector's submission also includes a portion of the 16ha site for employment land, including a health care centre and an equestrian centre. The need for a health care facility is not supported by evidence or information on funding or any evidence obtained by the objector from the Local Health Board, and in the absence of a masterplan it is difficult to envisage where the employment and residential elements will sit on the site, along with the somewhat random mix of other uses, and what their full impact may be. The UDP inspector made the following comments on two omission sites from Higher Kinnerton, which were considerably smaller than the 16ha site proposed at HK003; "(11.119.4.) The objection site measures some 4.6 ha which would potentially produce growth in the region of 20%. Excluding HSG1(57), in total this would result in over 25% growth within the plan period which is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				this would have a significant impact upon the character of the open countryside and the settings of the complex of Grade 2 Listed buildings to the north and south of the site." Detailed analysis of potential of the site to come forward has and is being carried out including: Transport and Sustainable Assessment - building on the findings and off site highways works being carried out on Kinnerton Land Landscape Assessment. Heritage Assessment (including archaeology) Ecological and Biodiversity Assessments. Agricultural Land classification (grade 3b) Drainage Assessment (including SUDs/SAB ready design) and FCA		well over the indicative growth for even category A settlements such as Mold and Flint. I have seen no substantive arguments which justify that level of growth in what is a relatively small rural village with limited facilities in comparison to the larger settlements." Higher Kinnerton is a tier 3 settlement in the LDP (STR2) and previously a category C settlement in the UDP. The UDP provided growth for the village through the allocation at HSG1(40) with a capacity for 40 units. The final 6 units were completed by 31st March 2015 according to the 2014/15 Land Availability Study. A speculative site on land at Kinnerton Lane has also been granted planning permission on appeal with capacity for 56 dwellings. According to the 2019/20 Land Availability Study 31 units have been completed, with 13 under construction and 12 not yet started. It is anticipated that these remaining units are due to be completed by April 2021. That speculative site was put forward on the basis of there being a need to make an exception to policy under the terms of the now revoked TAN1, where the Minister has clearly recognized the harm that such unplanned development was causing to communities such as Higher Kinnerton. Given that the objector was the applicant for that site, they now appear to be asking for an exception to the exception which is somewhat disingenuous and ignores the impact on this settlement, and seems primarily an exercise

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Detailed masterplanning including Phasing. Utilities Statement Arboricultural Reporting Ground Investigations Landscape Assessment Viability Assessment The conclusions of this analysis is that the site is free from substantive constraint and can be developed to meet the objectives the expired UDP (in so far as it remains currently relevant), the place-making objectives of the LDP, the national placemaking outcomes of Planning Policy Wales and the aspirations of the Higher Kinnerton Village Plan 2018-2030. Furthermore the developer provides its commitment to further engaging Flintshire County Council and Higher Kinnerton		in adding value to land rather than a sustainable development proposition. Candidate site HK003 is adjacent to the speculative site at Kinnerton Lane, given that Higher Kinnerton is a Tier 3 sustainable settlement where housing development must be related to the scale, character and role of the settlement, it is considered that the speculative site at Kinnerton Lane will provide sufficient growth for the village over the plan period, and no allocations are needed within the village. Higher Kinnerton is a Tier 3 Settlement and does not have sufficient facilities to sustainably accommodate the level of growth proposed by the objector. This large site is located in the open countryside to the west of Higher Kinnerton. It comprises two field parcels in agricultural use which contains several mature trees both within and on the periphery of the site. The eastern part of the site sits between a complex of listed buildings at Kinnerton Lodge (to the north) and Crompton Hall Farm (to the south). The objector's site is outside of the settlement boundary which follows the line of the public right of way along the edge of the speculative site at Kinnerton Lane. The planning application for the speculative site included a landscape buffer along its western boundary to provide a significant green edge to the new development and minimize its impact upon the open countryside. The agent for the speculative site promoted its

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Community Council to deliver the Place the site could be and to ensure concerns over the scale and phasing of development - not least to set aside the LPA's suggestion that the site could accommodate 500 dwellings - are fully resolved. The development offers strategic sustainable growth of Flintshire. It's focus on Housing including Extra Care within both the Private & Public Sectors, including Dementia Care, Residential Housing and an Equestrian Centre, associated Employment opportunities and development of sustainable transport route scores positively on the housing and access objectives, and is aligned with national place-making outcome of Planning Policy Wales. Access - Sustainable village location.		development on the basis that it would form a "logical and contained extension to the settlement" (Planning Statement 054770). However, further development beyond this initial 'contained' extension is now proposed. It is the Council's view that a further extension would be harmful to the appearance and character of the village. Development of the site would relate poorly to the nucleated built form of the settlement and result in an illogical pattern of development. In addition this would have a significant impact upon the character of the open countryside and the settings of the complex of Grade 2 Listed buildings to the north and south of the site as development would extend beyond the well-defined western edge of built development in the village. The Council's Highways Development Management team consider access to the site to be unsuitable as there is limited opportunity to construct an appropriate access due to the limited frontage length and restricted visibility caused by the vertical road alignment. There are also other factors which make the site inappropriate for development including the predicted loss of 16.03ha of grade 3a agricultural land. The objector's submission includes a list of ongoing assessments including an agricultural land classification. This has not been submitted with the objection, therefore the Council can only

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Enhanced Public footpath adjacent and scope to extend links to Bus Route and Active Travel route. Well located to maximise benefits of investment and potential to include and adopt positive measure to encourage none car modes including retention of footpath, new cycle links to pubic highways as exemplar development. Economy - The site will promote economic development and increase employment opportunities via its commitment to developing part of the 16ha of employment land, including a Health Care and Equestrian Centre. Placing homes and jobs close together could benefit other local businesses and promote investment in and around the local sustainable location such as Penyffordd, Penymynydd and the		assess this site against the information it has which shows the site to be Grade 3a. In addition HK003 has not been allocated within the LDP as the focus on growth within this area is at the allocated Strategic Site, Warren Hall. The Warren Hall site has been identified as the focus for growth and is a key part of the North Wales Growth Deal, receiving considerable public sector investment over recent years including junction improvements at the interchange of the A5104 and the A55, and a further commitment to public funding to secure infrastructure necessary to develop the site. The site has outline planning permission as a business park however this will be extended through its strategic allocation within the LDP to incorporate a mixed use development which will include a business park, a commercial hub including leisure facilities, a hotel and some retail opportunities. The Warren Hall site provides a unique opportunity to embody placemaking principles, and to develop a sustainable mixed use site that will bring significant economic benefits to the area. Consequently the land at Higher Kinnerton has not been allocated within the plan as it is not needed in addition to the residential units at Warren Hall. It is not considered to be a logical extension to the settlement as it extends significantly beyond the well defined western edge of the village and beyond the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Local Service Sector/Warren Hall/Broughton significant positive for the economy objective.		'green edge' that the speculative development sought to deliver. It is also constrained, with highways advising it is unlikely that an appropriate access can be made to the site due to the restricted visibility caused by the vertical road alignment. In conclusion, adequate development is provided for in Higher Kinnerton over the Plan period and the site is in close proximity to the Warren Hall Strategic Site where provision is made for mixed use development. It is not necessary or appropriate for an additional allocation particularly when the site would result in development which is poorly related to the urban form.
870	HN1: New Housing Development Proposals	BROU001 Bretton Road, Bretton	Object	Several proposed allocations are at clear risk of stagnating and thus remaining undelivered for a further plan period. Furthermore, the LDP approach to assessing potential allocations is inconsistent and this further undermines the soundness of the sites which are simply rolled forward. We therefore go on to identify inconsistencies in the way the council has assessed potential	HN1 should be revised to include additional site such as our site at Bretton Road, Broughton	Not accepted. Candidate site BROU001 was assessed as part of the original call for sites. As part of the Integrated Impact Assessment the site was identified as one of a number of 'reasonable alternative' sites. However it was not allocated within the LDP due to the ongoing cross border study to identify improved vehicular access from the A55 to the Broughton area and Western part of Chester. Until the findings of this study are known it would be premature to allocate the site and it is understood that further traffic modelling is being undertaken. Clearly, and as set out in the Plan strategy, the focus for growth in this area is on the development of the strategic site at Warren Hall to allow this long standing commitment to come forward and deliver strategic mixed use growth in a sustainable location, rather than just adding

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				sites, with reference to the assessment of our client's site. Background Paper 9 'Assessment of Candidate Sites and Alternative Sites' (2019), which forms part of the LDP evidence base, discusses the site (ref: BROU001) and states: 'The site is well defined by existing roads and wraps around existing residential development… Although the site is in close proximity to Bretton, the configuration of the site and its relationship with Bretton would ensure that development would not harm the present character and appearance of the Settlement' The evidence base is clear that the site is appropriate for residential development and should be considered for allocation,		more housing to more housing as proposed by the objector. It is acknowledged that the site is well located in terms of access to facilities and services, and is well served by public transport. It is also free from constraints such as flooding. However, the site is part of the Broughton Chester Growth Corridor Study and has been identified as a possible new slip road from the A55 into Broughton. Until the results of this study are finalised it would be premature to allocate this site for development as it could block an important infrastructure project, which would have wider implications for the local economy. Given the extensive amount of new housing already added to Broughton predominantly by the objector, it would be short sighted and an unsustainable form of development to prevent wider strategic infrastructure issues from being worked through, before simply allow further housing speculation. Noted. Noted Broughton is a Tier 2 Local Service Centre and has seen a large amount of development during the Plan period with 189 units completed on the site to the south of the Retail Park in 2017/18, 24 units completed on the 'compound site' immediately to the west of the retail park (adjacent to Aldi) in 2017/18,

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				yet an allocation has not been taken forward. Site context The site is south of Bretton Road, Broughton, within a pocket of enclosed land close to Broughton Shopping Park. The site is bound by Bretton Road a small number of dwellings to the north, Bretton Lane to the east, A55 slip road south and a farm access road to the west. The site is therefore clearly bound on all four sides, creating a neat parcel of potential development land. Beyond these immediate site boundaries are Broughton Shopping Park 125m north which includes a Tesco Extra, M&S Foodhall, Cineworld, McDonald's and various retail outlets. Beyond Broughton Shopping Park is Hawarden Airport, Airbus UK East Factory and		and 36 units completed on Chester Road (Park Jasmine) also in 2017/18. In addition there are also 300 dwellings planned on the allocated strategic site at Warren Hall. This is considered sufficient provision for the Plan period, particularly as the Plan Strategy does not prescribe set amounts or targets to each settlement. BROU001 has not been allocated within the LDP as the focus on growth within the Broughton area is at the allocated Strategic Site, Warren Hall. The Warren Hall strategic site is central to the North Wales Growth Deal, receiving considerable public sector investment over recent years including junction improvements at the interchange of the A5104 and the A55 and will benefit from further additional infrastructure funding to drive the development of the strategic mixed use site forward. The objection site does not appear to be presented either in scale or use as a suitable strategic alternative and it is therefore difficult to see how the objection site can benefit from or give benefits to the ambition behind the Growth Deal. The site at Warren Hall is allocated in the adopted UDP and has outline planning permission as a business park however this will be extended through its strategic allocation within the LDP to incorporate a mixed use development which will include a business park, a commercial hub including leisure facilities, a hotel and some retail opportunities as well as

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				other industrial / commercial uses. A dense area of residential dwellings is 350m west with open grassland to the east and south. In terms of the wider locality, the settlement of Bretton is approximately 0.50km northwest with Broughton 1.50km west. In terms of public transport, there are two bus stops (Buses 4, 4S, 9, 11, 11A, 13, 811, LT6, CT1, X1 and X4) at Broughton Shopping Park which provide access to the wider area. There site is not subject to any statutory designations (such as listed buildings or conservation designations) and there are no locally sensitive uses. The site is predominantly in Flood Zone A and therefore at the lowest risk of flooding, as shown on the Welsh Flood Map for planning.		housing. The Warren Hall site provides a unique opportunity to embody placemaking principles, and to develop a sustainable mixed use site that will bring significant economic benefits to the area. The Council have allocated Warren Hall as a strategic mixed use site in order to support the objectives of the North Wales Economic Ambition Board and the Mersey Dee Alliance, and boost the economy within North East Wales. This allocation is supported by Welsh Government. The development of the AMRC was clearly compliant with the present policy framework for Broughton and the wider area, and did not need to be factored into the deposit LDP or await the outcome of the LDP Examination to secure such important investment. This also illustrates that there is a sufficiently flexible framework to allow for such development, which does not simply concern itself with a housing only approach to sustainable development in this location. The allocation of BROU001 could potentially threaten future economic growth within the wider area, as the site may be needed as part of the Broughton Chester Growth Corridor Study to identify a possible new slip road from the A55 into Broughton. Until the results of this study are finalised it would be premature to allocate this site for development as it could block an important infrastructure project, which would have wider implications

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Planning policy position It is relevant that the site is currently allocated as a Green Barrier in the Unitary Development Plan ('UDP') (2011). However, the emerging LDP proposes to remove this Green Barrier allocation as per the council's Green Barrier Review in order to meet expected growth needs in this area of Flintshire. Planning history The private developer secured a Screening Opinion (ref: 059846) under Regulation 6 of the Town & Country Planning (Environmental Impact Assessment) (Wales) Regulations 2017 which confirmed residential development on the site would not constitute EIA development. There are no other applications of note.		for the local economy. Consequently the land at Bretton Road has not been allocated within the plan as it is not needed in addition to the allocated site at Warren Hall, and the results of the Broughton Chester Growth Corridor Study are not available yet. Candidate site BROU001 was not allocated within the LDP due to the ongoing cross border study to identify improved vehicular access from the A55 to the Broughton area and Western part of Chester. Until the findings of the Broughton Chester Growth Corridor study are known it would be premature to allocate the site. It is understood that further traffic modelling is currently being undertaken which should determine if the site will be needed for the new slip road or not. In conclusion, the site is considered premature to be considered as an allocation until the Broughton Chester Growth Corridor Study has been published and the aim of bringing forward the strategic site at Warren Hall has been achieved.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Development context Broughton is identified as a Local Service Centre in the Deposit Plan and therefore has a key role in providing locally accessible services and facilities. Of note, Broughton Shopping Park (to the north) provides a significant location for retail and other commercial development which serves both Flintshire and the wider North Wales and Cheshire sub-region. As such, Broughton and Flintshire are areas for growth, and this is relevant to understanding the site and development context. Broughton in particular has seen major investment from the Welsh Government. The Government have invested £20 million into an Advance		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Manufacturing Research Centre (AMRC) in Broughton (Adjacent to the existing Airbus site). The AMRC is touted to increase GVA to the Welsh economy by as much as £4 billion within the next 20 years. It's scheduled to complete development by end of this year and is not considered within the Deposit Plan. This indicates there is a disconnect between Government ambitions to foster growth in Broughton (as evident by the funding) and the Councils ambition. The Deposit Plan must reflect its employment and housing targets with the growth anticipated from the AMRC. In addition, on November 4th 2019, the Welsh and UK Government pledged £240 million investment as part of the North Wales Growth Deal. The deal promises a government investment		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				of £240 million and has potential to secure 4,000 new jobs across the 6 North Wales LPAs (Anglesey, Conwy, Denbighshire, Flintshire, Gwynedd and Wrexham) – with private sector investment it is expected the deal will bring up to £1 billion of investment in North Wales in total. This has been a key driver for the North Wales Economic Ambition Board, and should be considered as part of the Local Plan. Flintshire is also a key partner in the Mersey Dee Alliance ('MDA') which promotes economic, social and environmental interest across the West Cheshire, Wirral and North East Wales area. The MDA growth region is, although with both England and Wales, a single economic sub-region with a population of close to 1 million.		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The Mersey Dee Growth Prospectus sets out the transport infrastructure required to unlock the economic growth potential, in addition and complementary to the rail investment identified in the 'Growth Track 360' prospectus. These documents set out that by 2040 the MDA will: Double its economy to £44bn GVA; Increase its population beyond 1.1 million people; Create a minimum of 50,000 jobs; and Build up to 25,000 homes. Therefore, Flintshire and within the wider MDA area are areas of potential significant growth in the plan period and MDA growth can have catalytic benefits for Flintshire. This is relevant to		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				understanding the site and development context. Site – land at Bretton Road The site at Bretton Road (Broughton) is deliverable in the short term and is entirely suitable for housing. Indeed, an Environmental Impact Screening Opinion has been secured which concludes development would not be EIA development, and this is relevant when considering the pace at which the site could yield housing completions. A site 'Development Framework Document' showing how development could proceed is enclosed at Appendix 4, it shows development can proceed without any adverse impacts. Although site specific matters will need to be		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				addressed, they are not insurmountable. The suitability for housing is not least evidenced by the fact that the Deposit Plan removes the site from the current UDP 'Green Barrier' allocation. Indeed, LDP Background Paper 1 'Green Barrier Review' concludes: "Broughton sits at the heart of the growth area which is referenced in the Wales Spatial Plan. The present green barrier sits tight against Bretton Road and the shopping park and the settlement boundary for Bretton and offers no scope for future growth. The gap between Bretton and Saltney is 2.1km and the green barrier is considered to be larger than is necessary to prevent coalescence. It is therefore considered appropriate to draw back		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				the green barrier so that it broadly follows the line of the green barrier alongside Broughton Mills Industrial Estate, on the north side of Chester Road. The remaining green barrier is sufficiently robust and well defined to prevent coalescence with Saltney. However, the remaining green barrier would allow for possible future expansion eastwards of Broughton / Bretton." The council has (in Background Paper 9) already concluded the site is suitable for housing and that it can be brought forward with no appreciable effects on the surrounding area. The relevant extract of Background Paper 9 is set out earlier in Section 3 of these representations. The private developer consider the site is		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				deliverable and, subject to planning permission, could be brought forward quickly provided the planning policy context is favourable (or at least does not place unnecessary burdens). Therefore, there is a compelling and reasoned case for the site to be allocated. Clearly, therefore the council envisages growth in this location and the site at Bretton Road should be allocated in the emerging Deposit Plan.		
876	HN1: New Housing Development Proposals	BUC 30 Land between Chester Road and Bannel Lane, Buckley	Object	An extent of land between Bannel Lane and Chester Road, Buckley is proposed for removal from the Green Barrier, as a result of the Green Barrier review. Whilst this is supported in principle, we are of the view that the extent of land needs to be increased to include all land up to Bannel Lane,	Inclusion of additional site Bannel Lane	Not accepted. The objector has made a separate objection to the green barrier in terms of policy EN11 (id 875) and this is responded to separately. Buckley is a sustainable settlement and has been categorised in the settlement hierarchy as a Tier 1 Main Service Centre. During the UDP plan period Buckley grew by 17.4%, therefore as a Category ' A' settlement, the aim for growth to be within 10% to 20% was fulfilled. The LDP makes provision for growth

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				which acts as a natural line of delineation. It is submitted that the land on the north east side of Bannel Lane is read as a whole. Whilst in the ownership of two parties, the land on the ground is maintained / managed as one and presented physically accordingly. There is a distinct boundary line to the east, comprising a wooded area and the ribbon development on the southern side, up to and including Bannel Lane itself, acting as a natural boundary line. Accordingly, all of the land up to Bannel Lane should be excluded from the Green Barrier designation. We request the opportunity to present further evidence, including a landscape review, at the Examination, if so required.		in Buckley as a result of the allocated site at Well Street and growth as a result of 175 completions in the first three years of the Plan period and commitments of 138 units as at the Plans Housing Balance Sheet date of April 2018. This shows that for the first 3 years of the LDP plan period there is an appropriate level of development for a Tier 1 settlement and a healthy number of commitments coming forward. The green barrier has been reviewed and the land between Bannel Lane, Chester Rd and Little Mountain Industrial Estate has been excluded from the green barrier as it is not considered to contribute to the purposes of this green barrier. The ribbon of development along Bannel Lane and the arm of development at the industrial estate almost encircle the land that has been excluded from the green barrier in the LDP. This contrasts sharply with the land which slopes down to Bannel lane. The dwelling Haulfryn is considered to represent a clear end to built development, on the north side of Bannel Lane, beyond which there are only two sporadic bungalows. The green barrier therefore seeks to protect this highly visible parcel of land as it contributes to the remainder of the green barrier wrapping around Little Mountain Industrial Estate and Little Mountain. The deposit plan was the time to submit suitable evidence to support the case being made by the objector and this was made clear to the objector by the Council in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				It is further questioned that 'lack of certainty' is justification for not including the candidate site as a housing allocation. The position can equally change and what has been deemed an appropriate site for allocation in principle would be lost. At the very least, the site should be considered as safeguarded land.		advance of the deposit consultation period. The fact that they did not submit such evidence is entirely their failing and does not help the case being made. Viability and deliverability of sites allocated in the LDP is vitally important. Following the revocation of TAN1 the Minister has provided an update to the wording of PPW10 and para 4.2.10 now states 'To be 'deliverable', sites must be free from planning, physical and ownership constraints and be economically viable …'. The Council's response on candidate site BUC030 in LDPBP08 clearly references that the site was considered suitable in principle for a possible housing allocation but discussions with the owners and agents of the two parts of the site has resulted in a lack of certainty about the availability and deliverability of the site. There is clear evidence that ownership constraints apply to this site which cast doubt on its genuine availability and the objector has presented nothing at the deposit stage to clearly demonstrate the site's availability given the two ownerships and the previous inability to agree on bringing the site forward. In any event the Deposit Plan has now set out its proposals for making suitable housing provision to meet the plan's requirement and this site is not part of that provision. It is not considered that this site should be included as safeguarded land as the LDP includes a 14.4% flexibility allowance (1,000

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						dwellings) in addition to the 6,950 housing requirement, which provides a contingency to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify specific contingency sites, and there is presently no requirement in PPW10 or the Development Plan Manual to do so. A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility/contingency to ensure a sufficient housing supply and Welsh Government in their formal comments on the plan have no concerns about the housing growth provided. In conclusion it is not considered that the site is genuinely available and therefore not deliverable. The revised green barrier has been drawn logically and it is not considered that the green barrier should be deleted from the parcel of land fronting onto Bannel Lane. The land now not designated as green barrier may be suitable for future consideration as part of a plan review, subject to existing ownership and availability constraints being clearly resolved.
914	HN1: New Housing	DRU001 Bank Lane Drury	Object	As noted at the outset of these representations,	Inclusion of additional site at	Not accepted. The site is shown as being unannotated land within the settlement

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development Proposals			the representor promoted the land at Drury Lane as a housing allocation through the previous UDP. Set out below are the comments from the previous Inspector setting out his thoughts on the site in his report published in June 2009. It is clear that the previous Inspectors at the UDP inquiry (see below) had no concerns about the suitability of the site to accommodate residential development on it and that only the absence of the need for any additional land for housing stopped the site from being allocated as such. In light of the Council's current five year housing land supply shortfall, its reliance on two long standing strategic allocations and windfall development to meet its housing needs going forward, we contend that	Drury Lane in order to deliver the level of houses needed within Flintshire.	boundary of Drury in the LDP, which repeats the manner in which the site is designated in the adopted UDP. Given that the site lies within the settlement boundary of Drury, then it can be considered as a windfall site in the context of policies in each development plan. It is certainly the case that the UDP Inspector considered that Bank Lane was a firm boundary and that the land to the west of Bank Lane related better to the settlement than it did to open countryside. However, the Inspector retained the land to the east of Bank lane as open countryside and green barrier. More recently, the site has been subject to various applications in recent years (058489 – outline 66 dwellings refused, 090160 – outline 66 dwellings refused). At present a full planning application (060587) for the demolition of 81 Drury Lane and construction of up to 56 dwellings has been refused and an appeal is ongoing at the present time (May 2020). Rather than devise a housing scheme which functions within the settlement boundary, as recommended by the UDP Inspector, the applicant has sought to extend the application site boundary beyond the settlement boundary in order to increase on-site housing density by siting open space to the east of and outside the settlement boundary.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				the land at Drury Lane presents a strong and credible option to be allocated for housing. The land at Drury Lane has been promoted to accommodate up to 66 dwellings on 1.74 hectares. It is of note that the Plan does identify other allocations on smaller sites (Site 2 - Broad Oak Holding) and in other settlements in Tier 3 Sustainable Settlements. As such, we can see no justification as to why the land at Drury Lane, Drury should not be allocated. UDP Inspectors comments '' paragraph 11.106.11. Bank Lane Drury - 523, 5147, 5293, 11628 - It was confirmed at the inquiry that 523 and 5147 now relate to land to the west of Bank Lane only. As a consequence my observations and conclusions below relate		Given that there are concerns about the manner in which the site was being proposed for development in the planning applications, it was not considered appropriate for the site to be allocated in the Plan. With the direction of travel set by the latest planning application the Council maintains its stance that it would be inappropriate to allocate the site unless assurances can be given that the whole development can be fully contained within the settlement boundary. Clearly, the outcome of the appeal will inform how the site is treated in the LDP, but scope exists for the site to still be considered as a large windfall site against the Plan's framework of policies. An allowance for windfall development is made as part of the Plan's housing provision but this is by no means an 'over-reliance' and is backed by a sound evidence base where the allowances made are modest in relation to the long term windfall completions trend. The allowances made for windfall are supported by the HBF. In conclusion, the site can come forward as a windfall site, given that it is within the settlement boundary of Drury, provided that an appropriate development scheme is put forward. It would be entirely inappropriate for the site to be allocated for housing in the Plan when the objector is intent on pursuing a scheme which extends beyond Bank Lane and the settlement boundary.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				only to this area. 11.106.12. The site is rectangular in shape and has a back land location. Whilst the objection site has similar characteristics to the countryside, it shares 3 boundaries with the built up area and to my mind has a close relationship with it and development could be seen as a rounding off the settlement, in a similar way to HSG1(28). The Council recognises the difference between the objection site and land beyond to the east and has made Bank Lane the green barrier boundary. In effect this leaves the objection site as a small parcel of land subject to open countryside policies, but not recognised as being of importance in the longer term for its open characteristics or necessary to fulfil any of		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				the purposes of the green barrier. 11.106.13. Because of its location and appearance I consider it would be more appropriately located within the settlement. However, because of the level of growth that has and could potentially take place, I do not consider the site should be positively allocated for housing development. This is primarily because the figures presented to the inquiry do not demonstrate that there is a need for further housing. 11.106.14. That being said what the evidence does demonstrate is that there are no physical constraints to development in terms of ownership, access,		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				nature conservation and the like. In these circumstances and as recommended to be modified, development could be permissible if it was in accord with HSG3. It would be treated as any other windfall. 11.106.15. I have looked at the relative merits between the objection site and HSG1(28). The matter is finely balanced and I find marginal difference between the sites in terms of accessibility, availability, impact on the landscape and appearance of the village. The relative prominence of HSG1(28) does not to my mind equate to material harm. When weighing up all the matters it seems to me that the necessity to demolish a dwelling to achieve development on the objection site is just sufficient to weigh in		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				favour of the allocated site remaining.''		
915	HN1: New Housing Development Proposals	DEE009(AS) Land North of Shotwick Road	Object	Generally we are broadly supportive of the supply sources and how the dwellings have been distributed. We would simply like to see additional sources of supply (i.e. site allocations) for residential development to accommodate a slightly higher buffer. If a 20% buffer was applied to the proposed housing requirement of 6,950 dwellings (8,340 dwellings) then this would require the identification of sites to accommodate a further 390 dwellings. The housing allocation at land north of Shotwick Road would provide a valuable additional supply of housing of up to 300 units and accommodated by the buffer. Allocating part of our client's land interest for	The housing allocation at land north of Shotwick Road would provide a valuable additional supply of housing of up to c. 300 units and accommodated by the buffer. Paragraph 3.28 of the Deposit Plan acknowledges how Deeside Industrial Park forms the basis of the growth hub and forms part of the Wales Spatial Plan triangle of growth comprising Wrexham, Deeside and the Cheshire area. Generally we are broadly supportive of the supply sources and how	Not accepted. The Council's flexibility allowance of 14.4% has already exceeded the minimum 10% required by Welsh Government in the Development Plans Manual 3 and is considered to provide sufficient flexibility to ensure the delivery of the sites already provided in the plan, and not objected to by the objector. In addition, in their formal comments on the LDP the Welsh Government are supportive of the level of housing growth provided for in the plan, including the level of flexibility. The Plan has sought to provide a balanced housing land supply comprising two strategic mixed use sites and 11 housing allocations in sustainable locations. The two strategic sites at Northern Gateway and Warren Hall both form part of the North Wales Growth Deal. The Council is unaware of any support in the Growth Deal for the objection site. The Northern gateway site has now seen the granting of reserved matters approvals on both housing and employment development and one developer Countryside Properties has commenced construction on site. Given that the housing element on the Northern Gateway site is 1325 dwellings it is not necessary or appropriate to provide a further allocation only 1km from that site. It is also not clear how the provision of a housing site, as part of complex mixed use

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				residential development is considered an entirely sound and justified decision, given that it represents a sustainable, deliverable and developable site which should be recognised for its potential to contribute to the sustainability of the growth hub as set out in the Development Plan and the triangle of growth as set out in the Wales Spatial Plan Paragraph 3.28 of the Deposit Plan acknowledges how Deeside Industrial Park forms the basis of the growth hub and forms part of the Wales Spatial Plan triangle of growth comprising Wrexham, Deeside and the Cheshire area. Generally we are broadly supportive of the supply sources and how the dwellings have been distributed. In order to maximise the benefits of transport	the dwellings have been distributed. We would simply like to see additional sources of supply (i.e. site allocations) for residential development to accommodate a slightly higher buffer. If a 20% buffer was applied to the proposed housing requirement of 6,950 dwellings (8,340 dwellings) then this would require the identification of sites to accommodate a further 390 dwellings.	development, with the added uncertainty over the Red Route would assist the Plan in terms of the delivery of housing. If the Inspector were to identify a need for additional housing allocations there would be other possible sites which would be sequentially preferable and more deliverable. The basis for the objector's submission is that development will be delivered on the back of the Welsh Government Red Route road scheme but, despite the timings given by the objector, there is still uncertainty that this will be delivered within the Plan period. Highways Development Management Officers have commented that 'These sites do not have direct access to the public highway but it is assumed rely on the future construction of the A548. Following improvement, Welsh Government will become the highway authority for the A548 and their views ought to be considered in relation to future access. As the road alignment/design has not been completed, it would appear premature to allocate specific areas in this vicinity'. In the absence of a Transport Assessment it is difficult to offer further comment as to whether the local highway network can accommodate the proposed development. The indicative land use plan provided by the objector shows an arc shaped housing site

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				infrastructure investment, our client would be looking to unlock the development potential of the site from around 2025. The timings would be dependent on the progress of the Red Route. It is reasonable to expect that the residential element of the scheme would be available by middle part of the plan period. It is important to emphasise that the Welsh Government have already deemed that development within this site is acceptable having taken into account technical, social, economic and environmental considerations. There are no known impediment that could restrict the development of this site for the uses put forward through this representation. In addition, the local authority and Welsh		located between the existing A548 and A494 (T) (to the north west of the interchange) and the line of the new Red Route. At present there appears to be no means of securing a vehicular access to the housing element. In this context it is not clear how the housing element could possibly be delivered until the very end of the Plan period at the earliest. The objector's assertion that it could be delivered in the middle part of the Plan period, based on a timescale of constructing the Red Route in 2023, is highly ambitious. Furthermore, the proposed residential element is considered to be an isolated area for those to live being separated by trunk roads. It is surprising that the objector would seek to establish the agricultural land quality of the site by consulting the Councils Community Strategy document. The Welsh Government has placed on its Lle mapping system a data set of predictive agricultural land quality. The results show not only a predictive loss of grade 2 BMV but also a confirmed loss of grade 2 BMV (on the basis of previous site surveys) for the whole of the site. The proposed development would therefore result in the loss of 40ha of grade 2 BMV agricultural land without any justification by the objector. Whether or not the site has been previously promoted for development by the WDA, it is a matter of fact that the proposal results in the loss of BMV and it was on that basis that previous proposals were rejected.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Development Agency have both previously considered and promoted the site for development. Agricultural Land Classification 10.4 The Community Strategy Flintshire 2009-2019 shown how the site occupies grade 4 agricultural land and therefore does not comprise best and most versatile agricultural land. Relevant extract from the Community Strategy is set out below (with area around the site circled in red): - Flood Risk 10.5 The TAN 15 Development Advice Map for Wales locates the site within Flood Zone C1 (relevant extract is set out below). C1 is areas of the floodplain which are developed and served by significant infrastructure,		The site also sits within flood risk zone C1 in the NRW Development Advice Map. Para 6.6.22 of PPW10 states 'Planning authorities should adopt a precautionary approach of positive avoidance of development in areas of flooding from the sea or from rivers'. More detailed advice in TAN15 which advises that in C1 areas, 'development can take place subject to the application of justification test, including acceptability of consequences'. One of the justification tests is that the site meets the definition of previously developed land and another test is that the potential consequences of a flooding event have been considered and found to be acceptable. Given that the site involves greenfield land it is unclear how the brownfield test can be met and in respect of the consequences test the objection has not been accompanied by a Flood Consequences Assessment. It is unclear how the objector proposes to meet the justification tests in TAN15, particularly as the proposal involves highly vulnerable development including a hotel and 300 houses. The candidate site is located between Deeside Industrial Park and the Flintshire / Cheshire County boundary and it is currently designated as green barrier land. The objector has submitted a separate objection in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				including flood defences. TAN 15 allows for highly vulnerable development and less vulnerable development within C1 and these development category include all the land use proposal put forward by our client. Request land to be released from the green barrier designation and for it to be allocated and safeguarded as land to meet specific future development needs that will be required during the development plan period. The five options put forward in this Deport Plan representation supports and supplements the 2017 representations which introduced the masterplan components comprising the data centre, lorry park, service station, hotel / conference facility and residential. These representation take the form of a formal		respect of the green barrier and this will be dealt with in terms of policy EN11 (id916). It is unclear, given that the site is dependent on the Red Route, and there is uncertainty over the detail or timescale for the Red Route, how this site represents a realistic development opportunity within this Plan period. Whereas there is clear support for the Northern Gateway and Warren Hall strategic site allocations in the North Wales Growth Deal, there is no such support for the objection site. Furthermore, the site will result in the significant loss of confirmed grade 2 BMV agricultural land and result in highly vulnerable development within a C1 flood risk area, without any supporting technical justification or evidence and has not undertaken a Transport Assessment. In this context it is not understood how the exclusion of such a poorly evidenced strategic site proposal can result in the Plan being unsound. In conclusion, it is considered that there is no need for the removal of a significant portion of given that the Plan makes provision for growth at both a strategic and local level. The allocation of a large mixed use development on the back of a major new road, for which there is a lack of certainty in terms of detail and timing, combined with the lack of any technical evidence to support the objection, is considered to be premature and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				objection in that the objectors do not consider the Development Plan to be 'sound' and does not meet the requirements of all of the three tests of soundness (Test 1: Does the plan fit?; Test 2: is the plan appropriate?; Test 3: Will the plan deliver?) The site at Shotwick Road has direct inter-connectivity with the urban form of the Deeside Industrial Estate and this will be further enhanced with the physical introduction of the Red Route. The allocation of our client's site will ensure that Deeside is allowed to maximise from the growth and economic benefits linked with the proposed transport infrastructure investment. Drawing back the green barrier and allocating the site for the options set out in this		inappropriate. Therefore the proposed site should not be allocated within the LDP.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				representation will ensure that the Development Plan becomes consistent with other key economic and transport plans of the region. This representation has provided credible evidence to support a much needed gateway development to North Wales and this opportunity would be missed without such an allocation. The introduction of the Red Route provides clear evidence that the wider site can be developed, and the allocation of the site provides a logical action that will contribute towards the soundness of the Development Plan.		
926	HN1: New Housing Development Proposals	BUC22 Land at Liverpool Road Buckley	Object	The site covers an area of approximately 13 hectare and is located to the north of Liverpool Road close to the Town Centre of Buckley. It is bounded to the north by a landfill site, to the east by a newt breeding area	It is our view that the plans overall supply for housing in STR1 underprovides and has underestimated future growth in Flintshire,	Not accepted. The original Candidate site adjoins the settlement boundary along 3 sides and at 12.4 ha (375 dwellings) is a large infill area. This site extends north of Buckley up to the boundary of the SSSI and SAC designated the Great Crested Newt breeding Area. In resubmitting the site, the objector has stated that they do not intend to develop the whole site as one scheme but suggests that

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				(currently managed by Flintshire County Council and the Amphibian and Reptile Conservation Trust ARG), to the south by residential developments associated with Liverpool Road and Ewloe Place, while to the west the site is bounded by further residential development associated with Ewloe Heath and Catheralls Industrial Estate. The site is currently in use for agricultural purposes and consists of a number of fields with associated hedgerows and trees located along its boundaries, there are three ponds located within the site. The site is not within any statutory designated area and is not within green barrier. The site is not at risk from flooding. The site is not BMV and an ALC report has been undertaken to support this. (see attached). A phase II Site	therefore further allocations are required under HN1. the allocation of affordable housing sites should also be given due consideration. Consider alternative sites at Liverpool Road and Aston Hall Farm, previously submitted as candidate sites.	only 5.3ha at the southern part of the site be allocated at this time. The reduced site area abuts housing to the south east and south west. The site comprises a patchwork of fields and is bounded to the north by a track beyond which is a similar patchwork of fields. To the north of this is the Great Crested Newt Breeding Area. Although the amended site is enclosed by built development on two sides and is well related to the settlement pattern of Buckley, it is still close to a very important area for wildlife, primarily great crested newts. The north east corner of the emended site abuts the Buckley Claypits and Commons SSSI and the Deeside and Buckley Newt Sites SAC which are home to Great Crested Newts (GCN) and act as breeding ponds and terrestrial habitat. COFNOD records indicate that Great Crested Newts are present on the site. The proximity of the amended site to known GCN sites is such that there would be a need to ensure that there are no long term effects upon the GCN population through agreed avoidance and mitigation measures. The county ecologist originally commented on the larger site which extended up to the Newt site and this scheme was not considered acceptable. However in relation to the principle that a smaller area could be developed , the county ecologist commented as follows:-

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				investigation has also been undertaken which shows no prohibitive ground conditions. The site is in a sustainable location, with excellent access by foot and public/private transport, the site is within easy walking and cycling distance of a number of key service requirements. There is significant employment opportunities in Buckley through a range of service sectors including food and retail providers, also offices and industry, particularly being located adjacent to Pinfold Industrial Estate. Assessment of the site as part of the Candidate Sites Process It is noted that site has been assessed as part of the candidate site process. The site was assessed as Amber and		'' While the SAC and presence of GCN does not preclude development, it does limit the scale, 280 houses does not take the SAC or GCN population present at Brookhill ponds into account and would not be acceptable. The Appropriate Assessment would not be able to conclude "no effect" and with regards to the "3 Tests" for the derogation licence, there are likely to be alternative solutions that are less damaging. Other developments adjacent to the SAC have been developed on the "thirds principle;" namely one third development, one third GCN mitigation and one third informal recreation to avoid both direct and indirect impacts on the SAC. The reduction of the development to 150 units may be acceptable providing there is adequate provision for GCN and to prevent indirect impacts on the SAC. This does not preclude the necessity of ecological surveys for habitats present and the potential for other species (e.g. badger, breeding birds, reptiles etc) on site. Any development would need to assess the Ecology of the site and provide an Ecological Impact Assessment with appropriate avoidance and mitigation measures.''

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				it was acknowledged that it complied with the preferred strategy and was well sited in relation to Buckley and surrounded on 3 sides by development. The main barrier to its inclusion as a candidate site related to the ecological issues with the SSSI and SAC. It was indicated that a smaller land parcel on the southern side of the site could be more appropriate for inclusion in the LDP. Therefore, as outlined below, an amended area has been supplied for consideration as an Alternative site in line with the provisions of the Development Plan Manual. The amended area of 5.3 ha has the ability to deliver approximately 120 units, along with ecological mitigation, Suds and open space and can be designed to allow for future growth		This indicates that the smaller site area as put forward, may be developable if appropriate ecological measures are put in place. However, the masterplan submitted as part of the objection shows an indicative layout with a small part of the site (the north western part) as open space but it does not show the wider context for the site as identified by the Ecologist ie recreational and mitigation on land between the site and the designated areas. As presented, the scheme provides insufficient certainty that the site can be satisfactorily developed without harming the SSI/SAC. The Highways Development Management Officer has commented: ‘’Considered unsuitable for development due to restricted access arrangements and inadequate pedestrian and cycle connectivity. The applicant has requested the consideration of a reduced size site suggesting access from both Liverpool Road and Ewloe Heath. Whilst two points of access would increase the accessibility of the site an access via Ewloe Heath would generate additional movements on Ewloe Place; this road has limited capacity due to width constraints and an existing on-street residential parking demand.’’ In terms of the access from Liverpool Road he added:- ‘’The additional information shows the demolition of an existing building at no.55

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				into the adjoining additional land if considered appropriate in the future. The public footpath would become the access road into the site and all development would be to the south of the existing footpath. This would leave a significant buffer to the GCN SSSI/SAC. As the owner of the site, we can confirm that the site is deliverable within the Plan period, more over can be delivered quickly, as we are presently gearing up for submission of a planning application.		Liverpool Road with a potential access through the property. The proposed access appears to avoid the existing access track that carries public footpath no.18; it is not clear whether this land forms part of the application site. Junction visibility splays are not shown on the access drawing however it would appear that as drawn, a 2.4x43m splay (the minimum required for a road subject to a 30mph speed restriction) would cross the boundary of the adjacent property. The requirements of Active Travel Wales legislation must be considered; the requirements, including accurate assessment of connectivity between the site and community facilities, would be included within any Transport Assessment. Any existing retail facility within the suggested 800m of the site, is unlikely to provide an appropriate level of convenience shopping''. Despite the reduced area and reduced number of units associated with the amended objection site, it is still not considered that an adequate vehicular access can be provided to serve the site. In conclusion, the objector has reduced the site area and number of units but there are still concerns relating to ecology and also it would appear that a vehicular access cannot

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						be provided. The site is not appropriate to be allocated in the Plan.
929	HN1: New Housing Development Proposals	HWN001 Land at Lower Aston Hall Farm, Hawarden	Object	Aston and Shotton is a Tier 1 main service centre and there are no specific housing allocations within it. The settlement boundary is tightly drawn surrounded by green barrier limiting the opportunity for windfall sites. Furthermore the consultation draft of TAN15 indicates that planning policy towards highly vulnerable development such as housing in flood zone 3 could be advised against therefore reducing the capacity of settlements in proximity to the tidal River Dee such as Shotton and Aston. Summary of the Suitability of Site for Development: Site description Private developers own the site at Aston Hall, as well as land adjoining the		Not accepted. The Plan's spatial strategy is not premised on every settlement having a housing allocation. The Plan's housing requirement will be met through a variety of sources of supply such as completions, commitments and windfalls. Growth may therefore be achieved in a settlement without there being an allocation. Shotton / Aston is clearly a settlement that is constrained in its urban form by the adjoining settlements, by the R. Dee and by the line of the Wrexham / Bidston railway line. Nevertheless, the settlement has seen growth in the first four years of the Plan period with 55 completions recorded. It is noted that the objection submission document includes 'Hawarden' in the description of the site location. However, it clearly does not physically adjoin the settlement boundary of Hawarden which lies some 380m to the west. Site description The objection does not specify the size of the objection site, given that it has been reduced from the candidate site submission. Nevertheless, the Council measures it at

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				site to the south-east, totalling circa 18ha. The site is currently used for agricultural purposes and consists of a number of fields with trees along its boundaries. There is a large pond located in the centre of the site which would be retained and incorporated in to public open space. There are also other waterbodies nearby the site. The site is not shown as being at risk from flooding from rivers or the sea and so a formal Flood Consequences Assessment is not be required. Proposed site As outlined above, and previously within the candidate site submission, these representations put forward a site which is considered to be suitable for residential development. Pre-application discussions		6.4ha. The submission references 122 units which equates to a density of 19 dwellings per ha. Consultation with Welsh Government on the original larger candidate site identified a predicted loss of 3.02ha of grade 2 agricultural land and 15.07ha of grade 3a agricultural land. The objection has not been accompanied by the results of an on-site survey to determine the precise nature and extent of the loss of BMV. Proposed site It is of note that the objector owns another 12 ha of land adjoining this site and, in conjunction with other candidate sites in the locality there is clearly a threat of further development pressure. In terms of the prominence of the site, the provision of a vehicular access will require the removal of vegetation and trees which presently screens the site. This will clearly open up views of the wider landscape and built development will be prominent in the landscape. This is particularly the case given that the site sits lower in the landscape than the access point. Green barrier It is not considered that the site represents a logical urban extension to the settlement of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				have stated that bringing forward the total land holding would lead to coalescence between settlements and would undermine the objectives of the green barrier. We have therefore reduced the area of land to be put forward as an alternative site. (attached) This plan would deliver around 122 units. The proposal would incorporate areas of open space throughout the development, intended both for recreational use and biodiversity enhancement. Landscaping would be provided along the north-eastern and south-eastern boundaries of the site to contain the development and provide screening from the open countryside to the north east. The indicative masterplan also illustrates the intention to strengthen the woodland corridor to the north east which		Shotton / Aston. The bulk of the settlement lies to the north of the A494(T) whereas on the southern side of the A494(T) there is only a small block of estate type development and buildings around Aston Hall Farm, in the form of an 'outlier' of development. Although this outlier is included within the settlement boundary of Shotton / Aston in successive development plans, the outlier does not relate well to the settlement. The site forms part of a narrow green barrier between Shotton / Aston to the west and Hawarden to the East. The green barrier is some 300m to 600m wide and its primary purpose is to protect the openness of the gap between the settlements by preventing urban encroachment and coalescence. Despite the outlier of development eating into the green barrier it is of note that on the north side of Lower Aston Hall Lane there is only a ribbon of dwellings along the road and a small courtyard type development 'The Barnyard' adjacent to Aston Hall Farm. Despite the type development on the south side of Lower Aston Hall lane, the general character of the area is rural with the narrow roads, lack of footways and streetlighting. It is not considered that this form and pattern of development on the north side of the road acts as a context for the introduction of a block of development. The development of the site would represent a substantial loss of and harm to the green

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				includes the footpath running from Higher Shotton to Big Mancot. Green barrier The proposed development offers an opportunity to provide new, high quality housing within a sustainable location and would form a logical extension to the settlement of Aston and Shotton. The proposal would provide a diverse range of houses including a high proportion of affordable homes, easing the pressure on the social housing sector within the area. The site is within the Green Barrier allocation EN11, this allocation covers the areas of 12. Shotton - Mancot - Hawarden – Ewloe. The scheme as proposed is considered to provide a logical extension of the housing on Lower Aston		barrier and weaken the gap between the two settlements. The role and purpose of the green barrier was commented on by the UDP Inspector in respect of two omission sites to the immediate south east of the objection site. The Inspector comments on a site incorporating Aston Hall Nursing Home and Farm '9095 - The objection site is within the green barrier. In this location it safeguards the countryside from encroachment and prevents the merging of Shotton/Aston and Hawarden. In doing so it protects the countryside setting of the settlements and is particularly important because the strategic gap is relatively narrow between the built up areas'. The Inspector goes on to comment 'The objection site abuts the southernmost extremity of Aston to the east of the A494. Whilst the site does encompass some buildings, a significant part of it is open land associated with the properties and as such their spacious setting relates better to the surrounding countryside than to the more tightly knit housing within the settlement. At present the green barrier boundary is clearly defined and I see no reason to change it'. In respect of a site to the east of the Nursing Home the Inspector comments '10371 - … the development/allocation for housing would both consolidate and extend the built form and be a significant incursion into an area of open countryside which forms part of a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Hall Lane, with good vehicular access to the local and strategic highway network and good pedestrian links to Aston and Higher Shotton. The proposal respects the boundary to the north east which would help contain views of the site from the open countryside which exists beyond the site. The scheme would look to enhance and strengthen this boundary to create a defensible boundary for the site. Whilst the presence of Green Barrier is a clear policy constraint, it is considered that the removal of this site from the green barrier would not harm the overall function of the green barrier in this location and would be a sustainable extension to a Tier 1 settlement which has little room for windfall growth and no allocations in the current plan period.		strategic gap preventing the coalescence of built up areas'. The comments of the UDP Inspector are considered to be equally applicable to the situation at present. There has been no change in the character of the area that would justify a significant reduction in and harm to the green barrier. Highways It is of note that despite previous discussions with the lpa, the objection is not accompanied by a Transport Assessment nor evidence of discussions with Welsh Government given the proximity of the proposed access to the A494(T) and the fact that the layout of the slip roads fall below current design standards and the need to cater for improved pedestrian and cycling facilities. There is also a concern that the traffic generated from the development may impact on the Plough lane Link Road and there is no evidence of liaison with the Councils Streetscene Highways Strategy Section. Ecology The lack of ecological designations on or near the site are noted as is the reference to the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Highways To the northwest of the site Lower Aston Hall Lane runs parallel to the A494 dual carriageway trunk road and ultimately forms a direct terminal connection to the westbound carriageway of this route via local merge / diverge slip road connections. Access to the eastbound carriageway of the A494 and the residential area of Higher Shotton is available to the north via a local bridge connection over the A494, linking from a T-junction on Aston Hall Lane (north western corner of the site) to the local roundabout junction of Courtland Drive / Plough Lane / Aston Park Road. The immediate section of Lower Aston Hall Lane parallel to the A494 is of circa 7.1m operating width, with a footway to the northern carriageway edge (non-site side). This section of route is		ecological assessment and lack of recorded Great Crested Newts in the pond. Economic Viability The objection site offers no viability assessment to demonstrate that it is viable and therefore deliverable. This is particularly the case when the objection refers here to 'delivering a large quota of the affordable housing provision sought by the LDP' and below to 'meet and exceed the expectations on the delivery of affordable homes'. Policy HN3 of the Deposit Plan seeks the provision of 40% affordable housing in this location. However, the objector does not specify whether or how the site will exceed this requirement whilst remaining viable. Clearly the offer of more affordable housing than is required by policy does not make an inappropriate site suddenly acceptable. Highways Highways matters have been commented on above and raise concerns about the proximity of the site to the A494(T) and lack of submitted Transport Assessment. Sustainability

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				understood to be under the control of Flintshire County Council as local highway authority. The identified extent of the site does not provide a direct frontage to Lower Aston Hall Lane, with third party land forming a buffer between the road and the proposal land boundary. Discussions with the landowner have indicated that they would be open to the principle of allowing access through this land to serve the development of the site. Given the nature of the frontage section of Lower Aston Hall Lane, it is considered that a simple T-junction option would represent an appropriate new development access option in highway capacity and safety terms. It is noted that there is a significant drop in levels		In terms of sustainability, the proximity of the site to facilities and services in Shotton / Aston is noted. Environmental Health / Amenity The site lies alongside the A494(T) where, as a result of roadside air quality monitoring results, Welsh Government have introduced a 50mph speed limit on the A494(T) in order to reduce emissions. The proximity of the site raises concerns about air quality, in the absence of evidence. Biodiversity / landscape It is possible to reduce visual impacts of a development on the landscape through design and landscaping measures. However the key function of the land in respect of the green barrier is to retain the openness and to prevent urban encroachment and coalescence. The introduction of additional landscaping measures will not mitigate the harm to openness and the function of the green barrier caused by large scale development. In terms of the summary of factors put

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				from Lower Aston Hall Lane to the development site, however, it is not considered that this change in levels would represent a constraint on development access and could be addressed via appropriate local earthworks in order to deliver an access road of suitable residential standard gradient. Ecology An Ecological Assessment has been completed to inform the pre-application request. This assessment identified that the site is not located in any statutory or non-statutory designated sites for nature conservation. The search identified five statutory designated sites within a 5km radius of the site boundary, the closest being the Connah's Quay Ponds and Woodland SSSI and the Deeside and Buckley Newt sites SAC, both		forward to support the residential development of the site it is of note that: • The reference to the development of the site sustaining services in Hawarden is puzzling as the site is promoted by the objector as being an extension to the settlement of Shotton / Aston given reference to proximity of the site to facilities in that settlement. Linkages to Hawarden for vehicles and in particular pedestrians and cyclists are poor given the narrowness of Lower (and Upper) Aston hall lane and the lack of footways, streetlighting and gradient. In terms of the changes sought to the proposals maps and written statement it is unclear, despite reference to 'Consider the use of specific allocations for Affordable Housing Provision' whether this site is proposed as an affordable-only housing development or a market led housing development with a proportion of affordable housing. In conclusion, provision for growth has been made in the locality with allocations at Hawarden, Ewloe and Northern Gateway. It is not considered necessary or appropriate to allocate a further site particularly when it would relate poorly to the pattern of development and harm a green barrier.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				1.3km west of the site. The nearest non-statutory site is the Aston Wetland Wildlife Site 540m west of the site. The site itself is considered to be of low ecological value. The habitats present on site predominantly comprise open improved pasture fields with some semi-improved grassland in the north-western part of the site. A large pond is located in the southern part of the site which is fed by a wet ditch running from the north. The field boundaries comprise species poor hedgerows dominated by hawthorn (Crataegus monogyna) with hedgerow trees or post and wire fences. Broadleaved woodland exists along the north-western and north eastern boundaries of the site. At the north-western boundary this woodland adjoins Lower Aston Hall Lane. No ancient woodland is		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				present on site. The pond on site and accessible ponds within the surrounding area were surveyed for great crested newt presence in early June 2017. The survey results were negative for great crested newts and as such this species is not considered to be present on site. Given the separation distance from the designated and non-statutory sites, the development of the site for housing is not considered likely to have any direct effects on designated habitats and species. The potential for indirect effects is similarly considered unlikely and could be suitably avoided and mitigated through a Construction Environment Management Plan (CEMP) and implementation of standard pollution		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				prevention and control measures in line with guidance provided by Natural Resources Wales. Based on the findings of the Preliminary Ecology Assessment, it is considered unlikely that there would be any significant adverse effects in terms of ecology resulting from the development of the site. In summary therefore, the site is considered to be suitable for residential development for the following reasons: Economic Viability • There are no economic constraints which will affect the development of the site within the plan period. • The landowner is in agreement with the proposed land use of the site.		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				• There are no restrictive covenants relating to the use of the land. • The site is able to be served by existing utilities infrastructure. • The site will assist in delivering a large quota of the affordable housing provision sought by the LDP. Highways • Local destinations can be safely accessed from the site via the local highway network. • The site has good access to the wider highway network and strategic highway routes. Sustainability • The site is accessible to local destinations on foot,		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				• The settlement of Aston provides a range of services / facilities. St.Ethewold's Primary School (500m); Deeside Community Hospital 575m, Local shops and public house in Aston 400m. • The development of additional residential units will further sustain the existing services within Buckley. Environmental Health / Amenity • The development of the site will not create a potential nuisance in terms of air, light, noise or waste. No adverse impact should arise from the development of the site in terms of contamination. Biodiversity / Landscape • It is considered that the		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				development proposal will not have any negative impact on the surrounding countryside. • Any potential landscape impacts can be effectively managed through sensitive design of the proposals and appropriate landscaping. Accordingly, it is not considered that the proposals will cause any significant harm. Our proposed sites are considered to be suitable site for residential development, particularly in view of the following factors: • There are no economic constraints which will affect the development of the site within the plan period. • The landowner is in agreement with the proposed land use of the sites.		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				• The landowner as an affordable housing provider will be able to meet and exceed the expectations on the delivery of affordable homes in these locations, identified as a strategic importance to the County. • Satisfactory highway access can be provided to serve both sites and the current highway network can accommodate the anticipated traffic movements. • Both sites are located within close proximity to frequent public transport services. • Both sites are accessible to local destinations on foot. • The development of additional residential units will further sustain the existing services within Buckley and Hawarden.		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				• The site is not subject to any landscape or ecological designations. • The location of both sites provide an opportunity for residential development which would be neither prominent nor isolated. • There are no fundamental environmental or ecological constraints that would prohibit development on each site. • Existing mature planting / hedgerows, could be maintained and / or supplemented to ensure the developments fit well into the surrounding land uses. Requested / Recommended Changes to the Plan In light of, and as a consequence of these		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				representations, the particular parts / policies of the Plan subject to these representations, and which are considered to need amendment are: • Strategic Policy – Meeting Housing Needs – increase in the overall housing numbers to ensure that the needs of the Authority are provided for, and also to provide a 'contingency' for flexibility over the Plan period. • Consider the use of specific allocations for Affordable Housing Provision • Consider the alternative site put forward at Aston Hall Farm as an appropriate site for allocation in the LDP In addition, the Proposals Map of the LDP needs to be amended to include:

				• The Alternative Sites as housing allocations • Amend the settlement boundary of Aston to include the smaller parcel of land and remove the area from the green barrier		
959	HN1: New Housing Development Proposals	Mancot Lane, Mancot, Queensferry MAN0012	Object	The spatial distribution does not reflect the settlement hierarchy and we have considerable doubt that a host of the (draft) sites are actually deliverable over the plan period and beyond. Para 19.2 in the supporting text refers to a background paper on “Candidate & Alternative Site Assessment” yet this is not available. MAN001 is being promoted as an edge of settlement exception affordable housing site and an application is due	There is a belief that additional sites must be identified and that reserve sites are required in the event allocated sites do not deliver. The Assessment findings for MAN0012 found it to be an “AMBER” site and stated that: The site presently contributes to a wedge of countryside which serves to separate the settlements of Pentre, Mancot and Sandycroft.	Not accepted. The Plan’s strategy is not based on making planning growth through new allocations in every single settlement. In the case of Mancot the allocated site at Ash Lane (288 units) clearly adjoins the settlement boundaries of both Hawarden and Mancot and can meet the needs of both settlements. The objector fails to explain how the provision of 22 units rectifies concerns about the spatial distribution of development or the “considerable doubt that a host of the (draft) sites are actually deliverable”. It is unclear what document para 19.2 refers to as there is no para 19.2 in the LDP Deposit written statement. Despite commenting that the background paper on candidate site assessments not being available (which was not correct), the objector later in the objection quotes from it. Within the context of PPW10 affordable housing is no longer permissible within green wedges (barriers). Even an exceptions affordable housing scheme would represent ‘inappropriate’ development within the green

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				to be submitted very soon. The Assessment findings for MAN0012 found it to be an “AMBER” site and stated that: ‘The site presently contributes to a wedge of countryside which serves to separate the settlements of Pentre, Mancot and Sandycroft. The development of the site would result in a block of development extending into open countryside which would relate poorly to the form and pattern of built development. The development of the site would undermine the objective and openness of the green barrier and place pressure on adjoining land. Part of the site also lies within a C1 flood risk area and with pockets of surface water flood risk. Further commentary on the	The development of the site would result in a block of development extending into open countryside which would relate poorly to the form and pattern of built development. The development of the site would undermine the objective and openness of the green barrier and place pressure on adjoining land. Part of the site also lies within a C1 flood risk area and with pockets of surface water flood risk. Further commentary on the green barrier will be provided in the green barrier review. That the site is not considered suitable to be allocated. We consider that there are no	barrier. A planning application would be contrary to national planning guidance as well as policies in the adopted UDP. The site is promoted for 100% affordable housing by a housing association, but just because the units would all be affordable doesn’t make an inappropriate site suddenly appropriate. The Plan already makes provision for housing development on land between Ash Lane and Gladstone Way which will provide for both market and affordable housing, meeting the needs of both Hawarden and Mancot, given that the site adjoins the settlement boundary of each. Background Paper 07 Affordable Housing explains that based on the allocations capacity of 288 units, some 115 units would be affordable. The site was promoted for development in the form of an omission site as part of the UDP. The Inspector did not recommend allocating the site for housing nor amending the green barrier and commented ‘The objection site is a field with an area of about 1.5ha. It abuts the southern boundary of 860. The land is an integral part of the open countryside and part of the narrow green barrier between Mancot and Pentre which prevents the coalescence of the settlements. The rectangular shape of the site with its relatively short border with the built up area would mean that development would effectively bisect the open land between the 2 villages and compromise the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				green barrier will be provided in the green barrier review. That the site is not considered suitable to be allocated'. We consider that there are no technical constraints that prevent this site from being brought forward for development'	technical constraints that prevent this site from being brought forward for development.	strategic nature of the green barrier in this location'. The objector's original candidate site was for 43 units or for a care home / extra care living scheme on the whole site and was considered in that context. The objection now submitted is promoting only the southern half of the site for housing development, with the northern part of the site as open space. However, the site is still considered to be an extension of development into open countryside which will weaken the gap between Mancot and Pentre, as recognized by the Inspector. Data from Welsh Government on the original candidate site showed that the whole site was predicted as grade 3a BMV. Although the objector criticizes the Councils Background Paper 9 Agricultural Land as being unsound, the approach to minimizing the loss of BMV agricultural land has not been objected to by WG but has been supported in principle. The objector has not submitted a site based assessment so it is not possible to ascertain what grade BMV the site actually is. The submission includes an illustrative layout for the development which shows 22 dwellings on the southern half of the site and open space on the northern half. The boundary of the developable area appears to be based on flood risk considerations. However, based on the C1 boundary in the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						NRW Development Advice Map it appears that the potential for flood risk still extends slightly into the southern part of the site. This is a key concern if the site boundary includes C1 flood risk zone as a greenfield site cannot satisfy the justification tests in TAN1. In the absence of a FCA it is not possible to determine whether or not there is a risk of flooding on the site. The Inspector recognized flood risk as an issue commenting 'It is also within a flood risk area where TAN15 advises that allocations should only be made if they can be fully justified. There is no such justification in this case and in these circumstances I do not find the objection warrants any changes to the plan'. Despite the objectors criticism of the Plan and its evidence base it is disappointing that the submission has not provided evidence in relation to flood risk and agricultural land. In addition to the harm that the development of the site would cause to the green barrier, the site is not appropriate to be allocated in the Plan. In conclusion, the Plan has provided for growth in Hawarden and Mancot and it is not necessary or appropriate to make a further allocation when it would harm a green barrier and where there is no background evidence regarding constraints.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
974	HN1: New Housing Development Proposals	Warren Bank Lane, Broughton BROU10	Object	The spatial distribution does not reflect the settlement hierarchy and we have considerable doubt that a host of the (draft) sites are actually deliverable over the plan period and beyond. Para 19.2 in the supporting text refers to a background paper on "Candidate & Alternative Site Assessment" yet this is not available. We believe that many sites have a variety of significant constraints affecting deliverability and viability.	There is a belief that additional sites must be identified and that reserve sites are required in the event allocated sites do not deliver.	Not accepted. The proposed site is 9.2ha and the objector indicates a capacity for 230 dwellings. The site was initially submitted as a smaller candidate site (BROU010) which was assessed as part of the original call for sites. It was not considered suitable for allocation within the LDP as it is divorced from the settlement boundary of Broughton, and forms part of the open countryside. The site was clearly separate from the existing ribbon of development to the West of the site, therefore it relates more closely to the open countryside than it does to the nearby settlement. The allocation and development of this site would result in a small block of housing that poorly relates to the existing form and pattern of the settlement, and is too small for allocation within the plan. BROU10 was then resubmitted as an alternative site as part of a much larger scheme known as BROU17AS. This has also been assessed as part of the LDP site selection process. The larger BROU17AS site would adjoin the settlement boundary, however it would intrude into the open countryside in a ribbon like block of development, which would appear divorced from the form and pattern of existing development which is South of the A5104. The settlement boundary is presently well defined by the A5104, an extension across this into the Old Warren would harm the rural

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						character of this locality and be poorly related to the existing settlement. The development of BROU17AS would result in a large block of development extending into the open countryside. This contrasts sharply with the existing pattern of ribbon development along The Warren and the well defined residential development to the south of the A5104. The site does not represent a logical urban extension to the settlement. The site is also subject to constraints including being within the flight path for Broughton Airfield and the Southern part of the site is within 250m buffer zone of a landfill site. In view of the objector's criticism of the Warren Hall strategic site (Masterplan Delivery Statement) in terms of the implications of the flight path on built development, it is surprising that no detailed analysis on the implications of the flight path for this site has been submitted. Considering the size of the site and its potential to accommodate 230 dwellings, the objection is not accompanied by background studies or assessments nor a commentary as to the ethos behind the site, or the principles on which the site is to be developed. An example of this is the lack of any indication as to where for instance the vehicular access will be located and it is not sufficient at this late stage to simply state that "we will demonstrate that this site is technically

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						deliverable" without providing this detailed evidence. Highways have also raised concerns and advise that "a Transport Assessment is required to determine the full implications of any site over 100 dwellings. A site of this size is likely to have a detrimental impact on the operation of the Warren Hall Interchange especially when generated traffic is considered in addition to that of the proposed Warren Hall Development. Additional traffic is also likely to have a detrimental impact on the operation of Main Road Broughton. The full extents of the impact can only be determined by the consideration of a full Transport Assessment'. No Transport Assessment has been submitted by the objector. The focus on growth within this area is at the allocated Strategic Site, Warren Hall. The Warren Hall site has been identified as the focus for growth and is central to the North Wales Growth Deal, receiving considerable public sector investment over recent years including junction improvements at the interchange of the A5104 and the A55. The site has outline planning permission as a business park however this will be extended through its strategic allocation within the LDP to incorporate a mixed use development which will include a business park, a commercial hub including leisure facilities, a hotel and some retail opportunities.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						The Warren Hall site provides a unique opportunity to embody placemaking principles, and to develop a sustainable mixed use site that will bring significant economic benefits to the area. Consequently the land South of Old Warren has not been allocated within the plan as it is not needed in addition to the strategic allocation at Warren Hall. Broughton is a Tier 2 Local Service Centre and has seen a large amount of development during the Plan period with 189 units completed on the site to the south of the Retail Park in 2017/18, 24 units completed on the 'compound site' immediately to the west of the retail park (adjacent to Aldi) in 2017/18, and 36 units completed on Chester Road (Park Jasmine) also in 2017/18. In addition there are also 300 dwellings planned on the allocated strategic site at Warren Hall. This is considered sufficient provision for the Plan period, particularly as the Plan Strategy does not prescribe set amounts or targets to each settlement. The development of the site would also result in the loss of grades 2 and 3a agricultural land. Despite the objector criticizing the Council's background paper on agricultural land, they have not even submitted an on-site assessment to establish what grade the site actually is.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						In conclusion, the Plan has made provision for growth at Warren Hall and there is considered to be no need for a further housing allocation, particularly where it relates poorly to the built form of the settlement. The site is not considered appropriate to be allocated in the Plan.
991	HN1: New Housing Development Proposals	Plas Aney, Ruthin Road, Mold MOL002/MOL 051	Object	The spatial distribution does not reflect the settlement hierarchy and we have considerable doubt that a host of the (draft) sites are actually deliverable over the plan period and beyond. Para 19.2 in the supporting text refers to a background paper on "Candidate & Alternative Site Assessment" yet this is not available. We believe that many sites have a variety of significant constraints affecting site deliverability and viability. MOL002 and	There is a belief that additional sites must be identified and that reserve sites are required in the event allocated sites do not deliver. MOL002 and MOL051 are being promoted as an edge of settlement housing site and an application is due to be submitted very soon. The Assessment findings for them found it to be an "AMBER" site and stated that: The site sits in a prominent location on Ruthin Rd which is a key	Not accepted. The objector has objected to multiple policies and proposals in the LDP as well as background papers. However, despite alleging that allocated sites have constraints and are not viable and deliverable the objector has not provided a single piece of evidence to support this. Since making Deposit consultation objection, the objector has submitted a planning application 061154 for residential development. The submission of the planning application does not alter the Council's view that this site should not be allocated in the Plan. In responding on other representations by the objector the Council considers that its housing requirement figure is appropriate and it should be noted that this is not objected to by Welsh Government. The Council also considers that the various elements of housing supply within the Housing Balance Sheet are robust and reasonable. The effect is that the Council does not consider that additional allocations are required, particularly given the existence of a 14.4% flexibility allowance which exceeds the required minimum of 10% as set out by

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				MOL051 are being promoted as an edge of settlement housing site and an application is due to be submitted very soon. The Assessment findings for them found it to be an “AMBER” site and stated that: ‘The site sits in a prominent location on Ruthin Rd which is a key route into the town. Development would extend built development south westwards from Mold and would significantly weaken the green barrier between Gwernynynydd and Mold. A further consideration is that there is land along the north western edge of the settlement which does not involve the loss of green barrier land. In sequential terms the land off Ruthin Rd is less preferable than the land outside the green barrier in the vicinity of Denbigh Rd and Gwernaffield Rd.	route into the town. Development would extend built development south westwards from Mold and would significantly weaken the green barrier between Gwernynynydd and Mold. A further consideration is that there is land along the north western edge of the settlement which does not involve the loss of green barrier land. In sequential terms the land off Ruthin Rd is less preferable than the land outside the green barrier in the vicinity of Denbigh Rd and Gwernaffield Rd. A commentary on	Welsh Government in Development Plans Manual 3. The sites contribution to the green barrier is commented on in respect of policy EN11. The threat to the green barrier is enhanced by the Deposit consultation objection to the non-allocation of the candidate site MOL005 immediately to the west of the site. The Council do not agree that the site is sequentially preferable to other sites in Mold as there are sites which do not involve the loss of green barrier. Commitments exist at Bromfield Timber and Broncoed Park as well as the present development By Wates which is under construction at Maes Gwern, only 500m to the east for 186 dwellings. The Plan has also allocated a further site on land between Denbigh Road and Gwernaffield Rd and this has not involved the need to review a green barrier. In this context it is clearly sequentially less preferable to delete land from a green barrier when other non-green barriers opportunities exist, and particularly when the site concerned would fundamentally harm the green barrier concerned. The Plan’s approach to identifying a future direction of growth in Mold was also recognized by Mold Town Council in the Mold Town Plan. Growth in Mold will take place as a result of completions (156 completions in first 3 years of the Plan period) and commitments (177

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				A commentary on the green barrier is set out in the green Barrier review but development of the site would clearly weaken the gap between Mold and Gwernymydd when it is presently not necessary to do so. In addition, a large housing development is presently taking place on land at Maes Gwern, only a short distance from the site. In this context it is considered unnecessary and inappropriate to utilise green barrier land for development. That the site is not suitable for consideration as a housing allocation'. We consider that there are no technical constraints that prevent this site from being brought forward for development. Moreover, we have sought to show that the Green Barrier Review has not involved a full or considered assessment and is flawed. Whilst it may be	the green barrier is set out in the green Barrier review but development of the site would clearly weaken the gap between Mold and Gwernymydd when it is presently not necessary to do so. 					to be identified for housing.	
1013	HN1: New Housing Development Proposals	Bistre, Well Street, Buckley BUC023, BUC036, BUC055AS	Object	Land south of Bryn Awelon (east of Well Street), Buckley (BUC023, BUC036 and BUC055) has been promoted. The Assessment findings for them suggest it is an "AMBER" site and states that: The site adjoins the settlement boundary and in terms of the settlement form, the site is built up along the north east side and the Well Street allocation is along the north west side. However, there are highways concerns that there should be no further traffic on the road network, over and above the existing Well Street allocation, and that there is a need to avoid any increase in traffic southwards along Well Street. It could be considered as a	there is a belief that additional sites must be identified in the event allocated sites do not deliver. Land south of Bryn Awelon (east of Well Street), Buckley (BUC023, BUC036 and BUC055) has been promoted. The Assessment findings for them suggest it is an "AMBER" site and states that: 'The site adjoins the settlement boundary and in terms of the settlement form, the site is built up along the north east side and the Well	Not accepted. The objection site most closely resembles Alternative Site BUC055-AS in terms of size and configuration but has a slightly smaller site area as it excludes small parcels of land between Oakcroft and Bistre Cottage Farm. The objection does not specify the area of the submitted site boundary but it is likely to be slightly less than the 12.8ha of BUC055-AS. Buckley is a sustainable settlement and has been categorised in the settlement hierarchy as a Tier 1 Main Service Centre. During the UDP plan period Buckley grew by 17.4%, as a Category 'A' settlement the aim for growth to be within 10% to 20% was therefore fulfilled. The LDP makes provision for growth in Buckley through the allocated site at Well Street and as a result of 175 completions in the first three years of the Plan period and commitments of 138 units as at the Plans Housing Balance Sheet date of April 2018. This shows that for the first 3 years of the LDP plan period there is an appropriate level of development for a Tier 1 settlement and a healthy number of commitments coming forward. The Council's approach to allocating development in this part of Buckley is clear and follows advice in PPW in terms of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				sensible extension to the settlement but there are highways constraints. The site is not appropriate for a housing allocation They all refer to highway capacity being a concern; yet pre-application discussions on this site does not support this conclusion and we will challenge this.	Street allocation is along the north west side. However, there are highways concerns that there should be no further traffic on the road network, over and above the existing Well Street allocation, and that there is a need to avoid any increase in traffic southwards along Well Street. It could be considered as a sensible extension to the settlement but there are highways constraints. The site is not appropriate for a housing allocation'.	sequentially preferable land, as well as a clear logic in terms of bringing land forward that has already been identified for development and that sits in the settlement boundary of Buckley. This relates to the re-assessment and allocation of land off Well Street in Buckley, opposite the objection site, that was previously allocated in the UDP. From a planning and highways perspective, and given the commitment to see the allocated land come forward, until this land is developed and the traffic from it has successfully been integrated into the local highway network, it would be premature and potentially unsustainable to consider the allocation of significantly more land as proposed, in this part of Buckley within this Plan. Also, the time to submit evidence in support of the proposal to allocate this land was as part of the plan process up to and including the deposit consultation, and the agent's reluctance to present such evidence has understandably meant that the Council cannot fully assess the impacts of development, including highways where, as has been logically set out by the Council's highway development control officer, without the submission of a full transport assessment it is not possible to consider the impacts of this scale of development on the highway network both from the site alone, and also in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					They all refer to highway capacity being a concern; yet pre-application discussions on this site does not support this conclusion and we will challenge this.	combination with the proposed adjacent allocated land. Comments have been received on this site from the councils Highways Development Management Officers: ‘’Submission of a Transport Assessment is required to determine the full implications of a development of this scale. The site may not be suitable to provide the full potential of 384 dwellings but information submitted in support of a previous pre-application enquiry suggests that undue capacity concerns would not result from significant development on the site. Well Street is split into an urbanized, improved length and a rural un-improved length of road. The layout of the rural section is considered unsuitable to cater for any significant increase in the number of traffic movements. Any development proposal must provide improved access to the site and include measures to protect the rural section of road. ‘’ Whilst the highway network ‘may’ be capable of accommodating the level of traffic that this site would generate there is no certainty of this, or the cumulative impact when the development of the allocated site is factored in. This is particularly relevant given its status within the Buckley settlement boundary and where early development is likely given the advanced status of the sale of the land to a housing association and their plans to develop the site. This does not need to wait

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						for LDP adoption. The objector has not submitted a Transport Assessment as part of the objection but PPW emphasizes that for land to be allocated in a development plan it must be genuinely available and free from constraint, and the agent has failed to demonstrate this. In any event, the deposit plan has already set out sustainable and deliverable sites to meet the Plan's housing requirement which includes an additional contingency of 14.4%, which clearly demonstrates that there is no need to consider further sites for allocation in the plan. However opposite to the site is the Well Street allocation for 159 dwelling. This site has been reassessed for allocation in the LDP, having been previously allocated in the UDP, and it is considered to be a suitable allocation and the site has recently been purchased by a developer who are due to submit a planning application soon. Given the site's position within the settlement boundary of Buckley, and this clear intention to develop, it is capable of delivery early housing and is not technically reliant of LDP adoption, providing greater certainty that the housing will come forward. As explained above, Buckley will also deliver growth through completions and commitments which means that further allocations are not required for this plan period, either in Buckley as a whole or in this particular part of Buckley.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a buffer to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. In conclusion, it is considered that sufficient growth has been provided for at Buckley and that a sequentially preferable allocation has been made at Well St, directly opposite the objection site. There remain highways concerns about the capacity of the objection site in terms of impact on local highway network.
1108	HN1: New Housing Development Proposals	land off Church Road, Northop	Object	we object to the councils proposal to retain land off Church Road, Northop in the Green Barrier and therefore to exclude it from the list of potential sites in Policy HN1 (Tier 3). We argue separately for the exclusion of the land from the Green Barrier. Provide out objection ti EN11 is upheld there seems no reason not to add this land to the tier 3 list. the site is unconstrained by other local or national designations that would rule out housing	Add site described above to the list or tier 3 sites in policy HN1.	Not accepted. Northop has been categorized as a Tier 3 Sustainable Settlement in the LDP. Policy STR 2 sets out that Sustainable Settlements will be the locations for housing development related to the scale, character and role of the settlement. The plan also clearly states in paragraph 5.13 that ‘’The Plan intentionally avoids creating the perception that every settlement in every tier must contribute towards growth through having a housing allocation.’’ Although there have been no development completions in Northop in the first three years of the LDP, during the UDP period Northop grew by 21.9%. (80 dwellings) This was a very significant level of growth considering Northop was a Category B settlement with an indicative growth rate of between 10% and 15%. There is some opportunity for development in the village, as a small parcel

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				development. It is in an accessible location with local services and facilities nearby plus access to public transport. Development can be achieved without harm to the landscape or biodiversity, and there are no technical reasons to prevent development for housing.		of undeveloped land has been included within the settlement boundary towards the end of Church Road. The site comprises 7 fields of varying sizes and adjoins the settlement boundary along the rear of properties on Church Road to the south and along A5119 Northop Rd to the west. The broadly triangular shaped wedge of land is bounded by the A55 to the north. Although the site has distinct physical boundaries it has the character and feel of open countryside which is important in providing an open setting to this part of the settlement of Northop. To the east the site is bounded by a sewage works and to the west by a cemetery and cricket ground so the whole area enclosed by the A55 is open land. To the south of the cricket ground is the boundary of the Northop Conservation Area and a number of listed buildings in the vicinity of and including St Eurgain and St Peters Church. The site is a large area of land extending to the north of Northop and at 6.9 ha could accommodate 208 dwellings which is a significant level of development. Such a scale of development is considered to be out of keeping with the relatively small size, character and form of this tier 3 sustainable village. In particular, whereas the cricket ground presently has an open setting, it would be engulfed and encircled by built development if the site were developed. This

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						would fundamentally alter in a harmful manner the character and appearance of this part of the settlement and the setting of the historic core. The site was submitted as an omission site for housing as part of the UDP. The Inspector did not recommend the inclusion of the site and commented 'Although the site is well contained by existing development, the A55 and the A5119, it is an area of countryside which contributes to the rural setting of Northop. Moreover because of its open nature it is designated as part of the green barrier in order to protect a major road junction from visually intrusive development. In a situation where there is no need to release more greenfield sites to meet housing need, where the land meets the purposes of green barrier designation and contributes to the rural setting of Northop, I see no reason to allocate all or part of the site for housing purposes or to include the land within the settlement boundary where all things being equal there would be a presumption in favour of development'. The Inspector also noted that 'The objection site is over 7ha in extent and could accommodate a significant level of development'. In the context of the LDP where the provision for growth has been made in other sustainable locations, as demonstrated in the Housing Balance Sheet and policy STR3 and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						HN1, it is considered that the comments of the Inspector are still relevant and applicable. The objection refers to there being no technical reasons to prevent development yet there are a number of constraints yet to be resolved as no further background evidence has been submitted with the evidence. On the original candidate site, Highways Development Management Officers considered that the site was suitable subject to a Transport Assessment. Further comments were that 'Additional vehicular traffic generation onto Church Road should be limited due to the nature of the road and the limited available visibility from the existing access road. A ghost Island and right turning lane is likely to be required on Northop Road, the A5119'. In a subsequent planning application (055807) which was refused on 21/03/17 one of the reasons for refusal related to a lack of evidence leading to uncertainty relating to the impact of development upon the A55(T). Dwr Cymru/Welsh Water requested clarification of surface water drainage details and the submission of an Odour Assessment given the site's proximity to the Northop Waste Water Treatment Works and the need to assess impact on occupiers of proposed development. Natural Resources Wales also requested the submission of a Revised Flood Consequences Assessment in order to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						assess whether the consequences of flooding can be acceptably managed. A reason for refusal on the application related to concerns about surface water drainage scheme, FCA, and odour assessment being unresolved. Despite these clearly being in the public domain, no further technical information has been provided as part of the objection to demonstrate that these concerns can be overcome. Green barrier designations have all been reviewed as part of the LDP Deposit Plan the results of which is contained in the Background Paper 1: Green Barrier Review. This objector has submitted a separate objection to the Green Barrier and this is dealt with in full under objection ID 603 to policy EN11 Green Barrier. In the context of the purposes of a green barrier in PPW, the justification for this green barrier is: to manage urban form through controlled expansion of urban areas, assist in safeguarding the countryside from encroachment and to protect the setting of an urban area. The countryside setting for the historic village of Northop is important as it protects the setting of the conservation area and various listed buildings. It is a very important function of the green barrier in this location. The green barrier will therefore be an

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						important planning tool in managing urban form, and protecting the open countryside setting of this settlement. It will also assist in resisting the inevitable future pressure for development associated with the Red Route although the timescale is presently unclear. The LDP review provides the opportunity to re-assess this once the route and implications of the Red Route are more fully understood. Rather than taking a cautious approach to the designation of green barriers, the objector's stance to allocating housing seems cavalier and not based on sound sustainability principles, the allocation of land for housing for housing's sake, to simply add value to land. In conclusion, Northop is a relatively small Tier 3 settlement where the scale of development proposed is too great for Northop and the location of the site is in a very sensitive area of Green barrier. Protection of the green barrier is vitally important to retain the open setting for the historic character of the village. A number of unresolved constraints also question the viability and deliverability of the site. All these matters make this site unsuitable for a housing allocation in the LDP.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1112	HN1: New Housing Development Proposals		Support	Support for not including Candidate sites in Pantymwyn.		Support Noted.
1115	HN1: New Housing Development Proposals		Support	Support for the Non allocation of Candidate Site NOR032 Land North of Northop brook The Green Northop. We do not support the development of the Bog field as it would have an adverse effect on the conservation of the area also the green barrier and the SNCI on this land. This land also floods in wet weather which is of great concern. Also we feel that it would upset the rural settlement of Northop. We think there is no reasonable grounds to build on this site.		Support Noted.
1124	HN1: New Housing Development Proposals	Candidate Site Ref HOL015 Land at wood Lane Pen Y Maes, Holywell	Object	Candidate Site Ref HOL015 Land at wood Lane Pen Y Maes, Holywell In 1969 an area of land was conveyed to Charles Maxwell Developments	Inclusion of candidate site HL015	Not accepted. The site is an intrinsic part of the open countryside and forms part of a wider area designated as green barrier, which seeks to prevent the coalescence of Holywell and Greenfield. Wood Lane provides a firm and defensible boundary to this part of Holywell. The site

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Limited. Outline Planning was given in or around 1970 for the whole site and development commenced in phases. The area of land, the subject of the candidate site, was never built upon as Maxwell Developments went into liquidation. In 1991 we approached the administrators for Maxwell Developments to see if we could purchase this land. The land was duly purchased and we attempted to seek planning for this area of land. Unfortunately we were met with opposition by our then local Councillors who saw fit to apply for a landscape order thus preventing planning ever taking place. There are services running to this area of land and indeed a concrete base where building was to commence. Over the years and of recent times we have been approached by a number		comprises a narrow swathe of former pasture land with woodland at its southern and northern end, the northern end includes a large area of TPOs which cannot be developed. In the gap between the two woodlands the site affords open views of the landscape as it slopes down towards Greenfield. The site therefore performs an important function in protecting this open green barrier gap between the two settlements. To develop the site would represent an intrusion into the open countryside and undermine the green barrier function, and would also potentially threaten the woodland at either end of the site. The objector refers to a historic planning permission which is alleged to have included the objection site. However, in the absence of any documentary evidence either from the Council or the objector then it is not possible to attribute this weight in the present consideration of the site. It is important to note that the site was considered as part of the UDP, and rejected by the inspector for the same reason as given above. The UDP Inspector commented on the site in para. 11.120.5 'It is 40 years since permission was granted for housing and planning policy has changed significantly in that time. Whilst it has a different appearance to adjacent land, it is nevertheless open in nature and makes a positive contribution to the green barrier. Wood Lane provides a firm

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				of people wishing to purchase building plots upon this site. We recently took planning advice and we were advised that if this land was encompassed in the original Outline Planning Permission then the order should never have been placed on the land and, indeed, we could apply for a Certificate of Lawfulness. It is indeed the case that this land was always included in the Outline Planning Permission. Unfortunately due to the passage of time we are unable to locate a copy of the Outline Planning Permission having attended at your offices at Ewloe and requested a search of your registers. We would ask that you take all of the above information into consideration.		defensible boundary. I appreciate that development on the site would only be a small incursion into the strategic gap, but the same could be said of many similar sites on the urban fringe'. The Inspectors comments are considered to be equally applicable at the present time in terms of the character and role of the site. The Council's Environmental Health section have reported that the site contains lead and heavy metals. A land contamination assessment would be required. The site is also within 250m buffer of the former Bagillt Hall Farm landfill site. The objector offers no justification for the inclusion of this candidate site ahead of the allocated sites in terms of its sustainability and its performance sequentially. Furthermore, provision exits for development in Holywell in the form of completions of 36 units in the first three years of the Plan period and planning permissions at the former Lluesty Hospital (89 units on northern part and 69 units on southern part), the Ysgol Fabanod site at Perth Y Terfyn (55 dwellings) and Halkyn Road (45 dwellings), providing a total of 294 dwellings during the plan period. It is not considered necessary or appropriate to allocate additional land at Holywell particularly as developing this site would result in harm to the open countryside and green barrier and have a detrimental impact upon the character of Holywell when approaching from the North

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						of the settlement. Therefore the site is not considered appropriate to be allocated within the plan. A further consideration is that the Lluesty Hospital site is an important listed building and gateway to the town. The refurbishment and conversion of the listed buildings and redevelopment of other parts of the site will not be aided by a further greenfield allocation which would only serve to divert market interest away from the hospital site. In conclusion, sufficient provision for growth has been made for Holywell in the Plan period and a further allocation is not necessary or appropriate particularly when it would have a negative impact on open countryside and a green barrier.
1183	HN1: New Housing Development Proposals	PEN050AS Land east of Vounog Hill, Penyffordd	Object	Land east of Vounog Hill, Penyffordd Our Client has land interests located to the east of Vounog Hill in the settlement of Penyffordd, which is identified as a Sustainable Village in the Deposit Plan. The location of our Client's land is shown on the appended Site Location Plan. Technical details of the land are provided in Table 3 see full representation. Our	Include land East of Vounog Hill Penyffordd as a housing allocation (PEN050AS)	Not accepted Land-Use and Description The Welsh Government Predictive Agricultural land Classification Map shows the site as being grade 3a which represents BMV. However, the objection is not accompanied by an on-site survey to determine the exact quality of the land. Location Only the smaller front (western) part of the site adjoins the settlement boundary for approximately 40m along the site frontage

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Client's land interests have been subject to previous promotion through the LDP process, as demonstrated by its inclusion as a Candidate Site. The land is in single ownership, and is immediately available and deliverable within the Plan period (over a phased basis), or indeed within a five-year period in its entirety. There are no overriding technical or land assembly constraints which would preclude its development. In view of the above, it is our Client's consideration that their land interests should be allocated for housing in the LDP for up to 120 dwellings. In the event that the Council considers that only the single field fronting on Vounog Hill should be allocated, this could deliver up to 30 dwellings.		and approximately 100m alongside development at The Pastures. The remainder of the site is 'backland', being separated from the settlement boundary at Cambrian House by an intervening field and with an awkward 'pinch point' almost dividing the proposed site into two separate entities. The site would not represent a logical extension to the settlement as it would result in a disjointed pattern of development which is not well related to exiting built form. The site was promoted for development in the form of an omission site as part of the UDP. The Inspector commented in respect of the front part of the site '4835 Vounog Hill provides a strong physical boundary between the built up area to the west and the countryside to the east. This extensive elongated site along the eastern side of Vounog Hill disregards the existing field boundaries and would result in an illogical incursion into the countryside. Furthermore, it would result in an unacceptable ribbon of development that would be poorly related to the existing urban form'. Turning to the rear part of the site the Inspector commented '1924 - This land is part of the countryside on the edge of the settlement and is rural in character. Allocating this site would result in a significant incursion into the countryside. Furthermore, given the shape of the objection site it would isolate undeveloped land to the north and result in an incongruous settlement boundary.'

