Flintshire Deposit Local Development Plan 2015 - 2030

Appendix 1 to report to Cabinet/Full Council

Summary of Representations and Responses

CYNGOR Sir y Fflint Flintshire COUNTY COUNCIL

Foreword

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
32	Foreword	Object	We have just had in Mancot a consultation regarding parking and congestion problem around the school in Mancot, Sandycroft CP school. Traffic problems in the two main axes going in and out of Mancot, a problem that we also have for Hawarden CP school. Knowing the recurrent traffic and parking issue, we are now faced (with this new project) with an additional 300 houses being potentially built and adding to this major problems. Nothing to date has formally been decided regarding this traffic and parking problem. So to add another 300 new houses, 1200 people (parents and children), would increase Mancot's population by 30% . In addition to this, one can estimate an additional 600 cars crossing Mancot and Hawarden every day. This project appears disproportionate in that: • Schools are not sized for new future students • The road cannot absorb such a flow of vehicles • In case of heavy rain the problem of flooding would be even worst • Security problems will arise with an increasing flow of vehicles • There is also the problem of health: not enough doctors, dental service in the area…… Also being sat on an old mining area with lots of galleries; the vibrations created by the works are very likely to create unwanted ground movements. It would have been more judicious implement a new modern school grouping both, Sandycroft and Hawarden, on this new site, to and on the current school	Remove Mancot / Hawarden development	Not accepted. A Transport Study has been undertaken in respect of the Ash Lane allocation and Highways Development Management Officers consider that the highway network can accommodate the development. The Council is looking at options to address congestion in the vicinity of the school and Cross Tree Lane. It must be noted that the site is within walking distance of two schools and not all children will be driven to school. The housing trajectory in the Housing Land Supply Background paper identifies this site as not delivering completions until 2023/24 and provides time for both the congestion issues and the school capacity issues to be addressed. The development of the site will be required to incorporate a sustainable urban drainage scheme which will ensure that surface water run off is no greater than the present greenfield run off rates. There is no reason why the site should add to flooding elsewhere as these are existing problems which will not be made worse by the development. No objection has been made to the Plan by Betsi Cadwaladr Health Board in terms of impact on health facilities. The Health Board is presently looking in more detail at how health facilities can absorb the Plans housing allocations but it must be stressed that not all occupants of these development s will be 'new' to the County as previous surveys show that approximately 60% of occupants move from within the County. Given the timing of expected completions on the site, this provides time for the health Board to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			ground to build new housing. Something that would potentially have made more sense.		put in place appropriate measures. No objection has been made by the Coal Authority to this site. There are known mining shafts on part of the site and these can be taken account of in terms of the layout and design of the development.
124	Foreword	Object	Generally this has got to be one of the most awkward, hardest to digest documents I've clapped my eyes on! Trust me I've read a few. Considering it's taken 4 years to compile it's a shame that your average person in the street is going to give up after the first few paragraphs? I can appreciate you have to cover a lot of ground and make it comprehensive, but from what I've struggled through and that is a fair bit of it so far I can't help feeling it's the councils aim to hide behind smoke and mirrors?		Not accepted. The Plan has to be prepared in the context of national legislation and guidance and has to be informed by an evidence base comprising of background papers and other technical documents. The written statement has been written with the aim of being understandable and not too technical or jargonistic but its content must reflect the fact that it is a land use plan. The Plan has been accompanied by a glossary of terms, an easy read summary leaflet, permanent exhibitions and manned drop in sessions where Officers were on hand to help talk interested persons through the Plan, its policies and proposals and how to comment. The Objective Keystone consultation portal used by the Council is a market leading specialist consultation software package. It is used by private sector businesses and a significant number of local planning authorities. There was no requirement that representations had to be made using the consultation portal as there were clearly other methods of making representations i.e. standard representation forms, email or letter. All Local Development Plan documents were available in main libraries, connects Offices and in the County Council Offices in Mold and Ewloe. The documents were also available to view along with guidance in the ten drop in sessions that

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					took place during the consultation around the county. Guides on how to comment and register were available online and also in drop in sessions. Additionally, the phone lines were manned between the hours of 9am-5pm weekdays to provide assistance. The Local Development Plan has to be written in a particular style to meet the guidance set out in the LDP regulations manual.
225	Foreword	Object	A notable difficulty has been applied to the LDP consultation procedure which adds a needless complexity to objection to the LDP or specific details. This implies that the council is disingenuous regarding commentary or genuine feedback on the LDP. There must be clarity for all members of the public to be able to air views, support or objection to planning policies without a level of difficulty and confusion demonstrated in this document.		Not accepted. The Plan has to be prepared in the context of national legislation and guidance and has to be informed by an evidence base comprising of background papers and other technical documents. The written statement has been written with the aim of being understandable and not too technical or jargonistic but its content must reflect the fact that it is a land use plan. The Plan has been accompanied by a glossary of terms, an easy read summary leaflet, permanent exhibitions and manned drop in sessions where Officers were on hand to help talk interested persons through the Plan, its policies and proposals and how to comment. The Objective Keystone consultation portal used by the Council is a market leading specialist consultation software package. It is used by private sector businesses and a significant number of local planning authorities. There was no requirement that representations had to be made using the consultation portal as there were clearly other methods of making representations i.e. standard representation forms, email or letter. All Local Development Plan documents were available in main libraries, connects Offices and in the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					County Council Offices in Mold and Ewloe. The documents were also available to view along with guidance in the ten drop in sessions that took place during the consultation around the county. Guides on how to comment and register were available online and also in drop in sessions. Additionally, the phone lines were manned between the hours of 9am-5pm weekdays to provide assistance.
224	Foreword	Object	There is a distinct lack of clarity with regard to commentary and support or objection to the plan for users not experienced with planning applications, LDP documentation or IT literacy. This appears to be a deliberate obstruction by FCC to receive the appropriate objections to what is a fundamentally flawed LDP. There has to be clarity and ease of use considerations with regards to impacted residents of areas in Flintshire which are affected by the plans.		Not accepted. The Plan has to be prepared in the context of national legislation and guidance and has to be informed by an evidence base comprising of background papers and other technical documents. The written statement has been written with the aim of being understandable and not too technical or jargonistic but its content must reflect the fact that it is a land use plan. 357	Foreword	Object	The Northern Gateway. Can I ask you to give serious consideration to the following Independently prepared, Peer Reviewed Scientific Paper submitted by Climate Central. Climate Central is a non profit making group of leading Climatologists. https://choices.climatecentral.org/12/53.2516/-3. 1364?compare=temperatures&carbon-end-yr=2100& scenario-a=warming-4&scenario-b=warming-2 Please also note that The Welsh Government website is currently predicting a summer temperature increase of 3.4 Deg by 2050 and a further temperature increase by 4.8 Deg by 2080. I have raised this matter with a number of	Remove Northern Gateway Site	Not accepted. The site was allocated in the adopted UDP and has had the benefit of outline planning permissions on the two halves of the site. Welsh Government has funding flood defence works involving the strengthening of flood defence embankments along the R. Dee and the creation of development platforms. More recently, reserved matters consents have been granted for housing and construction has commenced. At the January Planning Committee a resolution to grant planning permission for a large warehouse and distribution centre was approved. The Northern Gateway development makes a significant contribution not just to the growth ambitions of Flintshire but also of the wider sub-region. Its importance is reflected by the investment in infrastructure by the Welsh Government. The flood prevention measures embodied with the site have been developed in full agreement with NRW. Given this broader context and the recent progress on the site it is clearly not feasible to delete the site from the Plan.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			RICS Members who have indicated that RICS are currently extremely concerned about future proposed development likely to be affected by the now predicted future Climate Change Putting these 3 factors together The Northern Gateway is very clearly an "Unsustainable Proposal" The creation of further Flood Defences for the benefit of this particular development will simply exacerbate the current fragile condition of existing housing Stock along the Dee Estuary. Climate Change is a Global issue that cannot be answered by such a Parochial answer as Flood Defences. Such Flood Defences will not solve this issue but merely move the problem to another adjoining location. If you were to present a Class of Primary School children with a 3 D model of Flintshire and pose the Question.. "Where should we NOT be building Houses to avoid potential flooding?" I suspect they would 100 % point to The Northern Gateway proposal.		

Introduction

ID	Title	Support or Object	Summary of representation	Summary of changes being sought/proposed	Council response
346	Introduction	Object	LDP Plan Period It is noted that the LDP period is proposed to cover a 15-year period between 2015 and 2030. Based on the Council's latest LDP Delivery Agreement (Third Revised, published in May 2019), the LDP is not expected to be adopted until at least July 2021. This would be six years after the commencement of the LDP period. Our Client objects to this approach; the Council has had no adopted and approved development and spatial strategy in place since the end of the Unitary Development Plan (UDP) period in 2015 to deliver new homes and jobs in the County. There has in effect been a policy vacuum. It is our Client's position that the LDP period should instead run from 2019 to 2034 (i.e. from the date of publication of the Deposit Plan), with any shortfall in housing delivery during the period 2000-2019 met during the subsequent period 2019-2034. In the event that the adoption of the LDP slips further owing to any concerns over the proposed development and spatial strategy (and which trigger the requirement for further work/updated evidence by the Council), then the LDP period should be adjusted further to reflect this.	It is our Client's position that the LDP period should instead run from 2019 to 2034 (i.e. from the date of publication of the Deposit Plan), with any shortfall in housing delivery during the period 2000-2019 met during the subsequent period 2019-2034.	Not accepted. Welsh Government does not prescribe a particular Plan period for a LDP. Typically the Plan period is for 15 years as this is a balance between looking far enough into the future for it to have a strategic context but so far ahead as to bring greater uncertainty in terms of forecasts, projections, changes in circumstances and guidance etc. It is also quite normal for a Plan to be adopted well into its Plan period. However, if the LDP is adopted at the end of 2021 it would still have 9 years remaining which is a significant improvement on the UDP. It is also normal practice for a Plan period to follow on directly from the previous Plan period. To amend the Plan period now to a 15 year period from 2019 to 2034 would have profound implications for the timetable for adopting the Plan as it would require a fundamental reconsideration of housing and employment growth and possibly require the identification of additional development sites. Such an approach does not represent sound or sensible planning. The Plan will need to be reviewed every 4 years. The 'policy vacuum' which is of concern to the objector would be extended even further by the objectors suggested approach.

ID	Title	Support or Object	Summary of representation	Summary of changes being sought/proposed	Council response
1120	Introduction	Object	I am commenting on a draft document which is subject to change. Comments need to be made on the final document and not the draft document.		Not accepted. The process of producing an LDP involves various stages of public participation as set out within the community involvement scheme within the Delivery Agreement. Consulting on the Deposit version of the plan is a statutory process, the Local Authority must present their final version of the plan for comments before it is submitted for formal examination by a planning inspector. During the examination the inspector may make changes to the deposit plan which the Local Authority must adopt. Once the plan has been formally adopted by Flintshire Council this will be the final version of the plan and no further changes can be made. It would not be possible to make comments on the plan once it has been adopted as no further changes would be allowed. The Deposit version of the LDP is therefore the final version of the plan, ready for the Deposit consultation stage which is the final point at which comments can be made ahead of the examination process.
1168	Introduction	Object	LDP Vision and Objectives On review of the Vision, it is considered that it is lacking in detail. For example, there is no reference or commitment to the LDP delivering, in the very least, the minimum housing and employment needs of the County, nor is there any detail on where these needs will be met (for example, directing new development towards sustainable locations). It is considered that the Vision should be expanded to include a commitment to achieve the needs of the County in sustainable towns and settlements over the LDP period and with it meet the need of current	It is considered that the Vision should be expanded to include a commitment to achieve the needs of the County in sustainable towns and settlements over the LDP period and with it meet the need of current generations, whilst safeguarding the needs of future generations.	Not accepted. Welsh Government advises in para 5.11 of Development Plans Manual 3 that each LDP must contain a vision and specifically advises a vision should 'be a concise, focused and positive statement'. It is considered that the Plan's vision accords with the guidance in Development Plans Manual 3. The Plan's vision is for the whole County and clearly addressed the need for sustainable development and meeting the needs of its residents in terms of the environment, economy and social considerations. However, it is not considered necessary for the vision to go into detail about housing provision as that is achieved in the Plans strategic policies. It is the relationship between the Vision, translated through the objectives, to

ID	Title	Support or Object	Summary of representation	Summary of changes being sought/proposed	Council response
			generations, whilst safeguarding the needs of future generations.		the plan policies which set out how much, how and where growth will happen that is key to reading the plan as a whole.
1169	Introduction	Object	Turning to the LDP objectives, our Client is generally supportive of all 19. However, and linked to the comments above (comments on the vision), it is considered that Objective 11 should be amended to read as follows: “Ensuring that Flintshire has the right amount, size and type of new housing to support economic development and to meet the minimum housing needs of the County in full, including both market and affordable housing’ Our Client supports the delivery of high-quality housing though good design. This includes the provision of green infrastructure as part of development proposals, alongside sustainable drainage systems. Our Client supports the Council’s ambition to deliver growth and prosperity which enhances community life, balanced against the need to protect the natural and historic environment where possible.	it is considered that Objective 11 should be amended to read as follows: “Ensuring that Flintshire has the right amount, size and type of new housing to support economic development and to meet the minimum housing needs of the County in full, including both market and affordable housing’	Not accepted. The wording of Objective 11 already references the need to ‘meet a range of housing needs’ and this will clearly include affordable housing. It is not considered necessary for the wording on the objective to be amended as required by the objector.
540	Introduction	Support	I refer to your letter dated 19 September 2019 regarding the above consultation. The Health and Safety Executive has no comments to make.		Accepted. Comments noted.

How to View and Comment on the Deposit Local Development Plan

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
267	How to View and Comment on the Deposit Local Development Plan	Support	I agree that this above site in Greenfield should not be built upon for the following reasons: *Greenfield does not have the amenities to accommodate an increased population. Greenfield School is almost full. There is no dentist or doctors surgery and few shops. *The drains and sewers struggle to cope at present. *Access to the site is steep and increased traffic would exacerbate the situation making accidents more likely and raise pollution levels. *Greenfield is an area of great natural beauty which is home to protected species including owls, bats, badgers buzzards and kites as well as small mammals, insects, amphibians and the greenery which supports them.We need to protect the "green" in Greenfield!		Noted. The Deposit Plan has not allocated land at Tan y Felin, Greenfield for housing development nor included it in the settlement boundary. The representors comments in opposing development of the land are noted
318	How to View and Comment on the Deposit Local Development Plan	Object	I wish to object to this development for the following reason: UPD in 2015 specified 15 potential sites which have not been taken up. Instead the LPD has concentrated on green belt land in 1site only which would result in approximately a 25 % increase in the population of Mancot Village & effectively combining Mancot with Hawarden. The resulting population explosion with create	Remove Site at Ash Lane	Not accepted. The Council has assessed some 700 candidate sites and nearly 100 alternative sites. In Mancot 6 candidate sites were assessed and in Hawarden 11 sites were assessed. Each was assessed against an assessment methodology which ensures all sites are assessed consistently. The Council has reviewed housing allocations in the UDP that have not come forward to determine whether they are suitable and appropriate to be

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			havoc within this area which is already drastically short on GP facilities, there being only 1 surgery in Hawarden. My own surgery is in Shotton has been trying to get a replacement GP since March so I cannot see how new doctors will suddenly be found for new patients. There is a similar shortage at all levels for places in local schools where families are already unable to attend a school nearest to their home. There is no longer a public transport service in this area so traffic along Ash Lane will be considerably increased On school days the junction at Ash Lane & Cross Tree Lane is already horrendous & this will be really dangerous with increased traffic.endangering children crossing the road to get to school. The only leisure facility in Mancot is the library which is run on a voluntary basis, For these reasons I believe the proposal is inappropriate & not justifiable		allocated again in the LDP in terms of being viable and deliverable. The candidate sites submitted around Hawarden and Mancot are all within the green barrier in the adopted UDP. The candidate site assessment has been accompanied by a green barrier which has reviewed each existing green barrier. The UDP Inspector considered that the sites allocation for housing would not undermine the function of the green barrier and although the site now allocated is slightly bigger than that considered by the UDP Inspector, the Council considers that this does not harm the broader function and purpose of the green barrier. The provision of health care facilities is a matter for Betsi Cadwaladr University health Board who have not objected to the Plan or this site. The site is forecast not to deliver completed houses until 2023/24 and will be developed over several years. The impact of development will not be felt in 'one hit' and allows sufficient time for BCUHB to address capacity issues. The Council is working with BCUHB to establish how it will provide capacity to accommodate the growth levels in the Plan. In a similar vein there is no objection to the Plan or allocation by the Local Education Authority. Again, the Council is working with the LEA to establish how capacity can be provided to accommodate the Plans growth levels. The Council's website indicates that service 11 still runs along Gladstone Way on a route from

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Rhyl to Chester every 30 mins Mon – Sat. The site sits between the two settlements of Hawarden and Mancot and is close to other settlements such as Broughton and Ewloe and the Deeside area. It is a sustainable location for growth as recognised in the Wales Spatial Plan and the draft National development Framework. A transport assessment has been undertaken for the site has established that the road network can accommodate the allocated site. The development will have two vehicular access points onto Gladstone Way and Ash Lane which will help traffic to dissipate, rather than all being directed along Ash Lane. The Council is looking at measures to alleciate traffic congestion at Cross tree Lane in the vicinity of the school and there is time for measures to be devised and put in place before development takes place. The site abuts the library, community hall and play area/ recreation ground and bowling green and will ensure be required to provide play space within the development.
1125	How to View and Comment on the Deposit Local Development Plan	Object	Test of Soundness. The Plan is not sound and Probably fails all 4 tests. This qualifying information is impenetrable and appears designed to mislead and obfuscate an already complex subject. According to national guidelines it is necessary for Authorities to present documents		Not accepted. The section of the Introductory Chapter of the written statement 'How to View and Comment on the Plan' was intentionally placed at the beginning of the Chapter so as to be the first part of the document to be read. The text has been written in a simple and understandable manner to identify clearly how people can view and ultimately comment on the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that can be used and understood by residents and council tax payers, businesses and those with an interest in the environment of environs. The so called Deposit LDP is not transparent it is opaque and it appears deliberately so. Removing an area of green barrier designated on the past for good reason by drawing a line around two properties appears very suspicious and illogical. I have not attached anything personally but I refer you to every submitted document deposited in the public consultation period between 30.9 - 11.11.2019.Residents have supplied me with copies.		Plan. The Deposit Plan was supported by an easy read summary leaflet, a representation form and two guides relating to registering with the Consultation Portal and commenting through the Portal. The Plan has to be prepared within the legislative framework set out in the LDP Regulations Wales….. and guidance in WG Development Plans Manual. The examination of the LDP by the Planning Inspectorate is concerned with establishing whether or not the Plan is sound or whether it can be made sound through amendments. The Inspectorate will therefore apply the Tests of Soundness to the Plan and determine whether or not each test is satisfied by the Plan. In this context the para 3.2 of the Introductory Chapter sets out what the Tests of Soundness are. The Deposit Plan was not designed or written with the objective of causing confusion or seeking to prevent comment. However, it is necessary for the Plan to be supported by an evidence base which will include background papers and other supporting technical evidence. In this context it is also relevant and important that objections to the Plan that reference concerns about its soundness are also supported by evidence of this is. The preparation of the Plan involved a review of existing green barriers and also other green barriers put forward as part of candidate sites. The review concluded that the green barrier

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					between Ewloe, Northop Hall, Connah's Quay and Shotton / Aston should be retained but that the release of part of the green barrier on the edge of Ewloe Green, to facilitate a housing allocation, did not undermine the objectives of this particular green barrier. The Green Barrier Review has been clearly presented and explained in a background paper which was available alongside the Deposit Plan during the consultation. Given that the Plan has been prepared and consulted upon in line with National planning guidance and regulations and with the statement of community involvement in the Delivery Agreement, it is not considered that the Plan fails the 'Preparation Requirements' test of soundness. The objector has provided no justification as to why the Plan fails to satisfy the other test of soundness.
1127	How to View and Comment on the Deposit Local Development Plan	Object	Objects to HN1(7) Holywell Road/ Green Lane Ewloe housing allocation. 1. Notices: a fair and transparent process of notices seeks to ensure the inclusion of all parties that would be impacted by any development that would directly affect them. The restricted methods of Notices adopted by the planning department of FCC failed to ensure they communicated fairly and equally to all affected persons, putting a proportion of the public/residents at a	Objects to HN1(7) Remove Holywell Road/ Green Lane Ewloe housing allocation	Not accepted. The categorisation of Ewloe as a Tier 2 settlement is based on the settlement audits which informed the Plans settlement hierarchy as consulted upon in the Key Messages document and confirmed in the Strategic Options consultation document. Ewloe has a good range of facilities and services as well as employment and has good road and bus communications and is close to Hawarden Railway Station. An Inspector in a recent appeal decision stated 'The site is located adjacent to a sustainable settlement which has a range of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			disadvantage and who would not have been aware of any proposed development were it not for the support of other residents. 2. Transparency. The Employment Land Reviews 2015 have a set scoring /weighting dataset, why has this not been done for housing. 3. The accessibility of the online portal and the structure of the paper Representation Form is overly difficult and deemed obstructive in that they are over complex and repeated reference to ''professional'' terminology deters residents form submitting their opinions. 4. It is unacceptable to expect, in a 6 week period, for residents to undertake and pay for the level of work and appraisals that are stated as ''essential'' and for which the LA has had years to prepare. Suggested alternative sites , derelict sites on land next to Wingfields outdoor shop Sealand Road, Land adjacent Chester road and B5129 Sandycroft and the former DARA site at Sealand.		services and facilities and is accessible by transport modes other than the private car'. The detailed responses later in the Council's response will set out the level of services and facilities, the public transport, the proximity to other settlements and employment areas and the opportunities for Active Travel being pursued by the Council's Transport Strategy Team. The allocated site is therefore considered to comply with para 3.38 of PPW10 in terms of minimising the need to travel, reducing reliance on the private car and increasing walking, cycling and use of public transport. In the 15 year UDP period Ewloe saw an actual growth of 16.1% (completions of 367 units) which was just above the indicative growth band of 8-15% for a category B settlement in the UDP. In the first 3 years of the LDP period Ewloe has seen a further 65 completions, largely as a result of the speculative permission Anwyl secured at Greenhill Avenue. At the Plans base date for the Housing Balance Sheet of April 2018 there were commitments for a further 40 units giving a growth rate of 4%. Taking into account the units form the allocated site the growth for Ewloe over the Plan period would be 15.2% which is broadly in line with the previous growth bad in the UDP. The Inspector in that appeal decision concluded that the proposal would '…not result in Ewloe having an unacceptable housing growth rate'. The rate of growth in Ewloe is not considered to be excessive and higher rates of growth have been

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					experienced in other settlements. The Council is now preparing a Plan for a new Plan period and Ewloe remains as a Tier 2 settlement which is capable of sustainably accommodating further growth. On the one hand objectors claim a lack of services and facilities and on the other hand claim that Ewloe is overloaded with commercial buildings. It is these commercial and employment buildings, largely centred on St Davids Park, which adds to the role and character of the settlement and adds to its sustainability credentials. The objection does not explain how the scale of building will negatively impact on the settlement as a whole. Objections appear to regard Ewloe Green as a separate settlement whereas it forms part of a larger settlement of Ewloe. In this context the site is not considered to be out of scale or harmful. Ewloe has seen previous housing developments and each has provided the requisite affordable housing. The Viability Study which informs policy HN3 identifies that this allocation should be able to provide 40% affordable housing. Comparing the size of this housing allocation with other housing allocations in other settlements only looks at part of the overall provision. The allocation in Ewloe may be larger than the Denbigh Rd site in Mold but it is the only site in Ewloe whereas in Mold there are two allocations and other committed sites. It is

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					necessary to look at Ewloe as a whole settlement and not just the Ewloe Green part. The presence of sand and gravel and other minerals on candidate sites has been assessed by the Council's Minerals and Waste team and there is no requirement for 'prior extraction' of any reserves. It is unclear whether objectors are suggesting that the site be held back for future minerals extraction as this would surely have detrimental impact on residents and the environment. The IIA recognises that measures can be put in place to secure additional educational capacity. This was also commented on in the Wrexham LDP Inspector's Interim Findings letter where she stated 'The final reason for reducing the housing requirement was that the level of growth identified was considered to place too much strain on infrastructure such as highways, education, schools, council services and health providers. Again, we are not convinced that this is relevant to the assessment of need. Moreover, it is always a requirement for developers to make provision, through planning obligations, for infrastructure to be provided where existing capacity would not meet the additional demands and needs of new development. This would be commensurate with the scale of development'. The Wrexham Inspector also commented 'We heard during the sessions of the shortcomings in the County Borough in the provision of health

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					facilities. The local health Board, which does not object to the LDP, states in its consultation responses that it is not the provision of buildings for additional services which is the issue but the availability of the required workforce. We have little evidence, therefore, that the availability of health services is a compelling reason to prevent or limit residential development'. It must be stressed that the Ewloe site will not deliver completed houses until 2023-24 with 28 completions forecast in the first year and 45 per year thereafter. The impact of development will therefore not be felt in 'one hit' and there is sufficient time for both the Heath Board and the Education Authority to support the delivery of growth that is identified in the Plan. There is no formal objection from either statutory body to the Plan nor allocation. The UDP Inspector clearly considered Ewloe to be a sustainable location in recommending housing allocations within Ewloe. A subsequent appeal Inspector also considered that Ewloe was a sustainable settlement. The Settlement Audit which informed the earlier stages in the Plans preparation sets out the range of facilities and services within the settlement, and this was widely consulted upon as part of the Plans earlier engagement phases. The sustainability of the settlement is not just as reflected in the settlement itself but also in the proximity of other nearby settlements such as Buckley, Drury, Northop Hall, Connah's Quay, Hawarden and

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the Deeside settlements as well as Deeside Industrial Park. The B5125 Mold Road is the route of two key bus services. Service 5 runs between Mold and Ellesmere Port and provides an hourly service calling in at Deeside Industrial Park. Service X4 runs between Chester and Mold and provides a link through Hawarden and runs every 30 mins. The site is also just over 2km to Hawarden Railway Station. Ewloe Green has a convenience store and a number of take aways, a social club and there are further facilities and services in Ewloe. There are also a series of Active Travel schemes as shown on the Flintshire Active Travel Integrated Route Map (Central). A key strategic route is the F6 'Connecting Settlements' route from Mold through Buckley to Ewloe. This links with other localised routes which includes: • EW2-16(1) – a route from Mare Hay Lane along the road to the rear of the Social Club and on to the roundabout. • EW2-16(2) – Route from Mare Hay Lane including the provision of a new footbridge with ramps, over A494(T). • EW2-16(3) – route from footbridge through Lakeside Business Park. • HA2-15(1) – two way cycle track along The

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Highway between roundabout and Hawarden High School. • SH2-12(1, 2, 4, 5) - shared use cycle and pedestrian lane along the 494(T) Aston Rd from the Ewloe roundabout to Shotton / Queensferry. It is evident that Ewloe, both as a settlement in its own right and in conjunction with nearby settlements and employment areas is a sustainable location to accommodate further growth, and that travel is not wholly car dependent. Policy STR2 criteria a. states that Tier 2 Local Service Centres 'will be the locations for more modest levels of new housing development'. The amount of housing development in settlements is not just made up of new allocations but also completions during the early years of the Plan and existing commitments (as well as possible windfalls). It is not appropriate to interpret the policy as indicating a more modest site size. Ewloe Green is predominantly made up of post war modern estate type development and is not considered on the whole to have a particular character that is different to Ewloe. The two have been considered as one settlement for successive development plans for 25 years. The site size is determined by the fact that the two candidate sites work hand in hand in bringing about a logical urban extension. The site does not have constraints that would prevent its development and the site promoters consider that the site is viable and deliverable in accordance with the Councils trajectory in the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Housing Land Supply Background Paper. This site is not the only new housing allocation in the Plan. Each site, whether new or previously considered, needs to be assessed on its individual merits. Brownfield / Alternative Sites The Plan preparation has involved the assessment of several hundred sites, the vast majority of which are greenfield. The County has large areas of brownfield or previously developed land particularly along the Dee Estuary. However, these are former mining and heavy industrial areas and often areas where landfill has taken place. These areas are affected by flood risk, contamination and their proximity to the Dee Estuary, which is of international nature conservation importance. These areas are not suitable to accommodate residential development which is a 'highly vulnerable' land use in terms of flood risk. It is accepted that there are potentially smaller parcels of unused and derelict land and buildings in towns but these can be difficult to allocate in terms of predicting their availability, viability and deliverability. This is why the Plan makes a conservative allowance for small and large site windfalls as part meeting of the Plans overall housing requirement, thereby recognising that such sites can make a modest contribution to overall supply. A Plan which places too much reliance on such unidentified windfalls is likely to be found unsound.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Each candidate site (and alternative site) has been assessed against the criteria in the Candidate Site Assessment Methodology which was previously consulted upon. The assessment is detailed involving in excess of 30 assessment criteria which would have been too detailed to publish as part of the Deposit consultation documents. Instead the Council published a summary assessment of each candidate site in the form of a Background Paper and this took the form of a conclusion on each site. This provided a clear explanation as to why each site was considered appropriate or otherwise to be allocated. There are obviously some constraints to a site being allocated that are not capable of being resolved and this might include flood risk or an ecological designation. However, in the main, many constraints are capable or being either avoided or mitigated. Planning is therefore not black and white and is not always a scientific or numeric exercise. Rather, it is a matter of planning balance in weighing up the evidence before making a decision. Merely totting up scores and allocating the highest scoring is too regimented and simplistic and fails to take account of other considerations or the application of planning judgement. It is acknowledged that para 5.3.4.11 of the Development Plan Manual (2) stresses the need to use a clear assessment methodology in order to rank sites, which can then inform plan allocations needed to deliver the strategy and

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					signpost potential reserve sites which may be required later. However, this version of the DPM has now been superseded by Edition 3 (March 2020) and there is no requirement for sites to be scored or ranked for the obvious reasons given above, that it is not a mathematical exercise. It is documented in the Integrated Impact Assessment that both the allocations and a number of reasonable alternative sites were appraised. Clearly, the reasonable alternative sites are not considered to perform as strongly as the allocated sites. In assessing candidate sites (and alternative sites) the Council has undertaken a consistent and detailed assessment of sites against an agreed methodology. Sites have been assessed against a wide range of criteria, designations and constraints of which green barriers is one. Alongside the assessment of sites is a review of green barriers. In the case of the Ewloe allocation the site is considered a sustainable location and a site which does not harm the overriding purpose of this particular green barrier given the remaining extent of the green barrier. The Plans settlement hierarchy and spatial strategy is based on a comprehensive suite of settlement audits which established the sustainability of each settlement in terms of location, size, character, role and level of services and facilities. The most sustainable settlements are generally located in the eastern part of the County close to major sources of employment. The lack of new allocations in the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					western part of the County should not be interpreted as there being no growth. There will be existing commitments (planning permissions) and also completions secured in the early years of the Plan period. For instance there are two large site commitments in Holywell, one of which is under construction and a large site commitment at Caerwys which is also under construction. A Council site being promoted by Wates as part of the SHARP scheme also has planning permission at Gronant, along with a further site at Pen-y-ffordd. It is a normal occurrence of the housing market for properties to be for sale or to be empty. This is known as 'churn' and an allowance is made for this as part of preparing forecasts of population and household growth. When projected household growth is converted to dwellings an assumption is added about vacant properties and second homes in the stock of 3.1%. The 'Population and Housing Projections Technical Paper' in Nov 2017 which accompanied the Preferred Strategy explains that Welsh Government recommends a notional average allowance of about 4% with a range between 1.5% and 8% depending on local evidence. Each of the 'alternative' sites put forward are commented on in turn: The Northern Gateway site is a key strategic mixed use allocation in the Plan. It forms a key part of the regional growth initiatives and is consistent with the draft NDF which identifies

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Deeside as a growth area. The site has two outline planning permissions and both parts of the site have a reserved matters approval for housing - Countryside Homes have commenced construction on the first phase of housing on the northern part (300 homes), and Keepmoat have now secured approval for the first phase of housing on the southern part of the site (120 homes). A reserved matters approval exists for a large B8 warehouse and distribution centre. The ethos behind the site is that it is a mixed use development with employment, housing and community facilities and it would be inappropriate to simply re-assign the employment areas to housing. The Gateway to Wales Hotel site recently suffered a fire and is reported in March 2020 to have been bought by a Manchester based developer with consideration being given to a range of uses being considered https://www.dailypost.co.uk/news/north-wales-news/gateway-wales-hotel-site-bought-17875172. The site though is relatively small and is not comparable to the allocated site. Neverthless, the Plans allowance for small and large site windfalls allows for sites such as this to come forward over the Plan period. The former Bengal Dynasty restaurant in Shotton is a small site which is not comparable to the allocated site. The site is capable of coming forward as a windfall over the Plan period. The Halfway House pub on Church Street in

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Connah's Quay is presently closed. The future intentions of the landowner are not known but it is relatively small and is not comparable to the allocated site. The site is capable of coming forward as a windfall over the Plan period. During the latter part of 2019 land at Hope Hill Farm, Hope was for sale. However, the land is in open countryside and is greenfield land not brownfield and relates poorly to the form and pattern of built development in Hope. The site is not appropriate or suitable to be allocated in the Plan The former Morrisons site Wepre Drive has potential to deliver a retail or commercial development / use and it is inappropriate to be considered for residential development. Preparations are being made for the demolition of the later phases (rear) of County Hall. Development is complicated by the need to retain the theatre, law courts and Llwynegrin Hall and the need to ensure some office space is retained for FCC. The site is also challenging in terms of mature trees, a listed building, green space, protected species and topography. In this context there was considered to be insufficient certainty regrading deliverability for it to be allocated. However, the site has the potential to deliver housing in the form of a large windfall site which the plan's housing balance sheet makes allowances for. The allotments on Upper Aston Hall are not owned by the Council. The allotments were

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					opened by Hawarden Community Council on 08/06/13 and are fully let to local residents through an Allotment Holders Association. The site is not available nor suitable for housing development as it is a valued local community facility. Green Barrier The site was designated as part of green barrier (GEN4-12) in the UDP which covers land between Connah's Quay, Northop Hall, Ewloe and Shotton. The Council is required during the preparation of each development plan to review existing green barriers as confirmed in para 3.64 of PPW10 'Green wedges are local designations which essentially have the same purpose as Green Belts.... Green wedges should be proposed and be subject to review as part of the LDP process'. The Council has explained its approach to the review of the green barrier in Background Paper No.1. The overriding objective or function of this green barrier is to prevent the coalescence of the 4 settlements. Given the large extent of this green barrier, the modest drawing back of the green barrier to accommodate the two candidate sites which make up the allocation are not considered to represent a risk to the coalescence of Ewloe with Northop Hall or Connah's Quay. This is because the wooded valley comprising New Inn Brook forms a robust physical feature which prevents the expansion of Ewloe in a north westwards direction. The

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					wildlife site at New Inn Brook (a continuation of the Wepre SSSI, SAC/SPA) would also require a buffer between it and development and this further protects against development. Although the green barrier is reduced by the housing allocation it does not undermine its effectiveness in seeking to prevent the coalescence of settlements. The physical arrangement of the site and green barrier does not result in development being any closer to Buckley. The town of Buckley lies to the south west of Ewloe. Green barriers (or green wedges as defined in PPW10) are not designated based on the quality of the landscape. The suitability and sensitivity of the landscape in terms of accommodating the proposed development is a separate consideration. Planning applications must be determined in accordance with the prevailing development plan in force. The planning application (050275) for a dwelling was refused 07/02/13 against the policies in the adopted UDP at that time on the basis that as the site was in open countryside and a green barrier and that there was no special justification for a new dwelling then the application was contrary to policy. The Council is now preparing a new development plan for a new time period, to meet a new housing need and this has involved a review of candidate sites, settlement boundaries and green barriers.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Site Assessment The site was assessed against the Preferred Strategy and was classed as an amber site 'The site complies with the Council's Preferred Strategy, however there are site constraints that would need to be overcome to allow the site to be developed' with a further explanatory note 'This includes sites where there are known constraints which would need to be overcome such as highways improvements, flood risk or ecological constraint. This would also include policy constraints such as existing green barrier. It would also include sites where there might be a potential viability or deliverability concern particularly when a site has not come forward'. The fact that a site was classified as amber at Preferred Strategy stage did not mean that it was unsuitable to be considered for inclusion in the Deposit Plan provided that constraints can be overcome. Each of the objectors concerns about constraints will be addressed in turn: • Green barrier – this is addressed above • Agricultural land – it is accepted that the site will result in the loss of grade 3a agricultural land. The Council's approach to minimising the loss of BMV agricultural land is set out in Background Paper 9. Welsh Government has supported in principle the approach taken and has not objected to this housing allocation • Road improvements – there has been long standing concern about the junction between the B5125 Holywell Rd and the B5127 Old Mold

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Rd at the former Boars Head Inn. This was particularly the case when planning applications on the site of the Boards Head were under consideration. The developer of the allocation will implement road improvements by improving the capacity of the junction to enable it to function more efficiently both for new and existing traffic. The provision of a vehicular access to the smaller part of the site off Green Lane will bring about the improvement of the junction of Green lane with the B5127 Mold Rd. • School capacity – This is considered later in the Council's response under 'Infrastructure'. • Sewer – Welsh Water identified earlier in the Plan preparation process that there is a sewer crossing the site. The detailed layout and design of the site will need to take into account the route of the pipe and ensure an easement for future maintenance is provided. • Ecological surveys – An ecological survey of the site has been unilaterally undertaken and submitted by the site promoters and assessed by the Council's Ecologist. Given that the site is improved agricultural grassland it is not of high ecological value with the exception of trees and hedgerows which can be retained in the main as part of a detailed layout for the site. The development would need to provide an Ecological Impact Assessment with appropriate avoidance and mitigation measures. The proximity of the SAC means indirect impacts would also have to be considered and this could be achieved by either using the public right of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					way network to direct recreational pressure away from the SAC and wildlife site, or through commuted sums towards management works within the SAC and wildlife site. NRW have been consulted and have not objected to the allocation. • Landmap – The NRW Landmap system identifies the following evaluation scores geological landscape (moderate), Landscape habitat (high), visual and sensory (moderate), historic landscape (high) and cultural landscape (high). A Landscape and Visual Impact Appraisal has been unilaterally undertaken and submitted by the site promoter for the site. In terms of the wider landscape character this concludes that the proposal would result in a Slight-Moderate Adverse effect to the positive characteristics of the site and wider landscape. However, it adds that the proposed development would establish over time as an extension of the Ewloe settlement and result in a residual effect of Slight – Moderate Neutral by year 15. The Study recommends a number of mitigation measures including retaining, enhancing the hedgerow boundary that surrounds the site along with design measures such as scale, massing, materials and building type that reflect local vernacular, retain the public footpath for permeability alongside structure planting through open spaces and streetscapes which would help soften the built form. • Character of settlement – The site is well framed by Green Lane and existing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					development to the south, by existing residential estate type development to the east and by Holywell Rd to the north. The western boundary is defined by mature hedgerows. The site is therefore considered to represent a logical extension to the settlement. Given that the bulk of development in this part of Ewloe is post war estate type development it is unclear why further residential estate type development would be out of character with the settlement, given that this is already the prevailing character of the settlement. • Mining – the site sits within an area where mining has previously taken place. However, there is no objection from British Coal in terms of the presence of any technical constraints to development. A detailed Geo-Environmental study has been unilaterally undertaken and submitted by the site promoter and this has not identified any issues. • Landfill – there is no landfill within the site boundary. A former landfill exists on land adjacent to Ewloe Green Primary School but this is now developed for housing and any legacy from landfill would have been dealt with through mitigation measures. • Sand and gravel reserves – this is commented on elsewhere in the Council's response • Tenant farmer– this is commented on elsewhere in the Council's response Amenity

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Construction nuisance - It is inevitable that a new housing site will bring some disruption as a result of construction, wherever it is located. This is not a compelling reason to remove the allocated site from the Plan. A planning permission can include conditions relating to hours of work and construction arrangements. Most developers will also work to a Construction Management Plan. Ultimately nuisance from a development site will be a matter for Public Protection and Planning Enforcement to address, if any occur. Overlooking / privacy / light – The Council already has an adopted Supplementary Planning Guidance Note relating to Space Around Dwellings which seeks to ensure that the residents of new houses and residents of existing houses enjoy satisfactory living conditions in terms of privacy and light. This is a matter for the detailed layout and design of the site to address at the planning application stage and does not affect the principle of development. Air pollution – The Council, through its Public Protection service, is responsible for monitoring air quality and the levels of pollution across the County. This is done through a network of monitoring stations throughout the County. All North Wales authorities contribute to an Annual Air Quality Progress Report in fulfilment of Part IV of the Environment Act 1995. The Reports for 2018 and 2019 show that within Flintshire and indeed across North Wales, there are no Air

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Quality Management Areas (AQMA) and in consequence has not published an Action Plan. In Ewloe there are monitoring stations at St Davids Close, Ewloe (monitoring station 2), Aston Hill Roadside (3/15), Hawarden High School (ms4), Ewloe Green Primary School (ms46), Aston Hill Roadside (ms3,15), South Bank, Aston Park Rd, Queensferry (ms5,9,10), 4 Belvedere Close, Queensferry (ms16). The conclusion of this evidence is that are no air pollution issues within the County or locally. In addition to this, Welsh Government installed their own continuous monitoring station at South Bank in Aston prior to the consultation for the red/blue route and the Aston Hill improvement scheme prior to that. At no time has the Governments action level of 40 µg/m3 NO2 been exceeded in any year so the Council have not had to make this stretch of road or any other area in Flintshire an Air Quality Management Area. Nevertheless, Welsh Government have introduced formalised speed restrictions along the A494(T) in order to generally reduce air pollution, whereby speed limits have been reduced to 50mph from the DIP junction to beyond Ewloe. It is the case though that speed limits for much of the route (River Crossing to Ewloe) have been 50mph for several years anyway. Welsh Government published the report 'Tackling roadside nitrogen dioxide concentrations in Wales - Welsh Government supplemental plan to the UK plan for tackling

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					roadside nitrogen dioxide concentrations 2017 – Interim Data on NO2 Concentrations for the Motorway and Trunk Road' in September 2019. The report highlights that since 2017 air pollution has reduced at roadside locations and will continue to reduce. A further consideration is that in the longer term, the implementation of the Red Route will have the effect of reducing traffic levels on the A494(T) and will be likely to lead to further reductions in pollution. Continued reductions in petrol / diesel emissions through tighter controls, combined with increasing levels of electric vehicles will also have the likely effect of reducing pollution further. This clearly points to a context of reducing levels of pollution in the area / County over time. The Council's Pollution Control Officer considers it is unlikely that the allocation alone would contribute enough additional pollution to push the levels currently being measured above the government action level of 40 µg/m3. However, the developer will be required to investigate and provide thorough Noise and Air Quality assessments to support any application in order to protect amenity and consider air quality in line with WG legislation and Future Generations Act. Light pollution – The detailed layout and design of the scheme will need to address the issue of light pollution as required by policy EN18 of the LDP. This must be viewed in the context of existing light pollution from existing development

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					and street lighting. PROW – The detailed layout of the site will need to ensure that the public footpath through the site remains as an attractive route, without the need for a diversion. This can be achieved by incorporating the public footpath as part of green infrastructure, so that it retains an open, non-urbanised feel. It is usual for improvements to a public right of way to be secured such as improved surfacing to improve usability. During construction works it may be necessary to temporarily close a public footpath in view of health and safety considerations. However, in this case there is a public footpath to the west of the site which runs from Green Lane to Holywell Road (Newbridge Farm) and links in with public footpaths into Wepre Park. There is a further public footpath on the far side of New Inn Brook which again links Green lane with Holywell Road. There is clearly a network of alternative footpaths. Apart from the construction phase, which is commented on above, it is unclear how or why a residential development would result in noise pollution to existing residents of a neighbouring residential development. Traffic A Transport Assessment has been unilaterally prepared and submitted by the site promoters, and assessed by the Council's Highway Development Control team. This confirms that the road network has the capacity to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					accommodate the development. It is acknowledged the road network around Ewloe is busy at the rush hour peaks but this does not mean that additional development cannot be accommodated. The development will provide for the improvement to two junctions to i) facilitate the delivery of the site but also to II) facilitate a significant junction improvement at the junction adjacent to the former Boars Head Inn in order to improve capacity. This is a known long standing problem and in the present financial climate, the junction improvements would be unlikely to be delivered in the absence of developer funding. It is unclear from the objection which country roads have experienced such an alleged increase in traffic. It is accepted that parking problems have occurred on residential roads. However, this is an existing problem and it is unclear how additional housing development which will have its own parking provision, will make this worse. The site is proposed to have two points of access, one onto Holywell Rd and one onto Green Lane. The provision of a through road between the two access points would result in residential estate roads becoming a rat run. Instead the proposed development will deliver an improved junction between Green Lane and Mold Rd and significant improvements to the junction of Mold Rd and Holywell Road including right turn lanes to add additional capacity at the junction. A Transport Assessment has been unilaterally provided by the site promoter which

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					establishes that the road network can satisfactorily accommodate the development. The site is within easy walking distance of Ewloe Green School and its development need not ad to existing problems. The improvement to the junction of Green Lane and Mold Rd may also help improve traffic movements in the area around the school. As referenced above, work is progressing in the Ewloe area in terms of Active Travel which will improve links to Hawarden High School. The Infrastructure Plan lists road schemes that are already identified by Welsh Government or by the County Council, where it is necessary to safeguard the route in the LDP. Examples include the red route identified by Welsh Government and a number of other schemes identified in the Local Transport Plan by the Council. The Ewloe housing allocation is only a proposal at the moment as is the two sets of road improvements proposed (and referenced in policy HN1). Therefore the two proposed junction improvements are referenced in Appendix 2 of the Infrastructure Plan as part of the highways section for this site. The proposed improvements to the Holywell Rd and Mold Rd junction will be carried out by the developer within FCC Highways land i.e. the adopted highway. The proposed improvements to the Green Lane and Mold Rd junction will be carried out by the developer using adopted highway land and also land to the west of Green Lane which is within the control of the one of the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					site landowners. However, neither the Council nor the developer has any control over land at Weighbridge Rd in terms of major road improvements. Neverthless, the Council's Active Travel Integrated Network Map shows a proposed Active Travel along Weighbridge Rd. Infrastructure The level of recent development in Ewloe is commented on above. No objection to the Plan or allocation has been made by the Local Education Authority. The commentary of the Wrexham LDP Inspector referenced in detail above, establishes that it is normal practice for new development to address capacity issues through developer contributions. The development will not deliver completed houses until 2023-24 and will take several years for the development to be completed. The impact on infrastructure will therefore be gradual and will not be in 'one hit'. This gives the Local Education Authority time to address how the growth in the Plan can be accommodated in terms of school capacity. The Planning Service continues to work with the LEA to secure appropriate mitigation for the delivery of planned LDP sites. No objection to the Plan or allocation has been made by Betsi Cadwaladr University Health Board. Flintshire has a number of relatively new Primary Health Care Centres and the issue is one of lack of sufficient staff including GPs,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					rather than a lack of facilities as also commented on by the Wrexham LDP Inspector above. As stated in the preceding paragraph in relation to education capacity, there is ample time for the Health Board to plan for how it intends to meet the health care needs of the Plan's growth levels. The Council continues to work with the Health Board in securing the appropriate provision of infrastructure such as health for the delivery of LDP sites. The presence of services and facilities in Ewloe Green and Ewloe is commented on above, with the conclusion that there is a good range of facilities and services in the settlement which are within walking distance of the site. The issue of education capacity is identified and responded to above. The IIA reflects that measures exist to address school capacity. The issue of the public footpath is commented on in detail above. The medical centre in Hawarden village centre is 2.7km from Ewloe, medical centres in Buckley are 2.8km from the site and medical facilities in Queensferry and Shotton are within 4km of the site. The IIA is therefore correct that there are doctors within 1-4km of the site. The history of St David's Park is not a matter for this LDP. The Council has engaged with and consulted internally throughout the Plans preparation.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Indeed the Plan has safeguarded two sites for cemetery extensions at Treuddyn and Greenfield. No such need for sites has been identified elsewhere in the County by the appropriate area of the Council. The site adjoins an existing play area at the junction of Greenville Avenue and Circular Drive. The development will also provide on-site play space and open space as well as a Multi Use Games Area (MUGA). In addition the existing public footpath will be sympathetically integrated into a green infrastructure network for the site, so that it remains an attractive walking route. Environment Natural The site is not green space. It is presently agricultural land and with the exception of the public right of way has no right of access to the public and is otherwise private land. The public footpath will be retained as part of the detailed layout of the development and is commented on in more detail earlier in the Council's response. Trees and hedgerows, with the exception of hedgerows to secure vehicular access, will be retained as both landscape and ecological features. This is a matter for the detailed design and layout of the development. There is no objection to the allocation from NRW. An ecological survey of the site has been

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					unilaterally undertaken and submitted by the site promoter which has been evaluated by the Council's Ecologist. Whilst the site is close to the SAC and Wildlife Site there is no objection to the principle of development subject to avoidance and mitigation measures. These could involve using the public right of way network to avoid cumulative impacts of recreational pressure on ecological habitats or it can be achieved through commuted sums to contribute towards off site ecological management works. This is commented on under 'Site Assessment' above. The implications of the 1986 Agricultural Tenancy Act is a matter between the tenant farmer and landowner. The Council has no financial interest in or involvement in such arrangements and it will be for parties involved to resolve. The issue of the use of agricultural land is commented on earlier in the Council's response under 'Site Assessment'. The site is not adjacent to the New Inn Brook wildlife site as there is buffer of land between the two. The ecological issues have been commented on above and do not frustrate development or reduce the number of units. The site may be open countryside at present but it is 'improved' grassland where the previous and present agricultural practices have sought to maximize its agricultural productivity. With the exception of trees and hedgerows such land typically has low ecological value.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					It is accepted that any development will have some impact on landscape through the loss of open countryside. However, the site has an irregular boundary as it follows hedgerows. The undulating nature of the site plus the provision of landscaping and green infrastructure can help to soften the appearance of the development. A Landscape and Visual Impact Assessment has been unilaterally prepared and submitted by the site promoter and sets out the assessment of the site and the proposed mitigation measures. This is commented on in more detail earlier in the Councils response. Environment – Historic / Heritage The Council's historic environment mapping records show only one asset in the vicinity which was an archaeological find of a 'finger ring' to the rear of Newbridge Farm. The policy already specifies the retention of hedgerows and trees. Flood Risk / Water Infrastructure The site may have small areas which are wet (as indicated on the NRW flood risk maps) this does not equate to the site being a natural wetland. The NRW Advice Map shows that the site is not within a zone C1 or C2 flood risk but that there are pockets of surface water flood risk. NRW have not objected to the allocation. National Legislation requires the use of Sustainable Urban Drainage Schemes to ensure that surface water run-off from the development

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					is no greater than the run-off from a greenfield site. The soil structures within the site will be taken into account in the design of a drainage scheme. The findings of the Geo Environmental Report unilaterally prepared and submitted by the site promoter will inform whether and how a SuDS scheme can be satisfactorily designed for the development given existing ground conditions and topography. The intention of SuDS is to sustainably drain the surface water run-off from a development to no more that the equivalent greenfield run off rate. In this context it is not considered that the perceived risk of flooding to adjoining properties can be increased, and an effective SuDs scheme has the potential to provide significant betterment to any present situation. Any surface water problems outside Ewloe Social Club are an existing issue and not related to the proposed development of the allocated site. The detailed design work associated with the improved Green Lane, B5127 junction will address surface water run-off. As explained earlier in the Council's response the allocated site is not within either a C1 or C2 flood risk zone. A detailed Geo Environmental Study has been unilaterally undertaken and provided for the site and this has shown that there are no water

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					abstraction licences relating to the site. In addition, no objection has been made to the site by either Welsh Water or NRW. Any easements or legal rights relating to the site are a civil matter between the site owners and third parties and ultimately the developer. No objection has been made by Natural Resources Wales in respect of the relationship of the site with Wepre Park SSSI/SAC. Welsh Water have made representations on the plan as set out below and confirm that a water supply can be provided to the site and that improvements to the Queensferry WWTW will be required. Energy The IIA recognises that both the construction phase of development and the operational phases of development will involve energy usage. However, that energy usage would happen whichever site was allocated in the Plan. Dwellings on the site will be constructed in accordance with the current Building Regulations in terms of energy efficiency. Policy EN12 will also require that new development maximises the potential for renewable or low carbon energy technology. Welsh Language The issue of education capacity is addressed above. The teaching of Welsh is a compulsory

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					part of the curriculum for Welsh schools and pupils. Tests of Soundness The Councils Delivery Agreement sets out how it intended to engage with and consult consultees, stakeholders and the public. The Council has exceeded statutory requirements. The Plans preparation has involved a number of documents being made available and distinct consultation exercise: • Key Stakeholder Forums • Delivery Agreement consultation • Call for Candidate Sites • Candidate Site Assessment Methodology • Publication of Candidate Site Register • Key Messages Document • Strategic Options • Preferred Strategy and Invitation for Alternative Sites • Publication of Alternative Sites Register • Deposit Plan The key stages have been publicized by public notices, direct mailings to consultees, direct

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					mailings to those on mailing list, availability of documents on web and advance notification to Council Members and Members of Town and Community Councils with an expectation that they would assist in publicizing the Plan locally. The Deposit stage involved site notices for housing allocations and strategic sites. The Council's PR Officers have also used social media to publicise the Plan. The Council has taken all reasonable steps to publicise the various stages of the Plan where the public and stakeholders needed to be involved and there is no requirement in the regulations to consult on Candidate Sites. The Council nevertheless made the register of candidate sites publicly available as soon as it was compiled, complied with changes to Welsh Government regulations to indicate at the Preferred Strategy Stage how the Council felt candidate sites complied with the Preferred Strategy or not, and then published a summary of the assessment and planning view of all candidate sites at the deposit stage. The Council has used an industry leading specialist consultation portal which is used by a large and growing number of planning authorities in Wales and England. It is disappointing that objectors claim they found it difficult to use but the Council made it clear that the portal was not the only means of making representations as they could also be made via letter, representation form and e-mail. The Council produced two 'step by step' guides to i) register on the portal and ii) how to comment on the portal, and these were available both on the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					website and in hard copy. The Plan was also made available to physically view at a number of consultation venues. The Deposit Plan was accompanied by an easy to understand leaflet explaining the Plan and the consultation. The Plan has to meet certain legislative requirements and Welsh Government guidance and it is inevitable that the Plan has to be accompanied by a range of supporting documents and that certain terminology is used and is therefore by definition a complicated document. Objectors did not have to read the whole plan or all supporting documents to understand the allocation of the land at Ewloe. These matters are addressed in the relevant sections above. In terms of i) The Health Board do not object to this site or the plan as a whole, or on the basis of their inability to meet the demand from the growth that the Plan will facilitate over its plan period. They do not object at all. Provided that the requisite improvements in infrastructure capacity is provided then it is unclear why 300 dwellings will prevent a cohesive community from being enabled. Whilst the process of constructing a housing development will inevitably bring with it some disruption to existing residents, this would be the case whatever site was allocated in the Plan and is capable of being managed effectively via appropriate planning conditions. It is not a reason to question the soundness of the Plan. The site adjoins an existing post war residential

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					development which is of an estate type character, and which incorporates green space and a play area. In broad terms this is no different to what is being proposed on the allocated site, a housing development which incorporates a green infrastructure network, play area and MUGA. In no way, shape or form can Ewloe Green be described as a 'hamlet' as it has estate type development, commercial development, and an urban context in terms of the road network, proximity to the A494(T) and being part of the wider settlement of Ewloe. The site is not considered to be inappropriate in terms of its context and the Plan is not considered to be unsound in the terms set out. The site promoter has invested a considerable amount of time and resources into unilaterally undertaking a comprehensive set of background studies to inform the deliverability of the site which is a key part of demonstrating its soundness. The Council is also aware that initial discussions have also taken place between the site promoter and a number of house builders with a view to identifying a preferred development partner. The identification of a developer by the time of Examination will also assist in demonstrating delivery and therefore soundness. The Plan has been prepared in the light of government guidance and is not considered to be out of accord with PPW10. The issue of the scale of the allocation relative to the settlements categorisation as a Tier 2 Local Service Centre is commented upon earlier in the Council's

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					response. The allocation is considered to be in accord with the Plans spatial strategy. The Plan was made publicly available several months prior to the commencement of the consultation exercise, at the time that is was reported for approval to Cabinet and Council in July 2019. Considerable publicity was given to the consultation in good time before the start of the 6 week period involving direct mailings to people on the mailing list, press notice, articles on the Council website and social media posts. Advance briefings were also given to all elected members as well as to Town and Community Councils. The Council is also aware that public meetings were arranged by the community prior to the start of the six week formal deposit consultation and the drop in session provided in the community was the most well attended of all the sessions provided. It is not clear therefore why or how local people were not aware of the proposal, the consultation, and judging by the high level of response, the various means of making comments on the plan The consultation involved permanent exhibitions, a full range of documents at Ewloe and County Hall and key documents at libraries and Connects Centres. The full range of documents were available on the Council's website through the consultation portal. The consultation exercise was in conformity with, and indeed, in excess of with Welsh Government requirements and was also in line with the Council's Statement of Community

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Involvement as set out in the Delivery Agreement. Welsh Government require that a development plan is supported by a range of background documents which forms the evidence base for the Plan. The range of documents accompanying the Plan is in accordance with these requirements. They were clearly listed within the Public Notice. Several of these documents are technical in nature but are written with introductions or executive summaries which seek to explain their context and purpose. The Plan is by definition a complicated document, but residents did not need to read the whole plan or all supporting documents, to understand the allocation of this land the Plan, or to make their views known. It is unclear how the consultation process is weighted in favour of this proposal as the Council is merely following prescribed Welsh Government procedures. Supporting representations The support for the allocation is noted and the submitted studies will be useful at Examination in support of the deliverability of the allocation.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The support for the allocation is noted. However, the Local Housing Market Assessment (and subsequent Update) clearly reference the need for smaller units of accommodation and that new developments should not comprise solely of 4/5 bedroom units. Policy HN2 seeks to ensure a mix of housing units by size and type to ensure that cohesive communities can be created. The LHMA has identified a need for affordable housing across the County and the Viability Study has assessed the ability of sites within different housing market sub-areas to deliver affordable housing whilst still remaining viable and deliverable. Ewloe sits within a strong housing market sub area where the Viability has demonstrated that 40% affordable is reasonable.
1184	How to View and Comment on the Deposit Local Development Plan	Object	Test 1: Does the Plan fit? For the reasons set out in this full Representation, our Client is concerned that the Deposit Plan evidence base is lacking in detail in terms of whether it is planning to address any housing shortfall from the UDP period, whilst continuing to place reliance on some previous UDP housing allocations which have historically failed to come forward and deliver as expected. Test 2: Is the Plan appropriate? Ø The housing requirement should take account of the identified affordability needs across the County as set out in the	Allocate more land for housing development.	Not accepted. The objectors proposed allocation on eastern edge of Penyffordd will be dealt with separately. In terms of the comments on the Tests of Soundness, each will be addressed in turn: Test 1 – The Plan is not seeking to specifically address any shortfall from the UDP housing requirement figure that was not built out. The UDP housing need was calculated at a different point in time, using different projections and forecasts and did not materialize due mainly to the financial crisis whereby households could not obtain mortgages and housebuilders could not obtain finance to build. The LDP has calculated a new housing requirement figure

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			LHMA Ø Any historic housing delivery shortfall from the UDP period should be planned for and met during the LDP period;Ø Whilst the Council is continuing to rely on windfall sites moving forward, it should be noted that historic windfall trends have taken account of the fact that a large number of speculative housing applications have been granted planning permission in the absence of a five-year housing land supply. The LDP Vision is lacking in detail, with no commitment to meeting the full minimum housing and employment needs of the County during the LDP period. Test 3: Will the Plan deliver? Ø The proposed housing allocations contain two sites which were previous allocations in the UDP, and which have failed to come forward. Ø The role of the Tier 3: Sustainable Villages in the settlement hierarchy is being overlookedØ The spatial strategy needs to be reviewed Ø The Council's housing requirement is not proposing to meet all of the identified affordable need set out within the LHMA Ø The Council's affordable housing policy is based on a historic Sub-Area approach		based on up to date projections and a range of other factors. It is not appropriate to merely add on what was not previously delivered as the need for the Plan period has been re-stated. Allocations in the UDP have been re-assessed as part of the candidate site assessment as presented in Background Paper 1. Two housing allocations in policy HN1 have been carried over from the UDP. The Well Street, Buckley site has been sold by Welsh Government to a housing association who are looking to submit a planning application. The Highmere Drive, Connah's Quay site has attracted the interest of a national housebuilder who is also looking to progress a planning application. In this context it is appropriate to include sites that were previously considered to be 'sound' allocations by the UDP Inspector and which are no being brought forward. Test 2 – The Plans allowances for small site and large site windfalls are based on long term trends and do not include the recent 'windfalls' arising from speculative sites. Strictly speaking such sites should not be regarded as 'windfalls' as these are sites which are generally policy compliant. If the speculative sites had been included in the allowances it would have been higher and this is not something the Council have sought to do as it would not be reflective of 'normal' circumstances. There is no requirement that a Plan's vision has to be detailed. The vision needs to be read alongside the objectives and key messages. Test 3 – The two carried over housing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					allocations from the UDP are commented on in Test 1 above. The Plan is not overlooking the role of Tier 3 sustainable settlements as 'new allocations' must be looked at alongside other elements of housing land supply such as completions and commitments. The spatial strategy for the Plan is considered to be soundly based on sustainability considerations. The approach is based on a joint Local Housing Market Assessment with WCBC which has since been updated and it is not considered to be a 'historic' approach as sub market areas did not feature in the adopted UDP.

How Have We Arrived at the Deposit Plan?

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
728	How Have We Arrived at the Deposit Plan?	Object	Objects to the LDP Plan Period .It is noted that the LDP period is proposed to cover 15 years between 2015 and 2030. Based on the Council's latest LDP Delivery Agreement (Third Revised, published in May 2019), the LDP is not expected to be adopted until at least July 2021. This would be six years after the commencement of the LDP period. Our Client objects to this approach; the Council has had no adopted and approved development and spatial strategy in place since the end of the Unitary Development Plan (UDP) period in 2015 to deliver new homes and jobs in the County. There has in effect been a policy vacuum. It is our Client's position that the LDP period should instead run from 2019 to 2034 (i.e. from the date of publication of the Deposit Plan), with any shortfall in housing delivery during the period 2000-2019 met during the subsequent period 2019-2034. 2.2. In the event that the adoption of the LDP slips further owing to any concerns over the proposed development and spatial strategy (and which trigger the requirement for further work/updated evidence by the Council), then the LDP period should be adjusted further to reflect this.		Not accepted. Welsh Government does not prescribe a particular Plan period for a LDP. Typically the Plan period is for 15 years as this is a balance between looking far enough into the future for it to have a strategic context but so far ahead as to bring greater uncertainty in terms of forecasts, projections, changes in circumstances and guidance etc. It is also quite normal for a Plan to be adopted well into its Plan period. However, if the LDP is adopted at the end of 2021 it would still have 9 years remaining which is a significant improvement on the UDP. It is also normal practice for a Plan period to follow on directly from the previous Plan period. To amend the Plan period now to a 15 year period from 2019 to 2034 would have profound implications for the timetable for adopting the Plan as it would require a fundamental reconsideration of housing and employment growth and possibly require the identification of additional development sites. Such an approach does not represent sound or sensible planning. The Plan will need to be reviewed every 4 years. The 'policy vacuum' which is of concern to the objector would be extended even further by the objectors suggested approach.
1129	How Have We	Object	Road/Highways Infrastructure		Not accepted. Background Paper 3 Infrastructure Plan – Para 2.45 of the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Arrived at the Deposit Plan?		LDP03 Infrastructure Plan Appendix 2 Table – reference is made to the requirement of a Transport Assessment as improvements are required to the Junction of Holywell Road and Mold Road to increase capacity. Para 2.54 identifies "Highways improvements in Flintshire". This junction is not mentioned which leads me to believe no improvements are intended or if they are, why are they not available for viewing? The whole infrastructure including design in this area is dangerously lacking and woefully inadequate and will not support more vehicles. A segment of the A494 including a section which runs directly through the communities of Ewloe and Ewloe Green has had a 50mph limit implemented in recognition of traffic pollution yet you seek to increase the number of vehicles who will connect to/travel through this same area, this is at odds with a LDP which should support and serve its residents. BP8 - Disagree that the irregular shape boundary does not justify significant encroachment/extension into open countryside and loss of green barrier. BP8 – Disagree that the existence of New Inn Brook is no less of a firm and defensible barrier as is the existence of the Wrexham-Bidston railway line which is not deemed a firm and defensible barrier		Infrastructure Plan is concerned with the Joint Local Transport Plan for Flintshire / North Wales and list some of the projects and priorities within Flintshire which form part of that Plan. The proposed junction improvements to deliver the Ewloe housing allocation are not listed in the LTP and therefore it would be inappropriate to list highway improvements relating to allocations which are not yet in an adopted LDP, let alone appropriate to include in the LTP. The site schedule for the Ewloe housing allocation, later in the report, is clear in identifying two junction improvements to facilitate the site. A Transport Study has been undertaken which shows that the local highway network can accommodate the development, subject these junction improvements which provide betterment to the existing position in the community. Background Paper 8 Candidate / Alternative Sites – A landscape assessment has been undertaken for the site which demonstrates that impacts on the landscape can be reduced through mitigation and design measures. The irregular shaped boundary of the site and existing hedgerows forms part this assessment. The wooded valley associated with New Inn Brook does provide a firm and defensible physical feature which will prevent development from leapfrogging it onto the other side of the brook. In conjunction with the need to retain a buffer to the New Inn Brook, which is a designated wildlife site, the valley does provide a firm and defensible boundary to further encroachment of Ewloe towards Northop hall. The release of the housing allocation site from

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			despite it being fixed and substantial infrastructure (see BP1 page 17). I therefore do not agree that the removal of this parcel of land will not harm the integrity of the wider Green Barrier.		the green barrier does not result in coalescence between Ewloe and Northop Hall and therefore does not undermine this objective of the green barrier designation.
1128	How Have We Arrived at the Deposit Plan?	Object	IIA objectives Topics. Ref 2 Education – score should be major adverse as Ewloe Green school is full and is providing detailed reasons why additional pupils cannot be accommodated to parents trying to secure places for children. Ref 3 Health - A Rerouted a PRoW, no new health facilities, residents of existing dwellings having their physical and mental health affected by noise disruption/disturbance by a construction site. Ref 4 Affordable housing projection is 40%. Ref 5 Access the proposed development does not improve access to cultural and recreational facilities. Ref 6 the mitigation offered does not correlate with the set criteria under the subsection and there is insufficient capacity to meet education and health needs. Ref 10 Biodiversity Loss of green barrier and wildlife, it will reduce opportunities for people to access wildlife and green spaces.	Remove site at Ewloe Green	Not accepted. IIA ref 2 Education – The planning system contains provisions to address capacity issues at schools through developer contributions, as referenced in policy STR6 of the Deposit Plan and as set out in an existing adopted Supplementary Planning Guidance Note 23 'Education Contributions'. The IIA records both this and the Hawarden housing allocations as having both positive and negative effects. The Local Education Authority have been involved in the preparation of the Plan from an early stage and were made aware of the draft potential allocations well ahead of the publication of the Deposit Plan. The housing trajectory in Background Paper 4 Housing Land Supply and Delivery identifies that completions on the Ewloe site would not be achieved until April 2024. This timescale given the Local Education Authority ample opportunity to address education provision in the area. In this context the scoring in the IIA is considered reasonable. IIA ref 3 Health – The public right of way which runs through the site links in with a wider network of rights of way, providing residents with recreational opportunities to access open countryside. The attractiveness to residents of using the right of way through the site is a detailed design matter to be considered as part

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Ref 11 Landscape and townscape, the development is on higher land than existing dwellings, Development which over shadows and dominates existing landscape will not be sensitive , the size of the development is disproportionate to the existing Ewloe Green community. It challenges Ref6 that any sense of community will be lost as Ewloe Green is consumed. Ref 13 Water Resources, The site includes natural wetlands for wildlife and boreholes which supply spring water to residents of Holywell Road and Stanford Way. Ref 14 Risk of Flooding the, site is an area of high water table known to flood. Ref 15 Air quality and greenhouse gas emissions, mitigation of electric charging is unrealistic and idealistic. Ref 16 Efficient and Renewable Energy mitigation is unclear. Ref 17 Natural resources, mitigation does not encourage the use of brownfield land or enhance soil quality. Ref 18 Welsh Language mitigation is incorrect the schools are unable to accept additional pupils.		of a green infrastructure strategy for the site. A sensitive design approach to the right of way, rather than its diversion, should not result in adverse health impacts to residents using it, other than temporary affects during construction phases. The positive score in the IIA is reasonable. Ref 4 Affordable Housing – it is not clear what point is being made in respect of affordable housing. Ref 5 Access – The IIA refers to the site being within 1km of cultural and leisure facilities, including sports and social centres and accordingly records a positive score. The IIA does not claim to 'improve' access, merely that that the facilities are accessible from the site. The positive score in the IIA is reasonable. Ref 6 strong and cohesive communities – The IIA records a significant positive score as the site would provide homes near to an existing community, with good access to employment opportunities as well as health and education. The site relates well to the existing form and pattern of development and with several linkage points into the existing settlement and community. It represents a logical extension to the settlement whereby new residents can integrate with the existing community and provided the basis to contribute to a strong and cohesive community. The issue of education

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					and health capacity is commend on in Ref 2 and 3 above. Ref 10 Biodiversity – The site is presently open countryside which is in use as agricultural land. Although it has a public right of way through it, the site is in private ownership and is not 'green space'. The site's primary wildlife value is with hedgerows and mature trees and these can be safeguarded as part of the detailed design of development. No objection has been made to the site by Natural Resources Wales. In terms of the green barrier the justification for this is set out in the Green Barrier Review Background Paper and in summary the drawing back of the site is not considered to undermine the objective of the designation, which is to prevent coalescence of Ewloe with Northop Hall and Connah's Quay, Shotton and Aston. The wooded valley to the west of the site (designated as a wildlife site) forms a firm and defensible boundary to the expansion of the settlement. The IIA scores an overall negative effect in terms of biodiversity but this does not take account of the preparation of detailed ecological surveys of the site. Ref 11 landscape and townscape – The land rises slightly from the existing levels of adjoining development but this is not to extent that it would overshadow or have a dominating effect on existing residents. The additional housing would represent an extension of existing estate type housing development and would not be inherently out of character with existing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					development. Although the site represents a sizeable addition to Ewloe Green, it must also be seen in the context of the settlement of Ewloe as a whole. It is accepted that any development will have an impact on landscape but a detailed landscape appraisal of the site identifies that the irregular shape of the site, existing hedgerows and trees and help soften the appearance of development in the landscape, when combined with additional landscaping measures and green infrastructure network. The IIA identifies a potential negative impact but recognizes this can be mitigated through the sensitive design of new development. Ref 13 Water Resources – No objection has been to the site by NRW in terms of standing water on parts of the site having wildlife value. This standing water is as a result of present surface water run off and is not a permanent pond. A detailed ecological study has been undertaken on the site. A detailed Geo-Environmental Study of the site has not identified any existing water extraction licences relating to the site and no objection has been from either NRW or Welsh Water. The IIA refers to the need for a surface water drainage strategy for the site which will need to comply with present national requirements for a Sustainable Urban Drainage System. Ref 14 Flood Risk – The site does not sit within C1 or C2 flood Risk as defined in the Development Advice Maps produced by NRW to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					support the Welsh Government TAN15 Flood Risk. No objection has made by NRW to the site in terms of flood risk. Parts of the site however, are defined in the Development Advice Map as being at risk of surface water flooding. This will need to be addressed as part of a detailed layout for the site alongside a Sustainable Urban Drainage Scheme, in conjunction with green Space Strategy. Ref 16 Efficient and renewable Energy - Residential development on the site would need to comply with prevailing building regulations in terms of energy efficiency. However, the Plan also includes policy EN12 whereby new large housing developments are required to maximize the potential for renewable energy. This is a relevant consideration for the detailed design stage for the development. Ref 17 Natural resources – The lack of suitable and developable brownfield sites in the County necessitates the use of greenfield sites in terms of meeting the requirement for housing in the Plan. Existing brownfield sites sit within areas which are at risk of flooding, are contaminated and lie adjacent to international nature conservation designations. Ref 18 Welsh Language – The issue of school capacity is commented on in Ref 2 above.

How to Use/Navigate and Interpret the Plan

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1094	How to Use/Navigate and Interpret the Plan	Object	I attended the LDP Consultation at Heulwen Close Hope. Documents were made available but did not appear to be properly typeset. No effort was made to make the documents easy to read, fonts used were too small, the text had not been expanded even though there was space available. See the 'How to Register ' Form.		Accepted. At the Hope drop in session the copies of Background Paper 8 Candidate / Alternative Sites had been printed in error in portrait rather than landscape mode. The effect of this was to make the text small. Officers at the session apologized. The document was available on the Council's website as part of the LDP supporting documents and at pre-advertised deposit consultation venues where documents could be inspected. Officers at the session also had two laptops which could have been used to view the document more easily. The availability of the document electronically allowed a user to zoom in and enlarge the text for ease of viewing. The two guides on how to register and comment via the Portal essentially present 'screenshots' from the Objective consultation portal which are annotated with 'notes' to provide guidance to the reader. It would be difficult to 'typeset' such a document.

Strategic Context

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1017	Strategic Context	Object	Paragraph 3.25 – the Council suggests that this should reference the TfN work programme including the Strategic Transport Plan and West & Wales OAR.	Paragraph 3.25 – the Council suggests that this should reference the TfN work programme including the Strategic Transport Plan and West & Wales	Not accepted. The objector seeks the inclusion of reference to two documents in the strategic context of the Plan. However, the objector has not identified what the specific strategies, projects and priorities are from these two documents, that warrant mention in the Plan. This section of the Plan has sought to provide a summary of the key national, regional and local references that are directly relevant to the LDP. There are numerous plans, strategies and initiatives that could have been included in this section of the Plan but the Council has only included key documents which are of direct relevance to the preparation of the Plan. In the absence of further justification / explanation form the objector it is not considered that the two documents should be included.

County Profile / Overview

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
123	County Profile / Overview	Object	3.28 Based on 2014 projections, the County is forecast to increase in population from 154,088 in 2015 to 156,899 in 2030 Do you need to check these figures? Population increase of 2811 and you want to build several thousand new homes?	3.28 Based on 2014 projections, the County is forecast to increase in population from 154,088 in 2015 to 156,899 in 2030 Do you need to check these figures? Population increase of 2811 and you want to build several thousand new homes?	Not accepted. Population forecasts are one component of how the Plans housing requirement figure has been calculated. A further consideration is the projected increase in households arising from people living longer, couples separating etc. The Plan also seeks to contribute to achieving growth aspirations both for Flintshire and the wider sub-region and part of this will be in-migration
1018	County Profile / Overview	Object	Paragraph 3.28 – should the reference to “cross broader” possibly be amended to “cross border”? In addition, the Council supports that this references both inbound and outbound commuter trips.	Paragraph 3.28 – should the reference to “cross broader” possibly be amended to “cross border”? In addition, the Council supports that this references both inbound and outbound commuter trips.	Accepted. Noted. The fifth sentence of para 3.28 should refer to ‘cross border’ not ‘cross broader’ and is clearly a typographical error and can be subsequently amended, without the need for a Focussed Change.

Key Issues and Drivers for Change

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
894	Key Issues and Drivers for Change	Object	The Table following paragraph 3.30 in the Introduction helpfully identifies a number of key issues and drivers that have informed the preparation of the Plan. Clearly the economic and job creation points are central to informing the economic-led strategy that is central to the Plan. In addition, it is of note that the previous UDP Inspector's comments on the approach to defining settlement boundaries on individual settlements rather than identifying urban areas was backward looking and that a fundamental review of open countryside and green barriers in parts of the County was needed. Furthermore, there is an acknowledgement that new development should be in the most sustainable locations and that new housing sites should be viable and deliverable in terms of contributing to housing land supply. The need to deliver affordable housing in an innovative and flexible manner is also a key driver. In light of the above, the representor contends that whilst these issues have been identified and intended to drive the direction and future strategy in the Plan, it at present does not fully respond to these and is, therefore, unsound. We expand on this further below.	Drury Lane site to be allocated within the plan	Not accepted. The table following para 3.30 specifically states 'The need to assess [bold – my emphasis] the comments of the UDP Inspector who considered that the approach to defining settlement boundaries based on individual settlements rather than identifying urban areas was backward looking and also considered that the time was rapidly approaching whereby a fundamental review of open countryside and green barriers in parts of the County was needed' The earlier Key Messages consultation document presented 6 options for categorising settlements. Option 3 was a 'fresh approach for the LDP defining settlement categories based primarily on whether settlements are urban and rural' and option 4 was 'a hybrid approach combining the urban areas in Option 3 with the lower three bands from Option 2'. Following consideration of consultation feedback, the subsequent Strategic Options document contained the following commentary on p8 'There was general consensus that the UDP approach was rather basic and somewhat outdated and that there was a need for a more refined and informed approach to categorising settlements. Although there was some support for the concept of urban areas, a five tier hierarchy was considered more appropriate in terms of representing settlements which exist now and are easily recognised, rather than seeking to create 'new' groupings of settlement

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					into urban areas, which would not be recognisable to, or supported by the public'. The Strategic Options document explained the preferred approach 'The Plan's settlement hierarchy is therefore Option 2a i.e. a 5 tier settlement hierarchy adjusted to take account of proximity and functional relationships to higher level settlements. This option is considered to take a much more refined approach than that contained within the UDP and is based on sustainability considerations. The settlement hierarchy provides a flexible and logical basis for the formulation of a number of spatial options'. No objections have been to the Plans spatial strategy by Welsh Government. Given that the Council has documented its approach to a settlement hierarchy and defining settlement boundaries, it is not considered that the Plan is unsound.

Forming the Plan's Strategy from This Context

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
264	Forming the Plan's Strategy from This Context	Object	Objection 11: The Plan does not reflect the reservations expressed during consultation The lack of sympathetic locally-specific insight was in fact identified during previous consultation exercises but the message has not percolated into the Plan: at the consultative workshops, participants stated that the Plan "needs to identify what is unique" about an area; needs to be "locally-specific in terms of key environment features" also should pay attention to the "historic environment"; and needs to acknowledge the "rural hinterland" in some areas of Flintshire. These points have not been addressed properly in the updated Deposit LDP. In the 2016 Workshops with Planning Aid Wales, consultees expressed the following views: • that the track record of new development in Flintshire so far was that it was not accompanied with an improvement in infrastructure • that Chester had not historically taken its fair share of housing and only now was starting to open up its own green belt land, the inference being that Flintshire was mainly providing new housing for people working in surrounding counties • that measures were need to boost the Welsh language and that an additional Welsh-medium school needed to be designated in Flintshire if it wants to meet		Not accepted. The written statement of the Plan is intended to be a clear and concise statement of land use policies and proposals for the County and it would not be appropriate for it to become an all embracing statement of 'all things' Flintshire. The written statement sets out earlier in the Introductory Chapter a brief overview and profile of the County. The Plan must also be read in conjunction with the accompanying evidence base. In terms of identifying 'what is unique about an area' and being 'locally specific in terms of key environmental features', the Plan has to be read in conjunction with a wide range of supporting datasets relevant to built and historic heritage (listed buildings, conservation areas, archaeological features etc), natural environment (the Landmap landscape resource, international, national and local wildlife designations, protected species, tree preservation orders etc). It is not considered that rewriting the written statement to include such information for every area of the Plan would be helpful or productive. In terms of the 'rural hinterland', the Plans policies define settlement boundaries and policy STR2 in conjunction with PC2 will protect open countryside on the edge of settlements. Policy EN4 also seeks to protect landscape character through the utilization of the national Landmap dataset on landscape character. Settlement

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			required Welsh Government targets on Welsh language (especially when suggesting a highly ambitious housing programme) None of these valid points have been addressed by the Deposit Plan. Not compliant with PPW paragraph: 1.30, 3.21		audits were undertaken to inform the Plan by looking at the sustainability of each settlement in terms of character, role, accessibility, services and facilities. The assessment of candidate and alternative sites also looked at the landscape implications of development and whether a site related more closely to open countryside or built development. In terms of the objectors points from the Planning Aid Wales consultation events on the Preferred Strategy, each will be commented on below: • Development and infrastructure – new development is required to mitigate against the impacts arising from it in terms of providing new or improved infrastructure. Any infrastructure improvements must be reasonably related in scale and kind to the development concerned and must not be a 'wish list'. Policy STR6 of the Deposit Plan sets out what infrastructure may be sought as part of new development and is supported by a Background Paper 'Infrastructure Plan'. • Chester housing provision – in the context of the LDP, Chester and Cheshire West is providing through its Local Plan an appropriate level of development and is making provision at Chester through the green belt release at Wrexham Road to facilitate a strategic mixed use development. Any arguments that Chester may previously have placed pressure on adjoining local authorities is not presently applicable as CWAC, Wrexham and Flintshire

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					are all seeking to meet their own needs for development through their respective development plans. • Welsh language Schools – It is not the role of the development plan per se to 'boost' the Welsh Language in Flintshire. Rather, it is necessary to look at the effects of the development plan on the Welsh language and to devise policy approaches where a negative impact is identified. Para 3.27 of PPW states 'Planning authorities must consider the likely effects of their development plans on the use of the Welsh language as part of the Sustainability Appraisal. Planning authorities should seek to ensure a broad distribution and phasing of development that takes into account the ability of the area or community to accommodate development without adversely impacting use of the Welsh language'. Para 3.27 of PPW then states 'Development plans should include a statement on how planning authorities have taken the needs and interests of the Welsh language into account in plan preparation and how any policies relating to the Welsh language interact with other plan policies'. The Plan has done this through the IIA and a separate Background paper. For information, a new Welsh medium school will be developed as part of a legal obligation for the Croes Atti development in Flint. Whether a need for an additional Welsh speaking school still exists is

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the remit of the local Education Authority within FCC. In the context of this, the objector claims that the Plan is not compliant with PPW in terms of two particular paragraphs: • para 1.30 of PPW provides general advice on 'Managing New Development' and is concerned with the Development Management process, rather than LDP's. It is considered by the Council that the Plan, when applied as a whole, will contribute to improving the social, economic, environmental and cultural well-being of the County. • para 3.21 of PPW forms part of a section in PPW entitled 'promoting Healthier Places'. The Plan is accompanied by an Integrated Impact Assessment, which includes a Health Impact Assessment, and this is has not demonstrated that the Plan will impact on health. This objection has not provided any evidence as to how the Plan will impact on health and not be compliant with PPW.
521	Forming the Plan's Strategy from This Context		The LDP vision is flawed 9.3 Statement 1 These proposals are premised on a need for "lasting balance". This invites compromise at a time when nothing less than an absolute declaration of carbon reduction values and parameters for		Not accepted. The Plan has been prepared in the context of national planning guidance in PPW10. Para 1.17 states 'A plan-led approach is the most effective way to secure sustainable development through the planning system and it is essential that plans are adopted and kept under review. Legislation secures a presumption

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			open-land conservation will satisfy the need to address those long-term, factors of nature that are outside the control of the council. Inadequate reference to available "brown-field" The plan (8.1 Key Issues and Drivers) refers to "extensive area of brownfield" but does not refer to them by specific topographic reference. Considerations for "sustainable development" 13.25 The explanation of "Sustainable development" is correct but, by admission of mitigation measures rather than adoption of measures to REDUCE the effects of (local) climate change the plan fails to be "sustainable". Considerations for Growth 2.4 The plan refers to growth as if it is an inherently a parameter of success and benefice. In reality, growth is never sustainable indefinitely. It has to have an end-point. In the real world, successive growth is always constrained once resources have been exhausted. Considerations for Prosperity Mentions "prosperity" in a subjective		in favour of sustainable development in accordance with the development plan unless material considerations indicate otherwise to ensure that social, economic, cultural and environmental issues are balanced and integrated' [bold- Council emphasis]. The table below para 3.30 identifies a number of key issues and drivers for change. The 8th point provides a clear geographic reference point by explaining that the County has areas of brownfield land 'in and around the River Dee and Dee Estuary'. It further explains that these areas of brownfield land are unsuitable for development for a variety of reasons'. It is unclear which part of the plan or supporting document is being referred to but it must surely be the case that if the effects of climate change can successfully be 'mitigated' then this in effect 'reduces' the effect of climate change as stated. There would not therefore appear to be any tension or conflict in the plan that questions sustainability. As referred to above Welsh Government includes reference to economic considerations as part of sustainable development. Furthermore, Welsh Government sets out in para 2.20 onwards of PPW that economic considerations must be looked at alongside social, cultural, environmental considerations. Under 'economic' considerations there is clear reference to 'growth'.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			context but fails to refer to the WG document "Prosperity for all" (27 June 2019) Encouragement to large-scale development The Plan, with its clearly de-marked open-spaces, is a "green-light", an estatebuilder's charter, to potential large-scale building development. Everything in the Plan is slewed to encourage extensive building on land which would present the potential developer with the easiest and most cost effective option. Climate change/Climate Emergency 9.6 (15) To minimise the causes of climate change is insufficient. Government imperative is to REDUCE causes of climate-change. The Plan makes no reference to the Welsh Government Committent to tackling climate change and committent to transitioning to a low-carbon economy The Plan fails to acknowledge the 29 April 2019 WG declaration that there is a climate emergency in Wales The council attitude towards the popular views The ethos of presentation of the plan to		The Plan has been prepared in the context of the earlier Wales Spatial Plan and the more recent draft National Development Framework, both of which reference this part of NE Wales as being a growth hub. Further considerations are the Deeside Enterprise Zone and the Growth Deal, both of which seek to promote economic growth. Open spaces and green spaces are protected in the plan and this would prevent their development. The plan, as required by Welsh Government guidance, specifically identifies the sites and locations where housing development should be focused and in doing so, provides the certainty for the public and developers as to exactly what the plan's intention is for these sites. This is not unusual. For development sites to be allocated in the plan for housing, they must be sustainable, viable and deliverable. The Plan must provide a housing land supply to meet its housing requirement figure in a manner which is viable and deliverable. The Plan has sought to identify site allocations which are in sustainable locations and which are viable and deliverable and this is best achieved through larger sites. It represents a move away from the UDP where a larger number of smaller allocated sites were not always in hindsight attractive or viable to be developed. The new allocations are only a small part of the overall supply of housing land and will also include small sites and

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			council members shows disdain and lack of respect for the views of ordinary members of the public. In his presentation to the council meeting of 23 July 2019, Planning Officer Andrew Roberts referred to "Provision of Infrastructure" -slide#17 This seeks to denigrate and dismiss the frequently expressed, commonly held concerns of ordinary members of the public		windfall development on both brownfield and greenfield sites. The Plan has had regard to climate change considerations as this is required in terms of adherence to PPW10. Policy STR5 and the accompanying detailed policies clearly provides a framework of policies with which to address climate change issues. The Plan clearly references PPW10 throughout and there is no objection from Welsh Government in their formal representations on the Plan in terms of climate change. The Plan has taken a pro-active approach in terms of allocating two sites for solar farms and identifying Solar Indicative Local Search Areas following a Renewable Energy Assessment for the County. The Plan is not considered deficient merely because it has not referenced the Welsh Government declaration of a climate emergency. In the presentation to Council this particular slide sought to identify the realism that members of the public object to most development proposals on the basis of lack of infrastructure such as schools and health facilities. The slide explained that infrastructure providers had been involved in the Plan's preparation and that there were mechanisms to address capacity through for instance developer contributions. Reference was made to the Infrastructure Plan that had been prepared to accompany the Deposit LDP and that there were no 'showstoppers' identified. The slide was not disrespectful and was an

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					honest representation of and discussion about infrastructure issues. The presentation of the deposit Plan to Council Members was a logical and essential precursor to then making the plan available for public consultation. The objector fails to understand or acknowledge that all of the relevant infrastructure providers have been involved in the plan making process from an early stage, so that they can understand and plan for the planned growth in the LDP from the perspective of their own organisations and infrastructure capacity. The Plans preparation has involved several stages of engagement and consultation which has formed the Plan is a logical step by step manner. The earlier stages of preparation involved a Key Stakeholder Forum comprising representatives from a wide range of organizations, statutory service providers, business and environmental groups. This included discussion with a Flintshire Youth Forum on 7th May 2019.
734	Forming the Plan's Strategy from This Context	Object	LDP VISION AND OBJECTIVES 4.1. On review of the Vision, it is considered that it is lacking in detail. For example, there is no reference or commitment to the LDP delivering, in the very least, the minimum housing and employment needs of the County, nor is there any detail on where these needs will be met (for example, directing new development towards sustainable locations). It is considered		Not accepted. Welsh Government advises in para 5.11 of Development Plans Manual 3 that each LDP must contain a vision and specifically advises a vision should 'be a concise, focused and positive statement'. It is considered that the Plan's vision accords with the guidance in Development Plans Manual 3.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that the Vision should be expanded to include a commitment to achieve the needs of the County in sustainable towns and settlements over the Plan period and with it meet the need of current generations, whilst safeguarding the needs of future generations. 4.2. Turning to the LDP objectives, our Client is generally supportive of all 19. However, and linked to the comments above, it is considered that Objective 11 should be amended to read as follows: "Ensuring that Flintshire has the right amount, size and type of new housing to support economic development and to meet the minimum housing needs of the County in full, including both market and affordable housing' 4.3. As a leading housebuilder in North Wales, our Client is committed to the delivery of high-quality housing though good design. This includes the provision of green infrastructure as part of development proposals, alongside sustainable drainage systems. Our Client supports the Council's ambition to deliver growth and prosperity which enhances community life, balanced against the need to protect the natural and historic environment where possible.		The Plan's vision is for the whole County and clearly addressed the need for sustainable development and meeting the needs of its residents in terms of the environment, economy and social considerations. However, it is not considered necessary for the vision to go into detail about housing provision as that is achieved in the Plans strategic policies. It is the relationship between the Vision, translated through the objectives, to the plan policies which set out how much, how and where growth will happen that is key to reading the plan as a whole. The objectives include the details on how the vision of the plan will be achieved. The vision and objectives have been developed through public and key stakeholder consultation via the key messages document in Spring 2016. The feedback from this consultation has directly informed the final vision and objectives for the plan. The vision and objectives therefore reflect the ambitions of these consultees for Flintshire as well as the priorities set by national planning policy and local plans/strategies for the area. The objector suggests amendments to the wording of objective 11 which currently states "a range of housing need." This covers both affordable and market needs, as well as specialist housing needs, it is not necessary to specify the housing types.
821	Forming the Plan's Strategy	Support	Objective 14 and Paragraph 14.5 Objective 14 of the Deposit Plan states		Support noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	from This Context		that the Council will: "Support the provision of sustainable tourism development." Paragraph 14.5 also recognises that: "sustainable tourism development has the potential to be a significant contributor to Flintshire's economy. Tourism development also has the potential to contribute positively to the range of social, economic and environmental objectives of the Plan…" Bourne Leisure endorses the Councils' recognition of the importance of tourism to the area's economy. It is vital for Bourne Leisure to operate within a positive policy context that encourages investment in its holiday parks, to widen and increase the quality of the tourism offer which is necessary to attract large visitor numbers who in turn support the local economy through the creation of jobs, facilitating further investment and through visitor spending. The Company considers that Objective 14 and paragraph 14.5 are consistent with paragraph 5.5.3 of Planning Policy Wales (PPW) Ed.10 which states that "in rural areas, tourism-related development is an essential element in providing for a healthy and diverse economy…".		

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
887	Forming the Plan's Strategy from This Context	Support	We generally support the objectives set out in the table following paragraph 3.41. Specifically, those that relate to Delivering Growth and Prosperity and which include ensuring that the Council has the right amount of new housing to support economic development and to meet a range of housing needs (Objective 11) and to ensure housing takes place in sustainable locations where sites are viable and deliverable (Objective 12). The representor agrees that the delivery of the right sites for residential development in the right locations, that are both viable and deliverable are key to meeting the objectives of the Council and that the land at Drury Lane, Drury is a suitable location for development that will help achieve these objectives.		Support noted. See rep id914 for comments on DRU001 land at Drury Lane.

The Growth Strategy of the Plan

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
611	The Growth Strategy of the Plan	Support	I and my wife welcome the Deposit Local Development Plan support it and do not want it to change.		Support noted.

Employment Growth

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1135	Employment Growth	Support	Housing requirement is 2,597 units above WG 2014 based 10yr migration variant and 3,000 units above principal projection. Annual build rate 465 p/a for plan is slightly above past 10yr build rate 427 units p/a, but significantly below past 5yr build rate 568 d/pa since 2015. Council concluded that WG 2014 based projections are not appropriate as predicated on recessionary and negative trends which would not deliver on the Council's, regional, or WG's economic growth aspirations for Flintshire and wider area. Council considers the job and homes target to be aspirational but deliverable (see comments on delivery). While evidence shows that based on recent delivery rates the housing requirement could be higher, Council consider recent green belt releases across the border in Cheshire and significant housing allocations in the neighbouring plans of Wrexham and Denbighshire, have a bearing on the scale of homes the plan should provide for. Plan aims to promote economic development, capitalising on County's role as regional economic hub and assist delivery of regional strategies through projects in the North Wales Economic Ambition Board Growth Deal. In particular the Growth Deal identifies key projects around Warren Hall, Broughton,		Support is noted.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Northern Gateway and Deeside. The emerging NDF (Policy 18: North Wales Coastal Settlements) also recognises the importance of Deeside as an important growth driver in the sub-region, which should be the focus for housing, employment and key services. The focus for the Council's strategy is the allocation of two strategic sites at Warren Hall and Northern Gateway (incorporating Deeside Enterprise Zone) providing a catalyst for growth in Flintshire. Collectively these sites aim to deliver 8-10,000 jobs and 1625 homes (1300 within the plan period).In terms of spatial distribution, 47% of housing growth is directed to main service centres (Tier 1) 36% to local service centres (Tier 2) and 17% to Tiers 3-5 (sustainable settlements, defined villages & undefined villages). The majority of new allocations outside of the strategic allocations are located in Tier 1 and Tier 2 settlements. WG does not object to the principle of this approach. WG considers the projections have been taken into account by Council, along with other relevant policy considerations in 4.2.6–4.2.8 PPW10. WG is broadly supportive of the strategy, level of homes and jobs proposed, considers it aligns with national policy and is in general conformity with emerging NDF.		

The Preferred Strategy

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
121	The Preferred Strategy	Support	I fully support the Plan that has been developed. The plan satisfies the Tests of Soundness and responds to the Strategic Policies in the various headings that are listed. It acts to preserve the local environment whilst also creating sustainable communities supporting business, prosperity and protecting the environment. Housing growth has been provide for in excess of the number required up to 2030		Accepted. The support for the settlement boundary for Greenfield and the reasons for excluding / preventing development on the named sites, is noted.
285	The Preferred Strategy	Support	I support the Plan that has been proposed which more than provides for the housing growth required within Flintshire		Accepted. The support for the settlement boundary for Greenfield and the reasons for excluding / preventing development on the named sites, is noted.
1095	The Preferred Strategy	Support	In terms of the Candidate sites I support the FCC Classification sites ref HCAC 001, 002, 003, 005, 006, 007, 008, 009, 010, 011, 012, 013, 014, 016, 017, 018, 023. Sites 015, 021, 024, 025, 026, 028 should not be classified as Amber but should be Red. 022 minimal need for route to be protected. 029 should not be classified as Amber but should be Green. I do not support 004 because it will increase ribbon development for several miles, this site has previously been		Accepted. The support for the non-inclusion within the settlement boundary of HCAC of the named sites is noted although no reasoning on each site is given. The objector then refers to the colour coding which has been applied to a small number of Candidate Sites. The objector argues that six candidate sites should not have been identified as amber, but as red. However, i) this was a point in time assessment as to whether a site broadly accorded with the Plans Preferred Strategy and ii) the objector offers no reasoning as to why the colour coding should be amended. The objector considers that HCAC025 should have been classed as red, but the site adjoins

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			rejected in the UDP, STR5 Transport and Accessibility para 5.43 Active Travel initiative - there is no evidence of any progress plans or links with neighbouring authorities .		the defined settlement boundary of HCAC and therefore broadly speaking complies with the Preferred Strategy. However the conclusion of the detailed site assessment, in Background Paper 8, clearly identifies why the site is not included in the Plan. The objector comments that there is a minimal need for HCAC022 to be safeguarded. This candidate site refers to the line of the Hope – Caergwrle bypass which was protected in the UDP but has not been carried over into the LDP. In terms of the allocated housing site at Wrexham Road, Abermorddu (HCAC004), it is evident that with a site frontage of approx. 300m, the site will not increase ribbon development by several miles. The site was recommended by the UDP Inspector to be allocated for housing but was not included by the Council in the adopted UDP. In terms of policy STR5, it is not the role of the LDP of the LDP to set out in detail what progress has been on Active Travel, as this is a matter for the Active Travel Team. The role of the LDP is to ensure that new development has regard to Active Travel routes and proposals to ensure that new development delivers sustainable means of travel for everyday activities.

Strategic Policies - General

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
245	Strategic Policies	Object	Objection 2: FCC does not have control of the variables required/guaranteed to make this ambitious plan successful The growth plans for Flintshire are channelled through the North Wales Economic Ambition Board, with the North Wales Growth Vision promising around 12000 jobs and a growth rate of 2.8% per annum. The NWEAB makes it clear though that the success of the venture is “co-dependent” on the success of other/component projects: the Nuclear Sector Deal, Wylfa Newydd, Growth Track 360 and the Welsh Government’s Trunk Road programme for North Wales (see “Moving NW forward strategy 2017”, NWEAB). But most of these projects are yet to get off the ground so a time lag, and the grants applied for, to achieve step change, have not yet met full expectations. The Deposit LDP, relies heavily on the North Wales Growth Vision and these projects delivering the ambitious employment target. On the back of this, the Plan calls for a highly ambitious new house building programme to soak up the projected numbers of people taking up 8000-10000 jobs. The UK has barely emerged out of austerity and business investment and confidence is low. The IMF has forecast global and national economic slowdown and reduced its growth rate projections. The resolution of our membership of the EU and the possible negative effect of Brexit upon business confidence and growth are as yet a		Not accepted. Whilst the objector is essentially opposed to a housing allocation close to where they live, they have made a large number of detailed representations objecting to a number of areas of the plan, but where the statements made are often subjective, confusing, selective, and are not supported by evidence, particularly of harm or that affects the soundness of the plan. That said the Council has attempted to interpret and respond to these objections in the best way it can given the above. The Plan has not sought to deliberately overprovide for housing in the context of taking an inappropriate, unjustified or harmful approach. Rather, the Plan has been prepared in the context of a regional growth strategy which is part of Welsh Government Policy and recently re-affirmed in the draft NDF. The Plan has not sought to unnecessarily allocate greenfield sites or agricultural land for housing. In the absence of brownfield land which is suitable be allocated for residential (flood risk, contamination and nature conservation) the Council has had to look at sensible urban extensions on the edge of sustainable settlements. The Council has sought to minimise the loss of Best and Most Versatile agricultural land and this approach recognises that agricultural land must be balanced against other planning

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			matter of conjecture. Flintshire's major employer, Airbus, is caught up in escalating tension over trade tariffs between Europe and the US/Boeing. If Brexit takes place then legal/regulatory cross-border agreements and legal/regulatory frameworks (whether specifically Welsh/UK or whether with Europe or the wider world) will need to be renegotiated and redrawn, and this will extend the period of uncertainty. Flintshire CC seems to be predicating its plans on the "old" pre-Brexit, pre-recession, pre-austerity world of high growth. Not compliant with PPW paragraph: 1.1 Deposit LDP Para 3.48 shows ELR does not indicate significant potential for jobs growth Para 3.50: the stated ambitious jobs total is in excess of the upper projections for total jobs. Para 5.8 Flintshire's aspirations are excessive given all the accumulated evidence showing difficult economic times ahead. Para 5.10 stresses a partnership approach, but this places power over the result to the goodwill of others which may be strong or weak. Para 6.10 No evidence of scenario planning having taken place for Brexit		considerations. Welsh Government and in particular their Agricultural Division, accepts the rationale for loss of BMV land, has supported the overall approach in respect of agricultural land and has not objected to the HN1.6 allocation. The Housing Balance Sheet demonstrates how the Plan can meet its housing requirement figure through various sources of 'supply' and part of this is to incorporate a flexibility allowance. The 'over-allocation' element is in effect the 'flexibility' allowance. Welsh Government explain in paras 5.58 and 5.59 of the Development Plan Manual 3 (now adopted) that it is rare for all of a Plans allocations to come forward and how a Plan will not be effective if it cannot accommodate changing circumstances. Welsh Government specifically state 'This means that a flexibility allowance must be embedded into the Plan'[The Councils emphasis in bold]. The guidance explains that it will be for each lpa to determine the level of flexibility allowance based on local considerations but that 'the starting point for such considerations should be 10% flexibility with any variation robustly evidenced'. Flexibility allowances typically sit within the range of 10-20% and the Plan sits comfortably at the mid point. Given concerns expressed by housebuilders about delivery as part of the UDP, it is considered that a slightly

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					higher flexibility of 14.4% is more realistic and supports the soundness of the plan. The Plan explains how it has sought, through the flexibility allowance, to provide a range of housing sites which are capable of delivering this element of the housing balance sheet. The Plan has not unnecessarily sought to allocate sites and has not allocated 'last resort' sites. In the absence of suitable brownfield land, the Plan has had to focus on greenfield sites. Many of the settlements in the top three tiers of the settlement hierarchy are bounded by BMV agricultural land and it would therefore be naive to expect there to be no loss. BMV agricultural land is one of a number of key constraints that need to be balanced when seeking to implement the Plans spatial strategy in terms of development allocations and these include green barriers, flood risk and environmental considerations. In many of the settlements within the County there is BMV agricultural land which would need to be utilised to identify allocations. Mold is a Tier 1 Main Service Centre and is a sustainable settlement but suffers from green barrier and flood risk constraints. The Plans approach to minimizing the loss of BMV agricultural land has been supported in principle and the Mold allocation has not been objected to by WG. The site between Denbigh Road and Gwernaffield Rd (along with further land to the south) was put forward by the landowner and

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					this would have been an informed decision based on how it would affect the farm holding. Welsh Government has supported in principle the approach that the Council has adopted in seeking to minimise the loss of agricultural land and has not objected to site HN1.6. The Welsh Government guidance in paras 3.54 and 3.55 is concerned with protecting BMV as a finite resource and is not seeking to protect such land because of its landscape character, as this is dealt with elsewhere in PPW. The Deposit Plan represents the Council's Plan that it considers 'sound' and which is released for public consultation. It represents the outcome of the requirement to review the UDP given it has time expired and that there is insufficient housing land to support national policy requirements for this. It therefore shows revised settlement boundaries where for instance a new site has been allocated for housing. It will be for the Inspector to decide whether the allocation / settlement boundary should be retained in the adopted Plan. objection 2 – The allocation is sustainable, sitting on the edge of a Tier 1 main Service Centre, and will help meet the Plans County wide housing requirement figure. The site has a housebuilder on board and it is considered to be viable and deliverable.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					There is no cast iron “guarantee” that the Council can give to the Plan’s complete implementation. Instead the Council has provided an explanation of the rationale behind the strategy, supported by an extensive evidence base. It is for the objector to question the soundness of the Plan by demonstrating with their own evidence how the plan is not sound, will not “succeed”, and why. Despite the multiple objections made and detailed commentaries within those, much of these commentaries are subjective opinion, and is not supported by evidence that questions plan soundness. The objector is also very dismissive of the need for any ambition in the plan and paints a very pessimistic view of prospects for economic growth and prosperity. In contrast, without some form of ambition there would be no progress or economic growth whatsoever, negating the need for strategies like the NWEAB Growth Vision or Welsh Government’s NDF. The plan takes the lead from this more positive expression of national and regional growth intentions, and also plans ahead to 2030. The objector also criticises the Growth Deal and its project aims as essentially premature and unimplemented, but the objector fails to acknowledge that the funding package bid for to secure investment in the Growth Deal projects and infrastructure is now in place. The objector is also critical of the Council for not

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					taking account of post-Brexit impacts on the economy and growth but it is difficult to foresee what these would be at present, and the plan has an end date of 2030 which is well beyond formal separation. The objector questions the context for the job growth target but the lower end of the range identified is only slightly above the job projections prepared by the Council's consultants who conclude in their deposit 'Employment and Housing Advice' Background Paper that the job target is not unrealistic. Whilst the objector's focus is on rejecting housing allocation HN1-6, stating that there are "ample alternatives", they do not say where these alternative sites are or how they are superior to the allocation objected to, having regard to a broad range of constraints and planning considerations. Whilst the objector states that the Plan is not consistent with the NDF, they do not say how or why it is not, and the Welsh Government in their formal comments on the LDP state that "the Welsh Government is broadly supportive of the strategy, level of homes and jobs proposed, considers it aligns with national policy and is in general conformity with the emerging NDF". Whilst the objector states that there is poor evidence of housing demand, the delivery rate

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					in the first four years of the plan period provides this evidence, where the rate is healthy and almost identical to the average planned provision in the Plan.
260	Strategic Policies	Object	Objection 9: The Deposit LDP proposes no special language policy to protect/promote Welsh speaking in the face of extensive housing development in Flintshire The footnote to Appendix 1 to Background Paper 12 quite clearly states that "Broadly Welsh speaking has declined since the 2001 census (14.4% in 2001 to 13.2.% in 2011), partly due to a fall in the numbers of Welsh speaking but also due to an increase in non-Welsh speakers living in the County". Table 3.4 states a key issue is that "Fluency in Welsh in Flintshire appears to be increasing though the rate of rise in non-fluency is faster, suggesting an overall decline of Welsh speakers within the County". Towards the end of the document, it seeks to tie in the IIA/App E scoring and notes that "Rates of Welsh speaking in Mold are some of the highest in the Count…… and there is a risk that these rates would be diluted to some extent due to the cumulative effect of development in Mold, although given the good access to Welsh-language medium schools here it could also be an effective means of providing a large number of residents in Flintshire with Welsh learning opportunities depending on the capacity of schools.". This optimism would be very welcome if there were clear plans to increase infrastructure such as a new Welsh-medium	include a special language policy to protect/promote Welsh speaking in the face of extensive housing development in Flintshire	Not accepted. The footnote to Appendix 1 of the Background Paper 12 is pointing out that the decrease in the percentage figures from 2001 to 2011 Census data is due partly to the increase in non Welsh speakers in the County. So that even though there is an actual slight decrease in Welsh speakers the % figure shows a bigger reduction due to more non speaking people living in the area rather than an actual large decline in Welsh Speakers. There is reason for optimism since there is more than sufficient capacity within the Welsh Language Education system in Mold and there are clear plans to increase that capacity too. Ysgol Maes Garmon the Welsh High School in Mold has capacity to accommodate an increase in pupil numbers. At the present time (March 2020) there are 182 spare pupil places at Maes Garmon. Also Ysgol Glanrafon the Welsh Language primary school also has some spare places (12) and is due to be expanded to accommodate an increase in demand. An extension to the school is due to be built this year increasing capacity of the school from 309 to 356. The objectors reference to the allocation not being compliant with para 1.34 is not

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			school and/or increasing the number of places in a Welsh medium school, as part of a concerted effort to put in place a language policy by which Flintshire could consider how housing developments might help to support/promote/protect the Welsh Language but none of these building blocks are in place. Considering how ambitious the Plan is for employment and housing targets, it is surprisingly unambitious on Welsh language issues in the context of housing development. Not compliant with PPW paragraph: 1.19, 1.34(ii), 2.19, 3.26 Deposit LDP Para 5.34 The Welsh Language Background Paper has significant weaknesses, a dubious evidence base, dubious analysis and arrives at a dubious conclusion - that no special language policy is required		applicable to development plans as this section of PPW is concerned with planning applications and there is no planning application on the site. In terms of para 1.19 of PPW, the Council considers that sufficient information has been published to enable a clear explanation as to why housing allocations have been made. The Sustainability Appraisal was part of the Integrated Impact Assessment (IIA) of the LDP has taken account of the Welsh Language. The details of the IIA in relation the Welsh Language are fully explained in Appendix 2 of the Background Paper 12. The objector criticises the plan for failing to be ambitious enough in tackling “Welsh language issues” but fails to explain or define what these are, what ambition should be promoted, and in a land use plan context, what harm the plan does to the Welsh language. Without this it is difficult for the Council to understand and consider how the soundness of the plan is challenged.
266	Strategic Policies	Object	Here is a summary of the various designation and associated comments on flood risk analysis on Site H1.6/MOL044/45, using only direct quotes from the documentation (but I have applied bold font to highlight critical comments). Background Paper: “Consideration of Candidate Sites against Preferred Strategy” Nov 2107: MOL025: Complies with preferred strategy however there are site constraints that would need to		Not accepted. Firstly the objector incorrectly refers to candidate sites as “designations” as candidate sites are put forward by landowners or other interested parties. It is entirely for the Council to assess the appropriateness of these sites and the area to allocate. For site HN1-6 the site is very clearly identified on the proposals map of the deposit Plan. The Council does not understand the objector’s confusion as there is no ambiguity, and also

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			be overcome to allow the site to be developed FCC Strategic Flood Risk Assessment, July 2018: MOL044 (3.94Ha): Currently in flood risk area and at risk of climate change; Highly vulnerable development category; Plan allocations should not be made for such development and planning applications not proposed; High risk of flooding from rivers and sea. Probability is greater than 1 in 100 or 1 in 200 sea, therefore presumption against site development; consider removal based on DAM C2 MOL045 (8.3Ha) FCA required to address surface water; Highly vulnerable development category; No constraints relating to river or coastal flooding, other than to avoid increasing the risk elsewhere. Integrated Impact Assessment, Appendix E: H1.6 MOL044 & MOL045 & MOL025 (10.6Ha) Site contains a small area of surface water flood risk in the southern portion and the vehicular access onto Denbigh Road will be outside Zone C2; careful consideration should be given to the potential impacts of the proposed development on the quality of nearby waterbodies particularly during the construction phase Background Paper: Assessment of candidate sites and alternative sites, Sept 2019:MOL025/MOL045 (8.28Ha) The site can be considered along with the site to the north thereby enabling improved vehicular access to Denbigh Road and better links with existing development in the locality….The site, in conjunction with MOL044, is		the objector attended two separate public drop-in sessions and spoke at length to an officer on both occasions. This would have provided ample opportunity to query any uncertainty over boundaries. Despite quoting at length from the Council's evidence, all the objector concludes from this is that it is "variable", without explaining what this means or why it renders the site HN1-6 or the plan as a whole, not sound. NRW have been part of the earlier engagement phases of the Plans preparation, being an important member of the Key Stakeholder Forum. NRW have been consulted on candidate sites and alternative sites and also consulted on possible development sites. NRW were formally consulted on the Key Messages document, Strategic Options and Preferred Strategy. No objection has been made by NRW on the Deposit Plan in respect of the Mold allocation. In the absence of an objection from the relevant statutory body it is evident that there is a not a flood risk issues with the site. The Candidate Site Register forms the basis for sites considered throughout the preparation of the Plan. The site comprises all of candidate sites MOL025/045 and part of MOL044 in order to avoid flood risk areas and also to reduce the visual impact of built development from Denbigh Rd. The Council consulted on the Deposit Plan and the proposals maps

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			considered suitable as an allocation. But MOL044 is a known flood risk with a presumption against development and developing MOL045 could exacerbate MOL044's flood risk even further. This shifting of boundaries sends the message that this site is complex and highly problematic and likely to become even more problematic, even with SuDs, in the event of significant rainfall events creating overland flow and fast run-off, on a sloped site with known drainage capacity issues, in a known flood area.		which accompanied the written statement clearly showed the boundary of the housing allocation and settlement boundary. There is no statutory requirement that a Plan housing allocation has to follow exactly the boundary of a candidate site. There is no confusion over what the boundary of the allocation is. MOL025/045 do not fall within an area of C1 or C2 flood risk as defined on the Development Advice Maps produced by NRW. A pocket of surface water floodrisk exists to the north west of Alwyn Close. The north western part of MOL044 sits within a C2 flood risk area within the DAM and accordingly the site boundary has been drawn back to exclude this flood risk area. The brief design guidance for this site in the written statement in policy HN1 stipulates that development, with the exception of the new access road onto Denbigh Rd, will not take place on MOL044. NRW have been consulted on the Deposit Plan and they have no statutory objection to the site. In this context it is not considered that the Plan, nor the specific allocation is non-compliant with PPW or fails the tests of soundness
261	Strategic Policies	Object	Background Paper 12 is a difficult document to digest (as the writer acknowledges in the confused debate outlined through paragraphs 4.7, 4.8 and 4.9). Either the consultants employed have done a rather poor job of their research, or their analysis, or their interpretation, or their dissemination of the		It is not clear what point the objector is making in this objection in relation to the background paper and the independent language research carried out. Rather than the "confusion" which the objector infers, the fundamental issue highlighted by paragraphs 4.7 to 4.9 of the Background Paper is that it demonstrates the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			results to FCC, or FCC have written a poor research brief and/or (as inferred) are unable to interpret the end results. The Paper reaches a conclusion that no special language policy is needed in the planning context, despite its own admission that the analysis is poor. This document needs to be rewritten and possibly the research needs to be repeated, after reviewing the brief, as the process is clearly not sound. There is no process offered by which Flintshire could operationalise the legal requirement, through the planning system, to (1) defend current levels of Welsh speaking in Flintshire and in Mold, and (2) to contribute, in the planning context, to WG's target of one million Welsh speakers by 2050 There is insufficient reasoned justification offered Not compliant with PPW paragraph: 1.19, 1.34(ii), 2.19, 3.26 Deposit LDP Para 5.34 The Welsh Language Background Paper has significant weaknesses, a dubious evidence base, dubious analysis and arrives at a dubious conclusion - that no special language policy is required		difficulty of linking language research to evidence of planning harm, something the objector also fails to do in other related objections referencing Welsh language. Whilst the objector feels the Council's evidence is "dubious", they offer no tenable alternative assessment or evidence of harm or need for a policy. The objectors reference to the allocation not being compliant with para 1.34 is not applicable to development plans as this section of PPW is concerned with planning applications and there is no planning application on the site. In terms of para 1.19 of PPW, the Council considers that sufficient information has been published to enable a clear explanation as to why housing allocations have been made.
281	Strategic Policies	Object	Objection 14: Absence of key documents to support decision making by FCC (and by Mold Town Council in its Plan feeding into the Deposit LDP) Decisions on planning matters, the allocation of candidate sites, the rejection of other sites, decisions to develop in open countryside have, at times, been made in the absence of key documents such as the Green Barrier Review and Background Paper on site assessment. Flintshire CC's Planning		Not accepted. It is difficult to understand the point being made in relation to absence of documents as the objector has made detailed reference to the Council's extensive evidence base in multiple objections. The objector also appears to have been very selective when highlighting extracts from the evidence base, which when taken and understood in their full

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Committee has been tasked with producing a LDP before the official paper of the Green Barrier Review (and other key documents) became available in September 2019. Under the circumstances there is the possibility that the Green Barrier Review becomes a rubber stamping exercise for decisions already taken, rather than a document written free of pre-conceptions on new site allocations. The review was not available to either FCC or to MTC until after the LDP and MTC Plans were published. In effect this invalidates both MTC and FCC plans. Therefore those decisions about which sites to allocate were made without reference to consistent approaches to protecting open countryside, which is unsound. Background Paper 1 on Green Barrier Review states that its role is to assist in safeguarding the countryside from encroachment and to protect the setting of an urban area. This applies where a settlement has a particularly open or sensitive edge and an open countryside. setting as in the case of MOL045/H1.6. It can also apply where a settlement has a particular historic value. The Review (Sept 2019, p5) also states that it is not the case that "every single urban edge requires a green barrier to prevent encroachment but more a consideration of settlement form and the nature of the urban edge and adjoining countryside".There is no point in producing a Green Barrier Review if it does not inform planning decisions, and crucially, shape the underlying discussions that precede the decisions to release sites. There is insufficient reasoned justification		context actually do not support the point being made by the objector. For example, as part of the UDP land was put forward for development by a third party as an 'omission' site and this considered by the UDP Inspector. The site was submitted in isolation and there were no other sites submitted on adjoining land. The comments of the Inspector must be considered in the context of the preparation of the UDP wherein four housing allocations in Mold were proposed by the Council and accepted by the Inspector. The Inspector therefore felt that this site, in isolation, would represent a significant incursion into open countryside, but also that there were also concerns about the provision of a satisfactory vehicular access. The objector's selective quotation from the UDP Inspector does not convey the full context or meaning behind what the Inspector actually said. The Inspector's comments in full are ''The site is a single field to the north of Gwernaffield Road. Whilst there is development to the east, it is estate type housing which turns its back on the site. Because of its size, at over 8 ha, development on the site would result in a significant incursion into the countryside to the west of the town. I am told there are concerns about providing a suitable access to the site which also weigh against its allocation'. The Council is now preparing a different development plan, within the context of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			offered Not compliant with PPW 1.19 and 3.40		updated national guidance and with a new housing need to meet. A completely different set of candidate sites (and later alternative sites) were presented for consideration and assessment. In looking at Mold, which is a Tier Main Service Centre, the southern part of the town is well defined by the line of the A494(T) bypass, to the north and east by green barrier and flood risk and the south west by green barrier. This leaves the north west of Mold as the logical area of search for development as it not affected by the same key designations and constraints. This was recognised by Mold Town Council, as part of the development of the Mold Town Plan which predates the LDP and is a material consideration. This identified the fields to the north and south of Gwernaffield Rd as being suitable in principle of housing. The site represents a sizeable extension into open countryside but, in conjunction with the proposed new access onto Denbigh Rd, it represents a logical extension to the form and pattern of development. The site is also well defined by strong physical features on the ground. The new road avoids having to access the site through small residential roads within adjoining estate type development. The existing hedgerows along Pool House Lane has the potential to be reinforced through additional landscaping. Furthermore, the lack of built development on the northernmost part of the allocation can provide an open landscaped greenspace setting to the site

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					when viewed from Denbigh Rd. This has the benefit of mitigating the extension of the site into open countryside. Contrary to the objector's view that no evidence has been made available relating to site selection, the Council published a Background Paper which provides a summary response of the assessment of candidate and alternative sites. This explains why the candidate sites were considered appropriate and suitable to be allocated in the Plan. The Council also produced a Background paper on Agricultural land which commented specifically on the Mold allocation. Welsh Government have supported in principle the approach taken to the Plan minimising the loss of BMV agricultural land and Welsh Government have not objected to the site. Sites have also been appraised by independent and experienced consultants as part of the sustainability appraisal in the IIA. The preparation of the LDP has been overseen by the Council's Planning Strategy Group. This is a core working group of 9 Members plus a Chair who have no decision making or approval powers. Rather, their role has been to endorse the Plan at various stages of its preparation before making a recommendation that the plan is considered by Cabinet / Council. Although the membership of PSG is taken from Planning Committee Members, the actual Planning Committee has had no involvement in the Plan. The

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					membership of PSG has remained fairly consistent over the several years taken to progress the Plan to Deposit stage and this has ensured knowledge and familiarity to be gained and a good working relationship with Officers established. PSG has been presented with key evidence to support the plan's development throughout the Plan's preparation. PSG gave detailed consideration to candidate sites and alternative assessments as part of filtering down possible allocations into the final list of allocations which appeared in the Plan. PSG also considered the green barrier at a series of meeting, workshops and site visits, prior to considering sites, a sequentially logical and sustainable process. The review focused on whether green barriers were still fit for purpose in the light of WG guidance in PPW10 and also whether new green barriers proposed as part of candidate site submissions, had any merit or not. The green barrier review was clearly not a rubber stamping exercise but did necessitate consideration as to whether possible housing allocations within the existing UDP green barrier would undermine the purpose of the respective green barrier designations. This is set out in the green barrier review background paper and the candidate sites assessment background paper. Mold Town Council prepared the Mold Town Plan in the light of existing UDP designations

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					and information. In looking at Mold, and with reference to PPW and the purpose of a green barrier, there is a clear need for a green barrier to protect the narrow gap between the south western edge of the town and Gwernymynydd. To the north of and north east of Mold there is a need to protect the narrow gap between Mold and Mynydd Isa and to protect the openness of the gap between Mold and the outlying villages of Sychdyn and New Brighton. To the north west of Mold there is no justification for a green barrier given that there is no strategic gap that needs to be protected. The nearest settlement is Rhydymwyn which is approximately 3km from the edge of Mold and is categorized as a Tier 4 Defined Village where planned growth is not being made in the context of policy STR2. The need to prevent open countryside from encroachment nor the need to protect the setting of an urban area are considered of sufficient importance to warrant green barrier designation to the north west of Mold. It is also the case that green barrier designations are not based on the landscape quality of the land concerned, but the specific purposes set out in PPW. Land need not have any inherent landscape or other quality for it to warrant green barrier designation. To wrap the green barrier around the north western edge of Mold, would be to virtually encircle Mold within a green barrier and offer no scope for future growth and development. A further purpose of green barrier designation, as set out in PPW,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					is to 'manage urban form through controlled expansion of urban areas' and this is what the green barriers achieve in Mold, by seeking to protect key gaps and to enable scope for an extension to the urban area. The north west of Mold is therefore the logical and sustainable place to plan for Mold's future long term growth.
372	Strategic Policies	Object	The underlying rationale of the Deposit LDP is that Flintshire has an abundance of employment land that, in theory, be used to generate an unprecedented number of jobs to Flintshire. In order to soak up this abundance, and house the projected number of workers and their families, a massive amount of houses are said to be "needed". For FCC's Deposit Plan to succeed it would require all the "co-dependent" infrastructure projects to succeed, all investments and bids to be successful, and all the political and economic conditions to be favourable for the next ten years. This is the wrong time for such an ambitious plan deploying an unproven strategy, based upon a highly aspirational projection of employment-led growth, which relies on factors that FCC is not in control of, during a period of great economic uncertainty. I have demonstrated, with evidence, that the Plan is not sound and made several detailed objections and comments across the board. In summary, there is insufficient reasoned justification in many parts of the plan, and it should be rejected as it stands.		Not accepted. These matters are already addressed in more detail against the objector's individual objections. That said, the objector's conclusions highlight the often subjective, selective and confusing nature of much of the representations made which lack evidence to substantiate the points made. For example: The objector refers to Mold being a "special case" but the reasons provided do not really distinguish this uniqueness to the Council, given that Mold is considered to be the County's most viable and vibrant town centre and service centre. The objector criticises the Council's assessment of sites for being a "subjective analysis" but fails to recognise that this is a matter of planning judgement rather than a mathematical exercise, but then makes the statement that the settlement strategy needs to be more "nuanced" but without explaining to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the Council what is meant by this highly subjective comment. The objector refers to the land being "actively farmed" whereas in fact it is pasture or forage area used for general grazing and silage production. This is no different to hundreds of hectares of land in the same use if Flintshire. All of the 'issues' raised by the objector to site HN1-6, for example flood risk and drainage, have been subject of consultation with relevant and statutory consultees and there are no objections from these bodies to the site's allocation. The objector criticises the plan for exceeding Welsh Government projections of housing growth but has failed to recognise the Ministerial advice given in 2014 to all LPAs which is still relevant, advising not to project forward recessionary trends that affect current population and household projections, as a basis for setting housing requirements in LDPs. The objector is also reminded that the Plan is in line with both the North Wales Growth Vision and the Welsh Government draft NDF, where the latter point has been confirmed by Welsh Government in their formal comments on the deposit LDP. In objecting to site HN1-6 the objector refers to "ample choice" of sites elsewhere, but fails to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					say where these sites are, or how they are preferable to the allocation objected to. In referring to the underlying rationale of the LDP, the objector feels that the job growth target, which the Council accepts is to a degree aspirational, is “unprecedented”, without saying why this is or why it cannot be achieved or indeed aspired to. Reference to the rationale for growth option 6, from which the jobs target and housing requirement have been drawn, explains the relationship and rationale, and also the papers prepared by the Council’s employment consultants conclude that this job ambition is achievable. In terms of housing demand not being present, the delivery rate of new housing in the first four years of the plan period indicate a healthy demand, and this rate almost exactly matches the average level of provision for housing made by the plan. The objector also fails to recognise that the funding bid to support the NWEAB Growth Deal has now been secured from UK and Welsh Governments to fund investment and infrastructure to promote economic growth and prosperity. The objector states that this is the “wrong time for such an ambitious plan deploying and unproven strategy”, but notwithstanding the significant evidence base produced to support and justify the plan, the proof of any strategy can only be in the successful implementation of it over time. The objector is reminded that in their formal comments on the deposit LDP the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Welsh Government stated that "the Welsh Government is broadly supportive of the strategy, level of homes and jobs proposed, considers it aligns with national policy and is in general conformity with the emerging NDF". Whilst the objector feels they have "demonstrated with evidence" why they feel the plan is not sound, from the Council's perspective the objector has provided a lengthy, detailed, selective, and sometimes confusing narrative as a critique of the Council's plan and evidence base, but contrary to their statement has not demonstrated with evidence what harm the plan or site HN1-6 causes that challenge the plan or site's soundness. To illustrate this last point, the objector concludes that "the site assessment of HN1-6 needs to be revisited to remedy information gaps, and to reflect the full range of information that is now available", but does not say how or what the remedy is, what the gaps are, what information is now available and how it changes the context for this site, why this information was not provided with the representation, or what the more suitable alternative site is?
374	Strategic Policies	Object	The underlying rationale of the Deposit LDP is that Flintshire has an abundance of employment land that, in theory, be used to generate an unprecedented number of jobs to Flintshire. In order to soak up this abundance, and house the projected number		see response to id 372

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			of workers and their families, a massive amount of houses are said to be “needed”. For FCC’s Deposit Plan to succeed it would require all the “co-dependent” infrastructure projects to succeed, all investments and bids to be successful, and all the political and economic conditions to be favourable for the next ten years. This is the wrong time for such an ambitious plan deploying an unproven strategy, based upon a highly aspirational projection of employment-led growth, which relies on factors that FCC is not in control of, during a period of great economic uncertainty. I have demonstrated, with evidence, that the Plan is not sound and made several detailed objections and comments across the board. In summary, there is insufficient reasoned justification in many parts of the plan, and it should be rejected as it stands.		

Strategic Policies - Creating Sustainable Places and Communities - General

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
17	Strategic Policies - Creating Sustainable Places and Communities	Object	Sustainable developments should include how the schools, medical services and shop needs are impacted by large scale developments. FCC should have 100% accurate data on school sizes and admission forecasts	Sustainable developments should include how the schools, medical services and shop needs are impacted by large scale developments. FCC should have 100% accurate data on school sizes and admission forecasts	Not Accepted. The LDP and all site allocations within it are informed by a robust evidence base. Gathering this evidence base involves consultation with statutory consultees including education, health, highways and utility companies to identify if the site would be suitable and sustainable to develop, and what the impact the development would have on each service/facility. For instance, Betsi Cadwaladr University Health Board are a Member of the Key Stakeholder Forum which met during the earlier engagement phases of the Plans preparation. All of the sites allocated within the plan have been through this rigorous process and statutory consultees have not identified any major constraints that would prevent a site from being developed sustainably. In addition to this, an Integrated Impact Assessment (IIA) has been conducted by an independent specialist to assess the Plan and allocated sites, to ensure they are sustainable. It must be stressed that the Plan's new allocations will not deliver completed houses until 2023-24 and will be developed over a number of years. The impact of development will therefore not be felt in 'one hit' and there is sufficient time for both the Heath Board and the Education Authority to support the delivery of growth that is identified in the Plan. There is

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					no formal objection from either statutory body to the Plan nor allocation. No objection to the Plan or allocations has been made by the Local Education Authority. The commentary of the Wrexham LDP Inspector referenced in detail above, establishes that it is normal practice for new development to address capacity issues through developer contributions. The new allocations will not deliver completed houses until 2023-24 and will take several years for the development to be completed. The impact on infrastructure will therefore be gradual and will not be in 'one hit'. This gives the Local Education Authority time to address how the growth in the Plan can be accommodated in terms of school capacity. The Planning Service continues to work with the LEA to secure appropriate mitigation for the delivery of planned LDP sites. No objection to the Plan or allocation has been made by Betsi Cadwaladr University Health Board. Flintshire has a number of relatively new Primary Health Care Centres and the issue is one of lack of sufficient staff including GPs, rather than a lack of facilities as also commented on by the Wrexham LDP Inspector above. As stated in the preceding paragraph in relation to education capacity, there is ample time for the Health Board to plan for how it intends to meet the health care needs of the Plan's growth levels. The Council continues to work with the Health Board in

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					securing the appropriate provision of infrastructure such as health for the delivery of LDP sites.
247	Strategic Policies - Creating Sustainable Places and Communities	Object	Objection 3: FCC's ambitious plans places disproportionate pressure on Mold's infrastructure, given that it is not a designated growth area according to the Welsh Government's National Development Framework and is not on the rail network Mold is not a Welsh Government designated growth area although it is a Tier 1 settlement for Flintshire. The National Development Framework (NDF) for Wales 2020-2040 states that "most large scale growth to jobs and housing will happen in Cardiff, Newport, the Valleys, Swansea Bay and Llanelli, Wrexham and Deeside". Mold is not listed as a growth area for jobs or housing for the foreseeable future, so excessive development is not needed, yet Mold is taking a greater share of new housing targets than might be considered equitable. Crucially, Mold does not have a railway station, so the Growth Track 360 project will have limited impact. In terms of accessibility to Deeside and the Enterprise Zone for jobs or for going further afield in England, the only feasible mode of transport for Mold residents will still be by car. Some 20,000 people commute every day from Flintshire to work outside the county and this trend indicates the risk that an		Not accepted. Mold is a vibrant town which is the administrative centre for the County and sits well in terms of the growth triangle concept of Wrexham Chester and Deeside in the former Wales Spatial Plan and the principle of Wrexham and Deeside as a focus for growth in the draft NDF. It is not considered that the settlement hierarchy and spatial strategy in respect of Mold is contrary to PPW10 or the NDF. Mold has always been in the highest tier of settlements from the Clwyd Structure Plan through to the Delyn Local Plan and the UDP. The LDP adopts a consistent approach as the settlement audit and settlement hierarchy work in the Key Messages document clearly shows that Mold meets the criteria for being classed in the upper tier of the settlement hierarchy and site comfortably along the other settlements identified within Tier 1. Mold is not the only Tier 1 settlement to not have a railway station as Saltney, Connah's Quay, Queensferry and Holywell do not. There are also alternative public transport options to the Rail Network, Mold is easily accessible by bus where it is possible to catch service 5 from Mold Bus Station and arrive at locations within Deeside Industrial park between 06.42 and 06.48 and the last bus back to Mold is 18.03.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			overdeveloped Mold would become a car-based dormitory town for workers in Deeside, Merseyside and NW England workers as bus routes/frequencies are also inadequate Topic Paper 7 on the Spatial Strategy notes (on p3) the advice in the Wales Spatial Plan that developments should be located "so as to minimise demand for travel especially by private car". So, development in Mold intended to support employment growth in Deeside can only add significantly to existing road travel and congestion. In Background Paper 3, the Infrastructure Plan, Figure 2 shows a map of "Flintshire's County Rail Routes and Regional Network Connections" (p20). Mold is not even named on the map which is very telling. There is insufficient reasoned justification offered Not compliant with PPW paragraph 1.17, 1.19, 2.19, 4.1, 4.6, 4.1.36, 5.4.13 Deposit LDP Para 5.13 allows for some nuancing of the settlement strategy but does not choose to do so for Mold which has unique features to be considered Para 5.30 & 5.31 Despite the stated commitment to local distinctiveness, historic assets and unprotected assets, this plan does not actually apply this when assessing settlements and sites		In addition, service no.6 provides an hourly service between Mold and Pantymwyn along Gwernaffield Rd whilst on Denbigh Road service 14 provides a bus every 2 hours between Denbigh and Mold and service 126 an hourly bus service between Mold and Holywell. This edge of town allocation is clearly accessible on foot and by bus to a range of facilities and is only approximately a 1200m walk from Mold Bus Station where other key services are available: • X4 – Mold, Broughton, Chester every 30 mins • 5 – Ellesmere Port, Deeside Industrial park, Queensferry, Buckley, Mold every 1 hr • 28 – Flint, Mold • 29 – Mold, Wrexham • X1 – Ruthin, Mold, Chester. Residents of the new development will be able to access facilities and services without being wholly dependent on a private car for all journeys. It is therefore possible to travel for work purposes. It should also be stressed that Mold includes existing sources of employment as well as employment allocations to facilitate further employment development that would not require residents to travel outside of the town. The objector argues that the LDP has not considered "local distinctiveness, historic assets and unprotected assets" as part of the site selection process, however does not

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Objection 8: Poor analysis of the ongoing effects of successive large housing developments on Welsh language and community cohesion in Mold and site H1.6 Background Paper 12 notes that Mold is an exception within Flintshire, being the only main settlement where there are relatively high levels of Welsh speaking (at 20%+). It quotes TAN 20 which states that that the Welsh language is "part of the social and cultural fabric" of Welsh life (para 3.25). It also states in paragraph 3.26 that "planning authorities must consider the likely effects of their development plans on the use of the Welsh language." In paragraph 3.10, it is claimed that housing development should be avoided in places where Welsh speaking is more common and might be diluted by too much development. Yet there is no attempt to give Mold special status in line with TAN 20 warnings. Paragraph 4.5 claims that housing development in recent years has had no detrimental effect in Mold but offers no evidence. Background Paper on "Agricultural Land", states that "The land between Denbigh Road and Gwernaffield Rd has the advantage in that it can be served by a new road directly off Denbigh Road. This can not only serve		provide any evidence of what the plan has failed to recognise. The candidate site assessment process involved the identification of such assets to inform site selection within the plan. Objection 8: The objector criticises the plan for its impact upon the Welsh language in Mold but fails to explain what harm the plan actually does to the Welsh language. Without this it is difficult for the Council to understand and consider how the soundness of the plan is challenged. The objector highlights that the Council have produced background evidence on the Welsh Language which identifies Mold as an area where the Welsh language is more dominant within the County. The objector miss quotes background paper 12 and TAN20, which do not seek to discourage residential development in areas of high Welsh speaking. TAN20 (3.8) states "Welsh language considerations may be relevant to the LPA's site selection process. For instance, it may be more appropriate and sustainable in some areas to meet housing need through one large housing allocation, supplemented by a phasing scheme; in others however, a number of smaller sites spread across a number of settlements might be preferable. The size and tenure of dwellings may also affect whether a development has a positive or negative effect on the language." The Council consider that the allocation of HN1.6 in Mold which is a Tier 1 settlement, is appropriate and sustainable for a settlement of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the proposed allocation but adjoining parcels of land in a future development plan." So if the H1.6 site is given over to development, then other sites (most likely the even bigger sites to the south of Gwernaffield Road) will then be put forward. Once there is development on the north side of Gwernaffield Road, FCC/developers will argue that it is lopsided and that development should be allowed on the south side of Gwernaffield Road. Such an argument is already being put forward for another site in Mold under the LDP. This is a stealthy and undemocratic path towards massive demographic and cultural changes in Mold that would drastically dilute its rural town culture, its town/county appeal, its Welsh culture and language, its sense of space, and notions of placemaking. Even the LDP's site assessments documents recognise that development at such a high level would be undesirable.		this size, and considers that sufficient information has been published to enable a clear explanation as to why housing allocations have been made.
265	Strategic Policies - Creating Sustainable Places and Communities	Object	The site on Gwernaffield Road / Denbigh Road, MOL045/H1.6 is a large Grade 2 field that is actively farmed. The current regime seems to be cultivating three crops of silage plus the provision of grazing for dairy cattle but local residents also recall seeing it cultivated for forage maize in recent times. Regarding Tan 1, I am not clear whether it allows a site (such as		Not accepted. The UDP is a time expired development plan, and once adopted the LDP will replace the UDP for Flintshire. The process of producing the LDP includes reviewing the settlement boundaries and identifying housing allocations in order to meet the Plan's housing requirement, which are then made available in the Deposit LDP for public consultation. The Council consider the allocation of the site at Denbigh Road, Mold to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			MOL045/H1.6) that is outside the settlement boundaries (under the UDP and for the first half of 2019) to be moved inside the settlement barrier (for the last three months or so at the time of writing) presumably for the purpose of deliberately making it accessible for development under the Deposit LDP. Coincidentally, a developer has expressed interest in the site. I am unclear about the decision-making process for this change of status and it is not explained in the documentation. As such I would consider the process unsound. There is insufficient reasoned justification offered Not compliant with PPW paragraph: 1.19, 1.34(ii)Referral needed, 3.40 Deposit LDP Para 9.1 refers to settlement boundaries but it is not clear how/why/when the H1.6 site was placed within the settlement boundary of Mold some time during 2019 as under the UDP it is in open countryside Para 12.15 stated that new development must sit comfortably in its landscape setting. Clearly this is at odds with development on site H1.6 classed as open countryside under UDP.		be appropriate and sustainable for this Tier 1 settlement, and the extension of the settlement boundary to incorporate this allocated site is logical. The status of the settlement boundaries will not be changed until the LDP is formally adopted, this will not happen until the Deposit LDP has been through a public examination process. The Council have followed the appropriate procedures to amending the settlement boundaries as part of the LDP process.