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Designation Although the site may not fall within any designated areas the submission has not included ecological survey information to establish ecological interests in the site. The Development Advice Map shows a wide band of low risk of surface water flood risk running north south across the site and is notable because it covers the narrow 20m 'link' between the two parts of the site. No information has been provided to demonstrate whether this constraint can be overcome to enable development. Potential Uses and Capacity The Plan has a spatial strategy which seeks to direct sites to the most sustainable settlements and sites and is not based on each settlement having a housing allocation. It must be noted that there are two sets of more sustainable settlements above the Tier 3 settlements and also that there are another 21 Tier 3 Sustainable Settlements. The settlement of Penyffordd / Penymynydd has already taken a significant level of the growth apportioned in the Deposit Plan to Tier 3 settlements as a result of two commitments at Rhos Road South (40 dwellings) and Hawarden Rd (32 dwellings) and the allocated site at Chester Road (186 dwellings). In addition a further planning permission for 36 no, over 55's retirement apartments was granted on appeal on

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						27/04/20. This represents some 296 dwellings in the settlement which is on top of the completions during the first few years of the Plan period arising from UDP allocations. Although the LDP has moved away from settlement growth rates for different tiers of the settlement hierarchy, it is useful to look back at the context in the UDP which identified a growth band of 8-15% for category B settlements. Over the UDP period the settlement saw actual growth of 21% as a result of 282 completions which was well in excess of the growth band. In the first 4 years of the LDP period the completions of 77 units equated to a 5.7% growth. As at April 2019 there were commitments of 267 units on the three earlier appeal sites which increases growth over the Plan period to 21%. The recent appeal decision for the over 55's apartments increased growth to 23.4% and the inclusion of say 100 units on the objection site would increase growth further to 31%. This settlement has more than made a reasonable contribution of housing in the LDP Plan period. The references to various background studies are noted as is the reference to the developer, but this does not change the fundamental concerns about the level and pace of development which this settlement is and will experience and disproportionate amount of development having regard to the Plans spatial strategy.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Policy STR2 sets out the hierarchy of growth to the tiers in the settlement boundary. Tie 1 Main Service Centres are the 'main' locations for new development, Tier 2 Local Service Centres are the locations for more modest levels of development whilst Tier 3 Sustainable Settlements will be the locations for 'housing development related to the scale, character and role of the settlement'. The policy clearly adopts a sliding scale of growth appropriate to each tier and the level of growth proposed by the objector in this settlement is not considered acceptable. Accessibility It is acknowledged that the site is well related in terms of proximity to facilities and services and public transport. Highways/Traffic The Highways Development management Officer has advised that a Transport Assessment is required in order to fully consider the site and proposal. However, it is questioned whether an appropriate access road junction design can be developed given the location of Wats Dyke Road opposite. Flood-Risk and Drainage The issue of flood risk and drainage is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						commented on above. Ecology Ecology is commented on above. Landscape and Visual Impact The site does not relate well to the existing form and pattern of development and would appear as a block of built development largely detached from the settlement and having an impact on landscape and open countryside, particularly given the public rights of way bordering the site. Deliverability The objector has provided no indication as to the timescales for the site to be delivered in terms of the Council's housing trajectory as set out in the Background Paper LDP10 Housing Land Supply. In view of the settlements position in the hierarchy, the level of development already permitted and the poor relationship of the site it is not considered necessary or appropriate for either the whole or smaller part of the site to be allocated in the Plan. Soundness: The Plan has formulated its housing requirement figure in line with advice in PPW

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						and subsequent versions of PPW and the Development Plan Manual and objections relating to historical unmet need have been comprehensively dealt with in responses to representations to policy STR1. There is no requirement either in PPW or DPM for the unmet housing requirement from a previous development plan to be merely added on to the next development plan. Welsh Government submitted formal representations on the Deposit LDP and have not commented on any shortfall from the UDP. Welsh Government state 'The Welsh Government is generally supportive of the spatial strategy and level of homes and jobs proposed and has no fundamental concerns in this respect'. The Plan's housing requirement is considerably in excess of the Welsh Government base population and household projections as the Plan seeks to support regional growth strategies. The Plan is clearly aspirational and the objector has identified no challenge in respect which would question the Plans soundness. The objector ignores the fact that the LHMA methodology produces an inflated need as it assesses the backlog of need but only has a lifespan of 5 years. It is therefore incorrect to transpose the annual need over the Plan period. It is also the case that affordable housing will be delivered through other initiatives and strategies and not just through the planning system.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						The point about UDP shortfall has been commented on in the previous section. The Plan has a conservative and realistic allowance for small and large site windfalls, having regard to previous trends. The allowances have also been informed by an Urban Capacity Study which demonstrates that the Plans allowance figures are realistic. It is of note that the HBF is supportive of the approach taken regarding windfalls. Also, Welsh Government in their formal representations on the Plan have made no comments about an over-reliance on windfalls. The Plans vision is meant to encapsulate the whole Plan strategy and purpose and is not meant to focus in detail on housing only. The Plan has identified a robust but aspirational housing requirement figure, well in excess of forecasts. In the absence of a formal objection from Welsh Government it is not considered that the Plan fails soundness test 2. The objector fails to explain why smaller sites in Tier 3 settlements are more capable of early delivery than the Plan's allocations, particularly given that the Plans allocations are backed up by a considerable amount of background studies and work. By contrast, the objector has submitted not a single

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						background study or piece of technical evidence to show that it is capable of early delivery. The two sites carried forward from the UDP were reassessed by the Council by putting them through the candidate site assessment process. The Highmere Drive allocation is backed up by a number of background studies by the owners and a renewed commitment to deliver the site and the Well Street allocation is in the process of being sold by Welsh Government to Clwyd Alyn Housing Association who are intending to submit an early planning application. On both of these sites, planning applications can come forward ahead of LDP examination as they are already allocated and within the settlement boundary. It is not accepted that the Plan is unsound in terms of test 3. In conclusion, the settlement of Penyffordd/ Penmymynydd will significant growth as a result of four speculative appeal decisions. It is not necessary or appropriate for a further allocation to be made, particularly where it would not represent a logical extension to the settlement.
1193	HN1: New Housing Development Proposals	Land adj Brook Farm, Kinnerton Lane, Higher Kinnerton		Objection to Strategic allocation at Warren hall, Broughton and suggestion of alternative site at Higher Kinnerton. Objection to allocation at Warren Hall for the following reasons: Access Volume of traffic	inclusion of alternative site at Higher Kinnerton	The Council have responded separately to the objection to the Warren Hall strategic allocation - see rep 1116 regarding policy STR3B. It is disappointing that the objector has sought to put forward the site at this late stage in the Plans preparation. An earlier submission at candidate site stage or at Alternative Sites

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				on Lesters Lane, a single track rural lane currently used for agricultural Lorries, tractors, surface water. This will affect our land causing flooding, ribbon development. Higher Kinnerton and Broughton will merge, unable to identify each village producing mass development. Warren Hall planning originally permitted to address planning requirements for 30 years ago. Failed to attract industry and use land for original permission. Should not be used for present day housing. I would like to put forward a field adjacent to the village of Higher Kinnerton to be considered for planning. This field is located within the village and has wide, good access onto a main road, Kinnerton Lane, which has a 30mph speed restriction in place. The field has a pavement adjoining it, a main sewer running through the middle with good access to electric,		(Preferred Strategy) stage would have enabled a full assessment and comparison alongside other sites. It is disappointing that the site is submitted without a Sustainability Appraisal as required by Welsh Government in the Development Plan Manual 3 in Diagram 8 'Any new sites proposed at Deposit stage will be required to submit an SA with their site submission'. The promoted site is located outside of the Settlement Boundary within the open countryside, north of Kinnerton Lane. Expansion of development beyond the settlement boundary north of Kinnerton Lane would create an irregular shaped block of development that would be illogical to the current built form of Higher Kinnerton and ultimately harmful to the open countryside. The green barrier designation in the UDP has been extended in the Deposit LDP to run alongside the north side of Kinnerton Lane to ensure a gap between the village and the Warren Hall allocation is retained. Development of the site would intrude in a harmful manner into the newly designated green barrier. The UDP inspector made the following comments on two omission sites from Higher Kinnerton, which were considerably smaller than the site proposed on land adjacent to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				water and drainage. I have enclosed an Ordnance Survey map with the location of field I wish to be considered.		Brook Farm, Kinnerton Lane; "(11.119.4.) The objection site measures some 4.6 ha which would potentially produce growth in the region of 20%. Excluding HSG1(57), in total this would result in over 25% growth within the plan period which is well over the indicative growth for even category A settlements such as Mold and Flint. I have seen no substantive arguments which justify that level of growth in what is a relatively small rural village with limited facilities in comparison to the larger settlements." Higher Kinnerton is a tier 3 settlement in the LDP (STR2) and previously a category C settlement in the UDP. The UDP provided growth for the village through the allocation at HSG1(40) with a capacity for 40 units. The final 6 units were completed by 31st March 2015 according to the 2014/15 Land Availability Study. A speculative site on land at Kinnerton Lane has also been granted planning permission on appeal with capacity for 56 dwellings. According to the 2019/20 Land Availability Study 31 units have been completed, with 13 under construction and 12 not yet started. It is anticipated that these remaining units are due to be completed by April 2021. Given that Higher Kinnerton is a Tier 3 sustainable settlement where housing development must be related to the scale, character and role of the settlement, it is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						considered that the speculative site at Kinnerton Lane under construction will provide sufficient growth for the village over the plan period, and no allocations are needed within the village. Higher Kinnerton is a Tier 3 Settlement and does not have sufficient facilities to sustainably accommodate the level of growth proposed by the objector. In addition land adjacent to Brook Farm has not been allocated within the LDP as the focus on growth within this area is at the allocated Strategic Site, Warren Hall. The Warren Hall site has been identified as the focus for growth and is a key part of the North Wales Growth Deal, receiving considerable public sector investment over recent years including junction improvements at the interchange of the A5104 and the A55, and a further commitment to public funding to secure infrastructure necessary to develop the site. The site has outline planning permission as a business park however this will be extended through its strategic allocation within the LDP to incorporate a mixed use development which will include a business park, a commercial hub including leisure facilities, a hotel and some retail opportunities. The Warren Hall site provides a unique opportunity to embody placemaking principles, and to develop a sustainable mixed use site that will bring significant economic benefits to the area. The promoted

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						site has been assessed by FCC's Ecologist who advised that "The site comprises improved agricultural grassland with trees and hedgerows and limited protected species records but with potential for bats, amphibians, badgers and nesting birds. From aerial photos the key features on site are the boundary trees and hedgerows. There are limited known ecological records but GCN, Common Pipistrelle and Hedgehog occur within the locality. Any development would need to assess the Ecology of the site and provide an Ecological Impact Assessment with measures to avoid, mitigate, compensate, enhance and manage wildlife features. It would also need to link to the mitigation/provision of associated green corridors associated with the adjacent development." Highway's Development Control have advised that "There would appear to be sufficient frontage (within the site outlined in red) to enable the construction of an appropriate access to the site but pedestrian and cycle provision in the area is inadequate with little opportunity to deliver improvement. A narrow footway has recently been constructed on the southern side of Kinnerton Lane and around the Royal Oak junction but the width is limited in places to 1.5m; this is significantly below the standard

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						minimum width of 2.0m. The existing footway along the western side of Main Road provides the shortest link from the site towards the village but is limited in width to approximately 1.3m in places. A development of 90 dwellings would not only add additional pedestrian movements onto a substandard footway but would add additional traffic movements onto a section of road where pedestrians are likely to be stepping off the footway in order to pass others. Natural Resources Wales (NRW) have identified that the submitted site may affect European and/or nationally protected species. European Protected Species (EPS) are given the highest legal protection through British and European legislation. Where an EPS is present, a development may only proceed under an appropriate license issued by Natural Resources Wales. We assume that the submitted site has not been subject to detailed ecological survey for protected species interest. NRW have no objection to the allocation of the submitted site in terms of protected species, however it should be noted that protected species surveys and, if required, any necessary mitigation measures would need to be provided in support of any planning applications at these submitted sites. NRW submitted the following comments on this site; "We refer you to Welsh Government Circular 008/2018 on the use of private sewerage in new development,

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						specifically paragraphs 2.3- 2.5 which stress the first presumption= must be to provide a system of foul drainage discharging into a public sewer. The additional submitted site is within a current sewer network area and therefore connection to main sewer would be expected for this site. There are a considerable number of new houses already in this area therefore investment in the sewer network and the receiving sewage works should be considered as part of the development. We advise that you liaise with Dŵr Cymru Welsh Water with regards to any improvements needed to sewer networks." CPAT have advised that "There are the vestigial remains of an area of medieval/post medieval ridge and furrow. This does not necessarily mean that the field cannot be developed but the historic asset may require recording prior to development." The predictive Agricultural Land Classification map indicates that this site is subgrade 3a which is best and most versatile agricultural land. Welsh Government has stated that a detailed ALC survey of the sits should be undertaken to determine if the land is 'Best and Most Versatile' (BMV) agricultural land and the proportion of grades identified. PPW strongly resists development on BMV unless there is a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						justifiable overriding need for development on the site. The objector has not evidenced an overriding need for development on this site, and growth will be provided for within the village on the speculative site at Kinnerton Lane, and on the nearby Strategic Site at Warren Hall. This is sufficient growth for this tier 3 settlement and locality over the plan period.
1194	HN1: New Housing Development Proposals	Candidate sites HK008	Object	Policy HN1 – New Housing Development Proposals During the 'Call for Sites' stage of the LDP, a number of candidate sites were put forward on the edge of the settlement of Higher Kinnerton. These sites proposed residential development in a sustainable location being a settlement that is closely located to the Cheshire and Wrexham borders. It is an area known to be occupied by commuters given its accessibility and some time ago, during the UDP examination, the Inspector recognised that there is a lack of constraints on these parcels of land. The	Allocate land at Higher Kinnerton. Candidate sites HK007, HK008, HK011 and HK012	Not accepted. The objector seeks the allocation of two candidate sites within the village of Higher Kinnerton, HK007/HK012 On land South of the Grange and HK008/ HK0011 also off Sandy Lane for approximately 100 dwellings. This response covers both sites. Higher Kinnerton is a tier 3 settlement in the LDP (STR2) and previously a category C settlement in the UDP. The UDP provided growth for the village through the allocation at HSG1(40) with a capacity for 40 units. The final 6 units were completed by 31st March 2015 according to the 2014/15 Land Availability Study. A speculative site on land at Kinnerton Lane has also been granted planning permission on appeal with capacity for 56 dwellings. According to the 2019/20 Land Availability Study 31 units have been completed, with 13 under construction and 12 not yet started. It is anticipated that these remaining units are due to be completed by April 2021. Given that Higher Kinnerton is a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				settlement of Higher Kinnerton has recently lost community amenities such as the Post Office and bus services, yet, residential development could have increased the population and therefore, made these services a viable option in the future to serve the whole community again. Strangely, the Authority chooses not to provide any opportunity to improve the offerings of an existing settlement and focusses all attention on a strategic site that, as discussed in the above section is considered difficult to deliver and would create an unsustainable development.		Tier 3 sustainable settlement where housing development must be related to the scale, character and role of the settlement, it is considered that the speculative site at Kinnerton Lane will provide sufficient growth for the village over the plan period, and no allocations are needed within the village. The allocation of both HK007/HK012 and HK008/ HK0011 would amount to an additional 100 dwellings, Higher Kinnerton is a Tier 3 Settlement and does not have sufficient facilities to sustainably accommodate the level of growth proposed by the objector. The objector refers to the loss of services in Higher Kinnerton such as the Post Office and bus services, and points to the need to increase the village's population to support these services. Higher Kinnerton has in fact seen the completion of 40 dwellings on UDP site HSG1(40) and 31 units on the speculative site at Kinnerton Lane, with a further 25 yet to be completed. Therefore residential development has taken place, yet services have continued to decline. This is the case in many rural and urban settlements across the Country, and is not unique to Flintshire. It is a sign of the times as demand shifts towards more online shopping and services. Simply building more houses is clearly not guaranteed to safeguard services and the proposition that if more housing is provided then facilities will return is both naive and un-

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						evidenced in terms of how and when such facilities would be provided. In addition HK007/012 and HK008/HK011 have not been allocated within the LDP as the Warren Hall strategic site has been identified as the focus for growth and is central to the North Wales Growth Deal, receiving considerable public sector investment over recent years including junction improvements at the interchange of the A5104 and the A55. The site has outline planning permission as a business park however this will be extended through its strategic allocation within the LDP to incorporate a mixed use development which will include a business park, a commercial hub including leisure facilities, a hotel and some retail opportunities. UDP Inspector's comments; The two resubmitted candidate sites by Caulmert are also omission sites from the UDP. The UDP Inspector removed the site from the plan for the following reasons; "(11.119.4.) The objection site measures some 4.6 ha which would potentially produce growth in the region of 20%. Excluding HSG1(57), in total this would result in over 25% growth within the plan period which is well over the indicative growth for even category A settlements such as Mold and Flint. I have seen no substantive arguments which justify that level of growth in what is a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						relatively small rural village with limited facilities in comparison to the larger settlements. (11.119.5.) Should more growth be required and Higher Kinnerton was judged to be a suitable location to accommodate that growth then the lack of constraints on the site would no doubt mean development could take place. Similarly road improvements, recreational facilities and affordable housing above and beyond the requirements of UDP policies would bring community benefits, but they are not good reasons to allocate greenfield land unnecessarily. To do so would be contrary to the sustainable objectives of the plan. (11.119.6.) The site consists of fields, is open in nature and forms an integral part of the countryside. It is not part of the built up area in either character or appearance. It follows from the above that I do not consider the land should be included within the settlement boundary where there would be a presumption in favour of development." HK008/ HK0011 HK008/ HK0011 is on the North Eastern edge of the village. It is outside but adjoining the settlement boundary along its Southern edge which is formed by the well-defined rear curtilages of properties on Deans Way. Of all the Candidate Sites submitted for Higher

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Kinnerton this relates relatively well to the settlement as opposed to the open countryside beyond Main Road to the north and Sandy Lane to the east. At 2.47 ha approximately 75 units could be accommodated. The Council's Highways Development Management Team stated that pedestrian facilities along the Main Road frontage are inadequate and there would not appear to be any opportunity to provide improvement. It would appear possible however to access the site from Sandy Lane; this would provide an opportunity to restrict pedestrian access from the site to the village, to the use of the bridleway. Development will necessitate a road improvement scheme on Sandy Lane to include road widening, improvements to the Main Road/Sandy Lane junction, the provision of pedestrian footways and improvements to the bridleway. Given the comprehensive highways improvements required it is not considered appropriate to allocate this site at the present time. Furthermore as a scheme for 56 dwellings has been allowed on appeal on land south of Kinnerton Lane this is considered to be sufficient as a commitment to meet the housing requirement for the village. There are also other factors which make the site less favorable to develop including the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						predicted loss of 2.48ha of grade 3a agricultural land. HK007/012 This irregular shaped 3.1 ha of land is located outside of the settlement boundary, on the Eastern edge of the village comprising gently sloping grade 3a agricultural land. It incorporates and is bounded by the dismantled railway line to the South East, a rural lane (The Green) and a dwelling (The Grange) together with a barn conversion scheme to the North. Whilst the site is outside of the village confines the Western boundary lies adjacent to the settlement boundary which runs along Sandy Lane beyond which is residential development at Beeston Road, Deans Way and Greenfield Avenue. The rear curtilages of these properties back onto Sandy Lane. However development of this site would not relate well to the existing pattern and form of development of the village the bulk of which is located to the West of Sandy Lane and the dismantled railway line. Sandy Lane is considered to be a logical and well defined boundary for this part of the settlement. Development of the site would create an illogical change to the boundary that does not constitute a rounding off of the village but rather would represent an unacceptable incursion into the countryside which would

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						result in the predicted loss of 2.26ha of grade 3a agricultural land. Highways Development Control have stated that alterations would be required to improve the operation of the Sandy Lane/Main Road junction along with improvements to the bridleway link into the village. Provision of a footway along the site frontage would also be required. Given the comprehensive highways improvements required it is not considered appropriate to allocate this site at the present time. In conclusion, the two proposed sites would result in a level of growth that is not sustainable for this tier 3 settlement. Higher Kinnerton has already experienced growth in the UDP and during the early years of the LDP. An additional 100 dwellings would not be appropriate for the scale, character and role of this settlement, particularly when there is a strategic allocation for 300 dwellings at Warren Hall in close proximity to Higher Kinnerton. The Warren Hall site provides a unique opportunity to embody placemaking principles, and to develop a sustainable mixed use site that will bring significant economic benefits to the area, rather than just taking housing only approach as with the two objection sites. Consequently there two candidate sites have not been allocated within the plan as it is not needed in addition to the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						residential units at Warren Hall and the existing commitments within the village. In conclusion, adequate development is provided for in Higher Kinnerton over the Plan period and the site is in close proximity to the Warren Hall Strategic Site where provision is made for mixed use development. It is not necessary or appropriate for an additional allocation.
1195	HN1: New Housing Development Proposals	Candidate sites HK011	Object	Policy HN1 – New Housing Development Proposals During the 'Call for Sites' stage of the LDP, a number of candidate sites were put forward on the edge of the settlement of Higher Kinnerton. 						residential units at Warren Hall and the existing commitments within the village. In conclusion, adequate development is provided for in Higher Kinnerton over the Plan period and the site is in close proximity to the Warren Hall Strategic Site where provision is made for mixed use development. It is not necessary or appropriate for an additional allocation.
1200	HN1: New Housing Development Proposals	BROU010 Land to the S of Old Waren Broughton		BROU010 is part of the enlarged site now being promoted. The Assessment findings for BROU0110 found it to be a “RED” site and stated that: The site does not comply with the Preferred Strategy as it is divorced from the Broughton settlement boundary. The site forms of part of open countryside to the west of Broughton and to the north of the A55. Despite having a dwelling and some commercial buildings, the site is divorced from ribbon development further to the west of the site. The site relates more closely to open countryside than it does to the nearby	We consider that the extended and conjoined site area addresses the issues of the original BROU010 site not being contiguous to Broughton and we will demonstrate that it is technically deliverable and should be identified for new housing and be identified as a “GREEN” site, which, at the very least is considered a suitable reserve site.	Not accepted. The proposed site is 9.2ha and the objector indicates a capacity for 230 dwellings. The site was initially submitted as a smaller candidate site (BROU010) which was assessed as part of the original call for sites. It was not considered suitable for allocation within the LDP as it is divorced from the settlement boundary of Broughton, and forms part of the open countryside. The site was clearly separate from the existing ribbon of development to the West of the site, therefore it relates more closely to the open countryside than it does to the nearby settlement. The allocation and development of this site would result in a small block of housing that poorly relates to the existing form and pattern of the settlement, and is too small for allocation within the plan. BROU10 was then resubmitted as an alternative site as part of a much larger scheme known as BROU17AS. This has also

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				settlement. Development would result in a small block of development which would appear as an outlier of development in open countryside, poorly related to the form and pattern of existing development. That the site is not considered suitable as an allocation. Other sites referring to land "south of Old Warren" (i.e. BROU14-AS, 15, 16, 17, 18, 19) have also been assessed and these may actually involve the land we are now promoting, but because no mapping is available this is unknown. However, the assessment findings determine them either as AMBER or RED. We consider that the extended and conjoined site area addresses the issues of the original BROU010 site not being contiguous to Broughton and we will demonstrate that it is technically deliverable and should be identified for new		been assessed as part of the LDP site selection process. The larger BROU17AS site would adjoin the settlement boundary, however it would intrude into the open countryside in a ribbon like block of development, which would appear divorced from the form and pattern of existing development which is South of the A5104. The settlement boundary is presently well defined by the A5104, an extension across this into the Old Warren would harm the rural character of this locality and be poorly related to the existing settlement. The development of BROU17AS would result in a large block of development extending into the open countryside. This contrasts sharply with the existing pattern of ribbon development along The Warren and the well defined residential development to the south of the A5104. The site does not represent a logical urban extension to the settlement. The site is also subject to constraints including being within the flight path for Broughton Airfield and the Southern part of the site is within 250m buffer zone of a landfill site. In view of the objector's criticism of the Warren Hall strategic site (Masterplan Delivery Statement) in terms of the implications of the flight path on built development, it is surprising that no detailed analysis on the implications of the flight path for this site has been submitted.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				housing and be identified as a “GREEN” site, which, at the very least is considered a suitable reserve site.		Considering the size of the site and its potential to accommodate 230 dwellings, the objection is not accompanied by background studies or assessments nor a commentary as to the ethos behind the site, or the principles on which the site is to be developed. An example of this is the lack of any indication as to where for instance the vehicular access will be located and it is not sufficient at this late stage to simply state that “we will demonstrate that this site is technically deliverable” without providing this detailed evidence. Highways have also raised concerns and advise that “a Transport Assessment is required to determine the full implications of any site over 100 dwellings. A site of this size is likely to have a detrimental impact on the operation of the Warren Hall Interchange especially when generated traffic is considered in addition to that of the proposed Warren Hall Development. Additional traffic is also likely to have a detrimental impact on the operation of Main Road Broughton. The full extents of the impact can only be determined by the consideration of a full Transport Assessment’. No Transport Assessment has been submitted by the objector. The focus on growth within this area is at the allocated Strategic Site, Warren Hall. The Warren Hall site has been identified as the focus for growth and is central to the North Wales Growth Deal, receiving considerable

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						public sector investment over recent years including junction improvements at the interchange of the A5104 and the A55. The site has outline planning permission as a business park however this will be extended through its strategic allocation within the LDP to incorporate a mixed use development which will include a business park, a commercial hub including leisure facilities, a hotel and some retail opportunities. The Warren Hall site provides a unique opportunity to embody placemaking principles, and to develop a sustainable mixed use site that will bring significant economic benefits to the area. Consequently the land South of Old Warren has not been allocated within the plan as it is not needed in addition to the strategic allocation at Warren Hall. Broughton is a Tier 2 Local Service Centre and has seen a large amount of development during the Plan period with 189 units completed on the site to the south of the Retail Park in 2017/18, 24 units completed on the 'compound site' immediately to the west of the retail park (adjacent to Aldi) in 2017/18, and 36 units completed on Chester Road (Park Jasmine) also in 2017/18. In addition there are also 300 dwellings planned on the allocated strategic site at Warren Hall. This is considered sufficient provision for the Plan period, particularly as the Plan Strategy

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						does not prescribe set amounts or targets to each settlement. The development of the site would also result in the loss of grades 2 and 3a agricultural land. Despite the objector criticizing the Council's background paper on agricultural land, they have not even submitted an on-site assessment to establish what grade the site actually is. In conclusion, the Plan has made provision for growth at Warren Hall and there is considered to be no need for a further housing allocation, particularly where it relates poorly to the built form of the settlement. The site is not considered appropriate to be allocated in the Plan.
1202	HN1: New Housing Development Proposals	HOL018 North of Moor Lane, Holywell	Object	Land-Use and Description The land is currently in agricultural use. It extends to c. 4.3 hectares. Existing trees and vegetation on the land are limited to the field boundaries which border it. Access into the land is currently provided via Moor Lane.	Deletion of allocations at Well Street Buckley and Highmere Drive, Connah's Quay due to issues around deliverability. These should be replaced with alternative sites with more certainty around	Not accepted. The site forms part of the open countryside to the north of the existing Holywell settlement boundary. In this part of Holywell there is a well-defined block of residential development at Holway which is dissected by Moor Lane. The existing built development at Nant Eos and Meadowbank result in a firm and defensible boundary to this part of Holywell. The development of the site would represent a large intrusion into the open countryside,

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Location The land is located to the north-east of existing residential development on Nant Eos. It is bounded by agricultural land at all other sides, with the existing Moor Farm access road lying immediately adjacent to the eastern boundary. The development of the land would provide for a logical and natural extension to the built-up area. Designation The land is located outwith the adopted settlement boundary of Holywell and is within the open countryside. It is not subject to any formal ecological, landscape, recreational, or historical designation. It is located within an area of low probability for flood risk. Potential Uses and Capacity The land has the potential to accommodate affordable housing together with	delivery such as candidate site HOL018 Moor Lane, Holywell.	poorly related to the existing settlement pattern and built form. It would have open countryside on three sides and not be a logical extension of the settlement boundary and would result in significant harm to the open countryside. As detailed below, there is sufficient growth already planned within Holywell, therefore this site is not required. Holywell is a Tier 1 Main Service Centre, on account of its size, character and level of services and facilities and represents a sustainable location for development. The LDP does not seek to apportion development spatially by the use of numerical methods or growth bands. The plan seeks to distribute growth in a sustainable manner having regard to the settlement hierarchy, this means that not all settlements will have allocated sites, including the Tier 1 Main Service Centres such as Holywell. As part of this approach it is necessary to have regard to the character and role of each settlement and the circumstances prevailing at the present time. In this context it does not mean that, in the absence of an allocation, Holywell will not experience growth during the plan period, as completions in the first three years of the Plan period of 36 units and committed sites which already have planning permission will provide sufficient growth for the town. The Lluesty Hospital site is committed for 89 dwellings, with permission for a further 69 units on the southern part of the former hospital site, the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				associated landscaping and public open space. Assuming a net developable area of 80% and a density of 35 dwellings per hectare, the land could accommodate in the region of 115 - 135 dwellings. The allocation of the land for housing is considered by our Client to be responsive to Holywell's identification as a Main Service Centre within the settlement hierarchy, and the scope provided within the Deposit Plan for new housing development to be delivered in the settlement during the Plan period. Any development on the land is capable of meeting spacing standards, high quality design, a mix of house types, and delivering new public open space and landscaping (including a landscape buffer). The scale of development and potential to phase delivery would ensure		Ysgol Fabanod site at Perth Y Terfyn will provide 55 units and the land East of Halkyn Road will provide 45 dwellings. This will provide a total of 294 dwellings over the plan period, which is sufficient growth for Holywell without the need for a further allocation. A further consideration is that the Lluesty Hospital site is an important listed building and gateway to the town. The refurbishment and conversion of the listed buildings and redevelopment of other parts of the site will not be aided by a further greenfield allocation which would only serve to divert market interest away from the hospital site. Noted. Highways Development Management Officers have identified the need for a detailed assessment of Moor Lane and the Moor Lane Junction with Holway Road. Officers point out that the site would result in additional traffic onto Moor Lane which appears excessively steep. The Moor Lane / Holway Rd junction is the only means of access for approximately 300 additional properties. No Transport Assessment or other technical assessment of the road network has been undertaken to establish whether Moor Lane is suitable to accommodate additional traffic. Noted. However, the detailed Development Advice Map shows a significant band of surface water flood risk running north

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				that the area is not overwhelmed by new development and residents. The scale of development which can be accommodated on the land is proportionate to the wider settlement, ensuring that the settlement is not subject to overdevelopment over the duration of the Plan period. The development of this land would contribute towards the sustainable distribution of development, whilst also supporting the vitality of Holywell's services and facilities. Accessibility Vehicular and pedestrian access into the land can be secured from Moor Lane and Nant Eos. The land's proximity to public transport services on Moor Lane provide any future residents with an alternative to the private car to access local shops, services and education.		eastwards down to the bottom of Moor Lane and then a further band of surface water flood risk running along the bottom of the slope . The confluence of these two bands is at the proposed point of vehicular access. No evidence has been provided to demonstrate whether this constraint can be overcome. It is disappointing that, despite claiming the site is viable and deliverable, no background evidence has been provided in respect of ecology. From the A5026 Holway Road, the land slopes down to Nant Eos and Meadowbank which sit at the bottom of that slope. The objection site then rises upwards in a northerly direction and is clearly visible when viewed from higher ground to the south. Development would be extremely visible and prominent in the landscape. The site is not entirely free from constraints, Environmental Health have reported that the site contains lead and other heavy metals, therefore a land contamination assessment would be required but has not been provided. The development of the site is considered to be unacceptable in terms of its poor relationship with the form and pattern of built development and the significant intrusion into open countryside where built development would be visually prominent and harmful. Furthermore there are technical uncertainties

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Highways/Traffic The land could be served by access from Moor Lane at its south-east corner. Any access road from Vounog Hill would provide for a 5.5m wide carriageway, with 2m footways on both sides. Visibility standards would be consistent with Manual for Streets. The highways impact of any development on the land would not be significant. Flood-Risk and Drainage The land is located wholly within Flood Zone A as defined on the Development Advice Map. Sustainable Urban Drainage Systems would be applied across the Site where feasible. Ecology The land is not subject to any formal international, national or local ecology designation which might prevent or limit its suitability for housing. It is distant from designations in the wider area, with only the		relating to the site in terms of ecology, surface water and access and these cause doubt that the site is viable and deliverable. In conclusion, sufficient provision for growth has been made for Holywell in the Plan period and a further allocation is not necessary or appropriate particularly when it would have a negative impact on open countryside and has a lack of evidence with regard to a number of constraints.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				potential for indirect effects (as with any location). The land holds limited ecological value, albeit a detailed Habitat Survey would need to be undertaken. The key ecological features of the land are the hedgerows and trees within and bordering it; the majority of these features should be capable of retention as part of any development. Where removal of any features is required, this loss could be compensated for by replacement planting. Landscape and Visual Impact The land does not sit within a designated landscape area. The land is considered to have a moderate impact taking into account the relationship of its built surroundings and potential for mitigation once planting matures within any landscape buffers, particularly along		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				the northern perimeter of the Site. Any adverse effects on visual receptors would likely be limited to those nearest to the land. Deliverability Our Client's land interests have been subject to previous promotion through the LDP process, as demonstrated by its inclusion as a Candidate Site. The land is in single ownership, and is immediately available and deliverable within the Plan period (over a phased basis), or indeed within a five-year period in its entirety. It is estimated by our Client that the land could be developed in its entirety within 24 months of a grant of planning permission. There are no overriding technical or land assembly constraints which would preclude its development.		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				In view of the above, it is our Client's consideration that their land interests should be allocated for housing in the LDP for up to 135 dwellings.		
1203	HN1: New Housing Development Proposals	HCAC029	Object	Land at Bryn Tirion, Caergwrle, Candidate Site HCAC029 for inclusion as a housing allocation. Objection to HCAC004. Please refer to attached document	Land at Bryn Tirion, Caergwrle, Candidate Site HCAC029 for inclusion as a housing allocation. Objection to HCAC004. Please refer to attached document	Not accepted. A key principle in PPW is that allocations are viable and deliverable yet the objection provides no assurances or evidence that a satisfactory access can be provided. It should be noted that there is presently no pavement fronting the site, nor is there a pavement fronting the lodge and adjoining stone constructed dwellings. This would necessitate pedestrians having to cross the road to reach the pavement opposite in order to walk into Caergwrle to access facilities and services. The access to Bryn Tirion is difficult as it is located just beyond a bed, in front of the adjacent lodge, and requires the provision of a 'mirror' on the lamppost opposite. It is accepted that the reference to 'ribbon development' in the Council's response on the candidate site assessment is not fully reflective of the proposal. As confirmed by the objector, the proposed site has 'depth' extending to the access track, and would result in 'estate type' development. However, this block of development would not represent a logical extension to the existing form and pattern of development in the settlement. Firstly, there is a gap comprising the land on the south side of the curved access track,

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						which falls outside the boundary of the objection site. Secondly, the only built development linkage between the settlement and the site is the short ribbon of stone constructed dwellings to the south of the site. These form a distinct character break between the public sector housing and the open countryside to the north. The site does not therefore read as a logical urban extension but as a divorced block of development, poorly related to the settlement. The site is at the extreme northern edge of Hope. It is separated from the settlement boundary by a narrow access road leading to Bryntirion Hall and alongside which there is a belt of mature trees. To the north it is bounded by an access track which leads to Bryntirion Farm to the west. A well-established hedgerow, with trees, characterises the whole length of the eastern boundary which fronts the A541 Mold Road. The land rises up gently from the A541 to the Hall and Farm. The proposed site is located between the access track leading to the Hall is a tapering intervening gap of land before reaching the well-defined settlement boundary which is formed by the residential development at Edinburgh Avenue and alongside the A541 to the south of the site. The lodge located alongside the existing access track was clearly associated with and serving the former Bryn Tirion Hall and the tree lined curved

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						access track gives a sense of a large country house with grounds. The proposed development does not sit comfortable with the character of the site and open countryside. The Council's Highways Development Management Team have raised objections to development at this site on the basis that the site is in a relatively remote location and limited/substandard pedestrian connectivity. This is commented on further above. The horizontal alignment of the road and bounding hedges, restricts forward visibility along the road. It would be possible to provide an appropriate junction layout (right turn lane potentially required) however this would require the full removal of the hedgerow fronting the site. Significantly impacting the character of the surrounding area. Although it is recognised that there are services and facilities within the settlement it is considered that there are negative factors which outweigh this, particularly the poor pedestrian linkages to and from the site. The objector claims that there are no known protected species on the land at this present time, but has provided no ecological survey to establish whether this is the case or not. The proposed development is agricultural grazing land which Welsh Government has categorized as a predicted loss of 0.77ha grade 2 and 0.37ha grade 3a providing a total predicted loss of 1.14 BMV land. Again, the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						objector has submitted no site-survey to demonstrate what grade the land actually is. The Plans allocation at Wrexham Road, Abermorddu is backed up by and informed by a large number of background and technical studies which demonstrate that the site is viable and deliverable. Despite the objector's statement that the site is preferable to the allocated site, there is no submitted background / technical evidence to show that this is the case. Development of this prominent site would result in a detached block of residential development which would be poorly related to existing development and visually damaging to an area of attractive open countryside. The site is not considered to be necessary or appropriate as an allocation either to replace or be in addition to the Wrexham Rd allocation. In conclusion, the Plan has made provision for growth in HCAC with the allocated site. The objection site is not appropriate to be allocated as it relates poorly with the built form of the settlement and would harm open countryside, and also is not backed up by any evidence.
1207	HN1: New Housing Development Proposals	FLI008	Object	Strategic Sites: The two strategic sites Northern Gateway and	There are serious concerns regarding the deliverability and timing of the two	Not accepted. The objector is concerned about the track record of poor delivery on both the strategic sites in terms of housing and how the Plan is over-reliant on them. However, it is worth noting that the Warren

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Warren Hall have historically not delivered, and there is no certainty that they will deliver over the LDP period. This will result in a significant shortfall in housing which cannot be filled by windfall alone. In such circumstances the logical and sensible approach would be to allocate a contingency site that could be brought forward if necessary. Site Context & Accessibility This site was put forward for mixed use of primarily residential development incorporating a retirement village and a limited amount of employment land adjacent to the existing Aber Park Industrial Estate.	major housing land allocations as contained in STR3(A) and STR3(B). There is a high risk of a shortfall in the housing land requirement. The advice in the Development Plans Manual should be followed in these circumstances and Candidate Site FLI008 should be allocated as a contingency site	Hall site has not previously had a housing element. The North Wales Growth Deal clearly identifies the Warren Hall site as forming a key part of the strategy. The initial projects include 'primary infrastructure, to include a new access road and on site access, electricity, drainage and other services at Warren Hall'. This is referenced in the Welsh Government representations on the Deposit LDP wherein Welsh Government support in principle the economic growth strategy in terms of the scale and location of homes and jobs. It is not considered that the Plan is over reliant on the two strategic sites in terms of housing or employment growth. Turning first to housing, it is worth stressing that the Plan is already delivering, in terms of completions to date, what the Plan seeks to provide. If the Council were in the position whereby it had built up a deficit of under-delivery in the first few years of the Plan period, then there might be greater concern about reliance on two strategic sites. Nevertheless, despite Warren Hall being a strategic site, the housing element is not strategic as it is 300 dwellings which is on a par with the other housing allocations in the Plan. It is not considered that there are any evidenced concerns about the ability to deliver 300 dwellings at Warren Hall within the Plan period.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The proposed candidate site FLI008 is the best option to fulfil this role given the sustainability of its location and its compliance with the preferred strategy. Flint is the most sustainable settlement of the Tier 1 Main Service Centres which are the main locations for growth. It has excellent public transport links in having the only railway station in Flintshire linked to main line national rail network with good bus routes to Deeside, Holywell, Mold and Chester. It has well established housing and employment areas and a good retail sector providing a range of goods. It has primary and secondary schools, medical services and a leisure centre. There is good access to the open countryside and River Dee with the national and regional cycle and footpath routes pass through the area.		The Plan is not reliant on windfalls given that the small site allowance of 60 units per annum and large sites allowance of 50 units per annum, is conservative when comparted with past trends and also having regard to the findings of the Urban Capacity Study. The HBF are supportive of these modest allowances. In line with advice contained within Development Plan Manual 3 (DPM3), the LDP incorporates a flexibility allowance of 14.4%. DPM3 states that LDPs must include a minimum flexibility allowance of 10%. There is no requirement from Welsh Government to include within the Plan contingency or reserve sites. The Northern Gateway is a strategic mixed use allocation in both the adopted UDP and the deposit LDP. Progress on the site was affected by the economic downturn but Welsh Government has now invested in flood defence works along the River Dee and a spine road, both of which have been implemented. The site is in two ownerships with Praxis promoting the northern part and Pochin the southern part. Good progress is now being made on the northern part of the site with enabling works and the reserved matters approval (059514) for Countryside Properties for 283 units on plots H1, H2 and part of H8, who are presently on site. Following marketing of the site, developer interest has led to a planning application (060311) for a further phase of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				One of the reasons that the authority consider the site not suitable for development is that it is separated from the town centre by the adjacent industrial area. This is hardly a reason for considering it unsuitable when, through good design and developer contributions, the development can provide for good cycle and footpath links. It is all the more bizarre given that the authority supports and proposes a 300 dwelling housing allocation of Warren Hall which is separated from Broughton by green barrier and the A55. Evidence of constraints There are no major constraints to development as evidenced by the site's employment allocation in the former Delyn and		site enabling works and this application is under consideration. In January 2020 reserved matters approval was granted for a 10,000sqm warehouse development on plot A. On the southern part of the site, Pochin are also making progress, albeit slightly behind. A planning application (058868) is presently under consideration for site enabling works for phase 1 and a reserved matters application (060411) is has been approved for 129 homes for Keepmoat Homes. Although Pochin Construction went into administration it is not considered to affect the Northern Gateway development. In Aug 2019 a Welsh Government spokesman said 'We have been assured that the Pochin Goodman Joint Venture, which owns part of the Northern Gateway site, is not affected by Pochin's administration process and as such we do not expect any delay to work being carried out on the development'. Pochin Goodman is continuing in its work in delivering the southern part of the site. The evidence clearly demonstrates there is renewed developer interest in the site and the construction on site by Countryside Properties will result in developer confidence in further phases of development. The Council has enquiries from other developers about further phases of the development. It is quite normal

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				draft North Flintshire local plans. Retirement Village The candidate site includes an area of the site being set aside for a retirement village. Not only does no other candidate site or allocation make such provision, the Plan has no policy upon which any such proposal can be considered. This is a major shortcoming in not addressing a pressing and significant need. Older people's housing needs are frequently overlooked in the drive to develop affordable housing for younger people. Much of the housing stock in the UK is not suitable for the needs of older people, not only in terms of being accessible for people with disabilities, but also in terms of size, energy efficiency and		on a strategic site of this size to have several housebuilders on site at the same time. The two strategic sites form an integral part of the Growth Bid proposals for North Wales and will bring about major economic benefits to the region. Evidence clearly demonstrates that Northern gateway is now being delivered and on course to deliver the units within Plan period (as shown in the trajectory). The provision of 300 units at Warren Hall is not considered excessive given its sustainable location relative to the focus for growth. In totality it is not considered that the Plan is over-reliant on the strategic sites. It is unclear from the objector's submission where the 'shortfall in housing land' is actually arising from given the size of the housing element at Warren Hall and the emerging picture of delivery at Northern Gateway. Flint is a Tier 1 Settlement which is recognised as a sustainable location for growth in both the UDP and the LDP, Tier 1 settlements have a strategic role in the delivery of facilities and services across Flintshire. Flint has already seen growth in the earlier years of the plan period with 308 dwellings completed in the early years of the plan period (2016, 2017 and 2018). There are also committed sites in Flint which will provide further growth for the town including an additional 378 dwellings on the Croes Atti site, 73 units on the Earl Lea site, 19 units at Ystrad Goffa Court and 15 units on the Flint

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				requirements for ongoing maintenance. The development of a retirement village provides the opportunity to create a significant pool of housing with a range of different types of tenure that is purpose designed to meet the needs of older people and to increase the amount of local provision to accommodate the future needs of an increasingly ageing population. Green Barrier The planning authority is also inconsistent in extending the green barrier up to the edge of Flint, presumably to prevent coalescence, when it takes out the area of green barrier fronting the A548. This appears to send out		Working Men's Club site. In addition to these commitments the allocated site at Northop Road will provide 170 dwellings which is a logical extension in a sustainable location. Collectively the committed sites and Northop Road will deliver a further 655 dwellings in Flint over the plan period, this is sufficient growth for the town therefore candidate site FLI008 is not needed. Situated on the western edge of Flint outside but adjacent to the settlement boundary which for the majority of its length runs along the eastern boundary of the site. The site includes the Bryn Farm complex of buildings beyond which is the A548 Coast Road which forms the northern boundary of the site. Aber Park Industrial Estate and an area of mature woodland (Red Wood) lies to the east of the site. This large roughly L shaped area of land was initially put forward as a mixed use scheme consisting of retirement village of approximately 55 units together with employment land if required. With regards to the employment element of the candidate site, the findings of the Employment Land Review (undertaken as part of preparing the LDP) has indicated that no new additional employment sites are required for the Plan period. In view of this the promoter of the site is now seeking all of the land to be allocated for residential use.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				clear message that the intervening land between Bagillt and the Reynolds Road/Manor Drive clustered settlement is suitable for development thus converging the two areas and adding to the impression of coalescence. It acknowledges this in the reasoning for its exclusion from the green barrier and effectively invites development proposals outside of the settlement boundary.		Despite this site lying adjacent to the settlement boundary it is separated from the bulk of the town center facilities by the Aber Park Industrial Estate and the edge of center Flintshire Retail Park. Similarly the site is poorly related to the well established residential areas of the town again by the intervening Kimberley Clark complex, a mature woodland and the Cemetery to the North of Royal Drive. Consequently it is considered that this large site relates better to the area of open countryside to the west of the town. The Employment Land Review has concluded that there is no need for additional employment land allocations in the Plan period, and the need for a north westwards expansion of employment land does not presently exist. This area of land on the edge of the industrial estate is open in character and undeveloped, with the exception of Bryn Farm, which sits comfortably within its agricultural landscape setting. Being alongside the A548 Coast Road it is also prominent and open in character. The Council's Highway Development Management Team have been consulted on the development of the site and concluded that the site had potential for development subject to a Transport Assessment, they also stated that "the site is relatively isolated from community facilities however a development of this scale may generate new facilities. It

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						would appear possible to provide access from a traffic signal controlled junction however this would benefit from a lowering of the speed limit' highlighted it is remote from facilities and would require a new traffic light controlled junction onto A549. But, no Transport Assessment provided with objection to demonstrate how this can be achieved." Candidate site FLI008 was previously allocated for employment use in the former Delyn plan. It was also put forward as a UDP omission site (1119/1520 re EM1). As part of the UDP process the site was the subject of investigative work by the former Welsh Development Agency prior to the publication of the deposit plan to establish the feasibility of bringing the site forward for development. Apart from the differing views of the owners of the site about whether the site should be developed or not, the former WDA found that the site development costs would be unduly prohibitive due to the need for a major new access from the A548, the likely need for storage lagoons and terracing of the northern part of the site. At the time of the UDP inquiry the Council were of the view that without public funding to overcome some of the constraints and infrastructure problems there was no prospect of the site coming forward for development

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						during the UDP period, therefore the site was not allocated within the plan. The UDP Inspector commented: "13.30.2. PPW indicates that local planning authorities should review existing allocations when preparing their UDP. This land was allocated in the Delyn Local Plan, was assessed for its suitability for rolling forward but was not included due to site constraints. The Council takes the view that there is no prospect of the site coming forward for development during the plan period. No substantive evidence has been produced to convince me otherwise. Adequate land has been allocated in the UDP for employment needs and I do not support this objection." The objector has not provided any evidence that the site is now free from these previous constraints. The UDP inquiry concluded that the site was unviable due to high development costs, therefore it could not be considered suitable for allocation within the LDP without evidence that these constraints could be overcome. The objector has not provided any evidence to demonstrate the viability of the site given these previous concerns. Policy HN2 of the LDP deals specifically with the mix of housing, including the need for housing by the older population. Paragraph 11.6 of the reasoned justification states that

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						"The Local Housing Market Assessment identified a particular need for smaller one and two bedroom units to meet the increasing need from single person households. A significant part of this need is driven by the growing older population (65+), therefore the housing needs of older people should be reflected in residential development proposals, which could include the development of bungalows. To ensure that mixed and balanced communities are created the Council will expect developers to provide an appropriate mix of dwelling size and type to meet local housing needs, making reference to the evidence within the latest Local Housing Market Assessment." Proposals for specialist types of housing such as retirement villages can be determined using policy HN2, supported by evidence of that particular need within the proposed location. A policy specifically for retirement villages is not required. The objector clearly sets out that the site would include an element for a retirement village, although there are concerns as to whether this is an appropriate location for such a use in the context of the distance to facilities and provision of walking and cycling routes. However the objector does not go into detail on what the remainder of the site will be used for. This is a 28.4Ha site, significant

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						background work and detail is required to consider it as a realistic strategic allocation. As part of a strategic review of the green barrier it is clear that the green barrier, as presently defined, does not reflect its title in that it does not extend up to the edge of Flint, it therefore will be extended to include candidate site FLI008. This will protect the open countryside from encroachment and prevent the coalescence of Flint and Bagilt. For this reason the candidate site FLI008 has not been allocated within the LDP. For further information please see response to EN11 Green Barrier rep number 93. The LDP has provided for a substantial amount of growth in Flint over the Plan period and it is not considered that an additional allocation is either necessary or appropriate. Given the size of the site and the lack of any supporting background or technical evidence it is not considered that the site is viable or deliverable, particularly in the light of previous concerns about viability. The site is also considered inappropriate given that it would represent a major urban encroachment into the green barrier designation which seeks to retain a gap between Flint and Bagillt.
1208	HN1: New Housing Development Proposals	EWL007 Land off Old Aston Hill/Church Lane Ewloe		Land-Use and Description The land is not currently in active use. It extends to c. 8.3 hectares. There	It is our Client's consideration that their land interests should be allocated for housing in the	Not accepted. The site may not be actively used at present but Welsh Government has provided information which identifies a predicted loss of 0.28ha of grade 2 and 5.85ha of grade 3A. In the absence of a site specific survey to determine the actual quality

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				are existing trees and hedgerows within and around the land, including a strong landscape buffer along the southern edge of the land separating it from the A494 slip road. This landscape buffer would be retained and strengthened where necessary as part of any development scheme on the land. Location The land is somewhat triangular in nature, with residential development to the west and north on Old Aston Hill and Church Lane respectively, with the A494 slip road forming the eastern boundary. The land is naturally well-contained, and is disconnected from the wider countryside (Green Barrier) land located to the west of Old Aston Hill. Designation The land is located outwith the adopted settlement	LDP for up to 180 dwellings. on land off Old Aston Hill / Church Lane, Ewloe.	of the agricultural and whether it represents BMV it is not considered appropriate to allocate the site. It is acknowledged that the site lies adjacent to the A494(T) and has arms of built development to the north and west. However the site has a sense of openness and has the appearance and character of open countryside. The site was promoted for development in the form of an omission site in the UDP and the Inspector commented 'Although the land is separated from open countryside it is open in character' and that 'The settlement boundary in this area reflects the existing built development and forms a strong and defensible boundary. The land is generally open in character and it is not necessary to include this area within the settlement boundary'. CPAT has identified that the site overlies the line of the former Ewloe Railway and may require prior assessment. The northern part of the site also lies within a 250m boundary of landfill sites at Sea View Farm. The submission is lacking in terms of detail as to how various constraints including noise, air pollution, vehicular access, ecology and trees would impact on the suitability and capacity of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				boundary of Ewloe and is within the Open Countryside. It is not subject to any formal ecological, landscape, recreational, or historical designation. It is located within an area of low probability for flood risk. Potential Uses and Capacity The land has the potential to accommodate affordable housing together with associated landscaping and public open space. Assuming a net developable area of 75% and a density of 30 dwellings per hectare, the land could accommodate in the region of 140 - 180 dwellings. The allocation of the land for housing is considered by our Client to be responsive to Ewloe's identification as a Local Service Centre within the settlement hierarchy, and the scope provided within the		the site for residential development. The submission also lacks an indicative or schematic layout to indicate the broad principle of how 140-180 units would be accommodated on the site. The Council has accepted that Ewloe is a sustainable location for growth given the allocation of land between Holywell Rd and Green Lane. Nevertheless, the objection site is not considered to be necessary or appropriate to be allocated. It is unclear why the objector is referencing the potential phasing of development on the site yet elsewhere is claiming the site could be fully built out in just 2 years. The submission provides no detail as to the proposed access arrangements. The candidate site submission explains that access will be improved at Bali Hai and 1 Ferry Hill off Old Aston Hill at the western extreme of the site and at Holly House and Moorwood off Old Aston Hill at the north eastern edge of the site. The candidate site submission also refers to a new 'A' road alongside the A494(T) which is not considered to be feasible or acceptable. Highways Development Management Officers consider that i) Church Lane is unsuitable to serve additional development and ii) there is limited opportunity for access onto Old Aston

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Deposit Plan for new housing development to be delivered in the settlement during the Plan period. Any development on the land is capable of meeting spacing standards, high quality design, a mix of house types, and delivering new public open space and landscaping (including a landscape buffer). The scale of development and potential to phase delivery would ensure that the area is not overwhelmed by new development and residents. The scale of development which can be accommodated on the land is proportionate to the wider settlement, ensuring that the settlement is not subject to overdevelopment over the duration of the Plan period. The development of this land would contribute towards the		Hill and that will restrict the layout of junctions and ultimately the number of dwellings. The proposed development appears to involve the acquisition and demolition of up to four existing dwellings as part of access arrangements which will surely have an impact on the viability and deliverability of the site. The Highways Development Management Officer has commented below: 'Initial comments made in relation to this site remain valid however if the land owner/developer can provide details of an access, as suggested, the site could be given further consideration. Any further consideration of a site of the proposed size will require the submission of a Transport Assessment with particular reference to potential impacts on the operation of junctions with the A494; Welsh Government as highway authority for the trunk road should be informed. It is evident from previous correspondence of concerns regarding the operation of the St David's/Ewloe roundabout. The requirements of Active Travel Wales legislation must be considered and the provision for cycle access included; this may require at least one of the footways entering

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				sustainable distribution of development, whilst also supporting the vitality of Ewloe's services and facilities. Accessibility Vehicular and pedestrian access into the land can be secured from Old Aston Hill. Lane End Developments Construction Ltd and the landowners have reached an agreement which will provide for the land to be accessed from Old Aston Hill following the acquisition of an existing residential dwellings and associated curtilage. The land's proximity to public transport services on Old Aston Hill will provide any future residents with an alternative to the private car, and with it good access to local shops, services and education. Highways/Traffic The land could be served by		the site to be provided as a 3m wide shared facility. Dependent upon the site layout, a development of 180 dwellings will potentially require two points of access or the provision of an emergency access. And, depending upon the access location, the minimum spacing between junctions onto Old Aston Hill may be significant'. The objection has not been accompanied by a Transport Assessment in order to determine whether the site can be accessed and whether the local highway network can accommodate the development. Noted. COFNOD data identifies that the majority of the site has a 50-70% likelihood of the presence of Great Crested Newts. Parts of the site also include wooded areas which are of landscape and ecological importance. In the absence of an ecological and arboricultural survey it is not possible to determine whether the sites limited ecological value is the case. It would be inappropriate to allocate land in the absence of having some robust evidence about ecology and trees. Welsh Government Noise maps show daytime noise levels on the site of between 55 and 69.9dB, and evening noise levels of 50 to 64.9dB increasing with proximity to the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				access from Old Aston Hill. Any access road would provide for a 5.5m wide carriageway, with 2m footways on both sides. Visibility standards would be consistent with Manual for Streets. The highways impact of any development on the land would not be significant. Flood-Risk and Drainage The land is located wholly within Flood Zone A as defined on the Development Advice Map. Sustainable Urban Drainage Systems would be applied across the Site where feasible. Ecology The land is not subject to any formal international, national or local ecology designation which might prevent or limit its suitability for housing. It is distant from designations in the wider area, with only the potential for indirect effects (as with any location).		A494(T). The advice in TAN11 Noise gives rise to serious concerns about the appropriateness of residential development in such locations. It would be inappropriate to allocate land in the absence of evidence about actual noise levels on the site and whether these can be mitigated within the development. Welsh Government roadside monitoring has identified levels of air pollution alongside the A494(T) and has installed 50mph speed restrictions to reduce emissions. The site is immediately adjacent to the A494(T) and it would be inappropriate to allocate the site without evidence as to pollution levels and whether mitigation measures can be put in place to address this. Despite the proposed site being bounded by built development, the site has an open character akin to open countryside, as recognized by the UDP Inspector. In terms of visual receptors the objector ignores the public footpath which dissects the site. The Red route has been safeguarded within the Plan by virtue of policy PC10. However there is no update on the route in terms of timescale and it will need to proceed through a public inquiry. If the Red route were not to proceed there would be a need to consider alternative options including improvements to the A494(T).

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The land holds limited ecological value, albeit a detailed Habitat Survey would need to be undertaken. The key ecological features of the land are the hedgerows and trees within and bordering it; the majority of these features should be capable of retention as part of any development. Where removal of any features is required, this loss could be compensated for by replacement planting. Noise Given the location of the land adjacent to the A494 slip-road, there may be the need for noise mitigation measures to be implemented as part of any future development. These could take the form of double glazing, additional landscaping, and/or acoustic fencing dependent on the conclusions of a Noise		The objector fails to mention that the site was previously promoted for development as part of the UDP but was not recommended for inclusion by the Inspector. The objector provides no firm evidence of an agreement between the landowners in terms of deliverability. The suggestion that 180 units could be developed within two years of a planning permission is out of step with the housing trajectory in Background Paper 10 Housing Land Supply which identifies a maximum yearly build of 53 units on a non-strategic housing allocation. The objectors proposed build rate of 80 units per annum, is significantly higher but without any evidence that this is realistic. In the context of uncertainty as to a number of constraints which might affect the site, as well as concerns over securing a suitable access into the site, it is not considered to be a viable and deliverable allocation. Furthermore, an additional allocation in Ewloe is not considered necessary or appropriate. In conclusion, provision for growth in Ewloe has been made with the allocated site which is sustainable, viable and deliverable. An additional allocation is not considered necessary or appropriate in Ewloe, particularly given that there are a number of constraints on the objection site which have not been addressed.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Impact Assessment. Landscape and Visual Impact The land does not sit within a designated landscape area. The land is considered to have a moderate impact taking into account the relationship of its built surroundings and potential for mitigation once planting matures within any landscape buffers, particularly along the eastern perimeter of the Site to the A494. Any adverse effects on visual receptors would likely be limited to those nearest to the land. Deliverability Our Client's land interests have been subject to previous promotion through the LDP process, as demonstrated by its inclusion as a Candidate Site. Whilst the land is in		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				multiple ownerships, our Client has now secured a promotional agreement across the whole of the land, with a collaboration agreement between the landowners. The land is immediately available and deliverable within the Plan period (over a phased basis), or indeed within a fiveyear period in its entirety. None of the land is now required for any highway works to the A494 slip road, and there are no scheme details to suggest that this is the case. It is estimated by our Client that the land could be developed in its entirety within 24 months of a grant of planning permission. There are no overriding technical or land assembly constraints which would preclude its development.		
1210	HN1: New Housing Development Proposals	HCAC 025 Land off Huxleys Lane Hope	Object	Land off Huxleys Lane, Hope, 36 houses	Allocate land at HCAC Huxley Lane Hope instead of HCAC	Not accepted. The Preferred Strategy colour coded assessment of candidate sites illustrated that the site was colour coded amber and mentioned that further

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				It is noteworthy that the methodology table was in favour for building on this site. We would therefore rely upon all the reasons set out by the Council in that table to support building on this land instead of the proposed site HCAC004. There are further reasons that we site below in support of this site for development in the LDP: This site would form an extension of Ty Carreg housing commitment with existing access through the Beeches and Almond Way. Therefore it would be building where houses already are. This site is for 36 houses which presents as a large development but, smaller than the 80 proposed on the Bluebell Fields in Abermorddu. It is submitted that this smaller development	004 Land at Wrexham Road Abermorddu	investigations were needed specifically regarding access to the site. This site abuts the settlement boundary on two sides - to the west and to the south where there is existing residential development at The Beeches and Almond Way. The site is considered to relate well to the urban form of the settlement where there is a large area of residential development to the south and which is well contained by by Sryt Isa to the west and the A550 Wrexham Road to the east. A key principle in PPW is that allocations are viable and deliverable yet the objection provides no assurances or evidence that a satisfactory access can be provided. It is considered that by allocating two smaller sites in comparison to one site at Wrexham Road will not be more deliverable or viable when HCAC025 is not deemed deliverable as set out by the concerns below. There is no evidence to illustrate that smaller sites would have less of an impact and would be more viable and deliverable. In this instance, the proposed site backs onto existing dwellings whereas the allocated site does not. Therefore the proposed site may have more of an impact on the surrounding residents. Additionally, due to the uncertainty over access, there is doubt about the deliverability of this site.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				would therefore lessen the impact on the community with 2 smaller developments of 30-40 being utilised in two locations. This would also make these sites more appropriate, viable and deliverable. No permitted use of the land by the public. Flat land. If thought necessary, the road could be adapted e.g. roundabout to actually improve that area and access to the road for more than just this site as it would slow traffic down to allow people to exit side roads easier onto the main road e.g. Mountain View etc. Due to it's location, this site would have a low/no impact on the surrounding area as it is behind existing development and a natural progression of		The objector is comparing this proposed site with the Wrexham Rd Abermorddu allocation where there is an alleged permitted public access. This is not an appropriate way in which to be informing the suitability of sites. There is no public right of way across the site although it is understood that the public do walk across the site to gain access to the hillside, but the Council is unaware whether this is with the consent of the land owner. However Wat's Dyke and a footpath is situated within the eastern edge of the proposed site HCAC025 which would require measures to safeguard these should the site be developed. Previously the site was allocated in the UDP but removed on account of access concerns, and the de-allocation of the site was also recommended by Inspector, who also expressed concerns about access constraints. Similarly the Highways Officer considers this site to be unsuitable as there is no direct access to a public highway and a transport assessment would be required in terms of access through The Beeches. At the time of writing no such Transport Assessment has been provided and the site has not been resubmitted by the landowner in the form of a representation at Deposit consultation stage. However, It could be considered further if a vehicular access could be secured through land to the southwest which has outline

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				existing and commitment housing. The general infrastructure for such a development is already in place and easy access to nearby shops and schools and other amenities and activities. There are already dwellings around this location. The site would therefore associate with development on three sides. Essentially development on this site would be filling in a gap in the existing housing as there is Ty Carreg on one side, houses on Huxleys Lane on the second side and two large dwellings with access and frontage onto the main road on the third side (see general area photograph at Appendix 4 HCAC025).		planning permission for housing (053445 – land at Ty Carreg for 19 dwellings). Although discussions have taken place to achieve this, no agreement has been made known to the LPA and the latest application for reserved matters approval on the site (060970) show a layout which makes no provision for vehicular access through to HCAC025. Although the development of the site is considered appropriate in terms of relationship with settlement and open countryside, it is not appropriate to allocate land for housing when there is no certainty of securing a suitable vehicular access. A holistic view includes the implications on highway safety and does not justify allocating land with known access constraints. Although it is recognised that there are services and facilities within the settlement it is considered that there are negative factors which outweigh the few factors which meet the criteria. The Plan's allocation at Wrexham Road, Abermorddu is backed up by and informed by a large number of background and technical studies which demonstrate that the site is viable and deliverable. Despite the objector's statement that the site is preferable to the allocated site, there is no submitted background / technical evidence to show that this is the case. The site is not considered to be necessary or appropriate as an allocation

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						either to replace or be in addition to the Wrexham Rd allocation. In conclusion, it is evident that there are long standing concerns about the lack of vehicular access to the site and in the light of this constraint it is not appropriate to be allocated.
1211	HN1: New Housing Development Proposals	HCAC 021 Land West of Gwalia, Bryn Yorkin	Object	Land west of Gwalia / Bryn Yorkin - 40 houses. Our reasons for putting forward this site for development in the LDP are as outlined below: The owners are in a position to begin building, therefore making this site viable and deliverable having a builder on board. This land runs alongside the settlement boundary. It runs alongside existing dwellings. The owner has vehicular access to the site therefore there is a means of access that can be altered and utilised accordingly. The	Alllocate HCAC 021 Land West of Gwalia, Bryn Yorkin instead of HCAC004	Not accepted. Despite the site being submitted as a candidate site, it has not been the subject of a representation to the Deposit LDP by the owners or a developer, and in this light, the objectors' assertion that the owners are in a position to begin building, and that the site is viable and deliverable appears unfounded. The site is not a suitable replacement, either in whole or in part, for the allocated site. Despite the objector's statement that the site is preferable to the allocated site, there is no submitted background / technical evidence to show that this is the case. Despite the entire eastern boundary adjoining the settlement boundary the site relates better to the open countryside as the site slopes upwards to the heavily wooded steeply sloping Alyn Valley sides. A key principle in PPW is that allocations are viable and deliverable yet the objection provides no assurances or evidence that a satisfactory access can be provided. In any event the Council's highways development management officer objects to the development of this site due to there being no

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				owners have looked into how to gain access to such a development on their site. There has been a dwelling on the site in the past. The family have used it for personal recreational purposes but now wish to develop the site. Therefore the public have not had lawful or permitted access to the site. This land runs alongside the settlement boundary. It runs alongside existing dwellings. The site is not wooded and is simply fields bounded on one side by housing and on the other by woods leading steeply up to Hope Mountain. There are already dwellings around this location. The site would therefore associate with development on three sides. - Any development on this site		direct access to the adopted highway, and furthermore roads in the vicinity are generally inadequate to serve a development of this size. Additionally, Gwalia is narrow in width with dwellings immediately abutting the highway, parked cars and the lack of footway illustrate this is unsuitable to accommodate additional traffic. The fact that there may have previously been a dwelling on site does not mean it is suitable to be allocated for housing, as it is necessary to look at a wide range of considerations relating to the site. The objector is comparing this proposed site with the Wrexham Rd Abermorddu allocation where there is an alleged permitted public access. This is not an appropriate way in which to be informing the suitability of sites. There is no public right of way across the site although it is understood that the public do walk across the site to gain access to the hillside, but the Council is unaware whether this is with the consent of the land owner. The site may adjoin the settlement boundary along its eastern edge but the site does not relate well to the form and pattern of existing development. The fields are crossed by a footpath which leads to an extensive network of footpaths in the wooded area beyond the site. Removal of trees on the fringes of the north western part of the site to accommodate approximately 40 dwellings would have a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				would not exceed the boundary line of existing housing on Bryn Yorkin and Gwalia. It would in fact bring it into line and fill in the gap. It is submitted that this site is ideal and appropriate for housing. This site is for 40 houses which presents as a large development as but smaller than the 80 proposed on the Bluebell Fields in Abermorddu. It is submitted that this smaller development would therefore lessen the impact on the community with 2 smaller developments of 30-40 being utilised in two locations. This would also make these sites more appropriate, viable and deliverable. - Due to its location, this site would have a low/no impact on the surrounding area as it is behind existing development and a natural progression of		significant visual adverse impact on this elevated and prominent site. Built development would not integrate well with the existing form and pattern of development in this part of the settlement. The proposed site is located within open country and does not form part of the settlement. The surrounding area is heavily wooded with numerous footpaths for public to enjoy the open countryside. The land is graded highly for agricultural use and there is a predicted loss of 0.18ha grade 3a. Additionally, due to the heavily wooded area there potentially may be bats in the area and further assessments would be required. The site, given its rising and prominent location, and the existing pattern of development would not represent a logical extension to the settlement. Instead, as outlined above, it harm the character and appearance of the locality. It is too simplistic to a make an assertion that a site will have a lesser impact than another site just because it is smaller. It is necessary to look at the particular merits of each site and its particular surroundings. It is also not necessarily the case that two sites each of 40 will have any less impact on services, facilities, or the highway network overall, than one site for 80. Although it is recognised that there are services and facilities within the settlement and in close proximity to the site, it is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				existing and commitment housing. The general infrastructure for such a development is already in place and easy access to nearby shops and schools and other amenities and activities. - In relation to 40 houses on this site, there are 86 dwellings on Bryn Yorkin Lane, Conway Close, Plas Yn Bwl, 45 on Bryn Yorkin. At present a total of 130 houses using the entrance to the main road. This site would either be accessed at the top of Bryn Yorkin or from Bryn Yorkin Line via Conway Close. Therefore there is a good filter system for traffic rather than all coming out on one road before meeting the main road. If one were to add 40 on this site that would take the total to 170. Such an overall development is not		considered that there are negative factors associated with the site which outweigh this. As commented above Highways Development Management Officers note that there is no direct access to the adopted highway and that the roads are generally inadequate to serve the development. The site is physically separated from both Bryn Yorkin and Conway Close by existing houses and intervening land. There is no clear means of securing an acceptable vehicular access. In conclusion, development of this prominent site would result in a detached block of residential development which would be poorly related to existing development and visually damaging to an area of attractive open countryside. The site is not considered to be necessary or appropriate as an allocation either to replace or be in addition to the Wrexham Rd allocation.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				excessive for the infrastructure particularly when you compare with other sites eg. Chester Road, Penyffordd • 186 houses and one entrance; Silverbirch Way, Penyffordd • 200 houses and one entrance.		
1212	HN1: New Housing Development Proposals	HCAC 026 Gresford Road Hope	Object	Land north of Bryn Isa, Gresford Rd, Hope - Our reasons for putting forward this site for development in the LDP are as outlined below: This site is a smaller development than HCAC004 and therefore would have a low impact on the surrounding area. Also smaller development would be more viable and deliverable. There are already dwellings on this side of the main road from the top of the photograph of the general area down to the bungalows that	Allocate HCAC 026 Gresford Road Hope instead of HCAC 004 Wrexham Road Abermorddu	Not accepted. A summary response has already been provided with the objection to HN1.9 (ID: 658) It is considered that allocating two smaller sites in comparison to one site at Wrexham Road will not be more deliverable or viable when HCAC026 is not deemed deliverable as set out by the concerns below. A key principle in PPW is that allocations are viable and deliverable yet the objection provides no assurances or evidence that a satisfactory access can be provided. It is a simplistic view that smaller sites have a lower impact, as all sites are assessed on their specific merits. In this instance, the proposed site would add to a detached small ribbon of development whereas the allocated site is considered to be better positioned to the settlement. Additionally, due to the uncertainty over access, this site is not preferable in comparison to the allocated site.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				would abut this development and Hope Motors at the end of that line. It would therefore associate with development on one side, the main road with dwellings opposite on one side (who don't have driveways opening onto the main road but gain access via Mountain View/Pen Y Bryn) and two sides of open countryside to the rear but one field of agricultural land between this location and the farm on at the top of the general area photograph (Appendix 4 HCAC026). Essentially development on this site would be filling in a gap in the existing housing. No permitted use of the land by the public. Relatively flat land after initial incline from the road of grass verge		Despite the site being submitted as a candidate site, it has not been the subject of a representation to the Deposit LDP by the owners or a developer, and in this light, is not considered to be a viable and deliverable site. The site is not considered to be necessary or appropriate as an allocation either to replace or be in addition to the Wrexham Rd allocation. With the exception of the 4 bungalows to the south of the site the bulk of the settlement form at this location is on the opposite side of the A55O Wrexham Road. This long straight road marks a strong physical demarcation between the built up area and the open countryside. Development of the site would result in urban encroachment extending beyond a well-defined and defensible edge. It is considered that the proposed site does not follow the physical settlement boundary as it merely follows an artificial line across the field. The objector is comparing this proposed site with the Wrexham Rd Abermorddu allocation where there is an alleged permitted public access. This is not an appropriate way in which to be informing the suitability of sites. There is no public right of way across the allocated site although it is understood that the public do walk across the site to gain access to the hillside, but the Council is unaware whether this is with the consent of the land owner.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				No different to access to bungalows abutting the site. The site is located On the straight main road which could be adapted to actually improve that area and access to the road for more than just this site as it would slow traffic down to allow people to exit side roads easier onto the main road eg. Mountain View. The general infrastructure for such a development is already in place with easy access to nearby shops and schools and other amenities and activities;		The Council's Highways Development Management Officer has raised objections to development at this site on the basis that the access would be unsuitable as there is inadequate junction visibility to the right on exit due to the horizontal and vertical profile of the road. The Plan's allocation at Wrexham Road, Abermorddu is backed up by and informed by a large number of background and technical studies which demonstrate that the site is viable and deliverable. Despite the objector's statement that the site is preferable to the allocated site, there is no submitted background / technical evidence to show that this is the case. Although it is recognised that there are services and facilities within the settlement and in close pro9ximity to the site, it is considered that there are negative factors with the site which outweigh this. In conclusion, the site relates poorly to the built form of the settlement and would result in ribbon development which would harm open countryside. The site is not appropriate to be allocated or included in the settlement boundary.
1213	HN1: New Housing Development Proposals	Gresford Rd, Hope HCAC028	Object	Land on south side of junction of Gresford Rd and Hope Hall Drive, Hope - Our reasons for putting forward this site for development in the	Allocate Gresford Rd, Hope HCAC028 instead of HCAC004	Not accepted. It is considered that by allocating two smaller sites in comparison to one site at Wrexham Road will not be more deliverable or viable when HCAC02 is not deemed deliverable as set out by the concerns below. A key principle in PPW is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				LDP are as outlined below: Smaller development than HCAC004 and therefore would have a lower impact on the surrounding area. Also a smaller development would be more viable and deliverable. Due to it's location, this site would have a low impact on the surrounding area. On the straight main road with good access. Hope Hall Drive already opens onto the main road next to that location. The road could be adapted to actually improve that area and access to the road for more than just this site as it would slow traffic down to allow people to exit side roads easier onto the main road eg. The lane next to The Rectory which comes out		that allocations are viable and deliverable yet the objection provides no assurances or evidence that a satisfactory access can be provided. It should be noted that there is presently no pavement fronting the site. It is a simplistic view that smaller sites have a lower impact, as all sites are assessed on their specific merits. In this instance, the proposed site would result in urban encroachment in the form of a large block of development extending beyond a well-defined and defensible edge. Whereas the allocated site is considered to be better positioned to the settlement. Additionally, due to the lack of background / technical studies there is no evidence to show that the site is viable or deliverable. Despite the site being submitted as a candidate site, it has not been the subject of a representation to the Deposit LDP by the owners or a developer, and in this light, is not considered to be a viable and deliverable site. The land is currently agricultural grazing land. The site is not located within the settlement boundary and is therefore greenfield land classed and open countryside. With the exception of the ribbon development to the south of the site the bulk of the settlement pattern and form at this location is on the opposite side of the B5373 Gresford Road. This together with the long straight A55O Wrexham Road to the north marks a

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				near to Hope Hall Drive and Kiln Lane. No permitted use of the land by the public. Flat land. The general infrastructure for such a development is already in place and easy access to nearby shops and schools and other amenities and activities. There are already dwellings on this side of the main road further back than this site and bungalows on that side. The site would therefore associate with development on two sides, the main road with dwellings opposite on one side (none of these dwellings have openings onto the main road and gain access onto Kiln Lane) and on the opposite side of a driveway are two fields of agricultural land (Appendix 4 HCAC028). Essentially development		strong physical demarcation between the built up area to the west and the open countryside to the east. The site relates poorly to the main built form of the settlement and is better related to the open countryside to the north and east. The eastern boundary of the proposed site follows no physical features on the ground and is not a firm and defensible boundary. Development of the site would result in urban encroachment in the form of a large block of development extending beyond a well-defined and defensible edge. Although there are no detrimental issues with regards to highways, careful detailing of the site access and pedestrian facilities (possible central refuge or right turn lane) will be required due to the nature of traffic using the B5373 past the site. Potential off-site footway improvements. 2.4x120 is available to the right into the 40mph restricted area and 2.4x215 to the left. The character of any development is likely to require a speed limit review. The objector is comparing this proposed site with the Wrexham Rd Abermorddu allocation where there is an alleged permitted public access. This is not an appropriate way in which to be informing the suitability of sites. There is no public right of way across the site although it is understood that the public do walk across the site to gain access to the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				on this site would be filling in a gap in the existing housing.		hillside, but the Council is unaware whether this is with the consent of the land owner. Although it is recognised that there are services and facilities within the settlement in close proximity to the site it is considered that there are negative factors associated with the site which outweigh this. As discussed above, although there are some dwellings nearby it is considered that the site relates poorly to the main built form of the settlement and is better related to the open countryside to the north and east. In conclusion, development of this prominent site would result in a detached block of residential development which would be poorly related to existing development and visually damaging to an area of attractive open countryside. The site is not considered to be necessary or appropriate as an allocation either to replace or be in addition to the Wrexham Rd allocation.
1214	HN1: New Housing Development Proposals	HCAC023 Land rear of 17 Plas Yn Bwl	Object	Land rear of 17 Plas y Bwl, Caergwrle - Our reasons for putting forward this site for development in the LDP are as outlined below:	Allocate HCAC023 Land rear of 17 Plas Yn Bwl instead of HCAC004 Wrexham Road Abermorddu	Not accepted. The site is not located within the settlement boundary. The site is located outside the settlement boundary, however adjoins the boundary from the rear of 17 Plas Y Bwl. Due to its small size and likely maximum number of dwellings being 6 units, this site is

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				within the settlement boundary flat land, Forms part of the curtilage of an existing dwellings. This is effectively someone's garden. It is also within the settlement boundary. Due to its location, this site would have no impact on the surrounding area. There are already dwellings / development around this site and the building line is also in line with other development parallel to it further down on the main road (see general area photograph at Appendix 4 HCAC005). This site doesn't readily associate with open countryside as it is an extension of someone's large garden area. Essentially development on this site would be filling in a gap in the existing housing.		classed as a Small Site and is not appropriate to be allocated in the Plan. The site is located at the southern end of dwellings on Plas y Bwl. The site lies in an elevated location and rises up from the rear of no. 17. The site sits behind existing houses which lie at the head of Plas y Bwl and is in an elevated position with land running steeply downward to the east to the A542 Wrexham Road therefore, the site is located within a prominent position The site has similar characteristics to the open countryside and is considered to have little relationship with the form and pattern of built development, given that there is housing only on its northern side. The inclusion of the site in the settlement boundary would result in a block of development in an elevated and prominent position which would be harmful to the character and appearance of open countryside and also relate poorly to existing built development. Although it is recognised that there are services and facilities within the settlement and in close proximity to the site, it is considered that there are negative factors with the site which outweigh this. Highways officers consider this site is unsuitable as there is no direct access to the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The general infrastructure for such a development is already in place and easy access to nearby shops and schools and other amenities and activities. Access already in place.		adopted highway. Plas y Bwl is considered unsuitable to cater for any additional traffic due to its alignment, limited width and inadequate junction with Bryn Yorkin Lane. Despite the objector's statement that the site is preferable to the allocated site, there is no submitted background / technical evidence to show that this is the case. A key principle in PPW is that allocations are viable and deliverable yet the objection provides no assurances or evidence that a satisfactory access can be provided. Despite the site being submitted as a candidate site, it has not been the subject of a representation to the Deposit LDP by the owners or a developer, and in this light, is not considered to be a viable and deliverable site. Development of this prominent site would result in a detached block of residential development which would be poorly related to existing development and visually damaging to an area of attractive open countryside. The site is not considered to be necessary or appropriate as an allocation either to replace or be in addition to the Wrexham Rd allocation. In conclusion, the site is too small to be allocated and inappropriate to be included in the settlement boundary on account of its access constraint and poor relationship with existing built form and associated impact on open countryside.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1218	HN1: New Housing Development Proposals	FLI008	Object	The Plan has no specific policy or proposal to meet the needs of housing for an ageing population and those with dementia. please refer to attached document. Please note that 2 other files are being forwarded separately by email direct to Planning Policy. Paragraph 7.16 refers to the need to provide for more specialist needs housing. It makes particular reference to the ageing population. However, apart from reference to the need for bungalows, other forms of housing suited to meeting the general housing needs of elderly residents, and more specialist forms of accommodation such as sheltered housing, it gives no further direction. The Plan contains no specific development management policy or proposal in the Plan to actually take this forward and meet the	Have a specific policy and proposal site for housing for the elderly, namely a retirement village on candidate site FLI008.	Not accepted. The objector is concerned about the track record of poor delivery on both the strategic sites in terms of housing and how the Plan is over-reliant on them. However, it is worth noting that the Warren Hall site has not previously had a housing element. The North Wales Growth Deal clearly identifies the Warren Hall site as forming a key part of the strategy. The initial projects include 'primary infrastructure, to include a new access road and on site access, electricity, drainage and other services at Warren Hall'. This is referenced in the Welsh Government representations on the Deposit LDP wherein Welsh Government support in principle the economic growth strategy in terms of the scale and location of homes and jobs. It is not considered that the Plan is over reliant on the two strategic sites in terms of housing or employment growth. Turning first to housing, it is worth stressing that the Plan is already delivering, in terms of completions to date, what the Plan seeks to provide. If the Council were in the position whereby it had built up a deficit of under-delivery in the first few years of the Plan period, then there might be greater concern about reliance on two strategic sites. Nevertheless, despite Warren Hall being a strategic site, the housing element is not strategic as it is 300 dwellings which is on a par with the other housing

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				aims/outcomes of PPW and Well-being Act. The Plan fails to actively address these issues and has had no regard to the pressing evidence that has been emerging for the last 5 years and more.		allocations in the Plan. It is not considered that there are any evidenced concerns about the ability to deliver 300 dwellings at Warren Hall within the Plan period. The Plan is not reliant on windfalls given that the small site allowance of 60 units per annum and large sites allowance of 50 units per annum, is conservative when comparted with past trends and also having regard to the findings of the Urban Capacity Study. The HBF are supportive of these modest allowances. In line with advice contained within Development Plan Manual 3 (DPM3), the LDP incorporates a flexibility allowance of 14.4%. DPM3 states that LDPs must include a minimum flexibility allowance of 10%. There is no requirement from Welsh Government to include within the Plan contingency or reserve sites. The Northern Gateway is a strategic mixed use allocation in both the adopted UDP and the deposit LDP. Progress on the site was affected by the economic downturn but Welsh Government has now invested in flood defence works along the River Dee and a spine road, both of which have been implemented. The site is in two ownerships with Praxis promoting the northern part and Pochin the southern part. Good progress is now being made on the northern part of the site with enabling works and the reserved matters approval (059514)

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						for Countryside Properties for 283 units on plots H1, H2 and part of H8, who are presently on site. Following marketing of the site, developer interest has led to a planning application (060311) for a further phase of site enabling works and this application is under consideration. In January 2020 reserved matters approval was granted for a 10,000sqm warehouse development on plot A. On the southern part of the site, Pochin are also making progress, albeit slightly behind. A planning application (058868) is presently under consideration for site enabling works for phase 1 and a reserved matters application (060411) is has been approved for 129 homes for Keepmoat Homes. Although Pochin Construction went into administration it is not considered to affect the Northern Gateway development. In Aug 2019 a Welsh Government spokesman said 'We have been assured that the Pochin Goodman Joint Venture, which owns part of the Northern Gateway site, is not affected by Pochin's administration process and as such we do not expect any delay to work being carried out on the development'. Pochin Goodman is continuing in its work in delivering the southern part of the site. The evidence clearly demonstrates there is renewed developer interest in the site and the construction on site by Countryside Properties will result in developer confidence in further

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						phases of development. The Council has enquiries from other developers about further phases of the development. It is quite normal on a strategic site of this size to have several housebuilders on site at the same time. The two strategic sites form an integral part of the Growth Bid proposals for North Wales and will bring about major economic benefits to the region. Evidence clearly demonstrates that Northern gateway is now being delivered and on course to deliver the units within Plan period (as shown in the trajectory). The provision of 300 units at Warren Hall is not considered excessive given its sustainable location relative to the focus for growth. In totality it is not considered that the Plan is over-reliant on the strategic sites. It is unclear from the objector's submission where the 'shortfall in housing land' is actually arising from given the size of the housing element at Warren Hall and the emerging picture of delivery at Northern Gateway. Flint is a Tier 1 Settlement which is recognised as a sustainable location for growth in both the UDP and the LDP, Tier 1 settlements have a strategic role in the delivery of facilities and services across Flintshire. Flint has already seen growth in the earlier years of the plan period with 308 dwellings completed in the early years of the plan period (2016, 2017 and 2018). There are also committed sites in Flint which will provide further growth for the town including an

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						additional 378 dwellings on the Croes Atti site, 73 units on the Earl Lea site, 19 units at Ystrad Goffa Court and 15 units on the Flint Working Men's Club site. In addition to these commitments the allocated site at Northop Road will provide 170 dwellings which is a logical extension in a sustainable location. Collectively the committed sites and Northop Road will deliver a further 655 dwellings in Flint over the plan period, this is sufficient growth for the town therefore candidate site FLI008 is not needed. Situated on the western edge of Flint outside but adjacent to the settlement boundary which for the majority of its length runs along the eastern boundary of the site. The site includes the Bryn Farm complex of buildings beyond which is the A548 Coast Road which forms the northern boundary of the site. Aber Park Industrial Estate and an area of mature woodland (Red Wood) lies to the east of the site. This large roughly L shaped area of land was initially put forward as a mixed use scheme consisting of retirement village of approximately 55 units together with employment land if required. With regards to the employment element of the candidate site, the findings of the Employment Land Review (undertaken as part of preparing the LDP) has indicated that no new additional employment sites are required for the Plan period. In view of this the promoter of the site

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						is now seeking all of the land to be allocated for residential use. Despite this site lying adjacent to the settlement boundary it is separated from the bulk of the town center facilities by the Aber Park Industrial Estate and the edge of center Flintshire Retail Park. Similarly the site is poorly related to the well established residential areas of the town again by the intervening Kimberley Clark complex, a mature woodland and the Cemetery to the North of Royal Drive. Consequently it is considered that this large site relates better to the area of open countryside to the west of the town. The Employment Land Review has concluded that there is no need for additional employment land allocations in the Plan period, and the need for a north westwards expansion of employment land does not presently exist. This area of land on the edge of the industrial estate is open in character and undeveloped, with the exception of Bryn Farm, which sits comfortably within its agricultural landscape setting. Being alongside the A548 Coast Road it is also prominent and open in character. The Council's Highway Development Management Team have been consulted on the development of the site and concluded that the site had potential for development subject to a Transport Assessment, they also

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						stated that "the site is relatively isolated from community facilities however a development of this scale may generate new facilities. It would appear possible to provide access from a traffic signal controlled junction however this would benefit from a lowering of the speed limit' highlighted it is remote from facilities and would require a new traffic light controlled junction onto A549. But, no Transport Assessment provided with objection to demonstrate how this can be achieved." Candidate site FLI008 was previously allocated for employment use in the former Delyn plan. It was also put forward as a UDP omission site (1119/1520 re EM1). As part of the UDP process the site was the subject of investigative work by the former Welsh Development Agency prior to the publication of the deposit plan to establish the feasibility of bringing the site forward for development. Apart from the differing views of the owners of the site about whether the site should be developed or not, the former WDA found that the site development costs would be unduly prohibitive due to the need for a major new access from the A548, the likely need for storage lagoons and terracing of the northern part of the site. At the time of the UDP inquiry the Council were of the view that without public funding to overcome some of the constraints and infrastructure problems there was no prospect

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						of the site coming forward for development during the UDP period, therefore the site was not allocated within the plan. The UDP Inspector commented: "13.30.2. PPW indicates that local planning authorities should review existing allocations when preparing their UDP. This land was allocated in the Delyn Local Plan, was assessed for its suitability for rolling forward but was not included due to site constraints. The Council takes the view that there is no prospect of the site coming forward for development during the plan period. No substantive evidence has been produced to convince me otherwise. Adequate land has been allocated in the UDP for employment needs and I do not support this objection." The objector has not provided any evidence that the site is now free from these previous constraints. The UDP inquiry concluded that the site was unviable due to high development costs, therefore it could not be considered suitable for allocation within the LDP without evidence that these constraints could be overcome. The objector has not provided any evidence to demonstrate the viability of the site given these previous concerns. Policy HN2 of the LDP deals specifically with the mix of housing, including the need for housing by the older population. Paragraph

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						11.6 of the reasoned justification states that "The Local Housing Market Assessment identified a particular need for smaller one and two bedroom units to meet the increasing need from single person households. A significant part of this need is driven by the growing older population (65+), therefore the housing needs of older people should be reflected in residential development proposals, which could include the development of bungalows. To ensure that mixed and balanced communities are created the Council will expect developers to provide an appropriate mix of dwelling size and type to meet local housing needs, making reference to the evidence within the latest Local Housing Market Assessment." Proposals for specialist types of housing such as retirement villages can be determined using policy HN2, supported by evidence of that particular need within the proposed location. A policy specifically for retirement villages is not required. The objector clearly sets out that the site would include an element for a retirement village, although there are concerns as to whether this is an appropriate location for such a use in the context of the distance to facilities and provision of walking and cycling routes. However the objector does not go into detail on what the remainder of the site will be used for. This is a 28.4Ha site, significant

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						background work and detail is required to consider it as a realistic strategic allocation. As part of a strategic review of the green barrier it is clear that the green barrier, as presently defined, does not reflect its title in that it does not extend up to the edge of Flint, it therefore will be extended to include candidate site FLI008. This will protect the open countryside from encroachment and prevent the coalescence of Flint and Bagilt. For this reason the candidate site FLI008 has not been allocated within the LDP. For further information please see response to EN11 Green Barrier rep number 93. The LDP has provided for a substantial amount of growth in Flint over the Plan period and it is not considered that an additional allocation is either necessary or appropriate. Given the size of the site and the lack of any supporting background or technical evidence it is not considered that the site is viable or deliverable, particularly in the light of previous concerns about viability. The site is also considered inappropriate given that it would represent a major urban encroachment into the green barrier designation which seeks to retain a gap between Flint and Bagillt.
1251	HN1: New Housing Development Proposals	NEW001/3/9/11 Bryn Y Baal, New Brighton	Object	A private developer submitted candidate site NEW003 for inclusion in the LDP. It was classified as an amber candidate site. The IIA which	Inclusion of candidate site NEW003 Bryn Y Baal, New Brighton.	Not accepted. New Brighton lies to the North East of Mold and immediately to the North West of Mynydd Isa. New Brighton has been categorised as a sustainable village on account of its size, accessibility and level of facilities and services and because of its

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				supports the LDP includes the candidate site in the reasonable list of alternatives, which Anwyl welcomes. On analysing the conclusions with the IIA, it can be said that the site performs positive on several objectives. However, it is noted that the site performs negatively in terms flood risk, heritage and green infrastructure. From the technical evidence which has been provided to support this representation, it is clearly demonstrated that objectives which score negatively within the IAA can easily be overcome and should not contribute to the Council's justification for the Site not being allocated at this time. In addition, the allocated site at Cae Isa (HN1-10) does not perform any stronger in IAA terms compared with our client's site (NEW003). Each are balanced to have equal numbers of		proximity to larger settlements. The bulk of the village lies on the southern side of the A5119 although small residential developments and commercial development lies on the North side of the A5119. The site is located on the eastern side of New Brighton, the A5119 is to the north and the A494 to the east. The site is well defined by existing residential development to the West and by roads to the North, East and South. The site was previously included in the green barrier which has been removed as part of the LDP green barrier review. The site remains part of the open countryside but was removed from the green barrier to allow scope for future residential development without compromising the gap between Mynydd Isa and New Brighton. Although the site remains part of the open countryside it is a logical location for growth because the site has strong and defensible boundaries. The release of the site from the green barrier will not result in the coalescence of New Brighton and Mynydd Isa as there is still open land on the between the A494(T) and the edge of Mynydd isa. Clwyd Powys Archaeological Trust have advised that the northern part of the site is crossed by the line of Wat's Dyke, development within this area may need to be avoided or may require excavation as part of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				positive and negative scores and indeed the conclusions drawn in relation to both are comparable. We do not agree the allocated site is any more preferable than site NEW003.		any development. It is therefore unlikely that the whole of this site can easily be developed. Although the site is considered suitable in principle as a housing allocation, it is sequentially less preferable compared to the site at Cae Isa which is located in the middle of the village where the UDP Inspector drew back the green barrier and included part of the site within the settlement boundary. The UDP Inspector's comments below highlight the preferable location of Cae Isa compared to NEW003. The northernmost field parcel within the objection site was submitted as an omission site for housing as part of the UDP, but it was not recommended favorably by the Inspector, who stated that; "The objection site has an area of almost 2ha which if it was allocated for housing would be likely to yield up to 60 dwellings. This would result in a further 18% or so growth which together with commitments and HSG1(47) would be more than the indicative level of the category A settlements. Whilst there may be a wide range of facilities within a 0.8-1.2km radius, for the most part distances would be further because of the road pattern and the physical barrier of the A494(T) bypass. Moreover because of the characteristics of the A5119, particularly its width and the proximity of houses to the road between the A494(T) roundabout and the crossroads in

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						the village, a pavement would more than likely to have to be to the north of the A5119 meaning walkers from the village would have to cross a busy road twice to use most of these facilities. 11.131.8. The objection site is rectangular in shape and fronts the A5119 on its northern side. It is at present grassed fields and seen as part of the open countryside. Because of its topography and proximity to the main road, it is highly prominent. Moreover where the site does abut houses, on its shorter western boundary, it is the rear of properties and development of the objection site would be a self contained entity with no vehicular link. Development on it would be seen as a significant encroachment into the rural area. It seems to me that together these factors illustrate the poor relationship both physically and visually with the main body of the village. 11.131.9. In addition, if the allocation were to go ahead, it would leave a substantial area of open land to the south which would in effect be enclosed on 3 sides by housing and the fourth by the bypass. There would therefore be likely to be pressure for further development on this land. 11.131.10. Finally the problems I have identified with the objection site mean that I do not consider it to be preferable to HSG1(47) which is part brownfield and to

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						my mind better related to the facilities in the village despite its location further from the crossroads. Whilst I recommend that HSG1(48) be deleted, I have nevertheless looked at it in comparison to the objection site and notwithstanding its constraints, it seems to me that because of its proximity to the centre of the village and its more secluded location, that it could be seen as more of a rounding off of the settlement and not an extension to it. Highway matters appear to be capable of resolution, particularly for pedestrians. The combination of these factors lead me to conclude that the omission site should not be allocated for housing'. The Council has acknowledged that the site may have future development potential and this is demonstrated by the drawing back of the green barrier to the line of the A494(T). It is also acknowledged that the inclusion of the whole site addresses the Inspectors comments about pedestrian linkages by facilitating pedestrian access onto Bryn y Baal Road. The Council are of the view that the allocated site at Cae Isa offers a more sustainable location in the centre of the village which is partly within the settlement boundary. The objector has provided their own assessment of the candidate site against the allocated site at Cae Isa, however this fails to demonstrate that candidate site

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						NEW001/003/009/011 performs sequentially higher than the allocated site. The Council have assessed all of the candidate sites and concludes that the development of the allocated site at Cae Isa ahead of candidate site NEW001/003/009/011 provides a more logical extension to the built form of the settlement, and is more preferable due to its central location within the village. It is not the purpose of the development plan to simply feed developer's long term land banks and if the site has future merit it can be considered as part of a plan review. The allocation at Cae Isa will provide 105 new dwellings for New Brighton, in addition there is a commitment of 23 dwellings on the former New Brighton Service Station, there has also been 13 units completed at Rock Bank. This will provide sufficient growth for the settlement therefore an additional site in New Brighton is not needed. Furthermore, development is taking place only a short distance away at Bryn y Baal where MacBryde Homes are developing a scheme for 59 dwellings. In conclusion, it is considered that sufficient provision for growth has been in New Brighton in the Plan and that further allocation, particularly given the size of the site is not necessary or appropriate.
1265	HN1: New Housing	PEN005 Land South of Rhos Road,	Object	- The, supposedly, 15-year Plan already has only just over 10 years	Allocate site PEN005	Noted. Outline planning permission was granted on appeal on 27/04/20 for an over 55's retirement development comprising

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development Proposals	Penyffordd, Nr Chester		remaining and even if the above timetable goes to plan it will only have 8.5 years remaining and, possibly even less, if there is further delay. Consequently, there should be an extension to the Plan period [Policy STR1 refers]. - The overall housing land figure does not provide for a sufficient amount of development [Policy STR1 refers]. - it is disputed that a sufficient range and choice of sites are provided for in the Plan - further releases of sites are necessary. - There is an over-reliance on just two large-scale Key Strategic Sites [Policies STR3A and STR3B refer] in that there exists some uncertainty in the delivery over the Plan Period. - There is an insufficient number of other		apartments. The Design and Access Statement specifies 37 units. The development of the site can clearly now proceed separate to the LDP preparation. At present, given that the Plans Housing Balance Sheet has a date of April 2018, it is not possible for the site to be included as a commitment. The appeal decision was dated 27/04/20 so will not be picked up in the April 2020 Housing Land Monitoring Study and will not feature until the April 2021 Study. Although not formally at present recognized in the Plans Housing Balance Sheet, clearly this site will add, in effect, to the Plans overall flexibility in the form of a large windfall site.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				allocations [Policy HN1 refers]. It is considered that a significant number of [deliverable] small to medium sites are required to be allocated in order to ensure that the Plan can deliver upon housing targets [thereby creating a deliverable, effective, and 'sound' Plan]. - There is an over-reliance on the total Windfall [Policies STR2 and STR11 refer] estimate of 1320. Windfall sites are a finite resource. There needs to be a subsequent reduction in the Windfall estimate. - There is a need for minor extensions to settlement limits [Policy PC1] to increase a significant number of (deliverable) Windfall sites to meet the shortfall identified and to ensure that the Deposit LDP can deliver upon housing targets - thereby creating a deliverable, effective,		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				and 'sound' Plan. - The flexible allowance of 1000 units [14.4%] is insufficient in light of the above shortcomings and should be increased to 20%. - The land south of Rhos Road, Penyffordd should be accepted as an additional allocation for housing.		
1266	HN1: New Housing Development Proposals	TREU001 Land adjacent to Bryn Tirion, Ffordd Y Rhos, Treuddyn, Flintshire	Object	General: Include new housing allocation on land adjacent to Bryn Tirion, Ffordd Y Rhos, Treuddyn in the list of Tier 3: Sustainable Village Allocations.	Allocate site are part of LDP	Not accepted. General: Treuddyn is a small village located some 9 km (by road) from Mold. The village is in a relatively isolated and undeveloped part of the County and benefits from an attractive rural setting. The built form of the village is relatively easily defined. The proposed site is approximately 1.8ha, comprising a roughly square shaped parcel of land located adjacent to Bryn Tirion immediately north-west of Ffordd Y Rhos which is a main route through Treuddyn. The proposal is sought for approximately up to 40 units.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The overall housing land figure does not provide for a sufficient amount of development [Policy STR1 refers]. There is an insufficient number of other allocations [Policy HN1 refers]. It is considered that a significant number of [deliverable] small to medium sites are required to be allocated in order to ensure that the Plan can deliver upon housing targets [thereby creating a deliverable, effective, and 'sound' Plan]. It is disputed that a sufficient range and choice of sites are provided for in the Plan further releases of sites are necessary. There is an over-reliance on just two large-scale Key Strategic Sites [Policies STR3A and STR3B refer] in that there exists some uncertainty in the		The Council has provided a robust evidence base to support the policies and proposals in the deposit LDP and to demonstrate the deliverability of the sites in the plan, and its overall soundness. The Plan's housing requirement figure is higher than Welsh Government projections, as it is based on a growth led strategy. The objector does not specify how much higher the housing requirement should be. The Housing Balance Sheet demonstrates how the Plan can meet its housing requirement figure through various sources of 'supply' and part of this is to incorporate a flexibility allowance. The 'over-allocation' element is in effect the 'flexibility' allowance. The LDP does not seek to apportion development spatially in an even manner across the County. Rather, it seeks to distribute growth towards the most sustainable settlements and sites in accordance with the settlement hierarchy which is embodied in policy STR2. The Plan has provided a good mix of strategic sites in STR3 and further allocations in HN1. The allocations are considered to be sustainable, viable and deliverable in accordance with the trajectory set out in the Housing land Supply background paper. The LDP aims to steer development within the first three tiers, within a hierarchy system

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				delivery over the Plan Period. There is an over-reliance on the total Windfall [Policies STR2 and STR11 refer] estimate of 1320. Windfall sites are a finite resource. There needs to be a subsequent reduction in the Windfall estimate. There is a need for minor extensions to settlement limits [Policy PC1] to increase a significant number of (deliverable) Windfall sites to meet the shortfall identified and to ensure that the Deposit LDP can deliver upon housing targets - thereby creating a deliverable, effective, and 'sound' Plan. The flexible allowance of 1000 units [14.4%] is insufficient in light of the above shortcomings and should be increased to 20%. Designation:		whereby the plan seeks to distribute development in a sustainable way having regards for the settlement hierarchy and by identifying the most sustainable settlements and sites. In this case Tier 3 settlements will be the location for housing that are related to the scale, character and role of the settlement in this case small scale development. The spatial strategy is not based on every settlement having an allocation. Growth can also occur through completions, commitments, windfalls and small scale exceptions schemes. In the case of Treuddyn, the UDP period saw considerable growth with 76 completions over the 15 year period amounting to 19% which was in excess of the 8-15% indicative growth band. It is not considered necessary for a housing allocation to be made in this Plan especially when provision for development exists in nearby Coedtalon / Pontybodkin and Leeswood. The Plan has sought to provide a balanced housing land supply comprising two strategic mixed use sites and 11 housing allocations in sustainable locations. The two strategic sites at Northern Gateway and Warren Hall both form part of the North Wales Growth Deal. The Northern gateway site has now seen the granting of reserved matters approvals on both housing and employment development

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Specific extension of the settlement boundary to Treuddyn for the inclusion of a new [alternative] site on land adjacent to Bryn Tirion, Ffordd y Rhos, Treuddyn Site would not be an extension into the open countryside but would be a logical expansion / 'rounding off' to the village, well integrated to the existing settlement pattern. Services: It is considered that the site relates well to the existing pattern of development in the area and lies in a sustainable location on the edge of the settlement of Treuddyn, within easy walking distance to bus routes and community facilities and would offer a firm prospect of delivery.		and one developer Countryside Properties has commenced construction on site. In relation to the Warren Hall strategic site this is in Welsh Government ownership and a significant amount of background work has and continues to be done to evidence and justify the developability and delivery of this site. This is assisted by the site's priority status as part of the North Wales Growth deal where significant funding is available to provide the necessary infrastructure to prime the delivery of development on this site. In addition, the housing element of this site will be fed into the Welsh Government project to accelerate the provision of affordable housing on sites in its ownership working in conjunction with Registered Social Landlords to facilitate this. This provides added certainty of the delivery of the housing element of this mixed use site, and the contribution this makes to the overall housing requirement of the Plan. Given the progress being made on the Northern gateway site and the fact that the Warren Hall site is for only 300 houses, it is not considered that the Plan's housing provision is over-reliant on strategic sites. No objection along these lines has been made by Welsh Government. The Council does not accept that too much reliance is placed on the contribution of large and small windfall sites in the LDP housing

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				The village is also served by regular bus services including Bus Route 40 which connects to Mold and Wrexham and Route DB1 linking the Village to Mold and Chester. A part-time GP Surgery is based in the village. There are a number of pharmacies and other GP practices offering a full-time service within the vicinity, the closest being approx. 2miles away in Mold. Highways: There is an existing gated access to the Representation Site, leading directly off Ffordd Y Rhos. Viability and Delivery: There are no social, economic or physical constraints which will affect the development of the site within the Deposit LDP plan period. In putting forward the		land Council response supply. With reference to the background evidence provided to support the LDP, the allowances made for small and windfall sites are set at 50% of the 18 year trend for development in these categories and therefore take a modest and conservative approach to the future delivery from these sources. BP10 (section 2.5) explains that an analysis of past trends has been carried out and this is detailed in Section 4.3 of the Flintshire Urban Capacity Study (June 2019) undertaken by Arcadis. This approach accords with the latest National guidance as contained in Development Plans Manual Edition 3: Consultation Draft (June2019). The Draft Manual advises (para. 5.63) that 'an urban capacity study can inform the identification of site allocations and assist to demonstrate delivery of windfall allowance in the Plan'. Both the Arcadis Study and BP10 explain that large and small windfall site contributions used in the Plan are significantly lower than the level of past completions achieved from these sources. It is also the case that the representative body of the development industry, the HBF, agree that the allowances are appropriate. This confirms that there is a realistic future supply of both potential small and windfall sites to support the assumptions made. No objection has been made by Welsh Government.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Representation Site, the following factors demonstrating its deliverability have been considered: Site ownership The Representation Site is in the ownership of promoters of the site. Restrictive covenants There are no restrictive covenants affecting the development of the site. Other land uses and users on the site There are no other land uses or users on the site. Need for infrastructure to support the development There are no infrastructure constraints, the site can be served by existing utilities infrastructure. Remediation and Issues relating to Site Viability		As discussed above the future supply of windfall sites shows a reasonable and healthy potential supply within existing settlements to support the allowances made. Therefore there is no need to further alter settlement boundaries and extend any areas to allow more land to be developed. The Council's flexibility allowance of 14.4% has already exceeded the minimum 10% required by Welsh Government in the Development Plans Manual 3. Designation: The site sits between a short ribbon of development and a detached dwelling. However, the site is separated from the ribbon by a narrow tarmac lane. The bulk of built development in the settlement lies to the south of Ffordd y Rhos. Along the northern side of Ffordd y Rhos the pattern of development is that of ribbon development. The site forms part of a larger open gap between Jerusalem Chapel to the south and Ebeneezer Chapel to the north, with this gap interrupted only by a single dwelling Bryntirion. The site clearly forms part of the open countryside setting to the settlement. The development of the site would result in a large ribbon / block of land which would relate poorly to the built form and pattern of development in Treuddyn. Development

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				There are no contamination / remediation issues that will limit the viability of the development.		would result in harm to the locality and potentially to the grade II two listed buildings adjacent to the site Jerusalem Chapel and former school room. Furthermore, 130m north-west of the site is the Scheduled Monument 'Bryntirion Round Barrow'. Development at the large greenfield site could potentially alter views from this Scheduled Monument and the character of its surrounding area. The southern part of the site was promoted as an omission site in the UDP and the Inspector commented '9926 – The objection site is a frontage strip of land to the west of Ffordd-y-Rhos. Whilst there is development in depth to the east of the road, to the west the site forms part of a large gap between a short stretch of ribbon development to the south and a longer run to the north up to the cross roads with Ffordd Carreg-y-Llech. The settlement already has firm defensible boundaries in this vicinity which would not be improved by inclusion of part of a field. The land appears to be part of the open countryside and I see no reason in the present policy context why it should be included within the settlement boundary and houses erected on it'. Services: Although it is considered that the site is located within 400m from an adequate regular bus service. The proposed site is located

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						approximately 800m to convenience store / post office. Therefore it is considered that there are an insufficient amount of services located in close proximity. Highways: The Council's highways development management team have been consulted and it is considered that access can be provided. Adequate visibility is available; footway and street lighting improvements required. However the submission provides no detail as to the proposed access arrangements. Other constraints which have arisen from stakeholders consultation include: Ecology: The site on one side is bounded by trees and it is considered that the site may affect priority or protected species, as it is greenfield (e.g. breeding birds) and contains existing structures (e.g. bats). Site is a large (>0.4ha) greenfield site and development here could adversely affect habitat connectivity due to the loss of trees. Development should seek to preserve tree canopy as much as feasible, including GI delineating the site perimeter. GI should be incorporated into the development in order to achieve biodiversity net gains, with a focus on preserving or enhancing local habitat

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						connectivity. Appropriate ecological surveys of the site should be completed prior to development taking place. Site would result in the loss of a greenfield site.. Development here could have an adverse effect on character and result in the loss of important features such as Green Infrastructure. Additionally, the site is bounded by trees on one site and no ecological survey has been submitted. The objector has not provided ecological survey to establish the impact the development may have on the ecology of the area and any mitigation procedures. Viability and Delivery: Despite the objector's statement that the site is deliverable no background and technical studies have been submitted which demonstrate that the site is viable and deliverable. There are no background studies or technical reports provided to illustrate how the development may overcome the above mentioned constraints. Additionally, the objector has not provided an indicative layout or even a masterplan type outline for the site in order for the Council to properly assess impacts. A key principle in PPW is that allocations are viable and deliverable yet the objection

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						provides no assurances or evidence that a satisfactory access can be provided. Public protection advise that a Land Contamination Assessment is required to identify if there are any metals and chemicals within the soil. Additionally, the northern part of the site is within a Coal Authority Standing Advice Area. Therefore, it is considered that development of this prominent site would result in residential development which would be poorly related to existing development and visually damaging to open countryside. There is also uncertainty relating to a number of constraints, specifically regarding ecology and potential impact on listed buildings as well as potential; contamination. In conclusion, the site is not considered to be necessary or appropriate as an allocation.
1267	HN1: New Housing Development Proposals	NH008/020 Wellfield Farm, Northop Hall	Object	Our Client has a number of land interests across Flintshire all of which are considered to be suitable, including land at Wellfield Farm, Northop Hall, which is identified as a Sustainable Village in the Deposit Plan. It is our Client's consideration that their	Allocation of additional residential sites to increase supply, including candidate site NH008/02 Wellfield Farm Northop Hall.	Not accepted. Northop Hall is a tier 3 settlement where housing development should be related to the scale, character and role of the settlement. Allocations have not been made in all settlements as the LDP does not seek to apportion development spatially by the use of numerical methods or growth bands. The plan seeks to distribute growth in a sustainable manner having regard to the settlement hierarchy. As part of this approach it is necessary to have regard to the character and role of each settlement and the circumstances prevailing at the present time.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				land interests at Northop Hall should be allocated for housing in the Flintshire LDP for up to 140 dwellings. The release and allocation of this Site would not result in over-development in Northop Hall. Site Designation, use & Location - The Site is designated as Open Countryside on the Flintshire UDP Proposals Map. It is not subject to any other statutory designations. It is one of few opportunities for housing growth around Northop Hall in view of the Green Barrier constraints to the north-east/east of the settlement, as well as topographical/landscape constraints on the land to the north of the settlement. The gross Site area extends to 6.11 hectares. The Site comprises greenfield land. The current use of		In this context it does not mean that, in the absence of an allocation, Northop Hall will not experience growth during the plan period, the village has already seen the completion of 85 dwellings in the early years of the LDP (2015-2018) and further growth is planned on the committed site at Cae Eithin for a further 9 dwellings. This will provide sufficient growth for the settlement over the plan period. The site could accommodate almost 200 dwellings, it is the Council's view that this would not be appropriate for the scale, character and role of the settlement given the growth it has already accommodated. Given this is a relatively large site, the lack of sufficient detail with the somewhat superficial assessment presented with the objection has highlighted the lack of supporting evidence for this proposal. This large square shaped site would result in the predicted loss of 6.43ha of grade 3a agricultural land situated on the western edge of the settlement. It lies to the south of the B5125 Village road and extends in a southerly direction where it abuts the A55 expressway. Wellfield farmhouse and its curtilage is situated on the northern edge of the site, whilst the remainder consists of four fields. The southern edge of the site is characterised by a mature woodland and a brook. It forms part of a swathe of land extending from the

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				the Site is agricultural. The Site is gently sloping in nature from its northern boundary down to the A55. There are existing trees and hedgerows at the perimeter of the Site. There are no Tree Preservation Orders within or at the perimeter of the Site. The Site is located at the edge of the large settlement of Northop Hall. In respect of its surroundings, to the north and east of the Site lies existing residential development (beyond the B5125 and Brookside respectively as 30mph roads). The A55 dual-carriageway forms the southern boundary, with countryside to the east beyond the existing Wellfield Farm and woodland (which provide a physical and visual separation between the Site and the wider countryside). By virtue of		western edge of Northop Hall, which comprises a series of fields of varying sizes. Highways Development Management Officers have stated that the site is suitable subject to a Transport Assessment as there is potential access from either Village Road (may require re-location of the bus stop) or Brookside. Improved junction visibility from Brookside across the corner of the site would be required. However, the objector has not provided a Transport Assessment to evidence that the site can be satisfactorily accessed or that the traffic it would generate could be accommodated on the network. Noted. The Council's Strategic Flood Consequence Assessment identifies this site as 'red' on account of part of the two southern field parcels being within a C2 area of flood risk, where in principle highly vulnerable development such as housing should not take place. The objector has not submitted a flood consequence assessment in support of this site therefore the Council cannot fully assess the implications of highly vulnerable development on this site. The objector has not submitted an ecological survey, therefore the impact cannot be fully assessed.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				its surroundings and boundaries, the Site is generally well-contained and a logical extension to the existing built-up area of Northop Hall. Accessibility - Access to the Site, both vehicular and pedestrian, can be secured from the B5125 with appropriate visibility splays achievable. The access road would be 5.5m in width, with 2m internal footways through the Site. A further pedestrian connection can be provided to Brookside to the east of the Site. The internal footways can provide for the safe movement of pedestrians, and to encourage non-car travel in view of the Site's locational sustainability and access to public transport services. The Site is sustainably located benefiting from excellent access to local primary education, shops and services, open space and recreation,		The development of the site would result in the predicted loss of 6.43ha of grade 3a agricultural land. The site is well screened from the A55 by the strip of woodland at the bottom of the site but is very visible from village road, with extensive views across the site to wider open countryside. The development of this site would be harmful to this area of open countryside, and it is unlikely that a landscaping scheme would be sufficient to mitigate against this. The objector states that the development of the site would result in the loss of trees and hedgerows which would increase the negative visual impact of the development. A planning application (060292) for 24 dwellings was recently submitted on land adjacent to the objector's site (Plas Ifan Hotel). The application was refused and is currently pending appeal. If this appeal is granted then the scale of the two adjoining sites would have a significant impact upon the village, particularly given the level of growth Northop Hall has already seen, which would be harmful to the character and role of this tier 3 settlement. The objector does not present sufficient justification that candidate site NH008/020 should be allocated within the plan. The development of this site in its entirety would

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				and bus services all of which are within an acceptable walking distance. Highways - The development of the Site would have a negligible impact on the safety and operation of the local highway network. There are no highway or road safety reasons why the Site could not be developed. A policy compliant quantum of car parking would be provided within the Site. Noise - The proposed development of the Site would be designed such that it would not result in unacceptable living conditions for any future residents, particularly those dwellings located towards the southern edge of the Site in closest proximity to the A55 Dual Carriageway. This would include the use of measures such as double glazing, windows with closed and trickle		represent a very large extension to the settlement by taking all of the land between the B5125 Village Road and the A55. In the light of development at the Cae Eithin site taking place both during the UDP plan period, and the early part of the LDP plan period, it is not considered that a site of this size is not necessary or appropriate for Northop Hall at this time, particularly as there are uncertainties regarding vehicular access and flood risk. In conclusion, growth has occurred in Northop Hall and it is not necessary or appropriate to make an allocation, particularly such a large site and where there are constraints which have not been addressed.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				ventilation, and a solid wall/proprietary timber acoustic fence(s) where necessary. Trees & Hedgerows - The development of the Site would require the loss of some existing landscape features in the forms of trees and hedgerows. Any loss would be kept to a minimum; replacement tree and hedgerow planting could be implemented across the Site as part of a comprehensive scheme of soft landscaping. Flood Risk & Drainage - The majority of the Site lies within Flood Zone 1. However, the southern part of the Site does lies in Flood Zone C2. Accordingly, no built development would be located in that part of the Site. Sustainable Urban Drainage Systems would be utilised across the Site to manage surface water run-off, and would		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				not exacerbate flood-risk elsewhere. Foul water would be managed by connecting into the existing public foul sewer along the B5125, together with a pumping station and rising main. Ecology - The development of the Site would not give rise to any significant adverse ecological impact; there would be the potential to employ mitigation measures where necessary some of which could deliver net gains in biodiversity. Landscape & Visual Impact - The Landscape Impact associated with the development of the Site would be Moderate to Slight Adverse at most. The Visual Impacts associated with the development of the Site would be Moderate to Moderate to Slight adverse post-construction, and provided that a robust		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				landscape scheme is implemented across the Site and once it becomes established Deliverability - The Site is being actively promoted by MacBryde Homes. As a leading housebuilder in North Wales, MacBryde Homes would advance a detailed planning application with a view to delivering in the region of 50 dwellings per annum on the Site, subject to market conditions. Accordingly, the Site is deliverable in its entirety within five years. There are no land ownership/land assembly constraints which would preclude its development, and MacBryde Homes has entered into a formal Option Agreement with the landowners to purchase the Site on the successful grant of planning permission.		
1268	HN1: New Housing	DRU009 Woodside	Object	Our Client has land interests on land at	Allocate additional land for housing,	Noted. A recent application ref 058212 for the demolition of 1 and 2 Woodside Cottages and

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development Proposals	Cottages, Drury		Woodside Cottages in Drury, which is identified as a Sustainable Village in the Deposit Plan. The Site is located within the settlement boundary of Drury as shown on the Flintshire UDP Proposals Map. It is not subject to any other designations. The Site is located within the settlement boundary of Drury. It is surrounded by existing residential dwellings to the north, south and west, with agricultural land (Green Barrier) located to the east beyond a further existing residential property. By virtue of its surroundings and boundaries, the Site is well-contained and represents a logical development opportunity. Access to the Site, both vehicular and pedestrian, can be secured from Peny-y-Coed Road with appropriate visibility splays achievable. The access road would be	including candidate site DRU009 Woodside Cottages, Drury.	erection of 23 new dwellings, on the candidate site and land to the north of it, was refused by Planning Committee and subsequently allowed on appeal. The site cannot be included as a housing commitment as planning permission was granted after the base date of 01/04/18 for the Plans housing balance sheet. The site therefore represents a windfall site and will form part of the Plans overall housing land supply for the Plan period. The site has planning permission and can therefore be developed, without it being allocated in the Plan.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				5.5m in width, with 2m internal footways through the Site. The internal footways can provide for the safe movement of pedestrians, and to encourage non-car travel in view of the The Site is sustainably located benefiting from good access to local primary education, local services and public transport all of which are within an acceptable walking distance. The development of the Site would have a negligible impact on the safety and operation of the local highway network. There are no highway or road safety reasons why the Site could not be developed. A policy compliant quantum of car parking would be provided within the Site. The development of the Site would require the loss of some existing landscape features in the forms of trees and

Foul water would be managed by connecting into the existing public foul sewer where possible. The development of the Site would not give rise to any significant adverse ecological impact; there would be the potential to employ mitigation measures where necessary some of which could deliver net gains in biodiversity. In view of the above, it is		

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				our Client's consideration that their land interests at Drury should be allocated for housing in the Flintshire LDP for up to 24 dwellings. The release and allocation of this Site would not result in over-development in Drury.		
1269	HN1: New Housing Development Proposals	CON 096AS Kelsterton Farm	Object	We consider that an allocation for mixed-use development on the owners land would help to align the ambitions of the Deposit Plan with the Welsh Government's Draft National Development Framework 2020-2040 Spatial Strategy for Wales which identifies Wrexham and Deeside as a 'National Growth Area' Major developments such as the A494(T)/A55(T)/A548 Northop to Shotwick Interchange Improvement scheme are ensuring that Connah's Quay remains a fundamental part of the North Wales Economy.	Include Kelsterton Farm allocation within LDP.	Not accepted. The objector proposes a mixed use development on 40ha of land on the north western edge of Connahs Quay. The objection is lacking in any background or technical documentation to demonstrate that it is appropriate, viable, free from constraint and deliverable. The submission is also lacking in any detail as to the quantums of development proposed other than a 'Proposed Uses layout Map' which shows broad locations for housing, employment and roadside. In the context of the importance in PPW10 and Development Plan Manual 3, of development plan proposals being evidenced in terms of viability and deliverability, the objection is lacking any evidenced that it is necessary, appropriate, viable or deliverable. There is also no requirement in PPW10 for sites to be 'safeguarded' for future uses. The Plan has sought to incorporate a growth based employment and housing strategy and the housing element is considerably in excess of the Welsh Government projections. No objection has been made to the level of

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				• Inevitably this will lead to a major change in the ability of the land required to perform its role as green barrier effectively. We consider that careful landscaping around the site would minimise the potential impact of such development on the remaining green barrier. • New Kelsterton junction will provide excellent access to Connah's Quay and the proposed road. Furthermore the proximity to the new Kelsterton junction will provide excellent access to Connah's Quay, Flint and North Wales and will provide opportunities for increased economic development in the immediate area, including residential, employment and roadside uses. • Our view is that this presents a major opportunity to allocate development land for a		growth in the Plan by Welsh Government, who broadly support the Plan's amount and spatial distribution of development and consider that it broadly accords with the draft NDF. The Plan has identified two strategic mixed use sites and a range of other employment and housing locations in sustainable locations. The two strategic sites at Northern Gateway and Warren Hall are both key elements of the North Wales Growth Deal and there is considered to be no need for a further strategic site. Connah's Quay is located in the north east of the County and it is the largest settlement in the Plan Area. Connah's Quay has been classified as a Tier 1 Main Service Centre in the LDP because of its size, role, character and level of services and facilities. The settlement has housing allocations at Highmere Drive and Broad Oak Holding as well as a large Principal Employment Area and is in close proximity to key existing and proposed employment in and around Deeside Industrial Park. There is presently no need for further greenfield employment or housing land in this location. The candidate site is located on the north western edge of Connah's Quay and although the site is adjacent to the existing settlement boundary it is situated within the Flint - Connah's Quay green barrier, GEN4(4) which

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				range of land uses. What remains clear is that planning policy must be able to keep up with this change and we believe that our suggestions outlined above will help contribute to making this happen. • Changes to Green Barrier Policy EN11 are essential as currently it contradicts the Welsh Government's National Development Framework and our recommended changes to Policy STR5 will ensure that the area is adequately provisioned for the increased HGV traffic that future improvements at Holyhead Port will bring.		has been reviewed as part of the LDP process and found to meet the objectives of PPW. The objectors comments in respect of the green barrier are addressed in respect of policy EN11 (id 555). The site forms part of a large swathe of open countryside to the north west of the settlement. It is considered that the site is better related to the open countryside than to the form and pattern of development within the settlement of Connah's Quay. The inclusion of this site within the settlement boundary, or its allocation would result in an illogically drawn settlement boundary, a significant incursion into open countryside and a scale of development which would be unsustainable particularly when there are sequentially preferable sites within the settlement boundary to cater for growth. The developer puts forward the case that the Welsh Government Red Route provides a context for the proposed allocation. However only broad line of the route is safeguarded in the Deposit LDP and there is no firm indication of timescales for the route to the completed, particularly as it still has to go through a public inquiry. The consideration of large scale development proposals is clearly premature until such time as there is more certainty as to the Red Route in terms of alignment, design and timescales. The proposed development is more appropriately

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						considered in a review of the LDP, following adoption. The Welsh Government Predictive Agricultural Land Classification Map shows the site as being grade 3a which represents Best and Most Versatile agricultural land. In the context of advice in PPW10 about the protection of BMV the objection is lacking in a supporting agricultural land survey to demonstrate the actual grade of agricultural land. Given the size of the site and the number of hedgerows and mature trees as well as its location adjoining and in close proximity to two wildlife sites, it is disappointing that the objection is not accompanied by an ecological survey. Highways Development Management Officers have been consulted and responded with the following: 'The site is affected by the "Red Route," the preferred route for the Welsh Government A548 road improvement scheme; Although not fully developable, a Transport Assessment is required in order to provide a fully detailed highway response in regard to the remainder of the site. Direct access to the site from the future trunk road or roundabout is unlikely to be practical (the land owner may wish to discuss that with

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Welsh Government. The site is isolated and remote from community facilities although a development of this scale would justify the provision of additional facilities on site. It is important to note that there is no evidence yet that the new road scheme will be delivered within the Plan period'. Given the size of the site and the mixed use nature, it is noted that the objection is not accompanied by a Transport Assessment. In conclusion, it is considered that there is no need for the removal of a significant portion of a Green Barrier between two of the County's largest settlements and given that the Plan makes provision for growth at both a strategic and local level. The allocation of a large mixed use development on the back of a major new road, for which there is a lack of certainty in terms of detail and timing, combined with the lack of any technical evidence to support the objection, is considered to be premature and inappropriate. Therefore the proposed site should not be allocated within the LDP.

				extending to 3.4 ha, for a residential allocation (under Policy 43 – HN1). It is submitted that the delivery of the some of the proposed residential allocations in the Deposit LDP is questioned on a number of grounds, details of which would be examined in more detail at the Examination. Planning Policy Wales (10th Edition) makes it very clear that the deliverability of sites is paramount in ensuring the soundness of a Local Development Plan and the associated allocation of sites for residential development. It is submitted that the Little Mountain site is 100% deliverable, free from any major constraints and, most importantly, capable of early delivery. • Change to Proposals Map • Addition (or substitution of alternative allocated		also referenced the sites allocation under policy HN1. The Plan has met its housing requirement figure through a variety of sources of supply and this includes a suite of housing allocations under policy HSG1. The Plan's housing allocations are all in sustainable locations and backed up by background and technical studies and are considered to be available, viable and deliverable. The objector's assertion that the objection site should be substituted for one of the existing allocations or included as an additional allocation is not supported, as no evidence is provided as to which sites are questioned in terms of delivery, nor the reasons why. The objection was not accompanied by any technical studies to demonstrate that the site is suitable and appropriate to be allocated, particularly given the sites sensitive location in respect of the Buckley Claypits and Commons SAC. The objection site is predominantly included within the settlement boundary in the adopted UDP, with the exception of the northern part of the objection site. The Council is aware that a pre-application enquiry has been submitted in respect of the site and it is also noted that the objector has now submitted an outline planning application (061507) for the erection of 94 dwellings.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				site if housing numbers do not allow additional sites) of site as residential allocation under Policy 43 – H1. It is submitted that the allocation of the site for residential purposes would have the ability to meet a number of the aims and objectives of national policy as set in the above documents as follows: • To provide a greater choice for people over the type of housing and the location within which they live. • To provide appropriate edge of settlement developments with a mix of affordable and market housing. • To locate development where it is easily accessible by public transport/walking/ cycling		The Plan includes an allowance for windfall sites as part of its Housing Balance Sheet. The site is considered to be more appropriately addressed in the context of the planning application, as part of which, detailed technical and background evidence can be assessed. The proposals can be assessed against the framework of policies in the UDP including policy PE6 which sets out texts in respect of the loss of employment land and buildings. This allows the proposer to deliver on the stated intention that this site is capable of early housing delivery which, by definition, can be sooner than the adoption date for the LDP, as indicated by the now submitted planning application. Consideration of the application will allow the principle of the reuse of this former employment site for housing to be assessed and determined as a windfall contribution towards housing supply. In conclusion it is considered that broadly speaking the site is in a sustainable location and represents brownfield land and is predominantly within the existing settlement boundary. It is not considered necessary or appropriate for the site to be allocated until appropriate evidence can be provided and assessed in respect of key constraints. It is more appropriately considered as part of the Plan's windfall allowance.

ID	Title	new or resubmitted site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				to local facilities. • To assimilate development into the landscape through appropriate mitigation measures. • To enhance biodiversity. • To make an efficient use of land through the provision of a mix of house types at a density appropriate to the surrounding locality and character of the area. • The site represents a sustainable location and is well related to wider area containing a number of local service centres and extensive employment sources.		

Policies HN2 to HN6

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
429	HN2: Density and Mix of Development	Support	support the caveat to the density policy relating to site constraints and harm to character of the site and surroundings.		The Council welcome your support for Policy HN2 and the aim to provide at least 30 dwellings per hectare.
598	HN2: Density and Mix of Development	Support	SUPPORTS to Policy HN2 with particular reference to the exception criteria contained within the policy which set out circumstances where development below 30 dwellings per hectare will be permitted.		The Council welcome your support for Policy HN2 and the aim to provide at least 30 dwellings per hectare.
647	HN2: Density and Mix of Development	Support	Policy HN2 sets out the required density for new developments and the requirement to include for a mix of housing tenure to maximise land use and ensure development positively contributes to the socially inclusive communities. TW broadly supports the principles set out in Policy HN2 in relation to development density and mix; and acknowledges the Council's efforts to ensure the efficient use of land. However, as currently worded, the Policy is unclear whether this density applies to the net developable or gross areas of sites. In the case of large-scale developments, consideration needs to be given to the provision of infrastructure and how this might impact on development densities. Approximately 60-70% of medium to large scale sites are developable depending on infrastructure requirement; this must be factored in when calculating the development densities of	Recommended Change TW recommends that the Council provides clarity on whether the density applies to the net developable or gross area of the site. the Policy is unclear whether this density applies to the net developable or gross areas of sites. In the case of large-scale developments, consideration needs to be given to the provision of infrastructure and how this might	Noted. Whilst the objector queries whether 30 dph is a gross or net developable area, the written statement does clarify this. With reference to paragraph 11.5 of the reasoned justification to policy HN2, the plan states that "On all sites of 10 units or more a general minimum net housing density of 30 dwellings per hectare is required but it is acknowledged that individual circumstances will vary according to the site location and the character of the surrounding area". The specific part highlighted confirms the emphasis on density being assumed as a "net minimum", which in turn reflects the Council's aim of ensuring compliance with relevant principles in PPW10. These principles are key threads throughout PPW10 and in relation to density, one of the national place making outcomes is 'Making Best Use of Resources'. This states very clearly that "the efficient use of resources, including land, underpins sustainable development"[the Council's emphasis

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			sites. Policy HN2 states that new developments will be expected to provide a mix of housing unit types and tenures to meet the needs of the borough. TW acknowledges the importance of delivering a wide choice of high-quality homes and the need to widen opportunities for home ownership and create sustainable, inclusive and mixed communities. TW therefore supports the provisions of the Policy which requires new developments to deliver a mix of housing to meet local demand. Tests of Soundness TW considers the Policy to be sound.	impact on development densities. Approximately 60-70% of medium to large scale sites are developable depending on infrastructure requirement; this must be factored in when calculating the development densities of sites.	in bold]. This in turn is compatible with many of the Well-Being Objectives. In terms of density of development and allocating sustainable sites, PPW10 states that "Planning authorities should reassess development sites which are highly accessible to non-car modes and allocate them for travel intensive uses such as offices, shopping, leisure, hospitals and housing of sufficient density to fully utilise their accessibility potential. Sites which are unlikely to be well served by walking, cycling and public transport should not be allocated for development". It then goes on to advise that "Planning authorities must ensure the layout, density and mix of uses of new development support the use of public transport and maximises accessibility potential. In particular, higher densities and mixed-use development should be encouraged in areas highly accessible by public transport". The Council has therefore endeavoured to follow these principles in allocating the most sustainable and accessible housing sites, where the expectation of achieving a net density of 30 dph is therefore not an unreasonable one. This approach is corroborated by evidence from recent reserve matters permissions granted for housing on the Northern Gateway strategic site allocated under policy STR3. Permissions granted to Countryside Homes (300 units) and Keep Moat (120 units) on early phases of the residential elements of the mixed use site, show respective development densities of 38.5 dph and 37 dph respectively, and where the site wide outline

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					permission allowed for a range of residential densities of between 25-40 dph. In this context the Council's expectation of achieving a minimum net density of 30 dph on its sustainable allocations is more than reasonable. In contrast, and in the context of promoting 36 ha of green barrier land as an alternative site, the objector only seeks to provide 580 units relative to this area of land, representing a gross area of just 16 dph. This is hardly an efficient use of land or sustainable development, and does not suggest that their proposed site is a location envisaged by PPW10 that would support the use of public transport and maximize accessibility potential, that could therefore deliver more efficient densities. The challenge for all developers of sites is to provide an appropriate balance and mix of house types and sizes that relate to the site and locational context is targeted at meeting housing needs and is not simply based on maximizing site returns. If the former were achieved then this would make a site compliant with the aims of PPW10, and if not then it would not be sustainable development and should not be allocated.
810	HN2: Density and Mix of Development	Object	Housing Mix. There has to be clear direction on the mix of houses, too many developments are revenue-driven and some control is needed to ensure the correct mix of properties to maintain communities.	Housing Mix. There has to be clear direction on the mix of houses, too many developments are revenue-driven	Not accepted. Under Policy HN2, paragraph 11.6 states "To ensure that mixed and balanced communities are created the Council will expect developers to provide an appropriate mix of dwelling size and type to meet local housing needs, making reference to the evidence within the latest

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				and some control is needed to ensure the correct mix of properties to maintain communities.	Local Housing Market Assessment and avoiding residential schemes that are dominated by larger properties with four or more bedrooms" This will ensure developments achieve a good mix of property type and sizes to cater for all needs and demands.
714	HN2: Density and Mix of Development	Support	Policy HN2: Density and Mix of Development We support the Council's aspiration to achieve a minimum density of 30 dwellings per hectare on new housing sites in order to provide for the efficient use of land. Equally, there will be occasions where site specific considerations (constraints, surroundings etc) necessitate a lower density; accordingly, we welcome the recognition of this within parts a) and b) of the Policy to provide sufficient flexibility. It is noted that paragraph 11.6 refers to the need for more bungalows to cater for the County's older population. Bungalows naturally take up a larger plot area than a standard family house, and as such would impact on the density of a site. This would therefore need to be considered by Officers as part of the development management process on a site-by-site basis. The financial viability of delivering bungalows as part of development proposals is a further consideration. It is noted that no specific housing mix requirements are imposed through this Policy, which we welcome. Instead, there is flexibility for this to be discussed between Applicant's and		The Council welcomes your support for Policy HN2 and the aim to provide at least 30 dwellings per hectare.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
72	HN3: Affordable Housing	Object	Viability Study Allowances - The HBF notes that the document states at para 2.6 'No allowance has been made for ecological factors (bats, newts etc) or other potential site remediation costs, as these will be very site-specific issues. We would suggest that any such matters on specific sites, coming forward for development, would be taken account of in a specific viability test.' However, the same report notes that most allocations are on green field sites where the issues listed above are more likely to encountered. In view of the plan's heavy reliance on green field sites it is considered appropriate to include an allowance for abnormal's associated with such sites. Further PPW10 advises against relying on individual site viability testing as referenced in our comment to the affordable housing policy HN3. PPW10 states at para. 4.2.21 Where up-to-date development plan policies have set out the community benefits expected from development, planning applications which comply with them should be assumed to be viable and it should not be necessary for viability issues to be considered further. It is for either the applicant or the planning authority to demonstrate that particular exceptional circumstances justify the need for a viability assessment at the application stage. This is repeated in the soon to be published WG Development Plan Led Manual 3, the HBF suggests that the		Not accepted. The SHARP programme is principally concerned with the delivery of social housing therefore the requirement for 50% social housing or higher on sites would not be unusual, and is unlikely to cause a delay to the delivery or viability of SHARP sites. SHARP has predominantly used council owned land in the past but may look towards privately owned sites in the future to ensure the supply of affordable homes continues. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. The viability assessment does not make an allowance for abnormal costs as this would be highly speculative, and not appropriate for the majority of sites. Abnormal costs are not the 'norm' therefore if would be unreasonable to apply an element of abnormal costs to all sites. Site specific viability assessments can be carried out as part of the planning application process where abnormal costs can be evidenced and justified. The LHMA shows a requirement for 30% social housing, 30% intermediate rent and 40% low cost home ownership. It had previously grouped social and intermediate rent together showing a need for '60% affordable rent', this has caused some confusion and will be clarified within the affordable housing background paper and viability study ahead of the examination. This change in wording is to assist with clarity and has no impact on the affordable housing calculation

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			fundamental matters of viability should not be left to the individual application stage as suggested in the report. Although flexibility does need to allow for such site by site assessments due to the nature and risks associated with development. Any comments on site mix used? Tenure Mix The Affordable Housing Paper states – 'The tenure split required is 60% affordable rent (of which 60% social and 40% intermediate) and 40% intermediate ownership. The tables below detail the tenure split.' Whereas the Viability study states – 'this assessment has adopted a policy position of 30% social units, 30% intermediate rent and 40% intermediate for sale for the purposes of calculating affordable housing contribution viability…' Paragraph at the end of page 8 and top of page 9 seem to contradict each other/ cause confusing over how and who will deliver the social rented housing.		
324	HN3: Affordable Housing	Object	The affordable housing percentage requirements should not be referred to as a starting point for negotiations as this provides little certainty to developers. The wording within the policy should instead refer to a target. The policy wording in relation to viability should be expanded to allow sufficient flexibility. We support the need for site specific viability testing to reflect the individual nature of development sites and consider that this more appropriate to be undertaken at the	The affordable housing percentage requirements should not be referred to as a starting point for negotiations as this provides little certainty to developers. The wording within the policy should instead refer to a	Partly accepted. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. The policy wording does not mean that the Council will be looking for a higher percentage than those specified within Policy HN3, these are simply the starting position for negotiation where the levels are a maximum and which may reduce downwards subject to detailed viability considerations

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			planning application stage as market conditions change over time We would therefore expect there to be review mechanism provisions within the VA or annual updates to account for this to ensure the delivery of housing over the plan period. Indeed, Background Paper 7, Affordable Housing (para 3.6) notes that the viability assessment of individual allocations within the LDP has not been undertaken and that site specific viability assessments may need to be carried out at the planning application stage where developers feel there are abnormal costs that may impede the delivery of affordable housing on the site. Further to a previous representation made by Savills on behalf of Anwyl Homes, Redrow Homes and MacBryde Homes to the Council's Viability Appraisal by the District Value Services (DVS) in May 2019, Anwyl wish to reiterate that they continue to have strong objections to the proposal for 40% affordable housing within the Mold and Buckley sub market area. A detailed review of the VA could not be fully undertaken by Savills because supporting market information and the full appraisals have not been disclosed by FCC. Based on the details set out within the response by Savills to the Council's Viability Assessment Consultation, we continue to struggle to see how the proposed affordable housing requirements are	target. The policy wording in relation to viability should be expanded to allow sufficient flexibility. We support the need for site specific viability testing to reflect the individual nature of development sites and consider that this more appropriate to be undertaken at the planning application stage as market conditions change over time We would therefore expect there to be review mechanism provisions within the VA or annual updates to account for this to ensure the delivery of housing over the plan period.	supported by clear and robust evidence. If the Inspector considers that further clarity could be added to the wording of the reasoned justification, then the Council would have no objection to the following additional wording being included: "The viability assessment has shown that the affordable housing percentages are the maximum levels of affordable housing that can viably be delivered across each of the housing market areas. Developers are therefore expected to start negotiation from these percentages if they believe there to be significant viability considerations on their particular site. This must be supported by a robust and credible evidence base to sufficiently demonstrate a reduction in the affordable housing delivered by the scheme." The Viability Assessment includes the following statement; "It may be recommended that a simple monitoring of House Price Index movements across Flintshire on a year to year basis is measured against BCIS rates, and that if a divergence of 5% either way against a sample 100 unit scheme residual value in comparison to current levels is detected that this triggers a fuller review. Where the rate changes cancel one another out then a full review may not be required." The Viability assessment will therefore be monitored along these lines. Prior to the start of the Deposit LDP public consultation, the Council shared the DVS viability assessment with local developers and RSLs for

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			viable, particularly in the case of Mold and Buckley and the Central HMA where 40% is suggested and would welcome the opportunity for this issue to be discussed at the future Examination of the Plan.		their initial feedback. Savills produced a response on behalf of Anwyl, Redrow and MacBryde Homes. The response from Savills criticized the availability of market information within the study in order for them to conduct their own appraisals. The DVS is an independent consultant with extensive experience of conducting viability assessments using robust and up to date evidence. The evidence used within the study is clearly explained throughout the DVS report. Savills have been free to provide their own data to substantiate their concerns, and themselves fully explain and justify their approach. Whilst the objector states that 40% is not viable in the Mold and Buckley sub market area they have not explained to the Council why this is the case, nor have they identified an affordable housing figure that they consider to be viable.
350	HN3: Affordable Housing	Support	It is not clear what is meant by "Affordable Housing contributions" Are the affordable home to be built on the same site ? and represent a percentage of the total site development? My view is that the affordable houses as part of a private developer site should be 30% of the development built on the same site where the building of 20 properties or more are proposed to be built. Subsequent Applications on development sites must count toward the overall threshold (20) for affordable housing. This is to prevent developers for example if the threshold was 20 to have 2 x applications for 19	My view is that the affordable houses as part of a private developer site should be 30% of the development built on the same site where the building of 20 properties or more are proposed to be built. Subsequent Applications on development sites	Noted. All sites with 10 or more dwellings are expected to provide the affordable dwellings on site in the first instance. In exceptional circumstances the Authority will consider permitting the off-site provision of affordable housing, which must be clearly justified with supporting evidence. Policy HN3 resists applications to deliberately phase sites to avoid meeting the threshold of 10 for affordable housing contributions. The viability assessment has shown that a higher level of affordable housing is achievable in some market areas, namely 40% within the Mold & Buckley market area. and this has been agreed by the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			houses. If one application was for 19 houses the second application on the same site for 2 or more would trigger the 30% affordable housing requirement.	must count toward the overall threshold (20) for affordable housing. This is to prevent developers for example if the threshold was 20 to have 2 x applications for 19 houses. If one application was for 19 houses the second application on the same site for 2 or more would trigger the 30% affordable housing requirement.	Council as part of its sound development plan. This will be tested at the LDP examination subject to there being evidence that demonstrates why the higher levels of affordable housing are not viable or deliverable.
409	HN3: Affordable Housing	Object	The affordable housing percentage requirements should not be referred to as a 'starting point' for negotiations as this provided no certainty to landowners or developers and could result in the site not coming forward. They should instead as in other LDPs be described as a target. The viability work has identified the level at which development is likely to be viable and set the level of percentage requirement, if this is described as a target then anything above this is unlikely to be viable and a request for a higher affordable percentage will cause delays in delivery and at worst could stop land coming forward all together. Further PPW 10	The words 'as a starting point' should be deleted from the policy and the percentage requirements should be referred to as a 'target'. The policy should include a reference to the preferred tenure mix on which the viability work was based yet allow flexibility for this to be varied by	Partly accepted. The policy wording does not mean that the Council will be looking for a higher percentage than those specified within Policy HN3, these are simply the starting position for negotiation downwards subject to detailed viability considerations supported by clear and robust evidence. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has set the levels at which affordable housing should be viable and so by

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			states at para. 4.2.21 'Where up-to-date development plan policies have set out the community benefits expected from development, planning applications which comply with them should be assumed to be viable and it should not be necessary for viability issues to be considered further. It is for either the applicant or the planning authority to demonstrate that particular exceptional circumstances justify the need for a viability assessment at the application stage.' The current policy wording does not comply with this as it suggests viability studies should be required on a site by site basis. However, the policy does need to retain the flexibility to allow for site viability to take place as circumstances do change over time and unknows can be discovered on sites. The policy or support text provides no detail on how off-site provision or payment in lieu will be dealt with or the Councils required tenure mix. tenure mix. The HBF challenges the 40 % requirement for the Mold are based on two recent planning consents which dd not achieve this level of affordable housing [Maes Gwern- 30%, Penymynydd - 15%]. Please see additional comments on affordable housing contained in separate emailed comments.	agreement. The supporting text needs to provide some guidance on how off-site provision or payment in lieu of affordable housing will be dealt with and at worst reference an Affordable Housing SPG which will be needed to provide greater detailed support to this policy.	definition, and with reference to the Study itself, are the upper limit of potential affordability. If the Inspector considers that further clarity could be added to the wording of the reasoned justification, then the Council would have no objection to the following additional wording being included: "The viability assessment has shown that the affordable housing percentages are the maximum levels of affordable housing that can viably be delivered across each of the housing market areas. Developers are therefore expected to start negotiation from these percentages if they believe there to be significant viability considerations on their particular site. This must be supported by a robust and credible evidence base to sufficiently demonstrate a reduction in the affordable housing delivered by the scheme." The mix of affordable dwellings will be negotiated with the Housing Strategy team in line with the latest needs on the register. A policy setting the mix of affordables would be restrictive, and unable to reflect the specific needs of each location. Whilst the objector quotes from PPW in relation to establishing viability at the LDP stage thereby removing the need to assess at the application stage, they at least recognise as the Council has that the Plan cannot envisage all circumstances which vary from site to site. That is why the policy sets out the percentages recognising they are a negotiating point and therefore there is flexibility in the policy to cater for specific circumstances.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
432	HN3: Affordable Housing	Support	Whilst agree that on-site provisions is preferable, we support the inclusion of caveat for those exceptional cases where this is not appropriate.		This support is welcomed. The policy is intended to be flexible to ensure deliverability.
599	HN3: Affordable Housing	Object	OBJECTS to Policy HN3. The comments below should also read in conjunction with those made in Chapter 11 about the Council's viability study. JUSTIFICATION The affordable housing percentage requirements should not be referred to as a starting point for negotiations as this provides no certainty to developers. They should instead as in all other LDPs be a target. Policy HN3 requires 40% in the Mold and Buckley sub market area subject to detailed viability considerations. This is a significant increase from the UDP Policy HSG10 which required 30% affordable housing on suitable and appropriate schemes within settlement limits. Table 2 on Pages 5 & 6 of the Council's Background Paper 7: Affordable Housing sets out the potential affordable housing numbers that can be achieved on the proposed allocated sites and expects 40% affordable housing to be delivered at HN10 (3) which is under our client's control. Stewart Milne's current planning application is proposing 30% affordable housing in accordance with the UDP Policy HSG10. This has been supported by the Council's Housing Strategy Manager in their consultation response dated 10 September 2019. 40% affordable housing	Policy HN3 is unsound as it will not deliver. The affordable housing requirement for the Mold and Buckley sub market area should be reduced to 30% and this should be a target not a starting point.	Not accepted. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has shown that the affordable housing percentages are viable within each housing market area, therefore the percentages do not need to be reduced. The policy wording does not mean that the Council will be looking for a higher percentage than those specified within Policy HN3, these are simply the starting position for negotiation downwards subject to detailed viability considerations supported by clear and robust evidence. If the Inspector considers that further clarity could be added to the wording of the reasoned justification, then the Council would have no objection to the following additional wording being included: "The viability assessment has shown that the affordable housing percentages are the maximum levels of affordable housing that can viably be delivered across each of the housing market areas. Developers are therefore expected to start negotiation from these percentages if they believe there to be significant viability considerations on their particular site. This must be supported by a robust and credible evidence base to sufficiently demonstrate a

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			would not to be achievable on this site due to the large area of SuDs and ecological mitigation that is required in order to secure the support of statutory consultees together with the suit of Section 106 Agreement contributions required. AMENDMENTS SOUGHT Policy HN3 is unsound as it will not deliver. The affordable housing requirement for the Mold and Buckley sub market area should be reduced to 30% and this should be a target not a starting point.		reduction in the affordable housing delivered by the scheme." It is a concern that the objectors do not appear to consider that their site which is allocated in the Plan is not deliverable under LDP policy requirements. The objector has provided no evidence to show how the differential of 10% affordable housing affects the viability of the site, but with the policy clarification above would be a point for consideration at the development management stage.
601	HN3: Affordable Housing	Object	OBJECTS to the Viability Study. JUSTIFICATIONThe Viability Study states the following at Paragraph 2.6: "No allowance has been made for ecological factors (bats, newts etc) or other potential site remediation costs, as these will be very site-specific issues. We would suggest that any such matters on specific sites, coming forward for development, would be taken account of in a specific viability test." The Viability Study also notes that the majority of allocations are on greenfield sites where ecological issues are more likely to encountered. This is the case with Stewart Milne's site at New Brighton where ecological mitigation is required as mentioned previously in Chapters 6 & 9. A	AMENDMENTS SOUGHT The Viability Study is considered unsound as it does not fit with national policy. The Viability Study should be reworded to allow for all abnormal costs including appropriate ecological mitigation.	Not accepted. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. The viability study is a high level assessment and does not make an allowance for abnormal or site specific costs as this would be highly site specific, and not appropriate for the majority of sites. Abnormal costs are not the 'norm' therefore if would be unreasonable to apply an element of abnormal costs to all sites. Site specific viability assessments can be carried out as part of the planning application process where abnormal or site specific costs can be evidenced and justified.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			new ecological pond has resulted in a reduction in the net developable area and these factors need to be considered now as part of the site's viability. Paragraph 4.2.21 of PPW10 is also relevant in this regard: "Where up-to-date development plan policies have set out the community benefits expected from development, planning applications which comply with them should be assumed to be viable and it should not be necessary for viability issues to be considered further. It is for either the applicant or the planning authority to demonstrate that particular exceptional circumstances justify the need for a viability assessment at the application stage." This is repeated in the soon to be published DPM (see Paragraph 5.85). This suggests that fundamental matters of viability should not be left to the individual application stage as suggested in the Viability Study.		
613	HN3: Affordable Housing	Object	The delivery of the proposed housing sites are at risk due to the high proportion of affordable housing requirement being proposed. Many landowners have owned the land within generations of their family and will not be incentivised to sell when development costs and the currently proposed	Reduce affordable housing requirement.	Not accepted. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. Development Plans Manual 3 (DPM3) produced by the Welsh Government to inform the production of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			affordable housing requirements are applied. The quantum of affordable housing proposed has been informed by the Background Paper Flintshire Viability Study Sept 2019 produced by the DVS. It is felt that while the methodology applied to assess the level of affordable housing for each site is appropriate, the parameters and assumptions made in terms of what is a reasonable return to landowners, sales prices of completed dwellings to be received by the developer (for both affordable and open market dwellings) and developers profit are too generalised and as such are producing distorted figures. For example, Table 4 of the Viability Study states various 'typical prices' for market housing, however, these appear to be at the higher range of what has been achieved and are not representative of the market within the immediate area of Highmere Drive. The benchmark Greenfield figure of £300,000 per hectare will not incentivise landowners to sell. It is our experience that landowners within the area are seeking net returns, after affordable housing and abnormal development costs are taken into account, of between £750,000 - £1,000,000 per hectare.		LDPs across Wales advises that Local Authorities should undertake a "high level viability appraisal to assess the broad levels of development viability at housing market areas." This involves making informed assumptions on house prices and build costs based upon robust evidence of recent transactions from Land Registry Data and build costs compiled by RICS. High level testing such is reflective of the wider market area (for example Connah's Quay, Broughton and Queensfeery area as shown on the map in the appendices of the viability assessment) and not site specific. Developers are still able to submit a site specific viability assessment alongside planning applications where they feel viability is an issue. This must be supported by evidence such as sale prices or abnormal costs to justify a departure from the percentages set out within policy HN3. The benchmark figure of £300,000 per hectare for green field land (without planning permission) is supported by evidence of recent transactions. Paragraph 4.16 of the viability assessment explains that "The land values adopted reflect an opinion of the level required for the land to be released onto the market for residential development. This may well be lower than transactions in the recent past, but our appraisals are based on current market conditions, with the affordable housing requirements as expected at the time and assuming the land is acquired at the date of valuation. It must be borne in mind that the sites we are assessing here do not have current planning in place - so we are assessing an amount which

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			It is our view that the Viability Study that has set the proposed affordable housing percentages needs to be based upon a higher benchmark figure and more a more accurate assessment of the house prices within the immediate vicinity of a site need to be applied as values can vary widely within a settlement area.		would convince a landowner to release land for development from its current use. This is not the same as a value for the transaction of a site which has planning agreed." The objector does not include any evidence of greenfield sites without planning permission selling for £750,000 - £1,000,000 per hectare within Flintshire.
768	HN3: Affordable Housing	Object	It is noted that this Policy is only applicable to schemes of 10 or more dwellings. We support this approach, as it is typically more challenging for smaller sites to support affordable housing without adversely impacting on the economic viability of sites. It is noted that the Policy is proposing a sub-market area approach/threshold to affordable housing delivery, with different thresholds across the County. It is welcoming to note that the stated quotas are only intended to serve as a "starting point' for negotiation on a site-by-site basis subject to detailed viability considerations. Paragraph 11.9 of the Deposit Plan states that the quotas themselves have been informed by the Council's Local Housing Market Assessment and the District Valuer Study concerning the 'Economic Viability of Providing Affordable Housing Across Flintshire.' The different affordable housing requirements are understood to be based on the relative strengths of the housing	On review of the Council's supporting evidence, we have the following observations: - Flintshire is recognised within the LHMA to be a self-contained housing market area. The Sub-Areas identified in the LHMA are documented in paragraph 3.14 to be based on an out-of-date Local Housing Strategy and previous LHMA's. We are concerned that these Sub-Area boundaries may no longer be an	Not accepted. The LHMA sub market areas have been identified by following the LHMA guidance produced by Welsh Government. There are various factors which inform the identification of these housing market areas including travel to work patterns, house prices and affordability. The housing market areas have been reviewed as part of the LHMA update with no changes required. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has shown that the affordable housing percentages are viable within each housing market area, therefore the percentages do not need to be reduced. The viability assessment has included costs for open space, education etc. in line with recent trends for developer contributions within Flintshire. Therefore the results of the viability assessment are robust.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			sub-market areas in terms of their viability, and ability to support affordable housing provision.	accurate reflection of the housing market in Flintshire. The robustness of these boundaries should be reviewed prior to imposing a Sub-Area approach to the provision of affordable housing; and - On review of Table 3.1 of the LHMA, and the requirements set out under Policy HN3, it is considered that the affordable housing requirement in the Connah's Quay, Queensferry and Broughton Sub-Market Area should be no more than 30%, consistent with that of the South Border Sub-Market Area given the relative house prices. Given the potential requirement for other developer contributions (such	In terms of the objectors point that the Connah's Quay, Queensferry and Broughton affordable housing level should be no more that 30%, no viability or other evidence is provided to substantiate this , making it difficult for the Council to accept the case being made. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has shown that the affordable housing percentages are viable within each housing market area, therefore the percentages do not need to be reduced. In terms of the objectors point about obligations those mentioned are all reasonably standard requirements for new development and the objector's objection to their provision would render a site (including any they are promoting) as unsustainable and undeliverable. Conversely, if a site is viable and deliverable then the requirement to secure such obligations should not be an issue. S106 legal agreements provide greater protection for affordable dwellings to ensure they do not resort to market dwellings. They are also more easily recorded and flagged by Land Charges when carrying out searches.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				as education, recreation/open space, health) on a site-by-site basis, it is imperative that the affordability thresholds set out in this Policy are robustly evidenced and will not serve to frustrate housing delivery across the County. It is noted that reference is made in paragraph 11.9 of the Deposit Plan to the fact that affordable housing delivery will be secured by way of a planning obligation. Based on recent experience elsewhere, there is the potential for such provision to be secured by way of a planning condition which in turn would reduce time and expense on the preparation of a S106 Agreement for	

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				those sites where no other obligations are being sought. The Council may wish to give consideration to the use of planning conditions to secure affordable housing delivery moving forward.	
649	HN3: Affordable Housing	Object	TW does not agree with the findings of the LHMA Update 2018 and has concerns regarding the methodology adopted. Furthermore, TW objects to the lack of consistency between the findings of the LHMA and the requirement stipulated in Policy HN3. However, TW does not agree with the findings of the LHMA Update 2018 and has concerns regarding the methodology adopted. Furthermore, TW objects to the lack of consistency between the findings of the LHMA and the requirement stipulated in Policy HN3. Table B5 identifies the Mold and Buckley HMA as needing to deliver 22 of the 238 affordable units annually. This equates to just over 9% of the affordable housing requirement within the borough. To put this into context, Connah's Quay, Queensferry and Broughton HMA is expected to deliver 186 units per annum which equates to 78% of the affordable housing requirement of the borough. TW has concerns with a	The Council amends the affordable housing requirement in line with the findings of the LHMA Update 2018 and ensure that the delivery of affordable housing units is directed to those areas in Flintshire with clear need, and that the Council can meet its target of 238 dpa.	Not accepted. The LHMA has been carried out by independent consultants ARC4, following Welsh Government guidance on how to produce an LHMA. The objector does not specify what their concerns relate to therefore the Council can offer no further feedback on this matter. We believe the findings of the LHMA are robust and that it has followed the recommended methodology set by Welsh Government. The strategic distribution of allocations cannot be simply aligned to the areas with a higher need for affordable housing as this approach would be unsustainable. Other sustainability criteria must be taken into consideration when distributing growth, including local infrastructure, accessibility to public transport etc. The objector also ignores the fact that the LHMA methodology produces an inflated need as it assesses the backlog of need but only has a

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			focus of delivery in just one HMA. Alternative strategies such as directing a proportion of additional housing towards sustainable, higher order settlements such as Mynydd Isa will ensure the delivery of much needed affordable housing, particularly in the early years of the Plan. Notwithstanding the above, TW objects to the requirement of the Mold and Buckley sub market area to provide 40% affordable housing as it is not based on robust and sound evidence and is contrary to the findings of the LHMA Update 2018. TW also has concerns over the assumptions set out within the Viability Study, in particular the allocated developer's profit of 17.5%, which is too low and would not provide a sufficient return to incentivise development and investment in Flintshire		lifespan of 5 years. It is therefore incorrect to transpose the annual need over the Plan period. The viability assessment has been carried out using robust and up to date evidence complied by independent consultants. This has shown that the affordable housing percentages are viable within each housing market area, therefore the percentages do not need to be reduced. Given the scale of the objectors alternative site, and the robustness of the assumptions made in the viability study, it would appear from what the objector is saying, is that their site at Mynydd Isa, which is within the 40% affordable housing market area (Mold & Buckley) is not viable to deliver 40%, it is therefore neither sustainable nor deliverable.
716	HN3: Affordable Housing	Object	It is noted that this Policy is only applicable to schemes of 10 or more dwellings. We support this approach, as it is typically more challenging for smaller sites to support affordable housing without adversely impacting on the economic viability of sites. It is noted that the Policy is proposing a sub-market area approach/threshold to affordable housing delivery, with different thresholds across the County. It is welcoming to note that the stated quotas are only intended to serve as a "starting point' for negotiation on a site-by-site basis subject to detailed viability considerations. 753	HN3: Affordable Housing	Support	It is noted that this Policy is only applicable to schemes of 10 or more dwellings. Our Client supports this approach, as it is typically more challenging for smaller sites to support affordable housing without adversely impacting on the economic viability of sites.		We welcome your support to the threshold of 10 or more dwellings for the application of the affordable housing percentages.
777	HN3: Affordable Housing	Support	In relation to the FCC's Development Management Policy for Affordable Housing the key comments in the context of the Village Plan thematics and objectives and from the Community Council's perspective as a key stakeholder in the LPD process	a) With an aging population nationally and locally, serious consideration needs to be given on how housing should be	Policy HN2 sets out the criteria for the density and mix of new dwellings, paragraph 11.6 of the reasoned justification states "In order to meet the variety of needs in Flintshire, a range of housing must be provided on sites. The Local Housing Market Assessment identified a particular need for

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			are as follows: a) With an aging population nationally and locally, serious consideration needs to be given on how housing should be provided for this section of our community, as well as the provision of affordable housing to encourage younger people to settle in Higher Kinnerton. This to ensure that we have a balanced mix of accommodation types available to provide for the newly enlarged community. b) Given the situation which arose with the affordable housing units at Babylon Fields in Higher Kinnerton, the criteria for affordable housing needs to ensure affordable housing is genuinely affordable for those in need of housing and whose needs are not met by the open market.	provided for this section of our community, as well as the provision of affordable housing to encourage younger people to settle in Higher Kinnerton. This to ensure that we have a balanced mix of accommodation types available to provide for the newly enlarged community. b) Given the situation which arose with the affordable housing units at Babylon Fields in Higher Kinnerton, the criteria for affordable housing needs to ensure affordable housing is genuinely affordable for those in need of housing and whose needs are not met by the open market.	smaller one and two bed units to meet the increasing need from single person households. A significant part of this need is driven by the growing older population (65+), therefore the housing needs of older people should be reflected in residential development proposals, which could include the development of bungalows. To ensure that mixed and balanced communities are created the Council will expect developers to provide an appropriate mix of dwelling size and type to meet local housing needs, making reference to the evidence within the latest Local Housing Market Assessment and avoiding residential schemes that are dominated by larger properties with four or more bedrooms" This will ensure developments achieve a good mix of property types and sizes to cater for all housing needs and demands. Affordable Housing will be delivered at 70% market value for low cost home ownership dwellings to eligible applicants from the Tai Teg register. Intermediate rental dwellings will be let at no more than 80% of private rental values. Applicants must meet specific eligibility criteria in terms of their income and any local connection criteria. This will ensure that only applicants who cannot afford to buy or rent on the open market are offered a property, and that they can afford to live in the property.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
897	HN3: Affordable Housing	Object	PGNL is concerned that the requirement for affordable housing for the Garden City Area has been set high relative to the findings and assumptions used within the viability study. PGNGL supports the provision of affordable housing however PGNGL is concerned that the policy requirements for affordable housing are high. The September 2019 viability Study indicates for Garden City that the majority of typologies become viable at 15% rather than 20% where three of the five typologies are marginal or unviable. The viability study has been set up to determine the viability of the requirements for affordable housing provision, however it is unclear what regard has been given to any of the other policy requirements, established within the Local Development Plan, and the associated impact on affordable housing targets. Nor is it clear what abnormals have been considered for the site specific testing. Thus, it is considered that the requirement is set at a level that is likely to necessitate site specific viability assessments and protracted negotiations at Planning Application stage. PGNGL is concerned that with all the policy requirements the Local Development Plan details this could undermine the delivery of housing through the need for a viability assessment of schemes on a regular basis. The Council must be aware of the impact that viability	To overcome the objection and address soundness matters, the Council should: Review the viability study to ensure that it reflects the requirements of the Plan as a whole and the abnormals likely to be present at STR3A. Amend the affordable housing requirement for the Garden City Area accordingly.	Not accepted. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has shown that the affordable housing percentages are viable within each housing market area, therefore the percentages do not need to be reduced. It is a little disappointing that having taken so long to advance the site, the objector only now considers viability an issue. As the site already has planning permission the objector will know that the 30% required by the UDP has been reduced in the first phases of permitting residential reserved matters given viability issues related to on-going infrastructure works and costs. The first phase of Northern Gateway has received planning permission with 10% affordable housing on site. The viability of the scheme was independently tested to ensure the right level of affordable housing could be achieved. It is expected that subsequent applications will achieve higher levels of affordable housing provision as viability on the site improves as the development of the site progresses and upfront costs for initial infrastructure are absorbed. Therefore the affordable housing percentage of 20% for the Garden City sub market area is realistic for this site. The existing permission has review points within the consent to examine viability at later phases which is only appropriate for a strategic site of this

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			assessments and subsequent negotiation of obligations can have on the delivery of development. This could impact on the delivery of the housing. Instead, the Council should ensure this policy is well tested to ensure the sites identified and allocated are deliverable.		scale where significant public money was provided in relation to key flood mitigation works and transport infrastructure. The viability assessment does not make an allowance for abnormal costs as this would be highly speculative, and not appropriate for the majority of sites. Abnormal costs are not the 'norm' therefore if would be unreasonable to apply an element of abnormal costs to all sites. Site specific viability assessments can be carried out as part of the planning application process where abnormal costs can be evidenced and justified.
923	HN3: Affordable Housing	Support	It is encouraging to see the prominence and weight given to the need to provide for affordable housing within the county over the plan period. It is commended that a target of 238 affordable homes are sought each year, which equates to approximately 50% of the total housing required to be delivered in the authority per annum. However, as a key delivery partner in providing this affordable housing, concern is raised with regards to the ability to deliver this proportion of housing, especially with the existing levels of funding available for the delivery of affordable housing and the very limited numbers of units being delivered and secured by the market house builders through s.106 agreements. It is also highly likely that developers will continue to use affordable housing as the flexibility factor		We welcome the support for the affordable housing percentages. Whilst the Council recognises the objector's general support for policy HN3 the LHMA need of 238 dwellings per annum is not the LDP affordable target and this is fully explained in background Paper & and specifically in paras 3.3 and 3.4. Clearly the funding of the delivery of affordable housing via Social Housing Grant is outside the remit of the LDP and it is also the case there are a number of sources of supply of affordable housing in Flintshire than just via the planning system, including the Councils own SHARP building programme. The objector, as a Registered Social Landlord, states the only way to increase supply is to allocate affordable only sites but this must also rely on RSL's making better informed and less

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			to argue viability on developments as has happened with Croes Atti (105) and Northern Gateway. The only way this would be delivered with more security is if specific affordable housing sites were allocated and if other housing tenures models such as affordable sales products are accepted as 'affordable housing'. Furthermore in the absence of dedicated sites for affordable housing (which has been intimated in the NDF currently out for consultation) and the tightly drawn settlement boundaries it is extremely difficult for affordable housing partners to compete with house builders for the allocated sites, even windfall sites. Policy HN4-D 'Affordable Housing Exception Schemes' permits exception sites adjacent to settlements in tier 2,3 and 4 settlements in 'rural' areas however tier 2 settlements in particular are not 'rural' by nature. It would be hard to demonstrate that alternative sites are not available to meet criterion b, however it may be that RSL's cannot compete for those sites in the settlement boundary and only sites outside the settlement are economically viable in terms of land values. Again this supports the allocation of specific affordable sites. Therefore whilst we support the targets for affordable housing, concerns are raised with regards to the ability to deliver on this level per annum, especially with existing		speculative decisions on the acquisition of suitable sites. Whilst reference is made to the need indicated in the draft NDF, the objector fails to note that this is not a specific policy requirement and like the LHMA methodology, represents an inflated view of need based on a methodology that calculates a backlog and from this which it tries to deliver over a short time period. The objector has also failed to reconcile their own capacity to deliver as on the one hand they propose new allocations, whilst on the other hand doubt the ability to achieve the affordable target. The Council has found it difficult to understand the position of the objector.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			funding levels and the under provision of s.106 units by housebuilders.		
931	HN3: Affordable Housing	Object	The policy is unclear as it does not define what the sub areas are and where they apply. We object to the differing levels of contributions that would be sought in the different sub-areas as we do not consider that these have been established having regard to a robust evidence base. The Affordable Housing Background Paper at paragraph 3.7 states: "The viability assessment is a high level appraisal therefore it didn't involve the assessment of individual allocations within the LDP, site specific viability assessments may need to be carried out at the planning application stage where developers feel there are abnormal costs that may impede the delivery of affordable housing on the site." We do not consider that a high level appraisal provides sufficient rigour to justify the differing thresholds and contributions that will be sought. Furthermore, it is not clear what the requirements will be on those sites that do not fall within any of the identified sub-areas. The policy is therefore unsound as it is not founded on a credible evidence base and therefore will not be effective. It fails Test 3.	Need to clearly define sub market areas. Viability Assessment needs to be more robust.	Not accepted. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has shown that the affordable housing percentages are viable within each housing market area, therefore the percentages do not need to be reduced. The draft viability assessment was made available to key agents and developers in August 2019 for initial consultation ahead of the Deposit LDP formal consultation in September 2019. The LHMA Sub Market areas are mapped within the LHMA Update 2018. If the Inspector is minded that the implementation of the policy would be improved by adding the LHMA sub-areas to the LDP proposals map then the Council would have no objection to this. Also, the objector queries what the % would be on any site that does not fall within a sub market area but as the sub market areas subdivide the entire County, any site outside would not be in Flintshire. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has shown that the affordable housing percentages are viable within

			HN1 (and any other windfall or exception site policy) will not reflect the LHMA identified need. Comments on Flintshire Viability Study (DVS) May 2019 This was published before the Background Paper into Affordable Housing was made available in September 2019; before the Deposit Version of the LDP was published for Members in July 2019 and before the Arc4 LMHA report of August 2019. It identifies affordable thresholds, so we can only imagine that a combination of the above documents / reports were fashioned around one another; yet it is strange that the Authority did not present any of the evidence base before its Members at Full Council. Notwithstanding the procedural order and/or the accessibility of such publications to Members and the wider general public we do wish to briefly comment on the main findings of this report. There will need to be a much more forensic assessment of its methodology but in brief our concerns lie with the percentile levels of affordable being suggested and the tenure split neither of which are reflective of current rates. Developer profit at 17.5% is low (should be	areas are not defined on any constraints map and detailed definition of boundaries will be needed to avoid errors. As it stands the increase over the Adopted UDP rate of 30% is considered to be far too challenging and unviable. We do not believe that the required affordable housing contributions are founded on a credible assessment of viability; particularly given that the level of affordable housing ought to commensurate and proportionate to the anticipated viability of delivering housing in any given location.	objector) in August 2019 for initial consultation ahead of the Deposit LDP formal consultation in September 2019. This is not a statutory part of the consultation process therefore the Council do not have to adhere to specific timescales for this consultation process. The Council had limited time in which to conduct this consultation ahead of the Deposit LDP formal consultation, therefore participants were given just over two weeks to submit their comments. Whilst the objector considers the 40% to be 'far too challenging and unviable' they do not provide any analytical evidence to substantiate this. Equally the objector was part of an early release of the viability study to industry representatives and agents to allow any queries or challenges to be put forward prior to deposit but none were received at this time from the objector. Whilst the objector subsequently criticizes the Viability Study and affordable housing policy at the deposit stage, where the relationship between the two is clear, they have failed to submit an alternative study based on the assumptions they feel are correct. The objector's opportunity to submit such a 'forensic' assessment was at the 'deposit' stage but they failed to do so. The Viability Assessment includes the following statement; "It may be recommended that a simple monitoring of House Price Index movements across Flintshire on a year to year basis is measured against BCIS rates, and that if a divergence of 5% either way against a sample 100 unit scheme residual value in comparison to current levels is

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			20%); construction build cost is estimated at almost £100/sqft (generally £125/sqft is common) and that is without any contingency (of say 5%) being applied; net to gross development areas vary massively site by site; benchmark land values are too low and landowners will not release land for housing if they are not incentivised in doing so; We are concerned that despite the availability of this report none of the draft allocation sites have had this applied to them to determine their viability.		detected that this triggers a fuller review. Where the rate changes cancel one another out then a full review may not be required." The Viability assessment will therefore be monitored along these lines. Land Value – The DVS have used land values that in their opinion reflect the level required for the land to be released onto the market for residential development. This may well be lower than transactions in the recent past, but the DVS appraisals are based on current market conditions, with the affordable housing requirements as expected at the time and assuming the land is acquired at the date of valuation. It must be borne in mind that the sites the DVS are assessing do not have planning permission - so they are assessing an amount which would convince a landowner to release land for development from its current use. This is not the same as a value for the transaction of a site which has planning agreed. On this basis the DVS have adopted a base Greenfield land value of £300,000 per hectare. It is the DVS opinion that these figures are sufficient to incentivise a landowner to sell and provides accurately for the reality in the market place, if compared to the existing use value (for example £18,000 per hectare for agricultural land). Construction Costs – The DVS are an independent consultant with extensive experience of conducting viability appraisals. The DVS have used information from their internal quantity surveyors and the BCIS data to establish a current base price per square