Strategic Policies - Supporting a Prosperous Economy - General

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
998	Strategic Policies - Supporting a Prosperous Economy	Object	Paragraph 6.3 – states that economic forecasts suggested negative growth in key sectors. As the LDP is reliant on the 2 strategic sites to meet the jobs/employment land requirements ("potential for the two sites to yield between 8,000–10,000 jobs over the plan period"), how does this fit with paragraph 5.9 regrading jobs growth defining the strategy and level of housing? However, the LDP also allocates a range of general employment sites to enable start-ups, expansion, new investment etc – will these also contribute towards the jobs/ land requirements set out in policies STR1 and PE1? And are these policies consistent?		Not accepted. Policy STR1 Strategic Growth sets out the broad quantums of development that the Plan provides for. Policy PE1 General Employment Land Allocations shows the breakdown of employment land allocated between the strategic sites and the range of other employment allocations. It is unclear why the objector considers the two policies might be inconsistent. The Plan explains that the Welsh Government population and household projections are low as they are based on a period of recession and that they should not be relied upon going forward. The Plan therefore considered a range of household forecasts in order to set a more ambitious but sustainable and deliverable figure. Alongside this the Plan also considered a jobs based projection figure and there is broad alignment between the two approaches. The Plan has to have regard to the economic context of the growth ambitions of Welsh Government for the region and therefore sought to take a more positive approach based on the likely contribution from the two strategic sites. However, the range of other employment allocations merely provides further flexibility as they are long standing employment allocations and have few other more suitable uses. WG in their formal representations to the deposit LDP support the levels of jobs and housing growth proposed,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the location of growth, and also consider the plan is in broad conformity with the draft NDF.

Strategic Policies - Meeting Housing Needs - General

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
282	Strategic Policies - Meeting Housing Needs		Objection 15: Candidate Site Assessment Process – scant analysis/information and subjective, inconsistent analysis It would be reasonable to suppose that given that MOL025/MOL044/H1.6 is BMV land and that the Preferred LDP Growth strategy is "ambitious" and "aspirational" (FCC's own words) then the decision to allocate a greenfield site would require very refined arguments, that would closely demonstrate (beyond any doubt) the need for housing on this particular site, in this particular part of town, and a solid evidence base proving the inability to meet demand in any other way. There is no such reasoned justification to be found. Although there is a Candidate Sites assessment document stating how this process should work, and a further document on the sites, there is no detailed/transparent assessment of candidate sites using objective criteria. This is contrast to the assessment of employment land where objective criteria were established that were then scored numerically (in Future Sites Scoping Exercise in App 8). The site assessments in the Background Paper 8 are littered with anomalies. For instance, in its assessment of OL023 (Land north of Queens Park and Hendy Road, 4Ha), the commentary states the following:	Remove Sites in Mold: H1.6/MOL044/MOL045/ MOL025 Closer study of Background Paper 8 reveals that in the assessment of the largest sites in Mold, they all repeat the mantra that the MOL025/044/045/H1.6 site is preferable for development, but the reasoning is inconsistent, citing features that could just as easily apply to the H1.6 site. The other sites (e.g. MOL002, MOL007, MOL019, MOL024, MOL041) are said to be: open countryside, too conspicuous in the landscape, not very urban etc. It seems clear to me that the assessor has decided that the H1.6 site is to be the sacrificial lamb that will not be defended/protected, in	Not accepted. The objector criticises the Council's assessment of sites for being a "subjective analysis" but fails to recognise that this is a matter of planning judgement rather than a mathematical exercise. Contrary to the objector's view that minimal evidence has been made available relating to site selection, the Council published a Background Paper which provides a summary response of the assessment of candidate and alternative sites. This explains why the candidate sites were considered appropriate and suitable to be allocated in the Plan. The Council also produced a Background paper on Agricultural land which commented specifically on the Mold allocation. Welsh Government have supported in principle the approach taken to the Plan minimising the loss of BMV agricultural land and Welsh Government have not objected to the site. Sites have also been appraised by independent and experienced consultants as part of the sustainability appraisal in the IIA. The preparation of the LDP has been overseen by the Council's Planning Strategy Group. This is a core working group of 9 Members plus a Chair who have no decision making or approval powers. Rather, their role has been to endorse the Plan at various stages of its preparation before making a

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			"Site for Protection - It is not possible or practicable to designate land in the development plan on the basis of it being agricultural land. Information relating to agricultural land quality is held by Welsh Government but accurate results require on site survey work to establish the exact quality. Any development proposals arising in such sites may be likely to be required to undertake detailed on-site assessments to establish whether it is best and most versatile agricultural land. This information would then be considered in the planning balance in assessing development proposals." However, the above comment applies equally to the MOL025/044/045 site i.e. the land between Gwernaffield Rd and Denbigh Rd, so why is it not being protected? There is insufficient reasoned justification offered Not compliant with PPW paragraph: 1.19, 3. H1.6/MOL044/MOL045/MOL025 Closer study of Background Paper 8 reveals that in the assessment of the largest sites in Mold, they all repeat the mantra that the MOL025/044/045/H1.6 site is preferable for development, but the reasoning is inconsistent, citing features that could just as easily apply to the H1.6 site. The other sites (e.g. MOL002, MOL007, MOL019, MOL024,	order to save the other sites. Perhaps they feel that there has been "enough development already" in the south/south west area of Mold. If so, I would point to the UDP Inspector's guidance, last time around, that he/she was not convinced by the argument that an accessible area needs a period of respite (see S3.5.38 of the Inspector's report). Clearly, MOL025/044/045 is a long way from being the best option for a number of reasons which singly and cumulatively make it a poor choice compared to some of the other sites available	recommendation that the plan is considered by Cabinet / Council. Although the membership of PSG is taken from Planning Committee Members, the actual Planning Committee has had no involvement in the Plan. The membership of PSG has remained fairly consistent over the several years taken to progress the Plan to Deposit stage and this has ensured knowledge and familiarity to be gained and a good working relationship with Officers established. PSG has been presented with key evidence to support the plan's development throughout the Plan's preparation. PSG gave detailed consideration to candidate sites and alternative assessments as part of filtering down possible allocations into the final list of allocations which appeared in the Plan. The comments on individual sites in Background Paper 8 in terms of landscape character and whether sites better relate to open countryside or urban form must also be considered in the context of a wide range of other assessment factors and material planning considerations. The summary assessments in BP08 are only a summary of whether or not a site is suitable or not to be allocated and is the 'front- end' of a detailed assessment database. It is the case that in terms of strategic constraints including flood risk, green barrier designations and the line of the bypass, the north western part of the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			MOL041) are said to be: open countryside, too conspicuous in the landscape, not very urban etc. It seems clear to me that the assessor has decided that the H1.6 site is to be the sacrificial lamb that will not be defended/protected, in order to save the other sites. Perhaps they feel that there has been "enough development already" in the south/south west area of Mold. If so, I would point to the UDP Inspector's guidance, last time around, that he/she was not convinced by the argument that an accessible area needs a period of respite (see S3.5.38 of the Inspector's report). Clearly, MOL025/044/045 is a long way from being the best option for a number of reasons which singly and cumulatively make it a poor choice compared to some of the other sites available: (1) it is the most actively farmed of these sites; (2) it sits most prominently within a green landscape, visible from major approaches to Mold (3) is the most obviously "open countryside" site of them all with rolling hills on three sides. (The UDP Inspector alluded to the "significant incursion" into the countryside represented by		town is the only practicable area of search for housing allocations. This is also recognised in the Mold Town Plan produced by the Town Council. The objector refers to the land being "actively farmed" whereas in fact it is pasture or forage area used for general grazing and silage production. This is no different to hundreds of hectares of land in the same use in Flintshire. All of the 'issues' raised by the objector to site HN1-6, for example flood risk and drainage, have been subject of consultation with relevant and statutory consultees and there are no objections from these bodies to the site's allocation. The site represents a sizeable extension into open countryside but, in conjunction with the proposed new access onto Denbigh Rd, it represents a logical extension to the form and pattern of development. The site is also well defined by strong physical features on the ground. The new road avoids having to access the site through small residential roads within adjoining estate type development. The existing hedgerows along Pool House Lane has the potential to be reinforced through additional landscaping. Furthermore, the lack of built development on the northernmost part of the allocation can provide an open landscaped greenspace setting to the site when viewed from Denbigh

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			developing this site); (4) has the least favourable location in terms of the road infrastructure; (5) has a significant mains trunk water pipe on site prone to emergency flooding; (6) is a flood risk; (7) sits in close proximity to a chemical factory (8) it sits in an area of Physical Environment Deprivation according to The Welsh index of Multiple Deprivation (12th worst out of 1909) In the Housing Land Monitoring Report Para 3.5, FCC claim that "the LDP will ensure that sites can be identified based on a rigorous and transparent assessment and against an agreed spatial strategy rather than on an ad hoc basis." That should surely apply to all the site assessments and documents but as shown above the assessments are not objective, rigorous or transparent. There is insufficient reasoned justification offered Not compliant with PPW paragraph: 1.19, 3.40		Rd. This has the benefit of mitigating the extension of the site into open countryside. The allocation of the site provides a new access onto Denbigh Road which is an 'A' road. Highways Development Management Officers have no objection to the creation of a new access, nor to the impact of traffic generated from the development, on the road network. The site may be in an area of Physical Environment Deprivation based on the Welsh Index but it is not explained why this should prevent new development from providing a quality residential environment which would benefit future residents. In respect of proximity to Synthite there are residential properties closer than the allocated site, which is separated by a buffer of open land. No objections to the allocation have been made from Health and Safety Executive or from any other statutory consultee. Whilst the objector feels they have "demonstrated with evidence" why they feel the plan is not sound, from the Council's perspective the objector has provided a lengthy, detailed, selective, and sometimes confusing narrative as a critique of the Council's plan and evidence base, but contrary to their statement has not demonstrated with evidence what harm the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					plan or site HN1-6 causes that challenge the plan or site's soundness.

Strategic Policies - Valuing the Environment - General

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
624	Strategic Policies - Valuing the Environment		Strongly support the policies aimed at protecting and enhancing the natural environment of the County in general and Pantymwyn in particular, especially EN 2,4,5,6,7 and 9, and more widely EN19. Urge that they are rigorously applied in Pantymwyn in order to safeguard its visual character, local biodiversity and its surrounding countryside.		Support noted.
912	Strategic Policies - Valuing the Environment		Relocate “Policy STR16 -Strategic Planning for Minerals” to “Section 6 – Supporting a Prosperous Economy”.	Relocate “Policy STR16 -Strategic Planning for Minerals” to “Section 6 – Supporting a Prosperous Economy”.	Not Accepted. Policy STR16 is one of just 16 strategic policies which need to be read together (as recognised in Development Plans Manual 3) and in conjunction with the supporting detailed development management policies. The economic role of the minerals industry is recognised by the Plan but it does not occur in 'employment areas' and is typically located in open countryside where minerals exist and often these are in sensitive areas in terms of landscape and ecology. The policy is properly included within the 'environment' policies within the Plan.

Policy STR1

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
252	STR1: Strategic Growth	Object	Gladman refer the Council to the draft NDF which recognises Wrexham and Deeside as key growth locations. It is important that the Plan reflects this and provides a sufficient scale of growth to Deeside. The Plan will need to include sufficient allocations and a flexible approach to ensure delivery.It is important that the scale of growth proposed in the FLDP is sufficient to meet needs and also respond to the growth ambitions of the area. The council will need to be able to demonstrate through robust evidence that this is the case.	The council will need to be able to demonstrate through robust evidence that this is the case.	Not accepted. The broad statements within the objection seem to simply repeat the same emphasis already found within the draft NDF and do not focus on what the particular soundness issue is with the LDP policy STR1. The NDF is also not yet finalized but with a proposed adoption date of autumn 2020 which will coincide with the LDP's Examination, the Council considers that its contribution to the NDF's growth ambitions for Wrexham and Flintshire can be met by the LDP, accepting also that the timeframes for the two strategies are different, with the NDF covering a longer time period than the LDP extending to 2040. It is also the case that the housing growth need assessed in the NDF is not directly compatible with the method for deriving housing requirements in LDPs. That said, when the housing need for Wrexham and Flintshire in the draft NDF is annualized and compared to the annualized cumulative housing requirements in the Flintshire and Wrexham LDPs, there is a high degree of conformity with the growth ambitions of the NDF. The objector is asked to note the formal comments of Welsh Government on the Deposit LDP where they consider it to be in general conformity with the draft NDF.
320	STR1: Strategic Growth	Object	The Local Authority has failed to meet housing needs for Flintshire. Land has been submitted to cover these affordable housing needs in a well based location with good amenities but this has not		Not accepted. The LDP identifies a need for 6,950 homes over the plan period (2015 to 2030) and makes provision for 7,950 homes to meet the identified need. This need has been accommodated within the plan through a

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			been considered for developement , why ? Housing has been added on the land nearer to towns but if land submitted has good local connections to towns then why has it not been considered? It fails to deliver the required amount of affordable housing requirements set out for Flintshire and failed to consider all land submitted for this. No explanation as to why areas have been excluded.		combination of allocated land for new residential development, committed sites which already have planning permission for new homes and windfall sites which come forward during the plan period. In addition to this a flexibility allowance of 14.4% or 1,000 homes has been included within the plan. It is not clear from the objector how the Council has failed to meet the identified need for housing. The Council have assessed over 800 candidate sites when preparing the LDP. It would not be sustainable to allocate all these sites as they are not needed, and many are unsuitable for development for a variety to reasons, please see Background Paper 8 for more detail as to why sites have not been allocated within the plan. As explained above the LDP has a housing requirement of 6,950 and makes provision for 7,950 homes within the plan. Policy STR2 of the plan sets out the settlement hierarchy, development has been directed towards the more sustainable locations with greater access to services and facilities (Tiers 1, 2 and 3). Policy HN3 of the plan sets out the affordable housing requirement across each housing market area within Flintshire. These range from 15% up to 40% on site provision of affordable housing depending on the housing market area. The Local Housing Market Assessment (LHMA) is a key piece of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					evidence used to inform the housing requirement within development plans. Flintshire's LHMA has informed the LDP and policy HN3 on affordable housing. The LHMA (2018) sets out a need for 238 affordable dwellings each year over a five year period. This need is not a target but should be used to inform the housing requirement within a development plan alongside other key pieces of evidence such as economic growth and population/household projections. It would be unsustainable to simply align the housing requirement within the plan with the LHMA without taking into consideration these other factors. The development of affordable housing requires significant subsidy, either through on site market housing or financial subsidy in the form of grants. To meet the need within the LHMA for 238 affordable dwellings every year for five years would require either a significant form of financial subsidy that is not available or a level of housing provision within the plan that would be unsustainable and likely undeliverable. The LDP will provide for a significant proportion of the affordable housing need identified by the LHMA and as Background Paper 7 highlights there are in fact other mechanisms to deliver more affordable housing outside of the allocations within the plan.
410	STR1: Strategic Growth	Object	The HBF objects to the proposed level of housing growth as it is not considered to be aspirational enough and plans to build fewer homes each year than in recent	The plan should recognise the growth ambition of the area and allocate a higher	Not accepted. The objector criticizes the Council in terms of the level of housing growth planned for on the basis that this growth is not "aspirational" enough. The objector goes on to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			years. This higher level of development has been achieved without a plan in place and it would be logical that house building is likely to increase with the certainty of allocated sites. Flintshire Council has also always been strong supporters of the past build rate method as seen by the Councils own HOUSING LAND MONITORING STATEMENT APRIL 2018, where they include a past build rate calculation even though this is not allowed to be used by TAN 1. They note the fact that they on average over the last three years have been delivering more homes than the plan requires proving the demand in the area. Further, the Draft NDF states 'In accordance with the NDF Spatial Strategy, growth in the North region should be focussed on the main existing built-up areas of Wrexham-Deeside.' Therefore, the HBF considers that the level of housing proposed should be more ambitious to align with the clear growth aspirations of the NDF and the now agreed North Wales Growth Deal. If the opportunity to provide for this growth is not provided by the LDP then the next opportunity to reconsider will be either at plan review or at possibly a Strategic Development Plan (SPD) the earliest of which will be four years following this plans adoption.	number of homes, using the higher figure identified in growth options table on page 29 of 7,350 plus the flexibility allowance.	state that the LDP "plans to build fewer homes than in recent years". Neither of these points is correct or substantiated, for a number of reasons. Firstly the HBF do not say what the "aspirational" target should be and nor does it provide any policy context contained in PPW10 or elsewhere, to explain why this is the key driver for setting a housing requirement figure in an LDP, as opposed to the guidance the Council has been following in relation to providing housing in the LDP that is sustainable, viable, deliverable, supported by evidence, and therefore a sound proposition. The HBF's aspirational approach is open-ended and unevidenced and it is hardly a sensible way to plan to meet housing needs in a development plan context, and demonstrate soundness. The objector fails to acknowledge the degree to which the housing requirement figure is already significantly above Welsh Government projected household growth trends, as shown in successive recent National projections from either 2011, 2014, or now more recently the 2018 based projections released by Welsh Government. The plan makes provision for housing at 2-3 times this projected growth trend for Flintshire. The only expression that the HBF provide to help quantify this need for greater "aspiration" is to propose the upper limit of the housing range projected on growth option 6 which is 7,350 units or just 400 more than the 6,950 allocated in the plan. This is hardly the "aspirational"

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					step change being inferred by the HBF above that already set out and evidenced and justified by the Council in the plan, and represents just 27 more units per annum over the plan period. Such a minimal level of change is already more than catered for by the Council's far more ambitious but sensible 14.4% flexibility allowance or over-provision, by the level of actual homes delivered so far during the plan period above requirement, and the level of windfall permissions that have come into the supply above the allowances made, as evidenced by the 2019 Housing land statement. The objector refers to the early delivery rates experienced being in excess of the average planned requirement and uses this to argue for a higher, but unspecified, provision. In doing this the objector ignores the level of flexibility included which results in an average provision of housing in the plan of 530 dpa, which when compared with the average actual delivery rate over the first four years of the plan (2015-2019) of 536 dpa, shows a very close alignment between the LDP and actual delivery. Whilst the objector refers to the early delivery rates being achieved without a plan in place, this does not mean that there is no supply of sustainable sites as clearly there is, in order for such rates to have been achieved. The plan has and retains a healthy supply of deliverable commitments and the LDP trajectory assumes that this will be the main source of supply early on, emphasizing a part

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					of the approach set out in the plan's strategy which is to ensure that the committed land bank in Flintshire is brought forward. It is not surprising therefore that in a rising market with available sites, these planned delivery rates are being achieved. Whilst the plan has made adequate provision for housing to match these rates it does not as stated by the objector "build homes" – that is the role of its members in combination with market forces and demand coming from potential buyers. The objector feels that housebuilding is likely to increase but offers no evidence or analysis to support this. In fact the delivery rate of 536 dpa over the first 4 years of the plan represents a fall from the three year rate available at the time plan was placed on deposit (568 dpa). Also the annual delivery figures within this average demonstrate significant variability where for two of the four years delivery topped 600 units in each year, whereas for the other two years the level was low to mid 400s, which is below the average plan requirement and well below the average plan level provided by the plan. This variability indicates a significant inconsistency in delivery by the market and industry and a variability in demand, and suggests significant uncertainty on the part of the industry to sustain delivery rates any higher that already planned for, throughout the plan period. The objector is correct in saying that the Council has promoted the merits of using the completions method alongside others in

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					monitoring land supply, simply because it serves as a performance measure for the industry's capacity to deliver new homes as discussed above. It is also difficult to affect this method unlike the residual method within TAN1 which has resulted in too much unplanned speculative development, which has proved damaging to the plan making process and to communities throughout Wales. This has now clearly been acknowledged by Welsh Government and the Minister where TAN1 is proposed for deletion in its entirety. The objector should also note that without an adopted LDP the Council was not bound by the formal advice in TAN1 in terms of how it monitored or presented land supply, other than the requirement to continue to do so to support the production of the LDP. In terms of the reference to the draft NDF and North Wales Growth Vision the Plan is in conformity with both of these contexts. In terms of the draft NDF, whilst the objector fails to reference the differing time periods of the 15 year LDP and the 20 year NDF where the latter extends beyond the former, they also fail to note that the cumulative annualized housing requirement of the Flintshire and Wrexham LDPs are in line with the annualized need for the region identified in the NDF. It is also a fact that Welsh Government in its formal comments on the LDP have said they are "generally supportive of the spatial strategy and level of homes and jobs proposed and have no fundamental concerns in this respect".

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					They also state that they consider the plan to be in general conformity with the draft NDF. Given that the Flintshire LDP at the stage reached is one of the few to be able to demonstrate it is providing or delivering housing at the planned rate, the Council considers that the objector's concerns are unfounded and do not challenge the soundness of the plan.
331	STR1: Strategic Growth	Object	The Vision and Strategic Objectives of the Plan are acknowledged and the Council's economic ambition and future aspirations for job growth in the County are also supported, however, we are of the view that the level of proposed housing growth is insufficient. Whilst the previous draft policy outlined a figure of 7645 new homes to be provided and the Deposit Plan increases this by 305 dwellings, the housing requirement of 6950 remains unchanged. In fact, this equates to an average build rate of 463 dwellings per annum over the Plan period. In comparison, the average annual build rate over the last 10 years has been 427 dwellings per annum and 573 dwellings per annum over the last 5 years. Completions in the first three years of the Plan period have also averaged 563. The Plan as drafted, therefore proposes a housing target which results in less homes being built each year than in recent years. If the Council fail to plan for a higher quantum	Need to increase the housing target.	Not accepted. It is disappointing that the representations from Anwyl, albeit by a different agent, simply repeat the same points made at previous stages of consultation on the plan namely the Growth Options stage and the consultation on the Preferred Strategy. Despite the Council in each subsequent consultation document explaining how the Plan has been informed by previous consultation feedback (as also clearly audited in the Initial Consultation Document), Anwyl repeat the points at the deposit stage but do not provide anything new for the Council to consider that it hasn't already reviewed previously. The opportunity given to the objector during the deposit consultation was to consider the soundness of the LDP as published and if this was questioned, to say how the plan is unsound and why, and what the preferable alternative is. The objector has not done this and despite objecting has provided nothing that the Council can apply much weight to in considering or

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			of housing, levels of commuting into Flintshire will increase, subsequently perpetuating the use of unsustainable modes of transport. The use of an employment-led projection (as in Option 6) is supported, however, this should be accompanied by a higher level of household growth than is currently demonstrated to encourage more sustainable commuting habits. A stepchange in housing and employment land delivery is now required and the continued approach to strategic growth now set out in the Deposit Plan is not ambitious enough and will not make the significant contribution that is needed to reducing affordable housing need and raising the profile of the County. It is our firm view this Plan will not assist the County in raising its profile or competing with neighbouring authorities such as Wrexham. In this regard, the Local Plan as written is a backward step and it does not seek to maximise the opportunity for economic and social development within the County.		understanding the basis of the arguments put forward. The objector refers to the recent trends in housing delivery to make the point that based on a short term trend, the LDP housing requirement should be increased and the short term rate applied over the entire plan period. That is the limit of the empirical justification for a higher housing requirement and no evidence is provided to show for example how the development Industry or the objector's company specifically has the ability or capacity to sustain higher delivery rates for the entire plan period, the inference being a limitless capacity to build. There is also no reference to the ability of supporting infrastructure to be provided to support a higher level of growth. This does not seem wholly tenable to the Council and ignores the reality of the variable economic climate, post Brexit future uncertainties and a lack of focus on the deliverability of sites in the plan. Whilst the objector refers to the delivery rate over the first three years of the plan period at 563 dpa, a fourth years' data is now available which shows that this rate has fallen significantly over just one year to 536 dpa. The objector also fails to note the significant year on year variability in delivery in just the first four years where despite there being a rising market and available sites, the rate varies from two years where it exceeded 600 dpa, to the other two years where it only achieved low to mid 400s, both under the long term planned average in

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the LDP. This does not suggest an ability to sustain high rates over the entire plan period. Also whilst the LDP housing requirement averages 463 dpa, the plan has actually made provision for 530 dpa to come forward, in line with the current actual delivery rate. The objector states that they are generally supportive of the "employment-led projection allowing for 8-10,000 job" but fail to recognize that the employment projections prepared by the Council are slightly lower than this more aspirational figure, which to use their term does represent something of a 'step change' in employment ambition. This is deliberate in order to support the aspirations of the North Wales Economic Ambition Board (NWEAB) and the Draft NDF, where Welsh Government state that the LDP is in general conformity with this. Welsh Government are also supportive of the level of housing and employment growth in the plan stating they have "no fundamental concerns in this respect". Notwithstanding their support for the employment levels, the objector feels that the housing requirement is not ambitious enough but again fail to recognize from the Council's evidence base that the housing requirement is derived directly from the employment rage in Growth Option 6 where the housing figure is arrived at by running the projections 'in reverse' from the 8-10,000 jobs to determine the population and labour force change required to support that, and from this the level of household growth, then converted to dwelling need. Instead they

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					state that a higher figure “could” be achieved but fail to set out what the higher figure ‘could be’ or ‘should be’ or provide evidence to justify a higher figure. The objector refers to a consequence of failing to increase the housing requirement being increased commuting into Flintshire, however as the Council have already referenced above, it (and Welsh Government) consider that the respective growth levels are appropriate. There is also no direct link between the employment and housing growth proposed and so if a higher housing figure were allowed for, and the level of jobs aspired to did not materialize but the houses were built, this could increase the already high levels of daily out-commuting from the County. The objector also fails to recognize that in order to create the conditions for the population growth to demand the level of housing allocated in the plan, requires a high level of net migration to the County to be achieved, and sustained above recent trends. This is why Growth Option 4 serves to corroborate the levels of housing growth identified in option 6 as they are similar, but where option 4 relies on the highest level of net migration seen in the 10 years prior to the plan period, being achieved consistently throughout the plan period. This is a significant assumption in its own right, and to push housing requirement beyond this already aspirational level would be unrealistic.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The objector refers to the need for the County to "raised its profile" but the Council are unclear what is meant by this. They also refer to the Council being in competition with Wrexham whereas clearly the Welsh Government via the draft NDF see the two authorities as providing the focus for growth in the area. The Council believes it can meet this requirement of the NDF from Flintshire's perspective and Welsh Government confirm that they consider the LDP in conformity with the NDF. The NWEAB via the Growth Vision and Growth Deal for North Wales already acknowledge the contribution that Flintshire and Wrexham make in terms of housing to support economic growth, encouraging the other authorities in North Wales to follow suit. Rather than taking the opportunity to focus on the soundness of the LDP, the objector looks backwards to the UDP to make the point that in their view the under-delivery from that plan should be added to the requirement for the LDP, notwithstanding its different time period. Whilst the Council do not accept this proposition, the objector provides no evidence to justify or quantify this apparent 'shortfall' instead anecdotally referring to a 'figure' (which is actually a broad range) of 2,300-4,500 dwellings. This unsubstantiated information cannot be considered in any other way by the Council and carries little weight. They also fail to acknowledge that a development plan does not actually deliver housing, it makes provision for the housing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					requirement to be built. Missing from the objector's argument is the interaction of the market, economic conditions, the capacity of developers to build, and the actual level of demand coming forward. These are all factors that are outside of the Council's control. The objector refers to the inadequacy of a 14.4% flexibility allowance but does not say why or what the appropriate level should be. They will also not (at the time of making representations) have had the benefit of reviewing the latest Welsh Government 2018 based household projections recently published, which show even lower projected household growth trends than either from the previous 2011 or 2014 projections previously referenced by the Council. Against the principal variant of the 2018 projections, the LDP provision is three times the projected growth, and over twice the amount projected by the highest growth variant. The Council do not understand how this is not sufficiently aspirational above the projections they are required by PPW to refer to as a starting point for setting a housing requirement. The objector makes reference to a small scale appeal decision from 2015 that predates any formal consultation stages on the LDP to give weight to the concept of transposing unmet demand from one plan to another. The Council is unaware of the national planning guidance to follow in this, and with reference to the appeal decision, this was made at a time when

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the now discredited approach to giving significant weight to speculative developments by TAN1 has been recognized by the Minister for the harm it has caused both to the plan making process and to communities in general. TAN 1 is proposed for deletion in its entirety. The objector questions the Council's view that there is no reference in PPW to the requirement for unmet need from a previous plan period to be added on to the new plan period, but then fail to actually point out where this is. They also fail to explain why it is sufficient to go back to just the previous plan, when following the logic put forward of the legitimacy of addressing historical under-delivery, there are any number of other earlier plans that may also have failed to 'deliver'. The objector does draw legitimacy for their position from Paragraph 4.2.3 of PPW which they quote from in terms of "As part of the development plan process planning authorities need to understand their local housing market and the factors influencing housing requirements in their area over the plan period [the Council's emphasis in bold]". The operative phrase would appear to the Council to be that highlighted – over the plan period. The plan period for the UDP was 2000-2015 whereas the LDP period is 2015-2030 and there is no overlap. Equally the LDP evidence base is logically based at 2015 including the Local Housing Market Assessment, as the plan aims to cater for needs during its 'plan period'. Also, even if it is accepted that there

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					was a UDP 'shortfall' that should somehow be incorporated, which the Council do not, and given that the UDP housing requirement adopted the projected amount of household growth at the time from Welsh Government projections, as the LDP provision is two to three times the present level of projected growth, then it can be said that any alleged shortfall has been catered for by the LDP as advocated by the objector. As a final point, given that the Council understands that the objector has control of or interest in a number of sites within the LDP housing supply balance sheet, there is concern that this leaves the objector and therefore the Council vulnerable to criticism about the objector's capacity to deliver sites it has an interest in, let alone any further sites it proposes to add. The concern is that this will simply lead to land banking of sites for the future rather than delivery within the plan period.
334	STR1: Strategic Growth	Object	It is important that the Council's approach in the LDP accurately reflects the housing needs of the area. The Council's figure of 6950 has been derived from examining needs between 2015 and 2030 (i.e. after the end date of the last UDP). It does not make any allowance for the substantial shortfall in delivery in the UDP up to 2015. It is important to acknowledge that these are dwellings which should have been delivered to meet past need but which	Proposed Change a) The figure of 7950 in policy STR1 for housing need should be increased pto take account of the past unmet need; or b) If past unmet need is not included the contingency figure	Not Accepted. In their formal comments on the deposit Plan Welsh Government state that they are "broadly supportive of the strategy, level of housing and jobs proposed, considers it [the plan] aligns with national policy and is in general conformity with the emerging NDF". The objector spends more time in the past referring to the UDP, than focusing on the main point of the Deposit LDP consultation which was to consider whether the plan as published is sound. The predominant purpose

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			have not been delivered. This lack of provision cannot simply be ignored in the Plan. If every Council in Wales took the same approach (i.e. seeking to wipe clear their housing debt from past Development Plan periods) it would create the equivalent of a never ending rising national debt in relation to meeting actual housing needs. It would certainly not meet the national policy objective of meeting housing needs through the Plan process. In that sense, without making appropriate provision for past shortfalls in delivery, the shortfall would fail to meet the appropriate tests of soundness as it would not seek to meet assessed needs (Test 2 as set out in the Soundness Self-Assessment Background Paper, Paper 11). Using the Council's own settlement growth table between April 2000 and April 2015 there was a total delivery of 4645 dwellings over the plan period. The UDP required 7400 dwellings to be provided (or 493 per annum) over that period. There is therefore a shortfall in the required provision for the UDP of 2755 units. As significant additional housing is likely to be required over the plan period to ensure identified needs are met, these should be provided through additional allocations (rather than seeking to rely on windfalls). An alternative would be to consider the introduction of contingency sites which would be brought in during later phases of the plan should the level	needs to be increased to reflect past under delivery to 2500 giving a total requirement of 9850 units.	of the objection also seems to be based on defining the largest housing number possible without any evidential support or assessment of the sustainability and deliverability of the 11,105 homes proposed, or where the additional sustainable and deliverable sites are to provide the additional 4,000+ homes proposed. The objector incorrectly refers to the LDP growth options stating that each was presented as a range, when only the employment driven option 6 was a range, this being the product of an aspirational job growth being presented as a range from which the resulted housing need was derived. The objector states that they do not consider selecting a mid-point from option 6 projected housing growth is reasonable but don't explain why, other than the approach is not "ambitious enough". Instead they state that to be more ambitious the Council should have selected the upper end of the growth range, a measure of housing ambition just 400 greater that the selected mid-point figure. The key point ignored by the objector and as set out in the Plan is that the selection of a mid-point from option 6 was also informed by reference to growth option 4 which was a more traditional demographic projection derived option where the high variant level of migration used to derive option 4 and its resultant level of housing requirement, was in line with that derived at the mid-point of the range of housing requirement derived from option 6. This translates into a level of ambition that sets a challenging but achievable housing requirement, ensuring compliance with PPW in

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			of delivery not meet identified need. We have commented on the potential for contingency sites to be included in our comments on STR11 and Section 13. Proposed Change a) The figure of 7950 in policy STR1 for housing need should be increased pto take account of the past unmet need; or b) If past unmet need is not included the contingency figure needs to be increased to reflect past under delivery to 2500 giving a total requirement of 9850 units.		terms of sustainability and deliverability of the plans housing requirement, to the extent that a development plan can actually deliver the housing it provides, as endorsed by Welsh Government. The objector also ignores the fact that the chosen housing requirement figure is significantly in excess of the formal published Welsh Government Household Projections both at the time that the growth options were derived (2011-Based WG Projections) and now where with the recent publication of the 2018-based WG Projections, the differential from the projection household growth and the LDP requirement is now even greater. The figure proposed by the objector would in fact be over 4 times the official projected growth but no assessment of the impact of this excess of growth over need has been made by the objector. Following the objector's logic in relation to adding undelivered growth from a previous plan, it is a fact that the UDP requirement was based on the actual level of WG projected growth at the time, and given that the LDP requirement is well in excess of the present level of projected growth, if the projected need shortfall case is accepted (which the Council does not), then the LDP requirement has in effect 'mopped up' any previous under-provision, by setting a requirement that is far in excess of present projections. The main emphasis of the objector's case for a higher housing requirement figure is based on the premise that the LDP should not only

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					make sufficient provision for the assessed need during its plan period (2015-2030) but should also look backwards and also account for under-delivered housing from the previous UDP plan period. The objector lays blame for an apparent under-deliver solely on the UDP for this but is silent on the role that the economic climate, actual level of demand coming from potential house buyers, or the willingness, capacity or ability of developers to deliver new homes, as it is these factors that determine delivery as development plans do not deliver housing, rather they make sufficient provision for housing to come forward to meet the assessed requirement. Unhelpfully the objector does not direct the Council to the relevant passage in PPW, the Development Plans Manual or relevant guidance that sets out the concept of transposing under-provision from one plan period to another, or the mechanism for doing so. Equally there is no precedent with other LDPs in Wales for where this has been accepted. If the Council were to entertain the concept that under-delivery carry over should be considered then it is not clear from the objector's focus on just the last development plan, the UDP, why the concept should be time limited to just this plan. After all the objector states that it is a fundamental principle affecting soundness of the LDP that it should cater for un-delivered historical need, which therefore should not be limited to just the UDP as other plans historically may also have failed to deliver in the way the objector suggests for the UDP. Clearly the flaw in the argument is then how far back do you go to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					address 'historical need'? Also, extending the principle and the objector's logic, if the UDP had over-delivered housing in relation to the requirement in that plan, then presumably the objector would accept that the LDP assessed need would be reduced by the level of over-provision in the previous plan? Without reference to where in National guidance or precedent it is accepted that the under-provision from a previous plan should be added to the requirement to the current plan under development, the Council does not see how this can be a soundness issue that challenges the strategy of the LDP. The objector refers to an old appeal decision to justify the principle of carrying over an alleged 'under-provision' but the Inspector in that decision does not say this. Instead the appeal at the time made was simply applying the principles in TAN1 of allowing speculative development, that Welsh Government now accept had adverse impacts on communities and the plan making process, resulting in the conclusion that this and other Councils have argued for some time, that TAN1 is no longer fit for purpose. This recognizes that the planning process was disadvantaged by the process facilitated by TAN1. The objector's simplistic exercise in arriving at a large housing number has no evidential basis to support its sustainability or deliverability and does not assess (other than land proposed by the objector in objections to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					HN11) what or where there are sufficient sustainable and deliverable sites to meet the radically increased proposed housing requirement, and in fact only offers in relation to objections to HN11 26 units towards the additional 4,155 units proposed, itself leaving a shortfall of 4,129 units to be found somehow, somewhere. This does not appear to be either a sustainable or sound proposition to provide certainty of delivery for the LDP housing requirement. In order to deliver the level of housing proposed by the objector, the development industry fueled by consistent market demand would have to complete 740 new homes every year for the entire LDP plan period. By the objector's own analysis of build rates (564 units per annum), this is almost 200 or 31% higher than the average the industry has been able to achieve in the first 3 years of the LDP plan period, where there has been an unconstrained supply as evidenced by the level of commitments in the housing balance sheet supplemented by significant speculative permissions granted under TAN1. With the addition of completions data for 2018-19 the average rate of delivery in the first 4 years of the plan is now 536 dpa and whilst above the plan's annualized housing requirement, is in line with the actual level of provision in the plan of 530 dpa. The short term delivery trend 2015-19 also masks the fact that even in a period of market demand with developers bringing forward sites, there is significant variability in the actual annual delivery where the range of delivery has reached 600 in two of the four years, but in others has only

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					achieved low to mid 400s. It is this variability in a rising market with land clearly available, that questions the ability to consistently year on year deliver housing completions at the rate suggested by the objector. Also in terms of growth ambition, the LDP is in conformity with the level of need and ambition contained within the draft NDF, a fact supported by the Welsh Government in their comments on the LDP growth strategy. Providing housing at the levels suggested by the objector will be in direct conflict with the National Development Framework and also logically mean that if a higher level of growth is to be accepted for Flintshire than in the NDF, then this should also be applied to Wrexham which the NDF groups with Flintshire as the focus for future growth and development, as to otherwise treat the two contributor areas so differently would be unsustainable. There is no evidence from the objector or the industry to show how such a high level of housing delivery is either sustainable, needed, or deliverable throughout the LDP plan period. The objector has made reference to the LDP trajectory and the fact that in the last 2 years of the trajectory there may be a shortfall in housing provision of 1,389 units, quoting from paragraph 3.1.4 of LDP Background Paper 10, which means that the plan requirement should be increased and/or 'contingency sites' should be added to the plan to come forward later in the plan period. The Council do not accept these arguments and consider that the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					objector has mis-interpreted the correct position as set out in paragraph 3.1.4. This is not a correct quotation from the document as paragraph 3.1.4 actually states “while the trajectory currently shows a supply of less than five years in the last two years of the Plan period, this is not surprising as the Plan’s housing land supply will have largely been built out by the end of the Plan period and while the Plan’s housing requirement will have been accommodated, to achieve a five year supply in the last two years of the Plan would necessitate the provision of land for some 1,389 additional dwellings beyond the plan period (based on extrapolating the Plan’s average annual requirement of 436 [typo should be 463] dwellings pa for 3 years beyond the LDP period, as required in para. 5.2 of TAN 1)” [Council’s emphasis in bold]. This is quite different from the objector’s interpretation. The objector has also already acknowledged that the plan has over-delivered in the first four years of the plan period which would compensate for any later plan period shortfall in the trajectory, assuming that the plan goes all the way to its end date without review. There is a requirement to review the position with the plan four years after adoption, and as part of this that housing delivery will be monitored against the trajectory as part of the annual AMR process. Given the intention to delete TAN1 it is also not yet clear what mechanisms will be put in place that determine what variance over what period away from the trajectory would trigger action on the part of the Council.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
337	STR1: Strategic Growth	Object	The Vision and Strategic Objectives of the Plan are acknowledged and the Council's economic ambition and future aspirations for job growth in the County are also supported, however, we are of the view that the level of proposed housing growth is insufficient. Whilst the previous draft policy outlined a figure of 7645 new homes to be provided and the Deposit Plan increases this by 305 dwellings, the housing requirement of 6950 remains unchanged. In fact, this equates to an average build rate of 463 dwellings per annum over the Plan period. In comparison, the average annual build rate over the last 10 years has been 427 dwellings per annum and 573 dwellings per annum over the last 5 years. Completions in the first three years of the Plan period have also averaged 563. The Plan as drafted, therefore proposes a housing target which results in less homes being built each year than in recent years. If the Council fail to plan for a higher quantum of housing, levels of commuting into Flintshire will increase, subsequently perpetuating the use of unsustainable modes of transport. The use of an employment-led projection (as in Option 6) is supported, however, this should be accompanied by a higher level of household growth than is currently demonstrated to encourage more sustainable commuting habits. A stepchange in housing and employment	Need to increase housing target	Not accepted. It is disappointing that the representations from Anwyl, albeit by a different agent, simply repeat the same points made at previous stages of consultation on the plan namely the Growth Options stage and the consultation on the Preferred Strategy. Despite the Council in each subsequent consultation document explaining how the Plan has been informed by previous consultation feedback (as also clearly audited in the Initial Consultation Document), Anwyl repeat the points at the deposit stage but do not provide anything new for the Council to consider that it hasn't already reviewed previously. The opportunity given to the objector during the deposit consultation was to consider the soundness of the LDP as published and if this was questioned, to say how the plan is unsound and why, and what the preferable alternative is. The objector has not done this and despite objecting has provided nothing that the Council can apply much weight to in considering or understanding the basis of the arguments put forward. The objector refers to the recent trends in housing delivery to make the point that based on a short term trend, the LDP housing requirement should be increased and the short term rate applied over the entire plan period. That is the limit of the empirical justification for a higher housing requirement and no evidence is provided to show for example how the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			land delivery is now required and the continued approach to strategic growth now set out in the Deposit Plan is not ambitious enough and will not make the significant contribution that is needed to reducing affordable housing need and raising the profile of the County. It is our firm view this Plan will not assist the County in raising its profile or competing with neighbouring authorities such as Wrexham. In this regard, the Local Plan as written is a backward step and it does not seek to maximise the opportunity for economic and social development within the County.		development Industry or the objector's company specifically has the ability or capacity to sustain higher delivery rates for the entire plan period, the inference being a limitless capacity to build. There is also no reference to the ability of supporting infrastructure to be provided to support a higher level of growth. This does not seem wholly tenable to the Council and ignores the reality of the variable economic climate, post Brexit future uncertainties and a lack of focus on the deliverability of sites in the plan. Whilst the objector refers to the delivery rate over the first three years of the plan period at 563 dpa, a fourth years' data is now available which shows that this rate has fallen significantly over just one year to 536 dpa. The Council is unaware of the national planning guidance to follow in this, and with reference to the appeal decision, this was made at a time when the now discredited approach to giving significant weight to speculative developments by TAN1 has been recognized by the Minister for the harm it has caused both to the plan making process and to communities in general. TAN 1 is proposed for deletion in its entirety. The objector questions the Council's view that there is no reference in PPW to the requirement for unmet need from a previous plan period to be added on to the new plan period, but then fail to actually point out where

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					this is. They also fail to explain why it is sufficient to go back to just the previous plan, when following the logic put forward of the legitimacy of addressing historical under-delivery, there are any number of other earlier plans that may also have failed to 'deliver'. The objector does draw legitimacy for their position from Paragraph 4.2.3 of PPW which they quote from in terms of "As part of the development plan process planning authorities need to understand their local housing market and the factors influencing housing requirements in their area over the plan period [the Council's emphasis in bold]". The operative phrase would appear to the Council to be that highlighted – over the plan period. The plan period for the UDP was 2000-2015 whereas the LDP period is 2015-2030 and there is no overlap. Equally the LDP evidence base is logically based at 2015 including the Local Housing Market Assessment, as the plan aims to cater for needs during its 'plan period'. Also, even if it is accepted that there was a UDP 'shortfall' that should somehow be incorporated, which the Council do not, and given that the UDP housing requirement adopted the projected amount of household growth at the time from Welsh Government projections, as the LDP provision is two to three times the present level of projected growth, then it can be said that any alleged shortfall has been catered for by the LDP as advocated by the objector.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					As a final point, given that the Council understands that the objector has control of or interest in a number of sites within the LDP housing supply balance sheet, there is concern that this leaves the objector and therefore the Council vulnerable to criticism about the objector's capacity to deliver sites it has an interest in, let alone any further sites it proposes to add. The concern is that this will simply lead to land banking of sites for the future rather than delivery within the plan period.
385	STR1: Strategic Growth	Object	The Vision and Strategic Objectives of the Plan are acknowledged and the Council's economic ambition and future aspirations for job growth in the County are also supported, however, we are of the view that the level of proposed housing growth is insufficient. Whilst the previous draft policy outlined a figure of 7645 new homes to be provided and the Deposit Plan increases this by 305 dwellings, the housing requirement of 6950 remains unchanged. In fact, this equates to an average build rate of 463 dwellings per annum over the Plan period. In comparison, the average annual build rate over the last 10 years has been 427 dwellings per annum and 573 dwellings per annum over the last 5 years. Completions in the first three years of the Plan period have also averaged 563. The Plan as drafted, therefore proposes a housing target which results in less homes being built	Need to increase housing target.	Not accepted. It is disappointing that the representations from Anwyl, albeit by a different agent, simply repeat the same points made at previous stages of consultation on the plan namely the Growth Options stage and the consultation on the Preferred Strategy. Despite the Council in each subsequent consultation document explaining how the Plan has been informed by previous consultation feedback (as also clearly audited in the Initial Consultation Document), Anwyl repeat the points at the deposit stage but do not provide anything new for the Council to consider that it hasn't already reviewed previously. The opportunity given to the objector during the deposit consultation was to consider the soundness of the LDP as published and if this was questioned, to say how the plan is unsound and why, and what the preferable alternative is. The objector has not done this and despite objecting has provided nothing that the Council can apply

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			each year than in recent years. If the Council fail to plan for a higher quantum of housing, levels of commuting into Flintshire will increase, subsequently perpetuating the use of unsustainable modes of transport. The use of an employment-led projection (as in Option 6) is supported, however, this should be accompanied by a higher level of household growth than is currently demonstrated to encourage more sustainable commuting habits. A stepchange in housing and employment land delivery is now required and the continued approach to strategic growth now set out in the Deposit Plan is not ambitious enough and will not make the significant contribution that is needed to reducing affordable housing need and raising the profile of the County. It is our firm view this Plan will not assist the County in raising its profile or competing with neighbouring authorities such as Wrexham. In this regard, the Local Plan as written is a backward step and it does not seek to maximise the opportunity for economic and social development within the County.		much weight to in considering or understanding the basis of the arguments put forward. The objector refers to the recent trends in housing delivery to make the point that based on a short term trend, the LDP housing requirement should be increased and the short term rate applied over the entire plan period. That is the limit of the empirical justification for a higher housing requirement and no evidence is provided to show for example how the development Industry or the objector's company specifically has the ability or capacity to sustain higher delivery rates for the entire plan period, the inference being a limitless capacity to build. There is also no reference to the ability of supporting infrastructure to be provided to support a higher level of growth. This does not seem wholly tenable to the Council and ignores the reality of the variable economic climate, post Brexit future uncertainties and a lack of focus on the deliverability of sites in the plan. Whilst the objector refers to the delivery rate over the first three years of the plan period at 563 dpa, a fourth years' data is now available which shows that this rate has fallen significantly over just one year to 536 dpa. The objector also fails to note the significant year on year variability in delivery in just the first four years where despite there being a rising market and available sites, the rate varies from two years where it exceeded 600 dpa, to the other two years where it only achieved low to mid 400s,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					both under the long term planned average in the LDP. This does not suggest an ability to sustain high rates over the entire plan period. Also whilst the LDP housing requirement averages 463 dpa, the plan has actually made provision for 530 dpa to come forward, in line with the current actual delivery rate. The objector states that they are generally supportive of the "employment-led projection allowing for 8-10,000 job" but fail to recognize that the employment projections prepared by the Council are slightly lower than this more aspirational figure, which to use their term does represent something of a 'step change' in employment ambition. This is deliberate in order to support the aspirations of the North Wales Economic Ambition Board (NWEAB) and the Draft NDF, where Welsh Government state that the LDP is in general conformity with this. Welsh Government are also supportive of the level of housing and employment growth in the plan stating they have "no fundamental concerns in this respect". Notwithstanding their support for the employment levels, the objector feels that the housing requirement is not ambitious enough but again fail to recognize from the Council's evidence base that the housing requirement is derived directly from the employment rage in Growth Option 6 where the housing figure is arrived at by running the projections 'in reverse' from the 8-10,000 jobs to determine the population and labour force change required to support that, and from this the level of household growth,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					then converted to dwelling need. Instead they state that a higher figure "could" be achieved but fail to set out what the higher figure 'could be' or 'should be' or provide evidence to justify a higher figure. The objector refers to a consequence of failing to increase the housing requirement being increased commuting into Flintshire, however as the Council have already referenced above, it (and Welsh Government) consider that the respective growth levels are appropriate. There is also no direct link between the employment and housing growth proposed and so if a higher housing figure were allowed for, and the level of jobs aspired to did not materialize but the houses were built, this could increase the already high levels of daily out-commuting from the County. The objector also fails to recognize that in order to create the conditions for the population growth to demand the level of housing allocated in the plan, requires a high level of net migration to the County to be achieved, and sustained above recent trends. This is why Growth Option 4 serves to corroborate the levels of housing growth identified in option 6 as they are similar, but where option 4 relies on the highest level of net migration seen in the 10 years prior to the plan period, being achieved consistently throughout the plan period. This is a significant assumption in its own right, and to push housing requirement beyond this already aspirational level would be unrealistic.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The objector refers to the need for the County to "raised its profile" but the Council are unclear what is meant by this. They also refer to the Council being in competition with Wrexham whereas clearly the Welsh Government via the draft NDF see the two authorities as providing the focus for growth in the area. The Council believes it can meet this requirement of the NDF from Flintshire's perspective and Welsh Government confirm that they consider the LDP in conformity with the NDF. The NWEAB via the Growth Vision and Growth Deal for North Wales already acknowledge the contribution that Flintshire and Wrexham make in terms of housing to support economic growth, encouraging the other authorities in North Wales to follow suit. Rather than taking the opportunity to focus on the soundness of the LDP, the objector looks backwards to the UDP to make the point that in their view the under-delivery from that plan should be added to the requirement for the LDP, notwithstanding its different time period. Whilst the Council do not accept this proposition, the objector provides no evidence to justify or quantify this apparent 'shortfall' instead anecdotally referring to a 'figure' (which is actually a broad range) of 2,300-4,500 dwellings. This unsubstantiated information cannot be considered in any other way by the Council and carries little weight. They also fail to acknowledge that a development plan does not actually deliver housing, it makes provision for the housing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					requirement to be built. Missing from the objector's argument is the interaction of the market, economic conditions, the capacity of developers to build, and the actual level of demand coming forward. These are all factors that are outside of the Council's control. The objector refers to the inadequacy of a 14.4% flexibility allowance but does not say why or what the appropriate level should be. They will also not (at the time of making representations) have had the benefit of reviewing the latest Welsh Government 2018 based household projections recently published, which show even lower projected household growth trends than either from the previous 2011 or 2014 projections previously referenced by the Council. Against the principal variant of the 2018 projections, the LDP provision is three times the projected growth, and over twice the amount projected by the highest growth variant. The Council do not understand how this is not sufficiently aspirational above the projections they are required by PPW to refer to as a starting point for setting a housing requirement. The objector makes reference to a small scale appeal decision from 2015 that predates any formal consultation stages on the LDP to give weight to the concept of transposing unmet demand from one plan to another. The Council is unaware of the national planning guidance to follow in this, and with reference to the appeal decision, this was made at a time when

					acknowledge the contribution that Flintshire and Wrexham make in terms of housing to support economic growth, encouraging the other authorities in North Wales to follow suit. Rather than taking the opportunity to focus on the soundness of the LDP, the objector looks backwards to the UDP to make the point that in their view the under-delivery from that plan should be added to the requirement for the LDP, notwithstanding its different time period. Whilst the Council do not accept this proposition, the objector provides no evidence to justify or quantify this apparent 'shortfall' instead anecdotally referring to a 'figure' (which is actually a broad range) of 2,300-4,500 dwellings. This unsubstantiated information cannot be considered in any other way by the Council and carries little weight. They also fail to acknowledge that a development plan does not actually deliver housing, it makes provision for the housing requirement to be built. Missing from the objector's argument is the interaction of the market, economic conditions, the capacity of developers to build, and the actual level of demand coming forward. These are all factors that are outside of the Council's control. The objector refers to the inadequacy of a 14.4% flexibility allowance but does not say why or what the appropriate level should be. They will also not (at the time of making representations) have had the benefit of reviewing the latest Welsh Government 2018

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					based household projections recently published, which show even lower projected household growth trends than either from the previous 2011 or 2014 projections previously referenced by the Council. Against the principal variant of the 2018 projections, the LDP provision is three times the projected growth, and over twice the amount projected by the highest growth variant. The Council do not understand how this is not sufficiently aspirational above the projections they are required by PPW to refer to as a starting point for setting a housing requirement. The objector makes reference to a small scale appeal decision from 2015 that predates any formal consultation stages on the LDP to give weight to the concept of transposing unmet demand from one plan to another. The Council is unaware of the national planning guidance to follow in this, and with reference to the appeal decision, this was made at a time when the now discredited approach to giving significant weight to speculative developments by TAN1 has been recognized by the Minister for the harm it has caused both to the plan making process and to communities in general. TAN 1 is proposed for deletion in its entirety. The objector questions the Council's view that there is no reference in PPW to the requirement for unmet need from a previous plan period to be added on to the new plan period, but then fail to actually point out where

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					this is. They also fail to explain why it is sufficient to go back to just the previous plan, when following the logic put forward of the legitimacy of addressing historical under-delivery, there are any number of other earlier plans that may also have failed to 'deliver'. The objector does draw legitimacy for their position from Paragraph 4.2.3 of PPW which they quote from in terms of "As part of the development plan process planning authorities need to understand their local housing market and the factors influencing housing requirements in their area over the plan period [the Council's emphasis in bold]". The operative phrase would appear to the Council to be that highlighted – over the plan period. The plan period for the UDP was 2000-2015 whereas the LDP period is 2015-2030 and there is no overlap. Equally the LDP evidence base is logically based at 2015 including the Local Housing Market Assessment, as the plan aims to cater for needs during its 'plan period'. Also, even if it is accepted that there was a UDP 'shortfall' that should somehow be incorporated, which the Council do not, and given that the UDP housing requirement adopted the projected amount of household growth at the time from Welsh Government projections, as the LDP provision is two to three times the present level of projected growth, then it can be said that any alleged shortfall has been catered for by the LDP as advocated by the objector.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					As a final point, given that the Council understands that the objector has control of or interest in a number of sites within the LDP housing supply balance sheet, there is concern that this leaves the objector and therefore the Council vulnerable to criticism about the objector's capacity to deliver sites it has an interest in, let alone any further sites it proposes to add. The concern is that this will simply lead to land banking of sites for the future rather than delivery within the plan period.
365	STR1: Strategic Growth	Object	The Vision and Strategic Objectives of the Plan are acknowledged and the Council's economic ambition and future aspirations for job growth in the County are also supported, however, we are of the view that the level of proposed housing growth is insufficient. Whilst the previous draft policy outlined a figure of 7645 new homes to be provided and the Deposit Plan increases this by 305 dwellings, the housing requirement of 6950 remains unchanged. In fact, this equates to an average build rate of 463 dwellings per annum over the Plan period. In comparison, the average annual build rate over the last 10 years has been 427 dwellings per annum and 573 dwellings per annum over the last 5 years. Completions in the first three years of the Plan period have also averaged 563. The Plan as drafted, therefore proposes a housing target which results in less homes being built	Need to increase housing target	Not accepted. It is disappointing that the representations from Anwyl, albeit by a different agent, simply repeat the same points made at previous stages of consultation on the plan namely the Growth Options stage and the consultation on the Preferred Strategy. Despite the Council in each subsequent consultation document explaining how the Plan has been informed by previous consultation feedback (as also clearly audited in the Initial Consultation Document), Anwyl repeat the points at the deposit stage but do not provide anything new for the Council to consider that it hasn't already reviewed previously. The opportunity given to the objector during the deposit consultation was to consider the soundness of the LDP as published and if this was questioned, to say how the plan is unsound and why, and what the preferable alternative is. The objector has not done this and despite objecting has provided nothing that the Council can apply

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			each year than in recent years. If the Council fail to plan for a higher quantum of housing, levels of commuting into Flintshire will increase, subsequently perpetuating the use of unsustainable modes of transport. The use of an employment-led projection (as in Option 6) is supported, however, this should be accompanied by a higher level of household growth than is currently demonstrated to encourage more sustainable commuting habits. A stepchange in housing and employment land delivery is now required and the continued approach to strategic growth now set out in the Deposit Plan is not ambitious enough and will not make the significant contribution that is needed to reducing affordable housing need and raising the profile of the County. It is our firm view this Plan will not assist the County in raising its profile or competing with neighbouring authorities such as Wrexham. In this regard, the Local Plan as written is a backward step and it does not seek to maximise the opportunity for economic and social development within the County.		much weight to in considering or understanding the basis of the arguments put forward. The objector refers to the recent trends in housing delivery to make the point that based on a short term trend, the LDP housing requirement should be increased and the short term rate applied over the entire plan period. That is the limit of the empirical justification for a higher housing requirement and no evidence is provided to show for example how the development Industry or the objector's company specifically has the ability or capacity to sustain higher delivery rates for the entire plan period, the inference being a limitless capacity to build. There is also no reference to the ability of supporting infrastructure to be provided to support a higher level of growth. This does not seem wholly tenable to the Council and ignores the reality of the variable economic climate, post Brexit future uncertainties and a lack of focus on the deliverability of sites in the plan. Whilst the objector refers to the delivery rate over the first three years of the plan period at 563 dpa, a fourth years' data is now available which shows that this rate has fallen significantly over just one year to 536 dpa. The objector also fails to note the significant year on year variability in delivery in just the first four years where despite there being a rising market and available sites, the rate varies from two years where it exceeded 600 dpa, to the other two years where it only achieved low to mid 400s,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					both under the long term planned average in the LDP. This does not suggest an ability to sustain high rates over the entire plan period. Also whilst the LDP housing requirement averages 463 dpa, the plan has actually made provision for 530 dpa to come forward, in line with the current actual delivery rate. The objector states that they are generally supportive of the "employment-led projection allowing for 8-10,000 job" but fail to recognize that the employment projections prepared by the Council are slightly lower than this more aspirational figure, which to use their term does represent something of a 'step change' in employment ambition. This is deliberate in order to support the aspirations of the North Wales Economic Ambition Board (NWEAB) and the Draft NDF, where Welsh Government state that the LDP is in general conformity with this. Welsh Government are also supportive of the level of housing and employment growth in the plan stating they have "no fundamental concerns in this respect". Notwithstanding their support for the employment levels, the objector feels that the housing requirement is not ambitious enough but again fail to recognize from the Council's evidence base that the housing requirement is derived directly from the employment rage in Growth Option 6 where the housing figure is arrived at by running the projections 'in reverse' from the 8-10,000 jobs to determine the population and labour force change required to support that, and from this the level of household growth,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					then converted to dwelling need. Instead they state that a higher figure "could" be achieved but fail to set out what the higher figure 'could be' or 'should be' or provide evidence to justify a higher figure. The objector refers to a consequence of failing to increase the housing requirement being increased commuting into Flintshire, however as the Council have already referenced above, it (and Welsh Government) consider that the respective growth levels are appropriate. There is also no direct link between the employment and housing growth proposed and so if a higher housing figure were allowed for, and the level of jobs aspired to did not materialize but the houses were built, this could increase the already high levels of daily out-commuting from the County. The objector also fails to recognize that in order to create the conditions for the population growth to demand the level of housing allocated in the plan, requires a high level of net migration to the County to be achieved, and sustained above recent trends. This is why Growth Option 4 serves to corroborate the levels of housing growth identified in option 6 as they are similar, but where option 4 relies on the highest level of net migration seen in the 10 years prior to the plan period, being achieved consistently throughout the plan period. This is a significant assumption in its own right, and to push housing requirement beyond this already aspirational level would be unrealistic.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The objector refers to the need for the County to "raised its profile" but the Council are unclear what is meant by this. They also refer to the Council being in competition with Wrexham whereas clearly the Welsh Government via the draft NDF see the two authorities as providing the focus for growth in the area. The Council believes it can meet this requirement of the NDF from Flintshire's perspective and Welsh Government confirm that they consider the LDP in conformity with the NDF. The NWEAB via the Growth Vision and Growth Deal for North Wales already acknowledge the contribution that Flintshire and Wrexham make in terms of housing to support economic growth, encouraging the other authorities in North Wales to follow suit. Rather than taking the opportunity to focus on the soundness of the LDP, the objector looks backwards to the UDP to make the point that in their view the under-delivery from that plan should be added to the requirement for the LDP, notwithstanding its different time period. ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
523	STR1: Strategic Growth	Object	The need for 7950 houses in Flintshire over the 15 years of the plan is primarily justified on the provision of 8-10,000 jobs and inward migration. The high projection for new jobs is mainly based upon the amount of employment land available in the County, particularly in the Deeside Enterprise Zone area. In the current economic climate, with political uncertainty and national economic slowdown these ambitious plans appear to be highly unrealistic. In the plan (para 3.27) the County is forecast to increase in population by 2,811 by 2030, even allowing for inward migration the need to provide 7950 houses over the 15 years of the plan appears to be excessive. The WG's draft NDF (Dec 2018), estimates that on average 8,300 homes are required annually in Wales for the period 2018/19 to 2022/23. It estimates that 19% of the homes required in Wales should be provided in North Wales. This equates to 1577 houses across the seven planning authorities in North Wales. We calculate that the LDP's for the seven planning authorities identify a need of 2163 houses per year on average throughout the life of the plans. This would provide 37% more than is required by the draft NDF. It is therefore suggested that the housing need for Flintshire should be considerably scaled back. The jobs growth is primarily based upon the fact that there is nearly 140 hectares of employment land available in	It is suggested that the housing need for Flintshire should be considerably scaled back.	Not accepted. The objector refers to the plan's housing 'need' as being 7,950, but the LDP housing requirement is 6,950 with a 14.4% contingency resulting in an overall provision for 7,950 homes to meet the lower requirement. It is also not the case that the job requirement is simply based on the amount of employment land provided in the plan, as it is based on the ability of the two large strategic sites to deliver jobs, referenced to the employment projections identified in the Employment Land background paper prepared by the County. It is also partly deliberately aspirational as this aligns with the intentions behind the North Wales Economic Ambition Board Growth Vision for North Wales from which the Growth Deal has been agreed by UK and Welsh Governments to support and fund infrastructure, projects and skills development all geared to improving economic activity, prosperity and well-being in a North Wales context. Whilst the objector considers the LDP housing provision to be "excessive" this is not characterized or explained in terms of either the harm this level of housing provision would result in, or by how much it is in 'excess', save for a reference to the low level Welsh Government 2011 based projections. In doing this the objector fails to recognize ministerial advice provided in 2014 which is still in place, that advised Local Authorities not to simply

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Flintshire, mainly in the Deeside Enterprise Zone. Whilst there are high aspirations to create large number of jobs there is little track record at the moment of these being created despite the advantageous offerings within the Enterprise Zone The LDP allows for a contingency of 14.4% beyond the housing need. Whilst 6950 houses are needed in the LDP, Flintshire is looking to provide planning permission for 7950. This contingency of simply adding 1000 properties to the housing need does not appear a very sound scientific approach. We would have thought a figure could be estimated based on previous experience in the Flintshire area. Other North Wales Planning Authorities LDPs have included a contingency of only 10%. In Flintshire there have been 1691 completions in the first three years of the plan (563 per year). The planning authority has identified 1771 commitments as of 1/4/2018 and has 'conservatively' allowed for 1320 new roproperties in small sites and windfalls. These figures should now be updated, but should give Flintshire CC confidence of being able to achieve it		project negative recessionary trend period's forward in terms of planning for future growth. The objector refers to a misalignment with the housing identified in the draft National Development Framework and apportions this out across all North Wales Authorities and from this concludes that Flintshire's LDP requirement should be "scaled back". No explanation is given for this conclusion, or whether other North Wales Authorities should also scale back and the mechanism for doing this, and the objector also fails to acknowledge the difference between the LDP housing requirement figure and how it is derived, and the NDF figures which relate to housing need based on affordable shortfalls and which are therefore not directly comparable. Of most relevance is the fact that in their formal comments on the Deposit LDP the Welsh Government are satisfied that the LDP is in general conformity with the draft NDF. The objector refers to the unscientific nature of allowing for a contingency on top of the housing requirement figure, and feels that there should be enough certainty taking account of identified commitments and the allowances made for windfall and small sites, to negate the need for a high contingency level. The objector then however refers to other Authorities who have used 10% as a contingency level. The provision of a contingency is a requirement of the Welsh Government LDP Manual which refers to 10%

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					as a starting point. Even if the Council followed the 10% lead of other North Wales Authorities this would still add almost 700 units to the LDP housing requirement as a contingency, but where for some of those authorities the level of contingency used has not been sufficient to ensure either delivery of sufficient sites or the maintenance of a 5 year land supply, post LDP adoption. It is the Council's view that the level of contingency allowed for is balanced and proportionate to help facilitate the delivery of sufficient homes to meet the plan's housing requirement figure.
583	STR1: Strategic Growth	Object	The policy is headed "Strategic Growth" and indicates that 7950 new homes will be provided to meet the requirement of 6950. In considering the appropriateness of the 6950 requirement set out in the LDP, it is necessary to firstly examine how this figure has been arrived at. As part of the Council's earlier Preferred Strategy Consultation the figure of 6950 was derived from the Technical Paper headed "Population and Household Projections with Dwelling and Employment Impacts (Nov 2017)". Each of the Options in that document presented numbers in a range. The Preferred Option selected by the Council was for between 6550 and 7350 units. The Council therefore chose a midpoint between the two which gave them 6950 units (and they have then added a contingency). v) Proposed Change a) The figure of 7950 in policy STR1 for	a) The figure of 7950 in policy STR1 for housing need should be replaced by 11, 105 to take account of the past unmet need; or b) If past unmet need is not included the contingency figure needs to be increased to reflect past under delivery to 2500 giving a total requirement of 9850 units.	Not Accepted. In their formal comments on the deposit Plan Welsh Government state that they are "broadly supportive of the strategy, level of housing and jobs proposed, considers it [the plan] aligns with national policy and is in general conformity with the emerging NDF". The objector spends more time in the past referring to the UDP, than focusing on the main point of the Deposit LDP consultation which was to consider whether the plan as published is sound. The predominant purpose of the objection also seems to be based on defining the largest housing number possible without any evidential support or assessment of the sustainability and deliverability of the 11,105 homes proposed, or where the additional sustainable and deliverable sites are to provide the additional 4,000+ homes proposed. The objector incorrectly refers to the LDP growth options stating that each was presented as a range, when only the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			housing need should be replaced by 11, 105 to take account of the past unmet need; or b) If past unmet need is not included the contingency figure needs to be increased to reflect past under delivery to 2500 giving a total requirement of 9850 units.		employment driven option 6 was a range, this being the product of an aspirational job growth being presented as a range from which the resulted housing need was derived. The objector states that they do not consider selecting a mid-point from option 6 projected housing growth is reasonable but don't explain why, other than the approach is not "ambitious enough". Instead they state that to be more ambitious the Council should have selected the upper end of the growth range, a measure of housing ambition just 400 greater that the selected mid-point figure. The key point ignored by the objector and as set out in the Plan is that the selection of a mid-point from option 6 was also informed by reference to growth option 4 which was a more traditional demographic projection derived option where the high variant level of migration used to derive option 4 and its resultant level of housing requirement, was in line with that derived at the mid-point of the range of housing requirement derived from option 6. This translates into a level of ambition that sets a challenging but achievable housing requirement, ensuring compliance with PPW in terms of sustainability and deliverability of the plans housing requirement, to the extent that a development plan can actually deliver the housing it provides, as endorsed by Welsh Government. The objector also ignores the fact that the chosen housing requirement figure is significantly in excess of the formal published Welsh Government Household