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					metre for residential development within the Flintshire area. The DVS have included a 2.5% uplift for contingencies as per paragraph 4.11 of the report. Developer Profit - The DVS have used a profit level of 17.5% which is considered reasonable based upon the nature of the developments and their perceived associated risks. If the Inspector is minded that the implementation of the policy would be improved by adding the LHMA sub-areas to the proposals map then the Council would have no objection to this.
858	HN3: Affordable Housing	Object	40% affordable housing in the Mold and Buckley sub market area is considerably less than the 51% over the initial five years in the emerging NDF for the North Wales region. Should the FCC figure be re-visited in line with the NDF?	40% in the Mold and Buckley sub market area is considerably less than the 51% over the initial five years in the emerging NDF for the North Wales region. Should the FCC figure be re-visited in line with the NDF?	Not accepted. The objector has failed to acknowledge that the % quoted is not part of any policy wording in the draft NDF and reflects a general backlog of affordable need that is artificially inflated by the short term focus on delivery. It would not be viable for developers to provide such levels without Welsh Government subsidy of some sort but the NDF is silent on the provision of such a subsidy. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has shown the maximum affordable housing percentages which are viable within each housing market area, if the Council were to increase these percentages without regard to the evidence within the viability assessment then

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					this would be unsound. In the absence of any evidence to contrary, it is assumed that the NDF has not carried out bespoke viability assessments within Flintshire therefore the Council cannot apply this percentage and ignore its own viability assessment results.
864	HN3: Affordable Housing	Object	Object to the wording of Policy HN3. Whilst it is noted that the level of affordable housing to be sought in different parts of the County is stated to be a "starting point" for negotiation and should, therefore, be capable of being viewed flexibly, the fact that the levels of provision are set out at all implies that the figures are, at least initially, justified. In our view, notwithstanding a willingness to be flexible and to consider site specific circumstances, if specific targets are to be included within the Policy, then those targets should be properly justified, we do not consider this to be the case. Various issues have been highlighted with the Viability Assessment, objections relate to: Typology approach – no differentiation has been made in respect of benchmark land values across the sub market areas. This is key because the release of land is fundamental to the delivery of the LDP. If landowners are not incentivised to release land, this will undermine the delivery of housing. Development land in higher value locations typically sells for higher values to reflect this. Gross Site Are Assumptions - too low, particularly for larger sites. Housing Mix -	Amendment to Policy in light of detail review of viability justification. Furthermore, and without prejudice to the above, as presently drafted, the Policy does not appear to acknowledge that the targets must be viewed as maximum requirements, the Policy should make clear that the LPA will not seek to negotiate for levels of provision in excess of the stated targets, otherwise, there would be serious problems for developers and landowners when negotiating land values.	Partly accepted. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. The policy wording does not mean that the Council will be looking for a higher percentage than those specified within Policy HN3, these are simply the starting position for negotiation where the levels are a maximum and which may reduce downwards subject to detailed viability considerations supported by clear and robust evidence. If the Inspector considers that further clarity could be added to the wording of the reasoned justification, then the Council would have no objection to the following additional wording being included: "The viability assessment has shown that the affordable housing percentages are the maximum levels of affordable housing that can viably be delivered across each of the housing market areas. Developers are therefore expected to start negotiation from these percentages if they believe there to be significant viability considerations on their particular site. This must be supported by a robust and credible evidence base

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Concerns over the amount of 2 beds included in the private housing mix, with actual delivery weighted towards 3 and 4 bedroom properties Affordable Housing Tenure – Concerned that affordable housing requirement has increased from 30% to 40% in the Central and Mold and Buckley HMA. Construction Costs - Note that our BCIS figures are different for Q1 2019, which seems to be a result of a larger sample size. This data is enclosed at Appendix 1 and details a median cost of £1,074 per sq m for estate housing generally. This equates to £99.78 per sq ft. This is more reflective of larger regional and national housebuilder cost information we receive from various sources and our market knowledge. We do not believe it is appropriate to reduce the build costs by £5 per sq ft (£52 per sq m) for sites of 150 units and 300 units respectively. We would also note that smaller local developers attract higher costs than this and that a scenario for sites below 10 units should also be tested so that these developers are not excluded from the market on viability grounds. Developers Profit – Too low Appraisal analysis - A series of tables have been provided that show the viability scenario testing results as 'viable', 'marginal' or 'unviable'. We note that the 'viable' results show a reduced % in some HMAs.	Need to review viability assessment.	to sufficiently demonstrate a reduction in the affordable housing delivered by the scheme ." The Viability Assessment includes the following statement; "It may be recommended that a simple monitoring of House Price Index movements across Flintshire on a year to year basis is measured against BCIS rates, and that if a divergence of 5% either way against a sample 100 unit scheme residual value in comparison to current levels is detected that this triggers a fuller review. Where the rate changes cancel one another out then a full review may not be required." The Viability assessment will therefore be monitored along these lines. Land Value – The DVS have used land values that in their opinion reflect the level required for the land to be released onto the market for residential development. This may well be lower than transactions in the recent past, but the DVS appraisals are based on current market conditions, with the affordable housing requirements as expected at the time and assuming the land is acquired at the date of valuation. It must be borne in mind that the sites the DVS are assessing do not have planning permission - so they are assessing an amount which would convince a landowner to release land for development from its current use. This is not the same as a value for the transaction of a site which has planning agreed. On this basis the DVS have adopted a base Greenfield land value of £300,000 per hectare. It is the DVS opinion that these figures are sufficient to incentivise a

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					landowner to sell and provides accurately for the reality in the market place, if compared to the existing use value (for example £18,000 per hectare for agricultural land). Housing Mix – The DVS looked at the housing mix on recent developments within Flintshire to reach this mix, therefore the Council do not accept that actual delivery was weighted towards more 3 and 4 bedroom homes. The need for new dwellings is actually weighted towards smaller properties as identified within the LHMA, rather than for 4 bedroom properties. The aspiration is for these larger properties not the need. Construction Costs – The DVS are an independent consultant with extensive experience of conducting viability appraisals. The DVS have used information from their internal quantity surveyors and the BCIS data to establish a current base price per square metre for residential development within the Flintshire area. The DVS reduced the build cost for larger schemes with more than 150 dwellings to reflect the economies of scale achieved by developments of this size. This is based upon the DVS evidence and experience of using build costs when carrying out viability assessments. Developer Profit - The DVS have used a profit level of 17.5% which is considered reasonable based upon the nature of the developments and their perceived associated risks.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1158	HN3: Affordable Housing	Support	HN3 Affordable Housing. These percentages must be enforced other than by exception. It is too easy for developers to claim commercial reasons not to do it. The LDP needs to provide the authority with teeth or we will continue to make the housing problems worse.		Noted. Policy HN3 will enable the Authority to maximise affordable housing delivery on viable sites across Flintshire.
1279	HN3: Affordable Housing	Object	Object to HN3 as currently drafted as it is unsound. Affordable housing requirements should not be referred to as a starting point for negotiations as this provides no certainty to developers on the level of affordable housing required in a policy compliant position. The policy should be revised to state affordable housing percentages as a target, acknowledging there are instances where a lower affordable housing provision is entirely justified and reasonable.	The policy should be revised to state affordable housing percentages as a target, acknowledging there are instances where a lower affordable housing provision is entirely justified and reasonable.	Not accepted. The policy wording does not mean that the Council will be looking for a higher percentage than those specified within Policy HN3. These requirements are simply the starting position for negotiation downwards subject to detailed viability considerations supported by clear and robust evidence. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has set the levels at which affordable housing should be viable and so by definition, and with reference to the Study itself, are the upper limit of potential affordability. Having regard to the findings of the Viability Study it is unlikely that situations would arise where new housing schemes would have sufficient viability to warrant higher figures being considered. If the Inspector considers that further clarity could be added to the wording of the reasoned justification, then the Council would have no objection to the following additional wording being included: “The viability assessment has shown that

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the affordable housing percentages are the maximum levels of affordable housing that can viably be delivered across each of the housing market areas. Developers are therefore expected to start negotiation from these percentages if they believe there to be significant viability considerations on their particular site. This must be supported by a robust and credible evidence base to sufficiently demonstrate a reduction in the affordable housing delivered by the scheme."
993	HN3: Affordable Housing	Object	This has pre-determined the outcome of any DVS assessment by the DVS or evidence that might have come forward to demonstrate (draft) housing site viability as required by PPW10. The sub-market areas are not defined on any constraints map and detailed definition of boundaries will be needed to avoid errors. It is the DVS opinion that these figures are sufficient to incentivise a landowner to sell and provides accurately for the reality in the market place, if compared to the existing use value (for example £18,000 per hectare for agricultural land). Construction Costs – The DVS are an independent consultant with extensive experience of conducting viability appraisals. The DVS have used information from their internal quantity surveyors and the BCIS data to establish a current base price per square metre for residential development within the Flintshire area. The DVS have included a 2.5% uplift for contingencies as per paragraph 4.11 of the report. Developer Profit - The DVS have used a profit level of 17.5% which is considered reasonable based upon the nature of the developments and their perceived associated risks. If the Inspector is minded that the implementation of the policy would be improved by adding the LHMA sub-areas to the proposals map then the Council would have no objection to this.
1139	HN3: Affordable Housing	Object	Local Housing Market Assessment: clarity and consistency with evidence base – implications for affordable housing targets	PPW (paragraph 4.26) states the importance of the	Accepted. The LHMA has been clarified to show the tenure split between social and intermediate rental. This has shown that the tenure split used

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and the viability of sites The LHMA concludes an annual need of 238 affordable homes p/a over the plan period. The tenure split shows a predominate need for social rented homes (60%) to intermediate (40%). The Council's Affordable Housing Viably Report (DVS) section 2.21 states the affordable housing targets in the plan are based on a 70% intermediate and 30% social housing split. This is a significant deviation from the LHMA tenure split and requires robust justification and explanation. The Council's explanation is that the majority of social housing is delivered outside of planning gain; the Affordable Housing Background Paper referencing the Councils own initiatives in this respect. While this is not disputed, PPW (paragraph 4.26) states the importance of the LHMA being a fundamental part of the evidence base for plans. The LPA should be seeking to deliver affordable housing, both in scale, type and tenure split in line with the LHMA. DPM (Edition 3) highlights the importance of ensuring the plans evidence base is internally consistent. In particular the tenure split from the LHMA forming a core input to the viability work underpinning the plan. It is imperative the assumptions underpinning the viability assessment are consistent with the LHMA to ensure affordable housing targets and percentages are robust. The more	LHMA being a fundamental part of the evidence base for plans. The LPA should be seeking to deliver affordable housing, both in scale, type and tenure split in line with the LHMA. The tenure mix from the LHMA should be referenced in the LDP reasoned justification in order to form the starting point for effective negotiations on planning applications.	within the viability assessment is in line with the findings of the LHMA. If the Inspector considers that the affordable housing target should be added to Policy STR1 then the Council would have no objection to this. The target for affordable housing delivery can also be seen in the affordable housing background paper LDP07. The affordable housing Background Paper will be updated with a table showing the anticipated affordable housing supply by settlement tier, and will include the expected contribution from windfall sites with ten or more units in line with the guidance set out within DPM3. The affordable housing target will also be revised to include the expected contribution from windfall sites with ten or more units.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			intermediate housing on a scheme, the more viability improves. While it is appropriate to undertake sensitivity testing on key aspects of the viability model, the baseline scenario should be the LHMA as the starting point. The DPM (Table 24) states the LHMA is a core piece of evidence in this respect with policies/targets matching as far as possible/reasonable the latest LHMA findings with regards to tenure split. Deviation from the LHMA tenure split to this degree is potentially high risk unless this can be robustly justified and explained by the LPA. The tenure mix from the LHMA should be referenced in the LDP reasoned justification in order to form the starting point for effective negotiations on planning applications. Category C Affordable Housing - general. Affordable Housing Authority Wide Target - The Affordable Housing Background Paper states the affordable housing target for the plan is 1,981 homes. This should be included within a policy in the plan. Policy STR1: Strategic Growth could be amended to state “7,950 homes are provided of which xxx are affordable”. The target does not include the contribution from windfall sites (Table 6). It should do. The affordable housing target in the plan should be derived from all components of supply to ensure it is realistic in its aspiration and for		

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			monitoring purposes. ? Spatial Distribution of Affordable Housing Supply – the Affordable Housing Background Paper includes an analysis of affordable housing contributions by housing component. A table setting out anticipated affordable housing contributions by settlement tier and component of supply in line with guidance in the DPM (Ed. 3) would be helpful aiding clarity of the plan and effective monitoring.		
1145	HN3: Affordable Housing	Support	HN3 Affordable Housing. These percentages must be enforced other than by exception. It is too easy for developers to claim commercial reasons not to do it. The LDP needs to provide the authority with teeth or we will continue to make the housing problems worse.		Noted. Policy HN3 will enable the Authority to maximise affordable housing delivery on viable sites across Flintshire.
1173	HN3: Affordable Housing	Object	The Council's Local Housing Market Assessment Update (January 2019) has identified a need for 238 units per annum across Flintshire; whilst not a target, it is a clear indication of significant affordability issues across the County. This need should be provided for through the LDP housing requirement in order to meet the needs of current and future generations; this will require an affordability uplift to be applied to the overall housing requirement (alongside economic, population and household projections). The Affordable Housing Background Paper states that the LDP is planning to deliver 132 affordable	A significant reliance on housebuilders alone to deliver affordable provision as part of market-led schemes will not address this need; instead, there is a need for the Council to identify and release sufficient land to meet both market and affordable housing needs	Not accepted. The objector fails to acknowledge that the LHMA figure is a snapshot of housing need over a five year period and cannot be simply extrapolated over the fifteen year period of the LDP. The LHMA figure of 238 is an inflated need owing to the LHMA methodology which includes a calculation of the backlog of need as well as future need predicted over a short time period, which is the 5 year lifetime of the Study. It is not correct to extrapolate this at the level identified, across the whole Plan period as the backlog of affordable need should be met within the five years of the LHMA.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			homes per annum, 1,980 dwellings over the LDP period. This is just 55% of the actual need, which at 238 dwellings per annum stands at 3,570 dwellings over the LDP period. Furthermore, recent affordable housing delivery rates in Flintshire have averaged 249 dwellings in 2017/18, 181 units in 2018/19, and a projected 284 units in 2019/20. As such, there is the ability to deliver much more than just 132 affordable dwellings per annum provided that sufficient land is made available to deliver them. A significant reliance on housebuilders alone to deliver affordable provision as part of market-led schemes will not address this need; instead, there is a need for the Council to identify and release sufficient land to meet both market and affordable housing needs through the LDP, and to plan positively to meet this need. This is in addition to a specific affordable housing policy requirement on sites which we comment on later in this Representation.	through the LDP, and to plan positively to meet this need.	The objector also fails to acknowledge that there are other sources of affordable housing delivery other than the allocated residential development sites. For example the Council have a successful track record of developing affordable housing via the SHARP (Strategic Housing and Regeneration Programme) and NEW Homes (North East Wales Homes and Property Management). These two schemes specialise in the delivery of social and intermediate rental homes, the SHARP programme has a commitment to deliver 500 new affordable dwellings by 2021, please see details of completed and forthcoming schemes on the Flintshire Council website. In addition to this the Council will continue to work with its Registered Social Landlord partners to deliver more affordable housing in Flintshire as part of the Social Housing Grant (SHG) programme funded by Welsh Government. Collectively these mechanisms of delivery alongside the development of affordable housing by private developers has resulted in Flintshire achieving the highest average annual delivery rate in North Wales over the last ten years. The majority of this delivery comes from RSLs and schemes such as the SHARP programme rather than private developers, therefore we do not rely on allocated LDP sites to deliver all of the affordable housing that Flintshire needs The LHMA methodology also includes a mechanism to deduct the supply of new affordable housing as part of the calculation. As the LDP

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					allocated sites are developed and new affordable housing is delivered this would need to be deducted from the LHMA overall need figure, therefore it wouldn't be correct to simply extrapolate the 238 figure forward past the five year period of the LHMA as it wouldn't reflect this significant supply of new affordable housing. The LHMA will need to be refreshed during the lifetime of the LDP and any undersupply will be monitored through the AMR process.
1181	HN3: Affordable Housing	Object	The different affordable housing requirements are understood to be based on the relative strengths of the housing sub-market areas in terms of their viability, and ability to support affordable housing provision. The Affordable Housing Background Paper offers further guidance on this matter. On review of the Council's supporting evidence, our Client has the following observations: - Flintshire is recognised within the LHMA to be a self-contained housing market area. The Sub-Areas identified in the LHMA are documented in paragraph 3.14 to be based on an out-of-date Local Housing Strategy and previous LHMA's. Our Client is concerned that these Sub-Area boundaries may no longer be an accurate reflection of the housing market in Flintshire. The robustness of these boundaries should be reviewed prior to imposing a Sub-Area approach to the provision of affordable housing; and - On review of Table 3.1 of the LHMA, and the	The Council may wish to give consideration to the use of planning conditions to secure affordable housing delivery moving forward.	Not accepted. S106 legal agreements provide greater protection for affordable dwellings to ensure they do not resort to market dwellings. They are also more easily recorded and flagged by Land Charges when carrying out searches. The objector criticises the 'accuracy' of the sub market area boundaries but these have been derived from the LHMA work and found to be still relevant in the 2018 Update. They are also to a degree not absolute but nevertheless provide guidance on affordable variability resulting from differences in viability. In light of the objectors inability to draw more accurate areas or evidence their concerns, the Council consider that they are fit for purpose. In terms of the objectors point that the Connah's Quay, Queensferry and Broughton affordable housing level should be no more that 30%, no viability or other evidence is provided to substantiate this , making it difficult for the Council to accept the case being made. The viability

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			requirements set out under Policy HN3, it is considered that the affordable housing requirement in the Connah's Quay, Queensferry and Broughton Sub- Market Area should be no more than 30%, consistent with that of the South Border Sub-Market Area given the relative house prices. Given the potential requirement for other developer contributions (such as education, recreation/open space, health) on a site-by-site basis, it is imperative that the affordability thresholds set out in this Policy are robustly evidenced and will not serve to frustrate housing delivery across the County. It is noted that reference is made in paragraph 11.9 of the Deposit Plan to the fact that affordable housing delivery will be secured by way of a planning obligation. Based on recent experience elsewhere, there is the potential for such provision to be secured by way of a planning condition which in turn would reduce time and expense on the preparation of a S106 Agreement for those sites where no other obligations are being sought. The Council may wish to give consideration to the use of planning conditions to secure affordable housing delivery moving forward.		assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has shown that the affordable housing percentages are viable within each housing market area, therefore the percentages do not need to be reduced. In terms of the objectors point about obligations those mentioned are all reasonably standard requirements for new development and the objector's objection to their provision would render a site (including any they are promoting) as unsustainable and undeliverable. Conversely, if a site is viable and deliverable then the requirement to secure such obligations should not be an issue.
1264	HN3: Affordable Housing	Object	Object to HN3 as currently drafted as it is unsound. Affordable housing requirements should not be referred to as a starting point for negotiations as this provides no certainty to developers on the level of	The policy should be revised to state affordable housing percentages as a target,	Partly accepted. The policy wording does not mean that the Council will be looking for a higher percentage than those specified within Policy HN3. These requirements are simply the starting position for negotiation downwards subject to detailed

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			affordable housing required in a policy compliant position. The policy should be revised to state affordable housing percentages as a target, acknowledging there are instances where a lower affordable housing provision is entirely justified and reasonable.	acknowledging there are instances where a lower affordable housing provision is entirely justified and reasonable.	viability considerations supported by clear and robust evidence. The viability assessment has been carried out using robust and up to date evidence complied by the District Valuer Services who are part of the Valuation Office Agency who operate on an independent basis. This has set the levels at which affordable housing should be viable and so by definition, and with reference to the Study itself, are the upper limit of potential affordability. Having regard to the findings of the Viability Study it is unlikely that situations would arise where new housing schemes would have sufficient viability to warrant higher figures being considered. If the Inspector considers that further clarity could be added to the wording of the reasoned justification, then the Council would have no objection to the following additional wording being included: “The viability assessment has shown that the affordable housing percentages are the maximum levels of affordable housing that can viably be delivered across each of the housing market areas. Developers are therefore expected to start negotiation from these percentages if they believe there to be significant viability considerations on their particular site. This must be supported by a robust and credible evidence base to sufficiently demonstrate a reduction in the affordable housing delivered by the scheme.”

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
6	HN4: Housing in the Countryside	Object	Planning Policy Wales Edition 10 | December 2018 Definition of Previously Developed Land Previously developed (also known as brownfield) land is that which is or was occupied by a permanent structure (excluding agricultural or forestry buildings) and associated fixed surface infrastructure. The curtilage (see note 1 below) of the development is included, as are defence buildings and land used for mineral extraction and waste disposal (see note 2 below) where provision for restoration has not been made through development management procedures. Note 2. This relates to minerals and waste sites which would otherwise remain unrestored after use because the planning permission allowing them did not include a restoration condition.	The reintroduction of development of brownfield sites even if their location is percived as open countryside.	Not accepted. Policy HN4 aims to protect the open countryside from inappropriate development, but enable housing to meet specific needs in exceptional circumstances only. The policy allows the consideration of brownfield sites through criteria b. c. and d. therefore these is no need to add an additional criteria specifically for brownfield land. Each application will be assessed on their individual merits and the circumstances of the applicant and their need for a dwelling in that particular area .
114	HN4: Housing in the Countryside	Support	We support this policy especially in Northop on the Holywell Road. There are currently fields bordering the edge of the village and providing a break between the edge of the village and Maes Celyn		The Council welcome your support to protect the open countryside from inappropriate housing development, but to ensure the delivery of specific types of new housing in exceptional circumstances only.
355	HN4: Housing in the Countryside	Support	I support these policies to retain green areas as much as possible.		The Council welcome your support to protect the open countryside from inappropriate housing development, but to ensure the delivery of specific types of new housing in exceptional circumstances only.
433	HN4: Housing in the Countryside	Object	object to the restrictive approach to growth proposed through HN4. Sustainable development on the edge of settlements	Sustainable development on the edge of settlements	Not accepted. The Plan seeks to meet its housing requirement in a sustainable manner through completions, commitments, strategic sites,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			should be capable of being brought forward.	should be capable of being brought forward.	allowances for windfall sites and small sites and new allocations, with settlement boundaries adjusted accordingly. Given that the Plan is providing for sustainable development, it is not understood why policy HN4 should seek to enable further housing development on the edge of settlements unless it is related to specific circumstances. Policy HN4 aims to protect the open countryside from inappropriate development, but enable housing to meet specific needs in exceptional circumstances only. Therefore the policy will allow appropriate residential development within the open countryside where it meets the criteria.
63	HN4-B: Residential Conversion of Rural Buildings	Support	CPAT welcomes the intent of this policy to retain any inherent traditional architectural and historic features which merit retention aspart of development schemes		The Council welcome your support for Policy HN4-B.
289	HN4-B: Residential Conversion of Rural Buildings	Object	Criteria a) and b) are unreasonable and unnecessary in a Flintshire context. Firstly, it is not logical to advertise premises for an employment use in the absence of planning permission for an employment use. It simply does not generate any interest as prospective purchasers/tenants will occupy existing available premises of which there are plenty in Flintshire. The Plan acknowledges that it has more employment land and premises that it needs to meet the projected jobs requirement. A freedom of information request to identify how many barn	Delete criteria a), b) and c).	Not accepted. PPW10 states that “A strong rural economy is essential to support sustainable and vibrant rural communities. The establishment of new enterprises and the expansion of existing business is crucial to the growth and stability of rural areas.” Therefore we must enable this type of development through the conversion of existing rural buildings, if they are not initially advertised for business use for a minimum period of twelve months they would have to complete with the demand for residential. This could stifle the opportunity to convert these buildings into business uses and restrict the opportunity to support the rural economy.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			conversions to employment use have been consented/implemented over the last 10 years failed to identify any. Also the planning authority acknowledged that it did not record this information and consequently is unable to review and monitor whether or not the policy is working. None of the 65 properties subject to applications for conversion from 2007 to January 2017 were for commercial/employment use. This requirement of the policy therefore serves no useful purpose and only serves to unnecessarily delay development. The situation is different in other rural areas such as the affluent areas of Cheshire where land values are significantly higher and allocated employment land is further away. here the policy works well but in Flintshire it clearly does not. Criterion c) is also unreasonable. Firstly, conversion costs are almost in every case significantly higher than new build and therefore are very unlikely to be affordable. Secondly, rural conversion properties are generally more isolated from local services such as shops, schools, medical facilities and public transport and so are not a sustainable form of development for those on lower incomes.		
275	HN4-C: Infill Development in Groups of Houses	Object	This policy has failed in delivering any affordable housing in over 15 years. Consequently, in its present form it is meaningless and has no planning purpose.	Allow market housing or a 50/50% mix with an affordable unit	Not accepted. The aim of policy HN4C is to protect the open countryside from inappropriate residential development, but to enable dwellings for proven local housing needs such as affordable housing or

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					essential workers where required. There are limited opportunities within rural areas for residential development therefore it is important that small infill plots outside of settlement boundaries are directed towards residential development for those with local housing needs only. If these were made available for market dwellings then local need affordable housing would struggle to compete, and the opportunity to deliver such dwellings could be stifled. Preserving infill plots for local housing needs only also reduces the pressure for sporadic and isolated development within the open countryside . Allowing market housing on these sites undermines the objective of this policy.
273	HN4-D: Affordable Housing Exceptions Schemes	Object	The policy is a repeat of an existing failed policy. See attached document. The rural exceptions policy is fatally flawed policy and has provided no meaningful affordable housing contribution in the rural areas. Attempts have been made to elicit a response from the local planning authority as to how many rural exception dwellings have been provided in Flintshire since its introduction over 15 years ago. These have included Freedom of Information requests but no evidence has been produced regarding the numbers, if any, of exceptional site dwellings that have been either approved or built. The only such development is the Maes Y Goron site at Lixwm. This 25 unit site was granted in 2007 and, although the cooperation and negotiation between the developer and the planning authority was well intentioned, it	It should be amended to allow for on site market housing to cross subsidise the affordable housing	Not accepted. Policy HN4D recognizes that the need for affordable housing in rural areas is particularly important. The aim of this policy is to protect the open countryside from inappropriate residential development, but to enable small scale affordable housing development where required. PPW10 paragraph 4.2.34 states “Affordable housing exception sites are not appropriate for market housing.” Therefore no market housing will be permitted on exception sites.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			has been fraught with difficulty ever since. It represented the first and only attempt to bring forward a rural exception site in the county. The lessons learned have demonstrated that the exceptions Policy HSG11 of the UDP is an ineffective mechanism to bring forward local needs housing in the rural area.		
623	HN4-D: Affordable Housing Exceptions Schemes	Support	Strongly support the controls on necessary affordable housing within the defined settlement boundary of Pantymwyn, and on small scale affordable housing outside/adjoining the settlement boundary. Urge that no changes are made to these controls in Pantymwyn, or to the defined settlement boundary		The Council welcome your support for Policy HN4D.
1132	HN4-D: Affordable Housing Exceptions Schemes	Object	HN4D. Reference to acceptance the addition of developments of affordable homes adjacent, but outside, settlement boundaries. This is not qualified, either in scale, number of developments or site specific locations considered acceptable for affordable development. 9.2 says that development must be controlled which contradicts this wording and leaves site open to potential exploitation.	Reword policy.	Not accepted. PPW10 paragraph 4.2.34 supports the release of “small” affordable housing sites adjoining settlement boundaries for the provision of affordable housing where a need has been identified. Affordable Housing delivered on exception sites must meet the needs of local people in perpetuity and will be secured accordingly with Section 106 legal agreements and/or planning conditions. The scheme must also meet all the other criteria against which a housing development will be assessed. In particular the scale of the scheme must be sympathetic and proportionate to the size of the settlement and its landscape setting. The criteria in policy HN4D provides sufficient control over the development of exception sites for affordable

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					housing, and leaves no room for potential exploitation through market development.
1185	HN4-D: Affordable Housing Exceptions Schemes	Object	Exception Sites – Affordable housing exception sites are permissible under policy STR2: Location of Development and HN4 (criteria f). It is unclear why small scale exception sites are only allowed in Tiers 2-5 and not Tier 1 which are the most sustainable settlements? The approach requires justification and clarification given affordable housing need across Flintshire is significant.	Exception Sites – Affordable housing exception sites are permissible under policy STR2: Location of Development and HN4 (criteria f). It is unclear why small scale exception sites are only allowed in Tiers 2-5 and not Tier 1 which are the most sustainable settlements? The approach requires justification and clarification given affordable housing need across Flintshire is significant.	Accepted. The Deposit Plans exclusion of Tier 1 Main Service Centres reflects a carry over from the adopted UDP whereby policy HSG11 applied 'rural' exceptions schemes as was defined in PPW at that time. Therefore adopted policy did not allow small scale exceptions schemes in the larger category A settlements as they were not rural settlements. It is noted that PPW describes such development as 'Affordable Housing Exceptions Schemes' and that reference to 'rural' settlements no longer applies. It is accepted that as Tier 1 settlements are considered to be most sustainable settlements then provision for small scale affordable housing exceptions development would be appropriate in principle. The Council would therefore offer no objection to the Inspector recommending that policy HN4-D be amended to allow 'Small Scale Exceptions Schemes for Affordable Housing adjoining settlement boundaries', within criteria a. re Tier 1 Main Service Centres.
122	HN6: Annex Accommodation	Object	While I do not object to the wording of the policy itself, I am objecting (in a purely personal capacity as a planning consultant and not on behalf of any client) to the following sentences in the supporting text, at paragraph 11.27: "An annexe should not contain a full range of facilities which would enable it to be used as a self-	The supporting text should be revised to explain that the use of an existing building within the curtilage of an existing dwellinghouse for	Not accepted. Policy HN6 supports the creation of annex accommodation where it is an extension to an existing dwelling or a conversion of an existing building within the curtilage of an existing dwelling, provided that its usage is ancillary to the residential use of the existing dwelling and is reliant in part on the main dwelling for facilities. If the building does not rely on the main dwelling for some facilities then

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			contained dwelling. If the facilities in the annex (sic) are such that it can be used separately from the original dwelling the Council will assess it as a separate dwelling". This implies that a material change of use might have occurred in the eyes of the LPA, whereas the courts have held that the use of an outbuilding in the curtilage of an existing dwellinghouse for primary residential purposes does not involve a material change of use where it is used in conjunction with the dwelling. This has been upheld by inspectors on appeal. The LPA is therefore respectfully requested to look again carefully at the wording to the supporting text to draft policy HN6 to make this clear.	primary residential purposes does not involve a material change of use where it is used in conjunction with the dwelling. Use by family members does not constitute a sufficient degree of 'separateness' (viz. create a separate dwelling), even where such a person lives independently from those occupying the main dwelling.	it would be an entirely separate dwelling and not annex accommodation, and would need to be assessed accordingly.
290	HN6: Annex Accommodation	Object	Criteria i) and iii) of the policy are unreasonable and unnecessary. Annex accommodation is generally required for family members who are either getting older and want to stay close to family where there will be an opportunity for help and care when their physical or mental health deteriorates. However it is extremely important for their dignity and well being that that they retain a significant element of independence. Criterion i) requires the annex to be reliant in part on the main dwelling for facilities and this will have a negative impact on their independence which they will want to retain for as long as possible. There is a	Delete criteria i) and iii) of the policy	Not accepted. Policy HN6 supports the creation of annex accommodation where it is an extension to an existing dwelling or a conversion of an existing building within the curtilage of an existing dwelling, provided that its usage is ancillary to the residential use of the existing dwelling and is reliant in part on the main dwelling for facilities. If the building does not rely on the main dwelling for some facilities then it would be an entirely separate dwelling and not annex accommodation, and would need to be assessed accordingly. Criteria i and iii are important to ensure the annex is not self-contained, and is used ancillary to the existing dwelling house as intended.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			wealth of reports and studies which confirm the beneficial effect of such independence but with the security that they can have help close at hand if required. Given the lack of affordable housing there are so many young family members having to live at home for much longer and often trying to raise a family of their own in a similar circumstances. With regard to criterion iii) this is rather too prescriptive and can be dealt with by sensitive design and layout as part of any planning application and subsequent permission. Separate vehicle access would seldom be required but again is controlled through the development management process as can a separate garden /sitting out area without affecting the character of the dwelling. Criterion iv) provides the strong and enforceable control to ensure that the annex does not become an entirely separate dwelling.		

Policy HN7

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1144	HN7: Houses in Multiple Occupation	Object	Category C Homes in Multiple Occupation (Policy HN7) The Council will need to ensure that the proposed policy provides an effective basis for determining applications for HMOs in line with the evidence and relevant legislation. In order for a policy of this nature to be effective and implementable in practice 'over concentration' should be defined in the policy. The policy would be strengthened if criterion (b) and (e) clearly detailed what the LPA considers to be an "over concentration" and "cumulative impact". It will be for the LPA to justify its approach based on evidence, and ensure it will deliver on the aims of the policy and can be implemented in practice.	In order for a policy of this nature to be effective and implementable in practice 'over concentration' should be defined in the policy. The policy would be strengthened if criterion (b) and (e) clearly detailed what the LPA considers to be an "over concentration" and "cumulative impact". It will be for the LPA to justify its approach based on evidence, and ensure it will deliver on the aims of the policy and can be implemented in practice.	Accepted. Flintshire County Council, (unlike all the other LA's in North Wales), does not have the power to license all HMO's at the present time. Work is in hand to survey where the existing HMO's are located in order to provide an evidence base against which to consider future registration options as well as support the policy in the LDP. This evidence base can be used to assess whether an area has an over concentration of HMO's using the level of 10% HMO's within a 50m radius of a new HMO, to measure concentration and impact against as a benchmark. Work on an HMO Advice Note, which can inform future SPG is ongoing at the present time and this will add the specific details to the implementation of the Policy. The policy has been written in this way because in the absence of a complete registration system which is not in the LPAs control, each application will need to be assessed using evidence from whatever secondary sources of information are available. Work is underway to collate and map information about known and suspected HMOs both to inform the need for a full registration process, and to assist in identifying areas with particular concentrations which could raise issues of cumulative impact. This work will continue and will need to be reported to the examination by means of a further statement.

Policy HN8

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
91	HN8: Gypsy and Traveller Sites	Object	Objects to sites HN8-1 (magazine Lane, Ewloe), HN8-2 (Gwern Lane, Hope) and HN8-3 (Riverside, Queensferry) as they do not comply with the requirements set out in Circular 005/2018 and in the criteria set out in the existing UDP (HSG14) and in the Deposit LDP (HN9). In particular HN8-3 is located on contaminated land, is in a C1 flood risk area, is adjacent to a major sewage works and is severed from local services by a principle main trunk road linking North Wales and the North West of England which is scheduled for upgrading. Detailed objection provided in the attached document. Proposes an alternative allocation at Bryn y Baal, Mynydd Isa.	Delete sites HN8-1, HN8-2 and HN8-3. Rely on criteria based policy HN9 for determination of planning applications on alternative sites. Allocate candidate site MYN006 at Bryn Y Baal and identified in the document attached above.	Not accepted. The objections relating to allocated sites have been recorded separately • HN8-1 (magazine Lane, Ewloe (id1215) • EN8-2 (Gwern Lane, Hope (id1216) • HN8-3 (Riverside, Queensferry (id1216) and these are dealt with in a comprehensive response on each site which also take into account other representations. The objector has made the following points in support of the site using a number of headings (in bold) and each will be responded to in turn: Adjacent to settlement boundary: The settlement boundary in this part of Mynydd Isa is well defined by existing estate type residential development. On the south side of Bryn Y Baal Rd this includes the farmhouse 'Bryn Derw' and the cul de sac Yr Ydlan. The objection site is quite different in character and appearance from the development within the settlement boundary. On the north side of Bryn y Baal Rd the settlement boundary includes the cul de sac development at Rockcliffe but excludes the buildings associated with Bryn Farm. The settlement boundary on this north western edge of Mynydd Isa is considered to be well defined and defensible. Well defined site boundaries: The triangular shaped site is bounded by Bryn y Baal Rd on its outer edge with a substantial hedgerow boundary and by the line of a former road on the other two sides. The former road is not now particularly visible as it has grassed over. In general, the site is considered to form part and parcel of the wider open countryside. Logical extension to urban form: The modern development at Yr Ydlan is set back from the road by grassed amenity areas on either side of the access road. This helps soften the appearance of built development. Similarly the farmhouse Bryn Derw is also set back from the road. Given that

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					built development is set back and has an 'open' setting, it is not considered that the development of the site represents a logical extension to the settlement boundary or to urban form. Well related to local community and services: It is noted that the site is in close proximity to services and facilities but this on its own is not sufficient to overcome the many site constraints that exist. Site location in green barrier no impediment to use as a gypsy / traveller site as seen by appeal decisions: The objector refers to appeal decisions at Magazine Lane, Ewloe and Oakehnolt where gypsy and traveller sites were allowed within green barriers. The planning application (053290) for the Oakenholt site was allowed on appeal on 08/10/15 for 2 pitches. It is the case that the Inspector considered that the need for accommodation and the lack of sites outweighed the fact it represented inappropriate development within a green barrier. However, the Inspector also looked at the specifics of the appeal site in terms of the purpose of the green barrier, noting that '…the site itself is largely enclosed by trees, many of which are mature and evergreen. As a result of this, there are very limited views into the site from the surrounding area. This, together with the presence of the adjacent housing and papermill, mean that the site as it was prior to its occupation…. would have made a limited contribution to the openness of the green barrier. Further, due to the location of the site adjacent to the row of dwellings and the papermill, the proposal would not appear to extend the developed area any further into the countryside…'. This contrasts sharply with the objection site which is open in character, is highly visible from the adjacent road and where it would extend development into open countryside. In any event, the Deposit LDP has identified allocated sites in the form of extensions to existing authorised sites and it is not necessary for a new site to be allocated where it would harm a

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					green barrier. A separate objection has been made in respect of EN11 and this is responded to separately. The site has previously been put forward for development as an omission site for housing in the UDP and the Inspector commented 'The site forms a small part (0.2ha) of 5963 adjacent to existing development and fronting Bryn-y-Baal Road. The settlement boundary in this location is firm and defensible following the line of built development. The objections site is open land screened by hedgerows and the track along its north western side is overgrown. At the time of my visit it was used as a storage compound. Despite the storage use, in appearance it has more in common with the countryside to the north and I consider it is appropriately located in the undeveloped area outside the settlement boundary. The Inspector also commented 'The site, albeit in a small way contributes to the strategic green barrier between New Brighton and Mynydd Isa'. The objector puts forward the argument, by objecting to the Plans allocated sites that there is an unmet need and this overrides the green barrier designation. The objector recently put forward similar arguments as part of a planning application (056672) for residential development in which the need to increase housing land housing supply outweighed the green barrier. However, the appeal was dismissed with the Inspector commenting 'My conclusions are that the development would be harmful to the openness of the green barrier and to the character and appearance of the area and would erode the gap between Mynydd Isa and New Brighton. These harmful effects warrant considerable weight. I also conclude that there is a lack of a 5 year supply of housing land, and that the need to increase the supply of housing land warrants considerable weight, provided the development would comply with development plan and national policies. If the site was not located in a green barrier, these arguments would be finely balanced. However, the proposal is for inappropriate development in the green barrier, and PPW advises that such development should not be granted planning permission except in very exceptional circumstances where other considerations clearly outweigh the harm the development would do to the green barrier. That demanding

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					balance would not be achieved in this case, and I conclude that the development would be contrary to development plan and national policy'. Turning to the issue as to whether this is an appropriate location and site it is not considered that the location is suitable. There is no history of encampments in this area and it is not located on the known traveller routes. In terms of the site itself the site area is only 0.13ha and is considered to be too small to accommodate a well laid out development. The site has previously been considered by the UDP Inspector who found that it formed part of the open countryside and green barrier and did not relate to the well defined settlement boundary. A subsequent appeal Inspector also considered that it formed part of the green barrier and that the increase in housing land supply did not outweigh the harm to the green barrier. The site is not considered to be in a suitable location nor does it have the size to meet the needs of the gypsy and traveller community. The Plan has sought to allocate extensions to existing lawful sites to meet the need arising over the Plan period. The objector's suggestion of deleting those allocations and replacing them with a single small site allocation, backed up by a criteria based policy does not meet national planning guidance nor the requirements of the Housing (Wales) Act. The Plans approach of seeking to extend sites which have a lawful use and planning permission is not considered to be unsound. However, the Objectors suggested approach of a single small allocation, backed up by a criteria based approach is simply not sound.
21	HN8: Gypsy and Traveller Sites	Object	I wish to object to the proposed traveller transit site in Castle Park Ind Est Flint. This site is not suitable for many reasons. This area is on contaminated ground from the previous use as a domestic waste site but before this it was an Alkali works which was	Please investigate above concerns.	Not accepted. The Council have grouped together and summarised representations made on this HN8.4 Castle park, Flint allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			capped but still requires monitoring for leaks from underground chemical activity. To the West of the site is an area of gutters and ditches which flood on a high tide, Not ideal for children who don't know the area to live next to. Also from a residents point of view the increased traffic over the Swan Bridge would be dangerous as there is no footpath. The local infrastructure simply could not cope. Also this plan contradicts what we were told by the local council the site would be used for, Which was to use the area for Flint Coastal Volunteers, Which is much safer than using the site as even a temporary home for someone. Has the council considered the old amenity site in Greenfield which is much larger and extends to the dock area and has better access and is closer to the A55 via the important traveller visiting place of The Well in Holywell. There is also the site on Dock road Connahs Quay where the skip site was but I believe is now closed and this area does not directly affect residential dwellings. Please take into account these concerns and think about the residents of this part of Flint who thought that things were starting to look up for us but we had the "Controversial" Iron Ring taken from us and there is still no sign of the castle visitors centre. This area surely deserves something positive to show off the natural beauty of the Estuary and the first castle built by King Edward I Please consider all of this and prove that the Council does listen.		Based on Incomplete Data: The need for a transit site has been identified through the GTAA and as a result of the Council's experience in dealing with unauthorised encampments and is not based on incomplete data. Flintshire Exceeded Reasonable Provision: Flintshire has a number of existing gypsy traveller sites, some granted planning permission on a permanent basis and some on a temporary basis. The GTAA which has been approved by Welsh Government, has identified a need for further 'residential' pitches and also the need for a transit site as there is presently no transit site in Flintshire. Nuisance From Previous Encampments in Area: The GTAA has established the need for a transit site in the County. The need has also been established as a result of unauthorised encampments in recent years throughout parts of the County. The provision of a transit site is in recognition of the impacts of unauthorised encampments on both communities and the environment. A transit site will provide the police and Council with a facility to temporarily accommodate travellers for a maximum of 12 weeks and the site will be closely managed by the Council with regular site management presence and short term tenancy agreements with those who are provided with temporary stay on the site. Site Specific Issues: The site will be designed in accordance with Welsh Government guidance 'Designing Gypsy and Traveller Sites' in terms of appropriate pitch sizes. A draft layout shows 6 pitches plus a site manager's office which will provide communal facilities. The draft site layout in Background Paper 6 shows 6 pitches and a site manager's office which will provide communal facilities. The design of the site will need to comply with para 6.17 of Welsh Government guidance 'Designing Gypsy and Traveller Sites' which states 'Instead of individual amenity blocks on each pitch, sites should include shared amenities featuring toilets, washbasins and shower facilities with hot and cold water supply. At least one male and one female amenity block are required'. The provision of public toilets elsewhere in Flint is not within the remit of the LDP. No proposals have been received for a base for the Flint Coastal Volunteers on the site of the former Civic Amenity Site. By contrast

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					there is a statutory duty placed on the Council's Housing function, to deliver gypsy and traveller sites. The need for a Transit site has been identified and following an assessment of Council owned land, this site has been identified as being available and suitable to be allocated for a transit site. Area Wide Issues: The recreational use of the Flint Dock and the surrounding area is noted given the network of paths and the Coast Path. The gypsy site is set back from the public highway behind gates and is well screened by existing woodland. Its use as a transit site will not harm views of the estuary. The transit site will be carefully managed and have an onsite manager office. Residents will be on site for a temporary period and will need to abide by site rules and regulations. The site would be fully serviced in terms of water electricity, sewage facilities and waste disposal. Given that it is has no public access and is well screened it is not considered that the proposal would harm recreational use of the area. The site was not previously used as an industrial unit or site, but as a former civic amenity site for recycling. It is separated from the industrial estate by woodland and landscaped open areas and the dock. With appropriate design and management there is no reason why the proposed use should be inappropriate or harmful to the industrial estate. The planning permission for the adjacent solar park includes security fencing and security gate and all generating and inverter infrastructure will be located within the secure fenced boundary of that site. It is not considered that there is any inherent conflict between a managed transit site and a solar farm / grid connection. Contamination and related Issues: Although the site was previously used as a civic amenity site it has a concrete slab and its operation as a waste site would have complied with all environmental licensing arrangements. Nevertheless, a contamination study has been commissioned to establish the existence of any contamination and what mitigation measures might be necessary. The adjoining former landfill site now has planning permission for a solar park and this will have security fencing and will not have public access. There are a number of gutters and ditches which

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					flood at high tide but these are clearly visible and accessible from the main footpath link between the retail park and Castle Park. The presence of these features is something that could be pointed out to travellers on site as part of the site management arrangements and signage. Conflict with Flint Masterplan: The Flint Masterplan 2021 has a base date of 2012 and covers the period to 2021. On p30 the Masterplan shows no particular proposals for the former Civic Amenity Site, but does show an improved pedestrian link from Flint Retail Park to Flint Dock and the coastal path, which runs either side of Flint Dock. It also shows proposed landscaping work in the area around Flint Dock. The Masterplan maps show a pedestrian route to the rear (south) of the former Civic Amenity Site, but not along the access road which leads to the site. Having checked the Council's public rights of way maps, there is no lawful public access along the access road to the site, and public access is presently prevented by locked gates. Given that the former Civic Amenity Site sits within, and is well screened by woodland, it is unclear how the sites use as a transit site will have a negative effect on the use of nearby public rights of way and the area around the Dock, nor prevent proposals which seek to enhance the recreational potential of the area. The Masterplan identifies the land opposite the former Civic Amenity site, (adjacent industrial unit 26 at Castle Park Industrial Estate) as a site for proposed greenspace. This proposal has not been delivered and a planning application (059397) has now been approved for a fenced open storage compound. No objection to this proposal has been made by local Members, the Town Council or the public on the basis that the proposal is contrary to the recommendations in the Flint Masterplan. The Flint Masterplan is not adopted supplementary planning guidance as part of the Council's planning policy framework. Infrastructure The site is allocated as a transit site for 6 pitches and is intended for occupation for a temporary period of up to 12 weeks. Any residential occupation by families with children will not place a pressure on schools to create a permanent place. The usual procedure is for Education Officers to complete a welfare assessment for any new family staying temporarily in the County

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					with the assistance of BCUHB. Families would not be allowed to stay within a transit site for longer than 12 weeks which is the national agreement and if the families asked for their children to attend school then this would need to be assessed. Experience to date is that this has never happened as families will usually have school places in their home town. Highways Issues Castle Park Industrial Estate presently has two means of access which are via Evans Way which has a height restriction of 2.8m and via Castle Dyke Street and Swan Bridge. These two access points provide satisfactory vehicular access to the Castle, foreshore and Industrial Estate. Also the use of the site as a transit site must be considered in the context of its previous use as a recycling centre, in terms of the amount and type of vehicular traffic. In this context it is considered that the existing road network is quite capable of serving a transit site of 6 pitches in this location. The Highways Development Management Officer has commented 'The site was formerly used as a household waste/recycling site; a change of use to a Transit Site is likely to generate a reduction in vehicular movements and a lesser highway impact'. The local highway network is considered appropriate in terms of accommodating the likely traffic generation from the transit site. Soundness Issues: As explained above, the former civic amenity site is not designated for any particular use or proposals in the Flint Masterplan and neither does the masterplan have any planning status in terms of supplementary planning guidance. The site is separated from the industrial estate (and nearby residents) by woodland and the dock. It is not clear how the site could "inhibit existing industrial operations". A contamination report has been commissioned and clearly the site has been more recently used as a civic amenity site where hardstanding and servicing was provided to the site. Given this, the amount of ground disturbance that would be required to facilitate the sites transit use would be minimal. Transit sites, where residents will only be present for a temporary period, would be unlikely to place pressure on schools for additional places. This is commented on further above. The industrial estate is served by two vehicular access routes. The

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					use of site for a 6 pitch transit site must also be considered against the traffic arising from the previous waste recycling centres which have involved visiting customers and operational HGV's and was far greater in size and volume than is likely to be the case with a periodic use for just a six pitch transit site. There is no inherent conflict between a transit site and solar park. In terms of the allegations that the Plan is unsound in respect of this allocation it is necessary to look at the tests of soundness in detail: i) Does the Plan fit? (is it clear that the LDP is consistent with other Plans) – in line with the Housing (Wales) Act, PPW10 and the findings of the GTAA as well as on-going problems with encampments, the Plan seeks to make provision for a transit site. The approach is not 'unsound'. ii) Is the Plan appropriate? (Is the Plan appropriate for the area in the light of the evidence) – The site is self-contained and is capable of being developed and operated in a manner which does not harm the locality. There is no conflict with the Flint Masterplan in terms of recreational uses in the area given the site configuration and relationship. iii) Will the Plan deliver? (is it likely to be effective) – The site is in Council ownership and this enables the Council to secure Welsh Government funding to develop the site. The site is both viable and deliverable. In conclusion, the site meets an identified need and is in a sustainable location off a main travelling route, on the edge of a Tier 1 Main Service Centre which provides a wide range of services and facilities. The site is self contained and can be developed and operated in a manner which does not harm the amenity and use of the local area. The site is viable and deliverable and should be retained as an allocation in the Plan.
241	HN8: Gypsy and Traveller Sites	Object	Land on Rhyddyn Hill, next to the 10 acres of land has been used by residents of Gwern Travellers Caravan Site for grazing horses and other activities, for many years. From the outset we tried to be welcoming & tolerant. We were to have this tolerance well & truly thrown back in our faces. On occasion there have been up to 21 horses	Permissions should be time limited to 5 years with renewal dependent on performance. (Previous agreements with the Authority regarding anti-social	Not accepted. The Council have grouped together and summarised representations made on this HN8.2 Gwern Lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			on this land & in 2014 the horses were neglected to the point where they stripped the bark from the trees, and ate through the hedge onto our land. The horses ended up on the Rhyddyn Hill after eating their way through my hedge & the Police issued a Fixed Penalty, I sought the help of the RSPCA; who were very effective at dealing with the problems caused by the Travellers. This year a white Transit Van and 2 off road motorcycles have been racing up & down on that land close to our land, regularly on Sundays, for up to 8 hours a day. If a vehicle or motorcycle lost control and travelled through the hedge the consequences would be dire. (We have had to consider a disaster plan following the recent tragedy at Rhyd y Galen Caravan Park, where a women was tragically killed in similar circumstances.) Gypsies & Travellers make applications on green belt land, to enlarge their site citing the fact that they are persecuted, and yet do not reveal the fact that they use local agricultural land for "recreation" in order to persecute others. The Police were too busy on ALL of the occasions we sought assistance this year & in desperation, I tried to reason with the group of 10 adolescents who were riding the motorcycles, I received verbal abuse & death threats. I expect Enforcement officers will receive many inquiries in 2020..... The Gwern Lane residents use Rhyddyn Hill to access Hope by foot and car, beyond, as it offers the shortest route. Rhyddyn Hill is already congested & any planning application for Gwern Lane will have to address the access via Rhyddyn Hill. I have received abuse on Rhyddyn Hill from a Traveller because I did	behaviour, have, I believe been ignored.) If residents on the Gwern Lane site really want to integrate with our community, & planning is to be granted, then it should be conditional & time limited. After all, a Caravan Park licence is subject to it being run in a proper, safe & correct way or a licence could be withdrawn. Surely the same should apply to Gypsy & Traveller Caravan sites too? The design and access statement attached to any Gwern Lane planning application must address access via Rhyddyn Hill & recreational intentions relating to the land adjacent to Little Rhyddyn Farm, as the use of this land is now entrenched with the occupiers of Gwern Lane Caravan Site.	11/05/11. Although the Inspector considered the appeal in the light of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling 'Gwern House' being some 40m to the south of the existing site. The extension to the site is located on the north side of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			not move out of his way quick enough. Others have also received abuse.		use of the existing vehicular access will prevent the need for hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations. Owners Intentions: The present families on site have expressed a need, via the Council's Gypsy Liaison Officer, to meet the additional accommodation needs of the family. Positive Discrimination: The site extension is allocated to meet an expressed need from the present family to meet their needs for additional accommodation. The LDP is merely seeking to meet the identified need for pitches in the GTAA through meeting the needs of an existing family. There is nothing discriminatory in the Council seeking to fulfil its statutory duty in the Housing (Wales) Act to meeting the needs of gypsies and travellers in the County. The Council is seeking to meet the need arising in the County as identified in the GTAA. The Council run site at Queensferry forms part of the existing site provision and an extension to this is proposed as an allocation in the LDP. The provision of sites in Llay, whether existing or proposed, is not relevant to the Flintshire LDP and consideration of this allocation as this lies in the adjacent County of Wrexham where the duty there is to meet their own identified needs. Scope for Smaller Proposal: In further discussions with the present family and their planning agent, the number of pitches to be provided on the site has been reviewed downwards to reflect the site size and characteristics and the family need. It is now proposed that the number of additional pitches to be provided is 4. This will enable a much less intensive use of the site and will reduce its impact on the character and appearance of the countryside. Road Safety: In the appeal decision the Inspector did not consider that the site

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					and approach roads presented any significant parking or traffic issues. The Highways Development Management Officer has considered the proposed extension and comments 'Gwern Lane is a 3m wide lane generally suitable for single lane operation however the road widens to a width of 4.5m in the vicinity of the junction with the B5373, sufficient to allow two vehicles to pass. Available visibility, in both directions, at the junction exceeds the minimum recommended 120m for a road subject to a 40mph speed restriction. On that basis I raise no objection to the proposed site increase'. Proportionality: As detailed above, the existing family and agent has revised their proposals to reduce the number of additional pitches to 4. Although the site area would remain the same, this allows for a lower density of development and scope for landscaping measures. The provision of 4 pitches would also help allay residents concerns about the size of the traveller community relative to the size of the settled community. Facilities / Services: Although the site sits in an open countryside location it is close to a number of settlements. It is close to the settlements of HCAC in Flintshire and Llay in Wrexham where there is education and health provision, and a range of employment and other services and facilities that serve the 'settled' community sufficiently as they do the Gypsy and Traveller site. It is in a broadly sustainable location. Amenity: Any matters relating to nuisance are the remit of the police and relevant Council Services. The Council's Gypsy Liaison Officer is in regular contact with the site residents and can monitor site conditions. Any breaches of the planning consent are a matter for the Council's Planning Enforcement Officers. In conclusion, the revised proposal for the site is a substantially reduced scheme in terms of the number of pitches (4 rather than 6-8) and addresses many of the objector's concerns in relation to impacts arising from the site of the traveller community relative to the settled community. It is suggested that the Inspector have regard to a reduced number of pitches on the site which together

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					with other provision identified in the plan is sufficient to meet established identified need.
30	HN8: Gypsy and Traveller Sites	Object	Please see the attached file for my comments about this policy. I object to the proposal to extend the Gypsy and Traveller site in Gwern Lane because I believe that the site is neither appropriate nor suitable and my reasons are detailed below. Road Safety Gwern Lane is a derestricted, narrow, country lane with blind bends, no footpaths and limited passing places. The lane is very popular for ramblers, dog walkers, people on horseback, cyclists and children playing. My wife and I are extremely cautious when travelling by car along the lane, especially at the blind bend near the northern boundary of the Gypsy and Traveller Site. In recent years, the local traffic using Gwern Lane has increased considerably. Unfortunately, many vehicles speed excessively along the lane and present a significant risk to other users, particulary to those mentioned above who are not protected by a vehicle. The extra vehicular traffic using the lane as a result of the proposed expansion of the Gypsy and Travellers Site would significantly increase the risk to other users of the lane. Proportionality The number of dwellings in the settled community of Gwern Lane including those dwellings at the junction with Gresford Road, is 10. The current total number of people occupying these dwellings is 12. The Gypsy and Traveller Site in Gwern Lane currently has planning consent for 2 static vans and 2 touring vans. There is currently 1 static van and there are usually several occupied touring vans also on site. If the proposed extension to the site is realised there would be 10 static vans and 10 touring	Removal of allocation from LDP.	Not accepted. The Council have grouped together and summarised representations made on this HN8.2 Gwern lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling ‘Gwern House’ being some 40m to the south of the existing site. The extension to the site is located on the north side

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			vans on the site. I believe that if the proposals were realised, the number of people occupying the Gypsy and Traveller Site in Gwern Lane would dominate the local settled community and not be in proportion to it. This situation would hinder and not promote 'peaceful and integrated co-existence between the site and the local community' as required in identifying Gypsy and Traveller Sites in Paragraph 37 of Document 'F'.		of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The use of the existing vehicular access will prevent the need for hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations. Owners Intentions: The present families on site have expressed a need, via the Council's Gypsy Liaison Officer, to meet the additional accommodation needs of the family. Positive Discrimination: The site extension is allocated to meet an expressed need from the present family to meet their needs for additional accommodation. The LDP is merely seeking to meet the identified need for pitches in the GTAA through meeting the needs of an existing family. There is nothing discriminatory in the Council seeking to fulfil its statutory duty in the Housing (Wales) Act to meeting the needs of gypsies and travellers in the County. The Council is seeking to meet the need arising in the County as identified in the GTAA. The Council run site at Queensferry forms part of the existing site provision and an extension to this is proposed as an allocation in the LDP. The provision of sites in Llay, whether existing or proposed, is not relevant to the Flintshire LDP and consideration of this allocation as this lies in the adjacent County of Wrexham where the duty there is to meet their own identified needs.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Scope for Smaller Proposal: In further discussions with the present family and their planning agent, the number of pitches to be provided on the site has been reviewed downwards to reflect the site size and characteristics and the family need. It is now proposed that the number of additional pitches to be provided is 4. This will enable a much less intensive use of the site and will reduce its impact on the character and appearance of the countryside. Road Safety: In the appeal decision the Inspector did not consider that the site and approach roads presented any significant parking or traffic issues. The Highways Development Management Officer has considered the proposed extension and comments 'Gwern Lane is a 3m wide lane generally suitable for single lane operation however the road widens to a width of 4.5m in the vicinity of the junction with the B5373, sufficient to allow two vehicles to pass. Available visibility, in both directions, at the junction exceeds the minimum recommended 120m for a road subject to a 40mph speed restriction. On that basis I raise no objection to the proposed site increase'. Proportionality: As detailed above, the existing family and agent has revised their proposals to reduce the number of additional pitches to 4. Although the site area would remain the same, this allows for a lower density of development and scope for landscaping measures. The provision of 4 pitches would also help allay residents' concerns about the size of the traveller community relative to the size of the settled community. Facilities / Services: Although the site sits in an open countryside location it is close to a number of settlements. It is close to the settlements of HCAC in Flintshire and Llay in Wrexham where there is education and health provision, and a range of employment and other services and facilities that serve the 'settled' community sufficiently as they do the Gypsy and Traveller site. It is in a broadly sustainable location. Amenity: Any matters relating to nuisance are the remit of the police and

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					relevant Council Services. The Council's Gypsy Liaison Officer is in regular contact with the site residents and can monitor site conditions. Any breaches of the planning consent are a matter for the Council's Planning Enforcement Officers. In conclusion, the revised proposal for the site is a substantially reduced scheme in terms of the number of pitches (4 rather than 6-8) and addresses many of the objector's concerns in relation to impacts arising from the site of the traveler community relative to the settled community. It is suggested that the Inspector have regard to a reduced number of pitches on the site which together with other provision identified in the plan is sufficient to meet established identified need.
33	HN8: Gypsy and Traveller Sites	Object	The location conflicts with the Flint Master plan and the use of the sire for recreation, leisure and walking. The proposal are therefor in conflict with the councils own proposals for the development of the area. The Swan Bridge does not have the capacity to deal with the increase in traffic as the road does not have a footpath in place for a considerable length. There is a lack of appropriate school places in the vicinity the sire was proposed as a base for the Flint Coastal Volunteers, a group which could assist the management of the paths and land around the site. This use of the site, which would have complemented the councils existing Master plan for the area, has not been given adequate consideration. This could also have been a base for schools visiting the area. Possible contamination of the land the site is on due to previous uses. The area around the site is used for recreation and this proposal conflicts with that use. It is adjacent to the proposed National Grid connection to the Solar Park.		Not accepted. The Council have grouped together and summarised representations made on this HN8.4 Castle Park, Flint allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Based on Incomplete Data: The need for a transit site has been identified through the GTAA and as a result of the Council's experience in dealing with unauthorised encampments and is not based on incomplete data. Flintshire Exceeded Reasonable Provision: Flintshire has a number of existing gypsy traveller sites, some granted planning permission on a permanent basis and some on a temporary basis. The GTAA which has been approved by Welsh Government, has identified a need for further 'residential' pitches and also the need for a transit site as there is presently no transit site in Flintshire. Nuisance From Previous Encampments in Area: The GTAA has established the need for a transit site in the County. The need has also been established as a result of unauthorised encampments in recent years throughout parts of the County. The provision of a transit site is in recognition of the impacts of unauthorised encampments on both communities and the environment. A transit site will provide the police and Council with a facility to temporarily accommodate travellers for a maximum of 12 weeks and the site will be closely managed by the Council with regular site management presence and short term tenancy

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					agreements with those who are provided with temporary stay on the site. Site Specific Issues: The site will be designed in accordance with Welsh Government guidance 'Designing Gypsy and Traveller Sites' in terms of appropriate pitch sizes. A draft layout shows 6 pitches plus a site manager's office which will provide communal facilities. The draft site layout in Background Paper 6 shows 6 pitches and a site manager's office which will provide communal facilities. The design of the site will need to comply with para 6.17 of Welsh Government guidance 'Designing Gypsy and Traveller Sites' which states 'Instead of individual amenity blocks on each pitch, sites should include shared amenities featuring toilets, washbasins and shower facilities with hot and cold water supply. At least one male and one female amenity block are required'. The provision of public toilets elsewhere in Flint is not within the remit of the LDP. No proposals have been received for a base for the Flint Coastal Volunteers on the site of the former Civic Amenity Site. By contrast there is a statutory duty placed on the Council's Housing function, to deliver gypsy and traveller sites. The need for a Transit site has been identified and following an assessment of Council owned land, this site has been identified as being available and suitable to be allocated for a transit site. Area Wide Issues: The recreational use of the Flint Dock and the surrounding area is noted given the network of paths and the Coast Path. The gypsy site is set back from the public highway behind gates and is well screened by existing woodland. Its use as a transit site will not harm views of the estuary. The transit site will be carefully managed and have an onsite manager office. Residents will be on site for a temporary period and will need to abide by site rules and regulations. The site would be fully serviced in terms of water electricity, sewage facilities and waste disposal. Given that it is has no public access and is well screened it is not considered that the proposal would harm recreational use of the area. The site was not previously used as an industrial unit or site, but as a former civic amenity site for recycling. It is separated from the industrial estate by woodland and landscaped open areas and the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					dock. With appropriate design and management there is no reason why the proposed use should be inappropriate or harmful to the industrial estate. The planning permission for the adjacent solar park includes security fencing and security gate and all generating and inverter infrastructure will be located within the secure fenced boundary of that site. It is not considered that there is any inherent conflict between a managed transit site and a solar farm / grid connection. Contamination and related Issues: Although the site was previously used as a civic amenity site it has a concrete slab and its operation as a waste site would have complied with all environmental licensing arrangements. Nevertheless, a contamination study has been commissioned to establish the existence of any contamination and what mitigation measures might be necessary. The adjoining former landfill site now has planning permission for a solar park and this will have security fencing and will not have public access. There are a number of gutters and ditches which flood at high tide but these are clearly visible and accessible from the main footpath link between the retail park and Castle Park. The presence of these features is something that could be pointed out to travellers on site as part of the site management arrangements and signage. Conflict with Flint Masterplan: The Flint Masterplan 2021 has a base date of 2012 and covers the period to 2021. On p30 the Masterplan shows no particular proposals for the former Civic Amenity Site, but does show an improved pedestrian link from Flint Retail Park to Flint Dock and the coastal path, which runs either side of Flint Dock. It also shows proposed landscaping work in the area around Flint Dock. The Masterplan maps show a pedestrian route to the rear (south) of the former Civic Amenity Site, but not along the access road which leads to the site. Having checked the Council's public rights of way maps, there is no lawful public access along the access road to the site, and public access is presently prevented by locked gates. Given that the former Civic Amenity Site sits within, and is well screened by woodland, it is unclear how the sites use as a transit site will have a negative effect on the use of nearby public rights of way and the area around the Dock, nor prevent proposals which

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					seek to enhance the recreational potential of the area. The Masterplan identifies the land opposite the former Civic Amenity site, (adjacent industrial unit 26 at Castle Park Industrial Estate) as a site for proposed greenspace. This proposal has not been delivered and a planning application (059397) has now been approved for a fenced open storage compound. No objection to this proposal has been made by local Members, the Town Council or the public on the basis that the proposal is contrary to the recommendations in the Flint Masterplan. The Flint Masterplan is not adopted supplementary planning guidance as part of the Council's planning policy framework. Infrastructure The site is allocated as a transit site for 6 pitches and is intended for occupation for a temporary period of up to 12 weeks. Any residential occupation by families with children will not place a pressure on schools to create a permanent place. The usual procedure is for Education Officers to complete a welfare assessment for any new family staying temporarily in the County with the assistance of BCUHB. Families would not be allowed to stay within a transit site for longer than 12 weeks which is the national agreement and if the families asked for their children to attend school then this would need to be assessed. Experience to date is that this has never happened as families will usually have school places in their home town. Highways Issues Castle Park Industrial Estate presently has two means of access which are via Evans Way which has a height restriction of 2.8m and via Castle Dyke Street and Swan Bridge. These two access points provide satisfactory vehicular access to the Castle, foreshore and Industrial Estate. Also the use of the site as a transit site must be considered in the context of its previous use as a recycling centre, in terms of the amount and type of vehicular traffic. In this context it is considered that the existing road network is quite capable of serving a transit site of 6 pitches in this location. The Highways Development Management Officer has commented 'The site was formerly used as a household waste/recycling site; a change of use to a Transit Site is likely to generate a reduction in vehicular movements and a lesser highway impact'. The local highway network is considered appropriate in terms of

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					accommodating the likely traffic generation from the transit site. Soundness Issues: As explained above, the former civic amenity site is not designated for any particular use or proposals in the Flint Masterplan and neither does the masterplan have any planning status in terms of supplementary planning guidance. The site is separated from the industrial estate (and nearby residents) by woodland and the dock. It is not clear how the site could "inhibit existing industrial operations". A contamination report has been commissioned and clearly the site has been more recently used as a civic amenity site where hardstanding and servicing was provided to the site. Given this, the amount of ground disturbance that would be required to facilitate the sites transit use would be minimal. Transit sites, where residents will only be present for a temporary period, would be unlikely to place pressure on schools for additional places. This is commented on further above. The industrial estate is served by two vehicular access routes. The use of site for a 6 pitch transit site must also be considered against the traffic arising from the previous waste recycling centres which have involved visiting customers and operational HGV's and was far greater in size and volume than is likely to be the case with a periodic use for just a six pitch transit site. There is no inherent conflict between a transit site and solar park. In terms of the allegations that the Plan is unsound in respect of this allocation it is necessary to look at the tests of soundness in detail: i) Does the Plan fit? (is it clear that the LDP is consistent with other Plans) – in line with the Housing (Wales) Act, PPW10 and the findings of the GTAA as well as on-going problems with encampments, the Plan seeks to make provision for a transit site. The approach is not 'unsound'. ii) Is the Plan appropriate? (Is the Plan appropriate for the area in the light of the evidence) – The site is self-contained and is capable of being developed and operated in a manner which does not harm the locality. There is no conflict with the Flint Masterplan in terms of recreational uses in the area given the site configuration and relationship. iii) Will the Plan deliver? (is it likely to be effective) – The site is in

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Council ownership and this enables the Council to secure Welsh Government funding to develop the site. The site is both viable and deliverable. In conclusion, the site meets an identified need and is in a sustainable location off a main travelling route, on the edge of a Tier 1 Main Service Centre which provides a wide range of services and facilities. The site is self contained and can be developed and operated in a manner which does not harm the amenity and use of the local area. The site is viable and deliverable and should be retained as an allocation in the Plan.
110	HN8: Gypsy and Traveller Sites	Object	Flint Traveller Site: Travellers have been camped in this area many times before and left a terrible mess for the council, at our expense to clean up after them. They did not use the toilets which were provided for them, but fouled the surrounding area. Why? should we provide these facilities for them when the town has none for the ratepayers. The dock area which has lovely views across the estuary is used by many elderly for it is a fairly level walk, many have told me that they will not be coming here while the travellers are here, it's a pity that we were not given the same consideration as the outsiders. My wife who as been picking up litter there for at least the last five years will not be doing it anymore, she was presented with a plaque for all her good work which will be to no avail if these people are allowed to stay.	Removal of allocation.	Not accepted. The Council have grouped together and summarised representations made on this HN8.4 Castle Park, Flint allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Based on Incomplete Data: The need for a transit site has been identified through the GTAA and as a result of the Council's experience in dealing with unauthorised encampments and is not based on incomplete data. 101	HN8: Gypsy and Traveller Sites	Object	I am appalled to learn of your plans to create a Travellers site at Castle Park, Flint. This is an access area to a well used recreational facility. Many people, individuals , families and many elderly people walk along this route every day. At the moment people feel quite safe but if a Travellers site is developed here this will change. This will then reduce the opportunities for people to exercise to keep fit and well. A Travellers site already exists in Flint, behind Jones Motors garage! One such site is enough for a town of this size! Flint has few facilities. Unlike our neighbouring towns we have no hospital. Our schools are full, doctors' lists are full and we have no police station in operation! It is time that you as town planners realised the impact that your plans would have on the lives of the residents of Flint. Stop using our town as your dumping ground!	Removal of allocation.	Not accepted. The Council have grouped together and summarised representations made on this HN8.4 Castle Park, Flint allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Based on Incomplete Data: The need for a transit site has been identified through the GTAA and as a result of the Council's experience in dealing with unauthorised encampments and is not based on incomplete data. There is no inherent conflict between a transit site and solar park. In terms of the allegations that the Plan is unsound in respect of this allocation it is necessary to look at the tests of soundness in detail: i) Does the Plan fit? (is it clear that the LDP is consistent with other Plans) – in line with the Housing (Wales) Act, PPW10 and the findings of the GTAA as well as on-going problems with encampments, the Plan seeks to make provision for a transit site. The approach is not ‘unsound’. ii) Is the Plan appropriate? (Is the Plan appropriate for the area in the light of the evidence) – The site is self-contained and is capable of being developed and operated in a manner which does not harm the locality. There is no conflict with the Flint Masterplan in terms of recreational uses in the area given the site configuration and relationship. iii) Will the Plan deliver? (is it likely to be effective) – The site is in Council ownership and this enables the Council to secure Welsh Government funding to develop the site. The site is both viable and deliverable. In conclusion, the site meets an identified need and is in a

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					sustainable location off a main travelling route, on the edge of a Tier 1 Main Service Centre which provides a wide range of services and facilities. The site is self contained and can be developed and operated in a manner which does not harm the amenity and use of the local area. The site is viable and deliverable and should be retained as an allocation in the Plan.
168	HN8: Gypsy and Traveller Sites	Object	I wish to object to the planned gypsy transit site proposed for Flint Castle Park on the grounds it is A. an inappropriate use of an existing industrial site B. too small to use as a transit site C. based on incomplete data D. in an unsafe location for the proposed use. E. and Flintshire has already exceeded reasonable provision The enclosed document details why I believe this an inappropriate location for such a transit site.	Remove Gypsy Site at Flint	Not accepted. The Council have grouped together and summarised representations made on this HN8.4 Castle Park, Flint allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Based on Incomplete Data: The need for a transit site has been identified through the GTAA and as a result of the Council's experience in dealing with unauthorised encampments and is not based on incomplete data. Flintshire Exceeded Reasonable Provision: Flintshire has a number of existing gypsy traveller sites, some granted planning permission on a permanent basis and some on a temporary basis. The GTAA which has been approved by Welsh Government, has identified a need for further 'residential' pitches and also the need for a transit site as there is presently no transit site in Flintshire. Nuisance From Previous Encampments in Area: The GTAA has established the need for a transit site in the County. The need has also been established as a result of unauthorised encampments in recent years throughout parts of the County. The provision of a transit site is in recognition of the impacts of unauthorised encampments on both communities and the environment. A transit site will provide the police and Council with a facility to temporarily accommodate travellers for a maximum of 12 weeks and the site will be closely managed by the Council with regular site management presence and short term tenancy agreements with those who are provided with temporary stay on the site. Site Specific Issues: The site will be designed in accordance with Welsh Government guidance 'Designing Gypsy and Traveller Sites' in terms of appropriate pitch sizes. A draft layout shows 6 pitches plus a site

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					manager's office which will provide communal facilities. The draft site layout in Background Paper 6 shows 6 pitches and a site manager's office which will provide communal facilities. The design of the site will need to comply with para 6.17 of Welsh Government guidance 'Designing Gypsy and Traveller Sites' which states 'Instead of individual amenity blocks on each pitch, sites should include shared amenities featuring toilets, washbasins and shower facilities with hot and cold water supply. At least one male and one female amenity block are required'. The provision of public toilets elsewhere in Flint is not within the remit of the LDP. No proposals have been received for a base for the Flint Coastal Volunteers on the site of the former Civic Amenity Site. By contrast there is a statutory duty placed on the Council's Housing function, to deliver gypsy and traveller sites. The need for a Transit site has been identified and following an assessment of Council owned land, this site has been identified as being available and suitable to be allocated for a transit site. Area Wide Issues: The recreational use of the Flint Dock and the surrounding area is noted given the network of paths and the Coast Path. The gypsy site is set back from the public highway behind gates and is well screened by existing woodland. Its use as a transit site will not harm views of the estuary. The transit site will be carefully managed and have an onsite manager office. Residents will be on site for a temporary period and will need to abide by site rules and regulations. The site would be fully serviced in terms of water electricity, sewage facilities and waste disposal. Given that it is has no public access and is well screened it is not considered that the proposal would harm recreational use of the area. The site was not previously used as an industrial unit or site, but as a former civic amenity site for recycling. It is separated from the industrial estate by woodland and landscaped open areas and the dock. With appropriate design and management there is no reason why the proposed use should be inappropriate or harmful to the industrial estate. The planning permission for the adjacent solar park includes security fencing and security gate and all generating and inverter infrastructure will be located within the secure fenced boundary of

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					that site. It is not considered that there is any inherent conflict between a managed transit site and a solar farm / grid connection. Contamination and related Issues: Although the site was previously used as a civic amenity site it has a concrete slab and its operation as a waste site would have complied with all environmental licensing arrangements. Nevertheless, a contamination study has been commissioned to establish the existence of any contamination and what mitigation measures might be necessary. The adjoining former landfill site now has planning permission for a solar park and this will have security fencing and will not have public access. There are a number of gutters and ditches which flood at high tide but these are clearly visible and accessible from the main footpath link between the retail park and Castle Park. The presence of these features is something that could be pointed out to travellers on site as part of the site management arrangements and signage. Conflict with Flint Masterplan: The Flint Masterplan 2021 has a base date of 2012 and covers the period to 2021. On p30 the Masterplan shows no particular proposals for the former Civic Amenity Site, but does show an improved pedestrian link from Flint Retail Park to Flint Dock and the coastal path, which runs either side of Flint Dock. It also shows proposed landscaping work in the area around Flint Dock. The Masterplan maps show a pedestrian route to the rear (south) of the former Civic Amenity Site, but not along the access road which leads to the site. Having checked the Council's public rights of way maps, there is no lawful public access along the access road to the site, and public access is presently prevented by locked gates. Given that the former Civic Amenity Site sits within, and is well screened by woodland, it is unclear how the sites use as a transit site will have a negative effect on the use of nearby public rights of way and the area around the Dock, nor prevent proposals which seek to enhance the recreational potential of the area. The Masterplan identifies the land opposite the former Civic Amenity site, (adjacent industrial unit 26 at Castle Park Industrial Estate) as a site for proposed greenspace. This proposal has not been delivered and a planning application (059397) has now been approved for a fenced open storage compound. No objection to

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					this proposal has been made by local Members, the Town Council or the public on the basis that the proposal is contrary to the recommendations in the Flint Masterplan. The Flint Masterplan is not adopted supplementary planning guidance as part of the Council's planning policy framework. Infrastructure The site is allocated as a transit site for 6 pitches and is intended for occupation for a temporary period of up to 12 weeks. Any residential occupation by families with children will not place a pressure on schools to create a permanent place. The usual procedure is for Education Officers to complete a welfare assessment for any new family staying temporarily in the County with the assistance of BCUHB. Families would not be allowed to stay within a transit site for longer than 12 weeks which is the national agreement and if the families asked for their children to attend school then this would need to be assessed. Experience to date is that this has never happened as families will usually have school places in their home town. Highways Issues Castle Park Industrial Estate presently has two means of access which are via Evans Way which has a height restriction of 2.8m and via Castle Dyke Street and Swan Bridge. These two access points provide satisfactory vehicular access to the Castle, foreshore and Industrial Estate. Also the use of the site as a transit site must be considered in the context of its previous use as a recycling centre, in terms of the amount and type of vehicular traffic. In this context it is considered that the existing road network is quite capable of serving a transit site of 6 pitches in this location. The Highways Development Management Officer has commented 'The site was formerly used as a household waste/recycling site; a change of use to a Transit Site is likely to generate a reduction in vehicular movements and a lesser highway impact'. The local highway network is considered appropriate in terms of accommodating the likely traffic generation from the transit site. Soundness Issues: As explained above, the former civic amenity site is not designated for any particular use or proposals in the Flint Masterplan and neither does the masterplan have any planning status in terms of supplementary planning guidance.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The site is separated from the industrial estate (and nearby residents) by woodland and the dock. It is not clear how the site could “inhibit existing industrial operations”. A contamination report has been commissioned and clearly the site has been more recently used as a civic amenity site where hardstanding and servicing was provided to the site. Given this, the amount of ground disturbance that would be required to facilitate the sites transit use would be minimal. Transit sites, where residents will only be present for a temporary period, would be unlikely to place pressure on schools for additional places. This is commented on further above. The industrial estate is served by two vehicular access routes. The use of site for a 6 pitch transit site must also be considered against the traffic arising from the previous waste recycling centres which have involved visiting customers and operational HGV’s and was far greater in size and volume than is likely to be the case with a periodic use for just a six pitch transit site. There is no inherent conflict between a transit site and solar park. In terms of the allegations that the Plan is unsound in respect of this allocation it is necessary to look at the tests of soundness in detail: i) Does the Plan fit? (is it clear that the LDP is consistent with other Plans) – in line with the Housing (Wales) Act, PPW10 and the findings of the GTAA as well as on-going problems with encampments, the Plan seeks to make provision for a transit site. The approach is not ‘unsound’. ii) Is the Plan appropriate? (Is the Plan appropriate for the area in the light of the evidence) – The site is self-contained and is capable of being developed and operated in a manner which does not harm the locality. There is no conflict with the Flint Masterplan in terms of recreational uses in the area given the site configuration and relationship. iii) Will the Plan deliver? (is it likely to be effective) – The site is in Council ownership and this enables the Council to secure Welsh Government funding to develop the site. The site is both viable and deliverable. In conclusion, the site meets an identified need and is in a sustainable location off a main travelling route, on the edge of a Tier 1 Main Service Centre which provides a wide range of

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					amenity and use of the local area. The site is viable and deliverable and should be retained as an allocation in the Plan.
315	HN8: Gypsy and Traveller Sites	Object	Reference Site HN8-2 1. Proportionality of this site with respect of the size of the immediate community of Caer Estyn is too large. This is site would not be in keeping with proportionality to allow for the promoting of peaceful and integrated co-existence of the site and local community. 2. The increase in traffic at the junction of Gwern Lane and Gresford Road would present a danger to existing road users. Gresford Road is a very busy road during peak times. 3. This site was only included after several calls for possible sites. Therefore it can not be considered a high priority site for this extension otherwise it would of come to light earlier. 4. The edge of this site borders directly on an existing footpath. If natural screening was installed as suggested this would encroach onto this footpath. 5. The existing site has a massive impact on the general noise and traffic levels in the area. Any extension would greatly increase these levels.	Remove Site HN8-2 1. Proportionality of this site with respect of the size of the immediate community of Caer Estyn is too large. This is site would not be in keeping with proportionality to allow for the promoting of peaceful and integrated co-existence of the site and local community.	Not accepted. The Council have grouped together and summarised representations made on this HN8.2 Gwern Lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling ‘Gwern House’ being some 40m to the south of the existing site. The extension to the site is located on the north side

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The use of the existing vehicular access will prevent the need for hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations. Owners Intentions: The present families on site have expressed a need, via the Council's Gypsy Liaison Officer, to meet the additional accommodation needs of the family. Positive Discrimination: The site extension is allocated to meet an expressed need from the present family to meet their needs for additional accommodation. The LDP is merely seeking to meet the identified need for pitches in the GTAA through meeting the needs of an existing family. There is nothing discriminatory in the Council seeking to fulfil its statutory duty in the Housing (Wales) Act to meeting the needs of gypsies and travellers in the County. The Council is seeking to meet the need arising in the County as identified in the GTAA. The Council run site at Queensferry forms part of the existing site provision and an extension to this is proposed as an allocation in the LDP. The provision of sites in Llay, whether existing or proposed, is not relevant to the Flintshire LDP and consideration of this allocation as this lies in the adjacent County of Wrexham where the duty there is to meet their own identified needs.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Scope for Smaller Proposal: In further discussions with the present family and their planning agent, the number of pitches to be provided on the site has been reviewed downwards to reflect the site size and characteristics and the family need. It is now proposed that the number of additional pitches to be provided is 4. This will enable a much less intensive use of the site and will reduce its impact on the character and appearance of the countryside. Road Safety: In the appeal decision the Inspector did not consider that the site and approach roads presented any significant parking or traffic issues. The Highways Development Management Officer has considered the proposed extension and comments 'Gwern Lane is a 3m wide lane generally suitable for single lane operation however the road widens to a width of 4.5m in the vicinity of the junction with the B5373, sufficient to allow two vehicles to pass. Available visibility, in both directions, at the junction exceeds the minimum recommended 120m for a road subject to a 40mph speed restriction. On that basis I raise no objection to the proposed site increase'. Proportionality: As detailed above, the existing family and agent has revised their proposals to reduce the number of additional pitches to 4. Although the site area would remain the same, this allows for a lower density of development and scope for landscaping measures. The provision of 4 pitches would also help allay residents concerns about the size of the traveller community relative to the size of the settled community. Facilities / Services: Although the site sits in an open countryside location it is close to a number of settlements. It is close to the settlements of HCAC in Flintshire and Llay in Wrexham where there is education and health provision, and a range of employment and other services and facilities that serve the 'settled' community sufficiently as they do the Gypsy and Traveller site. It is in a broadly sustainable location. Amenity: Any matters relating to nuisance are the remit of the police and

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					relevant Council Services. The Council's Gypsy Liaison Officer is in regular contact with the site residents and can monitor site conditions. Any breaches of the planning consent are a matter for the Council's Planning Enforcement Officers. In conclusion, the revised proposal for the site is a substantially reduced scheme in terms of the number of pitches (4 rather than 6-8) and addresses many of the objector's concerns in relation to impacts arising from the site of the traveller community relative to the settled community. It is suggested that the Inspector have regard to a reduced number of pitches on the site which together with other provision identified in the plan is sufficient to meet established identified need.
251	HN8: Gypsy and Traveller Sites	Object	Objection to proposed extension at Gwern Lane . I feel that the site is too small for 6-8 static caravans that could mean at least 16 extra vehicles using a small single track that I and other residents use for walking dogs.There have been issues with speeding trucks and vans on the blind corner. The road is hazardous in winter with the potholes.I worry that as there have always been more caravans on the site than planned for tha 6-8 more caravans will become even more. I have concerns that more residents will involve more dogs. I am also concerned about the sewerage which overflows onto the next field. There ia also an issue with noise coming form the site. If this site is increased in size it will have a big impact on a small community.	Removal of allocation.	Not accepted. The Council have grouped together and summarised representations made on this HN8.2 Gwern lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling 'Gwern House' being some 40m to the south of the existing site. The extension to the site is located on the north side of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The use of the existing vehicular access will prevent the need for hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations. Owners Intentions: The present families on site have expressed a need, via the Council's Gypsy Liaison Officer, to meet the additional accommodation needs of the family. Positive Discrimination: The site extension is allocated to meet an expressed need from the present family to meet their needs for additional accommodation. The LDP is merely seeking to meet the identified need for pitches in the GTAA through meeting the needs of an existing family. There is nothing discriminatory in the Council

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					seeking to fulfil its statutory duty in the Housing (Wales) Act to meeting the needs of gypsies and travellers in the County. The Council is seeking to meet the need arising in the County as identified in the GTAA. The Council run site at Queensferry forms part of the existing site provision and an extension to this is proposed as an allocation in the LDP. The provision of sites in Llay, whether existing or proposed, is not relevant to the Flintshire LDP and consideration of this allocation as this lies in the adjacent County of Wrexham where the duty there is to meet their own identified needs. Scope for Smaller Proposal: In further discussions with the present family and their planning agent, the number of pitches to be provided on the site has been reviewed downwards to reflect the site size and characteristics and the family need. It is now proposed that the number of additional pitches to be provided is 4. This will enable a much less intensive use of the site and will reduce its impact on the character and appearance of the countryside. Road Safety: In the appeal decision the Inspector did not consider that the site and approach roads presented any significant parking or traffic issues. The Highways Development Management Officer has considered the proposed extension and comments 'Gwern Lane is a 3m wide lane generally suitable for single lane operation however the road widens to a width of 4.5m in the vicinity of the junction with the B5373, sufficient to allow two vehicles to pass. Available visibility, in both directions, at the junction exceeds the minimum recommended 120m for a road subject to a 40mph speed restriction. On that basis I raise no objection to the proposed site increase'. Proportionality: As detailed above, the existing family and agent has revised their proposals to reduce the number of additional pitches to 4. Although the site area would remain the same, this allows for a lower density of development and scope for landscaping measures. The provision of 4 pitches would also help allay residents concerns about the size of the traveller community relative to the size of the settled community.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Facilities / Services: Although the site sits in an open countryside location it is close to a number of settlements. It is close to the settlements of HCAC in Flintshire and Llay in Wrexham where there is education and health provision, and a range of employment and other services and facilities that serve the 'settled' community sufficiently as they do the Gypsy and Traveller site. It is in a broadly sustainable location. Amenity: Any matters relating to nuisance are the remit of the police and relevant Council Services. The Council's Gypsy Liaison Officer is in regular contact with the site residents and can monitor site conditions. Any breaches of the planning consent are a matter for the Council's Planning Enforcement Officers. In conclusion, the revised proposal for the site is a substantially reduced scheme in terms of the number of pitches (4 rather than 6-8) and addresses many of the objector's concerns in relation to impacts arising from the site of the traveler community relative to the settled community. It is suggested that the Inspector have regard to a reduced number of pitches on the site which together with other provision identified in the plan is sufficient to meet established identified need.
379	HN8: Gypsy and Traveller Sites	Object	Proportionality - the document WGC005/2018 makes clear reference to sites being in context and in relation to existing local settlements. The proposal HN8-2 would see the traveller community outnumber existing settled residents by a considerable amount. The question as to whether the site which is in open countryside is appropriate for such expansion must be considered. Had application for a leisure site been proposed, it is unlikely that planning would have supported this. Settled residents and the current traveller family have learned to co-exist, however an increase in traveller pitches could may lead to this relationship being upset. There are a number of	The policy needs to ensure equal consideration to both settled residential communities and travellers alike. There are a number of alternative sites which could accommodate the need, namely Llay & Queensferry. In addition travellers have recently taken possession of land on Rhyddyn Hill.	Not accepted. The Council have grouped together and summarised representations made on this HN8.2 Gwern Lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			alternative sites which could accommodate the need, namely Llay & Queensferry. In addition travellers have recently taken possession of land on Rhyddyn Hill. There is also a large community in the neighbouring Wrexham settlement where the current family relocated from. Gwern lane is a single lane with an unstable surface, no speed restrictions/white lines and therefore cannot currently sustain an increase in traffic. In addition increased access to the main Gresford Road which is heavily used by commercial traffic may pose increased risk of accident, and there has been a number of near misses in recent years. The Planning Authority must satisfy itself that the application does relate to family expansion, the travellers have told us and neighbours a number of times that they intend to offer the pitches as a commercial concern. The planning authority has repeatedly to enforce the original terms of the current settlement (2x static/2x tourers), today there are approx. 6 caravans on the site (1 static/ 5 tourers). Whatever the outcome of the application, FCC must apply proper enforcement process so as not to negatively impact on the small local settled resident population. Finally, there is an environmental concern as raw sewage has been seen to seep onto the public footpath which crosses the field bordering the existing traveller settlement, an increase in residents will likely exacerbate this problem. The current dayroom is unlikely to be sufficient to support an increase in users.		on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling 'Gwern House' being some 40m to the south of the existing site. The extension to the site is located on the north side of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The use of the existing vehicular access will prevent the need for hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations.

287	HN8: Gypsy and Traveller Sites	Object	I wish to object to the planned gypsy transit site proposed for Flint Castle Park on the grounds it is A. an inappropriate use of an existing industrial site B. too small to use as a transit site C. based on incomplete data D. in an unsafe location for the proposed use	Removal of allocation	Not accepted. The Council have grouped together and summarised representations made on this HN8.4 Castle Park, Flint allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Based on Incomplete Data:

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			E. and Flintshire has already exceeded reasonable provision		The need for a transit site has been identified through the GTAA and as a result of the Council's experience in dealing with unauthorised encampments and is not based on incomplete data. Flintshire Exceeded Reasonable Provision: Flintshire has a number of existing gypsy traveller sites, some granted planning permission on a permanent basis and some on a temporary basis. The GTAA which has been approved by Welsh Government, has identified a need for further 'residential' pitches and also the need for a transit site as there is presently no transit site in Flintshire. Nuisance From Previous Encampments in Area: The GTAA has established the need for a transit site in the County. The need has also been established as a result of unauthorised encampments in recent years throughout parts of the County. The provision of a transit site is in recognition of the impacts of unauthorised encampments on both communities and the environment. A transit site will provide the police and Council with a facility to temporarily accommodate travellers for a maximum of 12 weeks and the site will be closely managed by the Council with regular site management presence and short term tenancy agreements with those who are provided with temporary stay on the site. Site Specific Issues: The site will be designed in accordance with Welsh Government guidance 'Designing Gypsy and Traveller Sites' in terms of appropriate pitch sizes. A draft layout shows 6 pitches plus a site manager's office which will provide communal facilities. The draft site layout in Background Paper 6 shows 6 pitches and a site manager's office which will provide communal facilities. The design of the site will need to comply with para 6.17 of Welsh Government guidance 'Designing Gypsy and Traveller Sites' which states 'Instead of individual amenity blocks on each pitch, sites should include shared amenities featuring toilets, washbasins and shower facilities with hot and cold water supply. At least one male and one female amenity block are required'. The provision of public toilets elsewhere in Flint is not within the remit of the LDP. No proposals have been received for a base for the Flint Coastal Volunteers on the site of the former Civic Amenity Site. By contrast there is a statutory duty placed on the Council's Housing function,

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					to deliver gypsy and traveller sites. The need for a Transit site has been identified and following an assessment of Council owned land, this site has been identified as being available and suitable to be allocated for a transit site. Area Wide Issues: The recreational use of the Flint Dock and the surrounding area is noted given the network of paths and the Coast Path. The gypsy site is set back from the public highway behind gates and is well screened by existing woodland. Its use as a transit site will not harm views of the estuary. The transit site will be carefully managed and have an onsite manager office. Residents will be on site for a temporary period and will need to abide by site rules and regulations. The site would be fully serviced in terms of water electricity, sewage facilities and waste disposal. Given that it is has no public access and is well screened it is not considered that the proposal would harm recreational use of the area. The site was not previously used as an industrial unit or site, but as a former civic amenity site for recycling. It is separated from the industrial estate by woodland and landscaped open areas and the dock. With appropriate design and management there is no reason why the proposed use should be inappropriate or harmful to the industrial estate. The planning permission for the adjacent solar park includes security fencing and security gate and all generating and inverter infrastructure will be located within the secure fenced boundary of that site. It is not considered that there is any inherent conflict between a managed transit site and a solar farm / grid connection. Contamination and related Issues: Although the site was previously used as a civic amenity site it has a concrete slab and its operation as a waste site would have complied with all environmental licensing arrangements. Nevertheless, a contamination study has been commissioned to establish the existence of any contamination and what mitigation measures might be necessary. The adjoining former landfill site now has planning permission for a solar park and this will have security fencing and will not have public access. There are a number of gutters and ditches which flood at high tide but these are clearly visible and accessible from

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the main footpath link between the retail park and Castle Park. The presence of these features is something that could be pointed out to travellers on site as part of the site management arrangements and signage. Conflict with Flint Masterplan: The Flint Masterplan 2021 has a base date of 2012 and covers the period to 2021. On p30 the Masterplan shows no particular proposals for the former Civic Amenity Site, but does show an improved pedestrian link from Flint Retail Park to Flint Dock and the coastal path, which runs either side of Flint Dock. It also shows proposed landscaping work in the area around Flint Dock. The Masterplan maps show a pedestrian route to the rear (south) of the former Civic Amenity Site, but not along the access road which leads to the site. Having checked the Council's public rights of way maps, there is no lawful public access along the access road to the site, and public access is presently prevented by locked gates. Given that the former Civic Amenity Site sits within, and is well screened by woodland, it is unclear how the sites use as a transit site will have a negative effect on the use of nearby public rights of way and the area around the Dock, nor prevent proposals which seek to enhance the recreational potential of the area. The Masterplan identifies the land opposite the former Civic Amenity site, (adjacent industrial unit 26 at Castle Park Industrial Estate) as a site for proposed greenspace. This proposal has not been delivered and a planning application (059397) has now been approved for a fenced open storage compound. No objection to this proposal has been made by local Members, the Town Council or the public on the basis that the proposal is contrary to the recommendations in the Flint Masterplan. The Flint Masterplan is not adopted supplementary planning guidance as part of the Council's planning policy framework. Infrastructure The site is allocated as a transit site for 6 pitches and is intended for occupation for a temporary period of up to 12 weeks. Any residential occupation by families with children will not place a pressure on schools to create a permanent place. The usual procedure is for Education Officers to complete a welfare assessment for any new family staying temporarily in the County with the assistance of BCUHB. Families would not be allowed to

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					stay within a transit site for longer than 12 weeks which is the national agreement and if the families asked for their children to attend school then this would need to be assessed. Experience to date is that this has never happened as families will usually have school places in their home town. Highways Issues Castle Park Industrial Estate presently has two means of access which are via Evans Way which has a height restriction of 2.8m and via Castle Dyke Street and Swan Bridge. These two access points provide satisfactory vehicular access to the Castle, foreshore and Industrial Estate. Also the use of the site as a transit site must be considered in the context of its previous use as a recycling centre, in terms of the amount and type of vehicular traffic. In this context it is considered that the existing road network is quite capable of serving a transit site of 6 pitches in this location. The Highways Development Management Officer has commented 'The site was formerly used as a household waste/recycling site; a change of use to a Transit Site is likely to generate a reduction in vehicular movements and a lesser highway impact'. The local highway network is considered appropriate in terms of accommodating the likely traffic generation from the transit site. Soundness Issues: As explained above, the former civic amenity site is not designated for any particular use or proposals in the Flint Masterplan and neither does the masterplan have any planning status in terms of supplementary planning guidance. The site is separated from the industrial estate (and nearby residents) by woodland and the dock. It is not clear how the site could "inhibit existing industrial operations". A contamination report has been commissioned and clearly the site has been more recently used as a civic amenity site where hardstanding and servicing was provided to the site. Given this, the amount of ground disturbance that would be required to facilitate the sites transit use would be minimal. Transit sites, where residents will only be present for a temporary period, would be unlikely to place pressure on schools for additional places. This is commented on further above. The industrial estate is served by two vehicular access routes. The use of site for a 6 pitch transit site must also be considered against

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the traffic arising from the previous waste recycling centres which have involved visiting customers and operational HGV's and was far greater in size and volume than is likely to be the case with a periodic use for just a six pitch transit site. There is no inherent conflict between a transit site and solar park. In terms of the allegations that the Plan is unsound in respect of this allocation it is necessary to look at the tests of soundness in detail: i) Does the Plan fit? (is it clear that the LDP is consistent with other Plans) – in line with the Housing (Wales) Act, PPW10 and the findings of the GTAA as well as on-going problems with encampments, the Plan seeks to make provision for a transit site. The approach is not 'unsound'. ii) Is the Plan appropriate? (Is the Plan appropriate for the area in the light of the evidence) – The site is self-contained and is capable of being developed and operated in a manner which does not harm the locality. There is no conflict with the Flint Masterplan in terms of recreational uses in the area given the site configuration and relationship. iii) Will the Plan deliver? (is it likely to be effective) – The site is in Council ownership and this enables the Council to secure Welsh Government funding to develop the site. The site is both viable and deliverable. In conclusion, the site meets an identified need and is in a sustainable location off a main travelling route, on the edge of a Tier 1 Main Service Centre which provides a wide range of services and facilities. The site is self contained and can be developed and operated in a manner which does not harm the amenity and use of the local area. The site is viable and deliverable and should be retained as an allocation in the Plan.
460	HN8: Gypsy and Traveller Sites	Object	Traveller Site: Gwern Lane I would like to express my concerns regarding the impact of the increased traffic that an extension to the traveller site on Gwern Lane would make as regards safety. The Lane is a single track and very narrow in parts. There is a ditch at one side of part of the Lane. The Lane is regularly used by dog walkers cyclists and ramblers as a public footpath runs alongside	Removal of Gwern Lane, Gypsy Traveller Allocated site.	Not accepted. The Council have grouped together and summarised representations made on this HN8.2 Gwern Lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the site also. There is sometimes cycling races held in the area. There is a sign at the entrance to the Lane reporting it is not suitable for heavy vehicles due to very narrow bend. The Lane already has numerous pot holes and often high hedges making visibility poor. There are also children playing on their bikes and scooters and I have serious concerns for their safety as it is before a possible increase in traffic being generated. The area is totally inappropriate for the proposed extension and very small. The existing problems with the sewerage also will be increased which is an environmental health issue and is very concerning.		of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling 'Gwern House' being some 40m to the south of the existing site. The extension to the site is located on the north side of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The use of the existing vehicular access will prevent the need for

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations. Owners Intentions: The present families on site have expressed a need, via the Council's Gypsy Liaison Officer, to meet the additional accommodation needs of the family. Positive Discrimination: The site extension is allocated to meet an expressed need from the present family to meet their needs for additional accommodation. The LDP is merely seeking to meet the identified need for pitches in the GTAA through meeting the needs of an existing family. There is nothing discriminatory in the Council seeking to fulfil its statutory duty in the Housing (Wales) Act to meeting the needs of gypsies and travellers in the County. The Council is seeking to meet the need arising in the County as identified in the GTAA. The Council run site at Queensferry forms part of the existing site provision and an extension to this is proposed as an allocation in the LDP. The provision of sites in Llay, whether existing or proposed, is not relevant to the Flintshire LDP and consideration of this allocation as this lies in the adjacent County of Wrexham where the duty there is to meet their own identified needs. Scope for Smaller Proposal: In further discussions with the present family and their planning agent, the number of pitches to be provided on the site has been reviewed downwards to reflect the site size and characteristics and the family need. It is now proposed that the number of additional pitches to be provided is 4. This will enable a much less intensive use of the site and will reduce its impact on the character and appearance of the countryside. Road Safety: In the appeal decision the Inspector did not consider that the site and approach roads presented any significant parking or traffic

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					issues. The Highways Development Management Officer has considered the proposed extension and comments 'Gwern Lane is a 3m wide lane generally suitable for single lane operation however the road widens to a width of 4.5m in the vicinity of the junction with the B5373, sufficient to allow two vehicles to pass. Available visibility, in both directions, at the junction exceeds the minimum recommended 120m for a road subject to a 40mph speed restriction. On that basis I raise no objection to the proposed site increase'. Proportionality: As detailed above, the existing family and agent has revised their proposals to reduce the number of additional pitches to 4. Although the site area would remain the same, this allows for a lower density of development and scope for landscaping measures. The provision of 4 pitches would also help allay residents concerns about the size of the traveller community relative to the size of the settled community. Facilities / Services: Although the site sits in an open countryside location it is close to a number of settlements. It is close to the settlements of HCAC in Flintshire and Llay in Wrexham where there is education and health provision, and a range of employment and other services and facilities that serve the 'settled' community sufficiently as they do the Gypsy and Traveller site. It is in a broadly sustainable location. Amenity: Any matters relating to nuisance are the remit of the police and relevant Council Services. The Council's Gypsy Liaison Officer is in regular contact with the site residents and can monitor site conditions. Any breaches of the planning consent are a matter for the Council's Planning Enforcement Officers. In conclusion, the revised proposal for the site is a substantially reduced scheme in terms of the number of pitches (4 rather than 6-8) and addresses many of the objector's concerns in relation to impacts arising from the site of the traveler community relative to the settled community. It is suggested that the Inspector have regard to a reduced number of pitches on the site which together

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					with other provision identified in the plan is sufficient to meet established identified need.

The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The use of the existing vehicular access will prevent the need for hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations. Owners Intentions: The present families on site have expressed a need, via the Council's Gypsy Liaison Officer, to meet the additional accommodation needs of the family. Positive Discrimination: The site extension is allocated to meet an expressed need from the present family to meet their needs for additional accommodation. The LDP is merely seeking to meet the identified need for pitches in the GTAA through meeting the needs of an existing family. There is nothing discriminatory in the Council seeking to fulfil its statutory duty in the Housing (Wales) Act to meeting the needs of gypsies and travellers in the County. The Council is seeking to meet the need arising in the County as identified in the GTAA. The Council run site at Queensferry forms part of the existing site provision and an extension to this is proposed as an allocation in the LDP. The provision of sites in Llay, whether existing or proposed, is not relevant to the Flintshire LDP and consideration of this allocation as this lies in the adjacent County of Wrexham where the duty there is to meet their own identified needs.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Scope for Smaller Proposal: In further discussions with the present family and their planning agent, the number of pitches to be provided on the site has been reviewed downwards to reflect the site size and characteristics and the family need. It is now proposed that the number of additional pitches to be provided is 4. This will enable a much less intensive use of the site and will reduce its impact on the character and appearance of the countryside. Road Safety: In the appeal decision the Inspector did not consider that the site and approach roads presented any significant parking or traffic issues. The Highways Development Management Officer has considered the proposed extension and comments 'Gwern Lane is a 3m wide lane generally suitable for single lane operation however the road widens to a width of 4.5m in the vicinity of the junction with the B5373, sufficient to allow two vehicles to pass. Available visibility, in both directions, at the junction exceeds the minimum recommended 120m for a road subject to a 40mph speed restriction. On that basis I raise no objection to the proposed site increase'. Proportionality: As detailed above, the existing family and agent has revised their proposals to reduce the number of additional pitches to 4. Although the site area would remain the same, this allows for a lower density of development and scope for landscaping measures. The provision of 4 pitches would also help allay residents concerns about the size of the traveller community relative to the size of the settled community. Facilities / Services: Although the site sits in an open countryside location it is close to a number of settlements. It is close to the settlements of HCAC in Flintshire and Llay in Wrexham where there is education and health provision, and a range of employment and other services and facilities that serve the 'settled' community sufficiently as they do the Gypsy and Traveller site. It is in a broadly sustainable location. Amenity: Any matters relating to nuisance are the remit of the police and

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					relevant Council Services. The Council's Gypsy Liaison Officer is in regular contact with the site residents and can monitor site conditions. Any breaches of the planning consent are a matter for the Council's Planning Enforcement Officers. In conclusion, the revised proposal for the site is a substantially reduced scheme in terms of the number of pitches (4 rather than 6-8) and addresses many of the objector's concerns in relation to impacts arising from the site of the traveller community relative to the settled community. It is suggested that the Inspector have regard to a reduced number of pitches on the site which together with other provision identified in the plan is sufficient to meet established identified need.
371	HN8: Gypsy and Traveller Sites	Object	Objection to Gwern Lane, Hope. I understand the need for additional pitches got travellers in Flintshire. My objection is not to the site itself in its current form but is to the additional number of pitches. I would have no objection if the number of pitches was limited to an additional 2 or 3. ON the current scale, my objections are: Site traffic - we already experience significant traffic movement exiting on to a main road, and living on the corner, I have heard many times, close calls with main road traffic. 6 to 8 additional pitches would mean 12 to 16 additional vehicles based on current site usage. Site use - one of the current travellers, has indicated that this extension is business use, not family, in that pitches will be rented to other travellers to produce an income Site use - no enforcement of current planning rules - there is a consistent overspill of waste water from the site into the adjacent field and over a public right of way Proportionality - I believe one of the principals of this type of planning is proportionality - extending the site by this number would mean neighbours in the immediate vicinity will be significantly	Reduction in number of pitches proposed on the site.	Not accepted. The Council have grouped together and summarised representations made on this Hn8.2 Gwern Lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the

567	HN8: Gypsy and Traveller Sites	Object	I have been instructed by Flint Town Council to register an objection to the proposed allocation of a Gypsy and Traveller site on land at Castle Park Industrial Estate, Flint (Site Ref. HN8-4). The Town Council asserts that the proposed allocation would be in direct conflict with the adopted Flint	Removal of allocation.	Not accepted. The Council have grouped together and summarised representations made on this HN8.4 Castle Park, Flint allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Based on Incomplete Data:

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Masterplan, which designates the site as a hard and soft landscaped area immediately adjacent to an existing/enhanced coastal footpath. An electronic version of the Flint Masterplan is appended to this submission for ease of reference. In summary, the Town Council considers that the proposed allocation for a Gypsy and Traveller Site at Castle Park Industrial Estate does not pass the 'tests of soundness' for the following reasons: • The proposal conflicts with the adopted Flint Masterplan which allocates the site for open space; • Siting a Gypsy and Traveller Site close to an industrial estate could adversely impact on the living conditions of future occupiers of the site and could inhibit the existing industrial operations; • There is a strong possibility that that the site will have suffered some degree of ground contamination given its industrial heritage and the cost of remediation could render the site unviable and therefore undeliverable; • It is not clear whether the local schools could absorb any additional demand generated by future occupiers of the site; • It is not clear whether the road access is of an adequate standard to serve the site; and • The implications of siting a Gypsy and Traveller site next to a potential solar park are also unclear.		The need for a transit site has been identified through the GTAA and as a result of the Council's experience in dealing with unauthorised encampments and is not based on incomplete data. Flintshire Exceeded Reasonable Provision: Flintshire has a number of existing gypsy traveller sites, some granted planning permission on a permanent basis and some on a temporary basis. The GTAA which has been approved by Welsh Government, has identified a need for further 'residential' pitches and also the need for a transit site as there is presently no transit site in Flintshire. Nuisance From Previous Encampments in Area: The GTAA has established the need for a transit site in the County. The need has also been established as a result of unauthorised encampments in recent years throughout parts of the County. The provision of a transit site is in recognition of the impacts of unauthorised encampments on both communities and the environment. A transit site will provide the police and Council with a facility to temporarily accommodate travellers for a maximum of 12 weeks and the site will be closely managed by the Council with regular site management presence and short term tenancy agreements with those who are provided with temporary stay on the site. Site Specific Issues: The site will be designed in accordance with Welsh Government guidance 'Designing Gypsy and Traveller Sites' in terms of appropriate pitch sizes. A draft layout shows 6 pitches plus a site manager's office which will provide communal facilities. The draft site layout in Background Paper 6 shows 6 pitches and a site manager's office which will provide communal facilities. The design of the site will need to comply with para 6.17 of Welsh Government guidance 'Designing Gypsy and Traveller Sites' which states 'Instead of individual amenity blocks on each pitch, sites should include shared amenities featuring toilets, washbasins and shower facilities with hot and cold water supply. At least one male and one female amenity block are required'. The provision of public toilets elsewhere in Flint is not within the remit of the LDP. No proposals have been received for a base for the Flint Coastal Volunteers on the site of the former Civic Amenity Site. By contrast there is a statutory duty placed on the Council's Housing function,

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					to deliver gypsy and traveller sites. The need for a Transit site has been identified and following an assessment of Council owned land, this site has been identified as being available and suitable to be allocated for a transit site. Area Wide Issues: The recreational use of the Flint Dock and the surrounding area is noted given the network of paths and the Coast Path. The gypsy site is set back from the public highway behind gates and is well screened by existing woodland. Its use as a transit site will not harm views of the estuary. The transit site will be carefully managed and have an onsite manager office. Residents will be on site for a temporary period and will need to abide by site rules and regulations. The site would be fully serviced in terms of water electricity, sewage facilities and waste disposal. Given that it is has no public access and is well screened it is not considered that the proposal would harm recreational use of the area. The site was not previously used as an industrial unit or site, but as a former civic amenity site for recycling. It is separated from the industrial estate by woodland and landscaped open areas and the dock. With appropriate design and management there is no reason why the proposed use should be inappropriate or harmful to the industrial estate. The planning permission for the adjacent solar park includes security fencing and security gate and all generating and inverter infrastructure will be located within the secure fenced boundary of that site. It is not considered that there is any inherent conflict between a managed transit site and a solar farm / grid connection. Contamination and related Issues: Although the site was previously used as a civic amenity site it has a concrete slab and its operation as a waste site would have complied with all environmental licensing arrangements. Nevertheless, a contamination study has been commissioned to establish the existence of any contamination and what mitigation measures might be necessary. The adjoining former landfill site now has planning permission for a solar park and this will have security fencing and will not have public access. There are a number of gutters and ditches which flood at high tide but these are clearly visible and accessible from

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the main footpath link between the retail park and Castle Park. The presence of these features is something that could be pointed out to travellers on site as part of the site management arrangements and signage. Conflict with Flint Masterplan: The Flint Masterplan 2021 has a base date of 2012 and covers the period to 2021. On p30 the Masterplan shows no particular proposals for the former Civic Amenity Site, but does show an improved pedestrian link from Flint Retail Park to Flint Dock and the coastal path, which runs either side of Flint Dock. It also shows proposed landscaping work in the area around Flint Dock. The Masterplan maps show a pedestrian route to the rear (south) of the former Civic Amenity Site, but not along the access road which leads to the site. Having checked the Council's public rights of way maps, there is no lawful public access along the access road to the site, and public access is presently prevented by locked gates. Given that the former Civic Amenity Site sits within, and is well screened by woodland, it is unclear how the sites use as a transit site will have a negative effect on the use of nearby public rights of way and the area around the Dock, nor prevent proposals which seek to enhance the recreational potential of the area. The Masterplan identifies the land opposite the former Civic Amenity site, (adjacent industrial unit 26 at Castle Park Industrial Estate) as a site for proposed greenspace. This proposal has not been delivered and a planning application (059397) has now been approved for a fenced open storage compound. No objection to this proposal has been made by local Members, the Town Council or the public on the basis that the proposal is contrary to the recommendations in the Flint Masterplan. The Flint Masterplan is not adopted supplementary planning guidance as part of the Council's planning policy framework. Infrastructure The site is allocated as a transit site for 6 pitches and is intended for occupation for a temporary period of up to 12 weeks. Any residential occupation by families with children will not place a pressure on schools to create a permanent place. The usual procedure is for Education Officers to complete a welfare assessment for any new family staying temporarily in the County with the assistance of BCUHB. Families would not be allowed to

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					stay within a transit site for longer than 12 weeks which is the national agreement and if the families asked for their children to attend school then this would need to be assessed. Experience to date is that this has never happened as families will usually have school places in their home town. Highways Issues Castle Park Industrial Estate presently has two means of access which are via Evans Way which has a height restriction of 2.8m and via Castle Dyke Street and Swan Bridge. These two access points provide satisfactory vehicular access to the Castle, foreshore and Industrial Estate. Also the use of the site as a transit site must be considered in the context of its previous use as a recycling centre, in terms of the amount and type of vehicular traffic. In this context it is considered that the existing road network is quite capable of serving a transit site of 6 pitches in this location. The Highways Development Management Officer has commented 'The site was formerly used as a household waste/recycling site; a change of use to a Transit Site is likely to generate a reduction in vehicular movements and a lesser highway impact'. The local highway network is considered appropriate in terms of accommodating the likely traffic generation from the transit site. Soundness Issues: As explained above, the former civic amenity site is not designated for any particular use or proposals in the Flint Masterplan and neither does the masterplan have any planning status in terms of supplementary planning guidance. The site is separated from the industrial estate (and nearby residents) by woodland and the dock. It is not clear how the site could "inhibit existing industrial operations". A contamination report has been commissioned and clearly the site has been more recently used as a civic amenity site where hardstanding and servicing was provided to the site. Given this, the amount of ground disturbance that would be required to facilitate the sites transit use would be minimal. Transit sites, where residents will only be present for a temporary period, would be unlikely to place pressure on schools for additional places. This is commented on further above. The industrial estate is served by two vehicular access routes. The use of site for a 6 pitch transit site must also be considered against

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the traffic arising from the previous waste recycling centres which have involved visiting customers and operational HGV's and was far greater in size and volume than is likely to be the case with a periodic use for just a six pitch transit site. There is no inherent conflict between a transit site and solar park. In terms of the allegations that the Plan is unsound in respect of this allocation it is necessary to look at the tests of soundness in detail: i) Does the Plan fit? (is it clear that the LDP is consistent with other Plans) – in line with the Housing (Wales) Act, PPW10 and the findings of the GTAA as well as on-going problems with encampments, the Plan seeks to make provision for a transit site. The approach is not 'unsound'. ii) Is the Plan appropriate? (Is the Plan appropriate for the area in the light of the evidence) – The site is self-contained and is capable of being developed and operated in a manner which does not harm the locality. There is no conflict with the Flint Masterplan in terms of recreational uses in the area given the site configuration and relationship. iii) Will the Plan deliver? (is it likely to be effective) – The site is in Council ownership and this enables the Council to secure Welsh Government funding to develop the site. The site is both viable and deliverable. In conclusion, the site meets an identified need and is in a sustainable location off a main travelling route, on the edge of a Tier 1 Main Service Centre which provides a wide range of services and facilities. The site is self contained and can be developed and operated in a manner which does not harm the amenity and use of the local area. The site is viable and deliverable and should be retained as an allocation in the Plan.
469	HN8: Gypsy and Traveller Sites	Object	With reference to the proposal in Flintshire's Draft Local Development Plan for an extension of Traveller's Pitches at Gwern Lane, Hope."The proposal to increase the number of pitches by 6-8 to accommodate an increase in family size". Originally, Flintshire County Council refused planning permission for the existing small Traveller's Site at Gwern Lane, Hope, but permission	Removal of allocation.	Not accepted. The Council have grouped together and summarised representations made on this HN8.2 Gwern Lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			was later granted by the Welsh Office on appeal. " The proposal to increase the number of pitches by 6-8 " would further exacerbate these conditions. Also, there would be increased noise and traffic entering/existing Gwern Lane and Caer Estyn Lane entering onto very busy B5373. It is a narrow lane and is deemed unsuitable for large vehicles. I trust my views will be taken into consideration.		of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling ‘Gwern House’ being some 40m to the south of the existing site. The extension to the site is located on the north side of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The use of the existing vehicular access will prevent the need for

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations. Owners Intentions: The present families on site have expressed a need, via the Council's Gypsy Liaison Officer, to meet the additional accommodation needs of the family. Positive Discrimination: The site extension is allocated to meet an expressed need from the present family to meet their needs for additional accommodation. The LDP is merely seeking to meet the identified need for pitches in the GTAA through meeting the needs of an existing family. There is nothing discriminatory in the Council seeking to fulfil its statutory duty in the Housing (Wales) Act to meeting the needs of gypsies and travellers in the County. The Council is seeking to meet the need arising in the County as identified in the GTAA. The Council run site at Queensferry forms part of the existing site provision and an extension to this is proposed as an allocation in the LDP. The provision of sites in Llay, whether existing or proposed, is not relevant to the Flintshire LDP and consideration of this allocation as this lies in the adjacent County of Wrexham where the duty there is to meet their own identified needs. Scope for Smaller Proposal: In further discussions with the present family and their planning agent, the number of pitches to be provided on the site has been reviewed downwards to reflect the site size and characteristics and the family need. It is now proposed that the number of additional pitches to be provided is 4. This will enable a much less intensive use of the site and will reduce its impact on the character and appearance of the countryside. Road Safety: In the appeal decision the Inspector did not consider that the site and approach roads presented any significant parking or traffic

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					issues. The Highways Development Management Officer has considered the proposed extension and comments 'Gwern Lane is a 3m wide lane generally suitable for single lane operation however the road widens to a width of 4.5m in the vicinity of the junction with the B5373, sufficient to allow two vehicles to pass. Available visibility, in both directions, at the junction exceeds the minimum recommended 120m for a road subject to a 40mph speed restriction. On that basis I raise no objection to the proposed site increase'. Proportionality: As detailed above, the existing family and agent has revised their proposals to reduce the number of additional pitches to 4. Although the site area would remain the same, this allows for a lower density of development and scope for landscaping measures. The provision of 4 pitches would also help allay residents concerns about the size of the traveller community relative to the size of the settled community. Facilities / Services: Although the site sits in an open countryside location it is close to a number of settlements. It is close to the settlements of HCAC in Flintshire and Llay in Wrexham where there is education and health provision, and a range of employment and other services and facilities that serve the 'settled' community sufficiently as they do the Gypsy and Traveller site. It is in a broadly sustainable location. Amenity: Any matters relating to nuisance are the remit of the police and relevant Council Services. The Council's Gypsy Liaison Officer is in regular contact with the site residents and can monitor site conditions. Any breaches of the planning consent are a matter for the Council's Planning Enforcement Officers. In conclusion, the revised proposal for the site is a substantially reduced scheme in terms of the number of pitches (4 rather than 6-8) and addresses many of the objector's concerns in relation to impacts arising from the site of the traveller community relative to the settled community. It is suggested that the Inspector have regard to a reduced number of pitches on the site which together

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					with other provision identified in the plan is sufficient to meet established identified need.
479	HN8: Gypsy and Traveller Sites	Object	Objects to Gwern Lane Travellers Site expansion for the following reasons:- There has been a lack of intervention from enforcement Officers on current planning infringes e.g. drainage, highways and number of caravans. This has worrying consequences if the expansion was to take place. Drainage - use of the nearby footpath is impossible due to the leaking septic tank. There are already issues with the traffic. It is a one track lane with a blind bend used by walkers, dog walkers, horses and cyclists, many houses front directly onto the lane making it dangerous for residents many of whom are over 60 years old. General impact on the surrounding community especially community integration.	Removal of allocation.	Not accepted. The Council have grouped together and summarised representations made on this Hn8.2 Gwern Lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling ‘Gwern House’ being some 40m to the south of the existing site. The extension to the site is located on the north side

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The use of the existing vehicular access will prevent the need for hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations. Owners Intentions: The present families on site have expressed a need, via the Council's Gypsy Liaison Officer, to meet the additional accommodation needs of the family. Positive Discrimination: The site extension is allocated to meet an expressed need from the present family to meet their needs for additional accommodation. The LDP is merely seeking to meet the identified need for pitches in the GTAA through meeting the needs of an existing family. There is nothing discriminatory in the Council seeking to fulfil its statutory duty in the Housing (Wales) Act to meeting the needs of gypsies and travellers in the County. The Council is seeking to meet the need arising in the County as identified in the GTAA. The Council run site at Queensferry forms part of the existing site provision and an extension to this is proposed as an allocation in the LDP. The provision of sites in Llay, whether existing or proposed, is not relevant to the Flintshire LDP and consideration of this allocation as this lies in the adjacent County of Wrexham where the duty there is to meet their own identified needs.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Scope for Smaller Proposal: In further discussions with the present family and their planning agent, the number of pitches to be provided on the site has been reviewed downwards to reflect the site size and characteristics and the family need. It is now proposed that the number of additional pitches to be provided is 4. This will enable a much less intensive use of the site and will reduce its impact on the character and appearance of the countryside. Road Safety: In the appeal decision the Inspector did not consider that the site and approach roads presented any significant parking or traffic issues. The Highways Development Management Officer has considered the proposed extension and comments 'Gwern Lane is a 3m wide lane generally suitable for single lane operation however the road widens to a width of 4.5m in the vicinity of the junction with the B5373, sufficient to allow two vehicles to pass. Available visibility, in both directions, at the junction exceeds the minimum recommended 120m for a road subject to a 40mph speed restriction. On that basis I raise no objection to the proposed site increase'. Proportionality: As detailed above, the existing family and agent has revised their proposals to reduce the number of additional pitches to 4. Although the site area would remain the same, this allows for a lower density of development and scope for landscaping measures. Facilities / Services: Although the site sits in an open countryside location it is close to a number of settlements. It is close to the settlements of HCAC in Flintshire and Llay in Wrexham where there is education and health provision, and a range of employment and other services and facilities that serve the 'settled' community sufficiently as they do the Gypsy and Traveller site. It is in a broadly sustainable location. Amenity: Any matters relating to nuisance are the remit of the police and

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					relevant Council Services. The Council's Gypsy Liaison Officer is in regular contact with the site residents and can monitor site conditions. Any breaches of the planning consent are a matter for the Council's Planning Enforcement Officers. In conclusion, the revised proposal for the site is a substantially reduced scheme in terms of the number of pitches (4 rather than 6-8) and addresses many of the objector's concerns in relation to impacts arising from the site of the traveller community relative to the settled community. It is suggested that the Inspector have regard to a reduced number of pitches on the site which together with other provision identified in the plan is sufficient to meet established identified need.
568	HN8: Gypsy and Traveller Sites	Object	Objection to Gypsy Traveller allocation Ewloe. The proposal is to more than double the site by the addition of 6 to 8 pitches which is disproportionate to the existing site of 5 which is not currently fully utilised. The pitches which are currently there have not been kept to their original planning permission.	Having a further potential eight pitches is not required an expansion is already available on the existing site where the current plots have not been used. Reconfigure the existing site.	Not accepted. The Council have grouped together and summarised representations made on this HN8.1 Magazine Lane, Ewloe allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Lies adjacent to A55(T) – noise and air pollution: Planning permission for the present use of the site for 5 pitches was allowed on appeal following the refusal of application 050463. The Inspector reported that the second reason for refusal regarding pollution was withdrawn by the Council following an addendum report produced by the appellant. In respect of noise the Inspector concluded 'On the balance of probabilities I conclude that the noise from traffic using the A55 would not materially harm the living conditions of the occupiers of the appeal site following the construction of the noise barrier subject to its retention thereafter'. In this context it is not considered that the allocation in the LDP would be likely to be unacceptable in terms of pollution and noise, particularly if similar noise attenuation measures (bund and fencing) are installed or are already in place. Isolated from Community: The site was granted planning permission on appeal and the distance of the site from facilities and services was not a decisive factor. The existing site is 1.3km from the school and 1.8km from the shops and take-aways at the junction of Mold Rd and Holywell Rd. The existing bus stop near the junction of Liverpool Rd and Mold Rd is 1km from the site and provides service 5 between Mold

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					and Ellesmere Port and service x4 between Mold and Chester. Breaches of Planning Permision: The site is closely monitored by Planning Enforcement Officers and is also visited regularly by the Council's Gypsy Traveller Liaison Officer. One pitch never occupied and used only for storage: Some representations point to the site being 'over-used' in terms of the level of caravans, vehicles and residents on each pitch yet other representations claim one pitch is not occupied for residential purposes and is used only for storage. However, the present families on site have expressed a need to the Council to have an extension to the site to accommodate the extended family needs. Expansion of Existing Site: Welsh Government guidance is contained in the guidance document (May 2015) 'Designing Gypsy and Traveller Sites' and there is no specific guidance on the size of a pitch. The guidance specifies in para 3.37 'As a minimum, each pitch should be capable of accommodating an amenity block, a mobile home, touring caravan and parking for two vehicles'. There are guidelines in respect of the size of parking spaces, the maximum size of a mobile home and separation distances between mobile homes and also between a mobile home and a pitch boundary. The guidance also specified what should be provided within an amenity block and other facilities on site such as hardstanding, electricity and water supply, and drainage arrangements for foul water and surface water. However, the guidance is clear that the 'layout of the pitch will depend on the overall site design'. The approved pitches on the site are rather generously proportioned and there is considered to be scope for a reconfiguration and remodelling of the present site to enable an additional 5 pitches within the existing site boundary. In effect, each existing pitch is capable of being split into two by a central vehicular access and separate accommodation to either side of the access road. In this scenario there is no need for the allocation for the site extension. Previous appeal decisions: This objection is made in the context of seeking an entirely new gypsy traveller residential site within a green barrier elsewhere in the County. The context in relation to the extension of an existing

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					site is different to that of developing a new site as are the respective site contexts and previous planning histories. Visual Impact: The visual impact of the existing site was considered as part of the first appeal decision and revisited as part of the second appeal decision. Deliverability and viability: Following the publication of the deposit Plan, the Council is now aware that the preference from the site owners is to increase the capacity of the site by reconfiguring the existing site within the red line of the present permission, and that this is in preference to the costs and viability of extending the site and required infrastructure into the extension land proposed in the deposit LDP. This has the potential to increase the certainty of delivery of more pitches at this location in a more viable and sustainable way than that proposed in the deposit LDP, thereby negating the need for the proposed site extension. Justification for expansion / Impact on Community: The Council has a statutory duty under the Housing Act to meet the needs for gypsy and traveller accommodation in the County, and has a general need for pitches identified in its approved GTAA. There is an expressed need from the present families on site for additional accommodation for their extended families that would contribute to meeting this need. Provision for site in Mold: Mold is not considered to be close to established traveller routes. No sites have been identified or suggested in Mold and furthermore no need has been identified for a site in Mold from the traveller community. Impact on green barrier: The site sits on the very southern edge of the green barrier, located between the A55(T) and Magazine Lane within the green barrier which sits between the settlements of Ewloe, Northop Hall, Connah's Quay and Shotton / Aston. In the first appeal decision the Inspector considered that a gypsy site was inappropriate development. In para 92 the Inspector noted 'In this case I have found that the open character and appearance of the green barrier would be adversely affected, but to a limited

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					extent. It would also make a marginal contribution to the coalescence of settlements as well as encroach into the countryside, another of the purposes of the green barrier'. In terms of the impact on the rural character and appearance the Inspector noted '…gypsy sites are acceptable in principle in rural locations and will inevitably have some impact on their surroundings. In this case that impact would not be unacceptable'. The Inspector's concluding comments were that 'For the reasons I have given, that harm is principally by way of inappropriateness. Otherwise the scheme has limited consequences for the open character and appearance of the green barrier and its purposes'. It is therefore evident that the impact of the existing site was considered by the Inspector to be limited in terms of green barrier and the character and appearance of open countryside. The extension site has natural screening to both Magazine Lane and the A55(T) and also on its western boundary. It is a physically well defined site and considered to represent logical extension to the site. It is clear that the extension site has a completely different character to the large linear field to the west. It is quite usual for green barrier designations in Flintshire to 'wash over' small scale built development in open countryside and this is the case with the existing site. In a similar manner to the Inspectors considerations, the Council does not consider that the proposed modest physical extension of the site would have such an impact on the purpose and openness of the green barrier, nor on the character and appearance of open countryside. However, as outlined above, an alternative approach has been tabled which involves the intensification of the existing site be the conversion of each pitch into separate pitches. This will inevitably involve an intensification of development within the existing site boundaries, but will remove the need for a physical extension of the site. The proposal would also involve less additional pitches with 5 new pitched rather than the 6-8 envisaged in the Deposit Plan. In conclusion, the proposed extension represents a modest physical extension of the existing consented and developed site which, despite its location within a green barrier, will not have an unacceptable impact on openness on the green barrier or the character and appearance of open countryside. The Inspector

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					though is requested to consider the appropriateness of an intensification of the existing site, to provide an additional 5 pitches, and to remove the extension allocation.
606	HN8: Gypsy and Traveller Sites	Object	Travellers have been camped in this area many times before and left a terrible mess for the council, at our expense to clean up after them. They did not use the toilets which were provided for them, but fouled the surrounding area. Why? should we provide these facilities for them when the town has none for the ratepayers. The dock area which has lovely views across the estuary is used by many elderly for it is a fairly level walk, many have told me that they will not be coming here while the travellers are here, it's a pity that we were not given the same consideration as the outsiders. My wife who as been picking up litter there for at least the last five years will not be doing it anymore, she was presented with a plaque for all her good work which will be to no avail if these people are allowed to stay.	Removal of allocation	Not accepted. The Council have grouped together and summarised representations made on this HN8.4 Castle Park, Flint allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Based on Incomplete Data: The need for a transit site has been identified through the GTAA and as a result of the Council's experience in dealing with unauthorised encampments and is not based on incomplete data. Flintshire Exceeded Reasonable Provision: Flintshire has a number of existing gypsy traveller sites, some granted planning permission on a permanent basis and some on a temporary basis. The GTAA which has been approved by Welsh Government, has identified a need for further 'residential' pitches and also the need for a transit site as there is presently no transit site in Flintshire. Nuisance From Previous Encampments in Area: The GTAA has established the need for a transit site in the County. The need has also been established as a result of unauthorised encampments in recent years throughout parts of the County. The provision of a transit site is in recognition of the impacts of unauthorised encampments on both communities and the environment. A transit site will provide the police and Council with a facility to temporarily accommodate travellers for a maximum of 12 weeks and the site will be closely managed by the Council with regular site management presence and short term tenancy agreements with those who are provided with temporary stay on the site. Site Specific Issues: The site will be designed in accordance with Welsh Government guidance 'Designing Gypsy and Traveller Sites' in terms of appropriate pitch sizes. A draft layout shows 6 pitches plus a site manager's office which will provide communal facilities. The draft site layout in Background Paper 6 shows 6 pitches and a site manager's office which will provide communal facilities. The

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					design of the site will need to comply with para 6.17 of Welsh Government guidance 'Designing Gypsy and Traveller Sites' which states 'Instead of individual amenity blocks on each pitch, sites should include shared amenities featuring toilets, washbasins and shower facilities with hot and cold water supply. At least one male and one female amenity block are required'. The provision of public toilets elsewhere in Flint is not within the remit of the LDP. No proposals have been received for a base for the Flint Coastal Volunteers on the site of the former Civic Amenity Site. By contrast there is a statutory duty placed on the Council's Housing function, to deliver gypsy and traveller sites. The need for a Transit site has been identified and following an assessment of Council owned land, this site has been identified as being available and suitable to be allocated for a transit site. Area Wide Issues: The recreational use of the Flint Dock and the surrounding area is noted given the network of paths and the Coast Path. The gypsy site is set back from the public highway behind gates and is well screened by existing woodland. Its use as a transit site will not harm views of the estuary. The transit site will be carefully managed and have an onsite manager office. Residents will be on site for a temporary period and will need to abide by site rules and regulations. The site would be fully serviced in terms of water electricity, sewage facilities and waste disposal. Given that it is has no public access and is well screened it is not considered that the proposal would harm recreational use of the area. The site was not previously used as an industrial unit or site, but as a former civic amenity site for recycling. It is separated from the industrial estate by woodland and landscaped open areas and the dock. With appropriate design and management there is no reason why the proposed use should be inappropriate or harmful to the industrial estate. The planning permission for the adjacent solar park includes security fencing and security gate and all generating and inverter infrastructure will be located within the secure fenced boundary of that site. It is not considered that there is any inherent conflict between a managed transit site and a solar farm / grid connection. Contamination and related Issues:

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Although the site was previously used as a civic amenity site it has a concrete slab and its operation as a waste site would have complied with all environmental licensing arrangements. Nevertheless, a contamination study has been commissioned to establish the existence of any contamination and what mitigation measures might be necessary. The adjoining former landfill site now has planning permission for a solar park and this will have security fencing and will not have public access. There are a number of gutters and ditches which flood at high tide but these are clearly visible and accessible from the main footpath link between the retail park and Castle Park. The presence of these features is something that could be pointed out to travellers on site as part of the site management arrangements and signage. Conflict with Flint Masterplan: The Flint Masterplan 2021 has a base date of 2012 and covers the period to 2021. On p30 the Masterplan shows no particular proposals for the former Civic Amenity Site, but does show an improved pedestrian link from Flint Retail Park to Flint Dock and the coastal path, which runs either side of Flint Dock. It also shows proposed landscaping work in the area around Flint Dock. The Masterplan maps show a pedestrian route to the rear (south) of the former Civic Amenity Site, but not along the access road which leads to the site. Having checked the Council's public rights of way maps, there is no lawful public access along the access road to the site, and public access is presently prevented by locked gates. Given that the former Civic Amenity Site sits within, and is well screened by woodland, it is unclear how the sites use as a transit site will have a negative effect on the use of nearby public rights of way and the area around the Dock, nor prevent proposals which seek to enhance the recreational potential of the area. The Masterplan identifies the land opposite the former Civic Amenity site, (adjacent industrial unit 26 at Castle Park Industrial Estate) as a site for proposed greenspace. This proposal has not been delivered and a planning application (059397) has now been approved for a fenced open storage compound. No objection to this proposal has been made by local Members, the Town Council or the public on the basis that the proposal is contrary to the recommendations in the Flint Masterplan. The Flint Masterplan is

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					not adopted supplementary planning guidance as part of the Council's planning policy framework. Infrastructure The site is allocated as a transit site for 6 pitches and is intended for occupation for a temporary period of up to 12 weeks. Any residential occupation by families with children will not place a pressure on schools to create a permanent place. The usual procedure is for Education Officers to complete a welfare assessment for any new family staying temporarily in the County with the assistance of BCUHB. Families would not be allowed to stay within a transit site for longer than 12 weeks which is the national agreement and if the families asked for their children to attend school then this would need to be assessed. Experience to date is that this has never happened as families will usually have school places in their home town. Highways Issues Castle Park Industrial Estate presently has two means of access which are via Evans Way which has a height restriction of 2.8m and via Castle Dyke Street and Swan Bridge. These two access points provide satisfactory vehicular access to the Castle, foreshore and Industrial Estate. Also the use of the site as a transit site must be considered in the context of its previous use as a recycling centre, in terms of the amount and type of vehicular traffic. In this context it is considered that the existing road network is quite capable of serving a transit site of 6 pitches in this location. The Highways Development Management Officer has commented 'The site was formerly used as a household waste/recycling site; a change of use to a Transit Site is likely to generate a reduction in vehicular movements and a lesser highway impact'. The local highway network is considered appropriate in terms of accommodating the likely traffic generation from the transit site. Soundness Issues: As explained above, the former civic amenity site is not designated for any particular use or proposals in the Flint Masterplan and neither does the masterplan have any planning status in terms of supplementary planning guidance. The site is separated from the industrial estate (and nearby residents) by woodland and the dock. It is not clear how the site could "inhibit existing industrial operations".

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					A contamination report has been commissioned and clearly the site has been more recently used as a civic amenity site where hardstanding and servicing was provided to the site. Given this, the amount of ground disturbance that would be required to facilitate the sites transit use would be minimal. Transit sites, where residents will only be present for a temporary period, would be unlikely to place pressure on schools for additional places. This is commented on further above. The industrial estate is served by two vehicular access routes. The use of site for a 6 pitch transit site must also be considered against the traffic arising from the previous waste recycling centres which have involved visiting customers and operational HGV's and was far greater in size and volume than is likely to be the case with a periodic use for just a six pitch transit site. There is no inherent conflict between a transit site and solar park. In terms of the allegations that the Plan is unsound in respect of this allocation it is necessary to look at the tests of soundness in detail: i) Does the Plan fit? (is it clear that the LDP is consistent with other Plans) – in line with the Housing (Wales) Act, PPW10 and the findings of the GTAA as well as on-going problems with encampments, the Plan seeks to make provision for a transit site. The approach is not 'unsound'. ii) Is the Plan appropriate? (Is the Plan appropriate for the area in the light of the evidence) – The site is self-contained and is capable of being developed and operated in a manner which does not harm the locality. There is no conflict with the Flint Masterplan in terms of recreational uses in the area given the site configuration and relationship. iii) Will the Plan deliver? (is it likely to be effective) – The site is in Council ownership and this enables the Council to secure Welsh Government funding to develop the site. The site is both viable and deliverable. In conclusion, the site meets an identified need and is in a sustainable location off a main travelling route, on the edge of a Tier 1 Main Service Centre which provides a wide range of services and facilities. The site is self contained and can be developed and operated in a manner which does not harm the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					amenity and use of the local area. The site is viable and deliverable and should be retained as an allocation in the Plan.
669	HN8: Gypsy and Traveller Sites	Object	TRAVELLERS SITE Gwern Lane - The Council wish to make the following observations: (i) Whether the land in question is appropriate for the land use proposed – the land Is situated on the green belt/open countryside; (ii) The effect on the open countryside and use of public footpaths; (iii) Proportionality - the proposed development needs to be taken into account in comparison to the immediate community it would be within. There are a minimal amount of other houses in Caer Estyn therefore it is questioned as to whether or not the scale of this development is appropriate. The effect on promoting peaceful and integrated co-existence between a site and the local community would not occur due to expansion due to there being larger amounts of travellers living at the site than in the surrounding community. Sites should be in context and in relation to the local infrastructure, population size and density to ensure they are in proportion to local settled communities (Planning for gypsy, traveller and showpeople sites WGC005/2018). (iv) Current facilities: there is a reason for the application cited as family expansion. However, this can be seen as positive discrimination, especially as there are currently large developments in Queensferry/Llay. (v) Sewerage/Environmental - impact on surroundings; there are current issues with sewage and drainage at the site regarding no appropriate drainage. (vi) Traffic issues - (a) nature of the lane - single lane, no white	Removal of allocation.	Not accepted. The Council have grouped together and summarised representations made on this HN8.2 Gwern Lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling ‘Gwern House’ being some 40m to the south of the existing site. The extension to the site is located on the north side

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			line, no speed restriction, surface issues - regular resurfacing (b) main road - extremely busy can't take added site; (vii) Planning enforcement - it is understood that several complaints have been raised by neighbours relating to issues with the site containing things that it did not have planning permission for, e.g. 1 static caravan instead of the 2 + 2 travelling pitches. If what is already on the site is not being enforced, how will an enlarged site be managed? (vii) Possible commercial motive and impact on the community - there is evidence that there is an intention to use the extension for commercial purposes which is an unacceptable reason for any extension.		of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The use of the existing vehicular access will prevent the need for hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations. Owners Intentions: The present families on site have expressed a need, via the Council's Gypsy Liaison Officer, to meet the additional accommodation needs of the family. Positive Discrimination: The site extension is allocated to meet an expressed need from the present family to meet their needs for additional accommodation. The LDP is merely seeking to meet the identified need for pitches in the GTAA through meeting the needs of an existing family. There is nothing discriminatory in the Council seeking to fulfil its statutory duty in the Housing (Wales) Act to meeting the needs of gypsies and travellers in the County. The Council is seeking to meet the need arising in the County as identified in the GTAA. The Council run site at Queensferry forms part of the existing site provision and an extension to this is proposed as an allocation in the LDP. The provision of sites in Llay, whether existing or proposed, is not relevant to the Flintshire LDP and consideration of this allocation as this lies in the adjacent County of Wrexham where the duty there is to meet their own identified needs.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Scope for Smaller Proposal: In further discussions with the present family and their planning agent, the number of pitches to be provided on the site has been reviewed downwards to reflect the site size and characteristics and the family need. It is now proposed that the number of additional pitches to be provided is 4. This will enable a much less intensive use of the site and will reduce its impact on the character and appearance of the countryside. Road Safety: In the appeal decision the Inspector did not consider that the site and approach roads presented any significant parking or traffic issues. The Highways Development Management Officer has considered the proposed extension and comments 'Gwern Lane is a 3m wide lane generally suitable for single lane operation however the road widens to a width of 4.5m in the vicinity of the junction with the B5373, sufficient to allow two vehicles to pass. Available visibility, in both directions, at the junction exceeds the minimum recommended 120m for a road subject to a 40mph speed restriction. On that basis I raise no objection to the proposed site increase'. Proportionality: As detailed above, the existing family and agent has revised their proposals to reduce the number of additional pitches to 4. Although the site area would remain the same, this allows for a lower density of development and scope for landscaping measures. The provision of 4 pitches would also help allay residents' concerns about the size of the traveller community relative to the size of the settled community. Facilities / Services: Although the site sits in an open countryside location it is close to a number of settlements. It is close to the settlements of HCAC in Flintshire and Llay in Wrexham where there is education and health provision, and a range of employment and other services and facilities that serve the 'settled' community sufficiently as they do the Gypsy and Traveller site. It is in a broadly sustainable location. Amenity: Any matters relating to nuisance are the remit of the police and

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					relevant Council Services. The Council's Gypsy Liaison Officer is in regular contact with the site residents and can monitor site conditions. Any breaches of the planning consent are a matter for the Council's Planning Enforcement Officers. In conclusion, the revised proposal for the site is a substantially reduced scheme in terms of the number of pitches (4 rather than 6-8) and addresses many of the objector's concerns in relation to impacts arising from the site of the traveller community relative to the settled community. It is suggested that the Inspector have regard to a reduced number of pitches on the site which together with other provision identified in the plan is sufficient to meet established identified need.
1040	HN8: Gypsy and Traveller Sites	Object	Objection to extension of existing travellers site at Gwern Lane, Hope. The existing site will more than double in size and is disproportionate to the local settled community. Sites should be in context and in relation to the local infrastructure, population size and density to ensure they are in proportion to local settled communities (Planning for Gypsy Traveller and Show people sites Wg005/2018) Traffic issues – site lies on a narrow country lane, despite efforts to slow traffic along this main road speed limits are not always adhered to. Sustainability – Sewage facilities are barely adequate for the existing residents, a larger site with inadequate sewage facilities would prove a significant health hazard. The development of the site to encroach further on to a green belt would cause greater environmental pollution. A larger traveller site in Llay or Queensferry would be more suitable No local shops or facilities near the site. No footpath to the nearest village of Hope. This is restricting for families and does not encourage co-existence between the site and the local community. Leads to	allocation of larger site at Llay or Queensferry	Not accepted. The Council have grouped together and summarised representations made on this HN8.2 Gwern Lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			isolation and continued separate identities. Increased noise levels from the site.		number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling 'Gwern House' being some 40m to the south of the existing site. The extension to the site is located on the north side of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. 1057	HN8: Gypsy and Traveller Sites	Object	HN8.3 - Riverside Park This site lies in a flood risk zone C1 and as this is Highly Vulnerable Development, we consider further assessment with regard to flood risk should be undertaken prior to allocation of this site to confirm suitability and deliverability. Your Authority's Strategic	Need to include FCA to support the allocation of Riverside extension.	Partly accepted. The Council have grouped together and summarised representations made on this HN8.3 Riverside, Queensferry allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Poor integration with community:

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Flood Consequences Assessment (SFCA) also shows the site to be partially at risk when considering a breach event at Pentre and Queensferry, for the 0.5% AEP event, with an allowance for climate change. The proposed allocation would consist of land used for a gypsy/traveller sites and would therefore constitute highly vulnerable development. We understand from discussions with your Authority that a detailed FCA has been produced in support of this allocation. This should be submitted as part of the LDP process.		The site is an existing long standing and successfully run Council owned site. The rebuilding of the adjacent bridge over the R.Dee by Welsh Government will require additional land on the south side of the A494(T) which will impact further on the already substandard vehicular access from the existing site onto the A494(T). This has led to a new vehicular access being proposed along an existing track from Chemistry lane to the south of the site that will be provided by Welsh Government. In addition there is vacant land to the south of the existing traveller site. This provides the opportunity for a remodelling of the existing site, and extension to the site and a new and improved vehicular access. The site is located at the heart of the Deeside area, close to a large number of settlements and their associated services and facilities. The new access will improve the links between the site and the existing community at Pentre, Sandycroft and Queensferry, rather than the existing access which is straight out on to the A494(T). A planning application for a Coop convenience store at Queensferry Industrial Estate which, if approved, will be within walking distance of the site. There is presently a public right of way along the R Dee along the northern edge of the existing traveller site. This route will be retained and enhanced as part of the bridge rebuilding works and will ensure improved links with Queensferry and Garden City. The site is not divorced from the wider community. The site will be accessed by a new road from the south from the junction of Chemistry Lane and Factory Lane. The Highways Development Management Officer comments 'The use of Chemistry Lane by large vehicles is limited by the clearance under the rail bridge; alternative access via Factory Road is available. The two roads provide the only vehicular access to the Queensferry Industrial Estate; the additional traffic impact resulting from revised access to the Residential Site is unlikely to be significant'. Archaeology: This is a detailed matter that can be addressed as part of working up a planning application. Housing Strategy have contacted CPAT to establish how this can best be dealt with. Contaminated Land When the former chemical works was demolished a land

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					remediation programme was undertaken by FCC. A number of technical reports were produced in 1990/91 and 2012 and these were reviewed by Arcadis in 2018 in order to inform the development of the site extension. Arcadis concluded that: • no further investigation work is necessary to assess risk to human health from potential CoC at the Site. • Mitigation measures within the construction design for permanent buildings and transient utility 'hook up' points are recommended to reduce risk to site users. • Risk assessment by Smith Grant assumes that the redevelopment design includes total hardstanding coverage. Additional assessment of risk to human health may be appropriate if the final redevelopment design includes areas of soft standing. • Protective measures to ensure integrity of water pipes may be appropriate if the construction design requires pipes to be places below or close to the base of the capping layer. In the light of these findings the broader principle of a residential use is considered acceptable and that the remaining technical matters can be satisfactorily resolved at development management stage. Proximity to industry / sewage works: The Pentre and Sandycroft area has a mix of industrial estates and residential properties in close proximity to each other. The site falls within a 1000m consultation zone for the Owens-Corning Building Products site where NRW will need to be consulted and the south east corner of the site falls within the 500m consultation zone of the J Reid Trading site where NRW will need to be consulted. However, following consultation on the Plan, NRW have not objected to this proposal in terms of proximity to industrial operations. No objection has been received from Welsh Water in terms of proximity to Waste Water Treatment Works. Flood Risk: The site is located within a C1 flood risk zone based on the NRW Development Advice Map. A Flood Consequences Assessment undertaken by Weetwood for the site has demonstrated that the proposed development may be completed in accordance with the requirements of planning policy subject to the following: • Development platform level to be set at a minimum of 7.24 m AOD

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					• Finished floor levels to be set 0.15 m above the development platform level • Flood Plan to be developed in consultation with Flintshire County Council • The detailed drainage design to be submitted to and approved by the local planning authority prior to the commencement of development NRW have considered the FCA and their comments appear to amount to a single concern which is increased flood risk elsewhere during a tidal breach scenario afforded by raising the development platform. Weetwood state that the increase flood risk elsewhere is explained in section 5.3 of the FCA and concludes that the 10-35mm increases are not significant owing to those areas already flooding to considerable depths up to 1.4m. Weetwood consider that this is similar to many other sites assessed within the River Dee floodplain. Given the nature of flooding in tidal breach scenarios, it is extremely difficult to feasibly mitigate increased flood risk elsewhere to show “no detriment”, which would likely involve significantly scaling back the proposed development and allocating a portion of land specifically as compensatory flood storage – all for very little benefit given that flood risk elsewhere is hardly changing. Work is progressing in order to resolve this NRW concern in terms of identifying whether there is any adjoining Council owned land that could be utilised as mitigation for any flood water displaced as a result of the raised platform on the extension site. Vehicle Emissions: It is acknowledged that the existing and proposed site is in close proximity to the A494(T). However, there will be a betterment on the existing situation in that the site will not be dependent on the A494(T) for vehicular access and that, as part of the bridge rebuilding proposals there existing scope for structural landscaping and noise attenuation measures.
1216	HN8: Gypsy and Traveller Sites	Object	Objects to sites HN8-1 (magazine Lane, Ewloe), HN8-2 (Gwern Lane, Hope) and HN8-3 (Riverside, Queensferry) as they do not comply with the requirements set out in Circular 005/2018 and in the criteria set out in the existing UDP (HSG14) and in the		Not accepted. The Council have grouped together and summarised representations made on this HN8.2 Gwern Lane, Hope allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Deposit LDP (HN9). In particular HN8-3 is located on contaminated land, is in a C1 flood risk area, is adjacent to a major sewage works and is severed from local services by a principle main trunk road linking North Wales and the North West of England which is scheduled for upgrading. Detailed objection provided in the attached document. Proposes an alternative allocation at Bryn y Baal, Mynydd Isa.		General: The existing site comprising two pitches was allowed on appeal on 11/05/11. Although the Inspector considered the appeal in the light of an identified need for pitches and a lack of existing sites, the inspector did not consider that any impacts on open countryside, were such as to warrant dismissing the appeal. The Inspector referred to the [applicable at the time] Circular 30/2007 which explained that land in rural or semi – rural settings are acceptable in principle for gypsy caravan sites where it is not subject to specific planning constraints. The Inspector noted that it is expected that gypsy sites in rural areas would have some impact on the local scene. The Inspector noted that the site had a good existing boundary hedge to Gwern Lane and to the former orchard behind Gwern House but that the site is conspicuous particularly from the north and even more so from the footpaths to the north corner of the site. The Inspector though concluded that the site does have a harmful impact on the local scene but considered that this could be mitigated with further natural screening. The Inspector therefore considered it to be an appropriate and suitable site. On any planning permission for this type of development a planning condition would be attached to control the number of pitches and caravans, in line with the details approved. This should not be interpreted as implying that an extension is unacceptable or that an absolute limit was imposed by the original decision. The site is outside any defined settlement boundary and in open countryside but it is not within a designated green barrier. Although there are clusters of dwellings in the area surrounding the site, the site does not directly adjoin a residential dwelling, with the nearest dwelling ‘Gwern House’ being some 40m to the south of the existing site. The extension to the site is located on the north side of the existing traveller site and away from this dwelling. The site is wedge shaped and is well bounded by Gwern Lane and a hedgerow to the east, by a hedgerow along the southern boundary and a post and rail fence along the western edge, alongside the public right of way. The site tapers towards the northern end at the point where two public rights of way join alongside the bend in Gwern Lane. The site is therefore well screened from Gwern lane and the B5373 Gresford Rd but has a

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					more open aspect to the west. However, the visual impact could be mitigated by hedgerow planting along the western boundary. The use of the existing vehicular access will prevent the need for hedgerow removal that would be necessary to create a new access. Breaches of Planning Permission: Regular liaison takes place between the residents and the Council's Gypsy Liaison Officer. Any alleged infringements relating to the planning permission and conditions should be reported to the Council's Planning Enforcement Officers who will undertake necessary investigations. Owners Intentions: The present families on site have expressed a need, via the Council's Gypsy Liaison Officer, to meet the additional accommodation needs of the family. Positive Discrimination: The site extension is allocated to meet an expressed need from the present family to meet their needs for additional accommodation. The LDP is merely seeking to meet the identified need for pitches in the GTAA through meeting the needs of an existing family. There is nothing discriminatory in the Council seeking to fulfil its statutory duty in the Housing (Wales) Act to meeting the needs of gypsies and travellers in the County. The Council is seeking to meet the need arising in the County as identified in the GTAA. The Council run site at Queensferry forms part of the existing site provision and an extension to this is proposed as an allocation in the LDP. The provision of sites in Llay, whether existing or proposed, is not relevant to the Flintshire LDP and consideration of this allocation as this lies in the adjacent County of Wrexham where the duty there is to meet their own identified needs. Scope for Smaller Proposal: In further discussions with the present family and their planning agent, the number of pitches to be provided on the site has been reviewed downwards to reflect the site size and characteristics and the family need. It is now proposed that the number of additional pitches to be provided is 4. This will enable a much less intensive use of the site and will reduce its impact on the character and appearance of the countryside.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Road Safety: In the appeal decision the Inspector did not consider that the site and approach roads presented any significant parking or traffic issues. The Highways Development Management Officer has considered the proposed extension and comments 'Gwern Lane is a 3m wide lane generally suitable for single lane operation however the road widens to a width of 4.5m in the vicinity of the junction with the B5373, sufficient to allow two vehicles to pass. Available visibility, in both directions, at the junction exceeds the minimum recommended 120m for a road subject to a 40mph speed restriction. On that basis I raise no objection to the proposed site increase'. Proportionality: As detailed above, the existing family and agent has revised their proposals to reduce the number of additional pitches to 4. Although the site area would remain the same, this allows for a lower density of development and scope for landscaping measures. The provision of 4 pitches would also help allay residents concerns about the size of the traveller community relative to the size of the settled community. Facilities / Services: Although the site sits in an open countryside location it is close to a number of settlements. It is close to the settlements of HCAC in Flintshire and Llay in Wrexham where there is education and health provision, and a range of employment and other services and facilities that serve the 'settled' community sufficiently as they do the Gypsy and Traveller site. It is in a broadly sustainable location. Amenity: Any matters relating to nuisance are the remit of the police and relevant Council Services. The Council's Gypsy Liaison Officer is in regular contact with the site residents and can monitor site conditions. Any breaches of the planning consent are a matter for the Council's Planning Enforcement Officers. In conclusion, the revised proposal for the site is a substantially reduced scheme in terms of the number of pitches (4 rather than 6-8) and addresses many of the objector's concerns in relation to impacts arising from the site of the traveller community relative to

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the settled community. It is suggested that the Inspector have regard to a reduced number of pitches on the site which together with other provision identified in the plan is sufficient to meet established identified need.
1126	HN8: Gypsy and Traveller Sites	Object	The travellers site off Magazine lane should not be increased in capacity under any circumstances. There is no justification in the deposit LDP as it stands, why this group's accommodation needs to feature in it. It should be removed and dealt with as a separate issue. The traveller community attracts different levels of considerations both locally in Wales and Nationally. Reality is that this group regards itself as 'other' and their contributions to local communities is and has been questionable. There needs to be a thorough examination of the activity /activities on this site and the impact on the rest of the local community. Other residents are terrified in their own homes while the number of caravans have increased on this site.	Removal of allocation to extend Magazine Lane.	Not accepted. The Council have grouped together and summarised representations made on this HN8.1 Magazine Lane, Ewloe allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Lies adjacent to A55(T) – noise and air pollution: Planning permission for the present use of the site for 5 pitches was allowed on appeal following the refusal of application 050463. The Inspector reported that the second reason for refusal regarding pollution was withdrawn by the Council following an addendum report produced by the appellant. In respect of noise the Inspector concluded 'On the balance of probabilities I conclude that the noise from traffic using the A55 would not materially harm the living conditions of the occupiers of the appeal site following the construction of the noise barrier subject to its retention thereafter'. In this context it is not considered that the allocation in the LDP would be likely to be unacceptable in terms of pollution and noise, particularly if similar noise attenuation measures (bund and fencing) are installed or are already in place. Isolated from Community: The site was granted planning permission on appeal and the distance of the site from facilities and services was not a decisive factor. The existing site is 1.3km from the school and 1.8km from the shops and take-aways at the junction of Mold Rd and Holywell Rd. The existing bus stop near the junction of Liverpool Rd and Mold Rd is 1km from the site and provides service 5 between Mold and Ellesmere Port and service x4 between Mold and Chester. Breaches of Planning Permission: The site is closely monitored by Planning Enforcement Officers and is also visited regularly by the Council's Gypsy Traveller Liaison Officer. One pitch never occupied and used only for storage: Some representations point to the site being 'over-used' in terms of the level of caravans, vehicles and residents on each pitch yet

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					other representations claim one pitch is not occupied for residential purposes and is used only for storage. However, the present families on site have expressed a need to the Council to have an extension to the site to accommodate the extended family needs. Expansion of Existing Site: Welsh Government guidance is contained in the guidance document (May 2015) 'Designing Gypsy and Traveller Sites' and there is no specific guidance on the size of a pitch. The guidance specifies in para 3.37 'As a minimum, each pitch should be capable of accommodating an amenity block, a mobile home, touring caravan and parking for two vehicles'. There are guidelines in respect of the size of parking spaces, the maximum size of a mobile home and separation distances between mobile homes and also between a mobile home and a pitch boundary. The guidance also specified what should be provided within an amenity block and other facilities on site such as hardstanding, electricity and water supply, and drainage arrangements for foul water and surface water. However, the guidance is clear that the 'layout of the pitch will depend on the overall site design'. The approved pitches on the site are rather generously proportioned and there is considered to be scope for a reconfiguration and remodelling of the present site to enable an additional 5 pitches within the existing site boundary. In effect, each existing pitch is capable of being split into two by a central vehicular access and separate accommodation to either side of the access road. In this scenario there is no need for the allocation for the site extension. Previous appeal decisions: This objection is made in the context of seeking an entirely new gypsy traveller residential site within a green barrier elsewhere in the County. The context in relation to the extension of an existing site is different to that of developing a new site as are the respective site contexts and previous planning histories. Visual Impact: The visual impact of the existing site was considered as part of the first appeal decision and revisited as part of the second appeal decision. Deliverability and viability: Following the publication of the deposit Plan, the Council is now

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					aware that the preference from the site owners is to increase the capacity of the site by reconfiguring the existing site within the red line of the present permission, and that this is in preference to the costs and viability of extending the site and required infrastructure into the extension land proposed in the deposit LDP. This has the potential to increase the certainty of delivery of more pitches at this location in a more viable and sustainable way than that proposed in the deposit LDP, thereby negating the need for the proposed site extension. Justification for expansion / Impact on Community: The Council has a statutory duty under the Housing Act to meet the needs for gypsy and traveller accommodation in the County, and has a general need for pitches identified in its approved GTAA. There is an expressed need from the present families on site for additional accommodation for their extended families that would contribute to meeting this need. Provision for site in Mold: Mold is not considered to be close to established traveller routes. No sites have been identified or suggested in Mold and furthermore no need has been identified for a site in Mold from the traveller community. Impact on green barrier: The site sits on the very southern edge of the green barrier, located between the A55(T) and Magazine Lane within the green barrier which sits between the settlements of Ewloe, Northop Hall, Connah's Quay and Shotton / Aston. In the first appeal decision the Inspector considered that a gypsy site was inappropriate development. In para 92 the Inspector noted 'In this case I have found that the open character and appearance of the green barrier would be adversely affected, but to a limited extent. It would also make a marginal contribution to the coalescence of settlements as well as encroach into the countryside, another of the purposes of the green barrier'. In terms of the impact on the rural character and appearance the Inspector noted '…gypsy sites are acceptable in principle in rural locations and will inevitably have some impact on their surroundings. In this case that impact would not be unacceptable'. The Inspector's concluding comments were that 'For the reasons I

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					have given, that harm is principally by way of inappropriateness. Otherwise the scheme has limited consequences for the open character and appearance of the green barrier and its purposes'. It is therefore evident that the impact of the existing site was considered by the Inspector to be limited in terms of green barrier and the character and appearance of open countryside. The extension site has natural screening to both Magazine Lane and the A55(T) and also on its western boundary. It is a physically well defined site and considered to represent logical extension to the site. It is clear that the extension site has a completely different character to the large linear field to the west. It is quite usual for green barrier designations in Flintshire to 'wash over' small scale built development in open countryside and this is the case with the existing site. In a similar manner to the Inspectors considerations, the Council does not consider that the proposed modest physical extension of the site would have such an impact on the purpose and openness of the green barrier, nor on the character and appearance of open countryside. However, as outlined above, an alternative approach has been tabled which involves the intensification of the existing site be the conversion of each pitch into separate pitches. This will inevitably involve an intensification of development within the existing site boundaries, but will remove the need for a physical extension of the site. The proposal would also involve less additional pitches with 5 new pitched rather than the 6-8 envisaged in the Deposit Plan. In conclusion, the proposed extension represents a modest physical extension of the existing consented and developed site which, despite its location within a green barrier, will not have an unacceptable impact on openness on the green barrier or the character and appearance of open countryside. The Inspector though is requested to consider the appropriateness of an intensification of the existing site, to provide an additional 5 pitches, and to remove the extension allocation.
1140	HN8: Gypsy and Traveller Sites	Object	Gypsy & Travellers - Level of Need and Provision (Gypsy Traveller Accommodation Assessment (GTAA) / Site Deliverability / Policy HN8 - Allocations, and Policy HN9 Level of Need & Provision – The LDP	Need to finalise GTAA. Need to ensure all allocations are suitable and can be	Partly accepted. Whilst the Council considers the 2018 update to be a more up to date position in terms of need, it has been frustrated by long delays by the Welsh Government's Equalities Division in responding to the 2018 update. Having confirmed that as the 'update' is not a full GTAA it would not comply with the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			evidence base comprises two GTAAs, both covering the plan period to 2030. The 2016 study has been agreed formally signed off by the relevant Minister. However, the 2018 study, which is considered by the Council to be a more robust and accurate picture of need in the County, has been used as the basis for the plan and the proposed allocations. The 2018 study has not yet been formally signed off/agreed by Welsh Government. To ensure compliance with the relevant legislation a GTAA must be prepared and agreed by Welsh Ministers in advance of the examination, with provision made for appropriate and deliverable site allocations to meet the need within identified timescales. The Council should work with Welsh Government - Equalities Division, to ensure the evidence is in place at the examination. Failure to gain Welsh Ministerial agreement for a GTAA and meet the required need (if appropriate) is likely to result in the plan being unable to be found 'sound'. The 2018 GTAA states the level of residential need over the plan period is for 8 permanent pitches by 2023/24 and a further 18 pitches by 2030, a total need of 26 pitches. The GTAA also recommends a need for a transit site of 5/6 pitches. Policy HN8: Gypsy and Traveller Sites allocates four separate sites to meet the need over the plan period. This is a positive response to the evidence base and is supported. The key issue is for the Authority to demonstrate all allocations are suitable and can be delivered in the required timescales. T	delivered in the required timescales. Which sites will accommodate the immediate need? Clarity is required on the delivery timescales of allocations. The allocations at Magazine Lane and Gwern Lane can accommodate 6-8 pitches. If the sites can only accommodate 6 pitches there would be a shortfall of 4 pitches over the plan period. The Council need to clarify the position in this respect. The proposed allocation at Magazine Lane is within a green wedge on the proposals map. Is this a mapping error? Housing allocations are not permissible in a green wedge (PPW para 3.65 and 3.71). The appropriateness of new allocations within a green wedge needs to be explained in light of PPW.	GTAA guidance and could not be approved by the Minister, the Equalities Division were then asked to confirm the status of the existing approved GTAA for use as an evidence base to support the LDP. In an email to the Council dated 6th March 2020 the Equalities Division of Welsh Government confirmed the following: "Having reviewed the extant approved GTAA (online link) I can confirm that in sections 5.48 and 5.49 the "plan period" calculations do refer explicitly to 2030. The current GTAA remains extant until a new GTAA is approved. I have consulted with colleagues in the Welsh Government Planning branch and I can confirm that the extant approved GTAA will suffice for LDP preparation. We agree that it is unfortunate that use of the extant approved GTAA means that the additional need set out in the update you provided will not form part of the LDP. However, we understand that the LDP will not prohibit site development to meet any additional need evidenced in a future GTAA". On the basis of this advice from the Welsh Government Equalities Division the Council considers that it has a compliant GTAA agreed by the Welsh Ministers to support the examination of the Flintshire LDP. The Plan makes three allocations for permanent sites and one allocation for a transit site. HN8.1 Magazine Lane, Ewloe This residential site is now proposed to be for a remodelling of the existing site to provide an additional 5 pitches rather than the proposed 6-8 pitches in the Deposit Plan. The site is in private ownership and the development will be privately funded. The Council is aware that the owners wish to progress with an increase in the capacity of this site in the short term (i.e. within 5 years of the GTAA base date) and intend to submit an application on this basis. HN1.2 Gwern Lane, Hope This residential site is now proposed to be for 4 pitches rather than for the 6-8 pitches in the Deposit Plan. The site is in private ownership and the development will be privately funded. The Council is aware that the owners wish to progress with an increase

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Background Paper 6: Gypsy and Traveller Site Search sets out the planning history, issues and constraints on the proposed allocations. The Riverside allocation is located within a C1 flood zone. The Council will be commissioning a Flood Consequence Assessment to demonstrate that flooding can be managed in line with TAN This assessment, including advice from the statutory body, must be in place for the examination to demonstrate the site is suitable and can be delivered. Sites with outstanding objections from the relevant statutory body, NRW, is a high risk strategy. This also applies to HN8-1 Magazine Lane which overlaps with the land fill buffer zone (Policy EN20). Allocation HN8.4 - Castle Park, Industrial Estate, Flint, partly	in the capacity of this site in the short term (i.e. within 5 years of the GTAA base date) and intend to submit an application on this basis. HN8.3 Riverside, Queensferry The site is in Council ownership and its development will be linked to the rebuilding of the A494(T) bridge over the R. Dee. As a result of the land take associated with the bridge reconstruction, the present vehicular access into the site will be replaced by a new vehicular access off Chemistry Lane to the south. This new access for both the existing site and proposed extension will be funded by Welsh Government. Public funding will need to be secured for the development of the extension and it is anticipated that development will not take place until 2023 at the earliest. HN8.4 Castle Park Industrial Estate The transit site is in Council ownership, being a former civic amenity site. The Council has already secured funding for the development of the transit site and work is progressing on a request for pre-application advice ahead of applying for planning permission. The site allocations are clearly capable of being delivered over the Plan period. The need identified in the approved GTAA is -4 pitches over the 5 year period and 19 pitches over the Plan period and the revisions to the Plans allocations result in a pitch provision of 19 which exactly meets the need. Magazine Lane, Ewloe In the separate detailed response on HN8.1 it is proposed that the allocation in the form of an extension to the site is to be replaced by a remodelling of the existing permitted site. Rather than securing 6-8 pitches on the extension site, the proposed remodelling of the existing site will secure an additional 5 pitches. Gwern Lane, Hope In the separate detailed response on HN8.1 it is proposed that the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				overlaps with solar allocation EN13: Castle Park Flint. Background Paper 6, Appendix 3, states the site has planning permission for a 2MW ground mounted solar farm and associated infrastructure which is under construction. This requires clarification. Can both allocations be developed for their intended use, or would one preclude the other? See previous comments regarding the deliverability of G&T sites.	number of pitches be reduced in scale from 6-8 pitches to 4 pitches. In total the proposed amendments to these two allocations will result in the loss of between 3 and 7 pitches. The allocations for permanent sites in policy HN8 will result in 19 pitches. Given the clarification provided by the Equalities Division of Welsh Government that the need identified in the 2016 GTAA is still extant as is the study overall, then there would not be a shortfall in provision if the sites extensions allocated were to be developed at either the lower end of the rages indicated, or indeed at the level more recently expressed by the respective site owners via submitted or planned planning applications or pre-app submissions. As explained above and in the detailed response on HN8.1 the Council is no longer proposing the extension to the site. Instead the allocation will on a remodelling of the existing permitted site. The green barrier washes over the permitted site and the appeal Inspector considered that '… the scheme has limited consequences for the open character and appearance of the green barrier and its purposes'. In this context the remodelling and intensification of the site is not considered to have a negative impact on openness of the green barrier. The existing permitted site already has 5 separate pitches which are generously proportioned and where each has its own vehicular access. Each pitch will be split into two pitches on either side of the access. Although there will be an increase in the amount of built development this is not considered to be of the scale that will harm the openness of the green barrier nor undermine its purpose given the clear physical boundaries and the opportunities presented by an improved layout and landscaping measures, as well as the backdrop of the site when viewed from across the extent of the green barrier from the north, which is the elevated alignment of the A55(T) trunk road. Riverside, Queensferry In response to this representation it should borne in mind that this

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					is an existing occupied site for Gypsies and Travellers and not a wholly new proposed allocation. In the separate detailed response on HN8.3 it is explained that a Flood Consequences Assessment has been undertaken for the proposed extension. The remaining concern of NRW in respect of the FCA is increased flood risk elsewhere during a tidal breach scenario afforded by raising the development platform but the Councils consultants do not consider that this is a significant issue. Discussions are on-going in respect of establishing whether compensatory mitigation can be provided on any adjacent Council owned land. It is not considered that there is an insurmountable constraint to the development of this extension. Magazine Lane The site lies within the 250m buffer zone to the Parrys Quarry Landill Site defined in policy EN20. The extension site is on the edge of the buffer zone and is separated from the landfill site by the A55(T) and by the Gateway to Wales Hotel complex. There is no objection from any statutory undertaker regarding this. As explained above it is now proposed to replace the extension site with a remodelling of the existing permitted site. Only the extreme north western corner of the existing site falls within the buffer zone, amounting to 0.06ha and this is not considered to be an overriding issue in terms of reconfiguring the existing site. The solar farm allocation EN13.2 does not overlap with the transit gypsy site allocation HN8.4. The two sites are separate mapped polygons and there is no overlap except that the vehicular access to the solar farm would also be the vehicular access to the transit site. The solar farm now has planning permission and the transit site is not considered to be in conflict in any way.
1192	HN8: Gypsy and Traveller Sites	Object	Objection to Gypsy traveller site extension Magazine Lane, Ewloe I note the proposal to allow the families living in Magazine to expand their current site into what was the ancient Ewloe Barn Wood. Having experienced and given evidence at the various Public Inquiries into the original site I	Removal of allocation to extend site.	Not accepted. The Council have grouped together and summarised representations made on this HN8.1 Magazine Lane, Ewloe allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Lies adjacent to A55(T) – noise and air pollution:

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			realise the pressure that Flintshire County Council are under to comply with National planning requirements for gypsy and traveller accommodation. However nearly every condition imposed on this site has been breached and far from blending in with the country location it occupies, it now stands out our garishly. The lane as predicted has become almost a 'no go' area. There was a planning stipulation of dog proof fencing which has never materialised or been enforced. The number of caravans is way above stipulations in the original plans and far more people are living on the site than originally permitted. Planning enforcement has been non existent and residents are left with the impression that Council Officials are too intimidated to take any action against gypsies because of their 'ethnic' status. It is noticeable that within the County of Flintshire, the one area that has not embraced diversity and made provision for gypsies is the county town of Mold. Is it not time that a site was set aside in that area where schools, shops, doctors and other facilities are more readily available than locations like this to better integrate the gypsy community into the county? The five families who applied for the original site claimed it was based on need, however one plot has never been occupied and is used for storage or transit purposes, so on what basis is the further extension needed? House dwellers and residents in the village cannot get permission to build yet the gypsy fraternity appear to be a law unto themselves doing what they want then getting permission retrospectively. If a further extension to this site is given the go		Planning permission for the present use of the site for 5 pitches was allowed on appeal following the refusal of application 050463. The Inspector reported that the second reason for refusal regarding pollution was withdrawn by the Council following an addendum report produced by the appellant. In respect of noise the Inspector concluded 'On the balance of probabilities I conclude that the noise from traffic using the A55 would not materially harm the living conditions of the occupiers of the appeal site following the construction of the noise barrier subject to its retention thereafter'. In this context it is not considered that the allocation in the LDP would be likely to be unacceptable in terms of pollution and noise, particularly if similar noise attenuation measures (bund and fencing) are installed or are already in place. Isolated from Community: The site was granted planning permission on appeal and the distance of the site from facilities and services was not a decisive factor. The existing site is 1.3km from the school and 1.8km from the shops and take-aways at the junction of Mold Rd and Holywell Rd. The existing bus stop near the junction of Liverpool Rd and Mold Rd is 1km from the site and provides service 5 between Mold and Ellesmere Port and service x4 between Mold and Chester. Breaches of Planning Permission: The site is closely monitored by Planning Enforcement Officers and is also visited regularly by the Council's Gypsy Traveller Liaison Officer. One pitch never occupied and used only for storage: Some representations point to the site being 'over-used' in terms of the level of caravans, vehicles and residents on each pitch yet other representations claim one pitch is not occupied for residential purposes and is used only for storage. However, the present families on site have expressed a need to the Council to have an extension to the site to accommodate the extended family needs. Expansion of Existing Site: Welsh Government guidance is contained in the guidance document (May 2015) 'Designing Gypsy and Traveller Sites' and there is no specific guidance on the size of a pitch. The guidance specifies in para 3.37 'As a minimum, each pitch should be capable of accommodating an amenity block, a mobile home, touring caravan and parking for two vehicles'. There are guidelines