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Projections both at the time that the growth options were derived (2011-Based WG Projections) and now where, with the recent publication of the 2018-based WG Projections, the differential from the projection household growth and the LDP requirement is now even greater. The figure proposed by the objector would in fact be over 4 times the official projected growth but no assessment of the impact of this excess of growth over need has been made by the objector. Following the objector's logic in relation to adding undelivered growth from a previous plan, it is a fact that the UDP requirement was based on the actual level of WG projected growth at the time, and given that the LDP requirement is well in excess of the present level of projected growth, if the projected need shortfall case is accepted (which the Council does not), then the LDP requirement has in effect 'mopped up' any previous under-provision, by setting a requirement that is far in excess of present projections. The main emphasis of the objector's case for a higher housing requirement figure is based on the premise that the LDP should not only make sufficient provision for the assessed need during its plan period (2015-2030) but should also look backwards and also account for under-delivered housing from the previous UDP plan period. The objector lays blame for an apparent under-deliver solely on the UDP for this but is silent on the role that the economic climate, actual level of demand

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					coming from potential house buyers, or the willingness, capacity or ability of developers to deliver new homes, as it is these factors that determine delivery as development plans do not deliver housing, rather they make sufficient provision for housing to come forward to meet the assessed requirement. Unhelpfully the objector does not direct the Council to the relevant passage in PPW, the Development Plans Manual or relevant guidance that sets out the concept of transposing under-provision from one plan period to another, or the mechanism for doing so. Equally there is no precedent with other LDPs in Wales for where this has been accepted. If the Council were to entertain the concept that under-delivery carry over should be considered then it is not clear from the objector's focus on just the last development plan, the UDP, why the concept should be time limited to just this plan. After all the objector states that it is a fundamental principle affecting soundness of the LDP that it should cater for un-delivered historical need, which therefore should not be limited to just the UDP as other plans historically may also have failed to deliver in the way the objector suggests for the UDP. Clearly the flaw in the argument is then how far back do you go to address 'historical need'? Also, extending the principle and the objector's logic, if the UDP had over-delivered housing in relation to the requirement in that plan, then presumably the objector would accept that the LDP assessed need would be reduced by the level of over-provision in the previous plan? Without reference to where in National guidance or

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					precedent it is accepted that the under-provision from a previous plan should be added to the requirement to the current plan under development, the Council does not see how this can be a soundness issue that challenges the strategy of the LDP. The objector refers to an old appeal decision to justify the principle of carrying over an alleged 'under-provision' but the Inspector in that decision does not say this. Instead the appeal at the time made was simply applying the principles in TAN1 of allowing speculative development, that Welsh Government now accept had adverse impacts on communities and the plan making process, resulting in the conclusion that this and other Councils have argued for some time, that TAN1 is no longer fit for purpose. This recognizes that the planning process was disadvantaged by the process facilitated by TAN1. The objector's simplistic exercise in arriving at a large housing number has no evidential basis to support its sustainability or deliverability and does not assess (other than land proposed by the objector in objections to HN11) what or where there are sufficient sustainable and deliverable sites to meet the radically increased proposed housing requirement, and in fact only offers in relation to objections to HN11 66 units (at Isa Farm, Mynydd Isa) towards the additional 4,155 units proposed, itself leaving a shortfall of 4,089 units to be found somehow, somewhere. This

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					does not appear to be either a sustainable or sound proposition to provide certainty of delivery for the LDP housing requirement. In order to deliver the level of housing proposed by the objector, the development industry fueled by consistent market demand would have to complete 740 new homes every year for the entire LDP plan period. By the objector's own analysis of build rates (564 units per annum), this is almost 200 or 31% higher than the average the industry has been able to achieve in the first 3 years of the LDP plan period, where there has been an unconstrained supply as evidenced by the level of commitments in the housing balance sheet supplemented by significant speculative permissions granted under TAN1. With the addition of completions data for 2018-19 the average rate of delivery in the first 4 years of the plan is now 536 dpa and whilst above the plan's annualized housing requirement, is in line with the actual level of provision in the plan of 530 dpa. The short term delivery trend 2015-19 also masks the fact that even in a period of market demand with developers bringing forward sites, there is significant variability in the actual annual delivery where the range of delivery has reached 600 in two of the four years, but in others has only achieved low to mid 400s. It is this variability in a rising market with land clearly available, that questions the ability to consistently year on year deliver housing completions at the rate suggested by the objector. Also in terms of growth ambition, the LDP is in conformity with the level of need and ambition contained

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					within the draft NDF, a fact supported by the Welsh Government in their comments on the LDP growth strategy. Providing housing at the levels suggested by the objector will be in direct conflict with the National Development Framework and also logically mean that if a higher level of growth is to be accepted for Flintshire than in the NDF, then this should also be applied to Wrexham which the NDF groups with Flintshire as the focus for future growth and development, as to otherwise treat the two contributor areas so differently would be unsustainable. There is no evidence from the objector or the industry to show how such a high level of housing delivery is either sustainable, needed, or deliverable throughout the LDP plan period. The objector has made reference to the LDP trajectory and the fact that in the last 2 years of the trajectory there may be a shortfall in housing provision of 1,389 units, quoting from paragraph 3.1.4 of LDP Background Paper 10, which means that the plan requirement should be increased and/or 'contingency sites' should be added to the plan to come forward later in the plan period. The Council do not accept these arguments and consider that the objector has mis-interpreted the correct position as set out in paragraph 3.1.4. This is not a correct quotation from the document as paragraph 3.1.4 actually states "while the trajectory currently shows a supply of less than five years in the last two years of the Plan period, this is not surprising as the Plan's

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					housing land supply will have largely been built out by the end of the Plan period and while the Plan's housing requirement will have been accommodated, to achieve a five year supply in the last two years of the Plan would necessitate the provision of land for some 1,389 additional dwellings beyond the plan period (based on extrapolating the Plan's average annual requirement of 436 [typo should be 463] dwellings pa for 3 years beyond the LDP period, as required in para. 5.2 of TAN 1)" [Council's emphasis in bold]. This is quite different from the objector's interpretation. The objector has also already acknowledged that the plan has over-delivered in the first four years of the plan period which would compensate for any later plan period shortfall in the trajectory, assuming that the plan goes all the way to its end date without review. There is a requirement to review the position with the plan four years after adoption, and as part of this that housing delivery will be monitored against the trajectory as part of the annual AMR process. Given the intention to delete TAN1 it is also not yet clear what mechanisms will be put in place that determine what variance over what period away from the trajectory would trigger action on the part of the Council.
605	STR1: Strategic Growth	Object	These proposals are disproportionate to any need for additional housing in the anticipated time-scale. The proposals DO NOTHING to REDUCE the effects of climate change. Given the flooding I see all round the county after a heavy	Remove allocations on greenfield land.	Not accepted. Whilst the objector references that the growth strategy of the plan is disproportionate to the need for additional housing, no indication is given as to what would be an appropriate level

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			rainfall, these plans do nothing to improve things. They do not recognise that open-space between existing settlements in the county is precious and must be preserved, as the highest priority. I am very concerned that the council thinks it is acceptable to build on open land which, would then lose its function as an “buffer”/ absorber and retainer of rain water. It makes no mention of the need to plant more trees. I would be very happy to see more woodland and forests in Flintshire. This plan should have marked on it reserved areas for tree-planting. I would like to see a tax (equal to VAT) when builders proposed to develop a “green” site for more than one dwelling. This would make big-building firms try harder to re-purpose existing built-up sites rather than take the easy route of taking away our green-spaces. This DLP will lead to increases in population and requirement for transport. This would have consequent strains on local infrastructure such as schools, transport * health-care. This plan contains nothing that would appeal to my grandchildren and therefore I can offer NO support for it.		of need to be met or any justification for this. The purpose of the deposit consultation was to allow the objector to view the plan and consider whether it represents a sound plan and if not, why it doesn’t and what is the alternative. In terms of the objector’s view that the plan is silent on climate change, they have clearly failed to note the strategic and policy framework within the plan that deals with climate change, flood risk, and environmental protection. These are found for example in policies STR13 Natural and Built Environment, Green Networks and Infrastructure, STR14 Climate Change and Environmental Protection or detailed policies that include EN2 Green Infrastructure, EN6 Sites of Biodiversity Importance, EN7 Development Affecting Trees, Woodland and Hedgerows, or EN14 Flood Risk. Such requirements have influenced the strategy of the plan and location of proposed development, as well as form policies to control how development takes place in relation to them. The Council have sought to develop a sustainable strategy avoiding unprotected areas at risk of flooding in line with national guidance and policy. The Council has also involved Natural Resources Wales as a statutory consultee in the plan making process and NRW do not object to the overall strategy of the plan or locations for housing development. Where growth is required, the most logical and sustainable way to plan for this is the sustainable expansion of existing settlements and the plan’s settlement hierarchy identifies the most suitable and sustainable locations in terms of supporting

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					services, facilities and infrastructure. If the Council had been able to identify suitable and sequentially preferable brown field site opportunities to locate housing development then it would have promoted such sites first. The fact that it hasn't confirms the point that whilst brown field land exists in parts of the County it is mainly found around Deeside and the developed coast where flood risk and the separation of employment land from the main settlement hierarchy forms a predominant constraint to the sustainable location of residential development, and where if the Council had followed such a strategy would have been in direct conflict with the objectors concern about flood risk. Wherever development takes place, developers are required by the policies set out earlier to mitigate and accommodate the impacts of development through developer obligations and contributions that seek to integrate new development into communities by ensuring that the infrastructure is there or is improved to accommodate the new development and population. Typically this includes contributions to the provision of open space, play space, highway improvements, affordable housing, sustainable urban drainage systems, green infrastructure and school places which can be both direct provision and/or the payment of substantial sums to facilitate delivery. Notwithstanding the objector's view that the plan offers little to future generations, it cannot as inferred by the objector simply plan for or accommodate the needs of the present alone or maintain a status quo with no

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					change, as guided by the Well-Being of Future Generations Act it has to take a longer term and more positive view of the needs of future generations.
637	STR1: Strategic Growth	Object	TW has concerns over the lack of consistency between the proposed housing requirement and Flintshire's economic growth targets. TW considers that the Council as a minimum should be planning for the upper end of the housing requirement. This would increase the housing requirement to 7,350 rather than 6,950; and a flexibility allowance should be added to this higher figure. This would derive a housing figure of 8,410 for the Plan period. That said, TW considers that the housing requirement should be significantly higher based on an alignment with an economic aspiration aligning with the growth objectives of the Welsh Assembly The principle of Flintshire County Council's approach to aligning housing need with economic growth targets and providing a 14.4% uplift to allow for flexibility and uncertainty in the housing land supply is welcomed. However, TW is concerned that a target of 463 dpa remains well below the level that is necessary to support and align with economic growth aspirations of Flintshire and the wider North Wales region. TW therefore considers that at the very least, a housing target at the top of the Council's OAHN range for Option 6, 590 dwellings,	In order to address the conflict detailed above, and ensure that the policy is sound, TW requests that the Council: 1 Plans for a longer plan period and ensures that the FLDP, when adopted, covers at least a 15-year plan period (ideally 20-years) to ensure longevity and, to provide certainty to the development industry. 2 Increases its housing requirement above the upper end of its objectively assessed housing need (using this upper end figure as a starting point) to deliver aspirational levels of housing and employment to align with national policy. 3 Review commuting	Not Accepted. In their formal comments on the Deposit LDP the Welsh Government have stated that they are "generally supportive of the spatial strategy and level of homes and jobs proposed and have no fundamental concerns in this respect". Welsh Government also state that they consider "it [the plan] aligns with national policy and is in general conformity with the emerging NDF". Given this, the Council is unclear as to where the objector is drawing their central point of objection from when they state on a number of occasions that the LDP is out of alignment with the growth objectives of Welsh Government. It would have been helpful if the objector had either said what these growth aspirations were, quantified how the LDP is at odds with them, or at least provided the reference point to Welsh Government policy or guidance for the Council to better understand the point being made. Whilst the objector has also provided a separate 'technical paper' to assess the growth options considered at an earlier stage in the plan process, whilst the paper is more of a narrative than technical exercise, the time to have commented on those options was at the Preferred Strategy stage in November 2017. The clear focus of the Deposit LDP stage was to seek views on the soundness of the plan as published and this serves to characterize a thread that runs throughout the objection

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			plus an uplift of at least 14%, would be the minimum that the Council should plan for. This would equate to a housing target of 560dpa; and better align with the delivery rates that the Council are currently sustaining. As required by PPW10, the Council has assessed alternative options relating to the housing requirement, but TW does not consider that the Council has been suitably aspirational in its approach TW would suggest that the Council maintains the commuting rate constant at 40% for the purposes of planning for housing and not seek to artificially supress the housing Plan's figure by virtue of a metric that it simply cannot control. This is likely to increase the housing requirement significantly. TW has concerns regarding the proposed plan period and notes that on adoption of the FLDP, it will be backdated to 2015. TW considers that the Council should adopt a much longer plan period. Assuming an adoption in 2021 at the very earliest, this will only effectively cover a 9- year period until 2030. TW considers that it would be more appropriate to look forward to a 15-year or 20-year plan period post adoption to provide more long-term certainty and ensure the longevity of the Plan.	patterns to reflect the current position (40%) and to factor this into the housing requirement	which relates to an attempt to 're-open' the opportunities for Taylor Wimpey to engage in the plan process now, to compensate for their inability to do so at the appropriate time earlier in the process. Notwithstanding this a separate rebuttal statement has been prepared by the Council to the technical note submitted by Lichfields on behalf of Taylor Wimpey and Redrow. The objector has concerns about a lack of consistency between the proposed housing requirement and the economic growth target but whilst they state their support in principle for a job growth led strategy they contradict this by stating that "housing is a driver for economic growth", which is perhaps not unsurprising from the perspective of a housing developer. The premise of the LDP strategy from the outset has been to not allow housing alone to dominate the approach of the plan, but rather to recognize its importance as part of the infrastructure necessary to support economic activity, wealth generation and well-being. They also fail to recognise that the processes for arriving at the plan's housing requirement and aspirational job figure are very different. In essence housing requirements are driven by reference to formally published national projections of household change whereas there are no similar projections at the national level of expected or anticipated job growth in each local authority area. This is why it is acceptable to have a broad portfolio of available employment land to facilitate job

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					growth, but where the housing sites to deliver the requirement must be clearly identified along with evidence of their deliverability. There is also no direct formulaic relationship that the Council is aware of between housing requirements and levels of job growth sought in development plans. The objector goes on to reference that this creates a mis-match with Welsh Government growth ambition but does not elaborate on this and as stated earlier, is at odds with the Welsh Government's own view of the growth levels in the LDP, and alignment with national policy and emerging NDF. The objector's view is that the Council are not being ambitious enough with their housing requirement but the only quantification of this lack of ambition is their view that the base requirement should be 400 units higher. The Council does not understand how 400 more units spread over the 15 year plan period represents such a step change in ambition. Given the objector considers that the requirement could be slightly higher, it also follows that at the level set in the Deposit LDP, there is no dispute that the requirement cannot be delivered. This means that a core aim of PPW is met and as such the requirement as set out in the LDP cannot be unsound, although it is not clear how a much higher requirement would be. The objector states several times that they feel the requirement should be "significantly higher" but on each occasion they fail to set out what such a significantly higher figure should be. This is unhelpful both to their case and for the Council to try to understand their stance.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The objector makes reference to the past ten year economic cycle as being recession driven and states there is also no certainty as to the effects of Brexit. In doing so however, they criticize the Council for referencing uncertainty about a post-brexit future which they say is "unjustified and unnecessary". This is naive as all the Council are doing is reflecting a national uncertainty and is part of the approach the Council has taken to balance its LDP strategy to enable realistically deliverable levels of growth both housing and jobs, without allowing one element of growth to dominate or run ahead of economic realities or actual levels of demand, that has yet to materialize. The LDP strategy is in broad alignment with the emerging NDF which is also confirmed in the formal comments of Welsh Government, and the plan seeks to support the emerging Growth Deal for North Wales which is at an early stage of inception prior to implementation. Whilst the Growth Deal has 20 year job growth aspirations, it does not specify housing provision. Nor is there any Strategic Development Plan context yet developed in a North Wales context to drive issues like housing apportionment or longer term planning timeframes as advocated by the objector for the LDP. The objector makes reference to the need to maintain previous high levels of commuting rates (40%) as opposed to the assumptions made as part of developing the LDP growth

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					options. To support this they state that the Council are assuming that higher levels of job growth can be sustained from the same population but they have failed to recognise that in order to achieve the level of housing growth set out in the plan, net migration into the County will need to be encouraged at consistently high levels. This is the step change in attracting 'new' people into the county to sustain job growth and improve internal self-sufficiency within the economy that the strategic growth is based on, thereby reducing the dependency on commuting out of the County. If the levels of migration do not materialize then the level of housing required would be much lower, as indicated by the low levels of household growth shown in the recently published Welsh Government 2018 Based National Projections.(REFER TO JANINE RE COMMUTING ASSUMPTION). The objector also criticizes the Council for setting a 15 year plan period housing requirement which aims to provide an average of 463 dwellings per annum, when the short term three year delivery rate at the start of the plan period is higher at 564 dwellings per annum. On the basis of this short term trend they advocate that this should be the delivery level throughout the 15 years (and longer as their preference) of the plan period. This fails to acknowledge the fact that the long term delivery trend over the last ten years is 448 dwelling per annum, a period during which the UDP was adopted and its sites were available

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					for development. It also fails to reflect updated information from the 2019 land supply statement that shows that completions on 2018-19 were 454, thereby reducing the average delivery during the plan period to date from 564 to 536. The objector states that if the Council can deliver these higher rates in the short term, then they can throughout the plan. This ignores the fact that the Plan does not deliver housing directly it simply makes adequate provision for the development of the number of homes set out in the housing requirement figure. It is the interaction of developer intentions, developer capacity, and market demand that create the conditions for delivery. With reference to the first four years of the plan period, whilst average level of delivery is 536 units p.a., this masks a significant degree of variability in the year on year delivery despite there being a rising housing market and available development land. In years 1 and 3 of the plan period completions exceeded 600 per annum but in the other years only reached low to mid 400s. This variability alongside the reducing delivery average questions the ability to sustain higher delivery rates consistently throughout the plan period and there is no evidence to show that this can be done. The delivery rate of 536 dpa is also in line with the plan's average level of provision for housing at 530 dpa. The objector also considers that the plan period should be significantly extended to between 15 and 20 years beyond the adoption

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					date of the plan, which at its maximum would provide for a 25 year plan period. The Council is not aware of any other LDP in Wales that has such a plan period or, in relation to the Flintshire LDP how it would be realistic or practical to plan with any certainty over such a long timeframe, given also the need to provide certainty to communities and to demonstrate the deliverability of the plan, which is challenging enough to evidence over 15 years let alone 25.
738	STR1: Strategic Growth	Object	Policy STR1: Strategic Growth Policy STR1 maintains the previous position set out in the Preferred Strategy, planning for a housing requirement of 6,950 homes up to 2030. However, unlike the Preferred Strategy, the LDP is proposing a flexibility factor of 14.4%, identifying land with the ability to deliver a claimed 7,950 homes during the LDP period. Our Client welcomes the inclusion of a flexibility factor in excess of 10% which was originally proposed in the Preferred Strategy. We comment on the sources of supply to meet this minimum requirement later in this Representation. On review of Policy STR1, we would request that part iii) be amended to include the word “minimum” before “housing” – the housing requirement should be treated as a minimum figure. Indeed, the Council itself is accepting that an over-provision of housing can be accommodated in the County by	On review of Policy STR1, we would request that part iii) be amended to include the word “minimum” before “housing” – the housing requirement should be treated as a minimum figure. Indeed, the Council itself is accepting that an over-provision of housing can be accommodated in the County by identifying sources of supply for an additional 1,000 homes.	Not accepted . The objector provides a lengthy narrative to support their representation much of which repeats the Deposit LDP and/or PPW. Within this the objector has a number of linked concerns relating to the strategic approach to growth in the LDP. The first of these relates to the plan period and the timing of the proposed adoption of the LDP, leaving 9 years of the plan period post adoption. Whilst the objector refers to there being a ‘policy vacuum’ for some time, it is not clear what is meant by this as the UDP whilst expired is still in line with many areas of PPW and is the starting point for making decisions on applications; PPW itself is national planning policy, along with the TANs that support it. Notwithstanding this they advocate extending the LDP plan period to 2034, and also imply it should look retrospectively as far back as 2000 to address unmet housing needs. They are in effect advocating a 34 year plan period but provide no evidential basis to explain or justify how this

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			identifying sources of supply for an additional 1,000 homes.		is sustainable, what growth levels are deliverable during this period and where the sites are that would be needed to address this lengthy plan period. There is also the problem of looking too far into the future from the perspective that it becomes more difficult via the housing trajectory to predict what will happen on development sites in the future. It is the Council's view that the plan period should remain as defined and the plan be examined on this basis, particularly in the context of housing delivery where, as the objector themselves acknowledge, the plan has so far delivered housing at or slightly above the rate planned for. The annual monitoring of the plan and the plan review process within the Regulations are the means to assess the performance of the plan and the need to update it, and the Council is bound by both of these requirements. The objector also feels the vision statement of the plan should be far more detailed but that would be counter intuitive to the normal purpose of a vision statement which in a short passage is intended to capture the essence of the plan's approach. It is the strategic objectives that provide the more detailed expression of the vision and set out the key policy strands from which the Council has developed the strategic and detailed policies in the plan. The objector's general support for all 19 objectives is duly noted with the exception of the point made in relation to objective 11 which relates to housing provision, where the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					objector requests the addition of the word 'minimum' before 'housing needs'. This is confusing and not fully explained and implies to the Council that the objector is advocating only meeting the lowest or 'minimum' needs, which are expressed in the low level Welsh Government household growth projections. The Council has already explained why it has significantly varied from these projections in its background paper, supported by Ministerial advice provided in 2014 which is still relevant. The objector refers back to the UDP period and speculates that there is "probably" a shortfall in provision of housing from that plan, that the Council should calculate what this was, and that this should be added to the requirement for the LDP period to compensate for under-delivery. With respect it is for the objector to evidence this if they feel it is of relevance. Also the objector refers to the UDP failing to deliver houses, but it is the role of any development plan to make sufficient provision (through sites) for the housing requirement to be met. The mechanism for how housing is provided relies on the interaction with the market including the prevailing economic conditions, the capacity of developers to build, and the level of demand coming from potential buyers. The objector refers to the average level of provision in the first three years of the plan as evidence of strong demand, but with the benefit of a fourth year of completions in 2019,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					it is evident that the average completion rate has reduced to 536 per annum. What the objector has also failed to recognise is that within this average there is significant variability in annual delivery, as whilst completions exceeded 600 for two of the four years, in the others they were low to mid 400s. This significant level of variability is at a time when there are sufficient deliverable commitments available, supplemented by speculative schemes that have consent, and illustrate the Council's concern of not seeking to set an unachievable housing requirement where consistently high delivery rates cannot be achieved and maintained by the development industry. The objector fails to recognize that the average level of overall provision made by the plan is 530 dpa which is directly in line with the up to date delivery rate. The only evidential basis the objector provides for increasing the LDP housing requirement is to raise it by 400 units to 7,350 which is the upper end of the growth option 6 range. Given the point already made about completions in the first four years, this has already been more than recovered by those completion rates, over and above the average planned level for the whole of the LDP period. The objector's point about adding an unspecified UDP 'shortfall' is not well made or supported by evidence of what the shortfall is or how and from where enough additional sites would be found, save of course for the land being promoted in Penyffordd, which on its

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					own would not significantly address the 400 unit increase advocated by the objector, let alone the addition of a more substantial apparent UDP shortfall. It is therefore difficult for the Council to understand the alleged failings of the plan at the strategic level from the case being made. The objector has also failed to reflect that the UDP and LDP time periods are separate time periods and do not overlap, and where the calculation of housing requirement was based on the prevailing circumstances at the time and supporting evidence base. The Welsh Government projected levels of household growth are also very different, with the housing requirement of the UDP based solely on the level of projected household growth at the time (converted into a dwelling need), whereas the projected growth during the LDP plan period is only around 36% of the LDP housing requirement when compared to the latest published 2018 based Household Projections. Even if the Council were to accept the principle of transposing an apparent under-provision of housing from a previous plan and adding it to the planned provision in the new plan, which it does not, the degree to which the LDP housing requirement exceeds the Welsh Government Projected growth could be argued to more than compensate for any such shortfall. The objector advocates a plan period being extended to 2034 but only proposes the addition of 400 units to the housing requirement to address the additional housing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					that would be required during this extended plan period. Extending the current planned requirement in the LDP of 463 units per annum for another 4 years would mean that there would be an additional requirement for 1,852 more homes that presently allocated, but apart from a relatively small site in Penyffordd, the objector offers no evidence or alternative proposals to show how this extended plan period requirement could be met from sustainable deliverable sites, or how this could be accommodated within the LDP housing trajectory. There is therefore nothing for the Council to assess or compare to show how such a proposal is in any way a sound proposition over and above the position it presents and justifies via the deposit plan. The Welsh Government have not objected to the Council's housing trajectory as part of their formal comments on the deposit LDP and are satisfied that the trajectory is compliant with the guidance in the LDP Manual edition 3. Whilst the objector expresses concern about reliance on commitments in the early part of the trajectory this is sensible and logical as these are the sites within the LDP balance sheet that are the commitments that already have permission and do not have to await the adoption of the LDP to come forward. It is also this assessed pool of commitments that has provided for the delivery rates supported by the objector in the early years of the plan period, and as per the Preferred Strategy of the plan it is right that this land bank of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					permitted sites makes an appropriate commitment to the LDP housing requirement. The objector also fails to recognize that a number of the sites allocated in the plan also already have planning consent and are already contributing units to the LDP supply and/or are capable of early delivery. That said it is also a false assumption made by the objector that the level of commitments and early years delivery rates are predominantly 'propped up' by speculative sites granted on appeal as there is little evidence to sustain this, and none presented by the objector. Indeed it is also the case that where inappropriate speculative sites have come forward they have been refused. The objector is concerned about deviation away from the housing trajectory in the second half of the plan period but doesn't provide any evidence to quantify by how much this deviation would be or which are the sites they feel will not come forward. It is therefore difficult to give any weight to the point being made and clearly from the recent consultation by Welsh Government on the Future of Housing Delivery via the Planning System the old mechanism of monitoring land supply via TAN1 is to be deleted and replaced by monitoring against the housing Trajectory. Whilst Welsh Government have not yet said what the mechanisms or actions would be if delivery varied significantly away from the trajectory, clearly the plan's monitoring framework and requirement to produce an AMR will ensure this is closely monitored. In

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					terms of the point made by the objector about the potential for recent large speculative windfalls to skew the assumptions made for windfall supply in the LDP balance sheet, the Council has accounted for this by reviewing the windfall trends over an 18 year period and by reducing the allowance by 50% of that trend, also in the knowledge that in terms of the more recent trend years, speculative sites have not contributed more than 50% of the overall windfall provision. Whilst the objector is concerned about the future supply of windfall sites even at the modest levels proposed, which they support, they have failed to note the findings of the Urban Capacity Study carried out to support the balance sheet and specifically the setting of the windfall and small sites allowance in the LDP. This shows a reasonable and healthy potential supply within existing settlements to support the allowances made.
742	STR1: Strategic Growth	Object	In response to the housing trajectory, our Client has the following observations: Ø There is a significant reliance on existing commitments during the period 2018-19 to 2021-22. It will be imperative that these commitments deliver if the Council is going to be able to demonstrate a five-year supply post-adoption, particularly given that no significant housing contribution is expected from allocated sites until 2021-22. It would be prudent, supported by evidence, to ensure that enough of the proposed site allocations are capable of early delivery during the	Ø There is a significant reliance on existing commitments during the period 2018-19 to 2021-22. It will be imperative that these commitments deliver if the Council is going to be able to demonstrate a five-year supply post-adoption, particularly given that	Not accepted . The objector provides a lengthy narrative to support their representation much of which repeats the Deposit LDP and/or PPW. Within this the objector has a number of linked concerns relating to the strategic approach to growth in the LDP. The first of these relates to the plan period and the timing of the proposed adoption of the LDP, leaving 9 years of the plan period post adoption. Whilst the objector refers to there being a 'policy vacuum' for some time, it is not clear what is meant by this as the UDP whilst expired is still in line with

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Plan period; Ø For the period 2023-24 onwards, the housing trajectory is heavily reliant on allocated and windfall sites in order for delivery to remain above the annual LDP requirement. However, given the lack of brownfield land availability in the County (as part of the justification for the release of greenfield sites), our Client is concerned that delivery could slip beyond the Council's estimations during the second half of the LDP period. It should be noted that historic windfall trends have taken account of the fact that speculative housing applications on greenfield sites have been granted planning permission in the absence of a five-year housing land supply.	no significant housing contribution is expected from allocated sites until 2021-22. It would be prudent, supported by evidence, to ensure that enough of the proposed site allocations are capable of early delivery during the Plan period; Ø For the period 2023-24 onwards, the housing trajectory is heavily reliant on allocated and windfall sites in order for delivery to remain above the annual LDP requirement. However, given the lack of brownfield land availability in the County (as part of the justification for the release of greenfield sites), our Client is concerned that delivery could slip beyond the Council's estimations during the	many areas of PPW and is the starting point for making decisions on applications; PPW itself is national planning policy, along with the TANs that support it. Notwithstanding this they advocate extending the LDP plan period to 2034, and also imply it should look retrospectively as far back as 2000 to address unmet housing needs. They are in effect advocating a 34 year plan period but provide no evidential basis to explain or justify how this is sustainable, what growth levels are deliverable during this period and where the sites are that would be needed to address this lengthy plan period. There is also the problem of looking too far into the future from the perspective that it becomes more difficult via the housing trajectory to predict what will happen on development sites in the future. It is the Council's view that the plan period should remain as defined and the plan be examined on this basis, particularly in the context of housing delivery where, as the objector themselves acknowledge, the plan has so far delivered housing at or slightly above the rate planned for. The annual monitoring of the plan and the plan review process within the Regulations are the means to assess the performance of the plan and the need to update it, and the Council is bound by both of these requirements. The objector also feels the vision statement of the plan should be far more detailed but that would be counter intuitive to the normal purpose of a vision statement which in a short

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				second half of the LDP period. It should be noted that historic windfall trends have taken account of the fact that speculative housing applications on greenfield sites have been granted planning permission in the absence of a five-year housing land supply.	passage is intended to capture the essence of the plan's approach. It is the strategic objectives that provide the more detailed expression of the vision and set out the key policy strands from which the Council has developed the strategic and detailed policies in the plan. The objector's general support for all 19 objectives is duly noted with the exception of the point made in relation to objective 11 which relates to housing provision, where the objector requests the addition of the word 'minimum' before 'housing needs'. This is confusing and not fully explained and implies to the Council that the objector is advocating only meeting the lowest or 'minimum' needs, which are expressed in the low level Welsh Government household growth projections. The Council has already explained why it has significantly varied from these projections in its background paper, supported by Ministerial advice provided in 2014 which is still relevant. The objector refers back to the UDP period and speculates that there is "probably" a shortfall in provision of housing from that plan, that the Council should calculate what this was, and that this should be added to the requirement for the LDP period to compensate for under-delivery. With respect it is for the objector to evidence this if they feel it is of relevance. Also the objector refers to the UDP failing to deliver houses, but it is the role of any development plan to make sufficient provision (through sites) for the housing requirement to be met. The mechanism for

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					how housing is provided relies on the interaction with the market including the prevailing economic conditions, the capacity of developers to build, and the level of demand coming from potential buyers. The objector refers to the average level of provision in the first three years of the plan as evidence of strong demand, but with the benefit of a fourth year of completions in 2019, it is evident that the average completion rate has reduced to 536 per annum. What the objector has also failed to recognise is that within this average there is significant variability in annual delivery, as whilst completions exceeded 600 for two of the four years, in the others they were low to mid 400s. This significant level of variability is at a time when there are sufficient deliverable commitments available, supplemented by speculative schemes that have consent, and illustrate the Council's concern of not seeking to set an unachievable housing requirement where consistently high delivery rates cannot be achieved and maintained by the development industry. The objector fails to recognize that the average level of overall provision made by the plan is 530 dpa which is directly in line with the up to date delivery rate. The only evidential basis the objector provides for increasing the LDP housing requirement is to raise it by 400 units to 7,350 which is the upper end of the growth option 6 range. Given the point already made about completions in the first four years, this has already been more

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					than recovered by those completion rates, over and above the average planned level for the whole of the LDP period. The objector's point about adding an unspecified UDP 'shortfall' is not well made or supported by evidence of what the shortfall is or how and from where enough additional sites would be found, save of course for the land being promoted in Penyffordd, which on its own would not significantly address the 400 unit increase advocated by the objector, let alone the addition of a more substantial apparent UDP shortfall. It is therefore difficult for the Council to understand the alleged failings of the plan at the strategic level from the case being made. The objector has also failed to reflect that the UDP and LDP time periods are separate time periods and do not overlap, and where the calculation of housing requirement was based on the prevailing circumstances at the time and supporting evidence base. The Welsh Government projected levels of household growth are also very different, with the housing requirement of the UDP based solely on the level of projected household growth at the time (converted into a dwelling need), whereas the projected growth during the LDP plan period is only around 36% of the LDP housing requirement when compared to the latest published 2018 based Household Projections. Even if the Council were to accept the principle of transposing an apparent under-provision of housing from a previous plan and adding it to the planned

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			"village feel" and attractive rural setting are both important appealing features. So too are its proximity to good transport links to Chester and other local employment centres and the good reputation of the village school, Ysgol Derwen. The village's desirability has unsurprisingly attracted developers. Recent notable developments have been "Babylon Fields" (approx. 30 houses) which commenced in 2012 and "Kinnerton Meadows" which is currently ongoing and will total 56 new homes. In addition, it is envisaged that the nearby Warren Hall mixed-use development will include a significant residential element of up to 300 houses. The Community Council and the village community itself recognise the need for new housing in the county and accept that Higher Kinnerton may accommodate some of this growth over the life of the LDP. However, the community feels that development should not come at the cost of a continuing decline in local infrastructure (road, transport, access to health provision, education) and local village amenities (post office, shops, pubs). These vital services have not kept pace with the growth of the community. The recent design of residential developments has also contributed to the growth and reliance of residents' use of their cars as the main means of transport and has added to parking problems within the village. This problem has been	consider that the case for further development within the current village boundary is substantially weakened and should not be supported.	STR1 and the growth strategy of the LDP, it is not clear from the representation whether and on what basis they are either objecting to, or supporting this aspect of the plan?

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			recognised nationally in a recent project document (Transport for New Homes 2018). The community would welcome the opportunity to influence positively the type and form of new development going forward, including Warren Hall, maximising the benefits of development while mitigating any negative impacts on the existing community as far as possible. Finally, as the Warren Hall development is included in the LDP, the Community Council consider that the case for further development within the current village boundary is substantially weakened and should not be supported.		
787	STR1: Strategic Growth	Object	TESTS OF SOUNDNESS 9.1. This Section of the Representation goes on to consider the three tests of "soundness" to which plan-making should accord, as set out within the LDPM. Test 1: Does the Plan fit? 9.2. For the reasons set out in this Representation, our Client is concerned that the Deposit Plan evidence base is lacking in detail in terms of whether it is planning to address any housing shortfall from the UDP period, whilst continuing to place reliance on some previous UDP housing allocations which have	he housing requirement should take account of the identified affordability needs across the County as set out in the LHMA such that they are provided for in full during the LDP period; Ø Any historic housing delivery shortfall from the UDP period should be planned for and met during the LDP period; this would justify a housing requirement of at least	Not accepted. Each of objectors points are addressed in turn: Test 1: The objector appears to have misunderstood Test 1 which is to do with whether the LDP is onsist4ent with other Plans. The objector questions the Council's view that there is no reference in PPW to the requirement for unmet need from a previous plan period to be added on to the new plan period, but then fail to actually point out where this is. They also fail to explain why it is sufficient to go back to just the previous plan, when following the logic put forward of the legitimacy of addressing historical under-delivery, there are any number

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			historically failed to come forward and deliver as expected. Test 2: Is the Plan appropriate? The housing requirement should take account of the identified affordability needs across the County as set out in the LHMA such that they are provided for in full during the LDP period; Any historic housing delivery shortfall from the UDP period should be planned for and met during the LDP period; this would justify a housing requirement of at least 7,350 dwellings as per the upper figure set out under Option 6 of the Preferred Strategy Growth Options; Test 3: Will the Plan deliver? The proposed housing allocations contain two sites which were previous allocations in the UDP, and which have failed to come forward. There is no evidence to offer any certainty that they will come forward in the future. Accordingly,	7,350 dwellings as per the upper figure set out under Option 6 of the Preferred Strategy Growth Options; Test 3: Will the Plan deliver? Ø The proposed housing allocations contain two sites which were previous allocations in the UDP, and which have failed to come forward. There is no evidence to offer any certainty that they will come forward in the future. Accordingly, our Client is concerned that by continuing to rely on these sites and extant commitments in the short-term (given the timescales for delivery of the larger allocations), the Council may be unable	of other earlier plans that may also have failed to 'deliver'. The plan period for the UDP was 2000-2015 whereas the LDP period is 2015-2030 and there is no overlap. Equally the LDP evidence base is logically based at 2015 including the Local Housing Market Assessment, as the plan aims to cater for needs during its 'plan period'. Also, even if it is accepted that there was a UDP 'shortfall' that should somehow be incorporated, which the Council do not, and given that the UDP housing requirement adopted the projected amount of household growth at the time from Welsh Government projections, as the LDP provision is two to three times the present level of projected growth, then it can be said that any alleged shortfall has been catered for by the LDP as advocated by the objector. The Plans approach is sound and there is no objection from Welsh Government in this respect. The Well Street The site was allocated in the UDP and it is accepted that the site owners, Welsh Government, have been slow to release the site to the market. However, the site has no technical or other constraints which would prevent it from coming forward and is in a sustainable location on the edge of a Main Service Centre. The sale of the site to a housing association is nearing completion and that housing association has commissioned the necessary background work to submit a

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			our Client is concerned that by continuing to rely on these sites and extant commitments in the short-term (given the timescales for delivery of the larger allocations), the Council may be unable to demonstrate a five-year housing land supply given the lack of any smaller site allocations in the Sustainable Villages which would be capable of early delivery; The role of the Tier 3: Sustainable Villages in the settlement hierarchy is being overlooked, with only two allocations across 22 settlements. The spatial strategy needs to be reviewed, with more housing directed towards the Sustainable Villages in line with the Preferred Strategy. A minimum of 20% of future housing growth should be directed/split amongst the 22 Sustainable Villages as opposed to the 14% which is currently proposed. The Council's housing requirement is not proposing to meet all of the identified affordable need set out within the LHMA. Our Client considers that the LDP should be planning to meet	to demonstrate a five-year housing land supply given the lack of any smaller site allocations in the Sustainable Villages which would be capable of early delivery; Ø The role of the Tier 3: Sustainable Villages in the settlement hierarchy is being overlooked, with only two allocations across 22 settlements. Ø The spatial strategy needs to be reviewed, with more housing directed towards the Sustainable Villages in line with the Preferred Strategy. A minimum of 20% of future housing growth should be directed/split amongst the 22 Sustainable Villages as	planning application for a market / affordable housing development as soon as possible. In view of this recent change in circumstances the site is considered to be viable and deliverable. Given that the site is already within the settlement boundary and is allocated in the adopted UDP, a planning application need not await adoption of the LDP. The allocation is considered to be sound and is justifiably allocated in the Plan. The site was allocated in the UDP and whilst it is acknowledged that the site owners have been slow to release the site there are no physical constraints to the development of the site and as part of the preparation of the Plan, discussions were held with the landowner and agent and the need for the site to be available for development was stressed if it is to be allocated in the LDP. The owners responded by undertaking background studies and confirmed that the site is genuinely available for development. Since the Plan was placed on Deposit it is understood that discussions have taken place between the owners / agent and house builders. The site has no technical or other constraints which would prevent development from taking place and in the light of the renewed commitment for the land owner, is considered to be appropriate to be carried over into the LDP. The allocation is considered to be sound and is justifiably allocated in the Plan.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			considerably more than just 55% of this need, and in doing so an uplift to the overall housing requirement is needed alongside the allocation and release of additional housing	opposed to the 14% which is currently proposed. Ø The Council's housing requirement is not proposing to meet all of the identified affordable need set out within the LHMA. Our Client considers that the LDP should be planning to meet considerably more than just 55% of this need, and in doing so an uplift to the overall housing requirement is needed alongside the allocation and release of additional housing	Test 2 The objector fails to acknowledge that the LHMA figure is a snapshot of housing need over a five year period and cannot be simply extrapolated over the fifteen year period of the LDP. The LHMA figure of 238 is an inflated need owing to the LHMA methodology which includes a calculation of the backlog of need as well as future need predicted over a short time period, which is the 5 year lifetime of the Study. It is not correct to extrapolate this at the level identified, across the whole Plan period as the backlog of affordable need should be met within the five years of the LHMA. The objector also fails to acknowledge that there are other sources of affordable housing delivery other than the allocated residential development sites. For example the Council have a successful track record of developing affordable housing via the SHARP (Strategic Housing and Regeneration Programme) and NEW Homes (North East Wales Homes and Property Management). These two schemes specialise in the delivery of social and intermediate rental homes, the SHARP programme has a commitment to deliver 500 new affordable dwellings by 2021, please see

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					details of completed and forthcoming schemes on the Flintshire Council website. In addition to this the Council will continue to work with its Registered Social Landlord partners to deliver more affordable housing in Flintshire as part of the Social Housing Grant (SHG) programme funded by Welsh Government. Collectively these mechanisms of delivery alongside the development of affordable housing by private developers has resulted in Flintshire achieving the highest average annual delivery rate in North Wales over the last ten years.The majority of this delivery comes from RSLs and schemes such as the SHARP programme rather than private developers, therefore we do not rely on allocated LDP sites to deliver all of the affordable housing that Flintshire needs. The approach is considered to be sound. The objectors point about UDP carry over has been addressed above. Test 3: The two housing allocations carried over from the UDP are commented on above and are viable and deliverable and therefore not unsound.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The Plan was accompanied by a Housing Land Supply Background Paper which contained a housing trajectory and demonstrated that a 5 year supply could be achieved and maintained. However, the need for a 5 year supply has now been removed following the revocation of TAN1 and instread housing must be delivered in accordance with ther Plans housing trajectory, which is clearly the case. The objector proposes 3 sites of which one in Drury already has planning permission. However, in respect of the objectors other two sites in Northop Hall and Carmel, the objector fails to demonstrate how these can be delivered any quicker than the Plans housing allocations. The role of Tier 3 settlements has not been overlooked and the objector fails to explain why the proportion should be increased above that earmarked for more sustainable Tier 1 and 2 settlements. There is no objection from Welsh Government to the broad distribution of development. The objectors concern regarding providing for all of the need identified in the LHMA has been addressed above. In conclusion, the objector has provided no evidence that the Plan is unsound.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
852	STR1: Strategic Growth	Object	Employment growth 3.48, 3.50 and section 10 8,000 to 10,000 new jobs are overly ambitious based on the information provided in the LDP and the LAs reliance on private companies to deliver them. With the budget pressures on FCC and regeneration no longer being a priority it would be better to reduce this new jobs number and make it smaller and deliverable. No reference is made to Brexit, and the potential loss of thousands of jobs in the county with the warnings from companies like Airbus. In the emerging NDF Brexit is mentioned and FCC should take the same approach with what the regional LAs are doing to mitigate against leaving the EU, if indeed they are in position to do anything? Housing Growth and its sustainable location 3.53 maintaining a 5 year minimum supply of housing land - update in line with WG announcement on 9 October 2019 Preferred strategy 3.65 housing growth of 7,950 dwellings in Flintshire is not in line with emerging		Para 3.48 of the Employment Land Review did not identify a significant need for employment land or job growth as it was affected by previous take up rates during a recessionary economic period. The rest of the paragraph explains how it is necessary for the Plan to have regard to a wider context which is expressed through the regional commitment to achieving growth. Para 3.50 accepts that the Plans job target of 8-10,000 jobs is ambitious in the context of job projection scenarios but notes that it is not that far in excess of the upper projection figure of 7,200. Whilst the Plan focuses on job growth from the two strategic mixed use allocations, the paragraph goes on to reference the flexibility offered by the Plans suite of employment allocations. The paragraph references the importance of the Deeside Enterprise zone and the North Wales Growth Vision to create 120,000 jobs by 2035. This section of the Plan then goes on in para 3.52 to explain how further work was undertaken with specialist consultants in the form of a Further Employment Growth Scenarios Assessment which identified a job growth / employment land need of 7,200 jobs and 50.6ha of employment Land. It explains that the Plans job growth target is deliberately more aspirational in order to reflect FLi8ntshire's position as a sub-regional economic hub, contributor to the Growth Vision and also as a major contributor to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			NDF of 19,400 across the whole of the N.Wales region. It needs re-visiting to comply and align with the national policy		output and growth in the Welsh economy as a whole. The implications of Brexit on the economy in terms of timescale and impact (whether negative or positive) are still not known. However, what is known is that Welsh Government has identified this part of Wales as a growth triangle in the Wales Spatial Plan and as a growth hub in the draft National Development Framework. Flintshire also sits at the heart of the Growth Deal and in this context it would be inappropriate for the Plan to plan for no or low growth. The National Development Framework is still a draft document and the timescales are different to the LDP's, with the NDF covering a longer period up to 2040. It is also the case that the housing growth need assessed in the NDF is not directly compatible with the method for deriving housing requirements in LDPs. In this context Welsh Government published a supplementary 'Explanatory Note – Housing Need' in Dec 2019 which stated 'While it is expected that there will be a clear alignment between the estimates of housing need and the Housing Requirements set out in LDPs and SDPs, they are not the same and therefore are not expected to match'. Nevertheless, when the housing need for Wrexham and Flintshire in the draft NDF is annualized and compared to the annualized cumulative housing requirements in the Flintshire and

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Wrexham LDPs, there is a high degree of conformity with the growth ambitions of the NDF. It must be noted that in their formal representations on the Deposit Plan, Welsh Government stated that 'The Welsh Government is generally supportive of the spatial strategy and level of homes and jobs proposed and has no fundamental concerns in this respect'.
590	STR1: Strategic Growth	Object	The policy is headed "Strategic Growth" and indicates that 7950 new homes will be provided to meet the requirement of 6950. We do not believe it is appropriate for the Council to simply pick a midpoint between the figures in the Preferred Option. The Population and Household Projection Background Paper acknowledged that it was appropriate for the Council to show some "ambition" in terms of economic growth and household provision. A figure of 1000 units amounts to 14.4% contingency. In LDP Background Paper number 10 on Housing Land Supply and Delivery (Sept 2019) the Council argue that this is higher than other Local Planning Authorities. They also argue that it is only slightly higher than the 13.8% contingency which was built into the UDP. As set out above, the UDP fell well short of its required delivery (a shortfall of 2755 units out of a requirement of	The policy is headed "Strategic Growth" and indicates that 7950 new homes will be provided to meet the requirement of 6950. We do not believe it is appropriate for the Council to simply pick a midpoint between the figures in the Preferred Option.	Not Accepted. In their formal comments on the deposit Plan Welsh Government state that they are "broadly supportive of the strategy, level of housing and jobs proposed, considers it [the plan] aligns with national policy and is in general conformity with the emerging NDF". The objector spends more time in the past referring to the UDP, than focusing on the main point of the Deposit LDP consultation which was to consider whether the plan as published is sound. The predominant purpose of the objection also seems to be based on defining the largest housing number possible without any evidential support or assessment of the sustainability and deliverability of the 11,105 homes proposed, or where the additional sustainable and deliverable sites are to provide the additional 4,000+ homes proposed. The objector incorrectly refers to the LDP growth options stating that each was presented as a range, when only the employment driven option 6 was a range, this

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			7400 units). This amounts to a 37% under delivery even with the contingency. The Council also acknowledge that of the 41 sites allocated in the UDP, 13 did not come forward for development (32%). In other words, over the previous plan period from 2000 to 2015 one third of the sites allocated for housing delivery did not come forward. Whilst the Council blame this on a general housing slow down, they fail to acknowledge that evidence of delivery (or lack of it) of the actual housing strategy in terms of the settlement hierarchy demonstrates that a significant element of under delivery was that sites where allocated in settlements which were not viable for housing development as a result of the internal housing market. The Council's own Settlement Growth Schedule over the UDP period showed that the growth rates over settlements within the same category varied substantially with some exceeding growth rates and with others providing virtually no growth. This resulted from a lack of assessment of the viability of sites which has now been continued into the current LDP. The Council have not assessed the viability of allocated sites as part of the LDP contrary to National Planning Policy (we comment further on this in relation to policy HN1). Therefore, the previous UDP had a 37% shortfall in delivery of the overall housing requirement through		being the product of an aspirational job growth being presented as a range from which the resulted housing need was derived. The objector states that they do not consider selecting a mid-point from option 6 projected housing growth is reasonable but don't explain why, other than the approach is not "ambitious enough". Instead they state that to be more ambitious the Council should have selected the upper end of the growth range, a measure of housing ambition just 400 greater that the selected mid-point figure. The key point ignored by the objector and as set out in the Plan is that the selection of a mid-point from option 6 was also informed by reference to growth option 4 which was a more traditional demographic projection derived option where the high variant level of migration used to derive option 4 and its resultant level of housing requirement, was in line with that derived at the mid-point of the range of housing requirement derived from option 6. This translates into a level of ambition that sets a challenging but achievable housing requirement, ensuring compliance with PPW in terms of sustainability and deliverability of the plans housing requirement, to the extent that a development plan can actually deliver the housing it provides, as endorsed by Welsh Government. The objector also ignores the fact that the chosen housing requirement figure is significantly in excess of the formal published Welsh Government Household Projections both at the time that the growth

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			all sources. Of those sites allocated only two thirds came forward over the plan period. Either using the overall delivery figure or that specifically relating to allocations, it can be seen that the shortfall was between 32% and 37%		options were derived (2011-Based WG Projections) and now where, with the recent publication of the 2018-based WG Projections, the differential from the projection household growth and the LDP requirement is now even greater. The figure proposed by the objector would in fact be over 4 times the official projected growth but no assessment of the impact of this excess of growth over need has been made by the objector. Following the objector's logic in relation to adding undelivered growth from a previous plan, it is a fact that the UDP requirement was based on the actual level of WG projected growth at the time, and given that the LDP requirement is well in excess of the present level of projected growth, if the projected need shortfall case is accepted (which the Council does not), then the LDP requirement has in effect 'mopped up' any previous under-provision, by setting a requirement that is far in excess of present projections. The main emphasis of the objector's case for a higher housing requirement figure is based on the premise that the LDP should not only make sufficient provision for the assessed need during its plan period (2015-2030) but should also look backwards and also account for under-delivered housing from the previous UDP plan period. The objector lays blame for an apparent under-deliver solely on the UDP for this but is silent on the role that the economic climate, actual level of demand coming from potential house buyers, or the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					willingness, capacity or ability of developers to deliver new homes, as it is these factors that determine delivery as development plans do not deliver housing, rather they make sufficient provision for housing to come forward to meet the assessed requirement. Unhelpfully the objector does not direct the Council to the relevant passage in PPW, the Development Plans Manual or relevant guidance that sets out the concept of transposing under-provision from one plan period to another, or the mechanism for doing so. Equally there is no precedent with other LDPs in Wales for where this has been accepted. If the Council were to entertain the concept that under-delivery carry over should be considered then it is not clear from the objector's focus on just the last development plan, the UDP, why the concept should be time limited to just this plan. After all the objector states that it is a fundamental principle affecting soundness of the LDP that it should cater for un-delivered historical need, which therefore should not be limited to just the UDP as other plans historically may also have failed to deliver in the way the objector suggests for the UDP. Clearly the flaw in the argument is then how far back do you go to address 'historical need'? Also, extending the principle and the objector's logic, if the UDP had over-delivered housing in relation to the requirement in that plan, then presumably the objector would accept that the LDP assessed need would be reduced by the level of over-provision in the previous plan? Without reference to where in National guidance or precedent it is accepted that the under-

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					provision from a previous plan should be added to the requirement to the current plan under development, the Council does not see how this can be a soundness issue that challenges the strategy of the LDP. The objector refers to an old appeal decision to justify the principle of carrying over an alleged 'under-provision' but the Inspector in that decision does not say this. Instead the appeal at the time made was simply applying the principles in TAN1 of allowing speculative development, that Welsh Government now accept had adverse impacts on communities and the plan making process, resulting in the conclusion that this and other Councils have argued for some time, that TAN1 is no longer fit for purpose. This recognizes that the planning process was disadvantaged by the process facilitated by TAN1. The objector's simplistic exercise in arriving at a large housing number has no evidential basis to support its sustainability or deliverability and does not assess (other than land proposed by the objector in objections to HN11) what or where there are sufficient sustainable and deliverable sites to meet the radically increased proposed housing requirement, and in fact only offers in relation to objections to HN11 66 units (at Isa Farm, Mynydd Isa) towards the additional 4,155 units proposed, itself leaving a shortfall of 4,089 units to be found somehow, somewhere. This does not appear to be either a sustainable or

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					sound proposition to provide certainty of delivery for the LDP housing requirement. In order to deliver the level of housing proposed by the objector, the development industry fueled by consistent market demand would have to complete 740 new homes every year for the entire LDP plan period. By the objector's own analysis of build rates (564 units per annum), this is almost 200 or 31% higher than the average the industry has been able to achieve in the first 3 years of the LDP plan period, where there has been an unconstrained supply as evidenced by the level of commitments in the housing balance sheet supplemented by significant speculative permissions granted under TAN1. With the addition of completions data for 2018-19 the average rate of delivery in the first 4 years of the plan is now 536 dpa and whilst above the plan's annualized housing requirement, is in line with the actual level of provision in the plan of 530 dpa. The short term delivery trend 2015-19 also masks the fact that even in a period of market demand with developers bringing forward sites, there is significant variability in the actual annual delivery where the range of delivery has reached 600 in two of the four years, but in others has only achieved low to mid 400s. It is this variability in a rising market with land clearly available, that questions the ability to consistently year on year deliver housing completions at the rate suggested by the objector. Also in terms of growth ambition, the LDP is in conformity with the level of need and ambition contained within the draft NDF, a fact supported by the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Welsh Government in their comments on the LDP growth strategy. Providing housing at the levels suggested by the objector will be in direct conflict with the National Development Framework and also logically mean that if a higher level of growth is to be accepted for Flintshire than in the NDF, then this should also be applied to Wrexham which the NDF groups with Flintshire as the focus for future growth and development, as to otherwise treat the two contributor areas so differently would be unsustainable. There is no evidence from the objector or the industry to show how such a high level of housing delivery is either sustainable, needed, or deliverable throughout the LDP plan period. The objector has made reference to the LDP trajectory and the fact that in the last 2 years of the trajectory there may be a shortfall in housing provision of 1,389 units, quoting from paragraph 3.1.4 of LDP Background Paper 10, which means that the plan requirement should be increased and/or 'contingency sites' should be added to the plan to come forward later in the plan period. The Council do not accept these arguments and consider that the objector has mis-interpreted the correct position as set out in paragraph 3.1.4. This is not a correct quotation from the document as paragraph 3.1.4 actually states "while the trajectory currently shows a supply of less than five years in the last two years of the Plan period, this is not surprising as the Plan's housing land supply will have largely been

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					built out by the end of the Plan period and while the Plan's housing requirement will have been accommodated, to achieve a five year supply in the last two years of the Plan would necessitate the provision of land for some 1,389 additional dwellings beyond the plan period (based on extrapolating the Plan's average annual requirement of 436 [typo should be 463] dwellings pa for 3 years beyond the LDP period, as required in para. 5.2 of TAN 1)" [Council's emphasis in bold]. This is quite different from the objector's interpretation. The objector has also already acknowledged that the plan has over-delivered in the first four years of the plan period which would compensate for any later plan period shortfall in the trajectory, assuming that the plan goes all the way to its end date without review. There is a requirement to review the position with the plan four years after adoption, and as part of this that housing delivery will be monitored against the trajectory as part of the annual AMR process. Given the intention to delete TAN1 it is also not yet clear what mechanisms will be put in place that determine what variance over what period away from the trajectory would trigger action on the part of the Council.
910	STR1: Strategic Growth	Object	This policy should include reference to the RTS, MTAN1 and the NWRAWP annual report in the evidence base.	This policy should include reference to the RTS, MTAN1 and the NWRAWP annual report in the evidence base.	Not accepted. It is not made clear by the objector as to why, in relation to policy STR1 which sets out the strategic growth proposed by the plan in terms of employment and housing, there needs to be reference in the policy to the Regional Technical Statement (RTS), minerals Planning Guidance (MTAN1)

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					or the North Wales Regional Aggregates Working Party annual report as part of the evidence base. The objector does not explain how the lack of reference to these makes policy STR1 unsound. All three are rightly part of the evidence base to the LDP, but are referred to in their proper context and place in support of the strategic and detailed policies relating to minerals development including STR15 and EN23-EN27.
918	STR1: Strategic Growth	Object	As housing delivery is central to the ability of a local authority area to create jobs and attract new employers in, or facilitate existing employers to expand, it is not clear that the quantum of development proposed in STR1 is going to be sufficient or whether it is sufficiently flexible to adjust if the Council are successful in creating more jobs over and above their maximum projections. In terms of soundness it does not meet Test 2 in that we do not consider that it is supported by a robust evidence base as the job creation target appears to have been determined by going to the projections and then just adding a bit extra, without justifying why. As a result of this we do not consider that it meets Test 3 either as it is not clear on what level of job creation the housing requirement has been set and as such, if more jobs are created than expected, how will a corresponding increase in housing be delivered in the County. Whilst a flexibility allowance has been	As a result of this we do not consider that it meets Test 3 either as it is not clear on what level of job creation the housing requirement has been set and as such, if more jobs are created than expected, how will a corresponding increase in housing be delivered in the County. Whilst a flexibility allowance has been included to the housing requirement, the Council do not go as far as actually identifying sufficient allocations in order to help deliver this and it will very much be left to the market to deliver these.	Not accepted. Not unsurprisingly the objector as a housing developer is taking a housing first approach to growth whereas the LDP strategy is based on an employment led approach where housing is part of the supporting infrastructure to help achieve and support job growth. This approach is reflective of the stance taken by the draft NDF for the area as well as being the central focus for the North Wales Growth Vision. Having set such a strategy for the LDP, the Welsh Government in their formal comments on the deposit plan state that they are “generally supportive of the spatial strategy and level of homes and jobs proposed and have no fundamental concerns in this respect”. They also consider the LDP to be in general conformity with the emerging NDF. Given this the Council is unsure from the objection made as to how the plan is unsound, as the objector simply speculates that they are not sure there is enough housing allocated in the plan in the event that more jobs are created than expected. Whilst the objector criticizes the robustness of the Council’s evidence base they provide no evidence or

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			included to the housing requirement, the Council do not go as far as actually identifying sufficient allocations in order to help deliver this and it will very much be left to the market to deliver these. The preparation of the LDP provides the opportunity to plan for this and it is therefore, surprising that the Council are not taking the opportunity to plan positively for the County.		assessment of where the evidence falls short, and themselves go beyond the aspirational approach taken by the Council in setting its job growth target just above the upper limit of the job projections, and speculate on an even higher job target on a 'what if?' basis, without providing any evidence of how an even higher job target is achievable, what empirical basis this has, and which sites will accommodate the higher figure? It is therefore difficult for the Council to give weight to such speculative and unsubstantiated general commentary. The objector further proposes a speculative question as to how housing provision would be increased if more jobs are created, and the likely logical answers would include building out LDP housing sites fully, assistance from the 14.4% flexibility built into the housing requirement figure, and if it came to it, triggering a plan review. The objector mistakenly states that the Council don't go as far as to allocate sites to accommodate the flexibility built into the plan leaving it "to the market to deliver these". This is totally counter-intuitive to the purpose of the development plan which is to identify housing sites as allocations and this is what the Council has done, including sufficient sites to accommodate the 14.4% flexibility. The objector is directed to the housing balance sheet in the Housing Supply Background Paper 10 published alongside the deposit Plan for consultation where it clearly shows the residual requirement as 874 having taken

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					account of completions, commitments, small and windfall allowances, and contribution from strategic sites, and where with the addition of 14.4% of the overall requirement (+1,000 units) the plan finds sufficient allocations to provide 1,874 units to meet the residual requirement plus flexibility. The deposit consultation was the objector's opportunity to state why the LDP was unsound, in what way, evidence this, and to suggest sustainable alternatives, yet none of these have been provided by the objector.
920	STR1: Strategic Growth	Object	Housing Requirement Policy STR1 'Strategic Growth' In regard to the supply of housing land across the Authority over the plan period as set out in Policy STR1, it is noted that there are clear differences between the WG projections for this plan period, and the growth projections which the Deposit Plan is based on. Whilst the dwelling requirements proposed within the Deposit Plan are welcomed, it is considered that there is still a significant shortfall in the overall dwelling requirement provided within the Deposit LDP, particularly when considered against the WG's 2014 figures. We therefore object to Policy STR1.	Whilst the dwelling requirements proposed within the Deposit Plan are welcomed, it is considered that there is still a significant shortfall in the overall dwelling requirement provided within the Deposit LDP, particularly when considered against the WG's 2014 figures.	Not accepted. The objector firstly confuses policy STR1 Strategic Growth which is where the housing requirement figure (rather than "demand" as referred by the objector) is referenced, with policy STR11 Provision of Sustainable Housing Sites but the Council have taken this to be an objection to STR1. Confusingly whilst the objector "welcomes" the overall dwelling requirement in the LDP they state that this is a conservative position in relation to the approach to stimulating the housing market. However the plan's strategy is employment-led rather than being housing driven as inferred, and in any event the Council considers it has provided sufficient housing plus 14.4% contingency to facilitate the objector's own approach. The objector's main point in relation to STR1 appears to be that when compared to the 2014 based Welsh Government household projections, the LDP housing requirement figure represents a "significant shortfall" to the growth projected in the 2014 Welsh Government projections.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Whilst the objector provides no assessment or analysis of the data to illustrate this point, the Council are confused as the consistent trends shown in household change in consecutive Welsh Government projections from 2011, 2014, and now 2018 all show low levels of household growth in Flintshire, that are significantly below the housing requirement set in the plan. The Council therefore do not understand the point about the LDP figure being a "shortfall" on the projections. The true position is entirely the opposite and to illustrate this the projected household growth from the 2014 Welsh Government projections for the plan period 2015-2030 was 305 per annum from the Hi variant projection, and 250 pa from the principal projection. These levels of projected change are similar when households are converted to dwellings and are significantly below the levels of growth required and provided for in the LDP (463/530 dpa respectively). The objector should also note that Welsh Government have recently published its 2018 based household projections which show for Flintshire a falling level of household change, with equivalent change for 2015-2030 at around 232 pa for the hi variant, and 166 pa for the principal projection.