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			ahead then Flintshire County Council need to get their act together and provide better planning enforcement support to local communities who if they develop a site or extend their house are subjected to rigorous inspection and enforcement procedures.		in respect of the size of parking spaces, the maximum size of a mobile home and separation distances between mobile homes and also between a mobile home and a pitch boundary. The guidance also specified what should be provided within an amenity block and other facilities on site such as hardstanding, electricity and water supply, and drainage arrangements for foul water and surface water. However, the guidance is clear that the 'layout of the pitch will depend on the overall site design'. The approved pitches on the site are rather generously proportioned and there is considered to be scope for a reconfiguration and remodelling of the present site to enable an additional 5 pitches within the existing site boundary. In effect, each existing pitch is capable of being split into two by a central vehicular access and separate accommodation to either side of the access road. In this scenario there is no need for the allocation for the site extension. Previous appeal decisions: This objection is made in the context of seeking an entirely new gypsy traveller residential site within a green barrier elsewhere in the County. The context in relation to the extension of an existing site is different to that of developing a new site as are the respective site contexts and previous planning histories. Visual Impact: The visual impact of the existing site was considered as part of the first appeal decision and revisited as part of the second appeal decision. Deliverability and viability: Following the publication of the deposit Plan, the Council is now aware that the preference from the site owners is to increase the capacity of the site by reconfiguring the existing site within the red line of the present permission, and that this is in preference to the costs and viability of extending the site and required infrastructure into the extension land proposed in the deposit LDP. This has the potential to increase the certainty of delivery of more pitches at this location in a more viable and sustainable way than that proposed in the deposit LDP, thereby negating the need for the proposed site extension. Justification for expansion / Impact on Community: The Council has a statutory duty under the Housing Act to meet

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the needs for gypsy and traveller accommodation in the County, and has a general need for pitches identified in its approved GTAA. There is an expressed need from the present families on site for additional accommodation for their extended families that would contribute to meeting this need. Provision for site in Mold: Mold is not considered to be close to established traveller routes. No sites have been identified or suggested in Mold and furthermore no need has been identified for a site in Mold from the traveller community. Impact on green barrier: The site sits on the very southern edge of the green barrier, located between the A55(T) and Magazine Lane within the green barrier which sits between the settlements of Ewloe, Northop Hall, Connah's Quay and Shotton / Aston. In the first appeal decision the Inspector considered that a gypsy site was inappropriate development. In para 92 the Inspector noted 'In this case I have found that the open character and appearance of the green barrier would be adversely affected, but to a limited extent. It would also make a marginal contribution to the coalescence of settlements as well as encroach into the countryside, another of the purposes of the green barrier'. In terms of the impact on the rural character and appearance the Inspector noted '…gypsy sites are acceptable in principle in rural locations and will inevitably have some impact on their surroundings. In this case that impact would not be unacceptable'. The Inspector's concluding comments were that 'For the reasons I have given, that harm is principally by way of inappropriateness. Otherwise the scheme has limited consequences for the open character and appearance of the green barrier and its purposes'. It is therefore evident that the impact of the existing site was considered by the Inspector to be limited in terms of green barrier and the character and appearance of open countryside. The extension site has natural screening to both Magazine Lane and the A55(T) and also on its western boundary. It is a physically well defined site and considered to represent logical extension to the site. It is clear that the extension site has a completely different character to the large linear field to the west.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					It is quite usual for green barrier designations in Flintshire to 'wash over' small scale built development in open countryside and this is the case with the existing site. In a similar manner to the Inspectors considerations, the Council does not consider that the proposed modest physical extension of the site would have such an impact on the purpose and openness of the green barrier, nor on the character and appearance of open countryside. However, as outlined above, an alternative approach has been tabled which involves the intensification of the existing site be the conversion of each pitch into separate pitches. This will inevitably involve an intensification of development within the existing site boundaries, but will remove the need for a physical extension of the site. The proposal would also involve less additional pitches with 5 new pitched rather than the 6-8 envisaged in the Deposit Plan. In conclusion, the proposed extension represents a modest physical extension of the existing consented and developed site which, despite its location within a green barrier, will not have an unacceptable impact on openness on the green barrier or the character and appearance of open countryside. The Inspector though is requested to consider the appropriateness of an intensification of the existing site, to provide an additional 5 pitches, and to remove the extension allocation.
1215	HN8: Gypsy and Traveller Sites	Object	Objects to sites HN8-1 (magazine Lane, Ewloe), HN8-2 (Gwern Lane, Hope) and HN8-3 (Riverside, Queensferry) as they do not comply with the requirements set out in Circular 005/2018 and in the criteria set out in the existing UDP (HSG14) and in the Deposit LDP (HN9). In particular HN8-3 is located on contaminated land, is in a C1 flood risk area, is adjacent to a major sewage works and is severed from local services by a principle main trunk road linking North Wales and the North West of England which is scheduled for upgrading. Detailed objection provided in the attached document. Proposes an alternative allocation at Bryn y Baal, Mynydd Isa.		Not accepted. The Council have grouped together and summarised representations made on this HN8.1 Magazine Lane, Ewloe allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Lies adjacent to A55(T) – noise and air pollution: Planning permission for the present use of the site for 5 pitches was allowed on appeal following the refusal of application 050463. The guidance also specified what should be provided within an amenity block and other facilities on site such as hardstanding, electricity and water supply, and drainage arrangements for foul water and surface water. However, the guidance is clear that the 'layout of the pitch will depend on the overall site design'. The approved pitches on the site are rather generously

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					proportioned and there is considered to be scope for a reconfiguration and remodelling of the present site to enable an additional 5 pitches within the existing site boundary. In effect, each existing pitch is capable of being split into two by a central vehicular access and separate accommodation to either side of the access road. In this scenario there is no need for the allocation for the site extension. Previous appeal decisions: This objection is made in the context of seeking an entirely new gypsy traveller residential site within a green barrier elsewhere in the County. The context in relation to the extension of an existing site is different to that of developing a new site as are the respective site contexts and previous planning histories. Visual Impact: The visual impact of the existing site was considered as part of the first appeal decision and revisited as part of the second appeal decision. Deliverability and viability: Following the publication of the deposit Plan, the Council is now aware that the preference from the site owners is to increase the capacity of the site by reconfiguring the existing site within the red line of the present permission, and that this is in preference to the costs and viability of extending the site and required infrastructure into the extension land proposed in the deposit LDP. This has the potential to increase the certainty of delivery of more pitches at this location in a more viable and sustainable way than that proposed in the deposit LDP, thereby negating the need for the proposed site extension. Justification for expansion / Impact on Community: The Council has a statutory duty under the Housing Act to meet the needs for gypsy and traveller accommodation in the County, and has a general need for pitches identified in its approved GTAA. There is an expressed need from the present families on site for additional accommodation for their extended families that would contribute to meeting this need. Provision for site in Mold: Mold is not considered to be close to established traveller routes. No sites have been identified or suggested in Mold and

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					furthermore no need has been identified for a site in Mold from the traveller community. Impact on green barrier: The site sits on the very southern edge of the green barrier, located between the A55(T) and Magazine Lane within the green barrier which sits between the settlements of Ewloe, Northop Hall, Connah's Quay and Shotton / Aston. In the first appeal decision the Inspector considered that a gypsy site was inappropriate development. In para 92 the Inspector noted 'In this case I have found that the open character and appearance of the green barrier would be adversely affected, but to a limited extent. It would also make a marginal contribution to the coalescence of settlements as well as encroach into the countryside, another of the purposes of the green barrier'. In terms of the impact on the rural character and appearance the Inspector noted '…gypsy sites are acceptable in principle in rural locations and will inevitably have some impact on their surroundings. In this case that impact would not be unacceptable'. The Inspector's concluding comments were that 'For the reasons I have given, that harm is principally by way of inappropriateness. Otherwise the scheme has limited consequences for the open character and appearance of the green barrier and its purposes'. It is therefore evident that the impact of the existing site was considered by the Inspector to be limited in terms of green barrier and the character and appearance of open countryside. The extension site has natural screening to both Magazine Lane and the A55(T) and also on its western boundary. It is a physically well defined site and considered to represent logical extension to the site. It is clear that the extension site has a completely different character to the large linear field to the west. It is quite usual for green barrier designations in Flintshire to 'wash over' small scale built development in open countryside and this is the case with the existing site. In a similar manner to the Inspectors considerations, the Council does not consider that the proposed modest physical extension of the site would have such an impact on the purpose and openness of the green barrier, nor on the character and appearance of open countryside. However, as outlined above, an alternative approach has been tabled which involves the intensification of the existing site be the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					conversion of each pitch into separate pitches. This will inevitably involve an intensification of development within the existing site boundaries, but will remove the need for a physical extension of the site. The proposal would also involve less additional pitches with 5 new pitched rather than the 6-8 envisaged in the Deposit Plan. In conclusion, the proposed extension represents a modest physical extension of the existing consented and developed site which, despite its location within a green barrier, will not have an unacceptable impact on openness on the green barrier or the character and appearance of open countryside. The Inspector though is requested to consider the appropriateness of an intensification of the existing site, to provide an additional 5 pitches, and to remove the extension allocation.
1217	HN8: Gypsy and Traveller Sites	Object	Objects to sites HN8-1 (magazine Lane, Ewloe), HN8-2 (Gwern Lane, Hope) and HN8-3 (Riverside, Queensferry) as they do not comply with the requirements set out in Circular 005/2018 and in the criteria set out in the existing UDP (HSG14) and in the Deposit LDP (HN9). In particular HN8-3 is located on contaminated land, is in a C1 flood risk area, is adjacent to a major sewage works and is severed from local services by a principle main trunk road linking North Wales and the North West of England which is scheduled for upgrading. Detailed objection provided in the attached document. Proposes an alternative allocation at Bryn y Baal, Mynydd Isa.		Not accepted. The Council have grouped together and summarised representations made on this HN8.3 Riverside, Queensferry allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Poor integration with community: The site is an existing long standing and successfully run Council owned site. The rebuilding of the adjacent bridge over the R.Dee by Welsh Government will require additional land on the south side of the A494(T) which will impact further on the already substandard vehicular access from the existing site onto the A494(T). This has led to a new vehicular access being proposed along an existing track from Chemistry lane to the south of the site that will be provided by Welsh Government. In addition there is vacant land to the south of the existing traveller site. This provides the opportunity for a remodelling of the existing site, and extension to the site and a new and improved vehicular access. The site is located at the heart of the Deeside area, close to a large number of settlements and their associated services and facilities. The new access will improve the links between the site and the existing community at Pentre, Sandycroft and Queensferry, rather than the existing access which is straight out on to the A494(T). A planning application for a Coop convenience store at Queensferry Industrial Estate which, if approved, will be

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					within walking distance of the site. There is presently a public right of way along the R Dee along the northern edge of the existing traveller site. This route will be retained and enhanced as part of the bridge rebuilding works and will ensure improved links with Queensferry and Garden City. The site is not divorced from the wider community. The site will be accessed by a new road from the south from the junction of Chemistry Lane and Factory Lane. The Highways Development Management Officer comments 'The use of Chemistry Lane by large vehicles is limited by the clearance under the rail bridge; alternative access via Factory Road is available. The two roads provide the only vehicular access to the Queensferry Industrial Estate; the additional traffic impact resulting from revised access to the Residential Site is unlikely to be significant'. Archaeology: This is a detailed matter that can be addressed as part of working up a planning application. Housing Strategy have contacted CPAT to establish how this can best be dealt with. Contaminated Land When the former chemical works was demolished a land remediation programme was undertaken by FCC. A number of technical reports were produced in 1990/91 and 2012 and these were reviewed by Arcadis in 2018 in order to inform the development of the site extension. Arcadis concluded that: • no further investigation work is necessary to assess risk to human health from potential CoC at the Site. • Mitigation measures within the construction design for permanent buildings and transient utility 'hook up' points are recommended to reduce risk to site users. • Risk assessment by Smith Grant assumes that the redevelopment design includes total hardstanding coverage. Additional assessment of risk to human health may be appropriate if the final redevelopment design includes areas of soft standing. • Protective measures to ensure integrity of water pipes may be appropriate if the construction design requires pipes to be places below or close to the base of the capping layer. In the light of these findings the broader principle of a residential use is considered acceptable and that the remaining technical

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					matters can be satisfactorily resolved at development management stage. Proximity to industry / sewage works: The Pentre and Sandycroft area has a mix of industrial estates and residential properties in close proximity to each other. The site falls within a 1000m consultation zone for the Owens-Corning Building Products site where NRW will need to be consulted and the south east corner of the site falls within the 500m consultation zone of the J Reid Trading site where NRW will need to be consulted. However, following consultation on the Plan, NRW have not objected to this proposal in terms of proximity to industrial operations. No objection has been received from Welsh Water in terms of proximity to Waste Water Treatment Works. Flood Risk: The site is located within a C1 flood risk zone based on the NRW Development Advice Map. A Flood Consequences Assessment undertaken by Weetwood for the site has demonstrated that the proposed development may be completed in accordance with the requirements of planning policy subject to the following: • Development platform level to be set at a minimum of 7.24 m AOD • Finished floor levels to be set 0.15 m above the development platform level • Flood Plan to be developed in consultation with Flintshire County Council • The detailed drainage design to be submitted to and approved by the local planning authority prior to the commencement of development NRW have considered the FCA and their comments appear to amount to a single concern which is increased flood risk elsewhere during a tidal breach scenario afforded by raising the development platform. Weetwood state that the increase flood risk elsewhere is explained in section 5.3 of the FCA and concludes that the 10-35mm increases are not significant owing to those areas already flooding to considerable depths up to 1.4m. Weetwood consider that this is similar to many other sites assessed within the River Dee floodplain. Given the nature of flooding in tidal breach scenarios, it is extremely difficult to feasibly mitigate increased flood risk elsewhere to show “no detriment”, which would likely

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					involve significantly scaling back the proposed development and allocating a portion of land specifically as compensatory flood storage – all for very little benefit given that flood risk elsewhere is hardly changing. Work is progressing in order to resolve this NRW concern in terms of identifying whether there is any adjoining Council owned land that could be utilised as mitigation for any flood water displaced as a result of the raised platform on the extension site. Vehicle Emissions: It is acknowledged that the existing and proposed site is in close proximity to the A494(T). However, there will be a betterment on the existing situation in that the site will not be dependent on the A494(T) for vehicular access and that, as part of the bridge rebuilding proposals there existing scope for structural landscaping and noise attenuation measures.
69	HN8: Gypsy and Traveller Sites	Support	However the proposed site at HN8.3 overlies the remains of the Queensferry Chemical works (https://www.archwilio.org.uk/arch/query/page.php?prn=CPAT103918&dbname=cpat&tbname=CORE) which may require e=assessment prior to development.		Noted. The Council have grouped together and summarised representations made on this HN8.3 Riverside, Queensferry allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Poor integration with community: The site is an existing long standing and successfully run Council owned site. The rebuilding of the adjacent bridge over the R.Dee by Welsh Government will require additional land on the south side of the A494(T) which will impact further on the already substandard vehicular access from the existing site onto the A494(T). This has led to a new vehicular access being proposed along an existing track from Chemistry lane to the south of the site that will be provided by Welsh Government. In addition there is vacant land to the south of the existing traveller site. This provides the opportunity for a remodelling of the existing site, and extension to the site and a new and improved vehicular access. The site is located at the heart of the Deeside area, close to a large number of settlements and their associated services and facilities. The new access will improve the links between the site and the existing community at Pentre, Sandycroft and Queensferry, rather than the existing access which is straight out on to the A494(T). 665	HN8: Gypsy and Traveller Sites	Support	Policy HN8: Gypsy and Traveller Sites 1. HN8-1, Magazine Lane, Ewloe • This site has planning permission and we have no further comment to make. Welsh Water made representations on this site through planning application 050463.		Noted.
1028	HN8: Gypsy and Traveller Sites	Support	Gypsy and Travellers The Council supports that the LDP contains allocations to meet Flintshire’s permanent need for gypsies and travellers.		Noted. The Council have grouped together and summarised representations made on this allocated site and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. Lies adjacent to A55(T) – noise and air pollution: Planning permission for the present use of the site for 5 pitches was allowed on appeal following the refusal of application 050463. The Inspector reported that the second reason for refusal regarding pollution was withdrawn by the Council following an addendum report produced by the appellant. In respect of noise the Inspector concluded ‘On the balance of probabilities I conclude that the noise from traffic using the A55 would not materially harm the living conditions of the occupiers of the appeal site following the construction of the noise barrier subject to its retention thereafter’. In this context it is not considered that the allocation in

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the LDP would be likely to be unacceptable in terms of pollution and noise, particularly if similar noise attenuation measures (bund and fencing) are installed or are already in place. Isolated from Community: The site was granted planning permission on appeal and the distance of the site from facilities and services was not a decisive factor. The existing site is 1.3km from the school and 1.8km from the shops and take-aways at the junction of Mold Rd and Holywell Rd. The existing bus stop near the junction of Liverpool Rd and Mold Rd is 1km from the site and provides service 5 between Mold and Ellesmere Port and service x4 between Mold and Chester. Breaches of Planning Permission: The site is closely monitored by Planning Enforcement Officers and is also visited regularly by the Council's Gypsy Traveller Liaison Officer. One pitch never occupied and used only for storage: Some representations point to the site being 'over-used' in terms of the level of caravans, vehicles and residents on each pitch yet other representations claim one pitch is not occupied for residential purposes and is used only for storage. However, the present families on site have expressed a need to the Council to have an extension to the site to accommodate the extended family needs. Expansion of Existing Site: Welsh Government guidance is contained in the guidance document (May 2015) 'Designing Gypsy and Traveller Sites' and there is no specific guidance on the size of a pitch. The guidance specifies in para 3.37 'As a minimum, each pitch should be capable of accommodating an amenity block, a mobile home, touring caravan and parking for two vehicles'. There are guidelines in respect of the size of parking spaces, the maximum size of a mobile home and separation distances between mobile homes and also between a mobile home and a pitch boundary. The guidance also specified what should be provided within an amenity block and other facilities on site such as hardstanding, electricity and water supply, and drainage arrangements for foul water and surface water. However, the guidance is clear that the 'layout of the pitch will depend on the overall site design'. The approved pitches on the site are rather generously proportioned and there is considered to be scope for a

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					reconfiguration and remodelling of the present site to enable an additional 5 pitches within the existing site boundary. In effect, each existing pitch is capable of being split into two by a central vehicular access and separate accommodation to either side of the access road. In this scenario there is no need for the allocation for the site extension. Previous appeal decisions: This objection is made in the context of seeking an entirely new gypsy traveller residential site within a green barrier elsewhere in the County. The context in relation to the extension of an existing site is different to that of developing a new site as are the respective site contexts and previous planning histories. Visual Impact: The visual impact of the existing site was considered as part of the first appeal decision and revisited as part of the second appeal decision. Deliverability and viability: Following the publication of the deposit Plan, the Council is now aware that the preference from the site owners is to increase the capacity of the site by reconfiguring the existing site within the red line of the present permission, and that this is in preference to the costs and viability of extending the site and required infrastructure into the extension land proposed in the deposit LDP. This has the potential to increase the certainty of delivery of more pitches at this location in a more viable and sustainable way than that proposed in the deposit LDP, thereby negating the need for the proposed site extension. Justification for expansion / Impact on Community: The Council has a statutory duty under the Housing Act to meet the needs for gypsy and traveller accommodation in the County, and has a general need for pitches identified in its approved GTAA. There is an expressed need from the present families on site for additional accommodation for their extended families that would contribute to meeting this need. Provision for site in Mold: Mold is not considered to be close to established traveller routes. No sites have been identified or suggested in Mold and furthermore no need has been identified for a site in Mold from the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					traveller community. Impact on green barrier: The site sits on the very southern edge of the green barrier, located between the A55(T) and Magazine Lane within the green barrier which sits between the settlements of Ewloe, Northop Hall, Connah's Quay and Shotton / Aston. In the first appeal decision the Inspector considered that a gypsy site was inappropriate development. In para 92 the Inspector noted 'In this case I have found that the open character and appearance of the green barrier would be adversely affected, but to a limited extent. It would also make a marginal contribution to the coalescence of settlements as well as encroach into the countryside, another of the purposes of the green barrier'. In terms of the impact on the rural character and appearance the Inspector noted '…gypsy sites are acceptable in principle in rural locations and will inevitably have some impact on their surroundings. In this case that impact would not be unacceptable'. The Inspector's concluding comments were that 'For the reasons I have given, that harm is principally by way of inappropriateness. Otherwise the scheme has limited consequences for the open character and appearance of the green barrier and its purposes'. It is therefore evident that the impact of the existing site was considered by the Inspector to be limited in terms of green barrier and the character and appearance of open countryside. The extension site has natural screening to both Magazine Lane and the A55(T) and also on its western boundary. It is a physically well defined site and considered to represent logical extension to the site. It is clear that the extension site has a completely different character to the large linear field to the west. It is quite usual for green barrier designations in Flintshire to 'wash over' small scale built development in open countryside and this is the case with the existing site. In a similar manner to the Inspectors considerations, the Council does not consider that the proposed modest physical extension of the site would have such an impact on the purpose and openness of the green barrier, nor on the character and appearance of open countryside. However, as outlined above, an alternative approach has been tabled which involves the intensification of the existing site be the conversion of each pitch into separate pitches. This will inevitably

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					involve an intensification of development within the existing site boundaries, but will remove the need for a physical extension of the site. The proposal would also involve less additional pitches with 5 new pitched rather than the 6-8 envisaged in the Deposit Plan. In conclusion, the proposed extension represents a modest physical extension of the existing consented and developed site which, despite its location within a green barrier, will not have an unacceptable impact on openness on the green barrier or the character and appearance of open countryside. The Inspector though is requested to consider the appropriateness of an intensification of the existing site, to provide an additional 5 pitches, and to remove the extension allocation.
1220	HN8: Gypsy and Traveller Sites	Support	Gypsy and Travellers The Council supports that the LDP contains allocations to meet Flintshire's permanent need for gypsies and travellers.		Support noted
1234	HN8: Gypsy and Traveller Sites	Support	4. ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1231	HN8: Gypsy and Traveller Sites	Support	2. HN8-2, Gwern Lane, Cae Estyn, Hope • Welsh Water does not supply water to this area. • The public sewerage network can accept potential foul flows from this development site. • Hope Wastewater Treatment Works (WwTW) can accommodate the foul flows from the proposed development site		Noted.
1233	HN8: Gypsy and Traveller Sites	Support	3. HN8-3, Riverside, Queensferry • A water supply can be provided for this site. • The public sewerage network can accept potential foul flows from this development site. • The proposed growth being promoted for the Queensferry Wastewater Treatment Works (WwTW) catchment would require improvements which would need to be funded through our Asset Management Plan (AMP) or potentially earlier through developer contributions. • The site is located in close proximity to Queensferry WwTW and the LPA may wish to contact their Environmental Health Department for their views on whether there is the potential for odour nuisance on the proposed allocation.		Noted.

Policy HN9

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
240	HN9: Gypsy and Traveller Accommodation	Support	Policy HN9 – Gypsy and Traveller Accommodation: The equivalent policy in the adopted Denbighshire LDP (Policy BSC10) places restrictions on such development within the AONB. In the interests of cross boundary consistency in the AONB, the committee would suggest that a similar safeguard is included within policy HN9		Noted. The Plan should be read as a whole and any development proposals arising in the AONB would need to be assessed against policy EN5 regarding the AONB and EN4 landscape character as well as other relevant policies. These provide a policy framework with which to assess any gypsy or traveller site proposals which may arise in the AONB. The Council also has a statutory duty under the Countryside and Rights of Way Act to have regard to the purpose of AONB's in exercising or performing any functions in relation to so as to affect land in these areas. In this context, it is not necessary for the AONB to be specifically addressed in numerous policies. Rather, proposals can be assessed on their merits against the Plan as a whole alongside national planning guidance.
840	HN9: Gypsy and Traveller Accommodation	Object	Policy HN9 (Gypsy and Traveller Accommodation) Bourne Leisure recognises the need to and the importance of securing suitable sites for Gypsy and Traveller communities in Flintshire. Welsh Government Circular 005/2018 on Planning for Gypsy, Traveller and Showpeople recognises that in creating policies and determining planning applications there is a need to consider how such sites operate in order to ensure "the promotion of peaceful and integrated co-existence between the site and the local community" (Paragraph 37).	Policy HN9 of the Deposit Plan should be amended to: "Proposals for new Gypsy and Traveller sites, or the extension of existing sites, including land outside of defined settlement limits will be permitted provided: a. There is a clearly identified unmet	Not accepted. The objector is seeking to add the wording 'Where any adverse impacts cannot be suitably mitigated, planning permission will be refused' at the end of the existing criteria e. However, this policy is not read in isolation and any development proposal for a gypsy / traveller site will also have to be addressed against the Plans framework of policies. The assessment of a proposal against relevant policies will determine whether impacts can be suitably mitigated and it is not necessary for this to be added to the policy nor to add negative wording whereby sites will be refused.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Factors for consideration set out in the Circular include the types of use on-site, storage of equipment and materials, vehicle movements, the nature of Pg 11/14 17958241v6 business activity, visual amenity and privacy need to be taken into account for both travelling communities and the local settled community. Suggestions for mitigation are included in the Circular. On this basis, we suggest that a minor amendment to the policy is needed for consistency with national guidance. Policy HN9 of the Deposit Plan should be amended to: "Proposals for new Gypsy and Traveller sites, or the extension of existing sites, including land outside of defined settlement limits will be permitted provided: a. There is a clearly identified unmet need in accordance with the most recently undertaken Gypsy and Traveller Accommodation Assessment; b. There are no suitable alternative sites either with planning permission or allocated for such uses which could accommodate the need; c. The site is well related to suitable community facilities and services for the prospective occupants; d. The site is capable of being served by utilities including sustainable waste disposal and recovery and emergency	need in accordance with the most recently undertaken Gypsy and Traveller Accommodation Assessment; b. There are no suitable alternative sites either with planning permission or allocated for such uses which could accommodate the need; c. The site is well related to suitable community facilities and services for the prospective occupants; d. The site is capable of being served by utilities including sustainable waste disposal and recovery and emergency services; e. The site affords satisfactory amenity standards both for its occupants and for neighbouring	

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			services; e. The site affords satisfactory amenity standards both for its occupants and for neighbouring land uses. Where any adverse impacts cannot be suitably mitigated, planning permission will be refused; f. The site is not in an area at high risk of flooding given the particular vulnerability of caravans." The proposed amendment to draft Policy HN9 would mean that this element of the Plan would satisfy the tests of soundness.	land uses. Where any adverse impacts cannot be suitably mitigated, planning permission will be refused; f. The site is not in an area at high risk of flooding given the particular vulnerability of caravans." The proposed amendment to draft Policy HN9 would mean that this element of the Plan would satisfy the tests of soundness.	
1141	HN9: Gypsy and Traveller Accommodation	Object	Policy HN9 Gypsy and Traveller Accommodation - Criteria Based Policy - Criterion a) and b) and the reasoned justification para 11.37 are contrary to national policy. Annex B in the Circular notes that policy requirements to demonstrate 'unmet need in the Gypsy and Traveller Accommodation Assessment' would act against freedom of movement for Gypsies and Travellers who may wish to develop their own sites. Such restrictions should not be placed on Gypsies and Travellers. The circular is clear that criteria-based policies must	Amendments to policy wording. Criteria Based Policy - Criterion a) and b) and the reasoned justification para 11.37 are contrary to national policy. Annex B in the Circular notes that policy requirements to demonstrate 'unmet need in the Gypsy and Traveller	Accepted. It is accepted that within the context of advice in Annex B of the Circular, criteria a) and b) are inappropriate and part of the explanatory text in para 11.37 is also inappropriate. The Council would have no objection to the Inspector recommending the following changes to the Plan if the Inspector considers that they will ensure Policy HN9 is in conformity with PPW and supporting guidance: • Delete criteria a) • Delete criteria b) • Renumber criteria • Amend para 11.37 as follows: 'Despite provision being made in the Plan through allocations, there may be development proposals for Gypsy and Traveller sites submitted during the Plan period,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			be fair, reasonable, realistic and effective in delivering sites and must not rule out or place undue constraints on the development of Gypsy and Traveller sites (paragraph 49). The reasoned justification (paragraph 11.38) states “Sites should be located on or close to main travelling routes for ease of access”. This would be more applicable to transit sites rather than those of a permanent nature.	Accommodation Assessment’ would act against freedom of movement for Gypsies and Travellers who may wish to develop their own sites. Such restrictions should not be placed on Gypsies and Travellers.	particularly in order to meet a specific need. This policy takes the form of a criteria based policy for assessing such proposals and should be read alongside the Plan’s framework of policies. It will be necessary for each applicant to demonstrate that there is a specific need which cannot be met on existing sites or sites with planning permission.’

Development Management Policies - Meeting Housing Needs - General

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
130	Development Management Policies - Meeting Housing Needs		Would FCC consider Ty Gwyn, The Catch, Halkyn for the Local Development plan		Not accepted. The site does not comply with the Preferred Strategy as Halkyn is a tier 5 Undefined Village which does not have a settlement boundary and where no new allocations will be made. The site was put forward as an omission site in the UDP but the Inspector did not see Halkyn as being a sustainable location to accommodate development. The Inspector commented ”Halkyn is a category C settlement with few facilities. It is a location where I recommend growth in general should be restricted to local needs only. Growth so far within the settlement has amounted to 6% and if the objection site were to be allocated and/or included within the settlement boundary it would potentially yield a further 25%. I consider this would be unacceptable and contrary to the plan’s sustainable principles which seek to concentrate growth in the larger settlements where there is better access to a wider range of services and facilities”. This has been reaffirmed by the work associated with the Settlement Audits carried out to inform the development of the LDP settlement hierarchy, whereby Halkyn is not considered to be a sustainable location as a result of its location, small size, scattered pattern of development and lack of facilities and services. The proposed site is located on greenfield land and is located in close proximity to Halkyn Mountain SAC and Halkyn Common and Holywell Grasslands SSSI. At 1.6ha in size it would result in a scale of development that would be out of proportion with the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					scale, character and role of the settlement. Development would harm the character of the locality. The designation of Halkyn as a Tier 5 settlement does not mean that no development can take place over the Plan period. New development which provides for local needs based affordable housing can take place in line with policy STR2, provided that it represents sensitive small scale housing in the form of infill or rounding off. The proposed site is clearly out of step with the policy approach. In conclusion the proposal does not comply with the Preferred Strategy in terms of the position of Halkyn in the settlement hierarchy. The site would result in a level of growth that would be unsustainable and harm the character and appearance of the locality.

Development Management Policies - Valuing the Environment - General

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
539	Development Management Policies - Valuing the Environment		I write following receipt of your letter dated 19th September notifying the Maritime & Coastguard Agency of your public consultation on the Flintshire County Council Local Development Plan. The MCA's Navigation Safety Branch act as primary consultees to Natural Resources Wales for marine licence applications under the Marine & Coastal Access Act 2009; namely for works below the Mean High Water Springs, to consider potential hazards to the safety of navigation and marine users, including HM Coastguard and other Search & Rescue assets. Following consideration we then typically propose suitable mitigation measures to be added to the licence through conditions and advisories. We would expect any works detailed in your LDP below the Mean High Water Springs to require a marine licence on an individual basis. MCA are therefore content not to submit substantive comment at this time, and will respond on a case by case basis to any relevant works through the marine licence system via Natural Resources Wales. We can therefore safely be discounted from further consultation specific to the LDP.		The comments are noted. The LDP does not propose works below the Mean High Water Mark.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
686	Development Management Policies - Valuing the Environment	Object	We request the addition of a new policy known as “Locations for Transmission Connected Energy Generation and Storage Facilities” to provide support for such developments at suitable locations in employment areas where there is an established energy use or existing transmission infrastructure. While such projects may require consent from the Welsh Ministers or the Secretary of State it is considered relevant for the Local Plan to demonstrate preferred locations for such facilities, given their particular locational requirements, their contribution to the concentration of manufacturing skills in Flintshire, and their role in supporting wider energy needs. We suggest the following wording: ENxx: Locations for Transmission Connected Energy Generation and Storage Facilities “Proposals for energy generation and storage facilities that require a connection to national transmission systems will generally be permitted on allocated employment sites in locations where existing connection infrastructure is situated or an energy use is already established. Sites which are considered to be suitable in principle for energy generation and storage facilities include: • Former Deeside Power Station site, South of Flintshire Bridge, Connah’s Quay; • (…)” Accompanying text could explain the need for these this type of development in wider policy, and recognise that they require large sites, and may have visual impacts due to the scale of the structures required, but otherwise have low impacts on neighbouring uses or		Not accepted. The objection lacks any detail on the nature of such proposals nor technical evidence to demonstrate that the Connah’s Quay Power Station (and other unspecified sites throughout the County) might be suitable for the proposed (unspecified) use or development. The objector already recognises that such development proposals may fall outside the scope of the LPA as they constitute major infrastructure projects. The Plan should only include site specific proposals where there is evidence that the proposed development is viable, deliverable and sustainable and this is clearly not the case. It would be inappropriate for the Plan to include the policy wording proposed by the objector .

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			existing communities, particularly when located on larger, established, sites with transmission connections in place. We also request the following minor changes be made to other policies: STR7 and STR14.		
932	Development Management Policies - Valuing the Environment	Object	Para 9.5 is almost the only place in the LDP where mention is made of protecting high quality agricultural land; yet despite this and the fact PPW10 places significant weight on BMV the LDP is devoid of any policy and makes no mention of any assessment of how this might have influenced housing site selection.		Not accepted. It is unclear what para 9.5 the objector is referring to. Para 9.5 of the written statement is part of the explanatory text to policy PC2 'General Requirements for Development' and is not relevant to agricultural land The objector recognises that the protection of Best and Most Versatile Agricultural Land is clearly and fully set out in paras 3.54-3.55 of PPW10. It is not necessary or desirable for LDP's to slavishly repeat national guidance from PPW10. Indeed, para 3.11 of Development Plan Manual 3 states 'An LDP should not repeat national policy. Plans should not be a compendium of policies to cover every eventuality'. The adopted LDP will clearly need to be read in the context of LDP. There is no objection from Welsh Government in their representations on the Plan regarding the lack of a policy on agricultural land. The preparation of the LDP has involved close working with Welsh Government in identifying the predicted loss of BMV as part of the assessment of candidate and alternative sites. On all allocations involving the potential loss of BMV an on-site survey has been arranged and results verified by Welsh Government. In identifying

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					allocations the Council has sought to minimize the loss of BMV. The approach is set out in Background Paper 09 which has been supported in principle by Welsh Government.

Policies EN1 to EN27

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
322	EN1: Sports, Recreation and Cultural Facilities	Object	Policy EN1 seeks to protect existing open space, sports and recreation facilities and provide guidance on the Council's approach to new provision which should be provided as a result of new residential developments in the County. In this regard, the Policy specifically states that "All new residential developments will be required to include provision for public open space or sports and recreational facilities in accordance with the Council's adopted standards and be well related to the development it is intended to serve. Where it is not reasonably practical to meet these standards on site or where there is already sufficient provision, a financial contribution will be sought for off-site provision and / or the improvement of existing local provision." The Draft Deposit Plan does not include any prescriptive polices on open space standards and instead relies on the standards of provision set out in section 4 of the SPG. The supporting text to policy EN1 (paragraph 12.3) makes reference to "Further details on Open Space Requirements is set out in a Supplementary Planning Guidance Note". The SPG is still in draft form and only approved for development management purposes but carries less weight than the adopted Supplementary Planning Guidance Notes. The Open Space Requirements SPG has not subject to any public consultation or Council resolution to date and therefore has not been formally adopted by FCC. It is our view that this should be adopted prior to the EiP into the Deposit Local Plan to ensure clarity and certainty of the open space	The SPG is still in draft form and only approved for development management purposes but carries less weight than the adopted Supplementary Planning Guidance Notes. The Open Space Requirements SPG has not subject to any public consultation or Council resolution to date and therefore has not been formally adopted by FCC. It is our view that this should be adopted prior to the EiP into the Deposit Local Plan to ensure clarity and certainty of the open space requirements for future residential developments and that greater detail is provided within the actual policy or the supporting text. In addition, the standards of provision within the draft SPG for developments of over 200 dwellings to provide additional space for adult sized sports pitches (e.g.	Partly accepted. If the inspector thinks that further clarify should be added to Policy EN1 through the inclusion of open space thresholds then the Council would have no objection to this. The Open Space SPG will be updated and consulted on in due course.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			requirements for future residential developments and that greater detail is provided within the actual policy or the supporting text. In addition, the standards of provision within the draft SPG for developments of over 200 dwellings to provide additional space for adult sized sports pitches (e.g. rugby, football, cricket) with changing facilities and car parking is very onerous on developers and the efficient use of land. Such matters should have the opportunity to be discussed through a formal consultation process.	rugby, football, cricket) with changing facilities and car parking is very onerous on developers and the efficient use of land. Such matters should have the opportunity to be discussed through a formal consultation process.	
785	EN1: Sports, Recreation and Cultural Facilities	Object	In relation to the FCC's Development Management Policy for Sports, Recreation and Cultural Facilities the key comments in the context of the Village Plan thematics and objectives and from the Community Council's perspective as a key stakeholder in the LPD process are as follows: a) Higher Kinnerton Community Council has adopted the aims and ambitions set out in the Wellbeing of Future Generations Act, Flintshire County Council's "A Wales of Cohesive Communities" and a "Healthier Wales". However, there is concern that a major development of 300 new homes within the boundary of Higher Kinnerton presents a		Noted. The Strategic allocation at Warren Hall will include on site open space facilities in accordance with the Fields in Trust (FIT) standards, as well as a series of green infrastructure routes in the form of footpaths and cycleways. The guidance within policy STR3b refers to a commercial hub which could include hotel, leisure, local centre and retail but the exact mix and nature of these facilities are not yet known. It is expected though that the commercial hub would be available for use by employees at the business park, residents on the housing site, residents in nearby settlements as well as passers by on A55. It is unclear why the Plan needs to specify a planning obligation to secure a financial contribution to achieve this? The Masterplan which accompanied the Deposit Plan for Warren Hall identified the provision of an extensive green infrastructure network across the site to maximise opportunities to promote

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			serious challenge to maintaining social cohesion for the expanded community. Going forward, plans need to be developed for how Warren Hall can be integrated in a way that promotes cohesion and mitigates the potential for any negative impacts of such a large single development. Given a development on this scale will inevitably place significant extra pressure on the natural and built environment and the social, physical and economic infrastructure which already exists in local area which should either be moderated by means of conditions attached to a planning decision or alternatively via financial contributions from the developer via a S106 agreement to facilitate and maintain environmental assets and to facilitate well-being through amenity, recreation and leisure activities in order to balance the pressure created by the new development with improvements to the surrounding area ensuring that where possible the development will make a positive contribution to the local area and community and to mitigate any negative impact caused by the development.		community cohesion within the site and to enable sustainable linkages with nearby settlements.
648	EN1: Sports, Recreation and Cultural Facilities	Support	Policy EN1 recognises the importance of protecting and providing open space and sports and recreational facilities and ensuring that new development incorporates adequate provision of both. Consideration of Policy 14.2 TW acknowledges the need for new residential development to make a contribution towards open space. TW supports the provisions set out in the Council's adopted open space standards, on account with its accordance with National Policy. 14.3 Furthermore, TW supports the inclusion of the last paragraph of the policy		The Council welcomes support for Policy EN1.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and the degree of flexibility that that the Council has adopted whereby it will allow for off-site provision or financial contributions to be made where it can be demonstrated that there is no practical alternative. 14.4 Notwithstanding the above, it is important that any financial contributions made meet the tests set out in the CIL Regulations and avoid causing undue impact on the cost of delivering units. Tests of Soundness 14.5 TW considers Policy RD4 to be sound. Recommended Change 14.6 TW considers that no further change to the Policy is required.		
56	EN2: Green Infrastructure	Object	I wish to make a representation concerning the Mold Inset Plan allocation of land adjoining their existing factory at Maes Gwern as EN2 Green Space. This land was previous allocated as L3 Open Space in the UDP and is shown on the attached plan. In the light of the decision of Flintshire County Council's Planning Committee on the 2nd October 2019 to approve application 060270 relating to a major extension to their premises, the allocation of the part of the site as Green Space under policy EN2 should be deleted and instead replaced by an equivalent area of Green Space on the western part of the site as shown on the attached plan. This 'land swap' was agreed by your Planning Committee and maintains the integrity of the Green Infrastructure around this part of Mold, thereby meeting the objectives of policy EN2.	the allocation of the part of the site as Green Space under policy EN2 should be deleted and instead replaced by an equivalent area of Green Space on the western part of the site as shown on the attached plan. This 'land swap' was agreed by your Planning Committee and maintains the integrity of the Green Infrastructure around this part of Mold, thereby meeting the objectives of policy EN2.	Partly accepted. Application 060270 was approved following the publication of the Deposit LDP, therefore couldn't take into account the change in green space. The proposals maps reflect the position on the ground at the moment and protects the existing greenspace. Depending on progress with implementing the planning permission, the Inspector may consider that the change in green space designation at Maes Gwern, Mold would add clarity to the proposals map, then the Council would have no objections to the changes.
149	EN2: Green Infrastructure	Object	HWN005 - Ash Lane, Hawarden This disrupts the green infrastructure connectivity and mitigation of green corridor within the	Small area of development will impact less.	Not accepted. The public rights of way map shows no public footpaths through the site and there is no public access to agricultural land. The main green infrastructure / ecological feature

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			development will not adequately compensate for this.		are the hedgerows and trees, which the Local Authority will seek to retain wherever possible. There will also be a need to create new open space on the site, a SuDS area and a buffer to listed building, all of which can be designed to ensure a green infrastructure strategy / corridor within the site.
415	EN2: Green Infrastructure	Object	objects to the current wording as it is not clear and creates uncertainty for developers and landowners. Developers in the main can only control the impact of new development on the development sites its self and the immediate surroundings. Currently, the wording does not clarify what we presume it is trying to say which is the requirements relate to the site and its immediate surroundings rather than anywhere in the County Borough.	Amend the policy wording to make it clear that the requirement of the policy relate to the site and its immediate surroundings rather than anywhere in the County Borough.	Not accepted. The Policy aims to enhance existing green infrastructure, and increase the network across the County. Where applications need to mitigate against the loss of green infrastructure then S106 payments would need to be made to compensate, this funding could then be spent outside the immediate site boundaries if it was more effective to do so. Improving and extending green infrastructure cannot be limited to immediate site boundaries only as this will prevent a meaningful increase in the green infrastructure network. S106 agreements will be reasonably related to the development to ensure they mitigate against the impacts of that development, therefore they will relate to the site and its immediate surrounding area and generally not County wide.
843	EN2: Green Infrastructure	Object	Bourne Leisure endorses the Council's approach to ensuring that Flintshire has a high quality green infrastructure network. However, as drafted, Policy EN2 is more onerous than the wording of national policy and therefore fails the first test of soundness. PPW states that "planning authorities should ensure that features and elements of biodiversity or green infrastructure value are retained on site, and enhanced or created where ever possible, by adopting best practice site design and green infrastructure principles…." (paragraph 6.4.21 part 2). Furthermore, PPW also states that "when all other options have been exhausted, and where modifications, alternative sites, conditions or obligations are not sufficient to secure biodiversity outcomes, offsite compensation for unavoidable damage must be sought…"	Policy EN2 is more onerous than the wording of national policy and therefore fails the first test of soundness. As such, the following amendments to draft Policy EN2 to align this element of the Deposit Plan with national policy are proposed: Add in "Where Possible" after Development proposals will be required to protect, maintain and (insert Where possible here) enhance the extent, quality and	Not accepted. PPW10 strongly supports the need to enhance green infrastructure networks across Wales, objective 17 of the LDP is also to "Maintain and enhance green infrastructure networks". Therefore if the Council dilute the wording of Policy EN2 with "Where possible" it may limit the opportunities to enhance green infrastructure networks across Flintshire. There has been no objection to the policy from Welsh Government.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			(paragraph 6.4.21 part 4). Taking a more onerous position than set out in PPW risks undermining the ability of businesses to invest in Flintshire and planning permission to be secured with the consequences that would have on the local economy. Further, the emerging plan has not demonstrated why taking a deviated approach is appropriate. As such, the following amendments to draft Policy EN2 to align this element of the Deposit Plan with national policy are proposed: "Development proposals will be required to protect, maintain and, where possible, enhance the extent, quality and connectivity of the green infrastructure network, including designated green spaces (as shown on the proposals maps), and where appropriate: a create new green infrastructure linkages from the proposed development to the existing network; b fill in gaps in the existing network to improve connectivity. Where the loss or damage of existing green infrastructure is unavoidable, appropriate mitigation and or compensation will be required." (proposed amendments underlined and with strikethrough). The proposed amendments to draft Policy EN2 would mean that this element of the Plan would satisfy the tests of soundness.	connectivity of the green infrastructure network, including designated green spaces (as shown on the proposals maps), and where appropriate: a create new green infrastructure linkages from the proposed development to the existing network; b fill in gaps in the existing network to improve connectivity. Where the loss or damage of existing green infrastructure is unavoidable, appropriate mitigation and or compensation will be required." (proposed amendments underlined and with strikethrough). The proposed amendments to draft Policy EN2 would mean that this element of the Plan would satisfy the tests of soundness.	
1155	EN2: Green Infrastructure	Object	The old school playing field Chester Road should be designated as a protected green space given the commitment made by the Local Authority to retain it as community open space.	The old school playing field Chester Road should be designated as a protected green space given the commitment made by the Local Authority to	Not accepted. The Plan does not as a matter of course safeguard all open space within settlement boundaries as there is a separate policy EN1 which will protect open space. Policy EN2 is concerned with whether land functions as a green space. Not all school playing fields will be open to the public and therefore, apart from their visual character, don't function as a green space. They will also be protected by EN1 and it is not necessary for a blanket

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				retain it as community open space.	approach to be adopted of designating all school playing fields as green space – rather, each should be assessed on their merits.
859	EN2: Green Infrastructure	Object	On the map, Mold Cemetery extension off Gas Lane is shown as a green space, it needs changing to be part of the cemetery Non of the school playing fields are indicated as green spaces, yet they are often important green infrastructure in our urban environments and should be protected as green spaces. The LDP lacks ambition in creating new green infrastructure as the list of places references across the county are existing sites. For instance the LDP could deliver the Mold Green Band (pages 48 and 49 of the Mold Town Plan).	On the map, Mold Cemetery extension off Gas Lane is shown as a green space, it needs changing to be part of the cemetery Non of the school playing fields are indicated as green spaces, yet they are often important green infrastructure in our urban environments and should be protected as green spaces. The LDP lacks ambition in creating new green infrastructure as the list of places references across the county are existing sites. For instance the LDP could deliver the Mold Green Band (pages 48 and 49 of the Mold Town Plan).	Not accepted. The Plan does not as a matter of course safeguard all open space within settlement boundaries as there is a separate policy EN1 which will protect open space. Policy EN2 is concerned with whether land functions as a green space. Not all school playing fields will be open to the public and therefore, apart from their visual character, don't function as a green space. They will also be protected by EN1 and it is not necessary for a blanket approach to be adopted of designating all school playing fields as green space – rather, each should be assessed on their merits. There is no inherent reason why a cemetery should not be designated as a green space on the proposals maps. Also there is no reason why the greenspace designation EN2.127 should prevent the extension of the existing cemetery. The cemetery provides visual relief to the local community, it has public access and complements the adjoining open land and has a particular cultural value. The Inspector may consider that there is benefit in extending greenspace EN1.127 to include all of the green space and ensure that this whole block of open land is treated in a similar manner. The Council would have no objection to this change. The LDP provides a framework of policies with which to protect, enhance and create new green infrastructure. The most recent version of PPW (10) attached greater importance to green infrastructure assessments and the Council is working on a green infrastructure network as explained in Background paper2. The appropriateness of designating or safeguarding particular green infrastructure projects such as the Mold Green band will depend on the status of each scheme in terms of consents, funding and a delivery programme. There will be numerous green infrastructure projects across the County but the inclusion of all of these would result in a development plan that was cluttered with individual projects, rather than being a more strategic framework of policies and proposals. Projects should only be safeguarded in a development plan where there is certainty about delivery.

GS 1,2 3 and 4 These locations noted on the map are village play spaces and need to be added to the plan. Particular attention needs to be paid to GS 1 that is a current play space that is being extended as part of the Rhos road development. • GS 5 This is the shared community play space that need to be added to the plan for protection. • Pr 1 This is the old school site as referenced at iii above and needs to be Protected from development.	Not accepted. The Plan does not as a matter of course safeguard all open space within settlement boundaries as there is a separate policy EN1 which will protect open space. Policy EN2 is concerned with whether land functions as a green space. Not all school playing fields will be open to the public and therefore, apart from their visual character, don't function as a green space. They will also be protected by EN1 and it is not necessary for a blanket approach to be adopted of designating all school playing fields as green space – rather, each should be assessed on their merits. GS1 – Play area Ffordd Derwen - Candidate Site submission PEN024 sought the protection of this site as open space. As explained in the Council's response on this candidate site, the Plan does not seek to designate on the proposals maps every parcel of open space, playing field or play area as these are protected by UDP policy SR4 and LDP policy EN1. Instead, the Plan designates green spaces which fulfil a broader function than simply being a play area. This particular play area is well established but is small and located on the edge of a residential area and is poorly related to that development given its physical relationship with housing. It therefore has little landscape, visual or amenity value to the wider area and does not provide a link between the settlement and open countryside. It is not therefore considered to warrant designation as a green space. GS2 – Open Space south of Millstone PH - Candidate Site submission PEN023 sought the protection of this site as open space. As explained in the Council's response on this candidate site, the Plan does not seek to designate on the proposals maps every parcel of open space, playing field or play area as these are protected by UDP policy SR4 and LDP policy EN1. Instead, the Plan designates green spaces which fulfil a broader function than

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					simply being a play area. The site comprises a play area, football pitch, allotments and the former bowling green. It is afforded protection from development on account of its location outside the settlement boundary and within open countryside and also on account of its open space function. It is not necessary or appropriate in these circumstances for any additional protection to be afforded to the site GS3 – Land East of White Lion - Candidate Site submission PEN022 sought the protection of this site as open space. As explained in the Council's response on this candidate site, the Plan does not seek to designate on the proposals maps every parcel of open space, playing field or play area as these are protected by UDP policy SR4 and LDP policy EN1. Instead, the Plan designates green spaces which fulfil a broader function than simply being a play area. The site forms the open space and ecological mitigation area associated with the Redrow / Elan development. It is afforded protection from development on account of its location outside the settlement boundary and within open countryside and also on account of its open space and ecological function. It is not necessary or appropriate in these circumstances for any additional protection to be afforded to the site. GS4 – Play area rear of West View026 - Candidate Site submission PEN026 sought the protection of this site as open space. As explained in the Council's response on this candidate site, the Plan does not seek to designate on the proposals maps every parcel of open space, playing field or play area as these are protected by UDP policy SR4 and LDP policy EN1. Instead, the Plan designates green spaces which fulfil a broader function than simply being a play area. Although the play area is well established it is small and located on the edge of a residential area and is poorly related to that development given its physical relationship with housing. It therefore has little landscape, visual or amenity value to the wider area and does not provide a link between the settlement and open countryside. It is not therefore considered to meet the criteria necessary for designation as a green space. The sites role as a play area is more appropriately protected by virtue of a criteria based policy, developed as part of the LDP and building on the approach in the UDP.

					landscape assessment resource. In the case of a determining a development proposal Landmap identifies the character and features of the landscape, its quality and its susceptibility to change. This will form part of the planning assessment of the landscape impacts of a development.
230	EN4: Landscape Character	Support	Policy EN4 – Landscape Character: This policy has the full support of the Joint Committee.		Support is noted.
393	EN4: Landscape Character	Support	support policy		Support is noted.
834	EN4: Landscape Character	Support	Policy EN4 (Landscape Character) Policy EN4 of the Deposit Plan states: "New development, either individually or cumulatively, must not have a significant adverse impact on the character and appearance of the landscape. Landscaping and other mitigation measures should seek to reduce landscape impact and where possible bring about enhancement." Bourne Leisure endorses the Council's approach to the use of landscaping and other mitigation measure to reduce landscape impact and where possible bring about enhancement. The Company also endorses the Council's position that development must not have a significant adverse impact on the appearance and character of the landscape. As drafted, Policy EN4 is consistent with PPW which states that planning authorities should "…enable complementary development such as accommodation and access to be provided in ways which limit negative environmental impacts and consider the opportunities to enhance biodiversity." (paragraph 5.5.6). PPW also states that "in rural areas, tourism-related		Support is noted.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			development is an essential element in providing for a healthy and diverse economy. Here development should be sympathetic in nature and scale to the local environment." (paragraph 5.5.3). The emerging policy also provides an effective solution to balancing the pillars of sustainability and delivering the objectives of the emerging Plan.		
1077	EN5: Area of Outstanding Natural Beauty	Object	EN5: Area of Outstanding Natural Beauty – We would recommend a minor amendment to this policy wording to ensure 'setting' is given due weight in the future: in regard to the Clwydian Range and Dee Valley AONB, development will only be permitted where it conserves or enhances the natural beauty of the designated area and its setting. In assessing the likely impact of development proposals on the natural beauty of the AONB, cumulative impact will also be taken into consideration.	We would recommend a minor amendment to this policy wording to ensure 'setting' is given due weight in the future: in regard to the Clwydian Range and Dee Valley AONB, development will only be permitted where it conserves or enhances the natural beauty of the designated area and its setting. In assessing the likely impact of development proposals on the natural beauty of the AONB, cumulative impact will also be taken into consideration.	Accepted. The intention of the policy is to consider proposals both within and close to the AONB, as it is recognized that both have the potential to harm the AONB. However, it is accepted that as written the opening part of the policy reads as only applying to the AONB itself. Accordingly, if the Inspector considers that the suggested change would improve the clarity and wording of the policy, then the Council would accept the addition of 'and its setting'' after 'AONB' in the first line of the policy wording.
231	EN5: Area of Outstanding Natural Beauty	Support	Policy EN5 - AONB: This policy has the full support of the Joint Committee. i) The intention to protect the setting of the AONB is welcomed but, despite the clarification set out in para 12.19, the first sentence of the policy could be interpreted as only applying		The general support for the policy is noted. i) The intention of the policy is to consider proposals both within and close to the AONB, as it is recognized that both have the potential to harm the AONB. However, it is accepted that as written the opening part of the policy reads as only applying to the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			to development within the AONB. For the avoidance of doubt the committee would suggest that this be amended to 'Within the Clwydian Range and Dee Valley AONB and its setting, development will only be permitted where it conserves or enhances the natural beauty of the designated area.' ii) In addition, the committee would wish to give more emphasis to development proposals enhancing the AONB and would suggest that criterion c) be amended along the lines of 'be of an appropriately high standard of design, use appropriate materials that are compatible with the character of the AONB and seeks to enhance the character and appearance of the area.' iii) The reference to the AONB's special qualities in Criterion a) is fully supported, but it is suggested that supporting para 12.17 clarifies that these are defined in the AONB Management Plan. iv) For consistency with the adjoining LDP's which include part of the AONB and to ensure developer awareness of the designation, it is recommended that the AONB should be shown on both the printed and interactive Proposals Map.		AONB itself. Accordingly, if the Inspector considers that the suggested change would improve the clarity and wording of the policy, then the Council would accept the addition of 'and its setting'' after 'AONB' in the first line of the policy wording. ii) The policy already states that development will only be permitted where it conserves and enhances the natural beauty of the designated area. Repetition of this wording within criteria c as well is not considered to be necessary. iii) The explanatory text in para 12.21 has clearly reference the AONB Management Plan and the recently jointly adopted SPG for the AONB. Both of these documents outline the special qualities of the AONB and it is not considered that additional explanatory text in para 12.21 is necessary. iv) Proposals maps – The boundary of the AONB has been included in the accompanying 'Constraints Map' largely in recognition that it is a boundary that it is not set by the LPA but by NRW i.e. it is a statutory boundary. The same approach has been taken with the SPA, SAC and SSSI boundaries. Inclusion of these would result in a cluttered proposals map. Nevertheless, if the Inspector considers that greater clarity would be added to the proposals mas by showing the AONB boundary then the Council would have no objection to this as a mapping change.
148	EN6: Sites of Biodiversity Importance	Object	Site HWN005 - Ash Lane, Hawarden This land is not a plain grass field. It has multiple established hedgerows and elderly trees and is regularly used for hay making - really good for insect and small animal habitat/biodivserity. The Allocation area is right next to a conservation area which if housing goes on this site is likely to affect the wildlife of that conservation area. It has been seen that badgers use the fields, also there are Buzzards nesting in the central oak tree. Bats fly along the hedgerows.	Mitigation promises of green corridors and maintaining hedgerows is insufficient and would cause biodiversity disruption. Areas adjacent to Conservation areas need to remain as farming fields so as to not disturb the	Not accepted. The importance of the mature hedgerows and trees within the site are recognized as being both landscape and biodiversity features. These features, together with specific species and their habitats can be protected as part of an appropriate detailed layout for the site. The fields themselves, given that they have been used for agricultural purposes are not of high ecological value. There are no nature conservation designations within, adjacent or near to the site. No objection to the site has been made by NRW.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Swifts, swallows and lapwings have been seen in different seasons which would be detrimental to the local natural wildlife scene shared by this community if they relocated. The mitigation stated is to incorporate wildlife corridors to preserve connectivity which is definitely disruptive as these corridors would be significantly different to the open farm fields currently in place. Preserving hedgerows and major trees is stated as mitigation but their use by wildfire and so their essential biodiversity will be massively disrupted.	biodiversity of these areas.	
394	EN6: Sites of Biodiversity Importance	Object		Please add 'and priority habitats' after the word 'priority species' i.e., the policy should read: 'Development proposals that would have a significant adverse effect on locally designated sites or site with other biodiversity and / or geological interest, including priority species and priority habitats will only be permitted where:...'	Not accepted. The wording of the third part of the policy clearly refers to 'designated sites' and 'sites with other biodiversity and / or geological interest, including priority species'. The policy seeks to refer to both habitats and species and the opening part of the explanation in para 12.22 clearly refers to habitats and species. It is not considered that further amendment to the policy wording is necessary.
1078	EN6: Sites of Biodiversity Importance	Object	EN6: Sites of Biodiversity Importance – We welcome the reference to geodiversity in the text. We would welcome if EN6 more specifically referred to geodiversity e.g. EN6: Sites of Biodiversity and Geodiversity importance	EN6: Sites of Biodiversity Importance – We welcome the reference to geodiversity in the text. We would welcome if EN6 more specifically referred to geodiversity	Partly accepted. Reference is made in the policy wording to geological interest and geological importance. In the policy explanation Regionally Important Geological Geomorphological Sites RIGs is also included. However if the Inspector considers that Geodiversity should be added to the policy then the Council would not object to this change.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				e.g. EN6: Sites of Biodiversity and Geodiversity importance	
177	EN7: Development Affecting Trees, Woodlands and Hedgerows	Object	Land at Fron Hall Fron Park Road Holywell CH8 7UT - I object to the current Flintshire Local Development Plan (FLDP) in respect to the above property. The FLDP shows the whole of the plan of 'the Fron', which includes the site of a building as well as woodland, is shown as all Reclaimed Ancient Woodland. This is incorrect, as there have been construction buildings on the site continuously since before 1870/71 when it is shown on the Ordinance Survey map. Currently there is an extensive concreted raised raft foundation in place with some building upon it together with a concrete drive leading up to it. I ask that the footprint of the building Fron Hall be reclassified as residential, and, the drive acknowledged as such.	The FLDP shows the whole of the plan of 'the Fron', which includes the site of a building as well as woodland, is shown as all Reclaimed Ancient Woodland. This is incorrect, as there have been construction buildings on the site continuously since before 1870/71 when it is shown on the Ordinance Survey map. Currently there is an extensive concreted raised raft foundation in place with some building upon it together with a concrete drive leading up to it. I ask that the footprint of the building Fron Hall be reclassified as residential, and, the drive acknowledged as such.	Not accepted. The settlement boundary in this part of Holywell runs along the rear of the ribbon of development on the south side of Fron Park Rd. The land to the south of the settlement boundary rises up and is heavily wooded, forming a distinct landscape backdrop to the ribbon development. It would be inappropriate to include any building or remain of a building within the settlement boundary as this would result in an illogically drawn settlement boundary. CPAT identifies Y Fron on its record of archaeological features as a post medieval house and its condition is described as 'near destroyed'. The Deposit LDP is accompanied by a constraints map which is not a formal part of the Plan. It seeks to provide a useful reference point for Plan readers by identifying key designations and constraints. Many of the datasets are not controlled by FCC but are the responsibility of other bodies. The woodland is designated on the constraints map as a wildlife site and the boundary of this excludes the actual footprint of the former dwelling. The site is also identified as a 'Restored Ancient Woodland' and the designation washes over the whole site including the site of the former house. The designation of ancient woodlands is not within the remit of the Council as they are designated by NRW. The LDP constraints map is merely representing the NRW ancient woodland dataset. Any concerns that the objector has about the boundary of the designation must be made by the objector to NRW.
416	EN7: Development Affecting Trees, Woodlands	Object	objects to the final criteria c which introduces the concept of 'net gain in biodiversity' which is is not supported by national policy. It is also not the appropriate term in relation to this policy which relates specifically to trees and hedgerows.	The word ' biodiversity ' should be deleted.	Not accepted. The aim of this policy is to protect trees, woodland or hedgerows from damaging impacts of development. Trees woodland and hedgerows particularly older hedgerows are of importance for a variety of reasons including historic, amenity and biodiversity. These features often contain a great diversity of plant and animal species so the use of the term biodiversity is

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	and Hedgerows				appropriate. It is also important to ensure that if there is an impact on trees woodlands or hedgerows that overall there is an improvement in the biodiversity of the site. The UK Government has already announced its requirement that the Environment Bill will make it mandatory for development to bring about a net gain in biodiversity. More specifically in Wales the Chief Planner at Welsh Government wrote to all local planning authorities in Wales on 23/10/19 in connection with para 6.4.5 of PPW which states 'planning authorities must seek to maintain and enhance biodiversity in the exercise of their functions. This means that development should not cause any significant loss of habitats or populations of species, locally or nationally and must provide a net benefit for biodiversity'. The letter reinforces 'The purpose of this letter is to clarify that in light of the legislation and Welsh Government policy outlined above, where biodiversity enhancement is not proposed as part of an application, significant weight will be given to its absence, and unless other significant material considerations indicate otherwise it will be necessary to refuse permission. In this context it is considered appropriate for the policy to seek a net gain in biodiversity.
279	EN7: Development Affecting Trees, Woodlands and Hedgerows	Object	Land at Fron Hall Fron Park Road Holywell CH8 7UT - I object to the uncritical assumptions made regarding classifying 'The Fron' as 'Reclaimed Ancient Woodland'. A completely new classification as 'Reclaimed Ancient Woodland' done without communication nor correspondence with the landowners. Done without any evidence. There are only about 6 trees probably older than 60 years old, scattered over 10 acres. The area covered does not	I object to the uncritical assumptions made regarding classifying 'The Fron' as 'Reclaimed Ancient Woodland'. A completely new classification as 'Reclaimed Ancient Woodland' done without communication nor correspondence	Not accepted. A detailed response is provided in id 177. The designation is 'restored' not 'reclaimed' ancient woodland and is a matter for Natural Resources Wales as they are the statutory body responsible for this designation. Any concerns that the objector has should be made directly to NRW. The Council has simply replicated this designation on the constraints map supporting the LDP.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			include all the wooded area, rather it seems it is based more on ownership.	with the landowners. Done without any evidence. There are only about 6 trees probably older than 60 years old, scattered over 10 acres. The area covered does not include all the wooded area, rather it seems it is based more on ownership.	
600	EN7: Development Affecting Trees, Woodlands and Hedgerows	Object	OBJECTS to Policy EN7. JUSTIFICATION 10.2 The policy states that: “Development proposals that will result in significant loss of, or harm to, trees, woodlands or hedgerows of biodiversity, historic, and amenity value will not be permitted.” 10.3 This policy is worded too firmly and should be reworded to allow some flexibility for proposals where it can be demonstrated that the benefits outweigh the harm. AMENDMENTS SOUGHT 10.4 Policy EN7 is considered unsound in that it is not appropriate for the area as it sets an unreasonably high bar for applicants and should be reworded to allow some flexibility. It is suggested that it is reworded as follows: “Development proposals that will result in significant loss of, or harm to, trees, woodlands or hedgerows of biodiversity, historic, and amenity value will not be permitted unless it can be demonstrated that the benefits outweigh the harm.”	AMENDMENTS SOUGHT 10.4 Policy EN7 is considered unsound in that it is not appropriate for the area as it sets an unreasonably high bar for applicants and should be reworded to allow some flexibility. It is suggested that it is reworded as follows: “Development proposals that will result in significant loss of, or harm to, trees, woodlands or hedgerows of biodiversity, historic, and amenity value will not be permitted unless it can be demonstrated that the benefits outweigh the harm.”	Not accepted. The aim of this policy is to protect trees, woodland or hedgerows from damaging impacts of development and it is supported by a Supplementary Planning Guidance on Trees and Development which gives further explanation and more detail on what significant loss or harm means. The guidance note promotes the retention of trees, highlights their importance in the environment and sets out an approach that the Council will take when dealing with proposals that will affect trees on development sites. The policy is essentially split into two parts. The first part seeks to prevent the ‘significant’ loss of or harm to trees, woodland or hedgerows. However the second part of the policy recognizes that it some cases an impact on trees, woodland or hedgerows may be acceptable, provided that it satisfies the three criteria. This second part of the policy would appear to meet the concerns of the objector.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
781	EN7: Development Affecting Trees, Woodlands and Hedgerows	Object	Policy EN7: Development Affecting Trees, Woodlands and Hedgerows 7.18. It is noted that this Policy resists any development which will result in the “significant” loss of or harm to trees, woodlands and hedgerows. In this instance, it is unclear how “significant” will be measured by the Council and Applicants. It is further unclear given that the following part of the Policy allows for suitable replacement features and a net gain in biodiversity. Whilst our Client does not disagree with the need to seek to retain as many natural features as possible, sometimes this is simply unavoidable in order to accommodate new development. As such, it is considered that the first part of the Policy should be re-phrased or quantified such that there is clearer guidance on what extent of loss would be acceptable such it would not be significant (particularly as reference is made to features of amenity value, which is highly subjective and could be deemed to apply to the majority of landscape features).	7.18. 				value, which is highly subjective and could be deemed to apply to the majority of landscape features).	
721	EN7: Development Affecting Trees, Woodlands and Hedgerows	Object	It is noted that this Policy resists any development which will result in the "significant" loss of or harm to trees, woodlands and hedgerows. In this instance, it is unclear how "significant" will be measured by the Council and Applicants. It is further unclear given that the following part of the Policy allows for suitable replacement features and a net gain in biodiversity. Whilst we does not disagree with the need to seek to retain as many natural features as possible, sometimes this is simply unavoidable in order to accommodate new development. As such, it is considered that the first part of the Policy should be re-phrased or quantified such that there is clearer guidance on what extent of loss would be acceptable such that it would not be significant (particularly as reference is made to features of amenity value, which is highly subjective and could be deemed to apply to the majority of landscape features).	it is considered that the first part of the Policy should be re-phrased or quantified such that there is clearer guidance on what extent of loss would be acceptable such that it would not be significant (particularly as reference is made to features of amenity value, which is highly subjective and could be deemed to apply to the majority of landscape features).	Not accepted. The aim of this policy is to protect trees, woodland or hedgerows from damaging impacts of development and it is supported by a Supplementary Planning Guidance on Trees and Development which gives further explanation and more detail on what significant loss or harm means. The guidance note promotes the retention of trees, highlights their importance in the environment and sets out an approach that the Council will take when dealing with proposals that will affect trees on development sites. The policy is essentially split into two parts. The first part seeks to prevent the 'significant' loss of or harm to trees, woodland or hedgerows. However the second part of the policy recognizes that it some cases an impact on trees, woodland or hedgerows may be acceptable, provided that it satisfies the three criteria. This second part of the policy would appear to meet the concerns of the objector.

	Trees, Woodlands and Hedgerows				
152	EN8: Built Historic Environment and Listed Buildings	Object	HWN005 - Ash Lane, Hawarden The Grade 1 lists Ash Deniols Farm building stands prominent amongst its green barrier fields and the aesthetic appeal of the old buildings would be ruined if it were seen adjacent to a newly built housing estate. It is a Farm building and unless it was surrounded by farm fields it's historical significance and character would be ruined,	Historic buildings must be kept within the surroundings that maintain their character.	Not accepted. In respect of the St Deiniols Ash Farm listed building a Heritage Assessment has been undertaken which recommends a landscape buffer to provide an open setting to the listed building (this forms part of the guidance for the site set out in policy HN1). The farmhouse will still have an open aspect to the south west, south and east and this will be unaffected by the development. In conjunction with the landscaped buffer within the allocated site, the listed building will still have an open setting.
64	EN8: Built Historic Environment and Listed Buildings	Support	CPAT supports this policy BUT would prefer to see the replacement of the phrase " . . . archaeological remains . . ." with " . . historic assets . . ." in EN8.b. This would better reflect accepted current terminology.	CPAT supports this policy BUT would prefer to see the replacement of the phrase " . . . archaeological remains . . ." with " . . historic assets . . ." in EN8.b. This would better reflect accepted current terminology.	Noted. It is accepted that PPW uses the term ‘historic assets’ as a general term for all the types of historical environment resources. However, in para 6.1.3 and 6.1.29 PPW also uses the term ‘archaeological remains` relating to a specific historic feature. In the context of the policy structure and the wording of criteria d. it is not considered that it is necessary or appropriate to replace "archaeological remains" with "historic assets" .
398	EN8: Built Historic Environment and Listed Buildings	Support	The Built Historic Environment and Listed Buildings often have elevated importance for wildlife, particularly synanthropic species such as bats, swifts and housemartins, which are of conservation concern. Whilst bat roosts and breeding sites might receive a high degree of protection, the nesting sites of other species, such as swifts and housemartins, are only protected whilst in use during the breeding season - so can be destroyed at other times. As these species are in decline partially due to the loss of historic nest sites, the North Wales Wildlife	The Built Historic Environment and Listed Buildings often have elevated importance for wildlife, particularly synanthropic species such as bats, swifts and housemartins, which are of conservation concern. Whilst bat roosts and breeding sites might receive a high degree	Noted. The Plan’s policies need to be read as whole. Therefore policy EN8 which provides guidance on the historic environment must be read in conjunction with policy EN6 which provides guidance on nature conservation. It is not considered necessary or appropriate for issues to be repeated throughout the Plan’s policies.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Trust would like to see a recognition in EN8 of the importance of Built Historic Environment and Listed Buildings to species of conservation concern and policy measures added to EN8 to ensure that historic nest sites in old structures are given special consideration in the planning process to ensure the preservation and enhancement of biodiversity.	of protection, the nesting sites of other species, such as swifts and housemartins, are only protected whilst in use during the breeding season - so can be destroyed at other times. As these species are in decline partially due to the loss of historic nest sites, the North Wales Wildlife Trust would like to see a recognition in EN8 of the importance of Built Historic Environment and Listed Buildings to species of conservation concern and policy measures added to EN8 to ensure that historic nest sites in old structures are given special consideration in the planning process to ensure the preservation and enhancement of biodiversity.	
151	EN9: Development In or Adjacent to Conservation Areas	Object	Site HWN005 - Ash Lane, Hawarden The Allocation area is right next to a conservation area which if housing goes on this site is likely to affect the wildlife of that conservation area. It has been seen that badgers use the fields, also there are Buzzards nesting in the central oak tree. Bats fly along the hedgerows. Swifts, swallows and lapwings have been seen in different seasons which would be	HWN005 The area around Ash Farm must be kept as farm land for the symbolic historic nature of the listed Ash FARM buildings as well as the adjacent area of a conservation area to	Not accepted. The Ash Lane housing allocation does not sit adjacent to a conservation area. The conservation area for Hawarden focuses on the historic core of the village and extends northwards along the eastern side of Gladstone Way and along the south side of Cross Tree Lane.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			detrimental to the local natural wildlife scene shared by this community if they relocated. The mitigation stated is to encorporate wildlife corridors to preserve connectivity which is definitely disruptive as these corridors would be significantly different to the open farm fields currently in place. Preserving hedgerows and major trees is stated as mitigation but their use by wildfire and so their essential biodiversity will be massively disrupted. Adjacent to the conservation area is also the grade 1 list farm house of Ash Farm with surround farm buildings and surround farm land. Having an historic Farm House surrounded by residential building rather than farm land greatly diminishes the character and historic value of this building.	allow continuous green field for biodiversity.	At the Gladstone Way frontage of the allocation, the conservation area is some 330m to the south. At the Ash Lane frontage of the allocation the conservation area is some 360m to the south. The Plan retains a green barrier between the housing allocation and the settlement boundary / conservation area. This recognizes the need to retain the historic setting to the settlement of Hawarden and to retain the open character of the gap between the allocation and the edge of the village as this is the higher and most visible land. The objectors concerns regarding St Deiniols Ash farm are set out in policy EN8. The objectors concerns in respect of wildlife and ecology are dealt with in policy EN6.
298	EN10: Buildings of Local Interest	Object	Whilst the principle of buildings of local interest is supported the manner in which they are identified is unreasonable. There is no formal mechanism for consideration of buildings and their inclusion on the 'protected' list. There is no opportunity for owners or interested parties to object or otherwise contribute to the process. There should be a system similar in process to listed building identification and listing. Listed buildings are of significantly more importance and yet owners have more rights to respond and there is a greater transparency to the process where for buildings of local interest these do not exist. There is therefore a fundamental issue of an individual's right to have their views, opinions and objections taken into account.	It should refer to the process of identification and inclusion in the list and set this out in the explanatory text which should include the production of supplementary planning guidance.	Not accepted. The purpose of policy EN10 is to provide guidance on development proposals which would affect Buildings of Local Interest. The policy is in accordance with para 6.1.29 of PPW which allows development plans to consider including locally specific policies relevant to the historic environment. The paragraph specifically refers to historic assets of special local importance that do not have statutory protection, but that make an important contribution to local distinctiveness and have the potential to contribute to public knowledge. It is also the case that the majority of buildings on the local list are former grade 3 listed buildings which ceased to be formally listed when the grading structure was reviewed by Cadw. The objector supports the policy but is concerned with the process of designating such BLI's and not with the policy itself. The Council adopted a Procedure for Designating BLI's in 2013 but this had not been made available on the Council's website. Given that the Procedure note was prepared in the context of UDP policy and references (now) replaced Welsh Government guidance, it is

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					considered that the note is reviewed and reconsulted upon following adoption of the LDP. However, given that the designation of BLI's clearly falls outside the remit and scope of the LDP, this should not be referenced in the LDP.
93	EN11: Green Barriers		Objection to Policy EN11(3) - Green Barrier at Flint	Objection to Policy EN11(3) - Green Barrier at Flint	Not accepted. The site was previously allocated for employment in the Delyn Local Plan but never came forward in the form of a planning application. In the Deposit UDP the exclusion of the site as an employment allocation was objected to and considered by the UDP Inspector. The Inspector commented 'This land was allocated in the Delyn Local Plan, was assessed for its suitability for rolling forward but was not included due to site constraints. The Council takes the view that there is no prospect of the site coming forward for development during the plan period. No substantive evidence has been produced to convince me otherwise. Adequate land has been allocated in the UDP for employment needs and I do not support this Objection'. As part of preparing the LDP, an Employment Land Review was carried out which has concluded that, on the basis of existing portfolio of employment land there is no need for additional employment land allocations in the Plan period. The objector submitted the site as a candidate site (FLI008) as a mixed use site comprising 500 dwellings and employment land if required. At Preferred Strategy consultation stage the objector submitted a representation clarifying that the proposal was for residential only. The Council's consideration of the representation seeking housing in respect of HN1 (id1218) has concluded that the LDP has provided for a substantial amount of growth in Flint over the Plan period and it is not considered that an additional allocation is either necessary or appropriate. Given the size of the site and the lack of any supporting background or technical evidence it is not considered that the site is viable or deliverable, particularly in the light of previous concerns about viability.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					In the UDP the green barrier did not extend up to the settlement boundary of Flint in this location. Whilst the UDP Inspector did not recommend allocating the site for development, she did not go so far as to extend the green barrier as there was no objection before her which proposed this. As part of reviewing the green barriers it was evident in this case that the green barrier sought to protect the gap between Bagillt and Flint but did not extend to the edge of the built part of Flint. As clearly set out in the Background Paper 1: Green Barrier Review, the purpose of the green barrier in this location is to prevent continuous built up frontage between Bagillt and Flint alongside the A548. The green barrier has therefore been reviewed and re-configured to focus on retaining the gap between the Manor Drive block of development and Flint and enabling a longer term development opportunity between Coleshill Road and Bagillt. The representor suggests that the UDP green barrier policy is likely to more permanently retain the open character of land than an open countryside policy, stating ''permanence beyond the life span of the Plan.'' This may be true for a Green Belt policy however PPW clearly states in paragraph 3.60 that green wedges should be reviewed as part of the development plan process as reflected in the LDP . PPW states ''The essential difference between them is that land within a Green Belt should be protected for a longer period than the relevant current development plan period, whereas green wedge policies should be reviewed as part of the development plan review process.'' The site is not required as a contingency housing site as the plan already has enough allocated sites to provide 7950 new homes to meet a housing requirement of 6950 homes with a flexibility allowance over nearly 15%. In addition there is no requirement in PPW or the Development Plans Manual to make provision for 'contingency sites'. The representor also states that ''PPW has changed in what Welsh Government considers to be acceptable in green barriers

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					with the inclusion in paragraph 3.73 of "renewable and low carbon energy generation". The objector then seeks to use this to criticize the Council in respect of alleged inconsistences between previous decisions on large scale solar proposals elsewhere in the County yet there were ket material differences in the cases referred to and none of those decision were call in by the Welsh Ministers as being in conflict with national policy.
434	EN11: Green Barriers		Whilst do not object to the principle of designating Green Barriers it is important that these are necessary to serve the purpose and not used as a means of unnecessarily restricting development.		Support noted
819	EN11: Green Barriers		Planning Policy Wales set out (para 3.60) that Green Wedges should only be employed where there is a demonstrable need to protect the urban form and alternative policy mechanisms, such as settlement boundaries, would not be sufficiently robust. The Preferred Strategy set out a key message (page 22) of "The need to assess the comments of the UDP Inspector who considered that the…. time was rapidly approaching whereby a fundamental review of open countryside and green barriers in parts of the County was needed." The expectancy is that the LDP would consider, having regard to both tests of PPW 3.60, both the ongoing use of (and therefore as an option the very need for Green Barriers as a tool). My client considers that the LDP is unsound as Background Paper 01 (BP01) presupposes that Green Barriers previously defined in the UDP be used as the starting point for assessment. No part of the BP01 assesses if Green Barriers should no longer be used or are needed as a matter of strategy and compliance with the PPW tests or whether	The Preferred Strategy set out a key message (page 22) of "The need to assess the comments of the UDP Inspector who considered that the…. time was rapidly approaching whereby a fundamental review of open countryside and green barriers in parts of the County was needed." The expectancy is that the LDP would consider, having regard to both tests of PPW 3.60, both the ongoing use of (and therefore as an option the very need for Green Barriers as a tool). My client considers that the LDP is unsound as	Not accepted. The objector seeks the allocation of the site for housing and the Council's response in respect of HN1(id817) should be read in conjunction with this response on the green barrier. In terms of Green Belts and green barrier or wedges, Welsh Government clearly state in para 3.60 pf PPW10 that 'The essential difference between them is that land within a Green Belt should be protected for a longer period than the relevant current development plan period, whereas green wedge policies should be reviewed as part of the development plan review process'. Therefore as part of preparing the LDP the Council has undertaken a review of the existing green barriers. It is quite legitimate for existing green barriers in the adopted UDP to be the starting point for the review. However, the review also assessed green barriers which were put forward in Candidate Site submissions. Green barrier (wedges) are a legitimate planning tool as identified by the Welsh Government in PPW10. Welsh Government have not objected to the Plan's spatial strategy or green barriers, other than to seek a renaming of green barrier to 'green wedge'. The objector claims that the inclusion of the objection site in this green barrier runs contrary to para 3.68 of PPW. The Council's interpretation of para 3.68 of PPW10 is that it is specifically

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			they should as a matter of principle no longer be provided. The inclusion of site NH003 within a Green Wedge runs contrary to the requirement of PPW para 3.68 as designation of such a large extent of land as Green Barrier in the plan and this Green Barrier in particular does not provide for a sufficient range of land around the settlement of Northophall to be made available. Publication of the National Development Framework (NDF) for consultation proposes much of Flintshire as a National Growth Area and a Green Belt between Wrexham and Deeside. The expectancy is that the NDF will be adopted and become part of the Development Plan for Flintshire in Autumn 2020, prior to LDP examination completion and adoption. This will create significant challenges for adoption of the LPD given the NDF conformity duty. The allocation of vast tracts of land around the edges of Deeside Settlements as Green Barrier contradicts with the objectives of the NDF to deliver a National Growth Area and the Wrexham-Deeside Green Belt. The spatial implications of NDF conformity are highly likely to require additional land releases to facilitate the required levels of nationally led growth and my client considers the LDP will not be capable of being found sound at this stage unless a fundamental further review of Green Barriers - including their very need as a matter of principle - is undertaken and consulted upon.	Background Paper 01 (BP01) presupposes that Green Barriers previously defined in the UDP be used as the starting point for assessment. No part of the BP01 assesses if Green Barriers should no longer be used or are needed as a matter of strategy and compliance with the PPW tests or whether they should as a matter of principle no longer be provided. The inclusion of site NH003 within a Green Wedge runs contrary to the requirement of PPW para 3.68 as designation of such a large extent of land as Green Barrier in the plan and this Green Barrier in particular does not provide for a sufficient range of land around the settlement of Northophall to be made available. Publication of the National Development Framework (NDF) for consultation	concerned with green ‘belts’ as green ’wedges’ are not mentioned. The paragraph refers to the need to define green belts so that there is land available for development in the long terms. This is clearly not applicable to green barriers (wedges) as para 3,60 of PPW refers to the need for green barriers to be reviewed as part of the preparation of development plan. There is no requirement in PPW10 for the Council to make land available on the edge of every settlement / green barrier in order to provide for longer term needs. Rather, the Plan has met its housing requirement figure (as demonstrated in the Housing Balance Sheet) and it is not necessary to make provision in Northop Hall by drawing back a green barrier. FCC has submitted representations to the Welsh Government consultation on the draft NDF. If the requirement for a green belt in North East Wales remains in the document it will need to be designated through a Strategic Development Plan. This will clearly take time to be prepared, consulted upon and adopted. The most appropriate time to address this is through a first review of the LDP when a Strategic Development Plan can be translated into the LDP. The objector appears to be claiming that the designation of the Wrexham Deeside area as a growth zone in the draft NDF will require the LDP to provide for additional growth in this Plan period. However, the LDP has adopted a growth based approach in respect of employment and housing. Welsh Government representations indicate that the Plan is broadly in conformity with the draft NDF. The objector appears to be arguing that the adoption of the Plan should be put on hold pending a further review of green barriers / designation of green belt is undertaken. This would not be a responsible way to deliver the growth that the Plan and draft NDF seeks. The southern part of the green barrier (EN11.4) seeks to protect the narrow neck of land between Northop Hall and Connah’s Quay. This is the most important part of the green barrier given the narrow gap. There is clear development pressure as demonstrated by the objection site and candidate site CON011

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				proposes much of Flintshire as a National Growth Area and a Green Belt between Wrexham and Deeside. The expectancy is that the NDF will be adopted and become part of the Development Plan for Flintshire in Autumn 2020, prior to LDP examination completion and adoption. This will create significant challenges for adoption of the LPD given the NDF conformity duty. The allocation of vast tracts of land around the edges of Deeside Settlements as Green Barrier contradicts with the objectives of the NDF to deliver a National Growth Area and the Wrexham-Deeside Green Belt. The spatial implications of NDF conformity are highly likely to require additional land releases to facilitate the required levels of nationally led growth and my client considers the LDP will not be capable	and CON021 (the latter site has been submitted multiple times). The implication of these sites together would result in the direct coalescence of Connah's Quay and Northop Hall. The release of the objection site would significantly erode the gap and increase the likelihood of coalescence. The ribbon of development along Bryn Gwyn Lane marks a firm and defensible boundary for both the settlement boundary of Northop Hall and the green barrier. Only part of the settlement is constrained by a green barrier. Therefore, even if there were a need to make provision for planned growth in Northop Hall (which is not the Council's case) then there are other options on the western edge of the settlement. Adopting a sequential approach to site selection, it must be the case that a site outside of a green barrier is preferable to a site within a green barrier.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				of being found sound at this stage unless a fundamental further review of Green Barriers - including their very need as a matter of principle - is undertaken and consulted upon.	
92	EN11: Green Barriers	Object	The green barrier in this location is relatively narrow but part of the rationale for extent of green barrier designation is that they should not be excessive both in number and extent. Paragraph 4.13 of the existing UDP explains: The green barriers in the Plan have therefore been reduced both in number and extent to ensure that they are more strategic in terms of protecting only key areas of land where it is essential to retain its open character and appearance". As part of the preparation of the LDP each green barrier was subject to an assessment that had regard to the need to make provision for development allocations where sites conformed with the Plan spatial strategy and detailed site assessment process. In considering this candidate site the key factor is whether or extending the settlement boundary would be materially harmful to green barrier purposes. The planning authority acknowledges that the site's contribution to the green barrier is small and seeks justification for this view by referring to 2 appeal decisions. The first appeal was in relation to an enforcement notice where the main issue related to the lawfulness of the use as a builder's yard	Land at Bryn Y Baal Candidate site MYN006 regarding extension to settlement boundary and roll back green barrier EN11(10). Please refer to attached document	Not accepted. The objector has proposed the inclusion of the site within the settlement boundary and to be allocated for a gypsy and traveller site and the Council's responses in respect of PC1 (id1206) and HN8 (id 91) should be read in conjunction with this green barrier objection. As part of the Deposit LDP green barriers have been reviewed and the conclusions have been set out in the Green Barrier Background Paper. This paper clearly shows that in some situations the green barrier has been drawn back where it is considered appropriate and the LDP has retained key areas of land where it is essential to retain its open character and appearance. In this case the paper does identify ''the land to the east and west of Bryn Y Baal Road forms part of a swathe of land which contributes to the objective of keeping separate the settlements of New Brighton, Mynydd Isa and Mold. This part of the green barrier should be retained'' The paper then goes on to delete parts of the green barrier. As the objector points out this process of assessment to make provision for development has therefore been carried out. At 0.12ha the size of the site is relatively small but the position of the site is important in an area of green barrier between Mynydd Isa and New Brighton which is dissected by the A494 and is a crucial gap between the settlements. The site is located on the edge of Mynydd Isa, along Bryn Road where there is a noticeable change in the character of the area from a densely built up area to farm buildings adjoining open fields on the right and on the left housing at Yr Ydlan is bounded by Bryn Derw Farm and out

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			over a period of time. This failed on the basis that there was insufficient evidence on the balance of probability that it had existed for 10 years although it was acknowledged that this only fell short by a matter of 2 months. The second appeal was in respect of the refusal of application reference 056672 for residential development where the Inspector concluded that harm to the green barrier designation outweighed the merits of residential development put forward at the appeal. It should be noted however that he also stated, “If the site was not located in a green barrier, these arguments would be finely balanced”. The critical issue here is that the Inspector’s decision was based on the policy that existed at the time. The difference now is that the green barrier is being reviewed as part of the development plan process and Inspectors’ comments should therefore be considered in this context. In declining to make a small change to the settlement boundary the planning authority consider that the site does not relate well to the form and pattern of nearby development. This is not the case and view of the physical form of the existing built settlement clearly shows that this is a logical extension and rounding off and fits with the principals that the authority has adopted in other new allocations adjacent to settlement boundaries. These include the much larger sites including the housing commitment at Mynydd Isa and new allocations at Abermorddu, Penyffordd, Ewloe Green, Mancot, Mold, New Brighton. All of these		buildings. This is followed by the site which is enclosed and well screened by mature hedgerows creating a natural feature in the wider open agricultural landscape. Within the site there is a small corrugated iron shed which is difficult to view as it is enclosed by mature hedgerow and there is very little actually stored on the site. The site was submitted as an Omission site and considered by the UDP Inspector who commented in paragraph 11.128.10. ‘’The settlement boundary in this location is firm and defensible following the line of built development. The objections site is open land screened by hedgerows and the track along its north western side is overgrown. At the time of my visit it was used as a storage compound. Despite the storage use, in appearance it has more in common with the countryside to the north and I consider it is appropriately located in the undeveloped area outside the settlement boundary.’’ Although the site is now barely used for storage, the conclusions are the same today. As the objector points out there have been two appeals in relation to this site the most recent in 2017 whereby the inspector concluded. ‘’The site lies within the Mold – Mynydd Isa/Sychdyn/New Brighton green barrier which was designated for the purpose of safeguarding the open countryside around these settlements and preventing the settlements from merging into one another. The development would comprise the construction of some 4 dwellings and associated works on a site that would protrude out into the rural gap between Mynydd Isa and New Brighton. As such it would be harmful to the rural character and appearance of the area and to the openness of the green barrier, and it would erode the gap between the 2 settlements,’’ These conclusions remain the same today. It is considered that the site is not ‘significantly different in character’ , as the UDP inspector pointed out ‘despite the storage use’ the appearance of the site is more in common with the countryside to the north’’. The fact that he site is enclosed by mature hedgerows means it fits in well with the surrounding agricultural landscape. It is also not considered to be a logical rounding off of the settlement as it extends out away from the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			have substantially greater impact in terms of scale and character. The planning authority also state that the site has “greater association in character and appearance with the open land between the two settlements”. This is simply not true. The site is a triangular enclosed area with the well-defined former hard surfaced former highway between the site and the established hedgerow. The land beyond consists of open fields in agricultural production. Not only is it significantly different in character but it has no realistic beneficial use for agricultural purposes. The site is hard surfaced and, without substantial security fencing, is liable to incidents of fly tipping and other unauthorised activity. It is a matter of fact that extending the settlement boundary would narrow the gap which separates the Bryn Y Baal from New Brighton. This measures some 350m with the A494 Mold by-pass passing through the centre of this gap. The reduction in the gap if the settlement boundary were redrawn would be some 50m, i.e. 15%. This would not be visually significant and the perception of the green barrier and its role would not be damaging due to the existence of the strong defensible boundary. All development, by definition, has an effect but in this case that effect is not so damaging as to outweigh a very modest development in a highly sustainable location. 3.7 The site’s current status as green barrier should not be an impediment at this stage to development of the site. When producing a new plan it is incumbent on the authority to		settlement and forms part of the open agricultural landscape. Development of the site, the objectors admits, would narrow the gap between the two settlements, this is one of the main purposes of the green barrier designation and since New Brighton and Mynydd Isa are relatively close it is more imperative that the area remains open and free from development. Allocated land at Ewloe does extend into a former green barrier area but it also does not extend the settlement into a narrow gap between settlements so as to threaten coalescence as is the case here. The objector suggest that only two dwellings would be built on the site however it is capable of accommodating 4 dwellings as previously noted in the planning application. In conclusion although small, the site is in a prominent location between Mynydd Isa and New Brighton, development of which would erode the green barrier where it is crucial to maintain an open gap between the two settlements. It is not considered suitable for an allocation or a settlement boundary change and should remain as green barrier.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			review the green barrier and make adjustments in the context of development need and sustainability. It has already done so at Ewloe where a large 10 ha site within the green barrier has been allocated to provide up to 300 dwellings. This is a major incursion into the green barrier with a substantially greater impact on landscape character than this small site at Bryn Y Baal which is well related to the existing settlement pattern. The site is close to open space sports facilities, schools, a shop, library and health clinic and access to public transport is excellent with a bus stop 50m away on the main road. In sustainability terms it is far superior to housing land allocations that the planning authority has proposed. This is merely a statement of fact rather than any argument that this site should in any way substitute for those allocations. The proposal to redraw the settlement boundary to allow for a very modest development of two dwellings constitutes a very sustainable form of development. This modest contribution to housing land supply would not result in any material harm to the character of the area and, in the context given above, would not prejudice or weaken the green barrier in terms of actual effect and the policy overall.		
150	EN11: Green Barriers	Object	Site HWN005 - Ash Lane, Hawarden We purchased our house on the edge of a village near green barrier land deliberately to avoid an area of continuous residential/urban landscape. Building on this Green barrier land will create a long urban	Green Barrier Land needs to be much more protected than it seems planned here. Welsh National policy is to protect Green Barrier	Not accepted. In terms of green belts and green barriers or wedges, Welsh Government clearly state in para 3.60 of PPW10 that 'The essential difference between them is that land within a Green Belt should be protected for a longer period than the relevant current development plan period, whereas green wedge policies should be reviewed as part of the development plan

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			strip from Ewloe - Hawarden - Mancot - Pentre - Queensferry - Sandycroft. This is far from the existing character of the area which is one of villages with green barrier surrounds. Although the policy wording suggests it is inappropriate to create housing in green barriers this Ash Lane Development flies against that by using a very large area of green barrier (green wedge) land. This is also against Planning Policy Wales Ed 10 Dec 2018: 3.71 The construction of new buildings in a Green Belt or green wedge is inappropriate development unless it is for the following purposes: • justi ed rural enterprise needs; • essential facilities for outdoor sport and outdoor recreation, cemeteries, and other uses of land which maintain the openness of the Green Belt or green wedge and which do not con ict with the purpose of including land within it; • limited extension, alteration or replacement of existing dwellings; or • small scale diversification within farm complexes where this is run as part of the farm business.	fields but this has been chosen over many brown field sites because the brown field sites are not ideal. More effort needs to go to mitigation of the factors against those brown field sites first before dismissing them and going for the developers easy choice of green fields sites. This is a bad precedent to set and would lead the way to every future plan avoiding those potential brown field sites and using more and more green field sites. The HWN005 Ash Lane development needs to be much smaller to maintain the green barrier and avoid coalescence of Mancot to the Upperdale area of Hawarden.	review process'. Therefore as part of preparing the LDP the Council has undertaken a review of the existing green barriers as required by national planning guidance. Welsh Government explains in para 3.51 that 'Previously developed (also referred to as brownfield) land (see definition overleaf) should, wherever possible, be used in preference to greenfield sites where it is suitable for development'. However, Welsh Government goes on to say that 'It is recognised, however, that not all previously developed land is suitable for development. This may be, for example, because of its unsustainable location, the presence of protected species or valuable habitats or industrial heritage, or because it is highly contaminated'. It is a fact that the County has large tracts of brownfield land but these are along the Dee Estuary where there is the presence of flood risk, contaminated land and proximity to the Dee Estuary ecological designations. These areas / sites are also divorced from sustainable settlements and are not suitable for residential development. The UDP Inspector did not consider that the drawing back of the green barrier as part of recommending the allocation of the site for housing, would harm the function of the green barrier. Although the site allocated in the LDP is slightly larger than that recommended by the UDP Inspector, the Green Barrier Background Paper demonstrates that it will not harm the function of the green barrier. The settlement boundaries of Hawarden and Mancot adjoin each other and there is already coalescence between the two settlements. The LDP seeks to retain the southern and higher land as green barrier on either side of Gladstone Way. This will ensure that the green barrier around the historic part of Hawarden remains intact to preserve the setting of the historic core. Both Hawarden and Mancot will still have an open countryside and green barrier setting. The Plan does not fail Test 1 as national planning guidance references the need to review green barriers. The Plan does not fail Test 2 as the Council is clearly aware of the green barrier context for the site having regard to the previous UDP Inspectors

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					report and the review of the green barrier as set out in the Green Barrier Background Paper.
195	EN11: Green Barriers	Object	The Green Barrier policy can be varied to allow Land at Megs Lane, Buckley to come forward for housing development without any prejudice to the principle of the policy in this location. See accompanying statement.	Amend the policy to exclude suitable land on the margins of Buckley in order to allow for longer term growth requirements.	Not accepted. The objector has promoted the site for housing in HN1 (id193) and that response should be read in conjunction with this response on the green barrier. The green barrier along the south eastern edge of Buckley is a well established green barrier that seeks, in line with PPW, to prevent encroachment of development into open countryside, to prevent coalescence of Buckley with built development at Padeswood and protecting the setting of an urban area. The Green Barrier is not being applied as a green belt in all but name as suggested by the objector. In line with advice in para 3.60 of PPW10, the Council has undertaken a review of existing Green Barriers as set out in Background Paper 1. The site was submitted for development as an 'omission site' as part of the UDP and the Inspector commented 'Whilst adjacent to HSG1(2) the site shares only a short boundary with it and is separated from it by a stream and a corridor of trees/vegetation. Although both are greenfield sites, visually there is not a strong relationship between the 2 and development on the objection site would extend further to the south into the rural area. The site is bounded to the north by the backs of properties fronting Megs Lane and lies within the green barrier which seeks to prevent encroachment into an area of open countryside to the south of Buckley where there is pressure to develop'. Land to the east was also submitted through a number of omission sites for development as part of the UDP and the Inspector also resisted these. A planning application (058237) has since been submitted for a large scale housing development of 435 dwellings, which was refused 18/07/18. This demonstrates that there is clear and continuous development pressure along this southern edge of Buckley and the Council and the Council

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					has consistently sought to prevent the green barrier being breached. The southern edge of Buckley has a well defined urban edge which sits at the top of gently rising land. In relation to this site land South of Buckley / Padeswood, this part of the green barrier comprises prominent and open land which rises from the A5118 at Padeswood up to the prominent edge of built development along the southern edge of Spon Green and Meg's Lane. The land fulfils the purposes for green barrier designation and should be retained. The objectors have included a Green Barrier Assessment as part of the submission. This assessment suggests that the present Green Barrier boundary is weak because it does not comprise a line of trees or a wooded area. However the settlement and Green Barrier boundary follows the line of the houses along Megs Lane and forms a well defined, significant physical feature on the ground, making it very clear the extent of Buckley and the transition from the character of the built limit of the settlement, to the open countryside beyond. It also suggests that built development will not detrimentally affect the green barrier as views into the site will be well screened due to the topography of the surrounding land and by woodlands. However, built development will affect the openness of the green barrier from close to and far views, some views may be shielded by woodland and topography but the extent and scale of the site means it will affect the overall openness of the area. It is not a good planning argument to say that simply because you may not be able to see a development that it doesn't therefore cause harm. This will then set a precedent for further development in an area where there is already significant pressure as has been as detailed above. As the UDP Inquiry Inspector also pointed out '' It would be the first extension beyond the well defined existing line of built development, result in the coalescence of Buckley and Padeswood/the cement works and effectively sever the strategic green barrier.'' The site has therefore been assessed as part of the Green Barrier review and retained as it is considered that it continues to play an

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					important role in protecting the openness of the area by preventing urban encroachment and coalescence. The conclusion of the UDP Inspector in supporting the retention of this barrier along the southern edge of Buckley is still considered to apply to the present situation. Furthermore, the Well Street housing allocation and commitments exist in Buckley for housing development without having to draw back the green barrier.
246	EN11: Green Barriers	Object	The designation of Green Barriers (Policy EN11) to prevent the coalescence of settlements is fully supported, particularly Green Barriers 11 and 12 which separate Ewloe from Connah's Quay/Shotton and Hawarden. The vulnerable open spaces between these settlements have been diminished and reduced over time and are now quite small and inevitably under pressure for development. Whilst the policy is supported along with the currently proposed Green Barrier designations 11 and 12, there is a strategic gap in the Green Barrier designed to conserve the open character between Ewloe and Connah's Quay/Shotton. The area in question is the open land to the north-west of the A494 Aston Hill which separates the A494 from the Old Aston Hill area. To maintain the integrity and purpose of the Green Barrier in this area it is requested that the Green Barrier designation should be extended to include this area. The area was put forward as a Candidate Site and is under pressure for development and if the LDP is to conserve a degree of openness between these settlements, control urban expansion and prevent encroachment into open countryside, this area should be included within the proposed Green Barrier.	Whilst the policy is supported along with the currently proposed Green Barrier designations 11 and 12, there is a strategic gap in the Green Barrier designed to conserve the open character between Ewloe and Connah's Quay/Shotton. The area in question is the open land to the north-west of the A494 Aston Hill which separates the A494 from the Old Aston Hill area. To maintain the integrity and purpose of the Green Barrier in this area it is requested that the Green Barrier designation should be extended to include this area. The area was put forward as a Candidate Site and is under pressure for development and if the LDP is to conserve a degree of openness	The general support for green barriers 11 and 12 is noted. Not accepted. This swathe of open land is set between the ribbon of development along Old Aston Hill and the A494(T) and dissected by Church Lane. It has the character and appearance of open countryside but is separated from the open countryside to the north west by Old Aston Hill and from land to the north east of Ewloe by the A494(T). The role of green barrier EN12 is to prevent the coalescence of Ewloe, Hawarden and the outlier development at Aston. The A494(T) provides a firm and defensible boundary to this green barrier and it is not necessary or appropriate for the green barrier to extend beyond the A494(T). The role of green barrier EN11(11) is to prevent the coalescence of Ewloe and Ewloe Green from Shotton / Aston, Connah's Quay and Northop Hall. The ribbon of residential properties along Old Aston Hill is considered to represent a firm and defensible edge to the extent of the green barrier and it would be inappropriate for the green barrier to extend as far as the A494(T). Ewloe and Ewloe Green form one defined settlement in the LDP with a single settlement boundary and it is not considered appropriate for a green barrier between the two parts of the settlement alongside the A494(T).

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				between these settlements, control urban expansion and prevent encroachment into open countryside, this area should be included within the proposed Green Barrier.	
326	EN11: Green Barriers	Object	Object to EN11(3) regarding the extension of the green barrier between Flint and Bagillt. This objection also cross references to the objection made in respect of Candidate Site FLI008. Please refer to attached document below.	Remove the proposed extension to the green barrier between Flint and Bagillt and include candidate site FLI008 as a contingency site. Add clarification in the explanatory text as to how it determines impact on open character in decision making	Not accepted. The site was previously allocated for employment in the Delyn Local Plan but never came forward in the form of a planning application. In the Deposit UDP the exclusion of the site as an employment allocation was objected to and considered by the UDP Inspector. The Inspector commented 'This land was allocated in the Delyn Local Plan, was assessed for its suitability for rolling forward but was not included due to site constraints. The Council takes the view that there is no prospect of the site coming forward for development during the plan period. No substantive evidence has been produced to convince me otherwise. Adequate land has been allocated in the UDP for employment needs and I do not support this Objection'. As part of preparing the LDP, an Employment Land Review was carried out which has concluded that, on the basis of existing portfolio of employment land there is no need for additional employment land allocations in the Plan period. The objector submitted the site as a candidate site (FLI008) as a mixed use site comprising 500 dwellings and employment land if required. At Preferred Strategy consultation stage the objector submitted a representation clarifying that the proposal was for residential only. The Council's consideration of the representation seeking housing in respect of HN1 (id1218) has concluded that the LDP has provided for a substantial amount of growth in Flint over the Plan period and it is not considered that an additional allocation is either necessary or appropriate. Given the size of the site and the lack of any supporting background or technical

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					evidence it is not considered that the site is viable or deliverable, particularly in the light of previous concerns about viability. In the UDP the green barrier did not extend up to the settlement boundary of Flint in this location. Whilst the UDP Inspector did not recommend allocating the site for development, she did not go so far as to extend the green barrier as there was no objection before her which proposed this. As part of reviewing the green barriers it was evident in this case that the green barrier sought to protect the gap between Bagillt and Flint but did not extend to the edge of the built part of Flint. As clearly set out in the Background Paper 1: Green Barrier Review, the purpose of the green barrier in this location is to prevent continuous built up frontage between Bagillt and Flint alongside the A548. The green barrier has therefore been reviewed and re-configured to focus on retaining the gap between the Manor Drive block of development and Flint and enabling a longer term development opportunity between Coleshill Road and Bagillt. The representor suggests that the UDP green barrier policy is likely to more permanently retain the open character of land than an open countryside policy, stating ''permanence beyond the life span of the Plan.'' This may be true for a Green Belt policy however PPW clearly states in paragraph 3.60 that green wedges should be reviewed as part of the development plan process as reflected in the LDP . PPW states ''The essential difference between them is that land within a Green Belt should be protected for a longer period than the relevant current development plan period, whereas green wedge policies should be reviewed as part of the development plan review process.'' The site is not required as a contingency housing site as the plan already has enough allocated sites to provide 7950 new homes to meet a housing requirement of 6950 homes with a flexibility allowance over nearly 15%. In addition there is no requirement in

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					PPW or the Development Plans Manual to make provision for 'contingency sites'. The representor also states that ''PPW has changed in what Welsh Government considers to be acceptable in green barriers with the inclusion in paragraph 3.73 of "renewable and low carbon energy generation". The objector then seeks to use this to criticize the Council in respect of alleged inconsistencies between previous decisions on large scale solar proposals elsewhere in the County yet there were key material differences in the cases referred to and none of those decision were call in by the Welsh Ministers as being in conflict with national policy.
555	EN11: Green Barriers	Object	This representation is made on behalf of a Trust which owns an area of land at Kelsterton Farm, Connah's Quay (Appendix 1). This land covers approximately 40Ha (98.8 acres) and is located south of Chester Road, between Connah's Quay and Flint. Given the site's size and its proximity to two 'Main Service Centre' settlements, we consider that this site provides a future opportunity for a range of land uses including residential, employment and roadside uses. Policy EN11 outlines areas that are designated as green barriers on the proposals map and lists the criteria for which development will be permitted. Whilst we support a considered approach to the location of development and are committed to preserving the openness of key areas, we object to the inclusion of land that is unable to meet these requirements. Our client's site is bisected by the proposed "red route" of the new 13km dual carriageway A494(T)/A55(T)/A548 Northop to Shotwick Interchange Improvement. Whilst this proposed new road represents an exciting new opportunity for the region (which we	Allocate an area of land at Kelsterton Farm, Connah's Quay (Appendix 1). we consider that this site provides a future opportunity for a range of land uses including residential, employment and roadside uses.	Not accepted. The objector seeks the allocation of the site for housing and mixed use development and the Council's response to HN1 (id1269) should be read in conjunction with this objection to the green barrier. The objection site is located on the north western edge of Connah's Quay. It adjoins the existing settlement boundary only at its north east corner adjoining Perenna Court, Kelsterton Hall and the Coach House. For the most part the site is completely divorced from the built form of Connah's Quay, being separate by open land between Kelsterton Lane and the settlement boundary. It is situated within the Flint - Connah's Quay green barrier, GEN4(4) which has been reviewed as part of the LDP process and found to meet the objectives of PPW. The site forms part of a large swathe of open countryside to the north west of the settlement. It is considered that the site is an integral part the open countryside and has little relationship to the form and pattern of development within the settlement of Connah's Quay. The inclusion of this site within the settlement boundary, or its allocation, would virtually split the green barrier between Flint and Connah's Quay in two. At the southernmost part of the site, alongside Cheshire Farm, the remaining green barrier would be a mere 160m compared to the existing 1100m depth of the green barrier. The resultant large detached block of development would place pressure, in particular on the intervening

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			support), it requires the removal of green barrier to the north of Connah's Quay. The new road aims to provide 4 lanes of traffic through the green barrier which will have a considerable impact on its openness and ability to perform as functional green barrier land. The layout of the proposed route however is such that it still maintains a distinct barrier between Connah's Quay and Flint and we propose that this becomes the new border between the two settlements (Appendix 4). Given this, we consider that the land should be removed from the Green Barrier and safeguarded for a mix of uses including residential, employment and roadside uses given its location.		land between the site and the edge of the settlement. Such a significant incursion into open countryside and green barrier is not necessary or appropriate when there are sequentially preferable sites within the settlement boundary to cater for growth at a more proportionate and sustainable scale. The objector appears to argue that the progression of the Red Route necessitates the removal of the green barrier designation. This is not the case as the guidance in para 3.74 of PPW10 explains that certain other forms of development may be appropriate in the Green Belt or green wedge provided they preserve its openness and do not conflict with the purposes of including land within it and these include engineering operations and local transport infrastructure. In its response on policy HN1 the Council has explained how the Red Route is not considered to provide a context for development in this Plan period. The site is located in the middle of the important strategic gap located within an extensive (335ha) green barrier between two of the County's towns (Main Service Centres). The purposes of the green barrier is to prevent coalescence of the two urban areas, to prevent encroachment into open countryside and to manage the urban form. The removal of the objection site from the green barrier would significantly undermine the purposes of the green barrier without any justifiable development context or need. Until further information about the timing and detail of the Red Route becomes known then it is premature for the site to be considered in any context, and certainly not within the timeframe of the LDP. The green barrier can potentially be reviewed at a future review of the LDP in line with the land use context for this location at that time.
603	EN11: Green Barriers	Object	Remove land from the Green Barrier Listed as Site No 6 Flint Mountain Northop.We contend that the draft Plan is not sound because its approach to Green Barriers (and Housing) fails the tests of soundness in Planning Policy Wales (Edition 10,	Remove land from the Green Barrier Listed as Site No 6 Flint Mountain Northop.We contend that the draft Plan is not sound	Not accepted. The green barrier at Northop is a well-established green barrier that seeks, in line with PPW, to prevent encroachment of development into open countryside and protecting the setting of an urban area. The particular land sought for housing development lies between the northern edge of the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			December 2018) and the Welsh Government's Local Development Plan Manual (Edition 2 - August 2015). Planning Policy Wales (PPW) sets out the land use planning policies of the Welsh Government. The primary objective of PPW is to ensure that the planning system contributes towards the delivery of sustainable development and improves the social, economic, environmental and cultural well-being of Wales. PPW explains the differences between Green Wedges (or Barriers, as in this instance) and Green Belt. Although the restrictions on development are identical, the procedure for designation and degree of permanence differ. Once they are in place, the restrictions they impose are essentially the same. This is why it is so important to ensure that local authorities: - a) Fully appreciate the seriousness of creating a Green Wedge/Barrier and understand the negative effects it will have on development that might have a strong justification and promise significant benefits; and b) Take a robust approach to ensure that land is not included without good reason and that boundaries are chosen carefully using physical features and boundaries to include only that land which it is necessary to keep open in the longer term. It is evident from Paragraph 3.67 that, unless a planning authority can demonstrate why normal planning and development management policies would not provide the necessary protection, it risks having its LDP found unsound. The testing of such designations would need to take account of the need for the LDP to respond to other pressures and considerations. For example, PPW states	because its approach to Green Barriers (and Housing)	settlement and the A55(T) along with the physical infrastructure associated with the grade separated interchange at junction 33. The Plan is not unsound as the Council has reviewed green barriers in line with national planning guidance and evidenced this as part of the Green Barrier Background Paper. The site was submitted as an omission site as part of the UDP and was not recommended for inclusion in the Plan by the Inspector. Indeed, she stated 'Although the site is well contained by existing development, the A55 and the A5119, it is an area of countryside which contributes to the rural setting of Northop. Moreover because of its open nature it is designated as part of the green barrier in order to protect a major road junction from visually intrusive development'. The land has since been the subject of a planning application for housing which was refused, and not taken to appeal. Candidate and Alternative Sites have also been submitted elsewhere at Northop and it is evident that there is clear and consistent development pressure in this part of Northop. The Council is also mindful that the proposed 'red route' linking the A494(T) with the A55(%T) at junction 33 will bring with it significant infrastructure development associated with the new road and how it ties in with the existing grade separated interchange. The Red route may also result in development pressure and it is important to protect the northern part of the settlement during this Plan period until the implications of the new road and its relationship with the settlement and green barrier can be re-assessed as part of the LDP review. The objector's estimates for the construction of the Red Route are unrealistically ambitious and it is far from clear whether the route will actually be built during the life of this LDP and/or before it is reviewed.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			(Paragraph 3.46) that a broad balance between housing, community facilities, services and employment opportunities in both urban and rural areas should be promoted to minimise the need for long distance commuting. PPW makes it clear (Paragraph 1.16) that evidence is needed to support LDP policies, which is tested through the Examination procedure.		The UDP Inspector considered green barrier designation was warranted as part of the adopted UDP and this is considered to still be the case in the LDP. The objector has submitted a Landscape and Visual Impact Review and the Council responds to the conclusions of that review below: 1. The fact that the site is separated from the northern section of the green barrier designation by the A55 does not mean is should not to be included in the designation. Many of the green barriers in the county are dissected by roads or railways. The key feature of the objection site is that it has the character and feel of open countryside. It is an important part of the green barrier as it protects the setting of the historic settlement from intrusive urban encroachment. As set out in in PPW one of the main purposes of the green barrier is to protect the setting of an urban area. 2. Visually, the open landscape in this area comprising agricultural land, the cricket ground and the cemetery together play a very important role in the historic rural setting for the listed church, the conservation area and the village as a whole. That setting is therefore vitally important to retain the character of Northop. Trees line the A55 route which again visually creates a natural backdrop to the area enhancing the impression being in the countryside. The urban influences mentioned by the objector are superficial (street lighting, signs, pavements) in that they do not detract from the site's importance as a tract of open landscape which maintains the sense of place for the village. The development of the site for housing would clearly have a major impact on the character and appearance of locality and the openness of this area of land. 3. Although the A55, A494 A548 Flintshire Corridor Red Route has been chosen it is not certain when it will be built, even though it is somewhat ambitiously at the present time scheduled to be designed and built by 2023. Regulations for LDP state that an Annual Monitoring Report should be carried out once the plan is adopted and a major review of the plan should occur every 4

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					years. It would be at this time that the implications for the interchange could be more accurately considered in relation to this area and the plan as a whole, if indeed it is built within the present unlikely schedule. 4. Development of the site would be detrimental to the setting of the historic village and affect the character of Northop and its sense of place. Planning policy Wales sets out in paragraph 6.1.7 the importance of safeguarding historic assets which includes Listed buildings and Conservation area and states '' It is important that the planning system looks to protect, conserve and enhance the significance of historic assets. This will include consideration of the setting of an historic asset which might extend beyond its curtilage. Any change that impacts on an historic asset or its setting should be managed in a sensitive and sustainable way.'' 5. As stated previously the Cricket ground and the cemetery add to the historic setting of the village. The sewage works covers a very small area and is situated on the perimeter of the site and set against the tree screening alongside the A55(T) and is not considered to detract from the overall green barrier designation and indeed has the potential to conflict more with an adjacent residential use. LANDMAP may recognise them as urban uses, however in this case the sewage works has very little impact on the landscape and is by definition necessary or essential infrastructure. The cricket ground and pavilion is open in character and adds to the character of Northop as a village. The cemetery is also open in character due to its relationship with the church adds to the historic character on the village. It is also the case that PPW in para 3.71 sets out clearly that some uses are appropriate in the green barrier and this includes 'outdoor sport and recreation' and 'cemeteries'. Contrary to the objectors argument that these features somehow detract from the green barrier they clearly conform with PPW10 in terms of being appropriate to be included within the green barrier. 6. The site is not isolated from the rural landscape, and given its size, has the character and feel of open countryside which creates

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					an important rural setting for the village. Any development would harm the open, rural and historic character of the site. In conclusion, it is vitally important that this site remain open, in order to retain the rural character and sense of place of Northop
625	EN11: Green Barriers	Object	The proposed Flint Mountain - Northop Green Barrier is not appropriate. Without prejudice to that view, our client's site (land at Maes Celyn, Northop) does not fullill any role or purpose as a Green Barrier. Please see enclosed statement.	The proposed Flint Mountain - Northop Green Barrier is not appropriate. Without prejudice to that view, our client's site (land at Maes Celyn, Northop) does not fullill any role or purpose as a Green Barrier. Please see enclosed statement.	Not accepted. The objection is initially to the whole green barrier and then to the objection site put forward for housing. This response on the green barrier should therefore be read in conjunction with the response to objection id 626 re policy HN1. The objector also appears to be 'hedging their bets' given this either/or approach, rather than making specific points that are relevant arguments to consider. The Green Barrier Review does not fall short as it has been undertaken in the light of guidance in PPW10. This particular green barrier also needs to be considered against the UDP Inspectors recommendation to retain the green barrier and where for the LDP the context is unchanged. Each of the objector's points will be addressed in turn: • Green Barriers need to be applied in the context of the settlement pattern within Flintshire, and the particular characteristics of each settlement. • The settlement of Northop has to its west a large college campus and a small residential development. Whilst these are not settlements in their own right they are readily identifiable built development which is separated from and different in character to the settlement form. The green barrier designation quite rightly seeks to prevent the coalescence of the settlement with these outlier developments. The extension of built development by some 200m along Holywell Rd to a small outlier of residential development does not represent a rounding off the settlement form. • The designation of the green barrier is considered to be justified on its own merits. Given previous and recent development pressure it is considered that normal development management

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					policies are not robust enough to provide sufficient protection to the land around Northop. The settlement has seen a large number of sites put forward as omission sites in the UDP and candidate sites and alternative sites in the LDP as well as recent planning applications for residential development. There has been consistent pressure to develop this land in two development plans now. • As explained in the bullet point above, development management policies are not considered adequate given the level of development pressure around the settlement. • The future construction of the Red Route linking the A55(T) with the A494(T) is an additional consideration in terms of development pressure. The Deposit LDP has already received objections seeking major development along the proposed Red Route. Indeed, the objector argues in para 8.3 of their submission 'The development of the entire site would represent a significant increase in the size of the village. However, this [according to the objector] is considered appropriate in the context of the village being a Tier 3 Sustainable Settlement, and also the unique economic opportunities for Northop arising from the Coleg Cambria campus, the proximity to the A55 and the proposed new link road to the A494'. Unfortunately these "unique opportunities" are not defined by the objector and neither is it certain when the Red Route will be constructed or what pressures or opportunities there may be from this. As such there is no need to change the green barrier in this location or any other part of Northop. • The open countryside along either side of Holywell Rd clearly provides an appropriate and proportionate setting to the present built form of the settlement. In terms of the objection site, the green barrier to the west of Northop seeks to protect the open swathe of land on either side of the road. On the north side of the road is a gap between built development and the built development associated with Coleg Cambria. On the south side of the road is a narrower gap between residential development and the outlying housing development at

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Maes Celyn. This part of the green barrier serves three of the five purposes of a green barrier in PPW in terms of preventing coalescence, safeguarding the countryside from encroachment and protecting the setting of the settlement. The site was submitted as an omission site as part of the UDP but the Inspector did not recommend inclusion of the site in the UDP. The Inspector commented 'The objection site lies in the open countryside between the built up limits of Northop to the east and Maes Celyn to the west. Maes Celyn relates to the horticultural college and not the village. The college is washed over by countryside policies and does not have a defined boundary. Land to the east and west is therefore subject to different policy frameworks. Although partly opposite the school, that is at a lower level with no main road frontage. The site forms a small but effective gap designated as green barrier between the village and college. Its topography rising to the south means it does not relate well to the built up area. Allocation of and development on it would merge the 2 areas, be a significant encroachment into the countryside and to my mind result in an unacceptable extension of the village to the west'. The green barrier concentrates only on the gap between the edge of the village and outlying blocks of built development. It does not seek to include any more land that is strictly necessary to maintain the gap and prevent the coalescence of built development. Although the development at Maes Celyn is not a separate 'settlement' it is a block of 25 residential units based on the former pig farm buildings and has a particular character which is quite different from the residential development within the village. The former Northop Horticultural College, now part of Coleg Cambria, is also of a completely difference character from the village and represents a sizeable development. The green barrier serves to ensure that the character of each development and the village is retained by preventing coalescence.
660	EN11: Green Barriers	Object	The site at Llys Ben is roughly rectangular in shape and is bounded to the east and the south by existing residential development	include the site at Llys ben	Not accepted. The objector has sought the allocation of the site for housing in HN1 (id 689) and the Council's response to that

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			comprising predominately large detached properties. To the west of the site is the Northop Hall Pavilion with carparking, formal play area and football pitches. The site is only open on its northern boundary beyond which is agricultural farmland. It therefore is contained with the existing urban form of Northop Hall. Outside of its Green Barrier designation the site does not have any particular landscape importance attached to it and is identified by Carl Taylor BA (Hons) Dip LA/CMLI as having "a poor-quality landscape".		representation needs to be read in conjunction with this green barrier response. This site has a long history of being promoted through development plan reviews for development, including the deletion of the well-established and appropriately defined green barrier. In addition, recent planning application history shows that this principle has been rejected by the Council and an appeal Inspector. The existing UDP green barriers have been reviewed against the criteria in PPW10. The presence or otherwise of 'landscape quality' considerations is not a factor to be taken into account in the designation of a green barrier as the key consideration is 'openness'. The site was submitted as an omission site in the UDP and was considered by the UDP Inspector who did not recommend the inclusion of the site. The Inspector commented in respect of the green barrier 'In this case because I find the site relates well to the countryside and other open land such as the playing fields to the west, it forms part, albeit a small part, of the green barrier and allocation of/development on it would undermine the objectives of the designation'. The findings of the UDP Inspector are still considered relevant in the context of the LDP. The site was also the subject of a subsequent planning application for 36 dwellings (050613) which was dismissed on appeal on 23/04/15. The Inspector commented that '….it would encroach into the countryside outside the settlement boundary and be detrimental to that green barrier purpose. It would also harm the openness of this part of the green barrier, which is its main attribute'. The site is bounded to the north by open countryside and to the west by the recreational fields associated with Northop Hall Pavilion. Both parcels of land are outside the settlement boundary and open in character and appearance. The retention of the objection site within the green barrier is considered to be justified

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					in terms of protecting the open character of this part of the settlement and preventing urban encroachment.
620	EN11: Green Barriers	Object	Policy EN11: Green Barrier Boundary As set out above, the property known as Newlands, Drury New Road, Drury is also located within the area proposed as Green Barrier. The boundaries of the Green Barrier follow the proposed settlement boundary to the south of Drury. We consider that the Green Barrier boundary should be re-drawn to exclude our client's site, for the reasons set out above in relation to the proposed settlement boundary. Our client's site forms an integral part of the settlement of Drury and should be included within the settlement boundary. It does not fulfil the purposes of a Green Wedge designation as set out in national policy.	We consider that the Green Barrier boundary should be re-drawn to exclude our client's site, for the reasons set out above in relation to the proposed settlement boundary. Our client's site forms an integral part of the settlement of Drury and should be included within the settlement boundary. It does not fulfil the purposes of a Green Wedge designation as set out in national policy. Allocation of additional site in Drury.	Not accepted. The objector proposes the inclusion of the site within the settlement boundary of Drury and the Council's response in respect of PC1 (id619) should be read in conjunction with this green barrier objection. The inclusion of DRU006 within the settlement boundary would result in a ribbon of development extending into the open countryside and the green barrier between Drury and Buckley, which would not be a logical extension of the settlement boundary. The objective of the green barrier designation is to retain the open nature of the countryside around the settlement and to protect the open countryside between Drury and Buckley from further encroachment. Built development in this location would undermine the function and openness of the green barrier. In terms of the green barrier in this location the gap between the two settlements of Buckley and Drury is narrow at this location. The land on either side of Drury New Road is prominent and has a feeling of openness, despite the proximity of the two settlements. The direct coalescence of the two settlements is ultimately prevented by the SSSI / SAC adjoining the western edge of the green barrier, and the GCN ponds comprising the ecological mitigation areas associated with The Heathlands development. However, the removal of the green barrier would potentially erode the openness of this swathe of land to the point where there would be only a very narrow or negligible gap between the two settlements. Drury is also a relatively small settlement when compared with Buckley and the green barrier helps in retaining its present scale, character and form. The green barrier is justified in terms of preventing the near coalescence of the two settlements and preventing urban encroachment into open countryside. Furthermore, para 3.64 of PPW states, relating to green barriers, 'They may be used to provide a buffer between the settlement edge and statutory designations and safeguard important views

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					into and out of the area'. This is applicable to this particular green barrier. The green barrier designation washes over many properties on the edge of settlements. Removal of the property Newlands from the green barrier would not be practicable as it would mean much larger area of land up to the Farm Shop car park would also need to be removed.
650	EN11: Green Barriers	Object	Recommended Change 15.15 TW recommends that the Council review the Green Barrier Review, with specific reference to area 10 (Mold – Mynydd Isa/Sychdyn/New Brighton) and give due consideration to removing part of this area from the Green Barrier; specifically TW's Fford Fer site.	Recommended Change 15.15 TW recommends that the Council review the Green Barrier Review, with specific reference to area 10 (Mold – Mynydd Isa/Sychdyn/New Brighton) and give due consideration to removing part of this area from the Green Barrier; specifically TW's Fford Fer site.	Not accepted. The objector has proposed the allocation of the site under policy HN1 (id636) and the Council response to that objection needs to be considered alongside this response on the green barrier. The site forms part of the green barrier which seeks to maintain a strategic gap between Mold and the outlying villages. The large site incorporates most of the swathe of open countryside and Green Barrier between the western edge of Mynydd Isa and the A494(T),. Each of the objectors points are addressed in turn. i) Prevent the coalescence of large towns and cities with other settlements: In terms of the Green Barrier designation in this location it seeks to protect the open gap between Mold and the outlying settlements. At the eastern edge of Mold there is only a narrow gap between built development at Mold and Mynydd Isa. Development would cause significant harm to the function of the green barrier which is designated to protect the openness of this swathe of open countryside and prevent coalescence of settlements. Development in this location and of this size would fundamentally weaken the gap between Mynydd Isa and Mold/New Brighton, and would be an unacceptable extension of the settlement. ii) Manage urban form through controlled expansion of urban areas: Mynydd Isa presently has a distinct urban form with a well defined edge as a result of built development following the route of overhead power lines. Given the size of the objection site, this is not considered to represent a controlled expansion of a

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					settlement. Rather, it would involve the almost total removal of a large tract of open countryside which presently provides a distinct setting to the settlement and maintains a gap between Mynydd Isa and Mold. Rather than being visually contained as described by the objector, the site is visible from distant viewpoints and is also extremely visible from sections of the adjoining A494(T). Development would be extremely prominent in the landscape. iii) Assist in safeguarding the countryside from encroachment: The size of the site means that it will involve a significant and harmful encroachment into open countryside and result in the near complete loss of this part of the green barrier. The objector's argument that this is the case with all green barrier land is not accepted as it is clearly necessary to look at each proposed green barrier release on its individual merits. The Council does also does not accept that a site of this size represents urban fringe. It is a large swathe of attractive open countryside characterized by hedgerows and mature trees and is open in character. The objector acknowledges that existing residential development is prominent in the landscape and the Council argue that this would be even more the case with development alongside the A494(T). iv) Protect the setting of an urban area. The western edge of Mynydd Isa is presently well defined by a clear line of built development and this forms a firm and defensible settlement boundary. The development of the site would create a detached form of built development within the open countryside, resulting in significant urban sprawl which would harm the character and appearance of the open countryside. From the well-defined edge of development, the objection site slopes downwards generally in a southerly direction towards the A494(T) and Wylfa roundabout. Development on the objection site would be visually prominent and harmful to the setting of Mynydd Isa and to Mold and from more distant vistas when approaching this location. Whereas the entire western edge of Mynydd Isa presently has an open countryside setting, the proposed development would remove the bulk of that setting and leave only a smaller portion of land to the north of the Wylfa roundabout.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					v) Assist in urban regeneration by encouraging the recycling of derelict and other urban land: The Plan has provided a sufficiently aspiration growth based housing and employment land requirement. The Plan has also identified a balanced housing land supply comprising strategic allocations, housing allocations and allowances for windfalls that have not necessitated the substantial release of green barrier as proposed here. Mynydd Isa - New Brighton. The scale of the site put forward is vastly larger than the area of land removed from the green barrier at New Brighton. It is necessary to look at the relative scales of the objection site compared to that taken out of the green barrier on the edge of New Brighton. The latter measures approx. 5 ha and is considered to represent a logical well defined rounding off of the settlement within the confines of the A494(T), Bryn y Baal Rd and the A5119 and is in addition not proposed as part of this LDP for development, but to provide a proportionate and sustainable future option to consider. By contrast, the objection site represents a loss of 24ha of green barrier. Mold - Mynydd Isa. The Wylfa roundabout clearly has a rural context, as recognised by the UDP Inspector. When looking at the 5 'portions' of land around its perimeter: • Between the north side of Chester Rd and the A494(T) is the valley alongside the R. Alyn • Between the south side of Chester Rd A494 is the Peny bont pub which comprises the conversion and extension of listed farm buildings and set against a block of open countryside. • Between the494(T) and the A549 Mold Road is valley alongside the R. Alyn • Between the A541 and the A549 Mold Rd is open countryside • Between the A549 Mold Rd and the A494(T) is the large block of open countryside comprising the objection site. Although the petrol filling station represents built development it is clearly set against a backdrop of fields and trees. Even the roundabout itself is grassed with a central wooded copse, which serves to soften its appearance in the wider landscape. This reinforces the fact that it is necessary to look at

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the whole of the green barrier containing the objection site. It is not considered sufficient to rely on only a small portion of this part of the green barrier alongside the Wylfa roundabout in order to protect the narrow gap between Mynydd Isa and Mold. It is also important for the green barrier to protect the present open character of the countryside setting along the entire western edge of Mynydd Isa. The Council does not understand the objector's assertion that 'openness' does not contribute to the one of the 5 purposes of a green barrier in PPW as in the paragraphs 3.60 to 3.74 of PPW10, the word 'openness' is used 7 times in providing guidance on green belts and wedges. Openness is clearly one of the underlying principles of a green barrier and the proposed development of this site would fundamentally harm and undermine a large part of a green barrier. In conclusion there is no justification for a significant loss of this green barrier when land is available outside of the green barrier for development in Mynydd Isa and in Mold.
916	EN11: Green Barriers	Object	Compton Group is promoting its land to be released from the green barrier designation and for it to be allocated and safeguarded as land to meet specific future development needs that will be required during the development plan period.	Part of our client's site forms part of the land required for the proposed improvements to the A55/A494/A548 Deeside Corridor, this is identified by the Welsh Government as the 'Red Option Route'. The finished route is intended to form the new main road between north-west England and North Wales and thus become the main gateway to North Wales.	Not accepted. The objector has submitted objections seeking a mixed use development and the Council's response in respect of HN1 (id915) and STR7 (id917) and should be read in conjunction with this green barrier response. The green barrier follows a well-defined boundary alongside the A548 which marks the outer edge of Deeside Industrial Park. This is a firm and defensible boundary given the land available for development within DIP, particularly at the Northern Gateway site. In this context, the green barrier quite rightly seeks to protect the open land to the north of the A548. The land is flat and open in character and highly visible. Welsh Government guidance in PPW 10 is based on the rationale of green barriers being reviewed as part of the preparation of each development plan. Whereas PPW10 references the need for Green Belts to be defined so as to provide for long term development, this is not the case for green barriers (wedges). The

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Appropriate recognition of the Red Route within the development plan and its correct alignment within the Proposal Map provides an unique opportunity to build on the existing gateway employment allocation to the south of Deeside. It provides an opportunity to deliver additional employment growth and associated infrastructure and this can be achieved by removing the site from the green barrier and allow the new transport infrastructure investment to unlock economic growth opportunities.	Council have clearly reviewed the green barriers as evidenced in the Background Paper. There is presently a readily identifiable urban form to Deeside Industrial Park whereby existing built development is broadly confined by the A548, A494(T) and the R. Dee. The green barrier serves to protect that urban form, preventing encroachment into open countryside, and preventing near coalescence with the village of Shotwick. It also serves a regeneration purpose by focusing development on existing land within Deeside Industrial park. The green barrier clearly fulfils a number of purposes of green barrier designation as set out in PPW10. The objector references two very minor amendments to the green barrier and that considers that these set a precedent for a further minor change to the green barrier to include the objection site. However, the release of a 54ha site from the green barrier can in no way be described as a 'minor' revision.
948	EN11: Green Barriers	Object	This is based upon a crude review/assessment that is not fit for purpose; Para 20.41 claims it has been robust but it is far from this. There is no sound justification for the continued Green Barrier designation (in its current entire form) between Sealand and Saltney.	This is based upon a crude review/assessment that is not fit for purpose; Para 20.41 claims it has been robust but it is far from this. There is no sound justification for the continued Green Barrier designation (in its current entire form)	Not accepted. The objector has proposed the extension to an existing Principal Employment Area in policy PE2 (id945) and the response to that objection should be read in conjunction with this response on the green barrier. The green barrier on the north side of the R.Dee mirrors the Chester green belt along the border between Flintshire and CWAC. It seeks to retain the openness of a strategic swathe of land between Chester and Saltney at its eastern end and Garden City / Deeside Industrial Park at its western end.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				between Sealand and Saltney.	The site forms part of a much larger site put forward for development in previous development plans as part of omission site objections, and also put forward as an objection to the Deposit Plan. The UDP Inspector did not recommend inclusion of the site for development in the UDP and in respect of the green barrier commented: 'Green barriers have been designated in areas where there is significant development pressure and where standard countryside policies are not considered robust enough to protect the countryside/open land. From Appendix 5 in Topic Paper 3 it is clear that this green barrier takes into account the Cheshire green belt and the level of development pressure in and around Chester. PPW acknowledges that there is often a need to protect open land around towns and cities. Whilst in this case, the city in question is in England, it does not lessen the need to protect land in Flintshire and safeguard it from further encroachment. I find the green barrier is in line with the objectives of PPW'. The conclusions of the UDP Inspector are considered as still being relevant to the LDP. The green barrier background paper clearly but concisely confirms that the green barrier is justified in line with PPW. The objector argues that the draft National Development Framework references the need for a Green Belt around Wrexham and Deeside and that this should only apply to pockets of land rather than 'blanket' coverage. However, that is a matter to be considered as part of the preparation of a Strategic Development Plan. For the time being, the designation of green barriers is wholly in line with PPW10. In looking at the specific objection site now presented, the same principles that apply to the larger Watersmeet site, are also considered to apply to the smaller site. The present boundary of the Principal Employment Area is well defined by the edge of existing industrial plots and its extension on the scale proposed would harm the green barrier.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
963	EN11: Green Barriers	Object	This is based upon a crude review/assessment that is not fit for purpose; Para 20.41 claims it has been robust but it is far from this. There is no sound justification for the continued Green Barrier designation (in its current form) between Mancot and Pentre.	This is based upon a crude review/assessment that is not fit for purpose; Para 20.41 claims it has been robust but it is far from this. There is no sound justification for the continued Green Barrier designation (in its current form) between Mancot and Pentre.	Not accepted. The objector has proposed the allocation of the objection site for housing in HN1 (id959) and the Councils response to that objection should be read in conjunction with this green barrier objection. The review has assessed each existing green barrier (and those proposed as part of candidate site submissions) against the criteria in PPW10. Despite raising concerns relating to the continued designation of the green barrier between Mancot and Pentre the objector offers no evidence as to why the green barrier is inappropriate or unnecessary. The objector argues that the draft National Development Framework references the need for a Green Belt around Wrexham and Deeside and that this should only apply to pockets of land rather than 'blanket' coverage. However, that is a matter to be considered as part of the preparation of a Strategic Development Plan. For the time being, the designation of green barriers is wholly in line with PPW10. It is also counter-intuitive as the concept of a green belt implies more of a 'blanket' approach not less. The site was put forward as an omission site as part of the UDP for housing but was not recommended by the Inspector for inclusion in the Plan. The Inspector commented in respect of the green barrier 'The land is an integral part of the open countryside and part of the narrow green barrier between Mancot and Pentre which prevents the coalescence of the settlements'. The objection site MAN001 on Mancot Lane, sits between the separate settlements of Mancot and Pentre, and adjoins the northern western part of the settlement of Mancot. The gap between Mancot and Pentre at this location is very narrow and further development at this point would significantly erode the gap and contribute to the virtual coalesce of the two settlements. The site is flat agricultural land on the northern edge of Mancot. Across Mancot Lane opposite to the site the same flat open fields extends up to the built edge of Pentre. The area is an important clear

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					break between the two settlements which needs to be retained as it is the main function of the green barrier in this location.
1027	EN11: Green Barriers	Object	This is based upon a crude review/assessment that is not fit for purpose; Para 20.41 claims it has been robust but it is far from this.	This is based upon a crude review/assessment that is not fit for purpose; Para 20.41 claims it has been robust but it is far from this.	Not accepted. This objection is promoting land at Well Street / Bryn Awelon, Buckley and comments that the green barrier is unsound. However, the land to the east of Well Street and south of Bryn Awelon is not designated as green barrier either in the adopted UDP or the LDP. It would appear that the objector is confused and has included reference to the green barrier and the motivations behind the review, in error.
1147	EN11: Green Barriers	Object	PEN 029 - These proposals have not been designated in LDP 01 Green barrier!? To protect this semi-rural settlement, it is believed these proposals should be added to the final plan. Seeks a green barrier to the west of Penyffordd / Penymynydd. This is important agricultural land that needs protection in the form of a green barrier. Disagrees with Council's assessment.	PEN 029 and PEN 030 These proposals have not been designated in LDP 01 Green barrier!? To protect this semi-rural settlement, it is believed these proposals should be added to the final plan.	Not accepted. The western edge of the settlement of Penyffordd / Penymynydd is well defined by the line of the A550 bypass which serves to logically contain the extent of the settlement along its whole eastern edge. This is a strong physical feature beyond which is open countryside. Proposals for development on the western side of the bypass would be completely inappropriate given the strong urban form of the settlement and the degree of separation given the intervening A550 which acts as a disconnect between the existing settlement and any development to the west. It would also not represent good place making in terms of settlement growth or planning urban form. Therefore the need to prevent encroachment of development into open countryside (one of the green barrier roles) is already performed by the line of the bypass and green barrier designation is not necessary. In terms of preventing the coalescence of settlements to the west, the nearest settlement is Pontblyddyn which is a Tier 5 settlement where new planned development is not proposed in the Plan. Given the distance between the two settlements there is no likelihood of coalescence and green barrier designation is not warranted.
1159	EN11: Green Barriers	Object	PEN 029 and PEN 030. These proposals have not been designated in LDP 01 Green barrier!? 1163	EN11: Green Barriers	Object	Category C - Green Barriers (Policy EN11) - consistency with PPW Policy EN11 should be renamed 'green wedges' and not 'green barrier' to ensure compliance with national policy. The reasoned justification (paras 12.40 - 12.43) are also unclear in this respect as they refer to national policy on both green wedge and green belt designations, conflating the two. As there is no Green Belt designated in Flintshire, the Welsh Government considers the policy and its reasoned justification should be amended to align with the correct terminology in PPW, and ensure clarity for plan users in terms the purpose and status of policy EN11, i.e. green wedges.	As there is no Green Belt designated in Flintshire, the Welsh Government considers the policy and its reasoned justification should be amended to align with the correct terminology in PPW, and ensure clarity for plan users in terms the purpose and status of policy EN11, i.e. green wedges.	Noted. PPW states in para 3.60 'This can be achieved through the identification of Green Belts and/or local designations, such as green wedges'. The words 'such as' would suggest that Welsh Government are not taking a prescriptive approach to using solely the terms 'belt' or 'wedge'. The use of green 'barriers' is well established in Flintshire and the Council asserts is a clearer and definitive term that clearly indicates the purpose of the designation, to act as a barrier to development. The Council will leave this point as a matter for the Inspector to decide.
851	EN11: Green Barriers	Object	Policy EN11 (Green Barriers) As set out in PPW, "the main aim of Green Belts [and by association Green Barriers] is to prevent urban sprawl by keeping land permanently open; the essential characteristics of Green Belts are their openness and their permanence" (Paragraph 3.61). Presthaven Sands Holiday Park is located adjacent to the Gronant-Talacre-Gwespyr-Ffynnongroyw Green Barrier. As part of LDP preparation, Flintshire Council has	In reviewing the designations, the Council has concluded that the Gronant-Talacre-Gwespyr-Ffynnongroyw Green Barrier meets only one of the five purposes of a green belt i.e. to assist in safeguarding the countryside from	Not accepted. The retained part of this UDP green barrier fulfils the PPW requirement in terms of 'openness' given the flat nature of the landscape and inter visibility of existing built development. The eastern part of the green barrier (now deleted) was not considered to raise the same concerns about coalescence since Ffynnyngroyw (a Tier 3 settlement) did not physically abut the green barrier and its expansion was constrained by flood risk considerations. The expansion south eastwards of Talacre is constrained by the presence of the Gas Terminal. This contrasts with the western part of the green barrier (now retained) in that the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			undertaken a process to review the green barrier designations, which PPW requires it to do. In reviewing the designations, the Council has concluded that the Gronant-Talacre-Gwespyr-Ffynnongroyw Green Barrier meets only one of the five purposes of a green belt i.e. to assist in safeguarding the countryside from encroachment. It is recognised that this does not necessarily mean that such a designation shouldn't be retained in principle and further consideration is required. The Council's methodology provides five further matters for consideration: • "not be designated where normal open countryside policies would be sufficient • not be drawn wider than necessary to achieve their purpose • be drawn where there is significant and sustained development pressure • not unnecessarily duplicate other policy designations • not need to possess any intrinsic inherent landscape, nature conservation or other quality." Having reviewed the Council's evidence base in detail, the Council proposes to remove the green barrier designation to the east as there is limited development pressure, the settlement boundary policy is sufficient and the designation would duplicate other policy controls. However, despite a very similar context, and indeed similar conclusions, the western part of the designation will be retained. This approach appears to be inconsistent with the only difference being the topography between the two areas. The Council considers that the more flat and open land to the west is sufficient justification for the difference in approach. Yet the council has provided no visual or	encroachment. It is recognised that this does not necessarily mean that such a designation shouldn't be retained in principle and further consideration is required. The Council's methodology provides five further matters for consideration: • "not be designated where normal open countryside policies would be sufficient • not be drawn wider than necessary to achieve their purpose • be drawn where there is significant and sustained development pressure • not unnecessarily duplicate other policy designations • not need to possess any intrinsic inherent landscape, nature conservation or other quality." Having reviewed the Council's evidence base in detail, the Council proposes to remove the green barrier designation to the east as there is	lower part of Gronant, which is also a Tier 3 Sustainable Settlement, physically abuts the green barrier. Much of this green barrier is bounded by built development with caravan related development along much of its northern boundary, Talacre to the north east and development at Tynmorfa along part of its southern edge. This area has seen pressure for caravan related development and it is considered that given the uniqueness of the coastal landscape, the retention of the green barrier is justified

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			other evidence but still recognises otherwise that the control of development can be met through other policy designations. There is no evidence to suggest there is significant or sustained development pressure which the Council describes as comprising UDP omission sites, LDP candidate sites and alternative sites and planning applications or pre-application enquiries.	limited development pressure, the settlement boundary policy is sufficient and the designation would duplicate other policy controls. However, despite a very similar context, and indeed similar conclusions, the western part of the designation will be retained. 				candidate sites and alternative sites and planning applications or pre-application enquiries.	
875	EN11: Green Barriers	Object	Objection: An extent of land between Bannel Lane and Chester Road, Buckley is proposed for removal from the Green Barrier, as a result of the Green Barrier review. Whilst this is supported in principle, we are of the view that the extent of land needs to be increased to include all land up to Bannel Lane, which acts as a natural line of delineation. It is submitted that the land on the north east side of Bannel Lane is read **as a whole**. Whilst in the ownership of two parties, the land on the ground is maintained / managed as one and presented physically accordingly. There is a distinct boundary line to the east, comprising a wooded area and the ribbon development on the southern side, up to and including Bannel Lane itself, acting as a natural boundary line. Accordingly, all of the land up to Bannel Lane should be excluded from the Green Barrier designation. We request the opportunity to present further evidence, including a landscape review, at the Examination, if so required.	An extent of land between Bannel Lane and Chester Road, Buckley is proposed for removal from the Green Barrier, as a result of the Green Barrier review. Whilst this is supported in principle, we are of the view that the extent of land needs to be increased to include all land up to Bannel Lane, which acts as a natural line of delineation. Objection It is submitted that the land on the north east side of Bannel Lane is read as a whole. Whilst in the ownership of two parties, the land on the ground is maintained / managed as one and presented physically accordingly. There is a distinct boundary line to the east, comprising a wooded area and the ribbon development on the southern side, up to and including Bannel Lane itself, acting as a	Not accepted. The objector has proposed the site as a housing allocation in HN1 (id 876) (id945) and the response to that objection should be read in conjunction with this response on the green barrier. The candidate site assessment background paper clearly sets out that the site was considered suitable in principle for housing development and that a drawing back of the green barrier would not undermine its function or role. However, the site was not proposed as an allocation on account of the inability of the respective landowners to sufficiently evidence or agree on the site's availability and deliverability. The objector has proposed that the whole of the land between Chester Road and Bannel Lane, including the disputed portion of green barrier is allocated for housing, and the Council has responded to this separately in its response to id876 regarding policy HN1. In drawing back the green barrier, and considering the sites development potential, the Council was concerned about the desirability of retaining the rural character of Bannel Lane and its hedgerows by retaining a small part of the green barrier on the north side of Bannel Lane. This would serve to prevent a vehicular access onto Bannel Lane and the urbanising effect that this would bring and it would also prevent the appearance of prominent ribbon development extending along Bannel Lane towards the existing dwelling Glan Morfa. The boundary of the revised green barrier seeks to follow the short length of hedgerow field boundaries between Haulfryn and the boundary of the Principal Employment Area. The boundary of the green barrier is considered to be logical and defensible and justified in seeking to retain the openness of land alongside Bannel Lane.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				natural boundary line. Accordingly, all of the land up to Bannel Lane should be excluded from the Green Barrier designation. We request the opportunity to present further evidence, including a landscape review, at the Examination, if so required.	
978	EN11: Green Barriers	Object	This is based upon a crude review/assessment that is not fit for purpose; Para 20.41 claims it has been robust but it is far from this.	This is based upon a crude review/assessment that is not fit for purpose; Para 20.41 claims it has been robust but it is far from this.	Not accepted. This objection is promoting land at Old Warren, Broughton and comments that the green barrier is unsound. However, the land to the north of Old Warren and west of the A5104 is not designated as green barrier either in the adopted UDP or the LDP. It would appear that the objector is confused and has included reference to the green barrier and the motivations behind the review, in error
996	EN11: Green Barriers	Object	This is based upon a crude review/assessment that is not fit for purpose; Para 20.41 claims it has been robust but it is far from this.There is no sound justification for the continued Green Barrier designation (in its current form) between Mold and Gwerymynydd.	This is based upon a crude review/assessment that is not fit for purpose; Para 20.41 claims it has been robust but it is far from this.There is no sound justification for the continued Green Barrier designation (in its current form) between Mold and Gwerymynydd.	Not accepted. The objector has sought the allocation of the site for housing and the Councils response to policy HN1 (id991) should be read in conjunction with this green barrier response. The site was submitted as an omission site as part of the UDP but the Inspector did not recommend inclusion of the site for housing development. The Inspector commented 'The objection site consists of 2 fields and is an integral part of the open countryside in both character and appearance. As such it is part of the rural setting of Mold and part of a narrow neck of prominent countryside between Mold and Gwernymynydd which is designated as green barrier in order to prevent the coalescence of the 2 settlements. Because of its size, location and topography development on it would be far more intrusive in the rural area than HSG1(18) to the east of Ruthin Road which is more modest in scale and not as prominent. and 'At present the housing area to the north east provides a firm defensible boundary. And given that my conclusions in the background paragraphs above indicate that

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					there is no need for the further release of greenfield sites to satisfy the housing demand in either the County or the town, I do not consider either the settlement or green barrier boundaries should be redrawn to enable a framework for development.' The UDP Inspector clearly considered that the green barrier was justified and necessary. This is considered to remain the case with the LDP as set out in the Green Barrier Background paper. Neither the UDP nor the LDP provides 'blanket coverage' by green barriers. In line with guidance in PPW10 the existing green barriers have been reviewed against the criteria in PPW. It is the case that the draft NDF has raised the issue of designating a green belt for Wrexham and Deeside and representations have been made by FCC on the draft NDF. The vehicle for designating any such green belt is through the development of a Strategic Development Plan. It would be entirely inappropriate to seek to pre-judge what form and extent such a green belt might take. Instead the Plan has sought to retain green barriers in a manner which protects key tracts of open land whilst making sufficient provision for development to meet the Plans housing requirement. The review has assessed each existing green barrier (and those proposed as part of candidate site submission) against the criteria in PPW10. Despite raising concerns with revisions to green barriers relating to BUC030 and EWL017/020 the objector offers no evidence as to why these are inappropriate or harmful. Whilst the objection site is only a small portion of the overall green barrier, it is located at the most important section of the green barrier between the two settlements of Mold and Gwernymynydd adjacent to the A494(T) and A5119. Green barrier designation is not based on the 'attractiveness' of land or whether it has any 'intrinsic landscape quality', or 'historical features' but instead is based on the essential quality of the openness of land. The objection site would erode the green barrier between the two settlements and would reduce the green barrier substantially. The

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					existence of built development (when viewed in plan form) on the southern side of the A5119 Ruthin Road, is not considered to set a precedent for the release of the objection site from the green barrier on the northern side of the A5119. The Llys Ambrose / Maes Glas development does not have its own vehicular access onto the A5119 as it was accessed through the previous phases of development. The built development is set behind a grass verge and mature hedgerow and trees and is not visually prominent. By contrast the objection site is bounded by a footway and low stone wall, with little in the way of landscaping and gives the site a visual prominence and sense of openness when viewed from the A5119. Development of the objection site would represent a harmful encroachment into and significantly erode the green barrier and risk to coalescence, when compared with the St Marys Park site. The objection site would represent an extension to the built form of Mold which is not considered to be logical. It cannot be described as 'infill' development. As previously described the Llys Ambrose development is well screened and does not represent a precedent for development on the objection site. At the northern end of the objection site is 'Parc Plas Aney' which is a large house set in large grounds. It extends into open countryside but is quite distinct from the form and pattern of estate type development which represents a logical boundary with which to delineate the settlement boundary and green barrier. The objection site will significantly reduce the gap and contribute to the coalescence of the two settlements. Each of the detailed points of the objector are commented on below: The objection site may account for only part of the overall green barrier but it is located at the most prominent part of the green barrier and at the most important part of the gap between Mold and Gwernymynydd. The UDP allocated land at Llys Ambrose in the form of an extension to the St Marys Park development. The UDP Inspector

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					considered this allocated site alongside the omission site (now the application site). The UDP Inspector clearly identified that it was of a different character from the omission site, and referred to its development being 'intrusive'. Although the development of the site would not result in the direct coalescence of Mold and Gwernymynydd, it would significantly erode the gap and undermine the objective of the green barrier in preventing coalescence. The presence of development on the eastern side of Ruthin Rd (Llys Ambrose and Maes Glas) does not automatically mean that development on the western side of Ruthin Rd is acceptable. Furthermore, the presence of development at Plas Aney does not justify the applicant's approach of simply drawing a line from development at Llys Ambrose to development at Plas Aney. Plas Aney is a small group of residential units set within extensive grounds and which is completely different from the urban form on the south western edge of Mold. The LDP and the earlier Mold Town Plan has sought to take a more holistic approach to the urban form of Mold and has concluded that the most suitable and logical means by which Mold can be expanded is the north western part of the town. By contrast the agents approach to managing urban form is to simply draw a line between two developments. This is commented on further above. It is not necessary for land to have any intrinsic landscape, historic or other value to warrant designation as green barrier. The application site is of a completely different character from the Llys Ambrose development. The latter is well screened by the grass verge and hedgerow / tree roadside boundary and its 'outer' edge is defined by a distinct change in levels and a line of mature trees. By contrast, the application has a much more open feel created by the low stone roadside wall and views across the site. The UDP Inspector noted that the site had a different character than the allocated site at Llys Ambrose and that development would be more intrusive. The site clearly adds to the open setting of the settlement. When travelling in to Mold it provides a setting to the present well defined edge to built development and when travelling out of Mold it affords views across the wider open countryside thereby clearly defining the setting of the Town in either context.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The Green Barrier Background Paper is looking at the whole green barrier and not just the objection site. The 640m is a measurement of the shortest straight line distance between the edge of Gwernymynydd and the closest built development at Mold which is at Llys Ambrose. However, the green barrier extends further than this up to the edge of built development at Lon Cae Del and Lon y Berth. The development of the site would reduce the narrow gap by approximately 160m on the northern side of Ruthin Rd. It must also be noted that there are other candidate sites seeking development in this part of Mold and this includes MOL005 which promotes a further 8ha of land directly to the west of the application site. There is clearly persistent development pressure in this part of Mold which would significantly erode the gap between it and Gwernymynydd. The key point is that the green barrier is prominent alongside the junction of the A494(T) and the A5119. When viewed from the A5119, which is a key route into Mold, the openness of the site and wider agricultural landscape is evident. The objection site, with its low boundary wall to the road has an open character and appearance which is highly visible and this adds to its openness. The fact that Gwernymynydd is in an elevated position and that the green barrier runs alongside Ruthin Road and comprises rising land, emphasises the need to retain this prominent and important green barrier. The objection site lies adjacent to Ruthin Rd and is the most prominent part of the green barrier. Whilst in terms of land area, its loss may be modest, the impact on the narrowest part of the green barrier is far greater in terms of impact. The existence of development at Llys Ambrose on the opposite side of Ruthin Rd does not set a precedent for the development of the objection site as the two are entirely different in character and appearance. The Tros y Wern development involved the redevelopment of existing farm buildings for a zero carbon type sustainable development. Its removal from the green barrier is of a completely different scale than that sought by the objector.
1134	EN11: Green Barriers	Object	Pen-y-ffordd Specific – there is no green barrier on the land east of Vounog Hill, the view over which defines the character of the	Pen-y-ffordd Specific – there is no green barrier on the land east	Not accepted. The only settlement to the east of Penyffordd / Penymynydd is Higher Kinnerton which features in the same tier of the settlement hierarchy i.e. in the third tier of ‘sustainable

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			village for many or west of the A550. This objection relates to candidate site PEN0030 which sought a green barrier on the eastside of the settlement. The objector seeks the inclusion of the following candidate sites and alternative sites as part of this green barrier - PEN003, 006, 011, 013, 128, 045AS, 046AS, 047AS, A48AS, A50AS, 051AS, 052AS, 053AS, 055AS, 056AS, 057AS. This is important agricultural land that needs protection in the form of a green barrier and disagrees with Council's assessment .	of Vounog Hill, the view over which defines the character of the village for many or west of the A550.	villages'. Given the amount of intervening open land as a result of the distance between the two settlements, a green barrier is not considered necessary or appropriate as there is little likelihood of coalescence of the two settlements The Deposit Plan has a strategic mixed use allocation at Warren Hall which has included a modest westwards and southwards extension of the site, from that in the UDP. The extension extends up to Kinnerton Lane which represents a firm and defensible boundary, given the road and the line of mature trees along the edge of the allocation. The distance between the edge of this allocation and the edge of built development at the White Lion site is just under 1km. However, the north western part of the Warren Hall strategic site at the junction of the A5104 and Kinnerton Lane, will remain open from development due to flight path restrictions on the height of development. Penyffordd / Penymynydd has seen significant development pressure as a result of the Councils inability to demonstrate a 5 year housing land supply within the terms of TAN1. However it is not considered that there is any likelihood of the coalescence of Penyffordd / Penymynydd with Warren Hall, which is a stand-alone strategic site within well-defined physical boundaries. The presence of the open space and ecological mitigation area (outside settlement boundary) alongside the eastern edge of the White Lion housing development, demonstrates a clear intention to prevent further eastwards expansion of development eastwards along the A5104. In between the Warren Hall site and Penyffordd is 'Warren Dingle' which is a wildlife site and located just to the south of the A5104. This important landscape and ecological feature would also assist in maintaining a gap between settlements and the Warren Hall development. Given the distance between Penyffordd / Penymynydd and the Warren Hall strategic site and Higher Kinnerton,and the nature of the intervening countryside, it is not considered that there is any likelihood of coalescence between the two.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1154	EN11: Green Barriers	Object	Penyffordd Specific – there is no green barrier on the land east of Vounog Hill, the view over which defines the character of the village for many or west of the A550.	Penyffordd Specific – there is no green barrier on the land east of Vounog Hill, the view over which defines the character of the village for many or west of the A550.	Not accepted. 					the intervening countryside, it is not considered that there is any likelihood of coalescence between the two.
1285	EN11: Green Barriers	Object	The representation requests the revision of the Green Barrier Boundary and Settlement Boundary adjacent to the Main Settlement of Mold to exclude land at Pen Y Bont Farm from the Green Barrier and include it within the Settlement Boundary for Mold. It is not considered that there is a 'demonstrable need' (as required by PPW para 3.60) to include the site at Pen Y Bont Farm within the green barrier boundary as its enclosure by existing built form/highway to the north and east fundamentally prevents encroachment towards Mynydd Isa. Likewise, in respect of urban form, the site's enclosure by highways and existing built form (including the pub and PFS adjacent to the Wylfa roundabout) means that it presents a logical rounding off of the existing settlement of Mold. Section 4 of the background paper 1 clarifies that the safeguarding of the countryside "does not mean that every single urban edge requires a green barrier to prevent encroachment, but more a consideration of settlement form and the nature of the urban edge and adjoining countryside" and furthermore, that protection of the urban setting applies to particularly open or sensitive edges. In both respects, enclosure of the site by the raised bypass to the east and associated roadside vegetation means that the purpose of the green barrier designation would not be harmed by de-designation of the Pen y Bont Farm land.	The development of this site will not result in coalescence of settlements and the gap between Mold and Mynydd Isa will be retained – as such, it is considered that a review of the green barrier should be undertaken as part of the LDP review process (as advised within PPW) to allow the logical rounding off of the settlement of Mold (and to facilitate the highly sustainable development of the land).	Not accepted. The objector has proposed the site for housing in respect of policy HN1 (id 653) and the Council's response on that objection should be read in conjunction with this green barrier response. It should be noted that another candidate site (MOL019) related to this site which includes the whole of the Peny Bont site extending to Woodlands Rd. The Objection site does not include a strip of land alongside Woodlands Rd as it is not within the control of the objector. As referenced in the Council's response on HN1 the Objection site does not relate well to existing built form and the settlement boundary and the exclusion of an intervening strip of land merely adds to its importance as open countryside and green barrier. The site sits within the green barrier between Mold and its outlying settlements at the narrowest part of the green barrier between Mold and Mynydd Isa. The settlement boundary for the town follows a strong defensible line of existing built development at Woodlands Road. Successive development plan Inspectors and a planning appeal Inspector have concluded that the site forms an integral part of the green barrier between Mold and Mynydd Isa. Adopting a sequential approach it is entirely inappropriate to seek to develop land within a green barrier ahead of land to the north west of Mold which is not within a green barrier. Given the size of the Candidate site of 11.6 ha, this large proposed housing development would have a significant impact on the green barrier Mold. A sequential approach has been used to consider how Mold should grow in the future and what impact that growth would have on the town and surrounding area. An Allocation has been made to the north west of the Mold in an area where there is no green barrier designation. The Mold Town Plan also identified the north west part of Mold as being the least constrained option for future growth.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			The development of this site will not result in coalescence of settlements and the gap between Mold and Mynydd Isa will be retained – as such, it is considered that a review of the green barrier should be undertaken as part of the LDP review process (as advised within PPW) to allow the logical rounding off of the settlement of Mold (and to facilitate the highly sustainable development of the land). Pen Y Bont The Background Paper 1:"Green Barrier Review" sets out the methodology of designation at section 4 and assesses the Mold - Mynydd Isa / Sychdyn / New Brighton green barrier from page 16. The green barrier is assessed as meeting all but the urban regeneration purpose of designation. It is not considered that there is a 'demonstrable need' (as required by PPW para 3.60) to include the site at Pen Y Bont Farm within the green barrier boundary as its enclosure by existing built form/highway to the north and east fundamentally prevents encroachment towards Mynydd Isa. Likewise, in respect of urban form, the site's enclosure by highways and existing built form (including the pub and PFS adjacent to the Wylfa roundabout) means that it presents a logical rounding off of the existing settlement of Mold. Section 4 of the background paper 1 clarifies that the safeguarding of the countryside "does not mean that every single urban edge requires a green barrier to prevent		The Pen Y Bont site is well defined by the A494(T), Chester Road and Woodlands Rd. However, its size gives it the character, appearance and feel of open countryside in its own right. The extensive views afforded to the north and east across wider open countryside gives it a sense of openness and a visual link to that wider open countryside. It is a large area of open land which warrants inclusion within the green barrier given it plays an important role in keeping the separation between Mold and Mynydd Isa. At the UDP inquiry the Inspector considered the site and commented in paragraph 11.126.16. ''With regard to the objection site I accept the green barrier is severed by the bypass, but given the scale of the site and its rural appearance I do not agree that it is seen as an integral part of the built up area. It is clearly part of the countryside and contributes towards the gap between settlements. Despite It's street lighting and petrol filling station my site visit confirmed that the roundabout is perceived as a being within the rural not urban area. I indicate above that at some time in the future the land may prove suitable for development, but that does not to my mind justify its deletion from the green barrier given the present circumstances where it forms an integral part of the gap between settlements and prevents encroachment into the rural area. Until such time as the situation is reviewed the development off Woodlands Road provides a firm defensible boundary.'' This conclusion still stands today. Although not recent, in 2002 there were 4 planning applications and subsequent appeals on the site Appeal Ref APP/A6835/A/00/1045870, 1048077,1050355 and 1051448. Dated 16/05/2002, this indicates that pressure for development of this site has been ongoing for many years. Whilst planning applications and appeals are indicators of significant pressure on land, omission and candidate sites are also relevant as they clearly show the intention of landowners and developers to develop sites. As previously stated, a sequential approach to choosing housing sites will look at all designations and site conditions in selecting suitable housing sites. Sites which are not

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			encroachment, but more a consideration of settlement form and the nature of the urban edge and adjoining countryside" and furthermore, that protection of the urban setting applies to particularly open or sensitive edges. In both respects, enclosure of the site by the raised bypass to the east and associated roadside vegetation means that the purpose of the green barrier designation would not be harmed by de-designation of the Pen y Bont Farm land. A further aspect of the methodology set out in the background paper relates to there being significant development pressure. This is presumably to address the PPW requirement that green wedge (and green barrier) designations should only be where "alternative policy mechanisms, such as settlement boundaries, would not be sufficiently robust". However, the background paper inappropriately defines "significant pressure" as including LDP candidate sites and omission sites and this is all the Council are able to call in aid of in respect of the Mold - Mynydd Isa barrier. We are not aware of any applications or appeals on the site the subject of these representations and do not consider participation in the development plan process as comprising 'significant development pressure'. The background paper 1 assessment of the green barrier breaks it down into constituent parts. In respect of Mold – Mynydd Isa it is concluded that "In terms of development options for Mold there is land on the north western edge of the town which is not		within the green barrier and do will not result in the erosion of an important gap between settlements will obviously be sequentially preferable to a site which has those constraints. Mold Town Plan, independently drawn up by the Mold Town Council, has also identified the land to the West of Mold for potential housing sites. Although this document does not have statutory weight as supplementary planning guidance, it does give a strong indication of how the local community consider the town should develop. This is a relevant evidence base and material consideration which has helped to guide decisions made on the LDP by the Council. In terms of a physical boundary to the green barrier and the settlement, the Council is of the opinion that the existing development off Woodlands Road provides a firm and defensible edge to the settlement boundary and the start of the green barrier. The objection site comprises a large wedge of farmland which is therefore agricultural in appearance. It relates more to the countryside and is open in character. As such it is appropriately included in the green barrier. Whilst the line of the A494(T) by pass provides a firm outer boundary to development in some parts of Mold, this is largely where industrial development is located. The Council has also taken a consistent approach to the green barrier at the south western edge of Mold where the green barrier included land on the inner side of the A494(T) in order to safeguard the gap between Mold and Gwernymynydd. The above points are backed up by the Inspector's decision letter dated 16th May 2002 in respect of the Pen y Bont Farm appeal Inquiry. The Inspector said: "In my opinion, the development of the open fields would defeat the objective of the green barrier to prevent the coalescence of Mold and Mynydd Isa……"; and "In the absence of a considered need to release the land through the development plan process, I consider that Woodlands Road forms an appropriate edge to the built–up area, and the open countryside between settlements should remain protected by the green barrier designation." (Appeal Ref

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			affected by green barrier designation. There is no justification for a significant incursion into this green barrier when land is available outside of the green barrier." However, this is no justification for allocation and is not even claimed to be part of the methodology in the background paper. The development of this site will not result in coalescence of settlements and the gap between Mold and Mynydd Isa will be retained – as such, it is considered that a review of the green barrier should be undertaken as part of the LDP review process (as advised within PPW) to allow the logical rounding off of the settlement of Mold (and to facilitate the highly sustainable development of the land). In summary, Paragraph 3.66 of PPW confirms that "Green Belt and green wedge boundaries should be chosen carefully using physical features and boundaries to include only that land which it is necessary to keep open in the longer term". As set out above, it is not considered necessary to include Land at Pen y Bont Farm within the green barrier for the purposes of coalescence, urban form, countryside encroachment or setting.		APP/A6835/A/00/1045870, 1048077,1050355 and 1051448. Dated 16/05/2002). In conclusion, the scale of the site gives it the character and appearance of open countryside and the settlement boundary is well defined by Woodlands Road. Given the proximity of the site to Mynydd Isa the development of the site would erode a significant part of the narrow and important gap between settlements. In the light of significant pressure for development over a long period of time in the form of past appeals, omission sites and at the present time the Candidate site submission, the retention of the green barrier is reasonable and justified. This is particularly the case when land to the north west of Mold is sequentially preferable as it lies outside of a green barrier.
125	EN11: Green Barriers	Support	I, and other residents of Northop have had a close interest in the allocation of green barriers since the 2003 Unitary Development Plan era and have fully supported Flintshire County Council's Planning Policies throughout.	On candidate site NOR37 the site has been marked in error showing the red boundary line within my garden. This land was purchased by me in December 2012 and is registered in my name by the Land Registry. However, it is shown correctly on NOR027	Support noted

901	EN11: Green Barriers	Support	Also, SUPPORT the Green Barrier designation for Land adjoining Wepre Brook and Killins Lane that is proposed in the LDP.		Support noted
1263	EN11: Green Barriers	Support	Supports the revised Green Barriers, particularly regarding the Broughton and Bretton settlements. Evidently, locations around these settlements are ideally placed to accommodate further growth, as recognised in the Green Barrier Review. Bloor welcome the removal of their site at Bretton Road from the Green Barrier on the basis is makes no overall contribution to the purposes and extent of the barrier in this location. The site's removal from the Green Barrier demonstrates that in principle it can be brought forward for development.		Support Noted.
803	EN12: New Development and Renewable and Low Carbon Energy Technology	Object	Objects to the current wording of Policy EN12. The policy requires the submission of an Energy Assessment to determine the feasibility of incorporating low carbon or renewable energy technology or connecting to nearby renewable or low carbon energy sources and networks for non-residential development of 1,000 sqm floorspace or more. It is suggested that the floorspace threshold should be increased to 2,500 sqm, which is considered to be a more reasonable reflection of the scale of development which could support its own low carbon or renewable energy source (Soundness Test 2).	Object to the current wording of Policy EN12. sources and networks for non-residential development of 1,000 sqm floorspace or more. It is suggested that the floorspace threshold should be increased to 2,500 sqm, which is considered to be a more reasonable reflection of the scale of development which could support its own low carbon or renewable energy source (Soundness Test 2).	Not accepted. Research identifies that a figure of 1000sq m or more for commercial development is used in several development plans across England and Wales. In the context of the importance attached by Welsh Government in PPW10 to renewable and low carbon energy and climate change it is not considered appropriate to amend the policy threshold for commercial development

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
899	EN12: New Development and Renewable and Low Carbon Energy Technology	Object	PGNGL is concerned with Policy EN12. PGNGL support the aims and objectives of EN12. However PGNGL consider that the policy is unnecessarily onerous. The wording 'requires' that development maximises the potential for renewable or low carbon energy technology to meet energy demands. PGNGL consider that the wording should be amended to 'encourage' or 'promote' and this would be more consistent with wording in PPW. The Plan in its present form is not effective or appropriate and is not consistent with national policy. It is considered that the Plan could fail to deliver sustainable development in accordance with the policies in the PPW. In these circumstances, we do not consider the Flintshire Local Development Plan, in its current form, to be sound. However, we consider that with the suggested amendments to the Policy to 'encourage' rather than 'require' the Plan can be found sound. PGNGL will continue to work with the Council to develop appropriate modifications to the Local Development Plan. However, we consider that with the suggested amendments to the Policy to 'encourage' rather than 'require' the Plan can be found sound.	To overcome the objection and address soundness matters, the Council should: • Amend wording in policy EN12 to 'encourage' rather than 'require'.	Not accepted. In terms of energy, Welsh Government sets the scene in para 5.71 of PPW10 which states quite clearly 'The planning system plays a key role in delivering clean growth and the decarbonisation of energy, as well as being crucial in building resilience to the impacts of climate change. The transition to a low carbon economy not only brings opportunities for clean growth and quality jobs, but also has wider benefits of enhanced places to live and work, with clean air and water and improved health outcomes'. In para 5.7.8 of PPW10. Welsh Government state 'The planning system should: • integrate development with the provision of additional electricity grid network infrastructure; • optimise energy storage; • facilitate the integration of sustainable building design principles in new development; • optimise the location of new developments to allow for efficient use of resources; • maximise renewable and low carbon energy generation; • maximise the use of local energy sources, such as district heating networks; • minimise the carbon impact of other energy generation; and • move away from the extraction of energy minerals, the burning of which is carbon intensive'. The policy seeks to ensure that new development maximizes the potential for renewable or low carbon development and that for development above a certain size will require an energy assessment. In the context of the importance attached by Welsh Government in PPW10 to energy and climate change considerations, it is considered that the policy is wholly appropriate.
68	EN13: Renewable and Low Carbon Energy	Object	The proposed solar farm at Crump's Yard lies on the site of Connah's Quay waggon works and may require assessment prior to development		Whilst the Council notes the point being made by the objector, the representation does not appear to be saying that development of a solar farm at Crump's Yard is inherently constrained. The site is now the subject of an application, such is the Council's positive desire to move forward with the development of this solar farm in

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development				order to contribute towards the Welsh Government's ambitions in terms of carbon reduction and the targets identified in PPW10. CPAT will have been consulted as part of the application under consideration to allow more detailed comments to be submitted, than the broad statement made during the LDP consultation. Given that the whole of the site is not proposed to be developed for the proposed solar farm there are opportunities to design the layout of the solar farm that, if necessary, avoid any conflict with heritage assets. It is also the case that as the solar farm will use a surface mounted anchoring system, there is very little if any ground invasive work proposed (beyond cabling) that may impact significantly on any sub-surface heritage remains, and any surface features are capable of being left un-disturbed, such is the mounting system for the solar panels. A heritage impact assessment has been prepared to support the application and in relation to the Wagon Works has assessed the significance and potential impact as follows: "The site of a late 19th century Chemical Works and subsequent early 20th century Wagon Works and Saw Mill are within the Application Site. The Chemical Works was partially demolished in the late 19th/ early 20th century with one building retained and used as a Wagon Works. That in turn was demolished in the late 1950's/ early 1960's when the Wagon Works was redeveloped. The Wagon Repair Workshop was extended in the 1980s but went out of use and all of the buildings associated with it were demolished by the early 2000s. The Application Site has a high potential for remains associated with this activity to be present. Any such remains would be of low to moderate value, and the magnitude of change would be low to moderate given the nature of the development and predicted impact below ground. A minor adverse effect is therefore predicted".
345	EN13: Renewable and Low Carbon Energy Development	Object	On the interactive proposals map, the land on eastern edge of New Brighton is covered by policy EN13-Renewable Energy. We appreciate the intention of this policy but would question why our clients land has been specifically included as the site has never been promoted for such uses in the past. We request further clarification on this.		Noted. The Council's approach to identifying search areas for potential development of renewable energy follows the approach set out in PPW10 and the Welsh Government renewable energy toolkit. Further explanation of the approach taken, and what the Indicative Local Search Areas are and are not, is contained in LDP background paper 13-Renewable Energy. In essence the search areas are broad and indicative, are not finite allocations or designations in the plan, and represent the outcome of the toolkit

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					prescribed sieve mapping exercise to screen out constrained areas of the county, leaving those least constrained and therefore with some potential to be looked at for the development of renewable energy. As the background paper refers, they are the 'first places to look, but not the only places'. Equally given their number and extent, there are far more search areas than is likely to come forward as development from the renewables market, and as the sieve mapping exercise referred to did not for practical reasons include consideration of land ownership, if an area of land within a search area (such as that your client has an interest in) is not available for renewable development, then proposals for a solar farm to come forward on that land seems unlikely.
860	EN13: Renewable and Low Carbon Energy Developme nt	Object	EN13 renewable and low carbon energy development 12.48 the allocation of 18 sites where solar arrays can be sited across the county in the LDP is excessive. They can be an intrusive visual eyesore on the landscape, the sites allocated would mainly take up agricultural land and be seen from a distance due to the rolling nature of the sites. Rather than take up more land put solar PV on every new house roof, and give incentives for solar to be added to existing houses. The NDF indicates an area to the north west of Wrexham for solar	the allocation of 18 sites where solar arrays can be sited across the county in the LDP is excessive.	Whilst the Council notes the point being made by the objector, they appear to have misinterpreted the nature and purpose of the Solar Indicative Local Search Areas. As is set out clearly in the explanation contained in supporting background paper 13: Renewable Energy (para 2.20) the ILSAs are not (amongst other criteria) – "a series of allocations or designations specifically promoting renewable technologies" or "the likely maximum extent of renewable development". The background paper then goes on to explain that the search areas are simply the outcome of following the Welsh Government's prescribed toolkit for assessing renewable energy potential and represent the "least constrained" parts of the County having followed a sieve mapping exercise to screen out other areas that are broadly constrained. The search areas are therefore very broad and indicative, acting as a guide to the potential to develop solar energy but are the first places to look, but not the only places. It is self-evident that any detailed proposals that are submitted within a search area, or indeed elsewhere, will be subject to the detailed scrutiny required by the development management process including any potential conflicts including unacceptable landscape impact, and that is why policy EN13 contains a clear set of criteria against which any proposals within a search area would need to be assessed. Best and most versatile agricultural