The Council does not see how from the points made and lack of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					corroboration, that the plan's soundness is in any way challenged.
685	STR1: Strategic Growth	Object	The Plan proposes a housing target of 7950 units. An analysis of the sites demonstrates that a number of those sites have had planning permission or have been around for a considerable period of time and have not been delivered. They should be removed from the allocated sites resulting in the need to accommodate another 342 units. The strategic site at Warren Hall (STR3B) near Broughton is isolated and does not have any relationship to facilities. It is therefore not a sustainable option for residential development and the lack of facilities mean that even if residential development comes forward in that location the need for facilities will delay delivery over many years. It is unrealistic to expect that allocation to be brought forward and therefore that represents a further shortfall in housing. Council's target per annum: 7950 To meet that target it is necessary to: Increase the allocations by 660 to allow for over-reliance on windfall sites. Increase the allowance by 300 to allow for the non-delivery of the Warren Hall site. Increase the allowance by 342 to allow for non-delivery of sites within Appendix Increase the allowance by 16% or 1272 units to reflect under-provision against the past five years delivery pattern. These figures taken together suggest	Increase Housing target and the number of allocations. Allocate site at Llys Ben	Not accepted. The objector states that the plan proposes a housing target of 7,950 but it does not. The housing requirement of the LDP is 6,950 to which 14.4% flexibility has been added so that the plan provides for 7,950 homes. The objector then refers to "an analysis of sites in Appendix 1" which relates to the appendix to the deposit LDP written statement where the housing commitments that the plan's housing supply balance sheet refers to are listed. The objector's analysis is selective and has failed to cross reference to the more detailed land availability statement from which the list is drawn, and as a result has made assumptions about the status of the sites listed in the objection, that are inaccurate and out of date. Had the objector referred to the land availability statement they would have been able to factually check the actual status of each site. The outcome of the 'analysis' carried out is therefore factually incorrect and the assumption that 342 units on committed sites, rather than 'allocated sites' as the objector refers to them, won't come forward is also false. To illustrate, the objector refers to the F G Whitley's depot site and claims no developer is on board and so the site won't come forward. They have failed to note that Whitley's are actually the developers, are currently on site with 11 units under construction and the remaining 28 due for

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that there should be an overall housing target of 10,500 units which is very significantly more than the number put forward by the Council and is more reflective of the amount of allocations that will be needed to deliver housing and the Council's jobs-led strategy. Sites to accommodate a further 2500 units are needed		completion by 2023. There is a similar pattern of assumptions made for the other sites referred to: a site simply referred to as 'Caerwys' is actually the former Summer Hill Farm site where the objector states "no housebuilder on board" but where a developer is on site, 5 properties are under construction with the site due for completion in 2023; the station yard site in Pontybodkin now has reserved matters approval and is being marketed for sale; The site east of Gronant Hill is a Council owned site, only gained permission in 2018 and not 2016 as referred to by the objector, and is part of the Council's Strategic Housing and Regeneration Programme to build 500 affordable homes on Council land with its developer partner Wates Residential; the site at Kinnerton Lane has 31 complete properties with a further 13 under construction and due for completion in 2021; the Bromfield Timber site has commenced and not lapsed, and whilst not part of the 5 year supply from 2019, can still deliver during the plan period; the former Sewage Works site has 35 units built, 10 under construction and will be completed in 2020; finally the Altbridge House site (41 units) has been removed from the 2019 land availability statement as is not relied on as a commitment. So from the analysis carried out by the objector, and when the facts from the land availability study are considered, there are only 41 units that the Council relies on as commitments that are no longer counted towards supply, rather than the 342 speculated by the objector. In terms of the loss of 41 units, the plan already has over-

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					provided 1,000 units above the requirement to cater for sites not coming forward, and as the plan has over-recovered delivered housing in the early years of the plan period above the average requirement, then these in combination provide the flexibility to absorb such minor changes to commitments. Equally, since the committed sites were listed in appendix 1 of the deposit LDP (based on 2018 land availability statement) further windfall permissions have been added as new commitments which are recorded in the 2019 land availability statement now on the Council's website. There is therefore no shortfall in housing from these sites. The objector criticizes the strategic site at Warren Hall Broughton stating it is isolated and does not have any relationship to facilities and as such is not a suitable location for residential development and that even if residential development comes forward the need for facilities will delay delivery of the housing "over many years". These are again uninformed assumptions and the objector has failed to note that the site is a 'mixed use' site where policy STR3 identifies that range of uses including of course sustainable employment opportunities and a commercial hub to support both residential and employment uses. The site at Llys Ben promoted by the objector provides no such supporting facilities. The objector also fails to acknowledge the fact that spatially the Warren Hall site is near to the local service centre at

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Broughton and is in spatial and accessibility terms in closer proximity to this centre, than Llys Ben is to its nearest service centre at Connah's Quay. It is also the case that the facilities available at Broughton to support nearby residential growth are superior to those in Connah's Quay. As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site. The site is also central to the North Wales Growth Vision and Growth Deal where UK and Welsh Government funding has been identified to provide the infrastructure required to bring sites like Warren Hall forward in a timely manner. There is therefore no shortfall in housing from this site. The objector summarises their position in terms of the housing requirement and this compounds the errors and assumptions made: the objector states the LDP target is 7,950 but this is incorrect; the objector states that a figure of 660 is required to allow for over-reliance on windfalls but this figure seems plucked from the air as the previous alleged shortfall suggested by the objector was 342 units of which only 41 is factually not relied on as a commitment, so there is no over-reliance as suggested; the objector suggests that the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					housing requirement should be increased by 300 to account for the non-delivery of housing at Warren Hall but this has been shown to be not the case and unnecessary; the objector proposes to increase the requirement by a further 342 to account for under-delivery of windfall sites but this seems to be a double counting on the purpose of the 660 units referenced earlier in the objection which itself is unjustified; the objector also suggests the need to increase the requirement by a further 16% or 1,272 units although these levels are not explained other than to reflect under-provision against the past five years delivery pattern. The Council are baffled by this last point as the past four to five years delivery has been at or slightly above the average provision made in the Plan. Cumulatively the objector contrives with no empirical evidence a suggested requirement of 10,500 units stating that this is 2,500 more than the present target, but in fact is an increased requirement of 3,550 units. Apart from a small site at Llys Ben the objector identifies no other sustainable and deliverable sites to deliver this uplift and without this it is difficult to conceive of how this is at all deliverable, sustainable or sound. To illustrate, the objector has referred to recent delivery rates as evidence of the need for more sites but the delivery rate in the first 4 years of the plan is 536 dpa whereas the average provision in the plan is 530 dpa, so very closely aligned. The figure advocated by the objector is

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					equivalent to 700 dpa or a difference to the current delivery rate of 164 dpa but the objector does not explain how the industry can provide such a high rate consistently, year on year, for the entire plan period. Without any evidence in support, this does not appear to be a reasonable, realistic or achievable proposition. Finally, in promoting the site at Llys Ben the objector has failed to reference relevant planning history for the site which was refused permission for housing by the Council and was also refused by a Planning Inspector when that decision was appealed. The central thread behind refusal is the site's unsuitability for housing due to its location and relationship to the open countryside where the site's contribution to the settlement setting and its openness is protected by a green barrier designation. These planning circumstances have not changed since the appeal refusal.
1100	STR1: Strategic Growth	Object	STR1 – outlines the requirement for 6950 houses within the plan period and makes provision for 7950 houses with a 14% flexibility. This is seen as a conservative estimates given the economic growth aspirations for the plan and should be seen as a minimum figure. The settlement hierarchy approach in STR2 is logical and supported Mold town is Tier 1 Main Service Centre and it is agreed that Mold is a sizeable town which has a full range of services and employment. In order to	Should allocate land for development between upper Bryn Coch and Llys Ambrose Off Ruthin Road, Mold	Not accepted. The objector refers to the housing requirement as an 'estimate' but fails to acknowledge the approach to deriving this figure clearly set out in the Council's evidence base. This includes how the housing figure has been derived from the level of employment growth defined by growth option 6, but where the objector feels the housing figure will not meet the employment ambition. The objector is concerned that a "sufficient number of sites and allocations is identified" but does not say whether this is within the housing requirement of the plan with the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			ensure the minimum target it is important that sufficient number of sites are allocated. Policy STR11 set out the two strategic sites, and the overall housing figures. Policy HN 1 sets out the allocations for each settlement tier. Para 5.12 sets out the fact that the plan seeks to distribute development to the most sustainable settlements. It is considers that the allocation are in the first 3 tiers of settlement are too heavily reliant on large sites. It is also asserted that the LDP is too heavily reliant on small and windfall sites. For the above reasons it is considered that the model for meeting the housing requirement is flawed and there is a risk that the requirement will not be met. The model does not provide for sufficient dwellings in Mold. It is also unclear why the allocated site HN1(6) Land between Denbigh Rd and Gwernaffield Rd is deemed more appropriate. Than Candidate Site MOL040. Which is a more sustainable site. Aside from the green barrier location there is no logical reasons why site HN1(6) is preferred .		added flexibility, or whether the housing requirement should be increased. If it is the latter, the objector unfortunately does not say what the figure should be or provide supporting evidence to justify this. The objector simply offers a single site in Mold on behalf of their client but fails to acknowledge that this is legacy land in the ownership of their client, remaining after significant development on the periphery of Mold has already occurred on their land. They also fail to acknowledge the green barrier status of this land established via the UDP and where, notwithstanding reference to 20 year old opinions, more recently the UDP Inspector agreed with the designation of the land as green barrier in the adopted UDP, and their client did not object to this at that time. The objector notes that the two strategic sites allocated in the LDP at Northern Gateway and Warren Hall are not located in Tier 1 Main Service Centres, and this is entirely logical as by definition they are ‘strategic’ mixed use development sites that at the scale and mix of sites proposed, if attached to a single centre may have the potential to overwhelm that settlement and its infrastructure. That is why these sites are where they are. The objector is concerned that too much reliance is placed on too few ‘large’ allocations and that there is an imbalance in terms of the distribution of growth within the settlement hierarchy. The approach of the LDP strategy

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					contrasts with that of the UDP where a large number of small allocations were provided but where sites were either slow to come forward and due to lack of scale, did not deliver the economies demanded by the development sector today in terms of efficiencies in build and materials, or sufficient scale to make sites viable to deliver the infrastructure and policy requirements. The objector also fails to acknowledge that the distribution of allocations also needs to be balanced against the location of commitments in order to paint the full and more accurate picture of where development is planned. The scale of allocations made is therefore considered to be sustainable, viable and deliverable and whilst a considerable amount of due diligence and back ground study work has occurred to support the deliverability of the allocated sites, no such evidence is presented to illustrate the same position for the site being promoted. The objector also feels that there is too much reliance on allowances made for small and windfall sites and wrongly states that simply perpetuating past delivery rates will not be achievable. With reference to the background evidence provided to support the LDP, the allowances made for small and windfall sites are set at 50% of the 18 year trend for development in these categories and therefore take a modest and conservative approach to the future delivery from these sources. This is considered to be sensible and realistic, a point fully supported by the Home Builders

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Federation in their comments on policy STR11 of the plan as follows “The HBF supports the Councils approach to windfall sites and commitments as identified with the Housing Balance sheet and the level of flexibility proposed. The HBF also supports the spatial strategy and the mix of both larger and smaller sites proposed”. The Council has also produced an Urban Capacity Study as part of the evidence to support the plan’s approach to the provision of housing, which confirms that there is a realistic future supply of both potential small and windfall sites to support the assumptions made. The objector criticizes the Council for not allocating enough sites in Mold and implies that Mold is the only Main Service Centre which is not correct with reference to the settlement hierarchy. They fail to acknowledge that with the combination of commitments and allocations the main centres are taking proportionately a significant element of growth and that this is relatively balanced between centres with Mold on a par with other centres at the same level. The objector then focusses on just one allocation in Mold and, without providing an in-depth critique of its soundness, does not understand why it is preferable to their client’s land in green barrier on the western edge of Mold. Whilst criticizing the accessibility of the allocated site HN1-6 to the town centre and by other means than the car, they then promote the alternative site on the basis of its proximity to the Mold by-pass and

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the ease of commuting out of the settlement by car. The assessment of each candidate site is presented as part of the Council's evidence base for the objector to compare and contrast, and clearly a key point which they seek to diminish, is the established green barrier status of their site, which is not the case for the allocation referenced, amongst other differences.
1171	STR1: Strategic Growth	Object	Using the figures set out in Table 1 (see full representation), 3,389 dwellings were built between 2007 and 2015 at an average of 376 dwellings per year during the UDP period. This would leave the need for 4,011 dwellings to be built during the UDP period 2000-2006, at a rate of 573 dwellings per year. We would request that the Council provides evidence of delivery rates during this period in order for all parties to establish whether the housing needs during the previous UDP period were met in full or not. The rates of housing delivery for the period 2016 to 2018 have averaged 563 dwellings a year, which demonstrates a strong market demand and ability to deliver homes in Flintshire. Moving forward, it is important to understand the extent of any shortfall in housing delivery from the previous UDP period given that our Client is firmly of the view that should be met and provided for during the LDP period moving forward, in addition to the identified requirement for at least 6,950 homes. Given that in all probability the	Given that in all probability the housing needs of the UDP period were not met in full, this will result in an increase to the overall LDP housing requirement (when making an allowance for the shortfall from the previous UDP period), and with it the need to identify and release more land across the County in order to maintain a 14.4% flexibility factor. Given the shortage of brownfield land and the recognition of the need to protect existing employment sites, this will necessitate further greenfield release.	Not accepted. The objector provides a lengthy narrative to support their representation much of which repeats the Deposit LDP and/or PPW. Within this the objector has a number of linked concerns relating to the strategic approach to growth in the LDP. The first of these relates to the plan period and the timing of the proposed adoption of the LDP, leaving 9 years of the plan period post adoption. Whilst the objector refers to there being a 'policy vacuum' for some time, it is not clear what is meant by this as the UDP whilst expired is still in line with many areas of PPW and is the starting point for making decisions on applications; PPW itself is national planning policy, along with the TANs that support it. Notwithstanding this they advocate extending the LDP plan period to 2034, and also imply it should look retrospectively as far back as 2000 to address unmet housing needs. They are in effect advocating a 34 year plan period but provide no evidential basis to explain or justify how this is sustainable, what growth levels are deliverable during this period and where the sites are that would be needed to address this lengthy plan period. There is also

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			housing needs of the UDP period were not met in full, this will result in an increase to the overall LDP housing requirement (when making an allowance for the shortfall from the previous UDP period), and with it the need to identify and release more land across the County in order to maintain a 14.4% flexibility factor. Given the shortage of brownfield land and the recognition of the need to protect existing employment sites, this will necessitate further greenfield release. Based on recent rates of delivery, there is no reason to believe that any shortfall from the UDP period cannot be met moving forward during the LDP period provided sufficient land is allocated on which to meet any shortfall. This would justify a housing requirement of at least 7,350 dwellings as per the upper figure set out under Option 6 of the Preferred Strategy Growth Options. - There is a significant reliance on existing commitments during the period 2018-19 to 2021-22. It will be imperative that these commitments deliver if the Council is going to be able to demonstrate a five-year supply post-adoption, particularly given that no significant housing contribution is expected from allocated sites until 2021-22. It would be prudent, supported by evidence, to ensure that enough of the proposed site allocations are capable of early delivery during the Plan period; and - For the period 2023-24 onwards, the		the problem of looking too far into the future from the perspective that it becomes more difficult via the housing trajectory to predict what will happen on development sites in the future. It is the Council's view that the plan period should remain as defined and the plan be examined on this basis, particularly in the context of housing delivery where, as the objector themselves acknowledge, the plan has so far delivered housing at or slightly above the rate planned for. The annual monitoring of the plan and the plan review process within the Regulations are the means to assess the performance of the plan and the need to update it, and the Council is bound by both of these requirements. The objector also feels the vision statement of the plan should be far more detailed but that would be counter intuitive to the normal purpose of a vision statement which in a short passage is intended to capture the essence of the plan's approach. It is the strategic objectives that provide the more detailed expression of the vision and set out the key policy strands from which the Council has developed the strategic and detailed policies in the plan. The objector's general support for all 19 objectives is duly noted with the exception of the point made in relation to objective 11 which relates to housing provision, where the objector requests the addition of the word 'minimum' before 'housing needs'. This is confusing and not fully explained and implies to the Council that the objector is advocating

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			housing trajectory is heavily reliant on allocate		only meeting the lowest or 'minimum' needs, which are expressed in the low level Welsh Government household growth projections. The Council has already explained why it has significantly varied from these projections in its background paper, supported by Ministerial advice provided in 2014 which is still relevant. The objector refers back to the UDP period and speculates that there is "probably" a shortfall in provision of housing from that plan, that the Council should calculate what this was, and that this should be added to the requirement for the LDP period to compensate for under-delivery. With respect it is for the objector to evidence this if they feel it is of relevance. Also the objector refers to the UDP failing to deliver houses, but it is the role of any development plan to make sufficient provision (through sites) for the housing requirement to be met. The mechanism for how housing is provided relies on the interaction with the market including the prevailing economic conditions, the capacity of developers to build, and the level of demand coming from potential buyers. The objector refers to the average level of provision in the first three years of the plan as evidence of strong demand, but with the benefit of a fourth year of completions in 2019, it is evident that the average completion rate has reduced to 536 per annum. What the objector has also failed to recognise is that within this average there is significant

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					variability in annual delivery, as whilst completions exceeded 600 for two of the four years, in the others they were low to mid 400s. This significant level of variability is at a time when there are sufficient deliverable commitments available, supplemented by speculative schemes that have consent, and illustrate the Council's concern of not seeking to set an unachievable housing requirement where consistently high delivery rates cannot be achieved and maintained by the development industry. The objector also fails to recognize that the average level of overall provision made by the plan is 530 dpa which is directly in line with the up to date delivery rate. The only evidential basis the objector provides for increasing the LDP housing requirement is to raise it by 400 units to 7,350 which is the upper end of the growth option 6 range. Given the point already made about completions in the first four years, this has already been more than recovered by those completion rates, over and above the average planned level for the whole of the LDP period. The objector's point about adding an unspecified UDP 'shortfall' is not well made or supported by evidence of what the shortfall is or how and from where enough additional sites would be found, save of course for the land being promoted in Penyffordd, which on its own would not significantly address the 400 unit increase advocated by the objector, let alone the addition of a more substantial apparent UDP shortfall. It is therefore difficult

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					for the Council to understand the alleged failings of the plan at the strategic level from the case being made. The objector has also failed to reflect that the UDP and LDP time periods are separate time periods and do not overlap, and where the calculation of housing requirement was based on the prevailing circumstances at the time and supporting evidence base. The Welsh Government projected levels of household growth are also very different, with the housing requirement of the UDP based solely on the level of projected household growth at the time (converted into a dwelling need), whereas the projected growth during the LDP plan period is only around 36% of the LDP housing requirement when compared to the latest published 2018 based Household Projections. Even if the Council were to accept the principle of transposing an apparent under-provision of housing from a previous plan and adding it to the planned provision in the new plan, which it does not, the degree to which the LDP housing requirement exceeds the Welsh Government Projected growth could be argued to more than compensate for any such shortfall. The objector advocates a plan period being extended to 2034 but only proposes the addition of 400 units to the housing requirement to address the additional housing that would be required during this extended plan period. Extending the current planned requirement in the LDP of 463 units per annum for another 4 years would mean that

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					there would be an additional requirement for 1,852 more homes that presently allocated, but apart from a relatively small site in Penyffordd, the objector offers no evidence or alternative proposals to show how this extended plan period requirement could be met from sustainable deliverable sites, or how this could be accommodated within the LDP housing trajectory. There is therefore nothing for the Council to assess or compare to show how such a proposal is in any way a sound proposition over and above the position it presents and justifies via the deposit plan.
1187	STR1: Strategic Growth	Object	Category C Affordable Housing - general. Affordable Housing Authority Wide Target - The Affordable Housing Background Paper states the affordable housing target for the plan is 1,981 homes. This should be included within a policy in the plan. Policy STR1: Strategic Growth could be amended to state "7,950 homes are provided of which xxx are affordable". The target does not include the contribution from windfall sites (Table 6). It should do. The affordable housing target in the plan should be derived from all components of supply to ensure it is realistic in its aspiration and for monitoring purposes. ? Spatial Distribution of Affordable Housing Supply – the Affordable Housing Background Paper includes an analysis of affordable housing contributions by housing component. A table setting out anticipated affordable housing	Policy STR1: Strategic Growth could be amended to state "7,950 homes are provided of which xxx are affordable". The target does not include the contribution from windfall sites (Table 6). It should do. The affordable housing target in the plan should be derived from all components of supply to ensure it is realistic in its aspiration and for monitoring purposes. A table setting out anticipated affordable housing contributions	Accepted. The affordable housing Background Paper will be updated with a table showing the anticipated affordable housing supply by settlement tier, and will include the expected contribution from windfall sites with ten or more units in line with the guidance set out within DPM3. The affordable housing target will also be revised to include the expected contribution from windfall sites with ten or more units.

			contributions by settlement tier and component of supply in line with guidance in the DPM (Ed. 3) would be helpful aiding clarity of the plan and effective monitoring.	by settlement tier and component of supply in line with guidance in the DPM (Ed. 3) would be helpful aiding clarity of the plan and effective monitoring	
1254	STR1: Strategic Growth	Object	The level of growth proposed is insufficient to meet development needs and fails to account for the significant potential growth resulting from MDA opportunities. Furthermore, the proposed levels of employment and housing growth do not match. STR1 makes provision for some 8,000 – 10,000 new jobs (i.e. a range of jobs) yet identified a need for only 7,950 new homes. In particular, the proposed housing target is wholly insufficient to meet local needs given the expected local, sub-regional and regional growth opportunities identified in the emerging Plan. The housing target also fails to account for previous significant under-provision of housing throughout the previous plan period, and it cannot be sound to simply dismiss this significant undersupply over an extended period. In its current state the Deposit Plan also risks major long term issues such as a loss of highly skilled workers and economically active population – the result will mean less spending within the	Increase housing target	Not accepted. The objector refers to the plan's housing 'need' as being 7,950, but the LDP housing requirement is 6,950 with a 14.4% contingency resulting in an overall provision for 7,950 homes to meet the lower requirement. The objector fails to acknowledge the degree to which the housing requirement figure is already significantly above Welsh Government projected household growth trends, as shown in successive recent National projections from either 2011, 2014, or now more recently the 2018 based projections released by Welsh Government. The plan makes provision for housing at 2-3 times this projected growth trend for Flintshire. The premise of the LDP strategy from the outset has been to not allow housing alone to dominate the approach of the plan, but rather to recognize its importance as part of the infrastructure necessary to support economic activity, wealth generation and well-being. They also fail to recognise that the processes for arriving at the plan's housing requirement and aspirational job figure are very different. In essence housing requirements are driven by

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			local area which can have a detrimental impact upon the local businesses within Broughton and Flintshire as a whole. An example of this is reflective of the recent success Airbus has had in their apprenticeship programme – the company has announced a record number of apprentices have been hired this year within their Broughton site. The company will continue to train and develop young workers, however there is a real risk the lack of housing will deter such people from staying in Flintshire. With an identified shortage of homes already, and an underestimated housing target, Flintshire risks losing these young highly skilled population to surrounding areas. This will have an impact upon the long term future of local businesses and the wider economy in Flintshire. Therefore, the number of new homes required is significantly higher than is being planned for and STR1 should be updated to increase the housing requirement and specifically state the housing requirement as a minimum number to achieve. We also have concerns with the distribution of growth and associated allocation of sites. These concerns are addressed in the context of the respective policies.		reference to formally published national projections of household change whereas there are no similar projections at the national level of expected or anticipated job growth in each local authority area. This is why it is acceptable to have a broad portfolio of available employment land to facilitate job growth, but where the housing sites to deliver the requirement must be clearly identified along with evidence of their deliverability. There is also no direct formulaic relationship that the Council is aware of between housing requirements and levels of job growth sought in development plans The objector states “The housing target also fails to account for previous significant under-provision of housing throughout the previous plan period, and it cannot be sound to simply dismiss this significant under supply over an extended period.” This is not supported by evidence of what the shortfall is. The objector has failed to reflect that the UDP and LDP time periods are separate time periods and do not overlap, and where the calculation of housing requirement was based on the prevailing circumstances at the time and supporting evidence base. The Welsh Government projected levels of household growth are also very different, with the housing requirement of the UDP based solely on the level of projected household growth at the time (converted into a dwelling need), whereas the projected growth during the LDP plan period is only around 36% of the LDP housing requirement when

707	STR1: Strategic Growth	Object	This Representation is submitted having regard to our land interests in the settlements of Ewloe and Holywell, further details of which are provided later in this Representation. Policy STR1 maintains the previous position set out in the Preferred Strategy, planning for a housing requirement of 6,950 homes up to 2030. However, unlike the Preferred Strategy, the LDP is proposing a flexibility factor of 14.4%, identifying land with the ability to deliver a claimed 7,950 homes during the LDP period. We welcome the inclusion of a flexibility factor in excess of 10% which was originally proposed in the Preferred Strategy. We comment on the sources of supply to meet this minimum requirement later in this Representation. General Comments On review of Policy STR1, we would request that part iii) be amended to include the word “minimum”	On review of Policy STR1, we would request that part iii) be amended to include the word “minimum” before “housing” – the housing requirement should be treated as a minimum figure. Indeed, the Council itself is accepting that an over-provision of housing can be accommodated in the County by identifying sources of supply for an additional 1,000 homes.	Not accepted. The objector provides a lengthy narrative to support their representation much of which repeats the Deposit LDP and/or PPW. Within this the objector has a number of linked concerns relating to the strategic approach to growth in the LDP. The first of these relates to the plan period and the timing of the proposed adoption of the LDP, leaving 9 years of the plan period post adoption. Whilst the objector refers to there being a ‘policy vacuum’ for some time, it is not clear what is meant by this as the UDP whilst expired is still in line with many areas of PPW and is the starting point for making decisions on applications; PPW itself is national planning policy, along with the TANs that support it. Notwithstanding this they advocate extending the LDP plan period to 2034, and also imply it should look retrospectively as far back as 2000 to address unmet housing needs. They are in effect advocating a 34 year plan period but provide no evidential basis to explain or

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			before “housing” – the housing requirement should be treated as a minimum figure. Indeed, the Council itself is accepting that an over-provision of housing can be accommodated in the County by identifying sources of supply for an additional 1,000 homes.		justify how this is sustainable, what growth levels are deliverable during this period and where the sites are that would be needed to address this lengthy plan period. There is also the problem of looking too far into the future from the perspective that it becomes more difficult via the housing trajectory to predict what will happen on development sites in the future. It is the Council’s view that the plan period should remain as defined and the plan be examined on this basis, particularly in the context of housing delivery where, as the objector themselves acknowledge, the plan has so far delivered housing at or slightly above the rate planned for. The annual monitoring of the plan and the plan review process within the Regulations are the means to assess the performance of the plan and the need to update it, and the Council is bound by both of these requirements. The objector also feels the vision statement of the plan should be far more detailed but that would be counter intuitive to the normal purpose of a vision statement which in a short passage is intended to capture the essence of the plan’s approach. It is the strategic objectives that provide the more detailed expression of the vision and set out the key policy strands from which the Council has developed the strategic and detailed policies in the plan. The objector’s general support for all 19 objectives is duly noted with the exception of the point made in relation to objective 11 which relates to housing provision, where the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					objector requests the addition of the word 'minimum' before 'housing needs'. This is confusing and not fully explained and implies to the Council that the objector is advocating only meeting the lowest or 'minimum' needs, which are expressed in the low level Welsh Government household growth projections. The Council has already explained why it has significantly varied from these projections in its background paper, supported by Ministerial advice provided in 2014 which is still relevant. The objector refers back to the UDP period and speculates that there is "probably" a shortfall in provision of housing from that plan, that the Council should calculate what this was, and that this should be added to the requirement for the LDP period to compensate for under-delivery. With respect it is for the objector to evidence this if they feel it is of relevance. Also the objector refers to the UDP failing to deliver houses, but it is the role of any development plan to make sufficient provision (through sites) for the housing requirement to be met. The mechanism for how housing is provided relies on the interaction with the market including the prevailing economic conditions, the capacity of developers to build, and the level of demand coming from potential buyers. The objector refers to the average level of provision in the first three years of the plan as evidence of strong demand, but with the benefit of a fourth year of completions in 2019,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					it is evident that the average completion rate has reduced to 536 per annum. What the objector has also failed to recognise is that within this average there is significant variability in annual delivery, as whilst completions exceeded 600 for two of the four years, in the others they were low to mid 400s. This significant level of variability is at a time when there are sufficient deliverable commitments available, supplemented by speculative schemes that have consent, and illustrate the Council's concern of not seeking to set an unachievable housing requirement where consistently high delivery rates cannot be achieved and maintained by the development industry. The objector also fails to recognize that the average level of provision made by the plan is 530 dpa which is directly in line with the up to date delivery rate. The only evidential basis the objector provides for increasing the LDP housing requirement is to raise it by 400 units to 7,350 which is the upper end of the growth option 6 range. Given the point already made about completions in the first four years, this has already been more than recovered by those completion rates, over and above the average planned level for the whole of the LDP period. The objector's point about adding an unspecified UDP 'shortfall' is not well made or supported by evidence of what the shortfall is or how and from where enough additional sites would be found, save of course for the land being promoted in Holywell and Ewloe, which

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					on its own would not significantly address the 400 unit increase advocated by the objector, let alone the addition of a more substantial apparent UDP shortfall. It is therefore difficult for the Council to understand the alleged failings of the plan at the strategic level from the case being made. The objector has also failed to reflect that the UDP and LDP time periods are separate time periods and do not overlap, and where the calculation of housing requirement was based on the prevailing circumstances at the time and supporting evidence base. The Welsh Government projected levels of household growth are also very different, with the housing requirement of the UDP based solely on the level of projected household growth at the time (converted into a dwelling need), whereas the projected growth during the LDP plan period is only around 36% of the LDP housing requirement when compared to the latest published 2018 based Household Projections. Even if the Council were to accept the principle of transposing an apparent under-provision of housing from a previous plan and adding it to the planned provision in the new plan, which it does not, the degree to which the LDP housing requirement exceeds the Welsh Government Projected growth could be argued to more than compensate for any such shortfall. The objector advocates a plan period being extended to 2034 but only proposes the addition of 400 units to the housing requirement to address the additional housing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					that would be required during this extended plan period. Extending the current planned requirement in the LDP of 463 units per annum for another 4 years would mean that there would be an additional requirement for 1,852 more homes that presently allocated, but apart from a relatively small sites in Holywell and Ewloe, the objector offers no evidence or alternative proposals to show how this extended plan period requirement could be met from sustainable deliverable sites, or how this could be accommodated within the LDP housing trajectory. There is therefore nothing for the Council to assess or compare to show how such a proposal is in any way a sound proposition over and above the position it presents and justifies via the deposit plan. The Welsh Government have not objected to the Council's housing trajectory as part of their formal comments on the deposit LDP and are satisfied that the trajectory is compliant with the guidance in the LDP Manual edition 3. Whilst the objector expresses concern about reliance on commitments in the early part of the trajectory this is sensible and logical as these are the sites within the LDP balance sheet that are the commitments that already have permission and do not have to await the adoption of the LDP to come forward. It is also this assessed pool of commitments that has provided for the delivery rates supported by the objector in the early years of the plan period, and as per the Preferred Strategy of the plan it is right that this land bank of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					permitted sites makes an appropriate commitment to the LDP housing requirement. The objector also fails to recognize that a number of the sites allocated in the plan also already have planning consent and are already contributing units to the LDP supply and/or are capable of early delivery. That said it is also a false assumption made by the objector that the level of commitments and early years delivery rates are predominantly 'propped up' by speculative sites granted on appeal as there is little evidence to sustain this, and none presented by the objector. Indeed it is also the case that where inappropriate speculative sites have come forward they have been refused. The objector is concerned about deviation away from the housing trajectory in the second half of the plan period but doesn't provide any evidence to quantify by how much this deviation would be or which are the sites they feel will not come forward. It is therefore difficult to give any weight to the point being made and clearly from the recent consultation by Welsh Government on the Future of Housing Delivery via the Planning System the old mechanism of monitoring land supply via TAN1 is to be deleted and replaced by monitoring against the housing Trajectory. Whilst Welsh Government have not yet said what the mechanisms or actions would be if delivery varied significantly away from the trajectory, clearly the plan's monitoring framework and requirement to produce an AMR will ensure this is closely monitored. In

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					terms of the point made by the objector about the potential for recent large speculative windfalls to skew the assumptions made for windfall supply in the LDP balance sheet, the Council has accounted for this by reviewing the windfall trends over an 18 year period and by reducing the allowance by 50% of that trend, also in the knowledge that in terms of the more recent trend years, speculative sites have not contributed more than 50% of the overall windfall provision. Whilst the objector is concerned about the future supply of windfall sites even at the modest levels proposed, which they support, they have failed to note the findings of the Urban Capacity Study carried out to support the balance sheet and specifically the setting of the windfall and small sites allowance in the LDP. This shows a reasonable and healthy potential supply within existing settlements to support the allowances made.
790	STR1: Strategic Growth	Object	Comments on behalf of Redrow Homes Ltd in respect of Policy STR1. The Plan proposes an average annual level of housing completions of 463 dwellings per annum (dpa), despite representations made at the time of the consultation on the Preferred Strategy, this proposed level of provision has not changed; no documents appear to be available to explain why representations made at the time were not considered legitimate. However, notwithstanding this, the Technical Paper 'population and household projections with dwelling and	the Technical Paper 'population and household projections with dwelling and employment impacts' which was published at the same time indicates a dwelling requirement derived from the employment led growth option of between 480 and 540 dwellings (Table 3.3); it is not explained how this	Not accepted. The objector refers to comments made on growth options at the Preferred Strategy stage and queries why these were not considered to be 'legitimate'. There is nothing to suggest that the Council did not consider the comments made and in fact these were reported to its internal Planning Strategy Group as part of progressing the plan and reporting back on comments made at the Pre-Deposit stage of the plan process, a stage designed as the name implies to inform the deposit stage of the process. The important opportunity provided to the objector was to comment on the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			employment impacts' which was published at the same time indicates a dwelling requirement derived from the employment led growth option of between 480 and 540 dwellings (Table 3.3); it is not explained how this assessment then translates into the, significantly lower, proposed figure for provision.	assessment then translates into the, significantly lower, proposed figure for provision.	soundness of the housing requirement in the deposit plan, and to provide evidence and justification to support any objection to that proposition. If the objector has failed to provide that evidence at the deposit stage, that is not a direct concern of the Council. The objector refers to the technical paper published at the time of the Preferred Strategy entitled 'Population and Household Projections with Dwelling and Employment Impacts', and specifically refers to table 3.3 of that document not clearly explaining the difference between the housing requirement figure published in the Deposit LDP (6,950/463 dpa) and the range presented from the growth option of between 480 – 540 dpa. With reference to table 3.3 in the background paper, the objector firstly ignores the point that the Council have made clear through its approach to the deposit LDP strategy that it has adopted the mid-point of the option 6 housing growth range which is clearly identified in table 3.34 as 6,950 dwellings, the figure that also appears in policy STR1 of the deposit LDP as the housing requirement or need to be met. Dividing this by the 15 year plan period gives the annualized requirement of 463 dpa. The objector's reference to the higher figures in the table is as a result of adding at that time a 10% contingency to the baseline requirement. In the second column of table 3.3 this adds 700 units to the 6,950 requirement, providing an overall provision for 7,650 units or 510 dpa. In fact since the preferred strategy, the level of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					homes actually provided for in the plan has increased as the contingency has gone up to 14.4% meaning that the plan overall provides for 7,950 homes at an annual rate of 530 dpa. The objector refers to the mismatch between the 15 year average plan requirement of 463 dpa when compared with the average annual delivery rate for housing over just the first three years of the plan period which averages 568 dpa. The objector uses this short term trend to infer that the housing requirement should be higher because of this level of provision. That said the objector presents no evidence whatsoever to show how this rate can be sustained over the entire plan period and in fact having produced the 2019 Housing Land Supply Statement it is clear that this delivery rate is both falling and has extreme variability when the year on year levels are compared. Adding a fourth year of completions reduces the average delivery rate to 536 dpa which when compared to the average provision within the LDP of 530 dpa is in very close alignment. The objector has also failed to comment on the fact that within the average delivery rate calculated over the first four years of the plan, whilst delivery in two years has topped 600 dpa, in the other two years has only achieved low to mid 400s which is below the average LDP requirement let alone the actual homes provided for in the plan. The range of variability is also significant at over 200 between two consecutive years, raising obvious concerns about the ability of either

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					'demand' as the objector refers to it as, or the ability of the industry to build, to be sustained at consistently high rates throughout the entire plan period. The objector refers to the high level of delivery being achieved whilst there has been a "housing land shortfall" but this does not make sense as how has such a healthy level of housing delivery occurred without there being suitable and available land. The objector seems to be confusing the Council's inability to formally demonstrate a land supply because of TAN1, with the fact that the Council has a significant committed supply that has clearly supported the delivery rates discussed above. Neither is this delivery substantially supported by speculative sites granted permission under TAN1 rules as these have yet to substantially deliver. Reference is made by the objector to the background paper 'Employment and Housing Advice' prepared by the Council's employment consultants BE Group, where the objector infers from a partial quote from paragraph 4.3 of that paper that the consultants are supporting a growth target above the LDP level and at the level of the short term delivery rates. This is neither an accurate quotation from the document, or what the paragraph actually refers to. The full paragraph actually states "As can be seen from the table, since 2015 housing completions have averaged above the decade average and 2015, 2016

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					and 2018 have performed above the 2015-2030 annual target of 463 dwellings (for the LDP requirement of 6,950 dwellings over the forecast period). The 2015-2018 average of 568 dwelling completions is above the target level and represents a strong start to the actual growth for the planning period. It also suggests that such growth targets are supportable in Flintshire". [The Council's emphasis in bold]. The clear and correct interpretation from what is actually said is that dwelling completions in the short term give a positive indication that the plan's housing target (the requirement) is achievable. The objector also reflects that in paragraph 4.4 of the same document short term employment trends have been negative, whereas as short term housing delivery trends are positive. Apart from ignoring the vagaries of BRES employment survey data from which the job change data is drawn, the objector also illustrates the danger of relying on very short terms trends to project accurate provision over the length of the plan period without this becoming a purely speculative exercise. The objector then switches from need, which is the basis for setting an LDP housing requirement, to 'demand' which is evidenced in their terms by three years of housing completions, and also switch context from a "period of economic decline" in the previous paragraph of their objection to "a period of reasonable economic stability", to make the point that the three year average completion rate ('demand') is a

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					reasonable reflection of general demand that by inference, should be carried through the whole plan period. This ignores the previous point made in response that the average delivery rate has fallen to 536 dpa, and that this is in line with the average provision in the plan at 530 dpa, contrary therefore to the statement made by the objector that "housing demand is well in excess of the proposed level of provision". This is not the case from the factual evidence available. Whilst the objector criticizes the Council's approach to projections and the production of a number of growth options to determine the correct level for the plan, with these based on empirical evidence, no evidential basis is provided to justify the statement that "a higher level of housing growth, above 570 dpa, is required". The only justification for this is the short term delivery trend, but as the Council has explained above this has dropped and is in close alignment with the average level of provision in the plan. It also follows that if the objector feels the requirement could be higher, there can be no doubt that the requirement as put forward in the plan is deliverable, and is therefore sound. In relation to provision of affordable housing the background paper explains that there are a number of sources for provision rather than just emphasising the role of the plan or planning system as put forward by the objector. In suggesting that the overall housing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					requirement should be higher, the objector is silent on the capacity of his client or the industry in general to deliver higher rates of affordable housing, given that the industry has generally objected to the 40% affordable housing levels proposed in policy, let alone having the capacity to meet the suggested need for 51% affordable proposed in the draft National Development Framework. The Council is confused by the point made that the projections used do not explicitly set out the assumptions behind them, as the main assumptions used to base each growth option were explained in the technical paper. The information behind the assumptions such as headship rates or migration trends is also publicly available and the objector was also free to provide their own projections during the consultation period on the deposit plan to both counter the continuing low level of projected household growth indicated by the 2011, 2014 and now 2018 based Welsh Government projections, as well as to support a higher LDP housing requirement than set out in the plan, but the objector has provided no such projections. The objector also provides mixed messages as on the one hand feels that the recent delivery rate is sustainable throughout the plan period, but also concludes without any form or justification that “an annual increase of at least 150 dwellings over that proposed appears justified, on top of which one should also add a proportionately increased flexibility allowance”. This would add

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					a minimum of 2,250 units to the requirement of 6,950 resulting in a requirement of 9,200. To that the objector adds flexibility but does not say at what rate, but assuming the 14.4% in the LDP is applied that would add a further 1,325 units making an overall provision of 10,525 units to be provided at an annual average of 701 dpa. This is in excess of any delivery rate quoted by the objector by a margin of 30% above, or 165 units per annum more than the current average delivery rate that either represents 'demand' by the market or what can be achieved by the industry. There is no evidence to show how this step change above market demand is deliverable or where the additional sites are that would be required to achieve it. Comparing this level of growth to the latest 2018 based Welsh Government projections shows that the even when compared to the high variant projected growth (232 dpa) the suggested level of growth is over 200% in excess of the projected trend. All that is offered by the objector is that "there are significant other opportunities for development in the County" but such an approach without evidence or justification, is purely speculative and simply makes provision for developers landbanks. The objector refers to a separate 'assessment' made by Lichfields on behalf of Redrow and Taylor Wimpey in collaboration where, because of the extent of the note, this has been responded to separately by way of a rebuttal statement by the Council.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
933	STR1: Strategic Growth	Object	Target housing requirement is too low. Jobs target does not reflect or correlate with the employment growth target, which is considered too low. Jobs target does not correlate with housing target. Also, despite the policy suggesting the focus of development will be located at sustainable employment locations many housing sites are not located to take advantage of this and moreover, insufficient employment provision is being identified. Policy should be expressed as a minimum.	Target housing requirement is too low. Jobs target does not correlate with housing target. Policy should be expressed as a minimum.	Not accepted. The objector makes a number of subjective and superficial statements in relation to the growth planned for in policy STR1 but does not provide any empirical evidence or reasoned arguments to support these statements. For example it is stated that the housing requirement is “too low” but there is nothing provided to explain why? by how much? or what is the ‘correct’ figure? Equally the jobs target is said to be “too low” and does not “correlate” with the housing target but again it is not explained how it is too low, by how much, what is the correct level, and what is the nature of the correlation between employment and housing targets. The opportunity given to the objector during the deposit consultation was to consider the soundness of the LDP as published and if this was questioned, to say how the plan is unsound and why, and what the preferable alternative is. The objector has not done this and despite objecting has provided nothing that the Council can apply much weight to in considering or understanding the basis of the arguments put forward. The objector simply seems to be saying the housing and employment targets are too low and should be higher but without saying why, by how much or provide supporting evidence to justify this. The objector has had every opportunity with reference to the Council’s evidence base supporting the growth promoted by policy STR1 to provide evidence and explanation to support the very basic points made, but has failed to do this. The Council does not see how from the points made and lack of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					corroboration, that the plan's soundness is in any way challenged.
939	STR1: Strategic Growth	Object	It is noted that the strategy is to seek to meet an aspirational employment growth scenario which is in excess of employment forecasts, instead based on the capacity figures of the strategic sites. In addition, that the housing land requirement is derived from this employment led growth scenario, which plans for housing above that indicated by household projections. While this is similar to the approach to plan positively for economic growth taken in the adopted Cheshire West and Chester Local Plan (although Cheshire West's approach is based on household projections uplifted for economic growth, rather than the jobs growth and employment land availability approach taken by Flintshire), this will require the retention and attraction of working age people or increased commuting to achieve these ambitions. It is not clear what level of in-migration or commuting is expected to be required from surrounding authority areas, however, it is recognised that it is extremely difficult to predict with any accuracy where people will choose to live and work. It would be helpful to clarify the reasons for the differences from the LDP Preferred Strategy 2017, which proposed an employment land figure of 223 ha, as compared to 139.67 ha in the Deposit	It would be helpful to clarify the reasons for the differences from the LDP Preferred Strategy 2017, which proposed an employment land figure of 223 ha, as compared to 139.67 ha in the Deposit Plan. PE1 (paragraph 10.1) states that this includes losses etc, so it is a net requirement, however, how is this linked to the number of jobs which remains unchanged at 8-10,000? Furthermore, the Council would like to understand how the differences in the sizes of the strategic sites from that in the Preferred Strategy, i.e. Warren Hall was 57 ha, but is now 74 ha, and Northern Gateway was 100 ha, but is now 72.4 ha.	Not accepted. It is noted that Cheshire West are also pursuing a positive economic growth strategy in their development plan and the Council have not objected to this. Whilst the objector recounts their understanding of the Council's strategy, the strategic sites in the LDP serve to illustrate that sufficient employment land is provided to meet the aspirational job target, along with other sites clearly identified under policy PE1. These are on long standing established employment locations where following the ELR there were no suitable alternative uses proposed for these sites, and it was established that they are still fit for purpose in providing a range and choice of sites for investors. Whilst Cheshire West's economic growth strategy is similar, Flintshire is less reliant on projected growth actually coming to fruition and that is why there is a broader range of employment site choice presented in a portfolio of sites to allow greater flexibility as well as capacity for job growth to occur. Flintshire's strategy is also aligned with the North Wales Economic Ambition Board's Growth Vision for North Wales as well as the collaborative work done via the Mersey Dee Alliance. Welsh Government are also satisfied with the level of housing and jobs growth in the plan and "have no concerns". They also consider that the LDP is in conformity with the draft National Development Framework, the Welsh Government's national development plan for Wales.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Plan. PE1 (paragraph 10.1) states that this includes losses etc, so it is a net requirement, however, how is this linked to the number of jobs which remains unchanged at 8-10,000? Furthermore, the Council would like to understand how the differences in the sizes of the strategic sites from that in the Preferred Strategy, i.e. Warren Hall was 57 ha, but is now 74 ha, and Northern Gateway was 100 ha, but is now 72.4 ha.		Like Cheshire West the strategy does rely on the attraction of working age people to meet a population change that is significantly above Welsh Government population and household projections, and where assumptions about net migration to achieve the level of population growth above projections are set out in the growth options considered for the plan, particularly option 4 which is clearly used to corroborate option 6 as the resulting population and household growth are very similar, and where for option 4 migration is assumed to be at the highest level achieved in Flintshire in the last ten years. The level of commuting assumed from the population has also been reduced in terms of the growth aimed for, on the basis of achieving a higher level of self-containment that is currently the case. Commuting is also two way as Cheshire West should acknowledge, where given the proximity of the two authorities Flintshire's role as an economic hub transcends administrative boundaries. The Council do not understand the point being made about how the employment land number has been reduced from 224 ha in the preferred strategy to 139 ha in the deposit plan, as this is explained on a site by site basis by the table under paragraph 10.1 of the deposit plan written statement on page 129. Equally CWAC could have queried anything that wasn't clear from this by contacting officers directly or via

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the LDP helpline, but the Council is not aware of any such approach.
980	STR1: Strategic Growth	Object	OBJECTION: The objection is that the projections are out of date: 1. The LPA's data are from 2011, 2014 and the Welsh Government Projections which stated that the Wales population projections 2017, (2016based) will increase 3.1% per Millionby 2026, and 4.6% per Million by 2041. But the up-to-date ONS 2018 Projections tell a very different story of decline: Wales 2018 at 3.1% and 2043 at 3.1% EW.EU request that the Plan's Housing Projection is revisited using the ONS 2018 Data for Housing Projection	the projections are out of date:	Not accepted. Whilst the objector refers to the use of out of date Welsh Government projections they do not say what impact this has on the strategy of the LDP or the soundness of the plan. Equally the objector fails to recognise that the plan has taken account of the 2014 projections published following agreement of the Preferred Strategy where despite slightly higher household change trends, these were still substantially lower that the Preferred Strategy housing requirement figure and did not therefore impact on the strategic approach being taken by the Council. The objector has also failed to acknowledge that even later trends have been considered alongside the deposit LDP as whilst the Welsh Government produced 2017 based population projections they did not publish related household projections. Instead the Council provided its own 2017 based household projections produced by the Research and Information Unit at Conwy County Council to again determine if later trend projections had any impact on the plan's strategy. The background paper produced by the Research Unit in fact compares the 2011 and 2014 Welsh Government figures with their own 2017 projections to conclude that none of the trends affect the stance taken in the LDP in relation to setting a housing requirement. The objector refers to population trends as far ahead as 2043 but fails to acknowledge that it is the household projections that are of more

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					use in determining a housing requirement, as well as the fact that the LDP plan period only runs to 2030 in terms of planning for housing needs. Finally recently released Welsh Government 2018 based household projections show a falling projected trend in household change with even the hi variant only indicating projected growth at half the level provided for in the LDP based on supporting its economic growth strategy.
1004	STR1: Strategic Growth	Object	Target housing requirement is too low. Jobs target does not reflect or correlate with the employment growth target, which is considered too low. Jobs target does not correlate with housing target. Also, despite the policy suggesting the focus of development will be located at sustainable employment locations many housing sites are not located to take advantage of this and moreover, insufficient employment provision is being identified. Policy should be expressed as a minimum.	Target housing requirement is too low. Jobs target does not reflect or correlate with the employment growth target, which is considered too low. Policy should be expressed as a minimum.	Not accepted. The objector makes a number of subjective and superficial statements in relation to the growth planned for in policy STR1 but does not provide any empirical evidence or reasoned arguments to support these statements. For example it is stated that the housing requirement is “too low” but there is nothing provided to explain why? by how much? or what is the ‘correct’ figure? Equally the jobs target is said to be “too low” and does not “correlate” with the housing target but again it is not explained how it is too low, by how much, what is the correct level, and what is the nature of the correlation between employment and housing targets. The opportunity given to the objector during the deposit consultation was to consider the soundness of the LDP as published and if this was questioned, to say how the plan is unsound and why, and what the preferable alternative is. The objector has not done this and despite objecting has provided nothing that the Council can apply much weight to in considering or understanding the basis of the arguments put forward. The objector simply

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					seems to be saying the housing and employment targets are too low and should be higher but without saying why, by how much or provide supporting evidence to justify this. The objector has had every opportunity with reference to the Council's evidence base supporting the growth promoted by policy STR1 to provide evidence and explanation to support the very basic points made, but has failed to do this. The Council does not see how from the points made and lack of corroboration, that the plan's soundness is in any way challenged.
1130	STR1: Strategic Growth	Support	The Welsh Government is generally supportive of the spatial strategy and level of homes and jobs proposed and has no fundamental concerns in this respect. It is pleasing to note the Deposit Plan has been prepared having regard to the guidance in DPM 3, particularly Chapter 5 and the de-risking checklist. This puts the Council in a good position moving forward to the examination stage. Further comments are set out in the annex to this letter with additional guidance contained in the draft LDP Manual (3rd Edition). In moving forward to the LDP examination, demonstrating delivery of the plan will be essential. The development planning system in Wales is evidence-led; demonstrating how a plan is shaped by this evidence is a key requirement of the examination. Demonstrating the delivery and viability of all sites in the plan is critical,		Noted. The Council notes the support from Welsh Government for the Plan's strategy and proposed levels of growth, and the recognition of the evidential basis for this that is in line with the requirements of the Development Plans Manual edition 3.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			particularly development proposed on strategic sites and other large housing/employment allocations which are integral to the strategy/objectives of the plan.		
1150	STR1: Strategic Growth	Object	Category C - Deeside Enterprise Zone – spatial identification The Council has not spatially allocated the Deeside Enterprise Zone (EZ) on the proposals map. The EZ should be shown spatially in the plan. Part of the EZ boundary is within a green barrier designation EN11.15 Sealand-Cheshire Border. It is not clear how/why a green wedge designation should be shown in an EZ. Would this preclude maximising economic opportunities within the EZ? This will be for the relevant Department of Welsh Government to comment on.	The Council has not spatially allocated the Deeside Enterprise Zone (EZ) on the proposals map. The EZ should be shown spatially in the plan.	Not accepted. The Enterprise Zone (EZ) is not a planning land use designation and was derived with Welsh Government to support funding/financial relief measures to facilitate economic investment in key sites specifically identified within the EZ such as Deeside Industrial Park and Principle Employment Area. The EZ boundary was not drawn up in a planning land use context and nor did its creation involve planners. Reference to the extent of the EZ could be made on the constraints map that's sits alongside the LDP Proposals Map.
1172	STR1: Strategic Growth	Object	LDP Housing Trajectory Background Paper 10 'Housing Land Supply and Delivery' sets out the Council's proposed housing trajectory for the proposed LDP period up to 2030. These figures are also reliant on 120 dwellings a year coming forward on a consistent basis from large and small windfall sites, which the Background Paper considers to be a conservative estimation (applying a 50% discount to both). In response to the housing trajectory, our Client has the following observations: - There is a significant reliance on existing commitments during the period 2018-19	To safeguard against this, our Client considers that more housing land should be allocated to come forward during the Plan period.	Not accepted. The objector provides a lengthy narrative to support their representation much of which repeats the Deposit LDP and/or PPW. Within this the objector has a number of linked concerns relating to the strategic approach to growth in the LDP. The first of these relates to the plan period and the timing of the proposed adoption of the LDP, leaving 9 years of the plan period post adoption. Whilst the objector refers to there being a 'policy vacuum' for some time, it is not clear what is meant by this as the UDP whilst expired is still in line with many areas of PPW and is the starting point for making decisions on applications; PPW itself is national planning

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			to 2021-22. It will be imperative that these commitments deliver if the Council is going to be able to demonstrate a five-year supply post-adoption, particularly given that no significant housing contribution is expected from allocated sites until 2021-22. It would be prudent, supported by evidence, to ensure that enough of the proposed site allocations are capable of early delivery during the Plan period; and - For the period 2023-24 onwards, the housing trajectory is heavily reliant on allocated and windfall sites in order for delivery to remain above the annual LDP requirement. However, given the lack of brownfield land availability in the County (as part of the justification for the release of greenfield sites), our Client is concerned that delivery could slip beyond the Council's estimations during the second half of the LDP period. It should be noted that historic windfall trends have taken account of the fact that speculative housing applications on greenfield sites have been granted planning permission in the absence of a five-year housing land supply. Clearly, this would not be the Council's intention once the LDP is adopted. Together, these could duly impact on windfall delivery rates in a number of the Tier 1, 2 and 3 locations in the settlement hierarchy. Paragraph 2.5.4 of the Background Paper refers to previous windfall delivery rates on large		policy, along with the TANs that support it. Notwithstanding this they advocate extending the LDP plan period to 2034, and also imply it should look retrospectively as far back as 2000 to address unmet housing needs. They are in effect advocating a 34 year plan period but provide no evidential basis to explain or justify how this is sustainable, what growth levels are deliverable during this period and where the sites are that would be needed to address this lengthy plan period. There is also the problem of looking too far into the future from the perspective that it becomes more difficult via the housing trajectory to predict what will happen on development sites in the future. It is the Council's view that the plan period should remain as defined and the plan be examined on this basis, particularly in the context of housing delivery where, as the objector themselves acknowledge, the plan has so far delivered housing at or slightly above the rate planned for. The annual monitoring of the plan and the plan review process within the Regulations are the means to assess the performance of the plan and the need to update it, and the Council is bound by both of these requirements. The objector also feels the vision statement of the plan should be far more detailed but that would be counter intuitive to the normal purpose of a vision statement which in a short passage is intended to capture the essence of the plan's approach. It is the strategic objectives that provide the more detailed

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and small sites. In doing so, the Council has applied		expression of the vision and set out the key policy strands from which the Council has developed the strategic and detailed policies in the plan. The objector's general support for all 19 objectives is duly noted with the exception of the point made in relation to objective 11 which relates to housing provision, where the objector requests the addition of the word 'minimum' before 'housing needs'. This is confusing and not fully explained and implies to the Council that the objector is advocating only meeting the lowest or 'minimum' needs, which are expressed in the low level Welsh Government household growth projections. The Council has already explained why it has significantly varied from these projections in its background paper, supported by Ministerial advice provided in 2014 which is still relevant. The objector refers back to the UDP period and speculates that there is "probably" a shortfall in provision of housing from that plan, that the Council should calculate what this was, and that this should be added to the requirement for the LDP period to compensate for under-delivery. With respect it is for the objector to evidence this if they feel it is of relevance. Also the objector refers to the UDP failing to deliver houses, but it is the role of any development plan to make sufficient provision (through sites) for the housing requirement to be met. The mechanism for how housing is provided relies on the interaction with the market including the prevailing economic conditions, the capacity of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					developers to build, and the level of demand coming from potential buyers. The objector refers to the average level of provision in the first three years of the plan as evidence of strong demand, but with the benefit of a fourth year of completions in 2019, it is evident that the average completion rate has reduced to 536 per annum. What the objector has also failed to recognise is that within this average there is significant variability in annual delivery, as whilst completions exceeded 600 for two of the four years, in the others they were low to mid 400s. This significant level of variability is at a time when there are sufficient deliverable commitments available, supplemented by speculative schemes that have consent, and illustrate the Council's concern of not seeking to set an unachievable housing requirement where consistently high delivery rates cannot be achieved and maintained by the development industry. The objector fails to recognize that the average level of overall provision made by the plan is 530 dpa which is directly in line with the up to date delivery rate. The only evidential basis the objector provides for increasing the LDP housing requirement is to raise it by 400 units to 7,350 which is the upper end of the growth option 6 range. Given the point already made about completions in the first four years, this has already been more than recovered by those completion rates,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					over and above the average planned level for the whole of the LDP period. The objector's point about adding an unspecified UDP 'shortfall' is not well made or supported by evidence of what the shortfall is or how and from where enough additional sites would be found, save of course for the land being promoted in Penyffordd, which on its own would not significantly address the 400 unit increase advocated by the objector, let alone the addition of a more substantial apparent UDP shortfall. It is therefore difficult for the Council to understand the alleged failings of the plan at the strategic level from the case being made. The objector has also failed to reflect that the UDP and LDP time periods are separate time periods and do not overlap, and where the calculation of housing requirement was based on the prevailing circumstances at the time and supporting evidence base. The Welsh Government projected levels of household growth are also very different, with the housing requirement of the UDP based solely on the level of projected household growth at the time (converted into a dwelling need), whereas the projected growth during the LDP plan period is only around 36% of the LDP housing requirement when compared to the latest published 2018 based Household Projections. Even if the Council were to accept the principle of transposing an apparent under-provision of housing from a previous plan and adding it to the planned provision in the new plan, which it does not,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the degree to which the LDP housing requirement exceeds the Welsh Government Projected growth could be argued to more than compensate for any such shortfall. The objector advocates a plan period being extended to 2034 but only proposes the addition of 400 units to the housing requirement to address the additional housing that would be required during this extended plan period. Extending the current planned requirement in the LDP of 463 units per annum for another 4 years would mean that there would be an additional requirement for 1,852 more homes that presently allocated, but apart from a relatively small site in Penyffordd, the objector offers no evidence or alternative proposals to show how this extended plan period requirement could be met from sustainable deliverable sites, or how this could be accommodated within the LDP housing trajectory. There is therefore nothing for the Council to assess or compare to show how such a proposal is in any way a sound proposition over and above the position it presents and justifies via the deposit plan. The Welsh Government have not objected to the Council's housing trajectory as part of their formal comments on the deposit LDP and are satisfied that the trajectory is compliant with the guidance in the LDP Manual edition 3. Whilst the objector expresses concern about reliance on commitments in the early part of the trajectory this is sensible and logical as

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					these are the sites within the LDP balance sheet that are the commitments that already have permission and do not have to await the adoption of the LDP to come forward. It is also this assessed pool of commitments that has provided for the delivery rates supported by the objector in the early years of the plan period, and as per the Preferred Strategy of the plan it is right that this land bank of permitted sites makes an appropriate commitment to the LDP housing requirement. The objector also fails to recognize that a number of the sites allocated in the plan also already have planning consent and are already contributing units to the LDP supply and/or are capable of early delivery. That said it is also a false assumption made by the objector that the level of commitments and early years delivery rates are predominantly 'propped up' by speculative sites granted on appeal as there is little evidence to sustain this, and none presented by the objector. Indeed it is also the case that where inappropriate speculative sites have come forward they have been refused. The objector is concerned about deviation away from the housing trajectory in the second half of the plan period but doesn't provide any evidence to quantify by how much this deviation would be or which are the sites they feel will not come forward. It is therefore difficult to give any weight to the point being made and clearly from the recent consultation by Welsh Government on the Future of Housing Delivery via the Planning System the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					old mechanism of monitoring land supply via TAN1 is to be deleted and replaced by monitoring against the housing Trajectory. Whilst Welsh Government have not yet said what the mechanisms or actions would be if delivery varied significantly away from the trajectory, clearly the plan's monitoring framework and requirement to produce an AMR will ensure this is closely monitored. In terms of the point made by the objector about the potential for recent large speculative windfalls to skew the assumptions made for windfall supply in the LDP balance sheet, the Council has accounted for this by reviewing the windfall trends over an 18 year period and by reducing the allowance by 50% of that trend, also in the knowledge that in terms of the more recent trend years, speculative sites have not contributed more than 50% of the overall windfall provision. Whilst the objector is concerned about the future supply of windfall sites even at the modest levels proposed, which they support, they have failed to note the findings of the Urban Capacity Study carried out to support the balance sheet and specifically the setting of the windfall and small sites allowance in the LDP. This shows a reasonable and healthy potential supply within existing settlements to support the allowances made.

Policy STR2

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
29	STR2: The Location of Development	Support	I fully support the classification of Gwernaffield as a Tier 4, defined village settlement.		Accepted. The support for the designation of Gwernaffield as a Tier 4 Defined Village is noted.
39	STR2: The Location of Development	Object	Policy STR2. The settlement hierarchy does not allow sufficient flexibility for the even distribution of new development across the County which is primarily being directed to the eastern half. The rigidity of the settlement hierarchy definitions mitigates against a more balanced distribution of housing development. As there are more Tier 3 and 4 settlements in the west there should be more allocations or settlement boundary changes to compensate for this uneven distribution where this would not create harm.	The settlement boundary in Trelawnyd should be changed to include part of site TLD001 and policies STR2,11 and HN1 amended accordingly to allow more flexibility of housing opportunities in Tier 3 and 4 settlements especially in the west of the County.	Not accepted. The settlement hierarchy in policy STR2 is based on a comprehensive suite of Settlement Audits which were published as part of the earlier Key Messages document alongside options in terms of categorizing settlements. This established that the most sustainable settlements are generally those in the eastern part of the County. The subsequent Strategic Options document then looked at 5 distinct spatial options for how growth should be distributed throughout the County. Option 1 was entitled ‘proportional distribution’ and involved the amount of development in each settlement being based on where a settlement is in the settlement hierarchy. Following an assessment of consultation responses, Option 5 which was a ‘Sustainable Distribution plus refined approach to rural settlements’. This option involved planned growth through allocations in the first three tiers of the settlement hierarchy and provision in the bottom two tiers through local needs based housing development. This is felt to be a far more sustainable approach as it is based on the relative sustainability of settlements rather than the “even distribution” advocated, which ignores this main principle. Although it is acknowledged that the new allocations are in the eastern half of the County, it must be stressed that the Plans housing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					supply comprises more than just new allocations. The Housing Balance Sheet comprises completions that have already taken pace in the first 4 years of the Plan period, housing commitments that have a valid planning permission at present and allowances for small site and large site windfalls. As part of this wider housing supply there will be scope for housing in the western part of the County. In Tier 4 Defined Villages such as Trelawnyd policy STR2 focuses on schemes which bring about local needs affordable housing either through small scale exceptions schemes on the edge of settlement boundaries or windfall sites within settlement boundaries, and allows an element of market housing where necessary to deliver local needs housing. The settlement of Trelawnyd has a relatively compact shape with development to the north and south of the A5151 London Rd. The southern part of the settlement features a conservation area and to the west and north of the settlement is the Clwydian Range and Dee Valley AONB which is a landscape of national importance. The candidate site promoted by the objector adjoins the western edge of the settlement on the south side of the road and forms part of the designated AONB. This is a statutory landscape of national significance where PPW states 'National Parks and AONBs are of equal status in terms of landscape and scenic beauty, and must both be afforded the highest status of protection from inappropriate developments'. There is a firm defensible edge

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					to existing built development and the site forms an integral part of the wider agricultural landscape which affords far reaching views across the AONB. Development on any part of the site would harm the character and appearance of the locality and the objector fails to identify what “part” of the site they feel could be developed, or how this could sensibly be delineated. Land on the eastern edge of the settlement on the north side of London Rd offers scope for an affordable housing exceptions scheme where there would be no harm to the AONB. The objector seeks revisions to policy HN1 to allow more scope for housing in tier 3 and 4 settlements in the West of the County, and specifically site TLD001 in Trelawnyd. As set out above TLD001 is not considered appropriate for allocation in policy HN1.
47	STR2: The Location of Development	Support	we welcome the classification that Gwernaffield is a 'Tier 4' Rural Defined Village with a settlement boundary this surely emphasising that the above development should certainly never be allowed to progress any further.		Support is noted.
85	STR2: The Location of Development	Support	I wish to register my support for the plan in relation to the village of Pantymwyn. and its proposed classification as a Tier 4 defined village and the non inclusion of 5 candidate development sites as a Tier 4 village and for other reasons		Support Noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
126	STR2: The Location of Development	Support	I wish to thank the council for a very thorough and responsible Local development plan. For example, you have recognized that my home, Pantymwyn, is to be defined as a Tier 4 village. This recognizes the strong community nature of such an established community, which would be seriously changed by any further development. Thank you. This is a thank you for recognizing the importance of the natural environment in Flintshire. You state in (Environment) 8.1 that 'Flintshire has a high quality NATURAL and built environment which is one of it's primary assets. This provides a context for PROTECTING important landscapes, biodiversity and habitats, attracting investment, promoting tourism and ensuring the county is a sustainable place to live and work.' Where I live in Pantymwyn there is an abandoned area between pen y fron road and Cilcain road which has returned to wild meadow and woodland. With no management it is a thriving		Support noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			ecological community. The abundance of cowslips and orchids in Spring I have not seen since the 1970's and that is just one example. I am a trained ecologist and carry out many surveys in the area for different organisations such as the RSPB, BYO, NW wildlife trust. Thank you for recognizing the importance of such areas, for controlling the amount of development allowed and making my life and that of the village safe, settled and enriched.		
136	STR2: The Location of Development	Object	The Joint Committee broadly supports the overall strategy set out in the plan, which allows for a level of growth in sustainable centres whilst seeking to protect key environmental assets such as the AONB. The focus on locating employment and housing growth in strategic sites and main services centres, all of which are outside the AONB or its immediate setting, is supported, together with the recognition that limited growth in a number of the rural settlements in and around the AONB will be necessary to meet local needs and help sustain essential services for both residents and visitors. Strategic Policy STR13 'Natural and Built Environment, Green Networks and Infrastructure' has		Not accepted. The settlement hierarchy in STR2 is based on a comprehensive suite of Settlement Audits which informed the earlier Key Messages document and Strategic Options consultations. Tier 5 'Undefined Settlements' are those which have the least facilities and services and often poor accessibility and therefore represent the least sustainable settlements in the County. Given this, and their small size they do not have the same policy approach as the other settlements, in that they do not have a defined settlement boundary. The policy wording in criteria e. of STR2 permits only sensitive and small scale housing developments which take the form of either infill or rounding off. A further policy proviso is that developments must be for local needs affordable housing. In many respects the approach is similar to small scale exceptions schemes, but without the delineation of a settlement boundary. The explanation in para 5.16 further explains the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the full support of the Committee, notably the commitment to 'conserve, protect and enhance the quality of … the Clwydian Range and Dee Valley AONB'. The Joint Committee supports the proposed 5 tier settlement hierarchy, noting that most rural settlements in the AONB or within its immediate setting are classed as Tier 4 Defined Villages (Cilcain, Gwernymynydd, Nannerch, Nercwys, Pantymwyn and Trelawnyd) or Tier 5 Undefined Villages (Afonwen, Cadole, Gwaenysgor and Llanasa) where limited development will be permitted in the form of infill development, rounding off of the settlement or local needs affordable housing. Whilst it is possible to assess where development will be permitted in the Defined Villages, which have settlement boundaries, it is less clear where development might take place in the Tier 5 settlements. The committee would suggest that additional safeguards to prevent the unacceptable expansion of these settlement is required to set out more precise criteria against which proposals will be judged.		policy wording by stating 'In these lower tier settlements, development needs to be sensitively conceived and designed …. and to respect the character and appearance of the site and its surroundings'. The implementation of the policy requires an analysis of the form and pattern of built development in each of the settlements and the relationship between built development and open countryside. The success or otherwise of a proposed development is whether it respects the present development pattern and respects the character and appearance of the locality. These are concepts which are embodied throughout the Plan and particularly in policies PC2 and PC3. By way of example, in the case of Afonwen there are distinct blocks of built development to the north and south of the A541. Even without the benefit of a settlement boundary, this pattern of development is clearly recognizable and provides a firm evidential basis with which to consider development proposals. In this context it is not considered that further detailed guidance is necessary.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
212	STR2: The Location of Development	Object	We do not feel that allocating large scale Housing in villages that do not have a primary school e.g. New Brighton, Alltami can be considered "sustainable". This will encourage car use, and contrary to Active travel policies, since school will be too far for children to walk. (See current application for 97 houses in New Brighton ref 060220)	Remove any villages without a school from "Sustainable category" e.g. New Brighton and place in lower tier	Not accepted. The designation of New Brighton as a Tier 3 sustainable settlement is based on the earlier Settlement Audit. Although recognising that New Brighton does not have a school it does have a range of other services and facilities and bus service between Mold and Buckley and onto Chester. Both Sychdyn and Mynydd Isa have a school and New Brighton sits between the two. In this context it is considered that New Brighton is properly recorded as a Tier 3 Sustainable Settlement. Mynydd Isa has a school on a split site and these are 1.1km and 1.7km from the New Brighton site. The route follows pavements and is capable of providing a safe and convenient route to school. The school at Sychdyn is located 1.25km from the site and measures are presently being considered to secure a safe and convenient route. A planning application is presently under consideration on the allocated site and this will involve provide a further opportunity to assess of the sustainability of the site in terms of accessing schools. It is not accepted that any settlements without a school should be removed from tier 3 Sustainable Settlements category as settlement categorization is based on a combination of factors.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
272	STR2: The Location of Development	Object	Objections to affordable housing exceptions policy in Tier 2,3,4 and 5 settlements and the affordable housing policy within the Tier 3 and 4 settlement boundaries. please refer to attached pdf file below for detailed objection. Objection to Policy STR2 Location of development: Rural exception sites and Tier 3 and 4 villages. The need for affordable housing in the rural area is strongly supported and whilst the sentiment of the rural exceptions policy is well meaning, it is not fit for purpose. Reliance on STR2 (ii) through the exceptions policy simply will not work. It is a flawed policy which has provided no meaningful affordable housing contribution in the rural areas. Attempts have been made to elicit a response from the local planning authority as to how many rural exception dwellings have been provided in the county since its introduction. These have included Freedom of Information requests but no evidence has been produced regarding the numbers, if any, of exceptional site	The rural exceptions policy needs to be changed to allow on site market housing as cross subsidy for affordable housing. This need not involve excessive development out of character with the rural settlement	Not accepted. The provision of small scale affordable housing exceptions in STR2 as further explained in HN4-D is a means of providing affordable housing on the edges of settlements. The approach is fully in line with PPW (para 4.2.34). However, para 4.2.34 of PPW specifically states 'Affordable housing exception sites are not appropriate for market housing'. Unless there is a change to national planning guidance it would not be appropriate to amend the Plan to include an element of market housing / cross subsidisation on exceptions schemes. Whilst the objector in a lengthy statement criticises the Council for a lack of clarity in relation to elements of STR2, from above the Council is satisfied that the policy aligns with PPW, and where Welsh Government have no issues with the spatial strategy of the plan. Having criticised a lack of clarity, the objector fails to define what "on site market housing" means, at what scale, what mechanisms there would be for "cross subsidy", or what "excessive development" means. Without this clearer expression of what is sought via the objection, it is difficult to see how the soundness of the plan is challenged.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			dwellings that have been either approved or built. The only such development is the Maes Y Goron site at Lixwm. This 25 unit site was granted in 2007 and, although the cooperation and negotiation between the developer and the planning authority was well intentioned, it has been fraught with difficulty ever since. It represented the first and only attempt to bring forward a rural exception site in the county. The lessons learned have demonstrated that the exceptions Policy HSG11 of the UDP is an ineffective mechanism to bring forward local needs housing in the rural area. In light of this experience it is surprising and disappointing that the planning authority reproduces exactly the same policy in the clear knowledge that it has failed. In response to an enquiry on a different site it was stated that, “The policy has worked well in terms of preventing market dwellings in these settlements but has perhaps worked less well in terms of the		

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			numbers of affordable houses it has delivered". This is a clear admission of its failure. If it is serious in seeking to provide affordable housing in the rural area, then it must re-think its policy. Otherwise it might as well acknowledge that there is no prospect of helping the rural community provide the type of housing that it needs. Implementation Statement 3 of the current UDP (Monitoring the Plan), states that "The Council will continuously monitor the effectiveness of policies and proposals in the Plan and will respond to changing economic, social, environmental and legislative circumstances in order to review and update the Plan". Paragraph 20.13 of the explanatory text emphasises how important this is in terms of measuring the effectiveness of its policies and proposals. "It is important that the policies and proposals in the UDP are regularly monitored and reviewed in order to gauge their effectiveness as they are implemented. Regular monitoring will indicate whether or not the Plan's aims are being met and will ensure that it remains the		

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			most appropriate and locally accepted response to current issues of environmental, social and economic importance". LDP Manual paragraph 5.2.2.2 advises that existing planning policies should be reviewed to assess their effectiveness and reiterates this later by saying that useful sources of existing information include the appraisal and monitoring of previous/extant Development Plans. The planning authority clearly have not done so in relation to the effectiveness and intent of this policy. Review should also have been triggered by RTPI Cymru's research carried out by Cardiff University and published in January 2019 which highlighted the failure of this policy nationally. With regard to the Tier 3 villages and criterion iii) of the policy it is hard to see how this will realise any affordable housing. The affordable housing area/units threshold applies to sites capable of accommodating 10 or more units. However, there are no undeveloped sites of such a size within any of the Tier 3 villages		