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					land for example, has been one of the considerations used to screen out grades 1, 2 or 3a land as being suitable for inclusion in the areas of search, and criteria ii-v cover various aspects of locational and landscape impact. Further refinement of the ILSAs is underway which seeks to narrow down their broad extent, based primarily on a landscape sensitivity assessment, but where the resulting areas will still represent an initial, indicative guide for the development of solar energy that will be subject to the need for more detailed assessment. Policy EN12 already included the requirement to consider the inclusion of renewable energy generating technology such a roof mounted solar in new development, but this alone would not be sufficient to meet the Welsh Government targets and ambitions for renewable energy generation and carbon reduction set out in PPW. The objector should note that the areas of search indicated in the draft NDF is substantially in the Wrexham County Council area, but also extends into Flintshire.
1058	EN13: Renewable and Low Carbon Energy Development	Object	EN13.1 - Crump's Yard, Dock Road The proposed allocation would consist of a solar farm. The site lies in a flood risk zone C1 and as such, we consider further assessment with regards to flood risk should be undertaken for the site prior in order to evidence suitability and deliverability. The site lies partially within Zone C1 as defined by the DAM. The NRW Flood Risk Map confirms that the site lies partially within the 0.5% Annual Exceedance Probability (AEP) event flood outline. Your Authority's Strategic Flood Consequences Assessment (SFCA) also shows the site to be at risk when considering a breach event at Pentre and Queensferry, for the 0.5% AEP event, with an allowance for climate change. Given the site's Zone C1 designation, and the nature of the proposal, a Flood	EN13.1 - Crump's Yard, Dock Road The site lies in a flood risk zone C1 and as such, we consider further assessment with regards to flood risk should be undertaken for the site prior in order to evidence suitability and deliverability. FCA needed.	Whilst the Council notes the position of NRW in relation to this site, as the site is now subject of a planning application an FCA has been prepared to support the site's development as a solar farm and the comments of NRW have been sought and taken into account in the consideration of the application. The Council considers it has clearly evidenced the suitability of the site and in particular the ability to avoid and mitigate the impacts of flood risk to the site and the proposed development. Subject to permission being granted, there will be no need to take this site forward as an allocation in the plan and the proposals map will be amended accordingly following examination and an update of the planning context of the site. The Council is disappointed to note the stance taken by NRW and the tension that seems to exist with the wider positive intent of other Welsh Government policy and ambition in relation to promoting all opportunities for renewable energy development and carbon reduction. This conflict makes it difficult for the Council to set a clear direction for local policies and the Council will continue to work with NRW to try to resolve these tensions with and between national policy areas.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Consequences Assessment (FCA) would need to be prepared in support of the allocation (Section 10 TAN15) in order to demonstrate that the proposals are deliverable from a flood risk perspective. In the absence of a FCA we object to this allocation, until sufficient evidence is provided to demonstrate that flood risk can be managed in accordance with TAN15.		
1161	EN13: Renewable and Low Carbon Energy Development	Object	Category C - Renewable Energy A proportion of the authority is within a Priority Area 4 for Solar in the draft NDF. On this basis the Authority should ensure that it is in general conformity with the NDF when adopted. The REA supporting Policy EN13 is broadly in line with national policy and the toolkit methodology which concludes there are no suitable wind Local Search Areas (LSAs) but there is significant potential for solar. The Council has allocated 18 Indicative Solar Local Search Areas. The authority has also allocated specific solar PV farms at Crumps Yard, Connah's Key and Castle Park. We have the following comments: The proposed LSAs for solar PV allocated by this policy should be specifically listed in the plan together with the contributions from each site. The 'actual' solar allocations should be separated from the ILSAs within this policy as they have a different status, i.e. ILSAs are indicative/preferred areas of search, not proposed allocations. ? Policy EN13: Renewable and Low Carbon Energy Development – include the target	The proposed LSAs for solar PV allocated by this policy should be specifically listed in the plan together with the contributions from each site. The 'actual' solar allocations should be separated from the ILSAs within this policy as they have a different status, i.e. ILSAs are indicative/preferred areas of search, not proposed allocations. Policy EN13: Renewable and Low Carbon Energy Development – include the target contribution from renewable and low carbon energy from the REA over the plan period within the reasoned justification and reflect as indicators within the monitoring framework. Land at Castle Park	The Council note's the point about compliance with the draft NDF in relation to the Priority Area 4 for solar that is mostly within the Wrexham County Borough Council area, but with some of its extent in Flintshire. Given that the scale of solar development in the draft NDF is at a higher level than that defined for the ILSAs in the LDP there is not considered to be any inherent conflict in respective approaches between the NDF and LDP. The Council is concerned that there is limited detailed mapping available to precisely identify the extent of the NDF Priority Area 4, or that explains whether these areas have been derived using a toolkit approach similar to that prescribed by Welsh Government for LDPs. It is also the case that the Council has clearly explained that the ILSAs in the LDP are not prescriptive allocations as inferred, but are higher level outcome areas resulting from the toolkit 'sieve mapping' approach prescribed, and represent broad or least constrained area of the county to guide prospective solar developers to. Further work is being undertaken to refine the generating potential of these areas, involving a landscape impact assessment the outcome of which will feed into the submission documents prior to examination. The Council notes the need to include the numbered areas of search within the RJ together with their potential energy contributions and the overall REA contributions (including indicators within the monitoring framework) and the Council would have no objection to this being considered as appropriate Matters Arising Changes following examination of this policy by the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			contribution from renewable and low carbon energy from the REA over the plan period within the reasoned justification and reflect as indicators within the monitoring framework. Land at Castle Park Flint (Policy EN13.2) is allocated for Solar but overlaps (in part) with a proposed Gypsy and Traveller Allocation HN8.4 - Castle Park, Industrial Estate, Flint. This requires clarification. Can both allocations be developed for thier intended use, or would one preclude the other? See comments regarding the deliverability of Gypsy and Traveller sites (Category B).	Flint (Policy EN13.2) is allocated for Solar but overlaps (in part) with a proposed Gypsy and Traveller Allocation HN8.4 - Castle Park, Industrial Estate, Flint. This requires clarification.	Inspector. The Council will indicate prior to examination how this can be accommodated. In relation to the request to separate out the proposed solar farms into a separate policy, whilst the Council's feels that policy EN13 reads clearly and distinctly enough, and has tried to avoid creating too many policies with similar intent, as both proposed solar farms are likely to have planning permission by the time of examination, reference to them can be removed from the policy as a MAC. There are no conflicts between the proposed solar farm at castle park Flint (EN13.2) with Gypsy and Traveller allocation HN8.4 and this has already been explained in response to representation to that policy.
1189	EN13: Renewable and Low Carbon Energy Development	Object	Members are aware that the deposit plan for sustainable energy identifies the Sites for Special Scientific Interest (SSSI) on the Holway Level as a potential site for solar energy and feel it should not be included in any list, potential or not. No other SSSI has been identified as such.	Removal of SSSI at Holway Level as a potential site for solar enrgy.	Not accepted. All designation such as SSSIs were used as constraints to filter out the land they covered from inclusion in the search areas. Whilst the search area of concern may be in proximity to the SSSI there is no conflict. In addition, given that search areas are only indicative and are not definitive allocations, the developability of any of the land within the search area would be the subject of detailed planning application where any impacts on neighbouring sensitive sites or receptors would need to be properly assessed and justified, and would be the subject of consultation with the statutory bodies including NRW. NRW have not raised an issue of conflict between this search area and the SSSI.
846	EN13: Renewable and Low Carbon Energy Development	Object	- Recognises the importance of ensuring that renewable and low carbon energy generation can play a key role in Flintshire's energy generation. However, the Company considers that the unacceptable loss of amenity and accessibility to the area as stated in part ii of draft Policy EN13 should not be limited to "public" loss. The amenity of any nearby sensitive receptors, including holiday accommodation, should be protected from any adverse impacts	The following amendment to draft Policy EN13: ""…All renewable or low carbon energy proposals will be permitted provided that: i the siting, design, layout, type of installation and materials used do not	Not accepted. Whilst the Council notes the points made by the objector, the plan should be read as a whole and there are already for example other criteria within policy EN13 such as criterion iv that seeks amongst other uses to protect existing "recreation and other uses" to "continue unhindered", as well as policies elsewhere in the plan, that provide adequate consideration for the amenity concerns highlighted without the need to unnecessarily add further criteria or repeat national policy which is already a material consideration in considering any local proposals for renewable development.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			associated with renewable of low carbon energy activities, such as visual, noise and odour impacts. Failing to protect amenity risks operators not being able to attract new and repeat visitors to the local area with direct and indirect consequences for the local economy, including retaining jobs. The following amendment to draft Policy EN13: ""…All renewable or low carbon energy proposals will be permitted provided that: i the siting, design, layout, type of installation and materials used do not have a significant adverse effect on the character and features of the proposes location; ii there would not be unacceptable loss of public amenity or accessibility to the area or to sensitive receptors…" (proposed amendment underlined). Bourne Leisure considers that the proposed amendment would align Policy EN13 with national policy (PPW) which states "proposed development should be designed wherever possible to prevent adverse effects to amenity, health and the environment but as a minimum, to limit or constrain any effects that do occur. In circumstances where impacts are unacceptable, for example where adequate mitigation is unlikely to be sufficient to safeguard local amenity in terms of air quality and the acoustic environment it will be appropriate to refuse permission." (paragraph 6.7.14). The proposed amendments to draft Policy EN13 would mean that this element of the Plan would satisfy the tests of soundness.	have a significant adverse effect on the character and features of the proposes location; ii there would not be unacceptable loss of public amenity or accessibility to the area or to sensitive receptors…" Bourne Leisure considers that the proposed amendment would align Policy EN13 with national policy (PPW) which states "proposed development should be designed wherever possible to prevent adverse effects to amenity, health and the environment but as a minimum, to limit or constrain any effects that do occur. 				(paragraph 6.7.14). The proposed amendments to draft Policy EN13 would mean that this element of the Plan would satisfy the tests of soundness.	
1079	EN13: Renewable and Low Carbon Energy Development	Object	EN13: Renewable and Low Carbon Energy Development –The text indicates that no SSAs or ILSAs for wind have been identified in the county. The policy tests refer to all renewables but the following section on wind energy includes only 2 tests and do not include landscape effects. Large scale wind and solar developments require an LVIA and even small-scale schemes may require a Landscape Appraisal. The Policy is may require revision in the light of the Draft NDF. Reference should also be made to the potential for effects from offshore wind developments and the need for Seascape assessment. We welcome the clear policy intent of EN13 Renewable energy Indicative Local Search Areas (ILSA), which requires the conservation of the setting of the AONB from single and cumulative renewable energy development proposals. We however note from Background Paper 13 Renewable Energy September 2019, that the landscape and visual issues of the 18 ILSAs have yet to be reviewed, to determine which sites singularly, or in combination could be viably brought forward, without significant effects on the setting of the AONB. Should the LPA wish to have more certainty as to the viability of its proposed ILSAs, we recommend the application of landscape and visual planning analysis by a suitably qualified professional using the GLVIA	The Policy is may require revision in the light of the Draft NDF. Reference should also be made to the potential for effects from offshore wind developments and the need for Seascape assessment.	Whilst the Council notes the points made by NRW, the objector has mis-interpreted the purpose and intention of policy EN13 which, in relation to the specific point made about wind energy does not only include 2 tests of appropriateness but in fact set out two additional tests for considering wind energy, as well as the criteria i-viii that relate to ALL renewable or low carbon energy proposals that by definition include those for wind energy. These criterial clearly include landscape impacts. The two addition criteria when read are clearly and specifically related to additional impacts resulting from wind energy development. In terms of the specific reference to the AONB, whilst the ILSAs are undergoing a further landscape impact assessment this is not solely to address any impacts on the AONB as patently not all are in sufficient proximity to have an impact as inferred. In fact the AONB and a significant buffer area beyond its extent, was used as a key constraint in the Welsh Government promoted toolkit sieve mapping exercise undertaken, to screen out land likely to have an impact on the setting. Helpfully, the AONB Committee have commented supportively in recognition of this as follows: “The intention not to identify any Indicative Local Search Areas (ILSA’s) for large scale wind turbine developments is welcome. No large scale solar PV ILSA’s are shown within the AONB, and most of those outside the protected landscape will not have an adverse impact on the setting of the AONB”. In fact the committee raised concerns with just one ILSA at Hope Mountain, recommending that development on the upper slopes be precluded. This is exactly the purpose of the ongoing landscape assessment that will refine the developable potential within the search areas by referencing topography as an issue amongst other factors.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			edition, supplemented with a preliminary glint and glare assessment in the case of solar development. Considerations we would expect to see assessed: • Glint and glare effects upon views from the AONB – specifically from Offa's Dyke national trail principle peaks and locations along the length of the Clwydian Range. Viewpoints to be determined by the landscape consultant in conjunction with NRW and the AONB planning officer. • The potential effect of the ILSAs appearing as large areas of development infill, settlement coalescence and urbanisation around Buckley - notably from Moel Findeg, but also other areas that might lie within the zone of theoretical visibility. See Appendix 2 for information on: Penyffordd and Penymynydd and Castle Park		Clearly given the indicative nature of the ILSA, any proposals that were to come forward for development would also have to be subject to the normal level of scrutiny required at the development management stage, including reference of any proposal to the relevant statutory bodies including NRW and the AONB committee.
70	EN13: Renewable and Low Carbon Energy Development	Support	However the site west of Greenfield Valley at The Moor is crosses by the line of a roman road (https://www.archwilio.org.uk/arch/query/page.php?prn=CPAT46805&dbname=cpat&tbname=CORE) and may require assessment prior to development		Whilst the Council notes the point being made by the objector, they appear to have misinterpreted the nature and purpose of the Solar Indicative Local Search Areas. It would have not been possibly to identify every individual heritage asset as part of this process or define for example appropriate avoidance buffers and so on given the broad range of assets and their degree of significant or protection, and the scale at which the mapping work has been undertaken. The search areas are therefore very broad and indicative, acting as a guide to the potential to develop solar energy but are the first places to look,

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					but not the only places. It is self-evident that any detailed proposals that are submitted within a search area, or indeed elsewhere, will be subject to the detailed scrutiny required by the development management process including any potential conflicts with heritage assets, and CPAT would be consulted as statutory consultees. Further refinement of the ILSAs is underway which seeks to narrow down their broad extent, based primarily on a landscape sensitivity assessment, but where the resulting areas will still represent an initial, indicative guide for the development of solar energy that will be subject to the need for more detailed assessment.
71	EN13: Renewable and Low Carbon Energy Development	Support	However the solar farm allocation at Castle Park EN13.2 overlies the sites of the Flint Chemical Works reservoir (https://www.archwilio.org.uk/arch/query/page.php?prn=CPAT83074&dbname=cpat&tbname=CORE) which may require a photographic record prior to development		This site now has planning permission and construction is due to commence during July 2020. A heritage impact assessment was undertaken for the application site which amongst other things concluded: “There are no designated heritage assets within the application site”. It went on to say “there are 82 non-designated heritage assets within the 1km study area, 81 of which are not within the application site or no longer extant and there would be no direct effect on the asset or any effect on the setting of the asset. The former Flint Marsh reservoir is recorded on the CPAT HER but is of negligible value as a late 19th century industrial feature that has subsequently been infilled and used as a landfill site. There is a low potential for any remains with archaeological (evidential) heritage value associated with the reservoir to survive within the application site. The magnitude of impact from the proposed works would be low, in terms of impact any surviving archaeological evidence associated with the former reservoir. The significance of effect would therefore be none”. Given that the proposed solar farm is to be surface mounted on the area of the reclaimed landfill site which itself infilled the reservoir referenced it is not clear what would remain to conduct a photographic survey with or for.
73	EN13: Renewable and Low Carbon Energy	Support	However the large renewable energy allocation north east of Northop overlies several historic assets and will require assessment prior to development		Whilst the Council notes the point being made by the objector, they appear to have misinterpreted the nature and purpose of the Solar Indicative Local Search Areas. As is set out clearly in the explanation contained in supporting background paper 13: Renewable Energy (para 2.20) the ILSAs are not (amongst other criteria) – “a series of allocations or designations specifically

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development				promoting renewable technologies" or "the likely maximum extent of renewable development". The background paper then goes on to explain that the search areas are simply the outcome of following the Welsh Government's prescribed toolkit for assessing renewable energy potential and represent the "least constrained" parts of the County having followed a sieve mapping exercise to screen out other areas that are broadly constrained. It would have not been possibly to identify every individual heritage asset as part of this process or define for example appropriate avoidance buffers and so on given the broad range of assets and their degree of significant or protection, and the scale at which the mapping work has been undertaken. The search areas are therefore very broad and indicative, acting as a guide to the potential to develop solar energy but are the first places to look, but not the only places. It is self-evident that any detailed proposals that are submitted within a search area, or indeed elsewhere, will be subject to the detailed scrutiny required by the development management process including any potential conflicts with heritage assets, and CPAT would be consulted as statutory consultees. Further refinement of the ILSAs is underway which seeks to narrow down their broad extent, based primarily on a landscape sensitivity assessment, but where the resulting areas will still represent an initial, indicative guide for the development of solar energy that will be subject to the need for more detailed assessment.
75	EN13: Renewable and Low Carbon Energy Development	Support	However the large renewable energy allocation surrounding Mynydd Isa contains a number of historic assets and these will require assessment prior to development		Whilst the Council notes the point being made by the objector, they appear to have misinterpreted the nature and purpose of the Solar Indicative Local Search Areas. As is set out clearly in the explanation contained in supporting background paper 13: Renewable Energy (para 2.20) the ILSAs are not (amongst other criteria) – "a series of allocations or designations specifically promoting renewable technologies" or "the likely maximum extent of renewable development". Further refinement of the ILSAs is underway which seeks to narrow down their broad extent, based primarily on a landscape sensitivity assessment, but where the resulting areas will still represent an initial, indicative guide for the development of solar energy that will be subject to the need for more detailed assessment.
233	EN13: Renewable and Low Carbon Energy Development	Support	Policy EN13 – Renewable Energy Development: Recognition of the sensitivity of the AONB and its setting in this policy and associated proposals is fully supported. The intention not to identify any Indicative Local Search Areas (ILSA's) for large scale wind turbine developments is welcome. No large scale solar PV ILSA's are shown within the AONB, and most of those outside the protected landscape will not have an adverse impact on the setting of the AONB. The one exception is the proposed ILSA adjoining Waen Y Llyn Country Park on		The support for the avoidance of locating areas of search within or predominantly adjacent to the AONB is noted. In relation to the one area noted as of concern the committee is asked to note that the ILSAs are not absolute allocations for solar development and neither is it proposed that any development will be to the extent of the broad search areas identified. This is explained clearly in the background paper 13: Renewable energy. In addition, further work is underway to refine the developable extent of the ILSAs to determine their more likely generating potential, which is focused on landscape sensitivity assessment as advocated, which will further filter sensitive landscape receptors such as the intervisibility of the AONB. In addition, and given these areas are only for broad guidance and the 'first places to look', it is self-

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Hope Mountain. There is good intervisibility between parts of the AONB and Hope Mountain, and the committee would recommend that this ILSA be reduced to exclude the higher slopes facing the AONB. To assist in the determination of other wind turbine proposals which may come forward during the plan period, the committee would also suggest that a Landscape Sensitivity and Capacity Assessment for the county similar to that undertaken by Denbighshire and Conwy Councils would be beneficial.		evident that any proposals for solar development within these areas (or indeed outside) will need to be the subject of more detailed scrutiny at the development management stage, where the AONB Committee are statutory consultees
1049	EN14: Flood Risk		We feel the IIA assessment for the plan understates flood risk for some of the allocations and it is not clear how the IIA has been guided by the Strategic Flood Consequence Assessment (SFCA). For allocations within/partially within flood zones, the inclusion of an element of green infrastructure may not have an appreciable effect on the levels of flood risk experienced onsite. As such, we would not consider this sufficient mitigation to support amending the scoring as presented in the IIA and further evidence would be needed (see flood risk comments below). We note that allocations made in PE2 appear not to have been assessed.		Noted. The Council is presently working to address the concerns of NRW which relate to certain PE1 Employment Allocations and certain PE2 Principal Employment Allocations. The Strategic Flood Consequences Assessment has been revisited to undertake an assessment of the objection sites and the Council is proposing amended and additional policy and explanatory text wording changes to highlight the need for avoidance of flood risk through layout and design measures and requirement for detailed Flood Consequences Assessments as part of the consideration of subsequent planning applications. The IIA is a high level appraisal of the Plan and can be revisited to take account of the amendments proposed in respect of PE1 and PE2.
1050	EN14: Flood Risk	Object	Section 10 of TAN15 identifies that where the local planning authority wishes to allocate a site, and can justify such an allocation, the local planning authority will need to undertake an assessment of the consequences of flooding. This assessment should demonstrate that the consequences of flooding have been understood and are capable of being managed in an acceptable way. Where such local information has been	We welcome the SFCA that supports the Deposit Plan but note that not all allocations presented in the Plan appear to have been assessed. It would appear that the level of assessment undertaken for a	This representation is noted and the Council has commissioned consultants who undertook the SFCA to undertake further work in respect of employment allocations in policy PE1 and Principal Employment Areas in PE2. This will ensure that all the appropriate allocations / designations will be assessed and where appropriate delivery/suitability reports will be made to ensure that sites are still viable.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			produced then this should be reflected in the plan. If the consequences are considered acceptable in accordance with section 7 and appendix 1 of TAN15, the resulting allocation should include annotation of flooding as a constraint for the individual site on the proposals map and specify the policy requirements which pertain to the development of that site. This should include making it clear that in taking forward the allocation a developer will need to undertake detailed technical assessment in accordance with appendix 1, to ensure that the nature of the proposed development is acceptable, that it is suitably designed to cope with the risk of flooding, and that any funding and maintenance provision is appropriate. We welcome the SCFCA that supports the Deposit Plan but note that not all allocations presented in the Plan appear to have been assessed. It would appear that the level of assessment undertaken for a number of allocations, set out below, and in further detail in Appendix 1 have not been sufficient to provide a robust evidence base to demonstrate suitability/deliverability. Whilst we note that specific allocations were made in your previous Plan, we suggest these need to be revisited as part of the current LDP process to ensure they remain viable.	number of allocations, set out below, and in further detail in Appendix 1 have not been sufficient to provide a robust evidence base to demonstrate suitability/deliverability. Whilst we note that specific allocations were made in your previous Plan, we suggest these need to be revisited as part of the current LDP process to ensure they remain viable.	
1162	EN14: Flood Risk	Object	Category C - Flood Risk The Strategic Flood Consequence Assessment alludes to some allocations having flooding issues. In most cases the Council is content that any issues can be overcome through site layout, i.e. avoiding areas of flood risk. The Council should ensure no highly vulnerable development is allocated in C2 Flood Plain.	The LPA will need to undertake a sufficiently detailed Flood Consequences Assessment (FCA) where appropriate and relevant, and seek advice from the	The representation has been noted and the Council will take into consideration the representation and will take on board the guidance provided.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Where development is located in C1, while the principle of development may be appropriate in national policy terms, the key consideration for the LPA will be to demonstrate that allocations are suitable and deliverable in line with any mitigation measures that may be required to meet the requirements of national policy. The LPA will need to undertake a sufficiently detailed Flood Consequences Assessment (FCA) where appropriate and relevant, and seek advice from the statutory body, NRW prior to the examination. The authority should keep abreast of the emerging Welsh Government Technical Advice Note 15 (currently subject to consultation) with regards to allocations and the policy framework within the plan.	statutory body, NRW prior to the examination. The authority should keep abreast of the emerging Welsh Government Technical Advice Note 15 (currently subject to consultation) with regards to allocations and the policy framework within the plan.	
401	EN14: Flood Risk	Support	support policy.		This representation is noted and the Council welcomes the support for Policy EN14 Flood Risk.
402	EN15: Water Resources	Support	support policy		This representation is noted and the Council welcomes the support for Policy EN15 Water Resources.
667	EN15: Water Resources	Support	Policy EN15: Water Resources We support the inclusion of this policy. Safe and reliable water supplies and efficient foul drainage are essential components to any development and are a pre-requisite to development taking place. The capability of our water and sewerage infrastructure to supply and have the capacity to accommodate future growth is an important consideration when assessing proposed development.		This representation is noted and the Council welcomes the support for Policy EN15 Water Resources.
184	EN17: Developme nt of	Support	The Coal Authority is pleased to see the inclusion of this policy which identifies the requirements for development proposals in		Support is noted.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Unstable Land		respect of considering and addressing issues of land instability.		
234	EN18: Pollution and Nuisance	Object	Policy EN18- Pollution and Nuisance: This policy has the full support of the Joint Committee, notably the specific references to protecting the AONB's dark sky and the aspiration to secure formal dark sky recognition for the area. It is suggested that the policy wording could be strengthened by amending the final paragraph to include the following '…. should be considered as part of an overall landscaping scheme, kept to a minimum to avoid light pollution and be designed to be dark sky friendly. The possibility of supplementary planning guidance on this topic should also be referenced in the supporting text.	It is suggested that the policy wording could be strengthened by amending the final paragraph to include the following '…. should be considered as part of an overall landscaping scheme, kept to a minimum to avoid light pollution and be designed to be dark sky friendly. The possibility of supplementary planning guidance on this topic should also be referenced in the supporting text.	Not accepted. The policy wording clearly references the need to carefully consider lighting schemes in or near the AONB. Paragraph 12.68 of the explanation to the policy explains that this is in relation to the Dark Skies initiative. Also, the Plan must be read as a whole and policy PC3 Design seeks to ensure sensitive lighting schemes and policy EN5 provides detailed guidelines on the consideration of development proposals in the AONB. It is not considered that the wording suggested is necessary or appropriate when the Plan is read as a whole. The explanation to policy EN5 already references the AONB SPG. The intention behind the AONB SPG is that over time it can be supplemented by additional guidance on particular topics / issues. In this context a supplementary SPG addressing the issues of lighting schemes in the AONB is presently between development between AONB Officers and each LPA. It is not considered that this needs to be specifically referenced in the LDP.
804	EN18: Pollution and Nuisance	Object	The British Land Company PLC object to the current wording of Policy EN18. It is suggested that the policy text should apply the 'Agent of Change' principle (i.e. the condition wording should ensure that new noise sensitive development (e.g. residential development) should not be allowed to locate in areas in which there is the potential to negatively impact upon the future operations of existing businesses / commercial operations) (Soundness Test 1). PPW clearly states; "The agent of change principle says that a business or person responsible for introducing a change is responsible for managing that change. In practice, for example, this means a developer would have to ensure that	The British Land Company PLC object to the current wording of Policy EN18. It is suggested that the policy text should apply the 'Agent of Change' principle (i.e. the condition wording should ensure that new noise sensitive development (e.g. residential development) should not be allowed to locate in areas in which there is	Not accepted. The policy wording is split into two distinct parts. The first part is concerned with new development proposals which are 'sensitive' being located in areas where there is existing sources of pollution or nuisance. The second part is concerned with new development which would result in noise / pollution being located in areas which may have sensitive development. This second part of the policy includes two criteria which consider i) the impact on amenity / living standards and ii) implications on the use or development of land. The policy clearly addresses the scenario put forward by the objector. It is not considered that either the policy or the explanation needs to refer specifically to the 'agent of change' principle for it to be effective in controlling development. The In considering development proposals the development plan must be read in conjunction with PPW and it is not necessary for the development plan to repeat all guidance that is in PPW.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			solutions to address air quality or noise from nearby pre-existing infrastructure, businesses or venues can be found and implemented as part of ensuring development is acceptable" (paragraph 6.7.5).	the potential to negatively impact upon the future operations of existing businesses / commercial operations) (Soundness Test 1). PPW clearly states;	
119	EN21: Locations for Waste Management Facilities	Object	Connahs Quay Southern Site Uniper support the identification of the site as a potential location for waste management facilities under Policy EN21 on the basis that this does not override the allocation of the site in general employment use. Uniper propose a clarification to Policy EN21 to confirm that the identification of sites within the policy does not override their allocation as general employment sites.	Uniper propose a clarification to Policy EN21 to confirm that the identification of sites within the policy does not override their allocation as general employment sites.	Not accepted. Policy EN21 directs waste management development to existing or allocated employment sites for B2 uses. The policy provides an 'in principle' acceptance that proposals for waste management would be acceptable subject to the criteria detailed in Policy EN22. The policy does not provide allocations for waste management. It is considered that this policy would not override the employment allocations of the LDP and no clarification is required. The site was not allocated for employment use in LDP as it was considered that there was sufficient employment land proposed within the deposit draft. Regardless of the site not being allocated within the LDP as an employment site, it is considered that the site would be 'in principle' acceptable for waste management purposes and the policy provides provision for waste uses to come forward on sites not allocated for employment uses.
1080	EN21: Locations for Waste Management Facilities	Object	EN21: Locations for Waste Management Facilities - We note that these sites are likely to require a permit to operate and that the granting of planning permission does not guarantee that a permit will be granted. Developers should be encouraged to parallel track planning and permit applications.	Developers should be encouraged to parallel track planning and permit applications.	Noted, this is done through the development management process suggested at the pre-application advice stage. Advisory notes are added to decision notices to advise waste developers that environmental permits maybe required.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
848	EN21: Locations for Waste Management Facilities	Object	Whilst Bourne Leisure understands the need for the Council to secure appropriate sites for waste management facilities, minerals development and aggregate management in Flintshire, the Company considers that the amenity of any nearby receptors, including holiday accommodation should be protected from any adverse impacts associated with their respective activities, such as noise, odour and visual impacts. Failing to protect amenity is likely to result in operators not being able to attract new and repeat visitors to the local area with direct and indirect consequences for the local economy, including retaining jobs. As such, Bourne Leisure proposes the following addition to Policy EN21: "Whilst meeting the needs of waste management facilities, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed waste management facilities." (proposed additions underlined) The Company also proposes the following addition to Policy EN26: ""Whilst meeting the needs of mineral extraction, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed waste management facilities." (proposed additions underlined) The Company further proposes the following addition to Policy EN27: ""Whilst meeting the needs of secondary and recycled aggregates management, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed waste management facilities." (proposed additions underlined) The proposed amendments will align Policies EN21, EN26 and EN27 with PPW	Bourne Leisure proposes the following addition to Policy EN21: "Whilst meeting the needs of waste management facilities, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed waste management facilities." (proposed additions underlined) The Company also proposes the following addition to Policy EN26: ""Whilst meeting the needs of mineral extraction, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed waste management facilities." (proposed additions underlined) The Company further proposes the following addition to Policy EN27: ""Whilst meeting the needs of secondary	Not accepted. Policy EN21 directs waste management development to existing or allocated employment sites for B2 uses. The policy provides an 'in principle' acceptance that proposals for waste management would be acceptable subject to the criteria detailed in Policy EN22. Strategic Policy STR14 sets out the general approach that new development will have regard to the protection of the environment in terms or air, noise and light pollution (in point vi). Also, Policies PC2, EN18, EN22 and EN27 provides detailed criteria against which planning applications (including waste management applications) will be assessed. Policy PC2 sets out the general requirements for development which includes a number of criterion including point a. which would ensure development harmonises with the surrounding area, point b. "where all development should, where appropriate not have a significant adverse impact on the safety and living conditions of nearby residents, other users or nearby land/property, or the community in general, through increased activity, disturbance, noise, dust, vibration, hazard or the adverse effects of pollution." Policy EN18 will also provide safeguards to ensure that new development would not create an increased risk of noise, vibration, odour, dust, light or other pollution or hazards. Policy EN22 provides specific criteria for waste management proposals which include the provision to safeguard any visual impacts of the waste proposal. Policy EN27, specific to secondary and recycled aggregate proposals will ensure that the development would not have an impact on residential amenity from noise or dust. It is considered that when the Plan is read as a whole, there are detailed criteria based policies within the plan that will safeguard the amenity of residents and other land users from any potential waste management facilities that may be proposed and assessed by the LDP. Therefore there would be no need to change Policy EN21 as suggested as this would repeat policy already contained within the LDP.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			which states that, “The planning system has an important role to play in facilitating sustainable waste management by providing a framework for decision making which recognises the social, economic and environmental benefits that can be realised from the management of waste as a resource to meet the needs of society and businesses, whilst at the same time: protecting the amenity of residents, of other land users and users affected by existing or proposed waste management facilities.” (paragraph 5.13.1). The amendments will also ensure that the ability to deliver Objective 14 is not compromised and that this element of the Plan would satisfy the tests of soundness.	and recycled aggregates management, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed waste management facilities.” (proposed additions underlined) The proposed amendments will align Policies EN21, EN26 and EN27 with PPW which states that, “The planning system has an important role to play in facilitating sustainable waste management by providing a framework for decision making which recognises the social, economic and environmental benefits that can be realised from the management of waste as a resource to meet the needs of society and businesses, whilst at the same time: protecting the amenity of residents, of other land users and users affected by existing or proposed waste management facilities.”	

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				(paragraph 5.13.1). The amendments will also ensure that the ability to deliver Objective 14 is not compromised and that this element of the Plan would satisfy the tests of soundness.	
235	EN21: Locations for Waste Management Facilities	Support	Policy EN21 – Waste Management Facilities: The Joint Committee welcomes there being no identified sites either within the AONB or its setting. The criteria based part of the policy relating to waste development outside the identified sites but within settlement boundaries only being applied to settlements outside the AONB is also supported. However, given that there are several settlements just outside the AONB the committee would suggest there is also a need to protect the setting of the AONB in the policy and would recommend that criterion iv) be amended to: 'The site is outside the AONB or its immediate setting.' In addition, similar safeguards for the AONB and its setting should be incorporated in the overall statement relating to all waste development outside settlement boundaries and not just biodegradable waste.	given that there are several settlements just outside the AONB the committee would suggest there is also a need to protect the setting of the AONB in the policy and would recommend that criterion iv) be amended to: 'The site is outside the AONB or its immediate setting.' In addition, similar safeguards for the AONB and its setting should be incorporated in the overall statement relating to all waste development outside settlement boundaries and not just biodegradable waste.	Not accepted. Policies within the plan provide criteria to ensure that proposals for waste management would not harm the AONB or its immediate setting. This is specifically addressed in policy EN5. Applications will be considered on their own merits and against the policies of the plan. Therefore no change is required to the policy. STR13 provides the strategic policy which states that all development will iii. Conserve, protect and enhance the quality and diversity of Flintshire's natural environment including landscape…and the AONB". Policy PC2 states development should a. "harmonise with or enhance the character, local distinctiveness and appearance of the site,… and surrounding landscape." Policy EN4 states "New development, either individually or cumulatively, must not have a significant adverse impact on the character and appearance of the landscape. Landscaping and other mitigation measures should seek to reduce landscape impact and where possible bring about enhancement." Policy EN22 provides the criteria which waste management proposals would be assessed. Part d states that waste management facilities will be permitted provided "any visual impacts can be satisfactorily mitigated". When the Plan is read as a whole it is considered that sufficient protection is given to the setting of the AONB and that it is not necessary for this to be repeated in policies throughout the Plan.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
5	EN23: Minerals Safeguarding	Object	The interactive map neglects to show old disused quarrys and areas that are no longer viable for future mineral extraction. The mineral safeguarding zone bares no relation the the British Geological servey for the area and take a very lazy option to identify the zone.	Overlay the British Geological servey with the mineral safeguarding zone and ensure areas that are no longer viable are not included in the safeguarding zone.	Not accepted. In section 5 of the Minerals Background Paper this provides the evidence to justify what minerals have been safeguarded and why, and provides a rationale of how the mineral safeguarding area has been defined. The Mineral Safeguarding areas has been defined by using the British Geological Survey minerals resource map which show, at the strategic level, the distribution of minerals across the County and the BGS Aggregate Safeguarding Map.
188	EN23: Minerals Safeguarding	Object	We note the comments that Flintshire do not consider that there are no specific circumstances to warrant the safeguarding of coal resources.	We note the comments that Flintshire do not consider that there are no specific circumstances to warrant the safeguarding of coal resources.	Noted. Evidence to support this policy position to not safeguard coal is contained within the Minerals Background Paper, in line with the policy in relation to the use of fossil fuels in PPW 10.
330	EN23: Minerals Safeguarding	Object	The plan is unrealstic in terms of its identification of mineral safeguarding zones in that it seeks to include land which would be better used for housing and it is suggests that areas of land in close proximity to exsitsing housing would be suitable for mineral extraction. In reality the suggestion that sites close to exsiting homes would be suitbale for large scale minerale extraction is flawed	The land known as Halfway Field whould be excluded from the proposed Mineral Saefgaurding Zone	Not accepted. Policy EN23 provides the detailed policy criteria to safeguard minerals of economic importance. In section 5 of the Minerals Background Paper this provides the evidence to justify what minerals have been safeguarded and why, and provides a rationale of how the mineral safeguarding area has been defined. The policy states that non mineral development within mineral safeguarding areas (MSAs) will only be permitted where it can be demonstrated that a. the mineral underlying the site does not merit extraction, and b. the need for the non-mineral development outweighs the need to protect the resource. The particular site that the respondent refers to has been assessed within the Minerals Background paper which notes on page 46 that the site is underlain by limestone but the resource has already been sterilised by existing built development and the settlement of Carmel. This site has not been allocated in the LDP for other, non-mineral related reasons. It is noted that this site lies outside of the settlement boundary. The mineral safeguarding area has been refined to exclude settlement boundaries, and international and national designations, and the detail within Policy EN23 provides specific criteria to assess other proposals that may be located within the MSA so that they can be assessed on a site by site, case by case basis.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
4	EN24: Minerals Buffer Zones	Object	Minerals Planning Policy (Wales) Minerals Technical Advice Note (Wales) 1: AGGREGATES Buffer zones States: Hard rock quarries 200 metres. The buffer zone should be defined from the outer edge of the area where extraction and processing operations will take place, including site haul roads, rather than the site boundary, as there may be land within site boundaries where mineral activities are limited or no operations are proposed so that the impact of the proximity of such land is negligible. The council have taken the 200m from the perimeter of the sites and not the working area.	The interactive map should be changes to mirror the Minerals Planning Policy (Wales) Minerals Technical Advice Note (Wales) 1: AGGREGATES and take the buffer zone to 200m from working area.	Not accepted. In line with the requirements of PPW10 and MTAN 1 a buffer has been identified around the quarry sites and shown on the proposals maps. Policy EN24 has been developed to meet the requirements of PPW10 and MTAN 1 and to enable any proposals which come forwards to be considered without compromising quarrying operations. The identification of a buffer is not a moratorium on all development but does require it to be demonstrated that any development which would occur within the buffer zone would not itself inhibit quarrying operations, either through the introduction of sensitive development or through the direct sterilisation of areas which would be required for quarrying development. Development that is proposed within a mineral buffer zone would be assessed on a case by case basis on its own merits. With regards to the proposed minerals allocations proposed in Policy EN25, as limited detail has been provided by the developers other than the general location, it is difficult at present to determine the exact location of the buffer zone. Once an extraction boundary has been delineated by any subsequent planning permission, the buffer zone would be amended at a subsequent review of the LDP.
668	EN25: Sustainable Minerals Development		Policy EN25: Sustainable Minerals Development 1. EN25.3 Extension to Ddol Uchaf Quarry, Afonwen • Site operators need to be aware that this site is crossed by a water main and an easement width would be required which may impact upon mineral extraction	Site operators need to be aware that this site is crossed by a water main and an easement width would be required which may impact upon mineral extraction	Noted and the Council will inform the developer.
1165	EN25: Sustainable Minerals Development	Object	Category C - Minerals (Policy EN25) Policy EN25 seeks to meet the shortfall of sand and gravel and crushed rock to satisfy the apportionments set out in the RTS 1st Review. We note the RTS 2nd Review is currently out for public consultation and there is a significant increase in the requirement for Flintshire, as set out below: ? The apportionment of sand and gravel has	Policy EN25 identifies extensions to four quarries to meet the requirement of the RTS 1st Review. The authority should demonstrate their ability to meet the increased need	Noted. The Flintshire LDP deposit draft, and the figures contained in strategic policy STR16 was published prior to the consultation draft RTS second review. Flintshire will work in collaboration with Wrexham County Borough Council, and Denbighshire County Council to provide for the minerals needs of the region for both the provision of sand and gravel and crushed rock. With respects to Wrexham and crushed rock, Flintshire had already committed to provide for Wrexham's crushed rock

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			increased the allocation required from 1.4mt to 3.543mt. ? The requirement for crushed rock has increased from an allocation of 3.84mt to 35.928mt. Policy EN25 identifies extensions to four quarries to meet the requirement of the RTS 1st Review. The authority should demonstrate their ability to meet the increased need apportioned in the RTS 2nd Review, should it be endorsed prior to the plan being subject to examination.	apportioned in the RTS 2nd Review, should it be endorsed prior to the plan being subject to examination.	requirements through a statement of Common Ground published through Wrexham's LDP process. The RTS second review now recognises that Wrexham is so heavily constrained due to the location of crushed rock in relation to the AONB, it is not reasonable to require Wrexham to provide for crushed rock. Therefore it is inherent that Flintshire will work collaboration with Wrexham with respects to Crushed Rock. As Denbighshire has a large landbank of crushed rock due to a number of mothballed sites in the County, Flintshire will produce a sub-regional Statement of Collaboration with Denbighshire to assist with the required apportionment identified for Flintshire. Furthermore, Flintshire will need to work in collaboration with Wrexham to meet its apportionment figure with respects to Sand and Gravel. The North Wales Minerals and Waste planning team are also in discussions with minerals operators to identify additional sites. It is considered that there is flexibility within policy EN26 which provides criteria for proposals for mineral extraction to come forward which are not on allocated sites. Additional sites can be added to Policy EN25 if required as part of the subsequent review of LDP. It has been suggested that Policy STR16 could be changed to be more generic to state that Flintshire will contribute to the regional supply of minerals in collaboration with Denbighshire and Wrexham County Borough Councils to accord with the apportionment figures contained in the published Regional Technical Statement, rather than prescribing an apportionment figure which will change over time, should the Inspector consider that this change to STR16 would improve the plan.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Should the Inspector feel that the Plan could be improved by amending the wording paragraph 12.84, the Council would not object to the following wording to Paragraph 12.84 of the RJ. "The North Wales Regional Technical Statement (RTS) 2nd review (consultation) has identified a requirement for Flintshire to allocated at least 3.543 million tonnes of sand and gravel and at least 35.928 million tonnes of crushed rock. The allocations identified within Policy EN25 are not sufficient to meet the identified need over the plan period. Therefore, the council will work in collaboration with Denbighshire and Wrexham County Borough Councils in order to provide the apportionments identified. Statements of Collaboration will be entered into in order to provide certainty that the identified need will be met over the plan period."
861	EN25: Sustainable Minerals Development	Object	EN25 Sustainable mineral developments Extension to Hendre Quarry 11 million tonnes of limestone, with no indication of which way it will be transported from the site – the Denbigh Road in Mold is potentially going to have a new road junction serving 246 homes on the proposed new Gwernaffield Road and Denbigh Road site. The impact of the quarry extension needs to be considered in line with developing that area of West Mold 12.88 could the LDP be much stronger than this and say that planning permission will not be given by FCC for fracking?	EN25 Sustainable mineral developments Extension to Hendre Quarry 11 million tonnes of limestone, with no indication of which way it will be transported from the site – the Denbigh Road in Mold is potentially going to have a new road junction serving 246 homes on the proposed new Gwernaffield Road and Denbigh Road site. The impact of the quarry extension needs to be considered in line with developing that area of West Mold	Not accepted. A transport assessment would be required to be submitted as part of an environmental statement should a planning application be submitted for the extension of Hendre Quarry. This would address highway concerns such as capacity of the highway and routing raised by this representation. The Plan and the reasoned justification is considered to be in line with the energy policy direction of PPW10 and the government's aspirations to decarbonize the Country and to avoid the continued extraction and consumption of fossil fuels. It is not considered necessary to repeat national policy within the Plan. As 12.88 states, applications will be considered on their own merits and robust and credible evidence will need to be provided to demonstrate that the proposal accords with the energy hierarchy.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				12.88 could the LDP be much stronger than this and say that planning permission will not be given by FCC for fracking?	
228	EN25: Sustainable Minerals Developme nt	Support	CEMEX UK Operations Ltd. wishes to express its support for Policy EN25.2, Extension to Pant y Pwll Dwr Quarry.		Noted
236	EN25: Sustainable Minerals Developme nt	Support	Policy EN25 and EN26 – Minerals Development: There are no proposed extensions to existing quarries within the AONB, which is welcomed by the committee. However, all four of the allocated sites are considered to be within the setting of the AONB as they are very close to the boundary and/or are clearly visible from the higher ground of the protected landscape. The criteria set out in EN26 are designed to ensure that the impact of mineral extraction at these sites is minimised and mitigated and that the development will be subject to progressive restoration, which is supported. The allocation which gives rise to most concern is the proposed reopening and extension of Ddol Uchaf Quarry near Afonwen, which has lain dormant for many years and has the potential to significantly impact on views from the higher ground of the AONB and the tranquillity of the locality. The current allocated site covers an extensive area of open fields, the upper slopes of which prominently face the AONB. The committee would recommend that the allocation should be reduced to exclude the higher slopes to mitigate the impact on the		Not accepted. Further detail would be provided at the application stage to assess the impact on the AONB. At this stage the Council do not have the evidence to justify the reduction in the allocation area, furthermore, need for sand and gravel may outweigh any visual impact from the AONB which would also be a material consideration when determining a planning application on this site. Policy EN26 provides a criteria based policy for which minerals development will be assessed. Criteria i states that mineral extraction will be permitted on allocated sites subject to no significant adverse visual impact from the development. There is a presumption against minerals development in the AONB. However, applications for minerals development on allocations or unallocated sites would need to include an assessment of the proposal on the landscape and visual impact and would require a Landscape and visual impact Assessment. This would assess the impact of the proposal on the AONB and its setting should the AONB be located in close proximity. Furthermore, Policies within the plan provide criteria to ensure that proposals for minerals development would not harm the AONB or its immediate setting. This is specifically addressed in Policy EN5. Applications will be considered on their own merits and against the policies of the plan. Therefore no change is required to the policy.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			AONB's special qualities and its setting. The safeguards for the AONB relating to minerals development outside the allocated sites in EN26 are supported, but again the committee would recommend that the policy wording be amended to reflect the need to also protect the setting of the AONB.		STR13 provides the strategic policy which states that all development will iii. Conserve, protect and enhance the quality and diversity of Flintshire's natural environment including landscape…and the AONB". Policy PC2 states development should a. "harmonise with or enhance the character, local distinctiveness and appearance of the site,…and surrounding landscape." Policy EN4 states "New development, either individually or cumulatively, must not have a significant adverse impact on the character and appearance of the landscape. Landscaping and other mitigation measures should seek to reduce landscape impact and where possible bring about enhancement." When the Plan is read as a whole it is considered that sufficient protection is given to the setting of the AONB and that it is not necessary for this to be repeated in policies throughout the Plan.
913	EN25: Sustainable Minerals Developme nt	Support	We support the principles of the policy, however, in light of the above comments and the need to update the mineral requirement, it may be necessary to provide a more flexible approach in case such sites cannot be delivered and the aggregate requirement is greater than that currently identified in STR16. Update the policy and provide more flexibility to ensure the plan can meet the updated mineral requirements.		Noted. Policy STR16 sets out the general approach that has been taken with respect of sustainably managing mineral resources in Flintshire, and the wider region. Policy EN25 provides details of the allocations set out in the plan to demonstrate how a sustainable supply of minerals can be provided for. Policy EN26 provides the criteria to which minerals development will be assessed at the planning application stage. The North Wales Minerals and Waste planning team are also in discussions with minerals operators to identify additional sites to meet the need identified within the draft RTS second review. It is considered that there is flexibility in Policy EN26 which provides criteria for proposals for mineral extraction to come forward which are not on allocated sites. Additional sites can be added to Policy EN25 if required as part of the subsequent reviews of LDP. It has been suggested that Policy STR16 could be changed to be more generic to state that Flintshire will contribute to the regional supply of minerals in collaboration with Denbighshire and Wrexham County Borough Councils to accord with the apportionment figures contained in the published Regional

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Technical Statement, rather than prescribing an apportionment figure which will change over time, should the Inspector consider that this change to STR16 would improve the plan. The comments are noted. The Policies and RJ was drafted prior to the second review of the RTS being published for consultation. Therefore, at the time of the Plan going on deposit, the first review of the RTS was the evidence base in which the Council used in the drafting of the policy and the RJ and therefore the figures quoted are from the first review of the RTS as the second review was not available at the time of publication. Policy EN26 provides a criteria based policy which allows for non-allocated sites to come forward. The Council feel that this policy provides flexibility for other sites to come forward to meet future demand. Should the Inspector feel that the Plan could be improved by amending the wording of this paragraph, the Council would not object to the following wording to Paragraph 12.84 of the RJ. “The North Wales Regional Technical Statement (RTS) 2nd review (consultation) has identified a requirement for Flintshire to allocated at least 3.543 million tonnes of sand and gravel and at least 35.928 million tonnes of crushed rock. The allocations identified within Policy EN25 are not sufficient to meet the identified need over the plan period. Therefore, the council will work in collaboration with Denbighshire and Wrexham County Borough Councils in order to provide the apportionments identified. Statements of Collaboration will be entered into in order to provide certainty that the identified need will be met over the plan period.” All limestone, including industrial limestone (non-aggregate limestone) is safeguarded through the mineral safeguarding areas shown on the constraints plan, and through Policy EN23.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					There is also a Mineral Buffer Zone (as defined in Policy EN24) applied to the operational quarry Cefn Mawr that supplies industrial limestone to Padeswood Cement works. The Minerals Background Paper also provides evidence how non mineral Candidates Sites within the Buffer Zone of Cefn Mawr quarry have been assessed. Policy EN26 (and other policies in the plan) provides the criteria in which proposals for non-aggregate minerals would be assessed. The Minerals Background Paper provides details relating to Cefn Mawr Quarry in relation to the life of planning permission to 2042 which is well beyond the plan period. Therefore, it is not necessary to plan for additional need for industrial limestone during this LDP. Furthermore, the LDP is not supposed to repeat national policy contained within PPW10. The area proposed under Policy EN25 is entirely within the existing planning permission boundary and is currently occupied by offices and fixed plant. The existing access would be used. It is considered that the proposal would have no greater impact compared with the existing approved development which were assessed and deemed acceptable in 1997 under planning permission M/97/27/00123. A planning application would need to be submitted to win and work the mineral present under the plant and office area, material planning considerations such as noise, dust, traffic and residential amenity would be required to be assessed through the planning application process and considered at that time, when neighbours would have an opportunity to engage again with the planning process to express their views. The drafting error on Page 9 of the Minerals Background Paper which incorrectly states that the end date of the quarrying permission at Fron Haul as being 21st February 2042 is noted. The correct end date of the current extant planning permission is

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					31st December 2022 as stated in paragraph 6.5.2 of the Minerals Background Paper. However the operator may apply to extend the life.
1252	EN26: Criteria for Minerals Development	Object	Whilst Bourne Leisure understands the need for the Council to secure appropriate sites for waste management facilities, minerals development and aggregate management in Flintshire, the Company considers that the amenity of any nearby receptors, including holiday accommodation should be protected from any adverse impacts associated with their respective activities, such as noise, odour and visual impacts. Failing to protect amenity is likely to result in operators not being able to attract new and repeat visitors to the local area with direct and indirect consequences for the local economy, including retaining jobs. As such, Bourne Leisure proposes the following addition to policy EN26: Whilst meeting the needs of mineral extraction, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed waste management facilities.	proposed amendments to policy wording to align with PPW	Not accepted. Policy EN26 includes specific criteria which minerals development will be assessed. Point i. includes there would be no significant visual impact from the development. Furthermore, Strategic Policy STR14 sets out the general approach in point vi that new development will have regard to the protection of the environment in terms or air, noise and light pollution Also, Policies PC2, EN18, and EN27 provides detailed criteria against which planning applications (including minerals applications) will be assessed. Policy PC2 sets out the general requirements for development which includes a number of criterion including point a. which would ensure development harmonises with the surrounding area, point b. “where all development should, where appropriate not have a significant adverse impact on the safety and living conditions of nearby residents, other users or nearby land/property, or the community in general, through increased activity, disturbance, noise, dust, vibration, hazard or the adverse effects of pollution.” Policy EN18 will also provide safeguards to ensure that new development would not create an increased risk of noise, vibration, odour, dust, light or other pollution or hazards. Policy EN27 is specific to secondary and recycled aggregate applications which will ensure that they development would not have an adverse impact on residential amenity through noise or dust. Therefore, there is already an element of what the representor has requested contained within the policy as currently drafted.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					It is considered that, when the Plan is read as a whole, there are detailed criteria based policies within the plan that will safeguard the amenity of residents and other land users from any potential mineral development that may be proposed and assessed by the LDP. Therefore there would be no need to change Policy EN26 as suggested as this would repeat policy already contained within the LDP.
1030	EN26: Criteria for Minerals Development	Object	EN26 (iv) – what would satisfactory provision for progressive restoration require? How will it be assessed whether proposals for progressive restoration are satisfactory? • EN26 (v) – what would be a satisfactory after-use? How will it be assessed whether proposed after-uses are satisfactory?		Noted. Policy EN26 provides a criteria based policy for which minerals development will be assessed. Criteria iv. and v. have been included within the policy to ensure that proposals for mineral development include restoration and aftercare provision which would be assessed at the planning application stage. Each proposal would be considered on a case by case basis, and on its own merits. All minerals development would have characteristics specific to the individual site and restoration for sand and gravel quarries may be different to a hard rock quarry. Therefore, it would be difficult to prescribe in the policy what specifically it should include and it would be unnecessarily restrictive.
1031	EN27: Secondary and Recycled Aggregate	Object	EN27 – what is meant by 'management of secondary and recycled aggregates?' Does this include crushing, processing, sorting, storage, stockpiling or all of these?	EN27 need to be more detailed: what is meant by 'management of secondary and recycled aggregates?' Does this include crushing, processing, sorting, storage, stockpiling or all	Partly accepted. The management of secondary and recycled aggregate does include all those listed; crushing, sorting, screening, stockpiling, storage and transfer. It is suggested that the Council would have no objection to include the above wording in the RJ after para 12.90, if the Inspector considers that this would improve the Plan. Policy EN26 provides a criteria based policy for which minerals development will be assessed. Criteria iv. and v. have been included within the policy to ensure that proposals for mineral development include restoration and aftercare provision which would be assessed at the planning application stage. Each proposal would be considered on a case by case basis, and on its own merits. All minerals development would have characteristics specific to the individual site and restoration for sand and gravel quarries may be different to a hard rock quarry. Therefore, it would be difficult to prescribe in the policy what specifically it should include and it would be unnecessarily restrictive.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1253	EN27: Secondary and Recycled Aggregate	Object	whilst Bourne Leisure understands the need for the Council to secure appropriate sites for waste management facilities, minerals development and aggregate management in Flintshire, the Company considers that the amenity of any nearby receptors, including holiday accommodation, should be protected from any adverse impacts associated with their respective activities, such as noise, odour and visual impacts. Failing to protect amenity is likely to result in operators not being able to attract new and repeat visitors to the local area with direct and indirect consequences for the local economy, including retaining jobs. As such, Bourne Leisure proposes the following addition to Policy EN27: Whilst meeting the needs of secondary and recycled aggregates management, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed waste management facilities.	additional wording for policy EN17 to align with PPW	Not accepted. Policy EN27 is specific to secondary and recycled aggregate applications which will ensure that they development would not have an adverse impact on residential amenity through noise or dust. Therefore, there is already an element of what the representor has requested contained within the policy as currently drafted. Furthermore, Strategic Policy STR14 sets out the general approach in point vi that new development will have regard to the protection of the environment in terms or air, noise and light pollution Also, Policies PC2, EN18 and EN26 provides detailed criteria against which planning applications (including minerals applications) will be assessed. Policy PC2 sets out the general requirements for development which includes a number of criterion including point a. which would ensure development harmonises with the surrounding area, point b. “where all development should, where appropriate not have a significant adverse impact on the safety and living conditions of nearby residents, other users or nearby land/property, or the community in general, through increased activity, disturbance, noise, dust, vibration, hazard or the adverse effects of pollution.” Policy EN18 will also provide safeguards to ensure that new development would not create an increased risk of noise, vibration, odour, dust, light or other pollution or hazards. Policy EN26 includes specific criteria which minerals development will be assessed. Point i. includes there would be no significant visual impact from the development. It is considered that, when the Plan is read as a whole, there are detailed criteria based policies within the Plan that will safeguard the amenity of residents and other land users from any potential mineral development that may be proposed and assessed by the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					LDP. Therefore, there would be no need to change Policy EN27 as suggested as this would repeat policy already contained within the LDP.

Ch 13 Monitoring

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
65	Monitoring	Object	CPAT is disappointed to see that there is no provision for the monitoring of the effectiveness of Policy EN8 in Section 13. Monitoring could be achieved by simple comparison of the numbers of planning applications having historic environment implications with the numbers showing how each of those was resolved.	Policy EN8 in Section 13. Monitoring could be achieved by simple comparison of the numbers of planning applications having historic environment implications with the numbers showing how each of those was resolved.	Not accepted. The suggested requirement to evaluate and monitor every single planning application which involves the historic environment is not a simple nor effective form of monitoring nor use of limited resources.
103	Monitoring	Object	This monitoring appears very weak, it just states to monitor and review, with nothing robust to address any failures or missed targets.		Not accepted. The objector offers no specific examples of why monitoring is deficient or how it could be improved. The Council is reviewing the monitoring framework having regard to the requirements contained in Welsh Government Development Plans Manual Ed.3 published in March 2020.
160	Monitoring	Object	Section 13 - Monitoring The monitoring in relation to housing delivery indicates that, should the housing land supply fall below 5 years for 2 consecutive years, the Council will “keep monitoring, further investigate and review as required”. This is extremely vague and provides no mechanism for bringing sites forward to meet the shortfall in the 5 year supply should this occur. It is an important national requirement as set out in PPW and TAN1 that Councils are able to continually show a 5 year supply of	The monitoring in relation to housing delivery indicates that, should the housing land supply fall below 5 years for 2 consecutive years, the Council will “keep monitoring, further investigate and review as required”. This is extremely vague and provides	Not accepted. The requirement for LPA’s to monitor their housing land supply and maintain a 5 year supply of housing land was removed on 26th March 2020.Technical Advice Note 1 (TAN 1) was revoked in its entirety and the housing delivery section of Planning Policy Wales (Edition 10) was amended to remove the 5 yr housing land policy. Instead LPA’s are now required to monitor the delivery of their development plan housing requirement based on a housing trajectory contained in the development plan (PPW para. 4.2.10).

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			deliverable sites for housing. Where this cannot be met there must be a mechanism in place to allow this to be achieved. Simply monitoring and further investigation will not achieve this and will therefore fail to meet soundness Test 2 in that the Plan will not seek to meet assessed needs. The Council's LDP 10 (Background Paper on Housing Land Supply and Delivery) sets out at paragraph 3.0.1 that "the delivery of the housing supply and the maintenance of a 5 year housing land supply throughout the plan period are essential to the achievement of the Plan's aims". As delivery of the 5 year housing land supply is central to the Plan's aims it is crucial that the Plan has a system in place for bringing forward alternative sites should the housing land supply fall short. The identification of contingency sites which could be brought forward in such circumstances would be an appropriate response. However, the current Plan does not identify contingency sites and will therefore lead to planning by appeal should the housing land supply figure fall below 5 years. It is of note that this is exactly what happened in relation to the previous UDP. We have made representations under policy STR11 and HN1 in relation to potential contingency sites.	no mechanism for bringing sites forward to meet the shortfall in the 5 year supply should this occur.	Not accepted. New guidance contained in the Development Plans Manual (Edition 3, March 2020) requires LPA's to now include in their Deposit LDP a trajectory showing how the Plan's housing requirement will be met over the Plan period. The trajectory is to incorporate an Anticipated Annual build Rate (AABR) calculated based on a formula contained in the Manual. The trajectory is to be updated annually, both up to and following Adoption of the LDP taking into account actual annual completions during the Plan period. The new guidance requires LPA's to monitor actual completions, both annually and cumulatively since the start of the Plan period, against the AABR in the trajectory as part of the LDP Annual Monitoring Report. The Council is reviewing the monitoring framework having regard to these revised requirements and the monitoring arrangements will be further refined through the examination process. There is no requirement in PPW10 or the Development Plans Manual (Edition 3) for LDP's to identify contingency sites. Instead LDP's must include an appropriate flexibility allowance. Furthermore, every LDP must be reviewed at least every 4 years after adoption.
411	Monitoring	Object	In terms of monitoring the level of open space provided by new developments,	In terms of monitoring the level of open	Not accepted. The purpose of this monitoring indicator is to establish whether residential

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the HBF consider that the contribution made by improvements to existing facilities should also be included. MI15 Viability – trends in house prices, land values, build costs The HBF requests that the trigger point needs to be amended so that not only are house prices considered but also the other factors such as build costs identified in the indicator are considered as well. (By way of example if house prices go up 5% but build cost also go up 5% then there is no impact on viability so a review of the viability should not be triggered). MI41 Open space provided as part of new housing development In terms of monitoring the level of open space provided by new developments, the HBF consider that the contribution made by improvements to existing facilities should also be included.	space provided by new developments, the HBF consider that the contribution made by improvements to existing facilities should also be included.	development is delivering open space in accordance with the policy requirements. This could include new on-site provision or the improvement to existing off-site open space. It is not considered necessary for the indicator to be amended as suggested. The wording of the indicator itself clearly references 'house prices, land values, build costs' but these have not been carried across into the other columns. It is anticipated that the monitoring indicators will be further refined during the examination and would have no objection to amending this indicator as suggested if the Inspector considers this appropriate.
589	Monitoring	Object	Section 13 - Monitoring The monitoring in relation to housing delivery indicates that, should the housing land supply fall below 5 years for 2 consecutive years, the Council will "keep monitoring, further investigate and review as required". The requirement for LPA's to monitor their housing land supply and maintain a 5 year supply of housing land was removed on 26th March 2020.Technical Advice Note 1 (TAN 1) was revoked in its entirety and the housing delivery section of Planning Policy Wales (Edition 10) was amended to remove the 5 yr

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			meet the shortfall in the 5 year supply should this occur. It is an important national requirement as set out in PPW and TAN1 that Councils are able to continually show a 5 year supply of deliverable sites for housing. Where this cannot be met there must be a mechanism in place to allow this to be achieved. Simply monitoring and further investigation will not achieve this and will therefore fail to meet soundness Test 2 in that the Plan will not seek to meet assessed needs. The Council's LDP 10 (Background Paper on Housing Land Supply and Delivery) sets out at paragraph 3.0.1 that "the delivery of the housing supply and the maintenance of a 5 year housing land supply throughout the plan period are essential to the achievement of the Plan's aims". As delivery of the 5 year housing land supply is central to the Plan's aims it is crucial that the Plan has a system in place for bringing forward alternative sites should the housing land supply fall short. The identification of contingency sites which could be brought forward in such circumstances would be an appropriate response. However, the current Plan does not identify contingency sites and will therefore lead to planning by appeal should the housing land supply figure fall below 5 years. It is of note that this is exactly what happened in relation to the previous UDP. We have made representations under policy STR11 and	fall below 5 years for 2 consecutive years, the Council will "keep monitoring, further investigate and review as required". This is extremely vague and provides no mechanism for bringing sites forward to meet the shortfall in the 5 year supply should this occur. It is an important national requirement as set out in PPW and TAN1 that Councils are able to continually show a 5 year supply of deliverable sites for housing. Where this cannot be met there must be a mechanism in place to allow this to be achieved. Simply monitoring and further investigation will not achieve this and will therefore fail to meet soundness Test 2 in that the Plan will not seek to meet	housing land policy. Instead LPA's are now required to monitor the delivery of their development plan housing requirement based on a housing trajectory contained in the development plan (PPW para. 4.2.10). New guidance contained in the Development Plans Manual (Edition 3, March 2020) requires LPA's to now include in their Deposit LDP a trajectory showing how the Plan's housing requirement will be met over the Plan period. The trajectory is to incorporate an Anticipated Annual build Rate (AABR) calculated based on a formula contained in the Manual. The trajectory is to be updated annually, both up to and following Adoption of the LDP taking into account actual annual completions during the Plan period. The new guidance requires LPA's to monitor actual completions, both annually and cumulatively since the start of the Plan period, against the AABR in the trajectory as part of the LDP Annual Monitoring Report. The Council is reviewing the monitoring framework having regard to these revised requirements and the monitoring arrangements will be further refined through the examination process. There is no requirement in PPW10 or the Development Plans Manual (Edition 3) for LDP's to identify contingency sites. Instead LDP's must include an appropriate flexibility allowance. Furthermore, every LDP must be reviewed at least every 4 years after adoption.

				contingency sites and will therefore lead to planning by appeal should the housing land supply figure fall below 5 years. It is of note that this is exactly what happened in relation to the previous UDP.	
862	Monitoring	Object	Actions are weak – keep monitoring, reviewing and investigating – it would give confidence in the plan if measures were taken to address any missed targets. Monitoring section 13 The NDF is not one of the triggers even though it will be produced during the FCC LDP timescale There is no mention at all of Strategic Development Plans and surely they will be in place over the plan period too? Actions are weak – keep monitoring, reviewing and investigating – it would give confidence in the plan if measures were taken to address any missed targets	Actions are weak – keep monitoring, reviewing and investigating – it would give confidence in the plan if measures were taken to address any missed targets	Not accepted. The objector provides no specific example of a monitoring indicator being deficient and how it could be improved. The Council considers the monitoring indicators represent a good starting point for monitoring the Plan. However the Monitoring Framework is being reviewed in the light of the requirements contained in the Development Plans Manual (Edition 3), published in March 2020 by the Welsh Government. It is likely that during the examination of the Plan, further amendments to the monitoring arrangements will be agreed. Once adopted, the Council will be required to review the Plan at least every 4 years. It is anticipated that the NDF will be approved by Welsh Government prior to the close of the examination process and it will be for the Inspector to determine whether the Plan is in general conformity with the NDF. Welsh Governments representations on the Plan has already established that the Plan is broadly in line with the draft NDF. The development of a SDP for North Wales has not yet been

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					commenced and it is difficult to see how incorporating this into the monitoring will help matters. The monitoring is meant to establish the performance of the Plan. Any emerging SDP is more a matter for the review of the LDP once adopted, and the Council is required to review a LDP every 4 years.
582	Monitoring	Object	The monitoring in relation to housing delivery indicates that, should the housing land supply fall below 5 years for 2 consecutive years, the Council will "keep monitoring, further investigate and review as required". This is extremely vague and provides no mechanism for bringing sites forward to meet the shortfall in the 5 year supply should this occur. 			2015), it is considered that the LDP should contain a specific commitment to undertake a Local Plan Review every five years postadoption. This should help to ensure that previous delays in the plan-making process in Flintshire can be avoided moving forward.		
1166	Monitoring	Support	Monitoring Framework The Councils monitoring framework provides a good starting point and it is clear the authority has looked at other monitoring frameworks which will need to be refined through the examination sessions. The Council should have regard to the monitoring and review Chapter of DPM (Ed. 3), in particular the key indicators set out in Table 29.		Noted. The Council is reviewing the monitoring framework having regard to the requirements contained in Welsh Government Development Plans Manual Ed.3 published in March 2020. It is noted that the monitoring arrangements will need to be further refined through the examination process.

Appendix 1 - Housing Commitments

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
57	Appendix 1 - Housing Commitments	Support	I am in support of the LDP and am pleased to see that the candidate site GRE002 at Tan y Felin, Greenfield has not been included. I objected to an application in September 2014. Although the site does not adjoin my property, I was concerned about road safety. It is accessed from Tan y Felin and Ffordd Dwyfor. Tan y Felin is a winding hill with drivers having to navigate around parked vehicles, often having to drive in the middle of the road and stop for people reversing out of driveways. The last right hand uphill bend at the cul-de-sac serving 91-99 odds Tan y Felin can be dangerous especially in the evening when the sun is low and in your eyes. Cars using the hill don't always stick to the speed limit. Also, further up the hill in the junction of Cae y Dderwen and Tan y Felin, children play football and ride their bikes in what is at present a very quiet spot. Regarding Ffordd Dwyfor, I would speculate that this road would be used more than Tan y Felin for access onto the site, because it generally goes to the middle of it. As with Tan y Felin, this road has cars parked on the roadside. There is a children's play area at the end of the road, fronting Tan y Felin. It is enclosed by a gate and fence but I was concerned that extra traffic could become a hazard for children who independently walk to and from the park and cross the road. Also, I find that cars do on occasion come		Support is noted

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			out of the Ffordd Dwyfor junction in front of me without the driver looking properly! When it snows heavily Tan y Felin is a hazard. I have witnessed on several occasions cars trying to get down the hill, bumping into parked cars and each other, and one car skidding and mounting a pavement on which was standing a toddler who was luckily unharmed. With a sizeable development on the land, the extra traffic would compound the situations described above and increase the potential for accidents. I can see that an option to mitigate the situation would have been to install speed bumps but this could cause problems for emergency vehicles, buses (Tan y Felin is on a bus route) and farm vehicles and up down Tan y Felin. Further, I'm sure residents like myself who drive up and down the hill on most weekdays would not like to drive over these bumps daily and residents on Tan y Felin itself would likely object to the increased noise levels of cars decelerating etc. Speed bumps were installed on Pen y Maes Road within the last few years but were taken up again maybe for the same reason.		
336	Appendix 1 - Housing Commitments	Object	Appendix 1 of the LDP Deposit Draft includes a list of housing commitments and their associated capacity. These are detailed within the Housing Land Monitoring Statement (April 2018). The ability to deliver		Not accepted. Each of the sites is commented on in turn: • Mount Pool, Buckley – The site only recently gained reserved matter approval (055936 on 04/12/19) and the applicant was Quatrefoil Homes. There is no evidence to doubt that the site will not come forward

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			a number of these commitments is questionable. Mount Pool (rear of Hillcrest) Buckley - The site was purchased for £1m in 2010. The owners are very unlikely to receive £1m return for 15 units. It is therefore likely that the site will remain undeveloped Land at Brook farm, Buckley - The Site has had planning permission for over 12 years which is renewed every 3 years. Simply rolling forward an extant consent which is clearly not being delivered is unrealistic and nonsensical to include in a housing commitment supply table Bromfield Timber Yard Mold - The site has planning consent no longer an appropriate location for apartments and therefore the site is more realistically able to achieve 35-40 dwellings. The landowners expectations for the value of the site are unrealistic and too high. Station Yard Depot - Whilst Reserved Matters Planning Approval has been granted, there is very limited market demand and interest. The ability to deliver 9 units in 2020 is unrealistic Altbridge House - Whilst the site benefits from planning approval for 41 apartments,		during the Plan period. The LDP Housing trajectory shows the site being delivered over two years 2021/22 and 2022/23 and even if some slippage occurred there is plenty of scope for this small site to be pushed back slightly. • Brook Farm, Buckley – As part of the April 2019 Housing Land Monitoring Study contact was made with the owners daughter who confirmed that following the renewal of the outline she was seeking to dispose of the site and asked advice regarding agents, social housing providers etc. This is a modest sized development of 14 dwellings and is quite capable of coming forward for development. • Bromfield Timber – In the April 2019 Housing Land Monitoring Study the forecast completions were moved outside of the 5 year supply following confirmation from the owners agent that the site is unlikely to be developed within the next five years. However, no information has been made available to suggest that the site will not be developed within the plan period. The site has an extant planning permission. • Station Yard, Coed Talon – the site only recently secured reserved matter approval on 18/09/19. The fact that there is not yet a housebuilder on board does not mean that the site cannot be delivered within the Plan period. • Altbridge House, Whitford – As part of work on the 2019 Housing Land Monitoring Study it has been established that following a change of ownership that

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the site is former nursing home which was purchased at height of the market in 2007 for £1.3m. There is currently limited Market demand and land value makes the site currently unviable and undeliverable unless the land owner would accept a lower sales fee. XXX questions the deliverability of approximately **203 units** within the next 5 years. Failure to maintain a 5-year supply of readily developable housing land, as contained in paragraph 2.1 of TAN 1, is a key planning policy requirement of the Welsh Government. Through the LDP process, enough land must be provided to allow for new home building that will ensure a 5-year land supply for housing is maintained.		there are no plans for immediate development. Further, the planning permission on the site has expired so the site is not included in the land supply in the 2019 housing land monitoring report.

			interest. The ability to deliver 9 units in 2020 is unrealistic Altbridge House - Whilst the site benefits from planning approval for 41 apartments, the site is former nursing home which was purchased at height of the market in 2007 for £1.3m. There is currently limited Market demand and land value makes the site currently unviable and undeliverable unless the land owner would accept a lower sales fee. XXX questions the deliverability of approximately **203 units** within the next 5 years. Failure to maintain a 5-year supply of readily developable housing land, as contained in paragraph 2.1 of TAN 1, is a key planning policy requirement of the Welsh Government. Through the LDP process, enough land must be provided to allow for new home building that will ensure a 5-year land supply for housing is maintained.		fact that there is not yet a housebuilder on board does not mean that the site cannot be delivered within the Plan period. • Altbridge House, Whitford – As part of work on the 2019 Housing Land Monitoring Study it has been established that following a change of ownership that there are no plans for immediate development. Further, the planning permission on the site has expired so the site is not included in the land supply in the 2019 housing land monitoring report.
692	Appendix 1 - Housing Commitments	Object	The site at Llys Ben is roughly rectangular in shape and is bounded to the east and the south by existing residential development comprising predominately large detached properties. To the west of the site is the Northop Hall Pavilion with carparking, formal play area and football pitches. The site is only open on its northern boundary beyond which is agricultural farmland. It therefore is	Include site at Llys Ben	Not accepted. Each of the sites is commented on below and it is evident that the objection is mostly based on inaccurate and out of date information: • The Whitleys Depot site is owned by and will be developed by FG Whitley who are a local developer and listed on the HBF website. Construction is taking place on site and the April 2019 Housing Land Monitoring Study showed 11 units under

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			contained with the existing urban form of Northop Hall. Outside of its Green Barrier designation the site does not have any particular landscape importance attached to it and is identified as having “a poor-quality landscape"		construction. • The Summerhill Farm site is being developed by Quatrefoild Homes and is under construction. The April 2019 Housing Land Monitoring Study showed 5 units under construction. • Station Yard, Coed Talon – the site only recently secured reserved matter approval on 18/09/19. The fact that there is not yet a housebuilder on board does not mean that the site cannot be delivered within the Plan period. • East of Gronant Hill, Gronant – the site is being developed by the Council’s SHARP development partner Wates, who are committed to delivering the site. The site has seen recent planning consents in relation to discharge of conditions and non-material amendments to the scheme. There is no evidence that the scheme cannot be developed within the Plan period. • Kinnerton Lane, Higher Kinnerton – Elan Homes are on site and the development is nearly finished. • Former Bromfield Timber, Mold – In the April 2019 Housing Land Monitoring Study the forecast completions were moved outside of the 5 year supply following confirmation from the owners agent that the site is unlikely to be developed within the next five years. However, no information has been made available to suggest that the site will not be developed within the plan period. The site has an extant planning permission.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					• Sewage Works, Sychdyn – the site is being developed by Stewart Milne Homes and is nearly complete. The April 2019 Housing Land Monitoring Statement identified that the remaining 10 units on the development were all under construction. • Altbridge House, Whitford – As part of work on the 2019 Housing Land Monitoring Study it has been established that following a change of ownership that there are no plans for immediate development. Further, the planning permission on the site has expired so the site is not included in the land supply in the 2019 housing land monitoring report.

Appendix 2 - Supplementary Planning Guidance

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
67	Appendix 2 - Supplementary Planning Guidance	Object	XXX would welcome the preparation of an SPG on the historic environment and would be happy to contribute to the preparation of such a document		Noted. However it is unclear what additional guidance a SPG could provide, over above the policies in the LDP and the guidance in the Historic Environment Wales Act, PPW10 and TAN24: The Historic Environment.

Flintshire Local Development Plan Deposit Draft September 2019 - Miscellaneous

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
20	Flintshire Local Development Plan Deposit Draft September 2019	Support	Re Tan-y-felin fields/ Cae Dderwen Greenfield, Holywell CH8: I wish to support the Planning Officer's decision against building development for the following reasons: 1. The existing insufficient infrastructure in Greenfield- insufficient shops, no doctors, no dentists, the primary school is almost full. 2. The protection of local cemeteries for potential pandemics 3. The importance of not undermining current accepted plans underway to develop the old Holywell hospital sites and sites opposite 4. Existence of more than double the Flintshire housing plans requirement passed 5. Existing poor drainage situation on Greenfield Road 6. Availability of existing brownfield sites in. Flintshire 7. Designation of Tan-y-felin fields as Green Space 8. Need to protect the site as ecologically		Support Noted

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			important for protected wildlife including badgers, bats, red kites, owls, field fare, sparrow hawks, buzzards, ravens, and a natural brook with ancient hedgerows and trees 9. Use of site for community leisure and its right to its unmanaged rural heritage, regularly used by Ramblers and other community groups 10. Existing very narrow and congested access in Woodland Drive and School Lane 11. Existing and increasing traffic congestion on at the bottom of Tan-y-felin and at the junction of Greenfield Road and the Coast Road 12. Existing severe traffic problems on Tan-y-felin: narrowness exacerbated by insufficient parking, cars forced to park on pavements on both sides resulting in single traffic lanes on blind bends and ensuing collisions/ very near misses. Existing very restricted access for emergency vehicles. Existing and increased danger to children at the playground blind bend.		
86	Flintshire Local Development Plan Deposit Draft		Flintshire Local Development Plan Dear Sirs, I object to the introduction of the Flintshire Local Development Plan (FLDP) as shown in the latest circulated		Not accepted. The settlement boundary in the UDP has been reviewed in the light of the construction of the new school. The LDP has drawn back the settlement boundary from the boundary of the school to follow

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	September 2019		form. The extent of the property Ardwyn Strand Lane is incorrectly shown. The boundary of the school is shown as extending to within a few feet of the back of the house. This is incorrect. It is incorrect as to past and current use, which is and since the house was built in the 1920s one settled residential property. since 1963 and at all times the land has been the exclusive property of the owners of Ardwyn who enjoyed sole use of the land. The boundary between my property and the School is clearly shown in the Conveyance of 29th July 1939 whereby the Council bought a piece of land at the bottom of the garden. Copy from plan enclosed (enclosure 1). By showing the boundary in its incorrect position it causes me a nuisance and deprives me of the exclusive residential usage I now enjoy, as mentioned in the said Conveyance. (Copy of section 5 enclosure 2). Which could be further exacerbated by any subsequent trespass by anyone trying to exercise what they think is a Right. The FLDP does not accurately reflect the current usage and is bad in law by not accurately reflect the current usage. I ask that it be amended to show the boundary between our respective properties in the correct position and that that the whole of my property be described by its current settled residential usage.		clearly defined boundaries to the rear of properties on Strand Lane. The purpose of this is to remove from within the settlement boundary an area of mature trees which are an important local amenity feature. This does not change ownership of land but reflects that as a planning tool the settlement boundary is considered to be more appropriately drawn back to more closely follow the line of existing built development and enhance the protection of mature trees.
243	Flintshire Local Development	Object	Objection 1: The Plan is excessively aspirational and results in		Not accepted. Objection 1: Whilst the objector is essentially opposed to a housing

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Plan Deposit Draft September 2019		disproportionately high levels of projected new housing "need" The Preferred Growth Strategy is based upon an "aspiration scenario" of highly ambitious growth projections for jobs mainly in Deeside and based upon the availability of employment land available in that area of Flintshire. The inflated employment target leads to an inflated housing "need" in Flintshire's Plan, well beyond what would be expected from an analysis of population trends, migration trends, political and economic trading conditions, or even the housing levels associated with a more controlled steady growth rate up to 2030. Also, a significant number of the new jobs would not come to people living in Flintshire, distorting the calculations. These projections together with the high contingency rate inflate the housing "need" in Flintshire at all stages of the process and are unsustainable. Not compliant with PPW paragraph 1.11, 1.15 LDP Section 3 does not consider the external factors needed to create a successful outcome (Test of Soundness Failed: 2,3) Site H1.6/MOL025/MOL044/MOL045 Objection 14: Absence of key documents to support decision making by FCC (and by Mold Town Council in its Plan feeding into the Deposit LDP)		allocation close to where they live, they have made a large number of detailed representations objecting to a number of areas of the plan, but where the statements made are often subjective, confusing, selective, and are not supported by evidence, particularly of harm or that affects the soundness of the plan. That said the Council has attempted to interpret and respond to these objections in the best way it can given the above. See also rep id249 and id250. The Plan has not sought to deliberately overprovide for housing in the context of taking an inappropriate, unjustified or harmful approach. Rather, the Plan has been prepared in the context of a regional growth strategy which is part of Welsh Government Policy and recently re-affirmed in the draft NDF. The objector questions the context for the job growth target but the lower end of the range identified is only slightly above the job projections prepared by the Council's consultants who conclude in their deposit 'Employment and Housing Advice' Background Paper that the job target is not unrealistic. The Welsh Government have submitted representations in support of the economic growth strategy of the plan, stating that they are supportive of the level of homes and jobs proposed within the plan and they consider it

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Decisions on planning matters, the allocation of candidate sites, the rejection of other sites, decisions to develop in open countryside have, at times, been made in the absence of key documents such as the Green Barrier Review and Background Paper on site assessment. Flintshire CC's Planning Committee has been tasked with producing a LDP before the official paper of the Green Barrier Review (and other key documents) became available in September 2019. Under the circumstances there is the possibility that the Green Barrier Review becomes a rubber stamping exercise for decisions already taken, rather than a document written free of pre-conceptions on new site allocations. The review was not available to either FCC or to MTC until after the LDP and MTC Plans were published. In effect this invalidates both MTC and FCC plans. Therefore those decisions about which sites to allocate were made without reference to consistent approaches to protecting open countryside, which is unsound. Background Paper 1 on Green Barrier Review states that its role is to assist in safeguarding the countryside from encroachment and to protect the setting of an urban area. This applies where a settlement has a particularly open or sensitive edge and an open countryside setting as in the case of MOL045/H1.6. The Review (Sept 2019, p5) also states		to align with national policy and the emerging NDF. The Housing Balance Sheet demonstrates how the Plan can meet its housing requirement figure through various sources of 'supply' and part of this is to incorporate a flexibility allowance. The 'over-allocation' element is in effect the 'flexibility' allowance. Welsh Government explain in paras 5.58 and 5.59 of the Development Plan Manual 3 (now adopted) that it is rare for all of a Plans allocations to come forward and how a Plan will not be effective if it cannot accommodate changing circumstances. Welsh Government specifically state 'This means that a flexibility allowance must be embedded into the Plan '[The Councils emphasis in bold]. The guidance explains that it will be for each LPA to determine the level of flexibility allowance based on local considerations but that 'the starting point for such considerations should be 10% flexibility with any variation robustly evidenced'. Flexibility allowances typically sit within the range of 10-20% and the Plan sits comfortably at the mid point. Given concerns expressed by housebuilders about delivery as part of the UDP, it is considered that a slightly higher flexibility of 14.4% is more realistic and supports the soundness of the plan. The Deposit Plan represents the Council's Plan that it considers 'sound' and which is released for public consultation. It represents

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that it is not the case that "every single urban edge requires a green barrier to prevent encroachment but more a consideration of settlement form and the nature of the urban edge and adjoining countryside". For instance, the UDP Inspector decided in 2009 that development on the MOL045/H1.6 Gwernaffield Rd/Denbigh Rd site would represent "significant incursion" into the countryside. Yet the LDP now proposes using this Grade 2 agricultural land for housing. Such an important decision requires all available evidence to be available and reasoned justification to be offered. I cannot find any evidence or justification. There is no point in producing a Green Barrier Review if it does not inform planning decisions, and crucially, shape the underlying discussions that precede the decisions to release sites. There is insufficient reasoned justification offered Not compliant with PPW paragraph: 1.19, 3.40 (Test of Soundness Failed: 1,2,3)		the outcome of the requirement to review the UDP given it has time expired and that there is insufficient housing land to support national policy requirements for this. It therefore shows revised settlement boundaries where for instance a new site has been allocated for housing. It will be for the Inspector to decide whether the allocation / settlement boundary should be retained in the adopted Plan. Objection 14: This objection is a duplicate of an objection under 'Strategic Policies – General' and has been fully responded to under rep id281.
384	Flintshire Local Development Plan Deposit Draft September 2019		Refer to attachments		See response to id 383 and 755

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
520	Flintshire Local Development Plan Deposit Draft September 2019				
744	Flintshire Local Development Plan Deposit Draft September 2019				
982	Flintshire Local Development Plan Deposit Draft September 2019		Para 9.5 is almost the only place in the LDP where mention is made of protecting high quality agricultural land; yet despite this and the fact PPW10 places significant weight on BMV the LDP is devoid of any policy and makes no mention of any assessment of how this might have influenced housing site selection		Not accepted. It is unclear what para 9.5 the objector is referring to. Para 9.5 of the written statement is part of the explanatory text to policy PC2 'General Requirements for Development' and is not relevant to agricultural land The objector recognises that the protection of Best and Most Versatile Agricultural Land is clearly and fully set out in paras 3.54-3.55 of PPW10. It is not necessary or desirable for LDP's to slavishly repeat national guidance from PPW10. Indeed, para 3.11 of Development Plan Manual 3 states 'An LDP should not repeat national policy. Plans should not be a compendium of policies to cover every eventuality'. The adopted LDP will clearly need to be read in the context of LDP. There is no objection from Welsh Government in their representations on the

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Plan regarding the lack of a policy on agricultural land. The preparation of the LDP has involved close working with Welsh Government in identifying the predicted loss of BMV as part of the assessment of candidate and alternative sites. On all allocations involving the potential loss of BMV an on-site survey has been arranged and results verified by Welsh Government. In identifying allocations the Council has sought to minimize the loss of BMV. The approach is set out in Background Paper 09 which has been supported in principle by Welsh Government.