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and it follows that no affordable house would be provided. Any such site has already been developed. For the Tier 4 defined villages, the policy would permit windfall market housing where it is essential to the delivery of affordable housing. Whilst this is a step in the right direction there is a lack of clarity as to how it will operate. Paragraph 5.15 states that, “in the case of windfall sites, scope exists for limited market housing where it can clearly facilitate local needs affordable housing. The additional flexibility arising from allowing market housing should help improve the viability of local needs affordable housing”. No further clarity is provided in Policy HN3 Affordable Housing.		
269	STR2: The Location of Development	Support	As a resident of Pantymwyn I am pleased to see that the village is classified as a Tier 4 Defined Village. This classification accurately defines the nature of the existing village and places upon it the restrictions on any future developments which will		Support noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			ensure that its character remains essentially unchanged for the foreseeable future. I note the possible impact on Pantymwyn of Policies HN3 and HN4-D with regard to Affordable Housing but, as the Plan does not set out a case for the creation of Affordable Housing in the village, I believe the parameters set out in the Plan for such developments should provide reassurance to existing residents. Given that my focus has been on the village of Pantymwyn, I consider that the draft LDP is a well researched and structured blueprint for the future of land development in the village and fior the County as a whole.		
208	STR2: The Location of Development	Support	I would like to put forward the site of the present India Restaurant on Hawarden Road, Hope. It could be a site that could fit in with the new Welsh Assembly Self Build Scheme, which has funding of £210 million and would be a valuable addition to the LDP housing policy and would fit in with policy STR2. It would also be a useful addition to the housing allocation in Hope.	Inclusion of additional india restaurant site on Hawarden Road, Hope.	Not accepted. The former Indian Restaurant at Hawarden Road Hope is within the settlement of HCAC in both the adopted UDP and the Deposit LDP. The development of the site has been previously constrained by its location on the line of the Hope – Caergwrle Bypass, although this road scheme has now been dropped by the Council. Given its location within the settlement boundary it could be developed for a variety of types of housing as set out in STR2. The Plan makes an allowance for small site windfalls and the site could be delivered as part of this. However, the restaurant has recently been trading again.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
373	STR2: The Location of Development	Object	Leeswood is classed as a Sustainable Settlement with a projected growth rate of 14%. Leeswood consists of some 800 homes. New homes projected for the 15 year LDP period = 14% x 800 = 112. New homes Approved for Leeswood since 03 Dec 2012* = 26 (includes Ivy Cottage = 7 homes and Wales Living Space = 13 homes). New homes under consideration (Site for > 10 homes) = 22 + 4 apartments (Pontybodkin Hill). New homes shown as Preferred Allocations under LDP = 0. New homes needed to allow for projected growth of 14% = circa 60 shortfall (at Nov 2019). (* 26 homes since 03 Dec 2012 ... includes for build start date slipping > 2015 / start of LDP).	Since 03 Dec 2012 ... 3 large schemes (7, 8 and 5 homes each) account for 77% of the 26 new homes Approved and delivered for Leeswood in the last 7 years. 4 individual homes and a pair of semi-bungalows have been Approved, so Total = 6 homes Approved over 7 years on sites < 2 homes. Changes:- Leeswood needs a ' > 10 homes site' under Preferred Allocations in LDP to allow for projected growth of 14% = circa 60 new homes shortfall (at Nov 2019).	Not accepted. The table below para 5.13 of the Deposit LDP sets out an apportionment of growth across the 5 tiers of the settlement hierarchy. Accordingly, 14% of the Plans total housing provision will be directed to Tier 3 Sustainable Settlements. It does not mean that every settlement within tier 3 will grow by 14%. Leeswood has undeveloped land within the settlement and there is presently a planning application for 26 houses at the former Laura Ashley site. However, in the adjoining settlement of Coedtalon / Pontybodkin there is a housing allocation carried over from the UDP and the bulk of this now has detailed planning permission. These are all brownfield sites and the focus in these two settlements in this Plan period should be for these to be developed. Allocating further greenfield land would detract from the delivery of these sites.
342	STR2: The Location of Development	Object	See attached representation. Unable to complete this box due to word restriction		Not accepted. The Plan does not assign specific growth bands or targets for specific settlements and the objector has argued against “apportioning a strict percentage growth” in its

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			The Plan therefore seeks to distribute development spatially across the County and emphasises the need for a settlement strategy to provide the basis for a spatial pattern of housing development. The site sits on the edge of the settlement of New Brighton which is designated as a 'Sustainable Village'. A greater proportion of development will be directed to the top three tiers of the settlement hierarchy which includes New Brighton. A broad brush distribution of housing, based on the pre deposit published version of the plan is set out below. The broad apportionment of growth may be further refined as the Plan progresses. • Tier 1 Main Service Centre 40-45% • Tier 2 Local Service Centre 35-40% • Tier 3 Sustainable Villages 15-20% • Tier 4 Defined Villages 1-2%		previous representation to policy STR2, objection reference 333. Growth over the Plan period in a settlement can be achieved through a variety of sources of supply including allocations, completions, commitments and windfalls. It is evident that New Brighton has seen substantial growth in the past few years with the development of the UDP allocation (Elan Homes) and a recent windfall development by Edwards Homes. The Plan has allocated a new site at Cae Isa on which there is a present planning application. Part of this allocated site is already within the settlement boundary. It is not considered that given the size of the settlement, a further allocation is necessary or appropriate in this settlement. Further commentary on the specifics of the promoted site on the eastern edge of the settlement is set out in response to other representations.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			• Tier 5 Undefined Villages 0-1% Future housing development surrounding the New Brighton settlement should be encouraged and supported in the local plan given the growth figures that are set out above.		
368	STR2: The Location of Development	Support	See attached representation. Unable to complete this box due to word restriction Policy STR2 sets out the Spatial Strategy and location of development for the County. The Policy is clear that the majority of development will be directed to the top three tiers of the settlement hierarchy as it is these settlements which are evidenced as being the most sustainable settlements in terms of the settlement audits. 4.2. Paragraph 5.13 of the LDP explains that the Plan does not seek to apportion development spatially using numerical or mechanistic methods relating to growth		Not accepted. Support for the policy is noted. However, the Plan does not assign specific growth bands or targets for specific settlements and the objector has argued against "apportioning a strict percentage growth" in its previous representation to policy STR2, objection reference 333. Growth over the Plan period in a settlement can be achieved through a variety of sources of supply including allocations, completions, commitments and windfalls. It is evident that Flint has seen substantial growth over the UDP period with the strategic Croes Atti development and that further development on remaining phases of this scheme will take place over the next few years. The Plan makes a further allocation on land at Northop Road, Flint which was previously proposed for development in the UDP, but not carried over into the adopted UDP. Both sites are considered to be sustainable and deliverable over the Plan period, particularly given that Anwyl Land are the applicant on a planning application at the Northop Rd site. With the remaining units at Croes Atti and the new allocation at Northop Road it is not considered

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			bands, rates, targets or quotas. Rather, the Plan seeks to distribute development in a sustainable manner having regard to the settlement hierarchy and by identifying the most sustainable settlements and sites. 4.3. Flint is identified as a Main Service Centre in the Deposit Plan and we agree with this designation in view of the sustainability of Flint and its wide range of services and facilities. Tier 1 settlements are intended to provide 47% of the Plan's housing requirements. This is a minor up lift from the Preferred Strategy breakdown of 40-45% of the total proportion of growth in the County. This approach is supported by our client in principle, as it seeks to provide an appropriate level of housing for each settlement. However, it is recommended that any targets provided are given as a minimum to ensure full flexibility and to assist Flintshire in maintaining		appropriate or necessary for a further large scale allocation at Croes Atti.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			their five-year supply of housing. Apportioning a strict percentage growth to each settlement as undertaken within the existing failed UDP may result in Flintshire continuing to under deliver on their housing supply and stop the market from being able to deliver sustainable housing sites. 4.4. Allowing further growth to the Main Service Centres with Sites which are readily available and unconstrained will help to ensure sufficient flexibility and deliverability of housing. The proposed allocation at Northop Road (HN1-4) is fully in accordance with Policy STR2. 4.5. The whole of the Site can be delivered within the plan period, the majority of which within the first 5 years. (There are no deliverability issues associated with this Site which can provide market and affordable homes).		
333	STR2: The Location of Development	Support	4.1. Policy STR2 sets out the Spatial Strategy and location of development for the County. The Policy is clear that the majority of		Support noted. However, it is not clear what the objector means by the “failed UDP” as they

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			development will be directed to the top three tiers of the settlement hierarchy as it is these settlements which are evidenced as being the most sustainable settlements in terms of the settlement audits. 4.2. Paragraph 5.13 of the LDP explains that the Plan does not seek to apportion development spatially using numerical or mechanistic methods relating to growth bands, rates, targets or quotas. Rather, the Plan seeks to distribute development in a sustainable manner having regard to the settlement hierarchy and by identifying the most sustainable settlements and sites. 4.3. Mold is identified as a Main Service Centre in the Deposit Plan and we agree with this designation in view of the sustainability of Mold and its wide range of services and facilities. Tier 1 settlements are intended to provide 47% of the Plan's housing requirements. This is a minor up lift from the Preferred Strategy breakdown of 40-45% of the total proportion of growth in the County. This approach is supported by our client in principle, as it seeks to provide an appropriate level of housing for each settlement. However, it is recommended that any targets provided are given as a minimum to ensure full flexibility		benefitted from numerous permissions granted under that policy framework. In addition, whilst from a developer perspective and for landbank purposes it may be preferable to have more "readily available and unconstrained" sites, the purpose of the LDP is to assess need and make suitable, sustainable, and deliverable provision to meet this.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and to assist Flintshire in maintaining their five-year supply of housing. Apportioning a strict percentage growth to each settlement as undertaken within the existing failed UDP may result in Flintshire continuing to under deliver on their housing supply and stop the market from being able to deliver sustainable housing sites. 4.4. Allowing further growth to the Main Service Centres with Sites which are readily available and unconstrained will help to ensure sufficient flexibility and deliverability of housing. The proposed allocation at land between Denbigh Road and Gwernaffield Road is fully in accordance with Policy STR2. The whole Site can be delivered within the plan period (market and affordable homes) and there are no deliverability issues associated with this Site.		
338	STR2: The Location of Development	Object	See attached representation. Unable to complete this box due to word restriction. Anwyl Homes firmly believes that additional development should be apportioned to Flint given the locational advantages in terms of sustainability and connectivity with wider North Wales, the North West		Not accepted. The Plan does not assign specific growth bands or targets for specific settlements and the objector has argued against "apportioning a strict percentage growth" in its previous representation to policy STR2, objection reference 333. Growth over the Plan period in a settlement can be achieved through a variety of sources of supply including allocations, completions, commitments and windfalls. It is evident that Flint has seen

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			of England and direct rail connections to London.		substantial growth over the UDP period with the strategic Croes Atti development and that further development on remaining phases of this scheme will take place over the next few years. The Plan makes a further allocation on land at Northop Road, Flint which was previously proposed for development in the UDP, but not carried over into the adopted UDP. Both sites are considered to be sustainable and deliverable over the Plan period, particularly given that Anwyl Land are the applicant on a planning application at the Northop Rd site. With the remaining units at Croes Atti and the new allocation at Northop Road it is not considered appropriate or necessary for a further large scale allocation at Croes Atti.
354	STR2: The Location of Development	Support	I feel the settlement boundaries within my village (Leeswood) have been sensibly placed and strongly support their retention , with no development outside of those boundaries		Support is noted.
381	STR2: The Location of Development	Object	The proposed housing development project on Ash Lane, Hawarden will place considerable extra strain on existing facilities within Hawarden such as schools, medical services and the existing road network. Attempting to access the medical services is already very difficult. The volume of traffic on both Ash Lane and Gladstone Way is already high, as	I believe that the planned construction of 288 houses on Ash Lane, Hawarden should be reconsidered.	Not accepted. It is accepted that new development will create pressure on existing services and facilities. However, Betsi Cadwaladr University Health Board have not objected to the Plan nor this allocation. Similarly, the Local Education Authority have not objected to the Plan nor this site. Both parties have been stakeholders in the Plans preparation and the lpa is continuing to work with each party to ensure that additional capacity can be provided. It must be stressed that completions on the site are not anticipated until 2023/4 and

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			is the speed at which some of the vehicles travel.		the site will be developed over several years, and this gives time for capacity and mitigation measures to be put in place. In terms of highway capacity, the Councils Highways Development management Officers have no objection to the proposed development. Any issues relating to the enforcement of speed limits on local roads are a matter for the police to enforce.
387	STR2: The Location of Development	Support	See attached representation. Unable to complete this box due to word restriction. Policy STR2 sets out the Spatial Strategy and location of development for the County. The Policy is clear that the majority of development will be directed to the top three tiers of the settlement hierarchy as it is these settlements which are evidenced as being the most sustainable settlements in terms of the settlement audits. 4.2. However, the Plan does not assign specific growth bands or targets for specific settlements and the objector has argued against “apportioning a strict percentage growth” in its previous representation to policy STR2, objection reference 333. Growth over the Plan period in a settlement can be achieved through a variety of sources of supply including allocations, completions, commitments and windfalls. It is evident that Mold has seen substantial growth over the UDP period through allocated sites and windfall development. The Plan makes two further allocations at Maes Gwern where Wates are presently developing 160 units and the new allocation at Denbigh Rd / Gwernaffield Rd, which the objector is promoting. Both sites are considered to be sustainable and deliverable over the Plan period, It is considered that sufficient provision for growth through new allocations has been made in Mold and other

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			distribute development in a sustainable manner having regard to the settlement hierarchy and by identifying the most sustainable settlements and sites. 4.3. Mold is identified as a Main Service Centre in the Deposit Plan and we agree with this designation in view of the sustainability of Mold and its wide range of services and facilities. Tier 1 settlements are intended to provide 47% of the Plan's housing requirements. This is a minor up lift from the Preferred Strategy breakdown of 40-45% of the total proportion of growth in the County. This approach is supported by our client in principle, as it seeks to provide an appropriate level of housing for each settlement. However, it is recommended that any targets provided are given as a minimum to ensure full flexibility and to assist Flintshire in maintaining their five-year supply of housing. Apportioning a strict percentage growth to each settlement as undertaken within the existing failed UDP may result in Flintshire continuing to under deliver on their housing supply and stop the market from being able to deliver		Tier 1 Main Service Centres. It is not considered that any additional growth should be apportioned to the Tier 1 settlements.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			sustainable housing sites. 4.4. Allowing further growth to the Main Service Centres with Sites which are readily available and unconstrained will help to ensure sufficient flexibility and deliverability of housing. We contend that residential development at the land to the South of Gwernaffield Road is fully in accordance with Policy STR2. The Site can deliver a significant element of housing within the plan period (market and affordable homes) and should be allocated within the Local Plan as there are no deliverability issues associated with this Site.		
423	STR2: The Location of Development	Support	supportive of the FLDP directing housing growth the housing growth the sustainable settlement and using the settlement hierarchy as a basis for this.		Support is noted.
451	STR2: The Location of Development		As Nannerch is a defined village there is little prospect of any realistic development despite some good proposed candidate sites suggested from the outset. There is talk in the policy of protecting the rural communities, pubs, schools halls etc but in reality there doesn't seem to be		Not accepted. The LDP has focused growth towards the higher tier settlements of the plan (Tiers 1, 2 and 3) where it is more sustainable to allocate sites close to existing services and facilities, and reduce the need to travel in line with national planning policy (PPW10). Nannerch is a Tier 4 'Defined Village' which

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			any flexibility outside the very restrictive settlement boundary. We are concerned at the prospect of no new housing until 2030 and loss of inward investment that any new development may bring. 9.25. Opportunities to expand the network for walking and cycling along old railway lines should be proactively sought and encouraged where possible. 9.36. Public Houses should be treated as 'assets of community value' as they are in England to ensure that they are safeguarded. We don't think you policy is strong enough in this aspect. 9.37. With so few sites earmarked for cemetery extensions, there should be the flexibility to extend other cemetery's under this plan should the need arise. 10.6. Every effort should be made to permit sympathetic farm diversification. This is specifically important in the AONB to increase tourism opportunities. 12.21. The AONB Supplementary Planning Guidance Note should be implemented in all applications in the AONB. 12.85. Whereas we are not opposed to the safeguarding of jobs that the extension to the quarrying that Fron Haul may bring, and we have currently not received any opposition, careful consideration		benefits from some services and facilities to sustain local needs. Policies within the plan enable small scale local needs housing within rural areas such as Nannerch, either as windfall sites within the settlement boundaries or as small exception sites on the edge of settlement boundaries for affordable housing. Windfall market housing will only be permitted on sites when it is essential to delivering affordable housing. Policies STR2 and HN4-D specifically provide the opportunity to develop local needs housing within Tier 4 Defined Villages such as Nannerch therefore it is not necessary to allocate a site to meet future needs.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			should be given to the Semi Natural Woodland that screens it from the A451 and AONB and any protected species such as Dormice. Any permission should ideally be a short term extension with realistic dates to allow the quarrying without the long term future threat of quarrying over decades.		
475	STR2: The Location of Development	Object	UDP policies GEN3, HSG4, HSG6 (Possibly STR2 Location of Development in the LDP) I have been advised that any building /development on the land adjacent to Mountain View Afonwen would not be allowed due to the fact that the land has been redesignated as open countryside. The site is sustainable as is borders the A541 has mains sewerage, water, electricity and is served by bus routes. The plan does not make any consideration for the smaller hamlets like Afonwen. Small controlled infill development should be considered to sustain and grow these hamlets and stop them being stockbroker belts where only people working away from the area can afford to buy.	seeks allocated site	Not accepted. It is disappointing that the objector has sought to put forward the site at this late stage in the Plans preparation. An earlier submission at candidate site stage or at Alternative Sites (Preferred Strategy) stage would have enabled a full assessment and comparison alongside other sites. It is disappointing that the site is submitted without a Sustainability Appraisal as required by Welsh Government in the Development Plan Manual 3 in Diagram 8 'Any new sites proposed at Deposit stage will be required to submit an SA with their site submission'. The site is approximately 0.34 acres in size. The site is located in Afonwen on the A541 Mold to Denbigh road. The site being promoted is located outside the settlement boundary in the adopted UDP and therefore in open countryside. This is the same as the Deposit LDP where the site sits within open countryside. The site does not comply with the Preferred Strategy as Afonwen is a tier 5 Undefined Village which does not have a settlement boundary and where no new allocations will be made. The lowest Tier

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					(5) comprises small settlements which have a poor level of services and facilities, and often poor accessibility and are the least sustainable settlement in the County. Afonwen has few facilities and services and residents would be dependent on car based travel to access everyday needs in the nearest sustainable settlement or service centre. The designation of Afonwen as a Tier 5 settlement does not mean that no development can take place over the Plan period. New development which provides for local needs based affordable housing can take place in line with policy STR2, provided that it represents sensitive small scale housing in the form of infill or rounding off. The proposed site is clearly out of step with the policy approach given that the site does not relate to the main built part of Afonwen some 400m to the east. Appendix 1 of the LDP written statement clearly indicates a planning permission for 19 units at the former Wilcox Coachworks. There is therefore scope for development to be delivered in Afonwen. The site does not act as an infill site and it is considered to form an illogical intensification of the existing sporadic pattern of development. Although it is acknowledged that the site was a brownfield site, the garage has been long gone and, although a little untidy, it now presents an open character along with the adjoining

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					undeveloped land and reads as part of the surrounding countryside when viewed from the A541. On the adjoining land to the east a planning application (056703) for three dwellings was refused on 05/07/17 and a subsequent appeal was dismissed on the basis that the Inspector considered that it would be contrary to national and local policy given its open countryside location and that it would not represent sustainable development. The approach regarding Tier 4 and 5 settlements in policy STR2 recognises the need to provide for opportunities for new housing to meet local needs provided that each proposal and site is sustainable and appropriate. Policy STR2 allows small scale affordable housing proposals in the form of infill or rounding off development. Afonwen has distinct blocks of development on both the north and south side of the A541 and the site is located some 450m to the west of this and therefore not considered to meet the requirements of STR2e. Although it is recognised that there are mains supplies that are achievable for the site, it is considered that there are overwhelming negative factors which outweigh these few factors which on their own do not define sustainable development. A number of consultation responses from key stakeholders are set out below:

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Highways: Highways have objections to the site due to limited visibility, it appears impracticable to create a new access onto the A541. Any development of the site should be limited to ensure that traffic movements do not exceed those of the current permitted use. Ecology: With regards to ecology, The Council's Ecologist team carried out a desktop assessment (in the light of Covid -19 restrictions) and considered that the regenerating scrub more mature trees and disturbed ground with rubble/debris had. the potential for nesting birds, badger and the debris can provide refugia for amphibians and reptiles. The Ecologist commented 'However I am aware that the adjacent site is subject of a planning application and photos of that site show that it has already been cleared and the boundary trees cut back and which may apply to the whole site. Without photos or being able to undertake a site visit I can't confirm what is actually present'. Any application would need a statement with regards to the habitats and species present on site and the measures to avoid, mitigate, compensate, enhance and manage wildlife features. This might just relate to the boundary features.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Protected Landscape: Another constraint to the site is that the landscape is protected. NRW have been consulted and responded 'This site is located within the Clwydian Range and Dee Valley Area of Outstanding Natural Beauty. NRW consider a carefully designed scheme could be accommodated on the site. At this stage NRW cannot comment upon its capacity for multiple dwellings, we provide the LPA with some guidance below on how to consider capacity within the allocation'. NRW Contextual appraisal response: The A541 has a strong rural character. There are scattered residential properties along the roadside. They are largely set back from the road edge within gardens/ behind hedgerows with trees. The site contains a number of trees. It is not clear which of these trees could be retained if the site were allocated for housing. NRW would advise the following landscape planning objectives need to be addressed by any future planning scheme. NRW recommend the LPA consider these in deciding the capacity of this site for residential allocation: NRW advise that a site appraisal which considers landscape and visual issues should be submitted with any planning application to ensure the scheme is integrated into the AONB without any adverse effects, the appraisal document should consider the following:

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					• Retain a green frontage to the site. This might entail a grass verge, new hedgerow boundary with scattered trees behind the highway sight line. • Set the building frontage back from this boundary within garden space. • Keep the site access simple and avoid walls, brick piers, over-elaborate detailing. • Utility uses of external space are to be hidden from view (e.g. car parking, bin stores). • The council's arboriculture officer needs to provide advice on the value of existing trees, root protection zones and the site's capacity for one or more houses. Further constrains include that he submitted site is situated on a Secondary B aquifer which has low sensitivity, however there is potential for gross contamination at this site due to its previous use as petrol station. As part of any planning application for this site we would advise planning conditions be imposed to ensure that risks associated with any contamination at the site are appropriately managed. Additionally, this site is adjacent to a potentially contaminative land use/historical land use and surface water/groundwater features.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The site is also immediately adjacent to a major road and a noise impact assessment would be necessary. Although some information has been provided: one site plan, drawing and picture. There have been no background studies or technical reports provided to illustrate how the development may overcome the above mentioned constraints. A key principle in PPW is that allocations are viable and deliverable yet the objection provides no assurances or evidence that the site can be development adequately. In conclusion the site does not comply with the Plans Strategy in respect of the spatial distribution of development. It is considered that development of this prominent site would result in residential development which would be poorly related to existing development and visually damaging to an area of attractive open countryside. The site contains many constrains that have not been addressed. The site is not considered to be necessary or appropriate as an allocation.
627	STR2: The Location of Development	Object	Our client's specific interest relates to the settlement of Northop, which is identified as a 'Tier 3 - Sustainable Settlement'. We agree that it is appropriate to identify Northop as a Tier 3 Sustainable Settlement. However, we have 4 key grounds for objection to Policy STR2, as follows: 1. The quantum of development distributed to the	The distribution of development to the Sustainable Settlements and in particular Northop, should be increased. Please see supporting statement.	Not accepted. The Deposit Plan explains in the table below para 3.58 the spatial options that were considered and the commentary for option 5 (the chosen option) clearly states that 'Development….based on identifying the most sustainable settlements and sites'. As explained in para 5.13, the Plans approach to distributing development has moved away from the UDP approach of growth rates, which gives the impression that every settlement has to have

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Tier 3 Sustainable Settlements; 2. The absence of any employment land requirement or allocations for the the Tier 3 Sustainable Settlements; 3. The level of development apportioned to each Tier 3 Sustainable Settlement, and specifically Northop; and, 4. The types of development permitted within Tier 3 Sustainable Settlements under part (iii)(c) of the policy. 3.2 We address each point in turn.		planned growth. This section of the Plan specifically states 'The Plan intentionally avoids creating a perception that every settlement in every tier must contribute towards growth through having a housing allocation'. 1. The quantum of development distributed to the Tier 3 Sustainable Settlements: Para 5.3.5 of the Preferred Strategy document identified a broad apportionment of growth to each of the 5 tiers of the settlement hierarchy. The paragraph clearly states ' This is indicative at present, being based on completions during the first two years of the LDP period, commitments as at April 2017 and the initial results of the assessment of Candidate Sites against the Preferred Strategy. The broad apportionment of growth may be further refined as the Plan progresses'. In the Deposit LDP the apportionment to Tier 3 settlements is 14% which is only slightly below, and broadly in line with that shown in the Preferred Strategy. This is not a significant reduction as 1% of the Plans housing requirement of 6,950 would equate to 69 dwellings. There is no justification for the objectors assertion that 'there does not appear to have been any regard for meeting local housing needs in rural areas'. The fact that there is no housing allocation in a settlement does not mean that there can be no growth in a settlement. Growth could already have been achieved through completions in the first four

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					years of the Plan period, through existing commitments and through allowances for small site and large site windfalls. This provides scope for development throughout the settlement tiers and across County. However, planned growth through new allocations has been focussed on the most sustainable settlements which relate to the growth area in the north eastern part of the County. It is of note that Welsh Government have made representations on the Plan and stated 'The Welsh Government is generally supportive of the spatial strategy and level of homes and jobs proposed and has no fundamental concerns in this respect' and offered 'support in principle' for 'The scale and location of homes and jobs'. 2. The absence of any employment land requirement or allocations for the Tier 3 Sustainable Settlements: Policy STR2 does not by itself provide guidance in respect of the spatial distribution of employment development, other than to specify that employment development will take place on allocated sites and in principal Employment Areas. The County has a well- established network of existing employment areas focused particularly in the Deeside area, along the Dee Estuary and in some of the key settlements. Employment allocations have been identified through the two strategic sites (STR2) and the employment allocations (PE1) as well as additional flexibility provided through the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					identification of Principal Employment Areas and PE3 and PE5. The Plan does not take the approach of seeking to apportion employment growth across the settlement hierarchy or to rural areas. For rural areas the Plan adopts a flexible policy approach through PE3, PE4 and the tourism policies. A flexible approach to employment development is considered more appropriate in rural areas than identifying and allocating sites for employment development for which there may be no need. In the case of Northop there is still extant planning permission for office use at Northop Country Park and Northop College (part of Colleg Cambria) submitted proposals at Alternative Site submission stage for an expansion to the existing campus on the north side of the road, for a mixed use educational based development. The Employment Land Study establishes that there is sufficient range and type of employment land and there is no need for further allocations for this Plan period. The focus of the Plan is to deliver existing employment sites, particularly the two strategic sites. 3. The level of development apportioned to each Tier 3 Sustainable Settlement, and specifically Northop: As commented on above the Plans spatial strategy is not premised on assigning a set amount of growth to each settlement in each tier of the settlement hierarchy. Such a mechanistic and rigid approach was considered as part of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the earlier consultation stages and was generally not looked upon favourably, either by the Council or by the housebuilding industry. It has no regard to the particular characteristics and circumstances of each settlement and does not represent an informed or sustainable approach to distributing development across the County. With 22 sustainable settlements across the County it simply cannot be case that every single settlement has a housing allocation. The objector questions whether the sites identified in Northop in the Urban capacity Study will be delivered. The intention of the Urban Capacity Study was to establish through detailed survey and assessment work whether the Plans annual allowances in the Housing Balance Sheet for small sites and large site windfalls are realistic and achievable. The findings of the UCS is that the allowances are a conservative estimate of what may be delivered having regard to i) past trends and ii) the findings of the Study. It is not necessary for every single site in the UCS to be delivered. The key point is that the Plan's policies allow for development in Northop through completions, commitments, allowances for windfalls and small scale affordable housing exceptions sites, and it would also be counter-intuitive to the principle of encouraging commitments or windfalls to come forward, if more land were also allocated.. The Plan has demonstrated how its housing requirement can be delivered through the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					various elements in the Housing Balance Sheet. The spatial strategy has sought to identify the most sustainable settlements and sites which sit comfortably with the County wide and regional growth strategy. Although Northop is seen as a sustainable settlement, and delivered housing in the UDP period, this does not mean that it has to have a housing allocation in the LDP. It is a relatively small settlement, and despite have the presence of the college and proximity to the A55, has a historic character as reflected by the conservation area. Furthermore, the absence of an allocation in one settlement, is not considered to make the Plan unsound, when provision for housing has been made elsewhere. There is some uncertainty over the timing and detail of the progression of the red route linking the A55(T) with the A494(T). It is unlikely that this will be implemented until the later stages of the Plan period and therefore its implications and further consideration as to the role of Northop as a settlement is better undertaken as part of the LDP Review. 4. The types of development permitted within Tier 3 Sustainable Settlements under part (iii)(c) of the policy. In terms of criteria i, and as set out above the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Plan strategy is not based on every settlement having a housing allocation. In terms of criteria ii. the settlement boundary in Northop has been extended to include a small parcel of land off Church Rd (NOR005). Although a small site, this has the potential to deliver a small windfall development of 5 dwellings and meet some local needs. In terms of criteria iv. there is planning permission (058740) for the erection of 4 dwellings and 2 apartments at the United Reformed Church. Despite not having a housing allocation there is clearly provision for a modest level of the development in the settlement.
674	STR2: The Location of Development	Object	Please find attached a representation in relation to the LDP consultation which relates to Gwernaffield. Policy STR2 sets out a Settlement Hierarchy and identifies Gwernaffield as a Tier 4 'Defined Settlement'. This guides that Tier 4 - housing development will only be permitted within settlement boundaries related to the scale, character and role of the settlement and which delivers local needs affordable housing. Provision will include: i. Windfall market housing (only permitted when essential to delivering affordable housing) ii. Small Scale Exceptions Schemes for Affordable Housing adjoining settlement boundaries It is considered that Gwernffield should be a Tier 3 settlement as it is in a	The above named site needs to be included as an allocated site for the following reasons: - The proposed Candidate Site GFD001 is a logical extension to Gwernaffield providing approximately 3ha developable area for housing which would provide up to 80 dwellings over the plan period. - Gwernaffield is a sustainable settlement which	Not accepted. The settlement hierarchy derives from the settlement audits which informed options for a settlement hierarchy as set out in the earlier Key Messages document. The settlement audits looked at factors such as size, character, role, accessibility and the level of services and facilities and provides a measure of the sustainability of settlements. The methodology used in assessing and categorizing settlements is set out in Appendix 1 to the Key Messages document. Figure 2 identifies bandings of settlements based on the settlement audit assessment work and Gwernaffield was included in the 7th of 10 groupings. Appendix 2 set out the process of refining this work into a series of settlement hierarchy options i.e. different approaches to defining settlements. The feedback from the Key Messages document consultation was used to inform the identification of a preferred settlement hierarchy

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			highly sustainable location and benefits from a number of services and facilities such as an employment site, churches, school and sustainable transport. Therefore, in meeting the plans needs up to 2030, the settlement requires further growth with a housing allocation and not to rely on windfall/ exception sites. No additional land has been identified within the development boundary for Gwernaffield which is available for development, and the only land available consists of curtilages and garden areas – but these are tight and there is little potential for increasing density. The settlement and site was assessed as part of the preparation of the Deposit LDP, however, it is considered that the over-riding strategy is incorrect and additional sites need to be allocated requiring an amendment to the Tier of Gwernaffield to Tier 3 and the site GFD001 needing to be allocated to deliver suitable growth for this highly sustainable settlement and its existing population.	requires an appropriate level of growth to sustain it. - Sites have only been allocated within 9 settlements on large sites of 32-298houses (nine of the total eleven allocated sites are for over 100houses). This is not considered a sustainable approach and more small to medium sized sites should be allocated in other settlements. - - Gwernaffield does require growth and it is considered that the site is the most appropriate candidate site for this purpose.	and this was identified in the Strategic Options consultation document. The Council opted for 'A Refined Five Tier Approach to Settlement Categorisation & Defining Settlement Relationships' involving 5 tiers of settlements. Based on the extensive and robust analysis of settlements and formulation of a sound settlement hierarchy it is not considered that Gwernaffield is of a size, character, or role, nor does it have the services and facilities to warrant it being elevated to a tier 3 sustainable settlement. Gwernaffield has a school, pub and places of worship, but the employment site referred to by the objector is very small and the village does not have a shop. A large proportion of everyday needs are likely to be accessed in the nearby larger settlement of Mold. Although Gwernaffield has a bus service (6/6A), it is only hourly and timings of the first and last service would not easily facilitate journeys to and from work. In this context Gwernaffield is considered to be appropriately designated as a Tier 4 Defined Village, where planned growth is not provided for through allocations. The submission puts forward the argument that because there is a planning consent for a farm shop / convenience store that the settlement should be moved up to a tier 3 Sustainable Settlement. Planning permission for a farm shop was approved on 16/06/17 (056664), removal / variation of conditions approved on 06/10/17 (057296) and reserved matter approved on 14/11/18 (058593). Despite having planning permission for some time, the shop has not

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					been built. It is therefore inappropriate for it to be taken account of in the settlement audit. The site could potentially deliver 90 dwellings, although the allocation seeks a mix of housing and employment. Whatever the mix of development, it represents a large site which is considered to be out of scale with the settlement and the limited range of facilities and services which the settlement offers. Such a scale of development relative the size and character of the settlement is not considered to represent sustainable development. The Employment Land Study has established that there is no need for further employment allocations in the County as there is a sufficient range of employment allocations in terms of type, scale and location and this is supported by a large number of Principal Employment Areas and a flexible suite of policies. However, it is noted that in the present planning application for 80 dwellings (059396) there is no employment provision shown. The objection refers to the proximity of the site to Mold and an improved pedestrian link between Mold and Gwernaffield. However, it is 2.2km from the edge of Gwernaffield to the edge of Mold and a further 1.2km to The Cross in the centre of Mold. This is not 'reasonable walking distance' particularly when much of the section between Mold and Gwernaffield is devoid of street lighting. More specifically, the objection site is 1.9km from the edge of a large housing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					allocation in the LDP on land between Mold Rd and Denbigh Rd for 246 dwellings in the Tier 1 settlement of Mold. Housing development is also presently being delivered at Maes Gwern by Wates who are in the process of constructing 160 dwellings. In this context it is unclear why there is a need for a further 80 dwellings in a settlement which is three tiers further down the hierarchy. At present there is a well-defined edge to the eastern part of Gwernaffield created by the block of built development on the south side of Gwernaffield Rd and the ribbon of development on the north side of Gwernaffield Rd. By contrast the candidate site would extend built development further eastwards away from the well-defined edge to the settlement. The extension of the settlement boundary to include the site would represent a large extension which would be prominent along the main entrance into the village. Development would harm the character and appearance of the settlement and the open countryside. The allocation of the site would conflict with the Plan's Spatial Strategy and introduce housing developments in less sustainable settlements. There is considered to be no justification for an allocation in Gwernaffield when there is existing and proposed provision in nearby Mold at a much higher level of sustainability. Furthermore, the development of such a large site relative to the size of the settlement would harm the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					character and appearance of the settlement and open countryside.
588	STR2: The Location of Development	Support	Stewart Milne SUPPORTS Policy STR2 that states that new development will be directed towards allocated sites which includes our client's interests at New Brighton. Stewart Milne also SUPPORTS directing development to the first three tiers of the settlement hierarchy. 2.2 Stewart Milne SUPPORTS the Settlement Hierarchy table on Pages 46 and 47 of the LDP and specifically that New Brighton falls within Tier 3 (Sustainable Settlements).		Support is noted.
608	STR2: The Location of Development	Support	The plan recommends tier 4 status for Pantymwyn i.e. no major development sites or windfall developement unless the latter there is proven local need for affordable houisng. I support thsi proposal based on the following. I want to retain the village's unique character and appearance, Pantymwyn is close to an AOB/country park and has an undulating rural nature. Years ago it was called little Switzerland. It has open land close to its housing and many trees. Some open areas		Support is noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			are nature significant eg Seven Stiles, Cefn Bychan Woods). It has many footpaths. Property generally follows the original roads and is not close together. Housing is diverse in age, appearance and type including a good number of bungalow style properties. There are several small developments off the original roads with "look a like" houses, and one has urban estate density. Properties close to the AOB are generally lower in height with trees and stonewalls adding to their character. There is no mains gas. Hidden in the landscape are a couple of long standing static caravan sites used by "regulars". There is a thriving village hall, a Post Office/shop (part day), Pub and a golf course. People like living here and newcomers tend to stay.There is a natural turnover of properties which because of the housing diversity seems to satisfy demand at a rate the community is able to absorb and welcome. Significant expansion in the larger open areas eg where developers seek to build, would completely change the village's character and appearance. There would be no local means of servicing their needs. These estates I suspect would just be urban commuter		

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			landscapes with little involvement in the village. Large scale development would bring more traffic on narrow roads and also have botanical and wildlife consequences. Allowing development in larger gardens would increase density and reduce greenery and thus change character.		
622	STR2: The Location of Development	Support	Strongly support the classification of Pantymwyn as Tier 4 defined village with its strict control on housing development, including especially no market housing outside the defined settlement boundary. Urge that no changes are made as a result of landowners/developers seeking to re-instate candidate sites seeking new provision for market dwellings in Pantymwyn, or seeking changes to the defined settlement boundary.		Support is noted.
704	STR2: The Location of Development	Object	Policy STR2 sets out a Settlement Hierarchy and identifies Sychdyn as a Tier 3 'Sustainable Settlement'. This guides that Tier 3 - Sustainable Settlements will be the locations for housing development related to the scale, character and role of the settlement. Provision will include: i. Allocations; ii. Windfall market	The above named site needs to be included as an allocated site for the following reasons: - The proposed Candidate Site SYCH007 is a logical extension to Sychdyn	Not accepted. The Plans spatial strategy distributes development based on a 5 tier settlement hierarchy with only the top three tiers receiving planned growth in the form of allocations. The Plan focuses on the most sustainable settlements and sites and does not apportion quantums of development across the board. However, the provision of housing is not just achieved through allocations as development will also be achieved through

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			housing; iii. Affordable housing on sites above an area / units threshold; iv. Small Scale Exceptions Schemes for Affordable Housing adjoining settlement boundaries. However, no allocations have been identified in the settlement and only an existing 'Housing Commitment at Sewage Works, Wats Dyke Way which have already been built and marketed / sold. Therefore, in meeting the plans needs up to 2030, the settlement requires a further allocation and not to purely rely on a previous allocations and consents dating back from the Unitary Development Plan period in 2000.	providing approximately 1.75ha developable area for housing which would provide for approximately 53 units over the plan period. - Sychdyn is a sustainable settlement which requires an appropriate level of growth to sustain it. - Sites have only been allocated within 9 settlements on large sites of 32-298houses (nine of the total eleven allocated sites are for over 100houses). This is not considered a sustainable approach and more small to medium sized sites should be allocated in other settlements. - Sychdyn does require growth and it is considered that the	existing completions, commitments and allowances for small and large site windfalls. In the case of Sychdyn the UDP allocation at the former waste water treatment works is nearing completion. The delivery of the 43 units has occurred during the LDP Plan period i.e. since April 2015. The settlement of Sychdyn has therefore contributed towards meeting the Plans County wide housing need and there is no obligation within the Plan Strategy for a further allocation to be made. The objection site was submitted as an omission site as part of the preparation of the UDP. The UDP Inspector commented ''The site is about 2ha in extent and is agricultural land lying next to the south eastern boundary of the village to the south west of the New Brighton Road close to its junction with Pen-y-Bryn. There is a definite character break between the objection land which rises to the south and the built up area. The site is prominent and forms an integral part of the open countryside which in this location is designated green barrier in order to protect both the rural area from encroachment and the strategic gap between Sychdyn and New Brighton'. The green barrier around and between Mold and the surrounding villages has been retained in the Plan. In the case of Sychdyn and New Brighton there is a narrow gap of 700m between the two settlements and the development of the site would serve to reduce that gap by approximately 115m. Development of the site

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				site is the most appropriate candidate site for this purpose.	would clearly undermine the objectives and function of this particular part of the green barrier. The objection site is in a prominent location alongside the junction of New Brighton Rd and Pen-y-Bryn. The land rises up from the road to the rear of the existing gardens to dwellings on Bryn Teg and Trem-y-Foel. Development would represent a sizeable extension to the settlement and would be visually harmful to the character and appearance of the settlement and open countryside. In the context of the Plans spatial strategy, delivery in Sychdyn during the plan period, provision in New Brighton, and harm to the green barrier and character and appearance of the settlement and open countryside, it would not be appropriate to allocate the site or reduce its level of protection from green barrier to open countryside.
706	STR2: The Location of Development	Support	This Policy sets out the Council's spatial strategy for growth across the County. The Policy is predicated on Spatial Option 5 of the Preferred Strategy published in November 2017, and contains very few changes to the earlier draft Policy. Firstly, we welcome and support the use of a settlement hierarchy to guide new		Support is noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			development in the County; this reflects the overarching aims of PPW10 to deliver sustainable development in the right places. Equally, it is important to ensure that there is not an imbalance to housing delivery; if this was the case, it could result in a number of sub-areas and settlements across the County being overlooked, and with it issues of demand outstripping supply creating issues of affordability. Conversely, there is the risk of people leaving a settlement in search of a new home or job, which in turn could impact of the vitality of settlements. On review of the proposed settlement hierarchy, we have no objection to the proposed settlement tiers, nor the identification of settlements within each tier. They support the role of Ewloe and Holywell. The ranking of each town/settlement is reflective of their sustainability. They also support the Council's approach to allocating land in Tiers 1 to 3, in addition to windfall housing schemes and rural exception sites.		
632	STR2: The Location of Development	Object	Emery Planning is instructed to prepare and submit representations to the Deposit Consultation on the Flintshire	Allocate land adjacent to Maes Celyn, Holywell Road, Northop, CH7 6BA.	See response to id 627 regarding STR2.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Local Development Plan (LDP). These representations are submitted on behalf of my client, who have an interest in land adjacent to Maes Celyn, Holywell Road, Northop, CH7 6BA. The site has been promoted as an allocation for residential development to previous consultations on the LDP.		
638	STR2: The Location of Development	Object	To address the conflicts above and ensure that the policy criteria is sound, TW requests that: 1 The Council revisits its evidence base to provide a clear review of the breakdown of development within each Tier. TW considers that the Council reviews Mynydd Isa within its settlement hierarchy and apportions a higher quantum of development towards those more sustainable settlements to meet the upper end of its housing need.	1 Plans for a longer plan period and ensures that the FLDP, when adopted, covers at least a 15-year plan period (ideally 20-years) to ensure longevity and, to provide certainty to the development industry. 2 Increases its housing requirement above the upper end of its objectively assessed housing need (using this upper end figure as a starting point) to deliver aspirational levels of	Not accepted. The Plans spatial strategy distributes development based on a 5 tier settlement hierarchy with only the top three tiers receiving planned growth in the form of allocations. The Plan focuses on the most sustainable settlements and sites and does not apportion quantums of development across the board. However, the provision of housing is not just achieved through allocations as development will also be achieved through existing completions, commitments and allowances for small and large site windfalls. In the case of Mynydd Isa the former allocation at Rose Lane is now progressing through a new developer (a Housing Association) and will deliver its 58 units. The site at Isa Farm, which received consent on appeal is also now progressing through a new developer MacBryde Homes and will deliver its 59 units. These two sites will together deliver 117 units which is considered adequate growth over the Plan period. In this context there is considered to be no further need for an additional allocation.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				housing and employment to align with national policy. 3 Review commuting patterns to reflect the current position (40%) and to factor this into the housing requirement. Review the evidence base to provide robust evidence for a housing requirement that will support proposed economic growth targets.	The Housing Supply Background Paper is considered to provide a clear breakdown of the growth in each settlement and tier. The objector seeks three changes and these are addressed in turn: 1. It is typical for Plans to be adopted into their respective Plan periods. To alter the Plan period now would require a fundamental reconsideration and rewrite of the Plan and would delay even further its adoption. Welsh Government have made no objections about the Plan period. The objector's failure to engage in the plan process at an earlier stage is not an issue for the Council. 2. The objector simply repeats the points made in objections to STR1 which have been comprehensively dealt with there, including a rebuttal of the separate 'Technical Note' prepared for TW by Lichfields. In essence the only quantification TW give for an increased housing requirement is for the upper range of growth option 6, which adds just 400 more units over the plan period, or just 27 dpa. This is hardly an 'aspirational' approach to use TW term, and is more than accommodated for by the 14.4% flexibility built in, and the over recovery of housing delivery in the early years of the plan. It is of little use to say that the figure should be significantly higher without saying what this figure is or how it is justified and deliverable. This does not therefore challenge the soundness of the plan.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					3. This point has again been dealt with in comprehensive responses to tW objections to STR1 where the same point was made.
659	STR2: The Location of Development	Object	LEE001 Land adj Queens Farm, Leeswood Policy STR2 sets out a Settlement Hierarchy and identifies Leeswood as a Tier 3 'Sustainable Settlement'. This guides that Tier 3 - Sustainable Settlements will be the locations for housing development related to the scale, character and role of the settlement. Provision will include: i. Allocations; ii. Windfall market housing; iii. Affordable housing on sites above an area / units threshold; iv. Small Scale Exceptions Schemes for Affordable Housing adjoining settlement boundaries. Policy HN1New Housing Development Proposals details where the housing allocations would be and the number of dwellings that these would provide. However, no new allocations have been identified in the settlement and only an existing 'Housing Commitment at Station Yard/Depot identified is on the plan and shown as an existing housing commitment.	The above named site needs to be included as an allocated site for the following reasons: - The proposed Candidate Site LEE001 is a logical extension to Leeswood providing up to 5ha developable area for housing which would provide for up to rely 150 units over the plan period. - Leeswood is a sustainable settlement which requires an appropriate level of growth to sustain it. - Sites have only been allocated within 9 settlements on large sites of 32-298houses	Not accepted. The Plans spatial strategy and approach to allocating land sites for housing is not premised on making allocations in every single settlement within the top three tiers of the settlement hierarchy. Although Leeswood is identified as a sustainable village in Tier 3 it is not considered necessary for it to have a housing allocation. The settlement includes land within the settlement boundary which is suitable in principle for housing. One such example is the former Laura Ashley site, which is a brownfield site and which is the subject of a planning application (058946) for 26 units. In the adjoining settlement of Coedtalon / Pontybodkin is a UDP housing allocation which has planning permission (055798) for 49 dwellings and there is a current planning application (052236) for 6 units on the remaining part of the site. All of these sites are brownfield and the focus within the two settlement over the Plan period should be their delivery and this would not be aided by further greenfield allocations. The objection site LEE001 was previously the subject of a planning application for residential development which was called in by Welsh Government. The Ministers Letter of 14/11/06 states 'The Planning Decision Committee agrees with the Inspector that the development

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				(nine of the total eleven allocated sites are for over 100houses). This is not considered a sustainable approach and more small to medium sized sites should be allocated in other settlements. - Leeswood does require growth and it is considered that the site is the most appropriate candidate site for this purpose.	would cause significant harm to the character of Leeswood village and surrounding countryside'. Planning permission was not granted. Subsequently the site was submitted as an omission site to be considered as part of the preparation of the UDP. The UDP Inspector commented 'At the density of development envisaged for this settlement category the site would accommodate some 162 dwellings resulting in growth of 24%. The growth from this development alone would be well above the indicative band and to my mind excessive. Furthermore, it would extend the settlement into the open countryside and significantly weaken the existing break in development between Leeswood and Pontblyddyn. I do not consider this land should be allocated'. The Inspector recommended no change to the Plan and therefore the site remained outside the settlement boundary in the adopted UDP. Leeswood has a broadly north - south linear character with development along King Street. At the northern end of the village, Dingle Road represents a physical limit to development with the exception of a small block of development on the north side of Dingle Road. This development is bounded by Dingle Road to the south and a minor road to the north, east and west. The narrow width of this road and its hedgerow on the outer edge is considered to represent a distinct change in character between the form and pattern of built development and open countryside beyond. The

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					site extends away from existing built development and would appear as a large extension of built development into countryside that would not be read as a logical urban extension. Development would also weaken the gap between Leeswood and Pontblyddyn, as referenced by the LDP Inspector. Highway Development Management have commented 'Potentially suitable subject to a Transport Assessment; the site is relatively isolated from community facilities (1.2km to school/shop).The width of Dingle Road along the site frontage is generally less than 4.5m; road widening and the provision of footways will be required as part of any development. The section of Dingle Road passing nos. 17-23 and the farm access road, appear unsuitable to cater for any additional traffic, amendments to the road layout will be required to ensure that additional traffic is not generated on this section of road'. It is evident that providing a suitable vehicular access to accommodate potentially 150 dwellings will require road widening and junction improvements that would harm the character and appearance of the area through loss of hedgerows and increase urbanisation. It is unclear whether sufficient control of third party land exists to make such significant improvements or whether the costs involved impact on viability or deliverability. The development of the site has been shown to be unacceptable in the judgement of two separate Planning Inspectors through a called in

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					planning application and through the UDP Inquiry, due to the impact of the site on the character of the village and open countryside and this is something which remains the case with the LDP, as the planning circumstances since those decisions remains unchanged in the context of this site. The site is not considered appropriate to be allocated or included within the settlement boundary.
757	STR2: The Location of Development	Object	STR2 Location of Development Given the constraints around 10 of the sustainable villages, and the absence of any significant brownfield windfall opportunities within the settlement boundaries, it is unclear how this residual need will be met without further site allocations through the LDP; this includes a review of settlement boundaries and the release of land in the Open Countryside and in some instances the Green Barrier. A failure to allocate land around these settlements, and the fact that 20 of the 22 Sustainable Villages are not subject to any allocations, raises concerns over a potential imbalance in housing delivery across the County and the future role of these settlements. 6.24. In addition to the above, our Client considers it would be more appropriate for the Sustainable	it would be more appropriate for the Sustainable Villages to accommodate a minimum of 20% of future housing growth, as documented in the Preferred Strategy as the upper figure. This would equate to 1,390 dwellings of the proposed County-wide requirement, an increase of 417 dwellings overall and an average of 63 dwellings per Sustainable Village.	Not accepted. The Plans Spatial Strategy is not based on having planned growth in every settlement and it is not necessary or appropriate to have a housing allocation in every tier 3 settlement. The provision of housing allocations is only one means of delivering the Plans housing requirement figure. Growth can and is also being delivered through completions during the first four years of the Plan period, through commitments and through allowances for small and large site windfalls. The apportionment of growth to the 5 tiers of the settlement hierarchy in the Preferred Strategy was clearly referenced as being indicative and subject to possible change in the Preferred Strategy. The 14% apportioned to tier 3 sustainable settlements is only just below the 15-20% in the Preferred Strategy. Such a spatial distribution is not considered inappropriate and the spatial strategy has not been objected to by Welsh Government. The objectors approach of seeking a further 417 dwellings in tier 3 or an increase of 63 dwellings

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Villages to accommodate a minimum of 20% of future housing growth, as documented in the Preferred Strategy as the upper figure. This would equate to 1,390 dwellings of the proposed County-wide requirement, an increase of 417 dwellings overall and an average of 63 dwellings per Sustainable Village. This would be much more reflective of a balanced approach to housing delivery across the County; as drafted, the Deposit Plan does not provide for this, with a clear reluctance on behalf of the Council to adopt a pro-active and positive approach to release and allocate housing sites in the Open Countryside and Green Barrier around the Sustainable Villages. Accordingly, our Client objects to the current proposed spatial distribution breakdown, and specifically the limited amount of growth directed to the Sustainable Villages in view of the policy constraints around a number of them which will equally serve to preclude windfall opportunities.		per sustainable settlement is not considered to offer any greater sustainability benefits than the Plans apportionment. The Council has taken a proactive approach to reviewing settlement boundaries, releasing two sites from green barrier and providing a healthy flexibility allowance. The objector also fails to note that a proportional distribution of growth was considered as an option prior to selecting the Preferred Strategy of the plan and was rejected on the basis of being too mechanistic and not based on sustainability principles. The objector would have been better demonstrating the sustainability of alternative sites being promoted and how these are preferable to the sites allocated in the plan. One of the sites promoted by the objector at Woodside Cottages, Drury already has outline planning permission (app ref 058212) allowed on appeal on 21/12/18 (appeal ref 3209704) for 23 dwellings. It is also noted that a reserved matters application (ref 60855) is presently under consideration. The site will clearly contribute as a commitment to meeting the Plans housing requirement figure and is an example of a windfall site coming forward within settlement boundaries. This site will have the effect of increasing the Plans flexibility, albeit marginally, given the small size of the site.
801	STR2: The Location of Development	Object	The British Land Company PLC object to the current Sustainable Settlement Hierarchy based on its	The British Land Company PLC object to the current	Not accepted. The settlement audit demonstrated that Broughton offers a high level of services and facilities, as a result of the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			allocation of Broughton as a Local Service Centre, rather than Main Service Centre. Broughton is identified as a 'Local Service Centre – Settlements with a local role in the delivery of services and facilities' in the Deposit Plan. The designation was underpinned by the inclusion of Broughton Shopping Park as a 'Local Centre with 10 or more shops' (Section 3.9). Notwithstanding this, the Deposit Plan clearly indicates the Shopping Park plays a sub-regional role (paragraph 6.20) and forms the biggest retail and leisure offering within the County (paragraph 6.23). It is therefore argued that it would be logical to allocate the settlement as a 'Main Service Centre – Settlements with a strategic role in delivery of services and facilities'. The Deposit Plan makes clear that "The Main Service Centres are the main locations for growth whereas Local Service Centres are where more modest levels of growth are located" (paragraph 5.13). In view of the considerable planned growth in and around Broughton, by virtue of allocations such as STR3B Warren Hall (mixed use development site for employment and housing), it follows that it should be designated as a Main	Sustainable Settlement Hierarchy based on its allocation of Broughton as a Local Service Centre, rather than Main Service Centre. Broughton is identified as a 'Local Service Centre – Settlements with a local role in the delivery of services and facilities' in the Deposit Plan. The designation was underpinned by the inclusion of Broughton Shopping Park as a 'Local Centre with 10 or more shops' (Section 3.9). Notwithstanding this, the Deposit Plan clearly indicates the Shopping Park plays a sub-regional role (paragraph 6.20) and forms the biggest	Broughton Shopping Park, and also is in an accessible location and with significant local employment. However, Broughton does not have the same character or role as the tier 1 Main Service Centres. The other tier 1 settlements are either traditional towns e.g. Flint or market towns e.g. Mold or are settlements which form part of a larger urban area e.g. Queensferry. Broughton does not fit into either of these scenarios as it does not have the character or feel of a town. Typically a town will have a central retail and commercial area which serves an outlying residential area. Broughton has residential areas to the west of an out of town retail park. Furthermore town centres have a wider range of facilities and services than that present in Broughton. Towns typically have a public or civic function such as leisure centres or Council Offices and again this is not the case with Broughton. Having regard to this context it is not considered that it would be appropriate for Broughton to be designated as a Tier 1 Main Service Centre which neither negates or prevents the shopping park from continuing its present role, and also does not challenge the soundness of the plan.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Service Centre to be considered to be 'effective' in respect of the Tests of Soundness (Soundness Test 3).	retail and leisure offering within the County (paragraph 6.23). It is therefore argued that it would be logical to allocate the settlement as a 'Main Service Centre – Settlements with a strategic role in delivery of services and facilities'. The Deposit Plan makes clear that "The Main Service Centres are the main locations for growth whereas Local Service Centres are where more modest levels of growth are located" (paragraph 5.13). In view of the considerable planned growth in and around Broughton, by virtue of allocations such as STR3B Warren Hall (mixed use development site	

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				for employment and housing), it follows that it should be designated as a Main Service Centre to be considered to be 'effective' in respect of the Tests of Soundness (Soundness Test 3).	
934	STR2: The Location of Development	Object	It is suggested new (employment) development twill be directed towards Principal employment allocations yet this is not the case and insufficient land has been identified at the PE2 site at Sealand IE.	Policy should be expressed as a minimum.	Not accepted. Policy STR2 explains that new development will be directed to i) allocated sites (which are identified in policy PE1) and ii) Principal Employment Areas which are identified in policy PE2. Unless an employment allocation happens to occur in a PEA, specific provision is not made within PEA's. Rather, PEA's provide a degree of flexibility in delivering new employment development by facilitating new employment development, extensions and expansion within existing defined employment areas. No provision has been made at Chester industrial Estate as an extension to the park (as sought by the objector) would necessitate removing green barrier and would also not meet the justification tests in TAN15 as even less vulnerable employment development cannot take place in flood risk zone C1 if it is greenfield land. The site also involves the loss of grade 2 BMV agricultural land.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1005	STR2: The Location of Development	Object	It is suggested new (housing) development will be targeted in the settlement hierarchy however, insufficient levels are identified for Mold (Tier 1) , Buckley (Tier 1), Broughton (Tier 2) and the sustainable village of Mancot.	More development within Mold, Buckley, Broughton and Mancot.	Not accepted. The fact that a settlement does not feature in the list of housing allocations in policy HN1 does not mean that these settlements will not experience growth. This may also be achieved by completions during the first 4 years of the Plan, by commitments and by allowances for small and large site windfall developments. Mold is a Tier 1 settlement which has two allocations in the Plan. One of these at Maes Gwern has planning permission for 160 dwellings and is under construction. The site is allocated because planning permission was granted after the Plans base date of April 2018 and could not be included as a commitment. Development is also taking place at Broncoed Industrial Estate via Whitley. In addition to the new allocation on land between Denbigh Rd and Gwernaffield Rd this is considered to be sufficient provision for the town particularly when there is the likelihood of another large windfall site coming forward during the latter half of the Plan period. The Plan Strategy does not prescribe growth limits or target for settlements, as did the UDP. Over the Plan period it is evident that Mold is contributing to the delivery of the identified housing requirement figure. Buckley is a Tier 1 settlement which has a housing allocation carried over from the adopted UDP. The Well St site has recently been sold by Welsh Government to Clwyd Alyn Housing Association who intend to develop a market /

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					affordable development. Despite accepting that the delivery of this site has been very slow, this new information demonstrates that it is an available, viable and deliverable allocation. Buckley has also seen a number of small to medium schemes consented in recent years and these will all contribute to delivering the Plans housing requirement figure. It is not considered that additional provision is required in Buckley. Broughton is a Tier 2 Local Service Centre and has seen a large amount of development during the Plan period on the site to the south of the Retail Park (Park Jasmine) and also the 'compound site' immediately to the west of the retail park (adjacent to Aldi). This is considered sufficient provision for the Plan period, particularly as the Plan Strategy does not prescribe set amounts or targets to each settlement. Mancot is a Tier 3 Sustainable Settlement. Provision for housing has been by virtue of the Ash lane allocation which abut the settlement boundary of both Mancot and Hawarden (Tier 2 Local Service Centre). Given that allocation is for nearly 300 units there is considered to be no need for further allocations either in Mancot or in Hawarden. The Plan Strategy does not prescribe growth rates or targets in each settlement.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1119	STR2: The Location of Development	Object	Objection to Settlement Audit. The settlement audits for the LDP are inaccurate. The settlement audit for the village of New Brighton includes services which are outside the settlement boundary. The settlement audit for Mold excludes services outside the settlement boundary	change settlement audit.	Not accepted. The settlement audit for New Brighton includes reference to the Beaufort Park Hotel which is a key facility for the settlement. The objector appears to arguing that it should not be counted as part of the facilities within the settlement. However, the car park to the hotel physically adjoins the settlement boundary and the built form of the hotel is 17m from the settlement boundary. The hotel clearly forms an important facility, both functionally and visually at the crossroads in the middle of the settlement and is quite properly recorded and counted as part of the settlement audit.
1123	STR2: The Location of Development	Object	Objection to allocation at Cae Isa, New Brighton. New Brighton has lost its shop/Post Office and public house, it has no facilities apart from a Church and Community Centre. We do not agree with our classification as a Tier 3 Sustainable Village as we have no services or facilities, it is debatable if we are even a Tier 4 Defined Village, we are not a sustainable location and new development should not be directed to our location.	Removal of allocation at Cae Isa, New Brighton	Not accepted. It is noted that New Brighton has lost its shop / post office and public house. However, it still has a large hotel / bar / conference facility, village hall, place of worship, car sales and service and a nearby petrol filling station and convenience store. The settlement hierarchy is informed not just by the level of services and facilities but also by its character, role and location. In this context New Brighton is on a key communication route between Mold and Deeside and sits close to settlements of Mynydd Isa and Buckley and Sychdyn. Its nucleated development pattern set around the crossroads and with the large hotel, gives it a distinct urban rather rural character and appearance. Despite the unfortunate loss of some facilities, it is still considered to be a Tier 3 Sustainable Settlement.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1131	STR2: The Location of Development	Object	During the review of growth options in 2016, Pen-y-ffordd was designated as a Sustainable Village! As this aspect is a key consideration in growth under the LDP, it is believed that the village should be re-categorised as a Rural Defined Village for the following reasons. o Public transport has been slashed with the loss of the Mold-Wrexham service and recent loss of the Mold-Chester service through Pen-y-ffordd leaving no punlic bus service running throught the village.. o There is no medical centre. o Junior and local High schools are over subscribed o There is significant shortfall in Adult and Youth Open space provision. o Infrastructure is inadequate with over stretched services. Also concerned about the colour coding from the previous consultation that i really feel did create a window of hope for some speculative applications. Has concerns about how some candidate sites were colour coded as set out in attached document.	Pen y Ffordd to be re-catergorised as a rural defined village	Not accepted. Penyffordd / Penymynydd was designated as a category B settlement in the adopted UDP and as a Tier 3 Sustainable Settlement in the LDP. Penyffordd / Penymynydd is a reasonably large settlement and lies in close proximity to several settlements and employment areas, both in Flintshire and in Wrexham. It has a good range of services and facilities and recently permission was granted for a Coop convenience store which is now under construction. Despite the unfortunate reduction in bus services it is still considered to be appropriately designated as a Tier 3 Sustainable Settlement especially as the settlement has a platform connection to the Wrexham Bidston railway line. Many settlements do not have a medical centre and these facilities exist at both Buckley and Hope where both are newly developed primary health centres. Penyffordd also has a new combined infants and junior school with capacity to expand.
1143	STR2: The Location of Development	Object	Category C Components of Housing Supply – clarification of spatial distribution & housing components by settlement tier & the housing trajectory Background	Housing Land Supply and Delivery contains all the tables required by DMP (Ed.3) namely, Table 4 and	Accepted. Noted. The information contained in the Background Paper and referred to, can be included in the final version of the written statement and can potentially be dealt with as an MAC at the Examination stage.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Paper 10: Housing Land Supply and Delivery contains all the tables required by DMP (Ed.3) namely, Table 4 and Appendix 2-5 which collectively set out the spatial distribution of housing provision in the plan, the housing trajectory and the timing and phasing of all the components of supply by settlement tier. They should all be included in the plan as required by the Manual and current consultation on PPW.	Appendix 2-5 which collectively set out the spatial distribution of housing provision in the plan, the housing trajectory and the timing and phasing of all the components of supply by settlement tier. They should all be included in the plan as required by the Manual and current consultation on PPW.	
1151	STR2: The Location of Development	Support	We are happy to accept the revised settlement boundary for Penyffordd and Dobshill, which incorporate all of the recent developments and permissions granted outside of the UDP settlement boundary. We are pleased to see that no further development is proposed in Penyffordd given the significant contribution to housing which has been permitted in the village. Time is needed for the current permissions to be completed and the new residents integrated into the community. there remains a need for critical infrastructure to catch up with housing development.		Support is noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
919	STR2: The Location of Development	Object	In light of the representor's land interest at Drury, which is classed as Sustainable Settlement and in third tier of the hierarchy, we welcome the intention that the top three tiers of the hierarchy should be the focus for the majority of new development in the County. The Council state that not every settlement should be expected to grow by having an allocation directed towards it. Clearly, in certain cases this may be appropriate as there are not suitable sites available or there are other policy constraints that would make identifying an allocation difficult. However, this is not the case for Drury. The representor's site at Drury Lane was promoted for residential development through the adopted UDP for a residential allocation. The Inspector, whilst not recommending the site to be allocated as there was no need for a second allocation in Drury at the time, recommended that the site be included within the settlement boundary. The site remains within the settlement boundary and has been promoted for development through the submission of a planning application, which the Council have refused and an appeal is pending. The representor	Allocate a proposed site in Drury	Not accepted. The Plans Spatial Strategy is not premised on the basis of every settlement having to deliver planned growth through a new housing allocation. Instead the Plan seeks to allocate the most sustainable settlements and sites. Drury delivered the highest rate of growth for a settlement in the UDP Plan period. More recently, planning permission has been granted for 23 dwellings at Woodside Cottages, within metres of the site. The Bank lane site remains within the settlement boundary of Drury and its development can be considered in the context of a large windfall site. The objector has been seeking planning permission for the Bank lane site for some time but has yet to submit a scheme which is considered accepted to the Council, most notably as each scheme has sought to include land outside the settlement boundary, within green barrier and utlising Best and Most Versatile agricultural land without justification. In the light of this entrenched position, the Council did not have sufficient confidence that an allocation could be secured within the settlement boundary and the site was not allocated. Equally, if in the context of the site being an existing windfall opportunity, the objector considers there are no "technical, physical, or environmental reasons that would preclude its allocation", then the same must also apply to its ability to come forward now on a windfall basis. If the applicant cannot currently ensure deliverability of the site as a windfall, then it is unclear how can this be done to satisfy the site's allocation.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			contends that the site remains suitable for residential development and that there are no technical, physical or environmental reasons that would preclude its allocation for residential development. The allocation of land for residential development in a Sustainable Settlement such as Drury would help to ensure that the housing requirement was delivered and that the Council could plan positively for the area rather than having to rely on windfalls coming forward, which by their very nature, cannot be relied on.		
951	STR2: The Location of Development	Object	It is suggested new (housing) development will be targeted in the settlement hierarchy however, insufficient levels are identified for Mold (Tier 1) , Buckley (Tier 1), Broughton (Tier 2) and the sustainable village of Mancot. 1059	STR2: The Location of Development	Object	we welcome the requirement that for Tiers 4 and 5 housing development should be related to the scale, character and role of the settlement and that in Tier 5 'development needs to be sensitively conceived and designed…to respect the character and appearance of the site and its surroundings'. We recommend that design related to scale and positive character should apply to all Tiers of development.	We recommend that design related to scale and positive character should apply to all Tiers of development.	Not accepted. Policy STR2 sets out that planned growth, through allocations will only take place in the top three tiers of the settlement hierarchy. These tend to be the most sustainable settlements in terms of their location, size, character, role and level of facilities and services. In Tier 4 Defined Settlements some additional guidance has been provided to guide the type and scale of housing development to ensure that it is related to the scale, character and role of the settlement. In Tier 5 Undefined Settlements there is no settlement boundary and the policy therefore provides additional guidance whereby new development should be sensitive and small scale. This additional guidance should work hand in hand with the policy requirement for new housing to deliver local needs affordable housing. Such additional guidance is not considered appropriate or necessary for the top

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					3 tiers of the settlement hierarchy and it must be stressed that the Plan also needs to be read as a whole whereby all development proposals would need to satisfy policies PC2, 3 and 4.
1146	STR2: The Location of Development	Object	Category C Affordable Housing - general ? Exception Sites – Affordable housing exception sites are permissible under policy STR2: Location of Development and HN4 (criteria f). It is unclear why small scale exception sites are only allowed in Tiers 2-5 and not Tier 1 which are the most sustainable settlements? The approach requires justification and clarification given affordable housing need across Flintshire is significant. ? Affordable Housing Authority Wide Target - The Affordable Housing Background Paper states the affordable housing target for the plan is 1,981 homes. This should be included within a policy in 6 the plan. Policy STR1: Strategic Growth could be amended to state "7,950 homes are provided of which xxx are affordable". The target does not include the contribution from windfall sites (Table 6). It should do. The affordable housing target in the plan should be derived from all components of supply to ensure it is realistic in its aspiration and for monitoring purposes. ? Spatial	The approach requires justification and clarification given affordable housing need across Flintshire is significant. The Affordable Housing Background Paper states the affordable housing target for the plan is 1,981 homes. This should be included within a policy in 6 the plan. Policy STR1: Strategic Growth could be amended to state "7,950 homes are provided of which xxx are affordable" A table setting out anticipated affordable housing contributions by settlement tier and component of supply in line with guidance in the DPM (Ed. 3)	Accepted. The Deposit Plans exclusion of Tier 1 Main Service Centres reflects a carry over from the adopted UDP whereby policy HSG11 applied 'rural' exceptions schemes as was defined in PPW at that time. Therefore adopted policy did not allow small scale exceptions schemes in the larger category A settlements as they were not rural settlements. It is noted that PPW describes such development as 'Affordable Housing Exceptions Schemes' and that reference to 'rural' settlements no longer applies. It is accepted that as Tier 1 settlements are considered to be most sustainable settlements then provision for small scale affordable housing exceptions development would be appropriate in principle. The Council would therefore offer no objection to the Inspector recommending that policy STR2 be amended to allow 'Small Scale Exceptions Schemes for Affordable Housing adjoining settlement boundaries', within criteria a. re Tier 1 Main Service Centres. There is a converse however which is that if small scale incremental schemes were permitted in Tier 1 settlements then this might sterilise future opportunities for larger scale planned growth in a future plan review. The affordable housing information referred to in the background paper can be moved into the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Distribution of Affordable Housing Supply – the Affordable Housing Background Paper includes an analysis of affordable housing contributions by housing component. A table setting out anticipated affordable housing contributions by settlement tier and component of supply in line with guidance in the DPM (Ed. 3) would be helpful aiding clarity of the plan and effective monitoring.	would be helpful aiding clarity of the plan and effective monitoring.	written statement in the final version of the Plan and could be agreed as an examination MAC.
1152	STR2: The Location of Development	Object	HN4D. Reference to acceptance the additional of developments of affordable homes adjacent, but outside, settlement boundaries. This is not qualified, either in scale, number of developments or site specific locations considered acceptable for affordable development. 9.2 says that development must be controlled which contradicts this wording and leaves sites open to potential exploitation.	9.2 says that development must be controlled which contradicts this wording and leaves sites open to potential exploitation.	Not accepted. Policy STR2 permits small scale affordable housing exceptions on the edge of tier 2-4 settlements. The policy approach is carried over from the UDP (policy HSG11) and reflects guidance in PPW whereby small scale developments on the edge of settlements can be delivered for affordable housing, as an 'exception' to normal planning policies. Further guidance is provided in the Development Management Policy HN4D. Given the nature of and workings of the policy it is not possible to predict the number or scale of developments. Schemes could arise where there is an identified and evidence housing need to be met, a willing landowner and a housing association or similar body to ensure that the units remain affordable in perpetuity. However, schemes would also need to be acceptable in planning terms in terms of representing a logical extension to the settlement, and acceptable in terms of highways and other considerations. The Plan, when read as a whole contains

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					adequate safeguards to ensure the policy is not mis-used.
1176	STR2: The Location of Development	Support	Policy STR2: The Location of Development This Policy sets out the Council's spatial strategy for growth across the County. The Policy is predicated on Spatial Option 5 of the Preferred Strategy published in November 2017, and contains very few changes to the earlier draft Policy. Firstly, our Client welcomes and supports the use of a settlement hierarchy to guide new development in the County; this reflects the overarching aims of PPW10 to deliver sustainable development in the right places. Equally, it is important to ensure that there is not an imbalance to housing delivery; if this was the case, it could result in a number of sub-areas and settlements across the County being overlooked, and with it issues of demand outstripping supply creating issues of affordability. Conversely, there is the risk of people leaving a settlement in search of a new home or job, which in turn could impact of the vitality of settlements. On review of the proposed settlement hierarchy, our Client has no objection to the proposed settlement tiers, nor the		Support is noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			identification of settlements within each tier. The ranking of each town/settlement is reflective of their sustainability. They also support the Council's approach to allocating land in Tiers 1 to 3, in addition to windfall housing schemes and rural exception sites.		
1178	STR2: The Location of Development	Object	No allowance has been made for completions during the period 2015-2018 given our earlier comments on the LDP period and UDP period shortfall. However, if they were, under the above scenarios the residual dwelling requirements would be adjusted to 49 and 111, and 189 and 251 (applying the 14.4% flexibility factor). In all cases, more housing land is required. Given the constraints around 10 of the sustainable villages, and the absence of any significant brownfield windfall opportunities within the settlement boundaries, it is unclear how this residual need will be met without further site allocations through the LDP; this includes a review of settlement boundaries and the release of land in the Open Countryside and in some instances the Green Barrier. A failure to allocate land around these settlements, and the fact that 20 of the 22 Sustainable	No allowance has been made for completions during the period 2015-2018 given our earlier comments on the LDP period and UDP period shortfall. However, if they were, under the above scenarios the residual dwelling requirements would be adjusted to 49 and 111, and 189 and 251 (applying the 14.4% flexibility factor). In all cases, more housing land is required.	Not accepted. The Plan adopts a sustainable approach to the spatial distribution of growth and it is evidenced that the Tier 1 and Tier 2 settlements are more sustainable that Tier 3 settlements, as this is the basis for the settlement hierarchy. It is therefore right and proper that a significant proportion of the Plans housing provision is directed to the top 2 tiers of the settlement hierarchy. The Plans spatial strategy is not premised on seeking to facilitate planned growth in every settlement and this applies equally to Tier 3 settlements The objection does not portray an accurate position in respect of green barriers and the settlements listed as not all of these settlements are encircled by green barriers whereby any development would be totally constrained. Only two allocations are proposed in Tier 3 settlements because this tier of settlements has seen a number of speculative housing schemes

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Villages are not subject to any allocations, raises concerns over a potential imbalance in housing delivery across the County and the future role of these settlements. In addition to the above, our Client considers it would be more appropriate for the Sustainable Villages to accommodate a minimum of 20% of future housing growth, as documented in the Preferred Strategy as the upper figure. This would equate to 1,390 dwellings of the proposed County-wide requirement, an increase of 417 dwellings overall and an average of 63 dwellings per Sustainable Village. This would be much more reflective of a balanced approach to housing delivery across the County; as drafted, the Deposit Plan does not provide for this, with a clear reluctance on behalf of the Council to adopt a pro-active and positive approach to release and allocate housing sites in the Open Countryside and Green Barrier around the Sustainable Villages. Accordingly, our Client objects to the current proposed spatial distribution breakdown, and specifically the limited amount of growth directed to the Sustainable Villages in view of the policy constraints around a number of		allowed on appeal and also completions during the first years of the Plan period. Growth is not only achieved through new allocations as it also achieved through completions, commitments and possible windfalls. The objector is proposing an additional allocation in Penyffordd / Penyffordd when there are already three consented housing developments in the settlement. Irrespective of the objectors point about the amount of growth apportioned to Tier 3 settlements it is not necessary or appropriate for further provision to be made in this particular settlement. It is the level of speculative growth approved on appeal in this settlement that was one of the triggers that prompted the Minister's review of TAN1 which has now formally been revoked as not fit for purpose. There is clearly no double counting in respect of the allocation HN1.11 Chester Rd Penymynydd as it appears in the Housing Balance Sheet as an allocation and not as a housing commitment (it is not included in the list of site commitments in Appendix1. There is no requirement in PPW or the draft Development Plans Manual 3 for a separate 10% slippage to the commitments figure. PPW10 requires a flexibility allowance of at least 10% to the overall housing requirement. It is not necessary or appropriate for an allowance to the made for the undelivered

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			them which will equally serve to preclude windfall opportunities. It is noted that the first two tiers of the settlement hierarchy are now expected to deliver 83% of the County's housing requirements, split across 15 towns/settlements. Only 17% of growth is going to be directed to the remaining parts of the County, which in total comprise 22 Sustainable Villages, 17 Defined Villages, and 14 Undefined Villages. Taking the Tier 3 'Sustainable Villages,' this equates to the delivery of 973 dwellings across 22 settlements (of the current proposed County-wide requirement of 6,950 dwellings), at an average of 44 dwellings per settlement. Applying the 14.4% flexibility factor, this increase to 1,113 dwellings. Of these 22 settlements, housing growth will be constrained by the presence of Green Barrier around the following: Ø Bagillt;		housing requirement from the UDP. The housing need for the UDP was calculated at a different point in time, using different projections and assumptions and the adoption of the UDP coincided with a recessionary period. The LDP is seeking to identify a housing requirement figure based on the latest projections and assumptions and the present policy context, for this Plan period, as confirmed by PPW. There is no provision in PPW to account for any historical backlog of housing delivery. The objector should also note that development plans do not deliver housing but rather they make adequate provision to meet the requirement of the plan. It is the industry in combination with market demand that determines delivery rates. It is noteworthy that Welsh Government are broadly comfortable with the level of growth being provided by the Plan and the spatial strategy to distribute that growth.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Ø Bretton; Ø Carmel; Ø Drury and Burntwood; Ø Mancot; Ø Northop; ØNorthop Hall; Ø Pentre; Ø Sandycroft; and Ø Sychdyn. As drafted, only two allocations are proposed in the Sustainable Villages; 105 dwellings in New Brighton (Site. Ref. 10), and 186 dwellings in Penymynydd (Site Ref. 11). A further 332 dwellings are already committed (based on the figures contained in Table 4 of Background Paper 10), and 51 units are under construction. It is important to ensure that there is no double-counting in respect of Site Ref. 11 given that this already benefits from planning permission and hence is a commitment.		

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Accordingly, this leaves a residual requirement of at least 299 dwellings to come forward in the Sustainable Villages against the current housing requirement (439 dwellings when applying the 14.4% flexibility factor), presuming that the allocations and commitments deliver in their entirety. Applying a 10% slippage to the commitments and allocations would increase the residual requirement to 361 dwellings (and 501 dwellings when applying the 14.4% flexibility factor). No allowance has been made for completions during the period 2015-2018 given our earlier comments on the LDP period and UDP period shortfall. However, if they were, under the above scenarios the residual dwelling requirements would be adjusted to 49 and 111, and 189 and 251 (applying the 14.4% flexibility factor). In all cases, more housing land is required. Given the constraints around 10 of the sustainable villages, and the absence of any significant		

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			brownfield windfall opportunities within the settlement boundaries, it is unclear how this residual need will be met without further site allocations through the LDP; this includes a review of settlement boundaries and the release of land in the Open Countryside and in some instances the Green Barrier. A failure to allocate land around these settlements, and the fact that 20 of the 22 Sustainable Villages are not subject to any allocations, raises concerns over a potential imbalance in housing delivery across the County and the future role of these settlements. In addition to the above, our Client considers it would be more appropriate for the Sustainable Villages to accommodate a minimum of 20% of future housing growth, as documented in the Preferred Strategy as the upper figure. This would equate to 1,390 dwellings of the proposed County-wide requirement, an increase of 417 dwellings overall and an average of 63 dwellings per Sustainable Village. This would be much more reflective of a balanced approach to housing delivery across the County; as drafted, the Deposit Plan does not		

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			provide for this, with a clear reluctance on behalf of the Council to adopt a pro-active and positive approach to release and allocate housing sites in the Open Countryside and Green Barrier around the Sustainable Villages. Accordingly, our Client objects to the current proposed spatial distribution breakdown, and specifically the limited amount of growth directed to the Sustainable Villages in view of the policy constraints around a number of them which will equally serve to preclude windfall opportunities.		
1186	STR2: The Location of Development	Object	Category C Affordable Housing - general ? Exception Sites – Affordable housing exception sites are permissible under policy STR2: Location of Development and HN4 (criteria f). It is unclear why small scale exception sites are only allowed in Tiers 2-5 and not Tier 1 which are the most sustainable settlements? The approach requires justification and clarification given affordable housing need across Flintshire is significant.	The approach requires justification and clarification given affordable housing need across Flintshire is significant.	Accepted. The Deposit Plans exclusion of Tier 1 Main Service Centres reflects a carry over from the adopted UDP whereby policy HSG11 applied 'rural' exceptions schemes as was defined in PPW at that time. Therefore adopted policy did not allow small scale exceptions schemes in the larger category A settlements as they were not rural settlements. It is noted that PPW describes such development as 'Affordable Housing Exceptions Schemes' and that reference to 'rural' settlements no longer applies. It is accepted that as Tier 1 settlements are considered to be most sustainable settlements then provision for small scale

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					affordable housing exceptions development would be appropriate in principle. The Council would therefore offer no objection to the Inspector recommending that policy STR2 be amended to allow 'Small Scale Exceptions Schemes for Affordable Housing adjoining settlement boundaries', within criteria a. re Tier 1 Main Service Centres. There is a converse however which is that if small scale incremental schemes were permitted in Tier 1 settlements then this might sterilise future opportunities for larger scale planned growth in a future plan review.
1198	STR2: The Location of Development	Object	I would like to put forward the site of the present India Restaurant on Hawarden Road Hope (The Bombay Sizzler). It could be a site that would fit in with the new Welsh Assembly Self Build Scheme which has funding of £20 million and would be a valuable addition to the LDP housing Policy and would fit in with Policy STR2. It would also be a useful addition to the Housing Allocation in Hope.		Not accepted. Although for a period of time the restaurant ceased trading it is now understood that the restaurant has re-opened. The Indian Restaurant at Hawarden Road Hope is situated within the settlement boundary of HCAC in both the adopted UDP and the Deposit LDP. The development of the site has been previously constrained by its location on the line of the Hope – Caergwrle Bypass, although this road scheme has now been dropped by the Council. Given its location within the settlement boundary it could be developed for a variety of types of housing as set out in STR2. The Plan makes an allowance for small site windfalls and the site could be delivered as part of this. However, the restaurant has recently been trading again and this, along with its small size makes it inappropriate to be allocated in the Plan.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Highways: Although there are no highway objection to a small residential development served by a shared private drive from the existing access. There are other constraints to the site that a discussed below. Ecology: Site is predominantly hard standing with leylandii hedgerows and an occasional mature deciduous tree. The building is within 100m of the River Alyn and trees/scrub associated with the adjacent railway and while the building itself is not of high potential, the proximity to suitable feeding habitats gives the building potential. As per BCT Survey guidelines a bat survey would therefore be required and an Impact Assessment with measures to avoid, mitigate, compensate, enhance and manage wildlife features as relevant. Refer to FCC Planning Guidance SPG No 8 Nature Conservation and Planning : http://www.flintshire.gov.uk/en/Resident/Planning/Supplementary-planning-guidance.aspx Additionally, the site is within 100m of Ancient Woodland. The site may affect priority or protected species, as it is agricultural (e.g. breeding birds) or contains existing structures (e.g. bats). The site is a large (>0.4ha) greenfield site. Development here could adversely affect habitat connectivity. It is considered that development here may have an

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					adverse effect on character and result in the loss of important features such as GI. Land contamination: The submitted site is situated on a Secondary A aquifer and with suspected contamination (adjacent to a historic landfill site). As part of any planning application for this site we would advise planning conditions be imposed to ensure that risks associated with any contamination at the site are appropriately managed. This site is immediately adjacent to an actively gassing landfill site and Pollution Control does not support this proposal. An application to develop this site would have to be supported by a detailed land contamination assessment including at least 12 months data and a detailed remediation proposal. It is possible that the site is unsuitable for development where a suitable remediation solution cannot be found. The landfill site is known to be actively gassing and was not engineered to prevent the escape or migration of leachate and landfill gasses away from the site. The extent of the wastes is not known and may extend beyond the boundary of the landfill site as it is today. Wastes are known to be present very close to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					the surface of the ground as the site is not capped. To conclude, a key principle in PPW is that allocations are viable and deliverable yet the objection provides no assurances or evidence regarding the above concerns that satisfactory development can be carried out. Therefore, the site is not considered to be necessary or appropriate as an allocation.
1255	STR2: The Location of Development	Object	The distribution of growth is out of kilter with the settlement hierarchy. For example, housing allocations are identified across Tier 1, 2 and 3 settlements yet some larger settlements have no corresponding employment growth. The reverse also applies as some settlements have no housing allocations but are expected to accommodate employment growth. Clearly, this will lead to disjointed housing supply. For example, Tier 1 settlements of Aston & Shotton, Queensferry and Saltney and Tier 2 settlements of Broughton and Greenfield have no housing allocated yet have a significant amount of employment space allocated over the plan period. Yet smaller settlements are identified for comparatively large levels of housing growth	Development must be better dispersed across the Tiers to allow for a proportionate level of growth across Flintshire. This means a broader distribution of housing sites particularly across Tier 1 and 2 settlements (such as Broughton), and particularly when settlements have large employment allocations, yet no housing.	Not accepted. The Plan's spatial strategy and approach to allocating land sites for housing is not premised on making allocations in every single settlement within the top three tiers of the settlement hierarchy. The fact that a settlement does not feature in the list of housing allocations in policy HN1 does not mean that these settlements will not experience growth. This may also be achieved by completions during the first 4 years of the Plan, by commitments and by allowances for small and large site windfall developments. Aston & Shotton and Queensferry are Tier 1 settlements, and although they do not contain any residential allocations, Queensferry does have commitments for 16 dwellings at 1-3 Pierce Street and all are located in close proximity to the Northern Gateway Strategic site which includes 1,325 homes as well as employment uses. The Deeside Plan is also seeking to facilitate improved links between settlements such as these and the Northern Gateway. These settlements are also in close proximity to Connahs Quay and Pentre /

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Development must be better dispersed across the Tiers to allow for a proportionate level of growth across Flintshire. This means a broader distribution of housing sites particularly across Tier 1 and 2 settlements (such as Broughton), and particularly when settlements have large employment allocations, yet no housing.		Sandycroft where there are large existing industrial areas as reflected in the Principal Employment Areas. In Shotton and Queensferry there are few opportunities for new housing development given the built form of the settlement and constraints such as flooding and ecological designations. However Aston & Shotton have seen the completion of 21 dwellings on the Aston Mead Estate in 2018 and 9 dwellings on the Melrose Centre, Aston in 2019. Saltney is a Tier 1 settlement, and although it does not have a residential allocation it does have a commitment for 71 dwellings at the Allied Bakeries site. As of 1st April 2019 35 of these dwellings were completed with the remaining 36 under construction, due for completion by 1st April 2020. There has also been 54 units completed at 142 High Street by April 2017, 11 of which were completed by the 1st April 2015 which is outside of the plan period, giving a total delivery of 43 units within the plan period. The settlement has clearly delivered housing growth within the first few years of the Plan period. Greenfield is a Tier 2 settlement, and has seen development in the form of 58 units at Glan y Don during the early years of the Plan period. The clear message from these settlements identified by the objector is that housing growth is not only achieved through new allocations but also from commitments and completions.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Broughton is a Tier 2 Local Service Centre and has seen a large amount of development during the Plan period with 189 units completed on the site to the south of the Retail Park in 2017/18, 24 units completed on the 'compound site' immediately to the west of the retail park (adjacent to Aldi) in 2017/18, and 36 units completed on Chester Road (Park Jasmine) also in 2017/18.This is considered sufficient provision for the Plan period, particularly as the Plan Strategy does not prescribe set amounts or targets to each settlement. The Plans spatial strategy distributes development based on a 5 tier settlement hierarchy with only the top three tiers receiving planned growth in the form of allocations. The Plan focuses on the most sustainable settlements and sites and does not apportion quantums of development across the board. Tier 1 and Tier 2 settlements accommodate 83% of the planned growth, whereas Tier 3 will accommodate just 14%, therefore the Council disagree with the objectors comment that "smaller settlements are identified for comparatively large levels of housing growth". In their formal representations on the Plan Welsh Government have no objections to, and have supported in principle the amount of growth and spatial strategy. In terms of the objectors comment that "some larger settlements have no corresponding employment growth" the following summarises the existing employment areas and any new

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					employment allocations within the settlements which include residential allocations; Buckley – has employment allocations and Principal Employment Area's (PEA's) Connah's Quay – has PEAs and is close to the allocated strategic allocation, Northern Gateway Flint – has large PEA's Mold – has employment allocations and PEA's Ewloe – is adjacent to St Davids Park and is close to several PEA's and the allocated strategic site Northern Gateway. Hawarden – close to several PEA's, the allocated strategic site Northern Gateway, and Airbus HCAC – close to Llay Industrial Estate. New Brighton – close to Mold, Buckley and Deeside Penymynydd – close to Broughton and the allocated strategic site Warren Hall. Flintshire has a large number of settlements and traditional employment locations and interrelationships between the two, it is not necessary or appropriate for every settlement to have its own employment as the objector suggests. If this approach was taken, then the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					objectors proposed site in Broughton would not be suitable as there is no employment allocation in Broughton itself, the nearest is Hawarden Park Industrial Estate and the Strategic allocation Warren Hall.
1275	STR2: The Location of Development	Object	The proposed approach set out within Policy STR2, to direct development towards the more sustainable settlements and employment areas is supported. However, in practice the proposed LPD allocations do not follow the principles of STR2 as a disproportionate amount of development is focussed to less sustainable lower order settlements instead of larger sustainable settlements such as Flint. We address these points later in these representations. The LDP Settlement Hierarchy has 5 Tiers; Main Service Centres (Tier 1), Local Service Centres (Tier 2), Sustainable Villages (Tier 3), Defined Villages (Tier 4) and Undefined Villages (Tier 5) (emerging Policy STR2). However, the distribution of growth is out of kilter with the settlement hierarchy. For example, housing allocations are identified across Tier 1, 2 and 3 settlements yet some larger settlements have no corresponding employment	Does not distribute growth across the settlement hierarchy in a logical or sustainable way in that it places too significant an emphasis on lower order settlements at the expense of more sustainable larger settlements. Additional sites required.	Not accepted. The Plans spatial strategy and approach to allocating land sites for housing is not premised on making allocations in every single settlement within the top three tiers of the settlement hierarchy. The fact that a settlement does not feature in the list of housing allocations in policy HN1 does not mean that these settlements will not experience growth. This may also be achieved by completions during the first 4 years of the Plan, by commitments and by allowances for small and large site windfall developments. Aston & Shotton and Queensferry are Tier 1 settlements, and although they do not contain any residential allocations, Queensferry does have commitments for 16 dwellings at 1-3 Pierce Street and all are located in close proximity to the Northern Gateway Strategic site which includes 1,325 homes as well as employment uses. The Deeside Plan is also seeking to facilitate improved links between settlements such as these and the Northern Gateway. These settlements are also in close proximity to Connahs Quay and Pentre / Sandycroft where there are large existing industrial areas as reflected in the Principal Employment Areas. In Shotton and Queensferry there are few opportunities for new housing development given the built form of the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			growth. The reverse also applies as some settlements have no housing allocations but are expected to accommodate employment growth. Clearly, this will lead to disjointed housing supply. Furthermore, proposed growth is not distributed across the hierarchy in a logical matter, not least as the distribution does not consider the potential for growth in larger accessible and sustainable settlements (such as Flint). For example, Tier 1 settlements of Aston & Shotton, Queensferry and Saltney, and Tier 2 settlements of Broughton and Greenfield, have no housing allocation yet are expected to support comparatively significant levels of employment growth. Yet smaller settlements are identified for comparatively large levels of housing (emerging Policy HN1, Table 19.1). Therefore, there is a clear uneven distribution of proposed growth across Flintshire, notwithstanding the plan does not allow for enough growth overall.		settlement and constraints such as flooding and ecological designations. However Aston & Shotton have seen the completion of 21 dwellings on the Aston Mead Estate in 2018 and 9 dwellings on the Melrose Centre, Aston in 2019. Saltney is a Tier 1 settlement, and although it does not have a residential allocation it does have a commitment for 71 dwellings at the Allied Bakeries site. As of 1st April 2019 35 of these dwellings were completed with the remaining 36 under construction, due for completion by 1st April 2020. Policy STR3 General

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
207	STR3: Strategic Sites	Object	Following a review of the above development plan, the Northern Gateway site has been identified as being crossed or in close proximity to National Grid infrastructure (ZO Route - 400Kv two circuit route from Daines substation in Trafford to Connahs Quay substation in Flintshire). The statutory safety clearances between overhead lines, the ground, and built structures must not be infringed. Where changes are proposed to ground levels beneath an existing line then it is important that changes in ground levels do not result in safety clearances being infringed. National Grid can, on request, provide to developers detailed line profile drawings that detail the height of conductors, above ordnance datum, at a specific site.		Not Accepted. However the Northern Gateway site has outline planning permissions on each half of the site. The existence of the overhead line will be taken into account in the consideration of reserved matters planning applications on each phase of development.
541	STR3: Strategic Sites	Object	Objection to Strategic allocation, Warren Hall, Broughton Road Links – Severe congestion within Broughton due to increasing staffing levels at Airbus and Broughton retail park. Main road not designed to take this volume of traffic. Where will the increased traffic from the new development go? This road should have been upgraded before now, and yet you are considering adding to the load with no apparent plans to alleviate the existing pressure. GP Surgeries – Broughton has only one GP surgery. I have approached the Marches Medical	Removal of Warren Hall Strategic Site allocation.	Not Accepted. The Betsi Cadwaldr University Health Board has been a key stakeholder during the preparation of the Plan. During the early engagement stages it was a member of the Key Stakeholder Forum and has been consulted on at each stage in the Plans progression. The Health Board has made no objection to the Plan generally nor this site specifically. The Council is continuing to work with the Health Board in terms of how to accommodate the Plan's proposed growth. It must be stressed that the residential development of this site will not result in one hit given that the Plan's Housing Land Supply Background paper shows the housing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Practice, which it tells me has not been consulted in the Planning process, either by Flintshire Planning or Betsi Cadwallder Health Board. I find this quite shocking, as an elderly patient with a number of health issues I rely on my GP and value their service. Three hundred houses could potentially be twelve hundred people, if those houses are four bed dwellings. Again, I have to ask, where will all those new residents go to register with a GP? Schools – Broughton currently has one primary school. At a recent Community Council meeting the Headmistress was quoted as saying that she couldn't deal with any further influx of children. Since the BCUHB had not consulted the Marches Medical practice I wonder whether the LEA has consulted this local school. Where will the additional school children go to school? Drains & Sewers – after speaking to your planning representative at the drop in meeting he advised that additional work is needed to drains and sewers to accommodate this potential new development. I have to ask, when will this work be carried out, before or after the three hundred houses, industrial estate and hotel are built? Broughton is becoming overloaded and unrecognizable without the correct infrastructure in place to support additional people. I cannot understand why additional services such as doctors, schools, roads and drainage are not put		being delivered at a rate of 30 units in 2023/24 and 45 units per year thereafter until 2030. This provides time for the Health Board to put suitable measures in place.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			in place before building starts. While your representative tells me that no objections have been raised either by the LEA or BCUHB I find it shocking to believe that these organizations are so arrogant to believe that they do not even consult the local grass roots staff for their views.		
633	STR3: Strategic Sites	Object	The Northern Gateway is a site that has been identified as a strategic allocation by the authority dating back to the Flintshire UDP (2000-2015). It is a complex site, with two landowners. One of these landowners, Pochin, recently went into administration. 4.2 The Council's trajectory assumes an extremely high delivery rate of 100 dwellings per annum from the Northern Gateway allocation, despite its acknowledgement in paragraph 5.3.2 of the Preferred Strategy consultation document (2017) that: "The experience of other large sites in Wales suggests they can be difficult to get off the ground and are not delivering development as anticipated. This can have a negative effect on securing and maintaining a 5 year housing land supply from adoption onwards." 4.3 The Council will need to evidence why this build rate has been applied. We would expect the Council to have assessed the local delivery record and explain why it assumes this build rate could be applied to the allocated site. However, no such evidence is	We note that the current reserved matters approval for the first 283 units is one developer only (Countryside). This should be reflected in the delivery forecasts. It is not realistic to assume 100 dwellings from one developer.	Not accepted. The Northern Gateway is a strategic mixed use allocation in both the adopted UDP and the deposit LDP. Progress on the site was affected by the economic downturn but Welsh Government has now invested in flood defence works along the River Dee and a spine road, both of which have been implemented. The site is in two ownerships with Praxis promoting the northern part and Pochin the southern part. Good progress is now being made on the northern part of the site with enabling works and the reserved matters approval (059514) for Countryside Properties for 283 units on plots H1, H2 and part of H8, who are presently on site. Following marketing of the site, developer interest has led to a planning application (060311) for a further phase of site enabling works and this application is under consideration. In January 2020 reserved matters approval was granted for a 10,000sqm warehouse development on plot A. On the southern part of the site, Pochin are also making progress in bringing their element of the site forward. A planning application (058868) is

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			provided in the published evidence base. We accept that a higher build rate could be achieved on very large sites with multiple developers. However, the Council will need to evidence that there will be more than one developer on site at the same time. In this case the Council will need to demonstrate why it assumes there will be four developers (which would be required to deliver in excess of 100 dwellings per annum) on site at the same time and when this is expected to happen. We note that the current reserved matters approval for the first 283 units is one developer only (Countryside). This should be reflected in the delivery forecasts. It is not realistic to assume 100 dwellings from one developer.		presently under consideration for site enabling works for phase 1 and a reserved matters application (060411) is presently under consideration for 129 homes for Keepmoat Homes (reported to Planning Committee 4th March and secured a Committee resolution to grant planning permission subject to signing of s106). Although Pochin Construction went into administration it is not considered to affect the Northern Gateway development as the development company who have an interest in this site are not affected by the administration. In Aug 2019 a Welsh Government spokesman said 'We have been assured that the Pochin Goodman Joint Venture, which owns part of the Northern Gateway site, is not affected by Pochin's administration process and as such we do not expect any delay to work being carried out on the development'. Pochin Goodman is continuing in its work in delivering the southern part of the site. The evidence clearly demonstrates there is renewed developer interest in the site and the construction on site by Countryside Properties will result in developer confidence in further phases of development. The Council is aware that the respective owners have had firm enquiries from other developers about further phases of the development on the back of the initial phases of reserved matters permissions having been granted, and development commenced on site. It is quite normal on a

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					strategic site of this size to have several housebuilders on site at the same time. Work associated with the April 2019 Housing Land Monitoring Study has involved feedback from Countryside Properties and it is of note that this developer has commenced construction on site and has a method of construction which can achieve high annual completion rates. It is evident that the site as a whole will be delivered by multiple developers and the housing delivery rates in the Housing Trajectory in the Housing Land Background Paper are realistic and achievable. The two strategic sites form an integral part of the Growth Bid proposals for North Wales and will bring about major economic benefits to the region. Evidence clearly demonstrates that Northern gateway is now being delivered and on course to deliver the units within Plan period (as shown in the trajectory). The objector's proposed site at Maes Celyn, Northop is predominantly housing based with some other small scale mixed use elements including starter employment units. Rather than focus on the delivery of the Northern Gateway site, the objector's proposed development would actually detract from and compete with it. The objector's proposal would have the effect of jeopardising the delivery of the strategic Northern Gateway site, in favour of pepper potting additional greenfield allocations across the County. Such an approach would have

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					implications for the delivery of regional growth as embodied in the Growth Deal, within which the Northern gateway is a key element.
766	STR3: Strategic Sites	Object			
1149	STR3: Strategic Sites	Object	A key matter for the examination will be whether the plan contains sufficient information in relation to the implementation, delivery and monitoring of the plan. Specifically, whether key elements of the master planning principles, delivery statements, and the infrastructure plan, should be in the plan to ensure good design and comprehensive development for housing and employment sites. ? Masterplan & Delivery Statements have been prepared for both strategic sites. Additional information, where necessary and relevant, along with statements of common ground to support the plan would be advantageous. This also applies to employment sites and key non-strategic housing sites, where relevant. ? Strategic Sites need significant infrastructure which should be articulated in the plan, including specific constraints such as those regarding the nearby airfield i.e. height restrictions which could impact on the developable area. ? The level and rational for the housing flexibility allowance is for the LPA to justify. The DPM (Edition 3)	The trajectory should illustrate the degree of flexibility throughout the plan period.	Accepted. The Council has done a considerable amount of work to provide a robust evidence base to support the policies and proposals in the deposit LDP and to demonstrate the deliverability of the sites in the plan, and its overall soundness. The Council notes and welcomes the Welsh Government's positive support in its formal comments on the Plan for the levels of housing and employment growth and the spatial strategy for distributing and delivering that growth. Whilst the Council acknowledges the need to ensure as far as possible that it can demonstrate the deliverability of the strategic sites in the plan, given the advanced planning status of the Northern Gateway site, which has both outline and now reserved matters permissions across the site, that are enabling the delivery of housing and employment on the ground, the Council is confident that this site is highly sustainable and deliverable, particularly as development interest grows. In relation to the Warren Hall strategic site this is in Welsh Government ownership and a significant amount of background work has and continues to be done to evidence and justify the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			states 10% is a starting point, with any variation being robustly evidenced. It is not the role of Welsh Government to comment on the merits or the timing of individual sites in the plan. The key point is that the LPA demonstrates that there is sufficient flexibility at key points in the plan period through the trajectory. Statements of Common Ground will assist in clarifying the timing and phasing of all sites. The trajectory should illustrate the degree of flexibility throughout the plan period.		developability and delivery of this site. This is assisted by the site's priority status as part of the North Wales Growth deal where significant funding is available to provide the necessary infrastructure to prime the delivery of development on this site. In addition, the housing element of this site will be fed into the Welsh Government project to accelerate the provision of affordable housing on sites in its ownership working in conjunction with Registered Social Landlords to facilitate this. This provides added certainty of the delivery of the housing element of this mixed use site, and the contribution this makes to the overall housing requirement of the Plan. In terms of flexibility, the Plan includes an allowance that is significantly above the minimum prescribed in DPM3 and the Council considers that this is both reasonable and pragmatic in terms of ensuring the delivery of sufficient housing to meet the housing requirement, consistently throughout the Plan period.
1260	STR3: Strategic Sites	Object	Do not object to the identification of strategic sites and fully recognise the location and potential benefits of such sites. However, the delivery of economic and housing growth objectives is entirely reliant on these two strategic sites, and any delays on these strategic sites is a clear risk. As the council will be aware, strategic sites are complex to deliver and the	the LDP should identify further sites across the plan area in accordance with the settlement hierarchy to safeguard for any further strategic site delays.	Not accepted. It is noted that the objector does not object to the principle of identifying strategic sites and recognises the benefits that they bring. Although the two strategic sites form a key part of the Plans growth strategy, the Plans economic and housing growth is clearly not entirely dependent upon the two sites. There is a range of employment allocations offering choice in terms of location, type and size and also additional flexibility officer by the Principal Employment Areas. The Plans housing

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			expected timescales for development of such sites are often subject to significant slippage. This is particularly apparent with the two LDP strategic sites. Delivery of Northern Gateway (STR3A) is some three years behind expectations and further parcels are likely to be delayed further as a result of the need for further infrastructure works and securing developer interest, for example. Warren Hall (STR3B) is more problematic as the site had an unimplemented Outline consent for employment led development in 2008, and there is no indication the site will come forward during the plan period. As a result, the LDP should identify further sites across the plan area in accordance with the settlement hierarchy to safeguard for any further strategic site delays.		provision is made up of completions, commitments and windfall allowances, in addition to the two strategic sites and other housing sites allocated in the plan. The objector also takes a housing only perspective to development, and in doing so fails to acknowledge the wider purpose and intentions behind promoting mixed use development through sites such as this, and the broader intentions for economic benefits that this can bring, that just building more homes alone cannot match.
1276	STR3: Strategic Sites	Object	Do not object to the identification of strategic sites and fully recognise the location and potential benefits of such sites. However, the delivery of economic and housing growth objectives is entirely reliant on these two strategic sites, and any delays on these strategic sites is a clear risk.	Additional sites required, the LDP should identify further sites across the plan area in accordance with the settlement hierarchy to safeguard for any	Not accepted. It is accepted that the Northern Gateway site has been slow to get off the ground. However, significant investment in flood defence and transport infrastructure has been undertaken by Welsh Government and reserved matters approval given to one phase of housing and a large storage and distribution warehouse. Developer interest is being expressed in other phases of the development. Countryside

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			As the council will be aware, strategic sites are complex to deliver and the expected timescales for development of such sites are often subject to significant slippage. This is particularly apparent with the two LDP strategic sites. Delivery of Northern Gateway (STR3A) is some three years behind expectations and further parcels are likely to be delayed further as a result of the need for further infrastructure works and securing developer interest, for example. As a result, the LDP should identify further sites across the plan area in accordance with the settlement hierarchy to safeguard for any further strategic site delays.	further strategic site delays.	Properties have also commenced construction and use a method of construction which can deliver high annual completion rates. This more positive outlook and the confidence that commencement of development on site can create, confirms the Council's belief that the site can be delivered during the Plan period. It is undoubtedly the case that the employment growth objectives of the Plan rely heavily on the two strategic sites, although there is additional provision in the Plan through other employments allocations and flexibility with the Principal Employment Areas. The Plan is in line with the Growth Deal where both sites form a key part of the economic strategy for the region. However, the housing objectives of the Plan are not solely reliant on the two strategic sites as the Plan makes a number of allocations, in addition to completions, commitments and allowances for small and large site windfalls. The Plan is also on track with the intended housing delivery in the first four years of the Plan. It is not considered that additional housing allocations are required in the Plan. In their formal representations on the Plan, Welsh Government broadly support the level of housing and employment growth and the spatial strategy and consider the Plan to be in general conformity with the draft NDF.
1277	STR3: Strategic Sites	Object	Do not object to the identification of strategic sites and fully recognise the location and potential benefits of such sites. However, the delivery of economic and housing growth objectives is entirely	Additional sites required, the LDP should identify further sites across the plan area in	Not accepted. Although Warren Hall is a strategic site for a mixed use development, the housing element is not strategic, being similar in scale to some LDP housing allocations. The housing element of 300 units is quite capable of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			reliant on these two strategic sites, and any delays on these strategic sites is a clear risk. As the council will be aware, strategic sites are complex to deliver and the expected timescales for development of such sites are often subject to significant slippage. This is particularly apparent with the two LDP strategic sites. Delivery of Northern Gateway (STR3A) is some three years behind expectations and further parcels are likely to be delayed further as a result of the need for further infrastructure works and securing developer interest, for example. Warren Hall (STR3B) is more problematic as the site had an unimplemented Outline consent for employment led development in 2008, and there is no indication the site will come forward during the plan period. As a result, the LDP should identify further sites across the plan area in accordance with the settlement hierarchy to safeguard for any further strategic site delays.	accordance with the settlement hierarchy to safeguard for any further strategic site delays.	being delivered within the Plan period. It is acknowledged that the Warren hall site has not come forward for development despite being previously allocated in the UDP and having the benefit of outline planning permission (not including the housing element). Nevertheless, the mix of uses has been broadened and the site extended to improve the viability of the site and to improve the mix of development in order to improve sustainability. The need for public sector investment in order to bring forward the site, particularly the employment part, is clearly referenced in the Growth Deal. There is therefore no shortfall in housing from this site. The delivery of 300 units on a strategic site, in a strong housing market area is not unduly onerous or challenging. It is undoubtedly the case that the employment growth objectives of the Plan rely heavily on the two strategic sites, although there is additional provision in the Plan through other employments allocations and flexibility with the Principal Employment Areas. The Plan is in line with the Growth Deal where both sites form a key part of the economic strategy for the region. However, the housing objectives of the Plan are not solely reliant on the two strategic sites as the Plan makes a number of allocations, in addition to completions, commitments and allowances for small and large site windfalls. The Plan is also on track with the intended housing delivery in the first four years of the Plan. It is not considered that additional housing allocations are required in the Plan.

Policy STR3A Northern Gateway and STR3B Warren Hall

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
257	STR3a	Object	STR3A Northern Gateway and STR3B Warren Hall. Both sites have a poor track record of delivery. The housing allocation at Warren Hall fails sustainability tests and the sequential approach to housing land allocation. Please refer to detailed objection in the pdf file attached below. The Plan places significant reliance on the two strategic sites for both employment and housing land requirements. The nature of this objection is that the Plan over-relies on these sites which have a track record of failing to deliver. Paragraphs 3.49 and 3.50 acknowledge that the Plan's job target of 8-10,000 jobs is ambitious and aspirational and justifies its approach due to Flintshire's role as a sub-regional economic hub. However, it does not follow that this will necessarily result an accelerated take up of employment and housing land. These strategic sites account for 24% and 68% of the housing and employment land requirement respectively. It is important to recognise that both these sites have been allocated for development in successive Alyn and Deeside and Flintshire development plans for the last 25 years and yet no meaningful development has taken place. The Northern Gateway site is a complex	With regard to STR3(B) the whole site should be deleted from the Plan and a completion notice served on Welsh Government in accordance with S94 of the Planning Act. At the very least the 300 housing allocation should be deleted. Given the serious shortfall in housing land arising from partial, or total, non-delivery over the Plan period, provision should be made for a suitable high capacity contingency site in a sustainable location. An example would be candidate site FLI008 in Flint.	Not accepted. The Northern Gateway is a strategic mixed use allocation in both the adopted UDP and the deposit LDP. Progress on the site was affected by the economic downturn but Welsh Government has now invested in flood defence works along the River Dee and a spine road, both of which have been implemented. The site is in two ownerships with Praxis promoting the northern part and Pochin the southern part. Good progress is now being made on the northern part of the site with enabling works and the reserved matters approval (059514) for Countryside Properties for 283 units on plots H1, H2 and part of H8, who are presently on site. Following marketing of the site, developer interest has led to a planning application (060311) for a further phase of site enabling works and this application is under consideration. In January 2020 reserved matters approval was granted for a 10,000sqm warehouse development on plot A. On the southern part of the site, Pochin are also making progress in bringing their element of the site forward. A planning application (058868) is presently under consideration for site enabling works for phase 1 and a reserved matters application (060411) is presently under consideration for 129 homes for Keepmoat Homes (reported to Planning Committee 4th March and secured a Committee resolution to grant planning permission subject to signing of s106). Although Pochin Construction went into administration it is not considered to affect the Northern Gateway development as the

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and difficult site to develop. There are abnormally high development costs that have necessitated significant public sector financial assistance. Even with this support the technical and ground condition difficulties and on-site constraints have necessitated the very large housing element as 'enabling development' despite the description of the regeneration project as being 'employment led'. This is misleading as development for employment purposes would not be financially viable and it is dependent on the largest housing allocation in the Plan, albeit wholly within a C1 flood risk area. There is a long history to the development of this Deeside employment area. There have been massive injections of public funding from the EU, UK and successive Welsh Governments following the 'overnight' closure of the former Shotton Steelworks with the loss of 15,000 jobs. That level of support is no longer available for infrastructure and ground preparation. Major land raise works were carried out which included pumping of material from the Dee Estuary. These sources of landfill are no longer available due to the high level of protection which is now rightly given to the estuary. It is also important to acknowledge that the inward investment mobility that Wales experienced at the time has long gone and employment land take up rates have substantially reduced.		development company who have an interest in this site are not affected by the administration. In Aug 2019 a Welsh Government spokesman said 'We have been assured that the Pochin Goodman Joint Venture, which owns part of the Northern Gateway site, is not affected by Pochin's administration process and as such we do not expect any delay to work being carried out on the development'. Pochin Goodman is continuing in its work in delivering the southern part of the site. The evidence clearly demonstrates there is renewed developer interest in the site and the construction on site by Countryside Properties will result in developer confidence in further phases of development. The Council is aware that the respective owners have had firm enquiries from other developers about further phases of the development on the back of the initial phases of reserved matters permissions having been granted, and development commenced on site. It is quite normal on a strategic site of this size to have several housebuilders on site at the same time. Work associated with the April 2019 Housing Land Monitoring Study has involved feedback from Countryside Properties and it is of note that this developer has commenced construction on site and has a method of construction which can achieve high annual completion rates. It is evident that the site as a whole will be delivered by multiple developers and the housing delivery rates in the Housing Trajectory in the Housing Land Background Paper are realistic and achievable. The two strategic sites form an integral part of the Growth Bid proposals for North Wales and will bring

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			These concerns are supported by the Council's own Employment Land Review referred to in paragraph 3.47. This states that the ELR "did not indicate a significant need for new employment land or significant potential for job growth". The Plan tends to dismiss its own evidence by saying that the review "coincided with a significant and prolonged economic recessionary period in the UK/globally" and this did not reflect the "growth ambition" of the County. The reality is that 'ambition' itself will not generate the level of jobs that the Plan seeks. There is no evidence that an upsurge in the take up of employment land will occur. On the contrary, the current uncertainty over investment indicates otherwise which is borne out by the fact that no development has actually taken place other than a sign at the site entrance. The Northern Gateway site was allocated for development as Opportunity Site 1 in the Alyn and Deeside Local Plan 1993 - 2003. This was the preferred site out of 3 Opportunity Sites but was pushed back in priority by the former WDA who favoured the ill-fated Opportunity Site 2 located north of Shotwick Road. None of the sites have been developed apart from the latter as a solar farm despite it being contrary to local and national policies regarding green barrier and the best and most versatile agricultural land. The reality is that this site		about major economic benefits to the region. Evidence clearly demonstrates that Northern gateway is now being delivered and on course to deliver the units within Plan period (as shown in the trajectory). The objector appears to be objecting to a highly sustainable strategic mixed use development yet the proposed site at Flint has, at its core, a retirement village. This is hardly a sustainable alternative to the Northern gateway site advocated for deletion and as a proposal does virtually nothing to promote economic growth,

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			has been actively proposed for development for over 25 years and still no meaningful development has occurred. Past experience indicates that there is little confidence that it will come forward either partially or completely within the plan period. Little appears to have changed because since permission was granted for the current scheme over 5 years ago, no development has taken place on site. Furthermore, one of the major development partners, Pochin, which went into liquidation earlier in 2019 and it is understood that this may have created difficulties with the other partners involved in the project. This adds to the significant doubt as to whether all, or even part of the site, will be developed within the plan period. There has been relatively little new employment development on the Deeside employment area over the last 10 years which means that the projected take up rate of employment land needs to be treated with great caution. Past experience, together with abnormal site development costs, is evidence that it is highly unlikely that the anticipated rate of housing and employment starts and completions will be realised. The worst case scenario is that none of it will be developed within the first 5 years of the plan period. This severely affects the		

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			deliverability of the required housing land across the county.		
339	STR3a	Object	See attached representation. Unable to complete this box due to word restriction We have significant concerns regarding the overreliance of housing allocations that focus on two strategic sites as set out in policy STR3 (STR3A Northern Gateway and STR3B Warren Hall). Both are allocated for mixed use development with the Northern Gateway expected to deliver approximately 1300 new dwellings and Warren Hall expected to deliver approximately 300 dwellings. Both sites were previous allocations in the UDP with STR3A allocated for a mix of uses including at least 650 dwellings and Warren Hall allocated for employment. However due to constraints they have failed to deliver any housing or employment uses over the UDP period. It is encouraging to note that the Airfields part (Praxis) of the Northern Gateway Strategic Site now benefits from planning permission and its delivery is in the hands of one landowner. We are also aware that the site has attracted interest from a number of housebuilders who are encouraged by site enabling works taking place and servicing the site for available development. However, we do have greater concerns	See attached representation. Unable to complete this box due to word restriction	Not accepted. The Northern Gateway is a strategic mixed use allocation in both the adopted UDP and the deposit LDP. Progress on the site was affected by the economic downturn but Welsh Government has now invested in flood defence works along the River Dee and a spine road, both of which have been implemented. The site is in two ownerships with Praxis promoting the northern part and Pochin the southern part. Good progress is now being made on the northern part of the site with enabling works and the reserved matters approval (059514) for Countryside Properties for 283 units on plots H1, H2 and part of H8, who are presently on site. Although Pochin Construction went into administration it is not considered to affect the Northern Gateway development as the

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			with regards to the Pochin Goodman part of the Site and its ability to deliver the level of housing envisaged. The very high level masterplan and delivery statement which has been prepared for this part of the Strategic Site provides an indication of the infrastructure which will be required and the anticipated timescales when development is expected to commence. In the case of the Pochin Goodman Northern Gateway element, a package of enabling works is still required to be implemented following reserved matters approval and therefore it is unlikely housing units will begin to be delivered on the site in 2020 as detailed. Whilst we do not object to the Strategic Sites in Policy STR3 being allocated for mixed uses, they will require considerable infrastructure and investment before any development, let alone housing can be delivered and this must be a significant factor when considering whether the Plan provides for a suitable choice of housing sites. The Infrastructure Background Paper 3 which supports the Deposit Draft LDP provides a simple statement in paragraph 4.3 that " Flintshire County Council have adopted a pragmatic approach to show that there are no major 'show stoppers' to the delivery of allocations identified in the plan and/or in the case of the two strategic sites, this has either already been		development company who have an interest in this site are not affected by the administration. In Aug 2019 a Welsh Government spokesman said 'We have been assured that the Pochin Goodman Joint Venture, which owns part of the Northern Gateway site, is not affected by Pochin's administration process and as such we do not expect any delay to work being carried out on the development'. ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			provided or is planned to take place." This may be the case but given the previous lack of delivery during the UDP era, it is questionable whether this is as simple as it sounds. Indeed Appendix 2 of the paper details the requirement for significant energy network provision for both Strategic Sites. The provision of such infrastructure is critical to the delivery of the such large sites. Whilst it is acknowledged within the Housing Balance Sheet on page 90 of the LDP, the Northern Gateway Strategic Allocation figure has been discounted by 331 units as they are more likely to be delivered beyond the Plan end date, given the points set out above, we would question whether the 200 unit discount on the Pochin Goodman part of the site should in fact be greater still. Given the lack of delivery during the UDP period we continue to doubt whether it is realistic to assume that the remaining 995 units on the site and 300 units at Warren Hall will be delivered by the end of the plan period. This adds to the need for a realistic contingency figure to be included in the housing requirement figures or the identification of future contingency sites.		about major economic benefits to the region. Evidence clearly demonstrates that Northern gateway is now being delivered and on course to deliver the units within Plan period (as shown in the trajectory). The objector's proposed site at Maes Celyn, Northop is predominantly housing based with some other small scale mixed use elements including starter employment units. Rather than focus on the delivery of the Northern Gateway site, the objector's proposed development would actually detract from and compete with it. The objector's proposal would have the effect of jeopardising the delivery of the strategic Northern Gateway site, in favour of pepper potting additional greenfield allocations across the County. Such an approach would have implications for the delivery of regional growth as embodied in the Growth Deal, within which the Northern gateway is a key element. There is presently no requirement in PPW10 or the Development Plans Manual 3 for LDP's to incorporate contingency sites. The Plan already has a healthy 14.4% flexibility allowance and the allowances for small and large site windfalls is also a conservative estimate, offering further flexibility. It is also unclear when Anwyl are promoting significant alternative sites such as the large predominantly housing only extension to Croes Atti, how they would be in a position to deliver significant housing on a large scale at a rate to meet the requirements of the plan, when multiple developers now with reserved matters consents on the Northern Gateway site would not.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
424	STR3a	Object	Gladman are not convinced that the re-allocation of these sites will necessarily result in delivery as suggested within the plan. The council need a greater level of certainty regarding the delivery of these two sites, which are fundamental element of the FLDP. This concern is even more important if the current consultation to revoke TAN1 goes ahead and 5yr land supply is revoked. The council would then be reliant on monitoring of the housing trajectory through the AMR to ensure the delivery of the necessary scale of housing.	The council need a greater level of certainty regarding the delivery of these two sites, which are fundamental element of the FLDP.	The objection provides little in way of detailed comment on each site other than reference to three studies which look at lead-in times and delivery rates, particularly on large sites. It is acknowledged that the Northern Gateway site has been slow to get off the ground. However, significant investment in flood defence and transport infrastructure has been undertaken by Welsh Government and reserved matters approval given to one phase of housing and a large storage and distribution warehouse. Developer interest is being expressed in other phases of the development. This more positive outlook and the confidence that commencement of development on site can create, confirms the Council's belief that the site can be delivered during the Plan period.
639	STR3a	Object	In order to ensure that the policy is sound, TW recommends that: 1 Strategic allocation STR3A is reviewed in its entirety and the proposed number of dwellings to be delivered by 2030 is reassessed; and, 2 Additional non-strategic sites, which are both available and deliverable within the plan period, are allocated to ensure that the local housing requirements are appropriately met.	Strategic allocation STR3A is reviewed in its entirety and the proposed number of dwellings to be delivered by 2030 is reassessed; and, 2 Additional non-strategic sites, which are both available and deliverable within the plan period, are allocated to ensure that the local housing	Not accepted. The objector's proposed site at Maes Celyn, Northop is predominantly housing based with some other small scale mixed use elements including starter employment units. Rather than focus on the delivery of the Northern Gateway site, the objector's proposed development would actually detract from and compete with it. The objector's proposal would have the effect of jeopardising the delivery of the strategic Northern Gateway site, in favour of pepper potting additional greenfield allocations across the County. Such an approach would have implications for the delivery of regional growth as

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					embodied in the Growth Deal, within which the Northern gateway is a key element. The objector objects to the Northern Gateway Strategic Site and proposes that, in view of delivery concerns, additional non-strategic sites which are available and deliverable within the Plan period are allocated. The objector proposes a large housing site of some 580 dwellings in green barrier on the edge of Mynydd Isa which is more akin to a strategic site than any of the Plan's housing allocations in policy HN1. The objector provides no information on how and when such a large site can be delivered by 2030 and in their representations in relation to the strategy of the plan, are actually seeking an extension to the plan period to assist with delivery of their proposed site.
922	STR3a	Object	The Plan identifies two strategic sites including the Northern Gateway and Warren Hall. The supporting text highlights the problems with strategic sites at paragraph 5.18 stating that they "can be difficult to get off the ground and are not delivering development as anticipated". In light of the Council's strategy of continuing to pursue development at two long standing strategic allocations that have not delivered to date, we question whether this is the correct strategy for the County. Whilst I'm sure the Council believe that these sites will eventually come forward, we remain of the view that an alternative approach that looked at allocating a larger range and number of small, medium and	Over reliance on strategic sites, and that through the allocation of a range of alternative and additional sites, this could be addressed.	Not accepted. The Northern Gateway is a strategic mixed use allocation in both the adopted UDP and the deposit LDP. Progress on the site was affected by the economic downturn but Welsh Government has now invested in flood defence works along the River Dee and a spine road, both of which have been implemented. The site is in two ownerships with Praxis promoting the northern part and Pochin the southern part. Good progress is now being made on the northern part of the site with enabling works and the reserved matters approval (059514) for Countryside Properties for 283 units on plots H1, H2 and part of H8, who are presently on site. Following marketing of the site, developer interest has led to a planning application (060311) for a further phase of site enabling works and this application is under consideration. In January 2020 reserved

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			large sites across the County in the top three tiers of the settlement hierarchy would result in higher and earlier delivery of new housing, as opposed to having to wait for infrastructure heavy strategic development options to come forward. The identification of alternative sites could be in addition to the two strategic sites rather than instead of them, thereby providing flexibility and increasing potential delivery in the short term. Sites such as that at Drury Lane would be ideally placed to come forward in the early part of the Plan. In its current format, we do not consider the Plan sound as it does not meet Test 3 as we do not believe it will deliver the levels of development that are needed, as there is an over reliance on strategic sites, and that through the allocation of a range of alternative and additional sites, this could be addressed.		matters approval was granted for a 10,000sqm warehouse development on plot A. On the southern part of the site, Pochin are also making progress in bringing their element of the site forward. A planning application (058868) is presently under consideration for site enabling works for phase 1 and a reserved matters application (060411) is presently under consideration for 129 homes for Keepmoat Homes (reported to Planning Committee 4th March and secured a Committee resolution to grant planning permission subject to signing of s106). Although Pochin Construction went into administration it is not considered to affect the Northern Gateway development as the development company who have an interest in this site are not affected by the administration. In Aug 2019 a Welsh Government spokesman said 'We have been assured that the Pochin Goodman Joint Venture, which owns part of the Northern Gateway site, is not affected by Pochin's administration process and as such we do not expect any delay to work being carried out on the development'. Pochin Goodman is continuing in its work in delivering the southern part of the site. The evidence clearly demonstrates there is renewed developer interest in the site and the construction on site by Countryside Properties will result in developer confidence in further phases of development. The Council is aware that the respective owners have had firm enquiries from other developers about further phases of the development on the back of the initial phases of reserved matters permissions having been granted, and development commenced on site. It is

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					quite normal on a strategic site of this size to have several housebuilders on site at the same time. Work associated with the April 2019 Housing Land Monitoring Study has involved feedback from Countryside Properties and it is of note that this developer has commenced construction on site and has a method of construction which can achieve high annual completion rates. It is evident that the site as a whole will be delivered by multiple developers and the housing delivery rates in the Housing Trajectory in the Housing Land Background Paper are realistic and achievable. The two strategic sites form an integral part of the Growth Bid proposals for North Wales and will bring about major economic benefits to the region. Evidence clearly demonstrates that Northern gateway is now being delivered and on course to deliver the units within Plan period (as shown in the trajectory). The ethos behind this objection, and others by the same developer, appears to be simply to object to the housing element of this strategic site in order to promote smaller housing elsewhere in the County. Such an approach does not recognise the context of this important mixed use development and the combined package of economic benefits.
952	STR3a	Object	We doubt that these will be delivered in the plan period and no proven deliverability has been demonstrated. Moreover, allocating a greenfield site (STR3B) in an isolated and unsustainable location does not reflect other policies or	Allocate new deliverable sites	Not accepted. Reserved matters planning consent for both employment and housing development have been granted and Countryside Properties are presently on site. Further reserved matters planning applications are presently under consideration and enquiries from a

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			PPW10; particularly when better more sequentially sites are available and can be demonstrated to be deliverable. Northern Gateway concerns are: • Pochin (in August 2019) collapsed and went into administration which places doubt over the validity of any claims made with respect deliverability. • It is suggested that the Praxis area could deliver 725 units by 2030 and Pochin/Goodman claim to deliver 654 by 2030 out of the approved permission for 770 units; this totals 1,495 units which exceeds the 1,300 draft allocation. • The LDP aims to deliver 994 units across the STR3A area by 2030 and the remainder of the total 1,300 allocation (i.e. 306) in the subsequent plan period. • The whole "Airfields" site is a massively challenging site to bring forward, not least because of its locational position whereupon it does not offer an attractive proposition to build new housing and attract occupiers, but because of significant environmental drainage and highway accessibility / infrastructure investment requirements. • The trajectories provided are not considered to be founded on accurate evidence and will struggle to deliver the rates purported for a variety of reasons.		number of developers relating to other residential plots on the site. In respect of the objectors comments on the Northern Gateway site the Council responds below: • Although Pochin have gone into administration, the Northern Gateway site is within the remit of Pochin Goodman which is a separate development company and is still operational. There is therefore no question mark over the delivery of the Pochin southern part of the site. • The Plans allocation is for 1300 units and this is the figure used in the housing trajectory in Background Paper 10 Housing Land Supply. With two landowners promoting each half of the site, within the context of different sets of planning permissions, this is a complex and rapidly changing site. The Pochin Goodmand Statement which accompanied the Deposit Plan explains that the outline planning permission was for 600 units. In para 2.4 it explains that a subsequent planning permission (054758) granted in March 2018 varied a condition to increase the number of units from 600 to 770 units. Pochin illustrate in Appendix 1 which shows 654 units being completed by the end of the Plan period with the remainder beyond the Plan period. The Praxis delivery statement shows that the 725 units on their part of the site can all be delivered within the Plan period. The position on behalf of the two developers that a total of 1379 units (out of the total of 1495) can be delivered is slightly more optimistic than the Councils position. Policy STR3 identifies the provision of 1325 units on the site and the accompanying trajectory in

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Background Paper 10 Housing Land Supply shows 994 units being developed within the Plan period and 331 units being beyond the Plan period. In the context of the objectors concerns about non-delivery, it is evident that i) there is now greater overall provision in the Northern Gateway site than shown in the Plan (an additional170 units on the Pochin part) and that ii) the two developers are more optimistic in their estimates having regard to recent progress on the site and recent enquiries and negotiations on subsequent plots and phases. These two factors, indicate that the delivery rates within the LDP trajectory are realistic and if anything an under-estimate of likely delivery. • The site has taken time to come on stream largely because of the need to secure infrastructure investment in the form of flood alleviation works and the provision of a spine road. However, these have been funded by Welsh Government and completed. The site represents a highly sustainable mixed use strategic site at the heart of the growth area advocated in the previous Wales Spatial Plan and now the draft National Development Framework. The site comprises residential, employment, green infrastructure and local community facilities and has a riverside setting alongside the R.Dee and the cycle track. The planning permission and commencement on site by Countryside Properties represents a step change moment and has brought market interest and confidence in the site. As development commences and other developers come on stream, as is the case based on subsequent planning applications and enquiries, the site will create its own housing market.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					• The objector refers to a variety of reasons as to why projected build rates are not achievable but does not say what they are. For instance, Countryside Properties build in a particular way which enables them to achieve high annual completion rates. Several developers are likely to be on site at the same time and this would increase annual build rates. The objector's comments in respect of Warren Hall will be commented on in relation to Policy ST3B.

1060	STR3a	Object	STR3A - Northern Gateway Mixed Use Development Site You will be aware that there is a long and complex planning history affecting the re-development of this site, and that a number of outline planning applications, which allow for mixed use development, have been granted approval by your Authority since 2013. A complex suite of flood risk mitigation measures are required across the site to manage the consequences of flooding to the development, and users of it, in accordance with TAN15. These are detailed in the various Flood Consequences Assessment (FCA) reports which supported the outline planning applications. Numerous planning conditions were imposed on the planning approvals to ensure that the key flood risk mitigation measures are implemented and delivered over an agreed phasing period. Works to develop the site have already commenced. We note from your	Given the site is intended for allocation further narrative to support viability for the plan period would be beneficial. STR3A and 3B – we would recommend reference is made to provision of a Green Infrastructure network and strategic landscaping and GI network. We suggest that these networks be included in the Proposed Green Infrastructure SPG.	Not accepted. In respect of the Northern Gateway allocation, the site was allocated in the adopted UDP. The site has the benefit of outline planning permissions, consents in respect of discharges of conditions and reserved matters approvals. Housing development is now under construction on the site. Welsh Government has invested in flood defence works involving the strengthening of the embankments along the R. Dee. NRW were a statutory consultee throughout the sites allocation and planning application processes and an appropriate flood management scheme put in place. In respect of both STR3A and B, reference is made as part of the policy wording on each site to 'green infrastructure'. It is not considered further reference is necessary.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Authority's Strategic Flood Consequences Assessment (SFCA), and specifically Appendix B (FCC Development Site Assessment) that this site is listed for mixed use development. The Development Site Assessment advises that there should be a presumption against highly vulnerable development on this site, and that your Authority should consider the removal of highly vulnerable development from the plan. Given the site is intended for allocation further narrative to support viability for the plan period would be beneficial. STR3A and 3B – we would recommend reference is made to provision of a Green Infrastructure network and strategic landscaping and GI network. We suggest that these networks be included in the Proposed Green Infrastructure SPG.		
335	STR3a	Object	See attached representation. Unable to complete this box due to word restriction We have significant concerns regarding the overreliance of housing allocations that focus on two strategic sites as set out in policy STR3 (STR3A Northern Gateway and STR3B Warren Hall). Both are allocated for mixed use development with the Northern Gateway expected to deliver approximately 1300 new dwellings and Warren Hall expected to deliver approximately 300 dwellings. Both sites	See attached representation	Not accepted. The Northern Gateway is a strategic mixed use allocation in both the adopted UDP and the deposit LDP. Progress on the site was affected by the economic downturn but Welsh Government has now invested in flood defence works along the River Dee and a spine road, both of which have been implemented. The site is in two ownerships with Praxis promoting the northern part and Pochin the southern part. Good progress is now being made on the northern part of the site with enabling works and the reserved matters approval (059514) for Countryside Properties for 283 units on plots H1, H2 and part of H8, who are presently

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			were previous allocations in the UDP with STR3A allocated for a mix of uses including at least 650 dwellings and Warren Hall allocated for employment. However due to constraints they have failed to deliver any housing or employment uses over the UDP period. It is encouraging to note that the Airfields part (Praxis) of the Northern Gateway Strategic Site now benefits from planning permission and its delivery is in the hands of one landowner. We are also aware that the site has attracted interest from a number of housebuilders who are encouraged by site enabling works taking place and servicing the site for available development. However, we do have greater concerns with regards to the Pochin Goodman part of the Site and its ability to deliver the level of housing envisaged. The very high level masterplan and delivery statement which has been prepared for this part of the Strategic Site provides an indication of the infrastructure which will be required and the anticipated timescales when development is expected to commence. In the case of the Pochin Goodman Northern Gateway element, a package of enabling works is still required to be implemented following reserved matters approval and therefore it is unlikely housing units will begin to be delivered on the site in 2020 as detailed.		on site. Following marketing of the site, developer interest has led to a planning application (060311) for a further phase of site enabling works and this application is under consideration. In January 2020 reserved matters approval was granted for a 10,000sqm warehouse development on plot A. On the southern part of the site, Pochin are also making progress in bringing their element of the site forward. A planning application (058868) is presently under consideration for site enabling works for phase 1 and a reserved matters application (060411) is presently under consideration for 129 homes for Keepmoat Homes (reported to Planning Committee 4th March and secured a Committee resolution to grant planning permission subject to signing of s106). Although Pochin Construction went into administration it is not considered to affect the Northern Gateway development as the development company who have an interest in this site are not affected by the administration. In Aug 2019 a Welsh Government spokesman said 'We have been assured that the Pochin Goodman Joint Venture, which owns part of the Northern Gateway site, is not affected by Pochin's administration process and as such we do not expect any delay to work being carried out on the development'. Pochin Goodman is continuing in its work in delivering the southern part of the site. The evidence clearly demonstrates there is renewed developer interest in the site and the construction on site by Countryside Properties will result in developer confidence in further phases of development. The Council is aware that the respective owners have had firm enquiries from other developers about further

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Whilst we do not object to the Strategic Sites in Policy STR3 being allocated for mixed uses, they will require considerable infrastructure and investment before any development, let alone housing can be delivered and this must be a significant factor when considering whether the Plan provides for a suitable choice of housing sites. The Infrastructure Background Paper 3 which supports the Deposit Draft LDP provides a simple statement in paragraph 4.3 that " Flintshire County Council have adopted a pragmatic approach to show that there are no major 'show stoppers' to the delivery of allocations identified in the plan and/or in the case of the two strategic sites, this has either already been provided or is planned to take place." This may be the case but given the previous lack of delivery during the UDP era, it is questionable whether this is as simple as it sounds. Indeed Appendix 2 of the paper details the requirement for significant energy network provision for both Strategic Sites. The provision of such infrastructure is critical to the delivery of the such large sites. Whilst it is acknowledged within the Housing Balance Sheet on page 90 of the LDP, the Northern Gateway Strategic Allocation figure has been discounted by 331 units as they are more likely to be delivered beyond the Plan end date, given		phases of the development on the back of the initial phases of reserved matters permissions having been granted, and development commenced on site. It is quite normal on a strategic site of this size to have several housebuilders on site at the same time. Work associated with the April 2019 Housing Land Monitoring Study has involved feedback from Countryside Properties and it is of note that this developer has commenced construction on site and has a method of construction which can achieve high annual completion rates. It is evident that the site as a whole will be delivered by multiple developers and the housing delivery rates in the Housing Trajectory in the Housing Land Background Paper are realistic and achievable. The two strategic sites form an integral part of the Growth Bid proposals for North Wales and will bring about major economic benefits to the region. Evidence clearly demonstrates that Northern gateway is now being delivered and on course to deliver the units within Plan period (as shown in the trajectory). The objector's proposed site at Maes Celyn, Northop is predominantly housing based with some other small scale mixed use elements including starter employment units. Rather than focus on the delivery of the Northern Gateway site, the objector's proposed development would actually detract from and compete with it. The objector's proposal would have the effect of jeopardising the delivery of the strategic Northern Gateway site, in favour of pepper potting additional greenfield allocations across the County. Such an approach would have implications for the delivery of regional growth as

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the points set out above, we would question whether the 200 unit discount on the Pochin Goodman part of the site should in fact be greater still. Given the lack of delivery during the UDP period we continue to doubt whether it is realistic to assume that the remaining 995 units on the site and 300 units at Warren Hall will be delivered by the end of the plan period. This adds to the need for a realistic contingency figure to be included in the housing requirement figures or the identification of future contingency sites.		embodied in the Growth Deal, within which the Northern gateway is a key element. There is presently no requirement in PPW10 or the Development Plans Manual 3 for LDP's to incorporate contingency sites. The Plan already has a healthy 14.4% flexibility allowance and the allowances for small and large site windfalls is also a conservative estimate, offering further flexibility. It is also unclear when Anwyl are promoting significant alternative sites such as the large predominantly housing only extension to Croes Atti, how they would be in a position to deliver significant housing on a large scale at a rate to meet the requirements of the plan, when multiple developers now with reserved matters consents on the Northern Gateway site would not.
343	STR3a	Object	See attached representation. Unable to complete this box due to word restriction We have significant concerns regarding the overreliance of housing allocations that focus on two strategic sites as set out in policy STR3 (STR3A Northern Gateway and STR3B Warren Hall). Both are allocated for mixed use development with the Northern Gateway expected to deliver approximately 1300 new dwellings and Warren Hall expected to deliver approximately 300 dwellings. Both sites were previous allocations in the UDP with STR3A allocated for a mix of uses including at least 650 dwellings and Warren Hall allocated for employment.	See attached representation. Unable to complete this box due to word restriction	Not accepted. The Northern Gateway is a strategic mixed use allocation in both the adopted UDP and the deposit LDP. Progress on the site was affected by the economic downturn but Welsh Government has now invested in flood defence works along the River Dee and a spine road, both of which have been implemented. The site is in two ownerships with Praxis promoting the northern part and Pochin the southern part. Good progress is now being made on the northern part of the site with enabling works and the reserved matters approval (059514) for Countryside Properties for 283 units on plots H1, H2 and part of H8, who are presently on site. Following marketing of the site, developer interest has led to a planning application (060311) for a further phase of site enabling works and this application is under consideration. In January 2020 reserved

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			However due to constraints they have failed to deliver any housing or employment uses over the UDP period. It is encouraging to note that the Airfields part (Praxis) of the Northern Gateway Strategic Site now benefits from planning permission and its delivery is in the hands of one landowner. We are also aware that the site has attracted interest from a number of housebuilders who are encouraged by site enabling works taking place and servicing the site for available development. However, we do have greater concerns with regards to the Pochin Goodman part of the Site and its ability to deliver the level of housing envisaged. The very high level masterplan and delivery statement which has been prepared for this part of the Strategic Site provides an indication of the infrastructure which will be required and the anticipated timescales when development is expected to commence. In the case of the Pochin Goodman Northern Gateway element, a package of enabling works is still required to be implemented following reserved matters approval and therefore it is unlikely housing units will begin to be delivered on the site in 2020 as detailed. Whilst we do not object to the Strategic Sites in Policy STR3 being allocated for mixed uses, they will require considerable infrastructure and investment before any		matters approval was granted for a 10,000sqm warehouse development on plot A. On the southern part of the site, Pochin are also making progress in bringing their element of the site forward. A planning application (058868) is presently under consideration for site enabling works for phase 1 and a reserved matters application (060411) is presently under consideration for 129 homes for Keepmoat Homes (reported to Planning Committee 4th March and secured a Committee resolution to grant planning permission subject to signing of s106). Although Pochin Construction went into administration it is not considered to affect the Northern Gateway development as the development company who have an interest in this site are not affected by the administration. In Aug 2019 a Welsh Government spokesman said 'We have been assured that the Pochin Goodman Joint Venture, which owns part of the Northern Gateway site, is not affected by Pochin's administration process and as such we do not expect any delay to work being carried out on the development'. Pochin Goodman is continuing in its work in delivering the southern part of the site. The evidence clearly demonstrates there is renewed developer interest in the site and the construction on site by Countryside Properties will result in developer confidence in further phases of development. The Council is aware that the respective owners have had firm enquiries from other developers about further phases of the development on the back of the initial phases of reserved matters permissions having been granted, and development commenced on site. It is

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			development, let alone housing can be delivered and this must be a significant factor when considering whether the Plan provides for a suitable choice of housing sites. The Infrastructure Background Paper 3 which supports the Deposit Draft LDP provides a simple statement in paragraph 4.3 that " Flintshire County Council have adopted a pragmatic approach to show that there are no major 'show stoppers' to the delivery of allocations identified in the plan and/or in the case of the two strategic sites, this has either already been provided or is planned to take place." This may be the case but given the previous lack of delivery during the UDP era, it is questionable whether this is as simple as it sounds. Indeed Appendix 2 of the paper details the requirement for significant energy network provision for both Strategic Sites. The provision of such infrastructure is critical to the delivery of the such large sites. Whilst it is acknowledged within the Housing Balance Sheet on page 90 of the LDP, the Northern Gateway Strategic Allocation figure has been discounted by 331 units as they are more likely to be delivered beyond the Plan end date, given the points set out above, we would question whether the 200 unit discount on the Pochin Goodman part of the site should in fact be greater still. Given the		quite normal on a strategic site of this size to have several housebuilders on site at the same time. Work associated with the April 2019 Housing Land Monitoring Study has involved feedback from Countryside Properties and it is of note that this developer has commenced construction on site and has a method of construction which can achieve high annual completion rates. It is evident that the site as a whole will be delivered by multiple developers and the housing delivery rates in the Housing Trajectory in the Housing Land Background Paper are realistic and achievable. The two strategic sites form an integral part of the Growth Bid proposals for North Wales and will bring about major economic benefits to the region. Evidence clearly demonstrates that Northern gateway is now being delivered and on course to deliver the units within Plan period (as shown in the trajectory). The objector's proposed site at Maes Celyn, Northop is predominantly housing based with some other small scale mixed use elements including starter employment units. Rather than focus on the delivery of the Northern Gateway site, the objector's proposed development would actually detract from and compete with it. The objector's proposal would have the effect of jeopardising the delivery of the strategic Northern Gateway site, in favour of pepper potting additional greenfield allocations across the County. Such an approach would have implications for the delivery of regional growth as

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			lack of delivery during the UDP period we continue to doubt whether it is realistic to assume that the remaining 995 units on the site and 300 units at Warren Hall will be delivered by the end of the plan period. This adds to the need for a realistic contingency figure to be included in the housing requirement figures or the identification of future contingency sites.		embodied in the Growth Deal, within which the Northern gateway is a key element. 758	STR3a	Object	Policy STR3: Strategic Sites 6.26. The Council has identified two Strategic Sites for development during the LDP period 6.27. Our Client has no in-principle objection to these two allocations. 6.28. On review of Appendix 3 of Background Paper 10, it is noted that this sets out proposed delivery rates for both sites during the LDP period. In respect of Warren Hall, this is expected to deliver in its entirety during the LDP period, and specifically during the period 2023-24 to 2029-30. Our Client has no objection to the projected rates of delivery. 6.29. Turning to the Northern Gateway site, it is the Council's expectation that this will deliver 994 dwellings between 2020-21	Our Client would request that the Council publishes firm evidence which supports these ambitious assumptions (i.e. actual housebuilder information on delivery rates as opposed to the Site Promoter's own assumptions);	Not accepted. The Northern Gateway is a strategic mixed use allocation in both the adopted UDP and the deposit LDP. Progress on the site was affected by the economic downturn but Welsh Government has now invested in flood defence works along the River Dee and a spine road, both of which have been implemented. The site is in two ownerships with Praxis promoting the northern part and Pochin the southern part. In January 2020 reserved

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and 2029-30, averaging close to 100 dwellings per annum (and in some years 150 dwellings per annum based on the Site Promoter's own Delivery Statements). To date, it is understood that 280 dwellings benefits from detailed Reserved Matters consent and it is understood that work has commenced on the delivery of associated infrastructure in relation to an access road and flood protection works. There is a need to a clear timetable of when these works will be commenced and completed, alongside evidence that there is no funding gap which could preclude or delay the implementation of any of the required infrastructure works. 6.30. The Council's projected rate of housing delivery on the site is notably ambitious, and will require at least three housebuilder outlets at any one time to achieve them (and in some cases 4 based on the Site Promoter's own Delivery Statements). In calculating these delivery rates, consideration needs to be given to market conditions and competition in respect of the rates of delivery, as build rates will naturally be informed by sales rates and access to mortgages. Our Client would request that the Council publishes firm evidence which supports these ambitious assumptions (i.e. actual housebuilder information on delivery rates as opposed to the Site Promoter's own assumptions); as a leading North Wales housebuilder,		matters approval was granted for a 10,000sqm warehouse development on plot A. On the southern part of the site, Pochin are also making progress in bringing their element of the site forward. A planning application (058868) is presently under consideration for site enabling works for phase 1 and a reserved matters application (060411) is presently under consideration for 129 homes for Keepmoat Homes (reported to Planning Committee 4th March and secured a Committee resolution to grant planning permission subject to signing of s106). The Council is aware that the respective owners have had firm enquiries from other developers about further phases of the development on the back of the initial phases of reserved matters permissions having been granted, and development commenced on site. It is

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			our Client is fully aware of how delivery rates will be affected by market conditions/sales rates, particularly when forecasting over a 10-15 year period.		quite normal on a strategic site of this size to have several housebuilders on site at the same time. Work associated with the April 2019 Housing Land Monitoring Study has involved feedback from Countryside Properties and it is of note that this developer has commenced construction on site and has a method of construction which can achieve high annual completion rates. It is evident that the site as a whole will be delivered by multiple developers and the housing delivery rates in the Housing Trajectory in the Housing Land Background Paper are realistic and achievable. The two strategic sites form an integral part of the Growth Bid proposals for North Wales and will bring about major economic benefits to the region. Evidence clearly demonstrates that Northern gateway is now being delivered and on course to deliver the units within Plan period (as shown in the trajectory). The ethos behind this objection appears to be simply to object to the housing element of this strategic site in order to promote smaller housing elsewhere in the County. Such an approach does not recognise the context of this important mixed use development and the combined package of economic benefits.
921	STR3a	Object	Reliance on Key Strategic Sites Policy STR3 It is accepted that there has been a long term vision and growth proposed for the Northern Gateway area and Warren Hall Development site which are proposed to provide for 1625 homes between them over the plan period. There appears to be	alternative provision should be made available in other highlighted key settlements which are also as sustainable in	Not accepted. The Northern Gateway is a strategic mixed use allocation in both the adopted UDP and the deposit LDP. Progress on the site was affected by the economic downturn but Welsh Government has now invested in flood defence works along the River Dee and a spine road, both of which have been implemented.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			a heavy reliance on these sites to deliver almost 25% of new homes required over the plan period. It is considered that there are considerable obstacles that could prohibit or at least slow down the delivery of these sites, in particular flood risk and highways capacity that could significantly hamper the delivery of sites within this timeframe. Neither of these issues have been fully investigated for a full built out scenario. Furthermore, strategic allocations can be slower to be built out as the market becomes saturated and delivery rates can slow in subsequent phases as evidenced on the UDP allocation at Croes Atti, Flint. Therefore, alternative provision should be made available in other highlighted key settlements which are also as sustainable in character in line with Policy STR2. These 2 strategic allocations puts a heavy reliance on these Tier 2 settlements providing a quarter of all new housing for the county over the plan period without the necessary services and infrastructure being in place in these areas to support this growth. This obvious over reliance can put strain on the existing local infrastructure and make it more difficult to achieve the housing figures targeted and moreover required to support a growing population. Furthermore, this approach also fails to provide the market with greater choice of where people want to	character in line with Policy STR2.	The site is in two ownerships with Praxis promoting the northern part and Pochin the southern part. Good progress is now being made on the northern part of the site with enabling works and the reserved matters approval (059514) for Countryside Properties for 283 units on plots H1, H2 and part of H8, who are presently on site. Following marketing of the site, developer interest has led to a planning application (060311) for a further phase of site enabling works and this application is under consideration. In January 2020 reserved matters approval was granted for a 10,000sqm warehouse development on plot A. On the southern part of the site, Pochin are also making progress in bringing their element of the site forward. A planning application (058868) is presently under consideration for site enabling works for phase 1 and a reserved matters application (060411) is presently under consideration for 129 homes for Keepmoat Homes (reported to Planning Committee 4th March and secured a Committee resolution to grant planning permission subject to signing of s106). Although Pochin Construction went into administration it is not considered to affect the Northern Gateway development as the development company who have an interest in this site are not affected by the administration. In Aug 2019 a Welsh Government spokesman said 'We have been assured that the Pochin Goodman Joint Venture, which owns part of the Northern Gateway site, is not affected by Pochin's administration process and as such we do not expect any delay to work being carried out on the

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			live. Other settlements such as Buckley and Aston which are identified in Policy STR2 as Tier 1 Main Service centres are also considered to be sustainable and arguably more sustainable given the existing level of key facilities and transport connections. It is considered that insufficient sites have been allocated in Tier 1 settlements to support the employment led growth forecast that the LDP housing numbers are based upon in STR1. We therefore object to policy STR3.		development'. Pochin Goodman is continuing in its work in delivering the southern part of the site. The evidence clearly demonstrates there is renewed developer interest in the site and the construction on site by Countryside Properties will result in developer confidence in further phases of development. The Council is aware that the respective owners have had firm enquiries from other developers about further phases of the development on the back of the initial phases of reserved matters permissions having been granted, and development commenced on site. It is quite normal on a strategic site of this size to have several housebuilders on site at the same time. Work associated with the April 2019 Housing Land Monitoring Study has involved feedback from Countryside Properties and it is of note that this developer has commenced construction on site and has a method of construction which can achieve high annual completion rates. 					The ethos behind this objection, and others by the same developer, appears to be simply to object to the housing element of this strategic site in order to promote smaller housing elsewhere in the County. Such an approach does not recognise the context of this important mixed use development and the combined package of economic benefits.
935	STR3a	Object	We doubt that these will be delivered in the plan period and no proven deliverability has been demonstrated. Moreover, allocating a greenfield site (STR3B) in an isolated and unsustainable location does not reflect other policies or PPW10; particularly when better more sequentially sites are available and can be demonstrated to be deliverable	allocate new site that are deliverable.	Not accepted. The objector, in this submission, provides no explanation or evidence as to why the Northern Gateway won't be developed in the Plan period. Given that this objection is promoting a small extension to a Principal Employment Area on the edge of Chester, it is assumed that the objectors concerns about non-delivery relate to the employment element of the Northern Gateway site. If this is the case it is unclear why the objector's submission is referring to Background Paper 9 Agricultural Land in respect of a proposed housing site in Mold. Reserved matters planning consent for both employment and housing development have been granted and Countryside Properties are presently on site. Further reserved matters planning applications are presently under consideration. Planning permission has been granted in January 2020 as part of a reserved matters approval for a 10,000sqm warehouse development on plot A. Further enquiries have recently made about employment development on other plots and phases.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The objectors suggested extension to the Principal Employment Area will be commented on in more detail in relation to policy PE2. The objector's comments in respect of Warren Hall will be commented on in relation to Policy ST3B.
1205	STR3a	Object	Major housing allocations at Northern Gateway and Warren Hall have an obvious track record of non-delivery and insufficient contingency provisions have been allowed for. A further significant consideration is that the Council relies heavily on 2 particular allocations and commitments to meet its target allocation for the Plan period. These are the 1,325 houses on the mixed use Northern Gateway site (STR3A) and the 300 dwellings at Warren Hall (STR3B). There are real concerns regarding the deliverability of these sites notwithstanding that permissions have been granted. The Northern Gateway site, apart from it being located in a C1 flood risk area and comprising of one of the best areas of Grade 2 agricultural land in North Wales, is a complex and difficult site to develop. Indeed, it is because of these difficulties that such a large housing element has been included as development purely for employment purposes would not have been financially viable. There is a long	Land at Bryn Tirion, Caergwrle, Candidate Site HCAC029 for inclusion as a housing allocation. Objection to HCAC004. Please refer to attached document Land at Bryn Tirion, Caergwrle, Candidate Site HCAC029 for inclusion as a housing allocation. Objection to HCAC004. Please refer to attached document. The Plan is not consistent in its approach to housing allocations. In particular it allocated 300 dwellings at Warren Hall which is	Not accepted. Progress on the Northern Gateway site has been slow due to the economic recession and the need for infrastructure investment by Welsh Government in terms of flood defence works and spine road. This has now been delivered and progress made on site with Countryside Properties constructing their part of the site and the recent reserved matters approval for a warehouse and distribution centre. Other enquiries are also being received from house builders for other parts of the site. This will bring about a confidence factor which will assist in delivering the bulk of the site within the Plan period. The site is of key importance to the growth agenda for North Wales and represents a strategic and sustainable mixed use development. The Plans housing supply, as set out in the Housing Balance Sheet comprises several elements including completions to date, commitments, windfalls and the detailed housing allocations as well as the contribution from the two strategic sites. It should be noted that the housing balance sheet does not include all of the 1325 units as being delivered within the Plan period. In the totality of the Plans housing supply it is not accepted that it is over-reliant on the two strategic sites, particularly when the Warren Hall allocation is only for 300 units.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			history to development in this area with massive injections of public funding since the closure of the Shotton Steelworks from the EU, UK and successive Welsh Governments. That level of support is no longer available. Major land raise works were carried out which included pumping of material from the Dee Estuary. These sources of landfill are no longer available due to the high level of protection rightly given to the estuary. Despite permission being granted in 2014 no development has taken place on site. One of the major development partners includes Pochin which went into liquidation in 2019 and it is understood that there may be difficulties between the major partners involved in the project. It should be remembered that Northern Gateway was allocated for development as Opportunity Site 1 in the Alyn and Deeside Local Plan 1993 - 2003. This was the preferred site out of 3 Opportunity Sites but was pushed back in priority by the former WDA who favoured the ill-fated Opportunity Site 2 located north of Shotwick Road. None of the sites have been developed apart from the latter as a solar farm despite it being contrary to green barrier/best and most versatile land local and national policies. The significance is that this site has been actively proposed for development for over	unsustainable and poorly related to settlements. This is subject to separate objection which should be referred to.	The objectors agent should be well aware that the allocation of the Northern Gateway site was based on considerable flood defence studies and approval of (at the time) Environment Agency Wales. The two outline planning applications involved a flood alleviation programme of works which was agreed by NRW and each successive residential phase involves the need to re-consider flood risk considerations. Neverthless, Countryside Properties have been granted planning permission and have commenced construction and a further reserved matters approval for Keepmoat has the benefit of a Committee resolution to grant planning permission. There is no overriding flood risk issue in delivering this site. The Plan has provided for a 14% flexibility allowance and the allowances for small site and large site windfalls are also conservative, having regard to past trends and the findings of the Urban Capacity Study. No further contingency provisions are considered necessary, nor are they required in terms of PPW10 or Development Plans Manual 3.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			25 years and still no meaningful development has occurred and there is no confidence that it will come forward either partially or completely within the plan period.		
661	STR3a	Support	STR3A Northern Gateway Mixed Use Development Site • This site has planning permission and we have no further comment to make. Welsh Water made representations on this site through planning applications 049320 & 050125.		Support noted.
883	STR3a	Support	Spawforths have been instructed by Pochin Goodman Northern Gateway Ltd (PGNGL) to submit representations to the Flintshire Local Development Plan 2015-2030 Deposit Plan and for their site at Northern Gateway (former Corus Garden City Site), Deeside, referred to in the emerging Plan as STR3A. PGNGL supports the allocation of STR3A, however PGNGL are concerned that there is internal inconsistency within the Local Development Plan which provides uncertainty for landowners, developers and members of the public.		Support is noted. The other matters referred to be the objector are dealt with in separate representations.
215	STR3b	Object	Broughton- The plans here are wholly inappropriate and will put significant strain on local services. When the new housing developments by Broughton Park were proposed it was stated there would be additional GP services and other facilities which never arrived. Residents in this area	Removal of allocation at Warren Hall.	Not accepted. It must be stressed that the site is allocated for a business park and hotel in the UDP and already has outline planning permission for a business park. In the LDP the site area has been extended and the mix of uses broadened to include housing and a commercial local centre.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			have spoken to me, as a Community Councillor, as they have had difficulty getting their children into school or as their children have been made to attend different schools. The local GP surgery has huge waiting times for appointments as it is. Those in employment, who can not attend the always overprescribed drop in service, regularly have to wait 4-8 weeks for a bookable appointment and then they are not able to see a consistent care provider and have to see whichever doctor is available. This already compromises medical care and there is no logistical way the current doctors surgery could physically expand. This new proposed development would add a huge demand for GP appointments as it would likely mean around 1,000 new residents. Broughton has serious traffic problems and particularly around the proposed Development site. The traffic from the A55 through Broughton is a known problem for Flintshire Council. Prior to the safety improvements on Broughton Hall Road temporary traffic lights were installed for a two week trial to see if this would ease congestion. The lights had to be removed less than 2 hours after they were installed due to the severe disruption they caused. This plan proposes hundreds of properties being built near this junction which means hundreds of extra vehicles adding to the		The Deposit Plan was accompanied by a Masterplan and Delivery Statement document which summaries the wide range of background and technical documents which had been undertaken for the site. One of these was a Transport Assessment which concluded that the local highway network is able to accommodate the development. The Council has for some time pushed for a new access off the A55(T) eastbound to provide a direct route to Airbus and the Retail Park, thereby avoiding Main Road. A sub-regional transport is presently taking place to look at options for improving access into the Broughton / Saltney area and the western edge of Chester. It must be stressed that the Warren Hall housing allocation will not deliver completed houses until 2023-24 and will be developed over a number of years. The impact of development will therefore not be felt in 'one hit' and there is sufficient time for both the Heath Board and the Education Authority to support the delivery of growth that is identified in the Plan. There is no formal objection from either statutory body to the Plan nor allocation. No objection to the Plan or allocations has been made by the Local Education Authority. The commentary of the Wrexham LDP Inspector referenced in detail above, establishes that it is normal practice for new development to address capacity issues through developer contributions. The new allocations will not deliver completed houses until 2023-24 and will take several years for the development to be completed. The impact on infrastructure will therefore be gradual and will

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			existing traffic issues at a section of road where safety concerns have been raised (and unsuccessfully attempted to be resolved through bollards by the co-op) and this extra congestion means additional pollution and the environmental concerns that go with this. When the planning permission was first considered it was before the Broughton Park expansion and before the Park Jasmine and other new housing developments were in place. Broughton does not have the resources to cope with such a large influx of people. The increased traffic could also be problematic for Airbus if it causes delays for their workers. I can not suggest a more appropriate site. I do not have the necessary data to be able to make such an assessment. I only know that there is no possible way that Broughton has the services and facilities to cope with anywhere near the number of houses suggested.		not be in 'one hit'. This gives the Local Education Authority time to address how the growth in the Plan can be accommodated in terms of school capacity. The Planning Service continues to work with the LEA to secure appropriate mitigation for the delivery of planned LDP sites. No objection to the Plan or allocation has been made by Betsi Cadwaladr University Health Board. Flintshire has a number of relatively new Primary Health Care Centres and the issue is one of lack of sufficient staff including GPs, rather than a lack of facilities as also commented on by the Wrexham LDP Inspector above. As stated in the preceding paragraph in relation to education capacity, there is ample time for the Health Board to plan for how it intends to meet the health care needs of the Plan's growth levels. The Council continues to work with the Health Board in securing the appropriate provision of infrastructure such as health for the delivery of LDP sites.
399	STR3b	Object	1. The site is referred to as Warren Hall all the way through the document. Warren Hall is the name of our house and not correct in the way you use this name through document to describe the site. we would like you to change this on the plan. 2. I'd like to understand if the high and low line electricity lines are new lines going in? Our 7 year old daughter is recovering from cancer and we would like to know what the	Already set out above in the comments box. The wording in the policy wording when describing the site needs to change from 'warren Hall' which is our house to the correct name.	Not accepted. The site has been allocated in the adopted UDP and has outline planning permission and has always been referred to as Warren Hall or Warren Hall Business Park. It is accepted that there is an existing residential property 'Warren Hall' adjoining the site. However, the name Warren Hall in the Plan refers to a geographical piece of land. During the operational phase of the development each internal road and unit /

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			impact would be and how close to our home they will be. 3.The road network around this site is in very poor condition , Lesters Lane is unable to accommodate two way traffic . There are many complaint about this from local villagers and when speaking to FCC representative this appears to be overlooked. There is no footpaths or cycle ways to Kinnerton village from this proposed development . There are also difficulties getting out of Kinnerton Lane onto Mold road at the junction. This feels unsafe especially with young children in the car. There needs to be more thought going into the roads around the development . 4. The Development will be very detrimental to local wildlife, there are many rare Species not mentioned on the plan which isn't accurate.		premises will have a new address and this should enable a differentiation from the objectors dwelling. Welsh Government have commissioned a utilities study for the proposed development and in terms of electricity lines this shows the diversion of a 11kV and a 33kV overhead lines but these do not appear to come any close to existing residential properties. As part of their promotion of the site, Welsh Government have undertaken a Transport assessment which demonstrates that the road network can accommodate the development. Nevertheless it is acknowledged that the condition of Lesters Lane is poor and options exist for it to become one-way or for it to be become a no-through road whilst maintaining access to land holdings and properties from either end. This should prevent Lesters Lane from becoming a rat run. These options were clearly highlighted to the objector at the drop-in session that discussed this site. Active Travel routes are being developed between Mold, Broughton and Broughton and the site can link in with these. Scope also exists for further linkages between these active travel routes and Higher Kinnerton. The principle of development has already been established on the bulk of the site with the allocation in the adopted UDP and the outline planning permission. Nevertheless, Welsh Government has commissioned a wide range of ecological surveys and whilst there are protected species present these can be addressed through avoidance and mitigation measures. No

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					objection has been made to the site by Natural Resources Wales.
666	STR3b	Object	Remove Llys Ben Northop Hall from Green barrier and allocate more housing increase overall housing numbers. The strategic site at Warren Hall (STR3B) near Broughton is isolated and does not have any relationship to facilities. It is therefore not a sustainable option for residential development and the lack of facilities mean that even if residential development comes forward in that location the need for facilities will delay delivery over many years. It is unrealistic to expect that allocation to be brought forward and therefore that represents a further shortfall in housing.	Remove Llys Ben Northop Hall from Green barrier and allocate more housing increase overall housing numbers	Not accepted. The Warren Hall allocation is for a strategic site in the form of a mixed use development. Further to the existing UDP allocation and outline planning permission, the LDP allocation has been extended slightly and the range of uses broadened to include a commercial hub alongside the hotel and to include 300 houses. The concept of mixed use developments is supported in PPW10 in that employment housing and employment provision are provided side by side, alongside a range of other facilities. The site also sits in a gap between Penyffordd / Penymynydd, Broughton and Higher Kinnerton, in a sustainable location where walking and cycling links with those settlements can be developed. It is not in an isolated location. As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site. The site is also central to the North Wales Growth Vision and Growth Deal where UK and Welsh Government funding has been identified to provide the infrastructure required to bring sites like Warren Hall forward in a timely manner. There is therefore no shortfall in housing from this site. The delivery of 300 units on a strategic site, in a strong housing market area is not unduly onerous or challenging.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
765	STR3b	Object	In relation to the FCC's strategic policy for Strategic Sites, the key comments in the context of Warren Hall and the Village Plan thematics and objectives are as follows: • The Community Council and the village community itself recognise the need for new housing in the county and accept that Higher Kinnerton may accommodate some of this growth over the life of the LDP. However, the community feels that development should not come at the cost of a continuing decline in local infrastructure (road, transport, access to health provision, education) and local village amenities (post office, shops, pubs). These vital services have not kept pace with the growth of the community. The recent design of residential developments has also contributed to the growth and reliance of residents' use of their cars as the main means of transport and has added to parking problems within the village. This problem has been recognised nationally in a recent project document (Transport for New Homes 2018). • The community would welcome the opportunity to influence positively the type and form of new development going forward at Warren Hall to maximise the benefits of development while mitigating any negative impacts on the existing community as far as possible. • As the Warren Hall development is included in the LDP, the	The Community Council and the village community itself recognise the need for new housing in the county and accept that Higher Kinnerton may accommodate some of this growth over the life of the LDP. However, the community feels that development should not come at the cost of a continuing decline in local infrastructure (road, transport, access to health provision, education) and local village amenities (post office, shops, pubs). • As the Warren Hall development is included in the LDP, the Community Council consider that the case for further development within the current village boundary is substantially	Noted. The settlement of Higher Kinnerton accommodated growth in the UDP period and in the early years of the LDP period. Unfortunately, recent years have seen a loss of services and facilities, whether private sector or public sector, but this is not specific just to Higher Kinnerton. It is unclear in the example of Higher Kinnerton whether these facilities and services would have been lost irrespective of housing development and the Community Council will be aware that local services are sustained by local patronage from the existing community itself, and if this patronage or demand is not present then that in itself puts a direct strain on the ability of local facilities to survive. It is also unclear from the objection how parking problems in the village have increased if services and facilities have been lost. Given that new developments would have provided on site car parking, and given that these developments are within walking distance of the village centre, it is not explained how or why these parking problems have arisen. The objections made by the objector will influence the broad principles of the allocation, through examination of the Plan. However the objector will have a further opportunity to influence the detail of the scheme through

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Community Council consider that the case for further development within the current village boundary is substantially weakened and should not be supported. • The residential element of the Warren Hall development should be delivered in such a way that its future residents benefit from a high-quality built environment balanced against not feel isolated from the existing Higher Kinnerton community of which they will become an important new part.	weakened and should not be supported. • The residential element of the Warren Hall development should be delivered in such a way that its future residents benefit from a high-quality built environment balanced against not feel isolated from the existing Higher Kinnerton community of which they will become an important new part.	Pre–Application Consultation (PAC) procedures, ahead of a planning application. Higher Kinnerton is a Tier 3 Sustainable Development which saw development in the UDP Plan period and has seen more recent development in the form of the Elan Homes speculative site on Kinnerton Lane. The Elan Homes development will contribute to the Plan's housing requirement figure through completions in the first few years of the Plan period as a large windfall development. The Plan Strategy is not based on the necessity for housing allocations in every settlement. Given that Higher Kinnerton has contributed to growth in two successive Plan periods it is not considered necessary for further development to be allocated. This is even more so when taking into account the allocation for 300 units at Warren Hall. The indicative Masterplan clearly identifies a Green Infrastructure network which will create a high quality live / work environment with linkages off site to Active Travel routes and to nearby settlements (as referenced in criteria v of STR3B). Residents on the Warren Hall development will benefit from on- site facilities and services but will also benefit from the proximity to facilities and services as well as community events and groups in Higher Kinnerton. The creation of a cohesive community should be capable of being achieved. Further work has been undertaken by Whyte Young Green on behalf of Welsh Government in the form of a Sustainable Development Placemaking Assessment

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					which will assists in ensuring that the allocation can deliver a high quality sustainable place.
1204	STR3b	Object	The Plan is not consistent in its approach to housing allocations. In particular it allocated 300 dwellings at Warren Hall which is unsustainable and poorly related to settlements. This is subject to separate objection which should be referred to. A further significant consideration is that the Council relies heavily on 2 particular allocations and commitments to meet its target allocation for the Plan period. These are the 1,325 houses on the mixed use Northern Gateway site (STR3A) and the 300 dwellings at Warren Hall (STR3B). There are real concerns regarding the deliverability of these sites notwithstanding that permissions have been granted. The Warren Hall site has a similar history of non-development. That was also included in the former Alyn and Deeside Local Plan and no development has occurred, other than works required merely to keep the permission for a business park, hotel and leisure facilities alive. The failure to carry out the development is despite its favourable location (from an investor/developer point of view), on the A55 and close to the Chester/Cheshire border where there is a track record of attracting high quality	Land at Bryn Tirion, Caergwrle, Candidate Site HCAC029 for inclusion as a housing allocation. Objection to HCAC004. Please refer to attached document Land at Bryn Tirion, Caergwrle, Candidate Site HCAC029 for inclusion as a housing allocation. Objection to HCAC004. Please refer to attached document Major housing allocations at Northern Gateway and Warren Hall have an obvious track record of non-delivery and insufficient contingency provisions have been allowed for.	Not accepted. The Warren Hall Strategic Site is not considered to be unsustainable nor poorly related to settlements. The site is a mixed use development which has been broadened from the UDP allocation to include housing and a local commercial hub. It therefore represents a high quality mixed use development which sits in close proximity to the two Tier 3 Sustainable Settlements of Penyffordd and Penymynydd and the Tier 2 Local Service Centre of Broughton with its significant retail and employment offer. The Plan is not considered to be over-reliant on the two strategic sites. The Plans housing land supply as set out in the Housing Balance Sheet comprises several elements including completions to date, commitments, windfall allowances and detailed housing allocations in addition to the two strategic sites. The Warren Hall residential element is 300 units which is on a par with the Plan's other housing allocations is quite capable of being delivered in this location. Not all of the 1325 units from the two strategic sites have been shown within the housing trajectory as being deliverable within the Plan period (discounted by 331 units). In this context the Plan is not considered to be over-reliant on the strategic sites. The Warren Hall site is a key part of the Plans Strategy but is also a key part of the North Wales Growth Deal and it is a matter of public record that there is a commitment to funding the infrastructure necessary to deliver the allocation. Welsh Government undertook a

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			business and residential development. The permission at Warren Hall does not include residential development and the likelihood is that the housing allocation is there to try and make it financially more attractive to develop. This is allocation is contrary the location criteria that is applied to new residential development given its isolation from the nearest settlement (Broughton) by green barrier and the busy A55 major strategic highway. Of further concern is the fact that the site is owned by Welsh Government which, through its own policy and LDP guidance, requires development to be allocated only where there is a realistic prospect that it is deliverable. If it was a viable development then it is only reasonable to expect that development would have occurred within the 25 years that a consent has existed.		significant amount of background studies to support the Deposit allocation and have done further work since including a report looking at aeronautical issues and the height of development, a marketing assessment and a sustainable development Placemaking Assessment. Welsh Government is clearly committed to delivering the site given that it forms such an important part of the Growth Deal.
1221	STR3b	Object	We doubt that these will be delivered in the plan period and no proven deliverability has been demonstrated. Moreover, allocating a greenfield site (STR3B) in an isolated and unsustainable location does not reflect other policies or PPW10; particularly when better more sequentially sites are available and can be demonstrated to be deliverable. Concerns in relation to Warren Hall: • Due to Aeronautical / Levels constraints	more sequentially sites are available and can be demonstrated to be deliverable	Not accepted. Warren Hall is not in an isolated position as it sits between the settlements of Penyffordd / Penymynydd, Higher Kinnerton and Broughton. It therefore sits at the heart of the growth zone between Wrexham and Deeside identified in the draft National Development Framework, being located adjacent to the settlement of Broughton, with its shopping park and major employers. As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			just 22% of the site area can be brought forward as two storey development; this increase to 71% – regardless of which figure is accurate this will impose significant commercial constraints upon new employment interests which we cannot believe be office, leisure or residential developers/operators would be keen to take up. • Whilst there may be capacity on the network to handle the volume of traffic that could be generated by the site there is no assessment of sustainable access; and given it comprises an isolated site divorced and physically unconnected with its closest settlements this is a major concern. Indeed, the location of the residential area to the far south of the site is akin to a new settlement not an urban extension. • The site does involve Grade 3 a land; a range of protected species are to be found and no drainage (FCA) SUD's compliant assessment has been undertaken for this greenfield site. • Significant water supply and electrical supplies will be needed to serve the site due to inadequate capacity levels which currently exist. • No trajectory is provided. • It is understood that WG are imposing constraints on delivery partners (zero carbon housing, bungalow development)		Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site. The site is also central to the North Wales Growth Vision and Growth Deal where UK and Welsh Government funding has been identified to provide the infrastructure required to bring sites like Warren Hall forward in a timely manner. There is therefore no shortfall in housing from this site. The Warren Hall allocation is for a strategic mixed use development which will involve a range of uses and facilities, ste within a high quality environment and strong local housing market area. The housing element will help deliver an employment site which is at the heart of the North Wales Growth Deal. The detailed concerns of the objector are addressed in turn: • The Deposit Plan is accompanied by a Masterplan Delivery Statement which represents a summary of the detailed background work that Welsh Government have commission on the site. The masterplan shows the location of the housing, business park and commercial hub and these are not affected by the height constraints associated with the flight path. It is the higher north western part of the site which is most constrained and the Masterplan clearly shows this as being retained as open land. The aeronautical constraint does not prevent the site coming forward for development. The comments by Airbus Operations are addressed separately. Further work has now been undertaken in the form of an

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that will not make for an attractive commercial proposition.		Instrument Flight Procedure Safeguarding assessment by Cyrrus on behalf of Welsh Government and discussions have taken place with Airbus. The outcome of this work is that development of two or more storeys in height will be acceptable on approximately 54.6ha or 71.2% of the overall site area. These results have been presented to Airbus who consider that further detailed design work at Warren Hall can proceed. • The housing element sits between the settlements of Penyffordd / Penymynnd Higher Kinnerton and Broughton where there is a range of services and facilities within each and major shopping and employment at Broughton and at the scale proposed cannot realistically be considered a 'new settlement' as suggested by the objectors. The Masterplan which accompanied the Deposit Plan for Warren Hall identified the provision of an extensive green infrastructure network across the site to maximise opportunities to promote community cohesion within the site and to enable sustainable linkages with nearby settlements. It clearly shows a network of green infrastructure and walking / cycling routes through the site. The policy requires that the development links in with the Active Travel scheme linking Mold, Buckley and Broughton, which is being developed by the Councils Transport Strategy unit. Consideration will be given to ensuring links between the site and the Active travel route and Higher Kinnerton. Bus services also operate along the A5104 adjacent to the site. It is acknowledged that the site is not an extension to an existing settlement but rather, it forms part of a strategic mixed use site in a

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					highly sustainable location close to several settlements and major employment and shopping at Broughton. • The majority of the site is already allocated in the adopted UDP and has outline planning permission. Although this part of the site has BMV, the principle of development has previously been established. The housing element comprises grade 3b and this is based on an onsite survey and is clearly referenced on the Welsh Government Predictive Agricultural Land Classification Map. In support of the allocation, Welsh Government have undertaken a large number of ecological surveys and whilst there are protected species within the site, they are matters that can be addressed through the detailed design of the scheme in terms of avoidance and / or mitigation measures. The need for SuDS is now a requirement of Welsh Government and this will be developed as part of the detailed design of the scheme. • The need for infrastructure improvements is acknowledged and this is reference in the Growth Deal in terms of the public funding being needed to deliver this. The commitment to fund the necessary infrastructure is a clear demonstration of the importance of the site to the regional growth strategy. • The Deposit LDP is accompanied by Background Paper 10 Housing Land Supply. The summary trajectory in table 3 (as supported by the detailed trajectory in

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					appendix 3) indicates that 75 units will be delivered in years 6-10 (30 in 2023-24, 45 in 2024/25) and 225 will be delivered in years 11-15 (45 per year). In this strong market area a build rate of 45 units per annum is realistic and achievable. • As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site.
1224	STR3b	Object	We have significant concerns regarding the overreliance of housing allocations that focus on two strategic sites as set out in policy STR3 (STR3A Northern Gateway and STR3B Warren Hall). Both are allocated for mixed use development with the Northern Gateway expected to deliver approximately 1300 new dwellings and Warren Hall expected to deliver approximately 300 dwellings. Both sites were previous allocations in the UDP with STR3A allocated for a mix of uses including at least 650 dwellings and Warren Hall allocated for employment. However due to constraints they have failed to deliver any housing or employment uses over the UDP period. It is encouraging to note that the Airfields part (Praxis) of the Northern Gateway Strategic Site now benefits from planning	In terms of the Warren Hall allocation, the Masterplan and Delivery Statement details that the LDP Preferred Strategy acknowledges that the delivery of the Warren Hall site has been impeded by both site conditions and wider economic influences, and that a wider mix of uses is required to allow for a deliverable and sustainable allocation. We	Not accepted. The objector's concerns in relation to the Northern Gateway strategic site have been addressed elsewhere in responding to the same point they made to STR3A. In summary, the recent grant of detailed planning permissions for housing and employment development, and the level of subsequent enquiries from other developers, plus Countryside Properties having commenced construction, confirms that the site is viable and deliverable over the Plan period. A second developer, Keepmoat has reserved matters consent subject to s106) to develop 120 homes on the southern parcel of the site owned by Pochin Goodman, confirming the collective interest in all housing elements of this site. The Council also understands that this interest extends to Anwyl seeking a development parcel on Northern Gateway. In terms of the Warren Hall mixed use development site, the introduction of housing will improve the viability of the overall development. However, it will also improve

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			permission and its delivery is in the hands of one landowner. We are also aware that the site has attracted interest from a number of housebuilders who are encouraged by site enabling works taking place and servicing the site for available development. In terms of the Warren Hall allocation, the Masterplan and Delivery Statement details that the LDP Preferred Strategy acknowledges that the delivery of the Warren Hall site has been impeded by both site conditions and wider economic influences, and that a wider mix of uses is required to allow for a deliverable and sustainable allocation. We do not dispute this assertion but consider that the site continues to require a significant amount of investment to assist in its delivery. The Delivery Statement does not provide any detail on the funding mechanism to achieve this, therefore delivery within the identified timescales is questionable. In addition, the location of Hawarden Airport which is located approximately 2 km to the north-west of the Warren Hall site will inevitably impact on the height of dwellings which can be brought forward on the site. Whilst bungalows would help to provide an alternative mix of housing on the site, the development density and	do not dispute this assertion but consider that the site continues to require a significant amount of investment to assist in its delivery. The Delivery Statement does not provide any detail on the funding mechanism to achieve this, therefore delivery within the identified timescales is questionable.	the overall sustainability of the strategic site by improving the mix of uses. It is a matter of public record that the Warren Hall site is a key part of the Growth Deal and that funding will be secured for infrastructure investment to bring about the delivery of the scheme. Further technical work will be commissioned by Welsh Government to establish further parameters for the height restrictions placed on development within the site. The provision of 300 dwellings at Warren Hall is not 'strategic' in the sense of the level of housing at Northern Gateway and in a strong market area should be capable of being delivered in line with the trajectory in Background paper 10. As stated earlier, the commitment of Welsh Government and National Government to securing funding for infrastructure at Warren Hall through the Growth Deal is a matter of public record. The 300 units proposed at Warren Hall is similar in scale to several of the Plans other housing allocations. Nearby development in Penyffordd / Penymynydd, Broughton and Higher Kinnerton demonstrates that the area is capable of delivering housing development. The Warren Hall site is equally capable of securing 300 units before the end of the Plan period. Welsh Government does not require the identification of contingency sites in the Plan. Instead, it requires that

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			numbers which can be achieved overall is likely to be fewer than envisaged. Whilst we do not object to the Strategic Sites in Policy STR3 being allocated for mixed uses, they will require considerable infrastructure and investment before any development, let alone housing can be delivered and this must be a significant factor when considering whether the Plan provides for a suitable choice of housing sites. The Infrastructure Background Paper 3 which supports the Deposit Draft LDP provides a simple statement in paragraph 4.3 that " Flintshire County Council have adopted a pragmatic approach to show that there are no major 'show stoppers' to the delivery of allocations identified in the plan and/or in the case of the two strategic sites, this has either already been provided or is planned to take place." This may be the case but given the previous lack of delivery during the UDP era, it is questionable whether this is as simple as it sounds. Indeed Appendix 2 of the paper details the requirement for significant energy network provision for both Strategic Sites. The provision of such infrastructure is critical to the delivery of the such large sites.		the Plan incorporates a flexibility allowance of at least 10% and the Plan has an allowance of 14.4%. The objector also takes a housing only perspective to development, and in doing so fails to acknowledge the wider purpose and intentions behind promoting mixed use development through sites such as this, and the broader intentions for economic benefits that this can bring, supported by infrastructure funding via the Growth Deal, that just building more homes alone cannot match.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Whilst it is acknowledged within the Housing Balance Sheet on page 90 of the LDP, the Northern Gateway Strategic Allocation figure has been discounted by 331 units as they are more likely to be delivered beyond the Plan end date, given the points set out above, we would question whether the 200 unit discount on the Pochin Goodman part of the site should in fact be greater still. Given the lack of delivery during the UDP period we continue to doubt whether it is realistic to assume that the remaining 995 units on the site and 300 units at Warren Hall will be delivered by the end of the plan period. This adds to the need for a realistic contingency figure to be included in the housing requirement figures or the identification of future contingency sites.		
1226	STR3b	Object	We have significant concerns regarding the overreliance of housing allocations that focus on two strategic sites as set out in policy STR3 (STR3A Northern Gateway and STR3B Warren Hall). Both are allocated for mixed use development with the Northern Gateway expected to deliver approximately 1300 new dwellings and Warren Hall expected to deliver approximately 300 dwellings. Both sites were previous allocations in the UDP with STR3A allocated for a mix of uses including at least 650 dwellings and Warren Hall allocated for employment. However due to constraints they have	In terms of the Warren Hall allocation, the Masterplan and Delivery Statement details that the LDP Preferred Strategy acknowledges that the delivery of the Warren Hall site has been impeded by both site conditions and wider economic influences, and that a	Not accepted. The objector's concerns in relation to the Northern Gateway strategic site have been addressed elsewhere in responding to the same point they made to STR3A. In summary, the recent grant of detailed planning permissions for housing and employment development, and the level of subsequent enquiries from other developers, plus Countryside Properties having commenced construction, confirms that the site is viable and deliverable over the Plan period. A second developer, Keepmoat has reserved matters consent subject to s106) to develop 120 homes on the southern parcel of the site owned by Pochin Goodman, confirming the collective interest in all housing elements of this site. The Council also understands that this

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			failed to deliver any housing or employment uses over the UDP period. It is encouraging to note that the Airfields part (Praxis) of the Northern Gateway Strategic Site now benefits from planning permission and its delivery is in the hands of one landowner. We are also aware that the site has attracted interest from a number of housebuilders who are encouraged by site enabling works taking place and servicing the site for available development. In terms of the Warren Hall allocation, the Masterplan and Delivery Statement details that the LDP Preferred Strategy acknowledges that the delivery of the Warren Hall site has been impeded by both site conditions and wider economic influences, and that a wider mix of uses is required to allow for a deliverable and sustainable allocation. We do not dispute this assertion but consider that the site continues to require a significant amount of investment to assist in its delivery. 			dwellings which can be brought forward on the site. Whilst bungalows would help to provide an alternative mix of housing on the site, the development density and numbers which can be achieved overall is likely to be fewer than envisaged. Whilst we do not object to the Strategic Sites in Policy STR3 being allocated for mixed uses, they will require considerable infrastructure and investment before any development, let alone housing can be delivered and this must be a significant factor when considering whether the Plan provides for a suitable choice of housing sites. The Infrastructure Background Paper 3 which supports the Deposit Draft LDP provides a simple statement in paragraph 4.3 that " Flintshire County Council have adopted a pragmatic approach to show that there are no major 'show stoppers' to the delivery of allocations identified in the plan and/or in the case of the two strategic sites, this has either already been provided or is planned to take place." This may be the case but given the previous lack of delivery during the UDP era, it is questionable whether this is as simple as it sounds. Indeed Appendix 2 of the paper details the requirement for significant energy network provision for both Strategic Sites. The provision of such		Hall site is equally capable of securing 300 units before the end of the Plan period. Welsh Government does not require the identification of contingency sites in the Plan. Instead, it requires that the Plan incorporates a flexibility allowance of at least 10% and the Plan has an allowance of 14.4%. The objector also takes a housing only perspective to development, and in doing so fails to acknowledge the wider purpose and intentions behind promoting mixed use development through sites such as this, and the broader intentions for economic benefits that this can bring, supported by infrastructure funding via the Growth Deal, that just building more homes alone cannot match.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			infrastructure is critical to the delivery of the such large sites. Whilst it is acknowledged within the Housing Balance Sheet on page 90 of the LDP, the Northern Gateway Strategic Allocation figure has been discounted by 331 units as they are more likely to be delivered beyond the Plan end date, given the points set out above, we would question whether the 200 unit discount on the Pochin Goodman part of the site should in fact be greater still. Given the lack of delivery during the UDP period we continue to doubt whether it is realistic to assume that the remaining 995 units on the site and 300 units at Warren Hall will be delivered by the end of the plan period. This adds to the need for a realistic contingency figure to be included in the housing requirement figures or the identification of future contingency sites.		
1228	STR3b	Object	We doubt that these will be delivered in the plan period and no proven deliverability has been demonstrated. Moreover, allocating a greenfield site (STR3B) in an isolated and unsustainable location does not reflect other policies or PPW10; particularly when better more sequentially sites are available and can be demonstrated to be deliverable. Concerns in relation to Warren Hall: • Due to Aeronautical / Levels constraints	Allocate new deliverable sites	Not accepted. Warren Hall is not in an isolated position as it sits between the settlements of Penyffordd / Penymynydd, Higher Kinnerton and Broughton. It therefore sits at the heart of the growth zone between Wrexham and Deeside identified in the draft National Development Framework, being located adjacent to the settlement of Broughton, with its shopping park and major employers. As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			just 22% of the site area can be brought forward as two storey development; this increase to 71% – regardless of which figure is accurate this will impose significant commercial constraints upon new employment interests which we cannot believe be office, leisure or residential developers/operators would be keen to take up. • Whilst there may be capacity on the network to handle the volume of traffic that could be generated by the site there is no assessment of sustainable access; and given it comprises an isolated site divorced and physically unconnected with its closest settlements this is a major concern. Indeed, the location of the residential area to the far south of the site is akin to a new settlement not an urban extension. • The site does involve Grade 3 a land; a range of protected species are to be found and no drainage (FCA) SUD's compliant assessment has been undertaken for this greenfield site. • Significant water supply and electrical supplies will be needed to serve the site due to inadequate capacity levels which currently exist. • No trajectory is provided. • It is understood that WG are imposing constraints on delivery partners (zero carbon housing, bungalow development)		Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site. The site is also central to the North Wales Growth Vision and Growth Deal where UK and Welsh Government funding has been identified to provide the infrastructure required to bring sites like Warren Hall forward in a timely manner. There is therefore no shortfall in housing from this site. The Warren Hall allocation is for a strategic mixed use development which will involve a range of uses and facilities, ste within a high quality environment and strong local housing market area. The housing element will help deliver an employment site which is at the heart of the North Wales Growth Deal. The detailed concerns of the objector are addressed in turn: • The Deposit Plan is accompanied by a Masterplan Delivery Statement which represents a summary of the detailed background work that Welsh Government have commission on the site. The masterplan shows the location of the housing, business park and commercial hub and these are not affected by the height constraints associated with the flight path. It is the higher north western part of the site which is most constrained and the Masterplan clearly shows this as being retained as open land. The aeronautical constraint does not prevent the site coming forward for development. The comments by Airbus Operations are addressed separately. Further work has now been undertaken in the form of an

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that will not make for an attractive commercial proposition.		Instrument Flight Procedure Safeguarding assessment by Cyrrus on behalf of Welsh Government and discussions have taken place with Airbus. The outcome of this work is that development of two or more storeys in height will be acceptable on approximately 54.6ha or 71.2% of the overall site area. These results have been presented to Airbus who consider that further detailed design work at Warren Hall can proceed. • The housing element sits between the settlements of Penyffordd / Penymynnd Higher Kinnerton and Broughton where there is a range of services and facilities within each and major shopping and employment at Broughton and at the scale proposed cannot realistically be considered a 'new settlement' as suggested by the objectors. The Masterplan which accompanied the Deposit Plan for Warren Hall identified the provision of an extensive green infrastructure network across the site to maximise opportunities to promote community cohesion within the site and to enable sustainable linkages with nearby settlements. It clearly shows a network of green infrastructure and walking / cycling routes through the site. The policy requires that the development links in with the Active Travel scheme linking Mold, Buckley and Broughton, which is being developed by the Councils Transport Strategy unit. Consideration will be given to ensuring links between the site and the Active travel route and Higher Kinnerton. Bus services also operate along the A5104 adjacent to the site. It is acknowledged that the site is not an extension to an existing settlement but rather, it forms part of a strategic mixed use site in a

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					highly sustainable location close to several settlements and major employment and shopping at Broughton. • The majority of the site is already allocated in the adopted UDP and has outline planning permission. Although this part of the site has BMV, the principle of development has previously been established. The housing element comprises grade 3b and this is based on an onsite survey and is clearly referenced on the Welsh Government Predictive Agricultural Land Classification Map. In support of the allocation, Welsh Government have undertaken a large number of ecological surveys and whilst there are protected species within the site, they are matters that can be addressed through the detailed design of the scheme in terms of avoidance and / or mitigation measures. The need for SuDS is now a requirement of Welsh Government and this will be developed as part of the detailed design of the scheme. • The need for infrastructure improvements is acknowledged and this is reference in the Growth Deal in terms of the public funding being needed to deliver this. The commitment to fund the necessary infrastructure is a clear demonstration of the importance of the site to the regional growth strategy. • The Deposit LDP is accompanied by Background Paper 10 Housing Land Supply. The summary trajectory in table 3 (as supported by the detailed trajectory in

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					appendix 3) indicates that 75 units will be delivered in years 6-10 (30 in 2023-24, 45 in 2024/25) and 225 will be delivered in years 11-15 (45 per year). In this strong market area a build rate of 45 units per annum is realistic and achievable. • As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site.
1230	STR3b	Object	We doubt that these will be delivered in the plan period and no proven deliverability has been demonstrated. Moreover, allocating a greenfield site (STR3B) in an isolated and unsustainable location does not reflect other policies or PPW10; particularly when better more sequentially sites are available and can be demonstrated to be deliverable. 					• As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site.
1232	STR3b	Object	The Plan identifies two strategic sites including the Northern Gateway and Warren Hall. The supporting text highlights the problems with strategic sites at paragraph 5.18 stating that they "can be difficult to get off the ground and are not delivering development as anticipated". In light of the Council's strategy of continuing to pursue development at two long standing strategic allocations that have not delivered to date, we question whether this is the correct strategy for the County. Whilst I'm sure the Council believe that these sites will eventually come forward, we remain of the view that an alternative approach that looked at allocating a larger range and number of small, medium and large sites across the County in the top three tiers of the settlement hierarchy would result in higher and earlier delivery of new housing, as opposed to having to wait for infrastructure heavy strategic development options to come forward. The identification of alternative sites could be in addition to the two strategic sites rather than instead of them, thereby providing flexibility and increasing potential delivery	over reliance on strategic sites, and that through the allocation of a range of alternative and additional sites, this could be addressed.	Not accepted. The objectors concerns in relation to the Northern Gateway strategic site have been addressed elsewhere in response to their same point made to policy STR3A. In summary, the recent grant of detailed planning permissions for housing and employment development, and the level of subsequent enquiries from other developers, plus Countryside Properties having commenced construction, confirms that the site is viable and deliverable over the Plan period. The Warren Hall strategic site comprises 300 units and it is not considered that this is strategic as there are several other housing allocations of a similar size. In combination therefore, it is not considered that the Plan is over-reliant on these two strategic site allocations. As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site. This provides further certainty to the delivery of the housing element of this site.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			in the short term. Sites such as that at Drury Lane would be ideally placed to come forward in the early part of the Plan. In its current format, we do not consider the Plan sound as it does not meet Test 3 as we do not believe it will deliver the levels of development that are needed, as there is an over reliance on strategic sites, and that through the allocation of a range of alternative and additional sites, this could be addressed.		The Plan has made a range of other housing allocations, and delivery in the early years of the Plan period are on track in terms of the Plans proposed housing provision. The distribution of housing allocations has been made in the context of the settlement hierarchy and spatial strategy in policy STR2. The site promoted at Drury is commented on separately and given that it already lies within the settlement boundary, can be brought forward as a windfall site over the Plan period.
1236	STR3b	Object	We have significant concerns regarding the overreliance of housing allocations that focus on two strategic sites as set out in policy STR3 (STR3A Northern Gateway and STR3B Warren Hall). Both are allocated for mixed use development with the Northern Gateway expected to deliver approximately 1300 new dwellings and Warren Hall expected to deliver approximately 300 dwellings. Both sites were previous allocations in the UDP with STR3A allocated for a mix of uses including at least 650 dwellings and Warren Hall allocated for employment. However due to constraints they have failed to deliver any housing or employment uses over the UDP period. It is encouraging to note that the Airfields part (Praxis) of the Northern Gateway Strategic Site now benefits from planning permission and its delivery is in the hands of one landowner. We are also aware that the site has	In terms of the Warren Hall allocation, the Masterplan and Delivery Statement details that the LDP Preferred Strategy acknowledges that the delivery of the Warren Hall site has been impeded by both site conditions and wider economic influences, and that a wider mix of uses is required to allow for a deliverable and sustainable allocation. We do not dispute this assertion but consider that the site	Not accepted. The objector's concerns in relation to the Northern Gateway strategic site have been addressed elsewhere in responding to the same point they made to STR3A. In summary, the recent grant of detailed planning permissions for housing and employment development, and the level of subsequent enquiries from other developers, plus Countryside Properties having commenced construction, confirms that the site is viable and deliverable over the Plan period. A second developer, Keepmoat has reserved matters consent subject to s106) to develop 120 homes on the southern parcel of the site owned by Pochin Goodman, confirming the collective interest in all housing elements of this site. The Council also understands that this interest extends to Anwyl seeking a development parcel on Northern Gateway. In terms of the Warren Hall mixed use development site, the introduction of housing will improve the viability of the overall development. However, it will also improve the overall sustainability of the strategic site by improving the mix of uses. It is a matter of public record

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			attracted interest from a number of housebuilders who are encouraged by site enabling works taking place and servicing the site for available development. In terms of the Warren Hall allocation, the Masterplan and Delivery Statement details that the LDP Preferred Strategy acknowledges that the delivery of the Warren Hall site has been impeded by both site conditions and wider economic influences, and that a wider mix of uses is required to allow for a deliverable and sustainable allocation. We do not dispute this assertion but consider that the site continues to require a significant amount of investment to assist in its delivery. The Delivery Statement does not provide any detail on the funding mechanism to achieve this, therefore delivery within the identified timescales is questionable. In addition, the location of Hawarden Airport which is located approximately 2 km to the north-west of the Warren Hall site will inevitably impact on the height of dwellings which can be brought forward on the site. Whilst bungalows would help to provide an alternative mix of housing on the site, the development density and numbers which can be achieved overall is likely to be fewer than envisaged.	continues to require a significant amount of investment to assist in its delivery. The Delivery Statement does not provide any detail on the funding mechanism to achieve this, therefore delivery within the identified timescales is questionable.	that the Warren Hall site is a key part of the Growth Deal and that funding will be secured for infrastructure investment to bring about the delivery of the scheme. Further technical work will be commissioned by Welsh Government to establish further parameters for the height restrictions placed on development within the site. The provision of 300 dwellings at Warren Hall is not 'strategic' in the sense of the level of housing at Northern Gateway and in a strong market area should be capable of being delivered in line with the trajectory in Background paper 10. As stated earlier, the commitment of Welsh Government and National Government to securing funding for infrastructure at Warren Hall through the Growth Deal is a matter of public record. The 300 units proposed at Warren Hall is similar in scale to several of the Plans other housing allocations. Nearby development in Penyffordd / Penymynydd, Broughton and Higher Kinnerton demonstrates that the area is capable of delivering housing development. The Warren Hall site is equally capable of securing 300 units before the end of the Plan period. Welsh Government does not require the identification of contingency sites in the Plan. Instead, it requires that the Plan incorporates a flexibility allowance of at least 10% and the Plan has an allowance of 14.4%.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Whilst we do not object to the Strategic Sites in Policy STR3 being allocated for mixed uses, they will require considerable infrastructure and investment before any development, let alone housing can be delivered and this must be a significant factor when considering whether the Plan provides for a suitable choice of housing sites. The Infrastructure Background Paper 3 which supports the Deposit Draft LDP provides a simple statement in paragraph 4.3 that " Flintshire County Council have adopted a pragmatic approach to show that there are no major 'show stoppers' to the delivery of allocations identified in the plan and/or in the case of the two strategic sites, this has either already been provided or is planned to take place." This may be the case but given the previous lack of delivery during the UDP era, it is questionable whether this is as simple as it sounds. Indeed Appendix 2 of the paper details the requirement for significant energy network provision for both Strategic Sites. The provision of such infrastructure is critical to the delivery of the such large sites. Whilst it is acknowledged within the Housing Balance Sheet on page 90 of the LDP, the Northern Gateway Strategic Allocation figure has been discounted by 331 units as they are more likely to be		The objector also takes a housing only perspective to development, and in doing so fails to acknowledge the wider purpose and intentions behind promoting mixed use development through sites such as this, and the broader intentions for economic benefits that this can bring, supported by infrastructure funding via the Growth Deal, that just building more homes alone cannot match.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			delivered beyond the Plan end date, given the points set out above, we would question whether the 200 unit discount on the Pochin Goodman part of the site should in fact be greater still. Given the lack of delivery during the UDP period we continue to doubt whether it is realistic to assume that the remaining 995 units on the site and 300 units at Warren Hall will be delivered by the end of the plan period. This adds to the need for a realistic contingency figure to be included in the housing requirement figures or the identification of future contingency sites.		
1272	STR3b	Object	We would recommend reference is made to provision of a Green Infrastructure network and strategic landscaping and GI network. We suggest that these networks be included in the Proposed Green Infrastructure SPG.	We would recommend reference is made to provision of a Green Infrastructure network and strategic landscaping and GI network. We suggest that these networks be included in the Proposed Green Infrastructure SPG.	Not accepted. In respect of both STR3A and B, reference is made as part of the policy wording on each site to 'green infrastructure'. It is not considered further reference is necessary.
7	STR3b	Object	Warren Hall Mixed Use Development Site Like most people I welcome any employment opportunity this site would bring to our local area, but the info structure is just not available to support it. Main road is already blocked with traffic at most times of the day and would only		Not accepted. It must be stressed that the site is allocated for a business park and hotel in the UDP and already has outline planning permission for a business park. In the LDP the site area has been extended and the mix of uses broadened to include housing and a commercial local centre.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			become worse if this went ahead. Traffic from the A55 can exit and join at the roundabouts but anyone wishing to go to Broughton Park will use the main road adding to the local traffic chaos at certain times. A new exit and on junction would be required at Broughton Park. The housing development planned is also not thought out. Local schools and doctors can not cope with the influx of people that it would bring. The local doctors is already at capacity and so are the schools. More planning is required for this plan to go ahead.		The Deposit Plan was accompanied by a Masterplan and Delivery Statement document which summaries the wide range of background and technical documents which had been undertaken for the site. One of these was a Transport Assessment which concluded that the local highway network is able to accommodate the development. The Council has for some time pushed for a new access off the A55(T) eastbound to provide a direct route to Airbus and the Retail Park, thereby avoiding Main Road. A sub-regional transport is presently taking place to look at options for improving access into the Broughton / Saltney area and the western edge of Chester. It must be stressed that the Warren Hall housing allocation will not deliver completed houses until 2023-24 and will be developed over a number of years. The impact of development will therefore not be felt in 'one hit' and there is sufficient time for both the Heath Board and the Education Authority to support the delivery of growth that is identified in the Plan. There is no formal objection from either statutory body to the Plan nor allocation. No objection to the Plan or allocations has been made by the Local Education Authority. The commentary of the Wrexham LDP Inspector referenced in detail above, establishes that it is normal practice for new development to address capacity issues through developer contributions. The new allocations will not deliver completed houses until 2023-24 and will take several years for the development to be completed. The impact on infrastructure will therefore be gradual and will

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					not be in 'one hit'. This gives the Local Education Authority time to address how the growth in the Plan can be accommodated in terms of school capacity. The Planning Service continues to work with the LEA to secure appropriate mitigation for the delivery of planned LDP sites. No objection to the Plan or allocation has been made by Betsi Cadwaladr University Health Board. Flintshire has a number of relatively new Primary Health Care Centres and the issue is one of lack of sufficient staff including GPs, rather than a lack of facilities as also commented on by the Wrexham LDP Inspector above. As stated in the preceding paragraph in relation to education capacity, there is ample time for the Health Board to plan for how it intends to meet the health care needs of the Plan's growth levels. The Council continues to work with the Health Board in securing the appropriate provision of infrastructure such as health for the delivery of LDP sites.
220	STR3b	Object	STR3 The Warren Hall Masterplan & Delivery Statement, published as a supporting document to the LDP, proposes a complex and aspirational mixed-use development site which, it is considered, would be highly unlikely to be fully delivered within the proposed plan period of 11 years whilst considering the planning history of the site to date. Part of the strategic site was originally granted outline planning permission in 1989 and has not been developed in the last 30 years. It is acknowledged that various	It is considered that the Deposit LDP should consider a number of smaller residential allocations which relate well to existing development boundaries and will ensure that existing services and shops are retained.	Not accepted. The site has outline planning permission for a business park and a hotel. Investment by Welsh Government in the improved grade separated interchange between the A55(T) and the A5119 has been completed. In the LDP the size of the site has been extended and the mix of land uses broadened to include a commercial hub associated with the hotel and 300 houses. It is not considered that the LDP allocation, in comparison with the UDP allocation and planning permission is 'complex and aspirational'. Rather, it is representative of the facilities that would be expected as part of a sustainable mixed use strategic site.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			subsequent planning consents have been obtained, together with a physical start on site comprising of access works to ensure the planning permission is extant. However, these consents would not relate to the proposed strategic site so it is considered that the proposed strategic site should be assessed on its own merits without having previous consents referenced. It is considered that the Deposit LDP should consider a number of smaller residential allocations which relate well to existing development boundaries and will ensure that existing services and shops are retained. This is the approach which is advocated by Welsh Government policy and one which would ensure that the proposed Deposit LDP meets the Test of Soundness.		The existing consent is clearly relevant as it establishes the principle of development in this location and on this site. It is not considered that the new mix of uses and extent of the site is so different as to warrant ignoring the sites planning history. The relevance of the sites importance to the regional growth agenda is also important. There is a clear commitment in the Growth Deal, through the North Wales Economic Ambition Board, to delivering the Warren Hall site and there is significant financial support to ensure the site can come forward. The site is crucial to delivering economic growth to the region and brings multiple benefits that cannot be delivered by the site being promoted in Higher Kinnerton by the objector. The objector refers to how it has been well documented in recent months that another global recession is soon expected, so the deliverability of this strategic site is questionable. It is simply questioned why such a global recession would affect only the strategic site and not the site being proposed by the objector. The Warren Hall site will be assisted by funding secured through the Growth Deal. The Plan is not over-reliant on the housing element at Warren hall and furthermore, the Plan has made housing allocations in appropriate settlements in line with its Spatial Strategy. PPW fully supports the concept of mixed use development and there is no objection from Welsh Government Planning to the Plan's spatial strategy or to this allocation.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The objector also takes a housing only perspective to development, and in doing so fails to acknowledge the wider purpose and intentions behind promoting mixed use development through sites such as this, and the broader intentions for economic benefits that this can bring, that just building more homes alone cannot match.
435	STR3b	Object	I note on the Flintshire Development plan that there is a strategic site on Lesters Lane leading to Higher Kinnerton. This area would fall under our practice boundary. I would like to make it known that we do not have the capacity to take on any new patients in great numbers. We have heard that potentially there could be 300 houses on this site, we certainly could not accommodate the numbers of patients who would reside in them without affecting the care provided to our current patients.	Removal of the Warren Hall Strategic Site	Not accepted. The Betsi Cadwaldr University Health Board has been a key stakeholder during the preparation of the Plan. During the early engagement stages it was a member of the Key Stakeholder Forum and has been consulted on at each stage in the Plans progression. The Health Board has made no objection to the Plan generally nor this site specifically. The Council is continuing to work with the Health Board in terms of how to accommodate the Plans proposed growth. It must be stressed that the residential development of this site will not result in one hit given that the Plans Housing Land Supply Background paper shows the housing being delivered at a rate of 30 units in 2023/24 and 45 units per year thereafter until 2030. This provides time for the Health Board to put suitable measures in place.
580	STR3b	Object	An amendment to the text at Paragraph 5.33 is requested to include specific reference to the B2 element of the Warren Hall allocation. At present the supporting text at paragraph 5.33 states that "The employment element will still comprise B1 development and will need to be of high quality in terms of siting, form, design and materials which respects the setting of the site". It is requested that this is altered to		Not accepted. The Plan quite clearly references in criteria ii of STR3B that the Warren Hall allocation comprises 'B1 and high quality B2 employment land'. In the explanation to the policy paragraph 5.23 (not 5.33) refers only to B1 development. It is accepted that this is an error and that the explanation should also include B2 so that it is in with the policy wording. The Council would have no objection to the Inspector considering an amendment to the Plan accordingly.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			refer to 'B1/B2 development' to correctly reflect the B1/B2 reference within policy STR3B itself.		
614	STR3b	Object	The Warren Hall Development - STR3B Warren Hall Mixed Use Development Site: Employment and housing I do understand that people need homes and this is a real social problem. Yet, based on what I have seen with all the building taking place in the immediate area, builders are prioritising more lucrative larger properties that are not genuinely affordable to the people in real need. They only put in the absolute minimum of affordable homes in order to secure the land for profitable building. This doesn't solve the housing problem and means large amounts of land must be lost before making any tangible progress delivering the type of housing that is actually needed. The location of the housing planned at Warren Hall is of concern. Higher Kinnerton has already has substantially increased in size over the past few years, and the Elan development is ongoing. The planned location of the new housing, effectively within touching distance of the village, means the nature of what was once a rural community will be badly affected. If the proposed development of the other areas of Warren Hall is permitted, the visual impact will be to effectively connect it up with Broughton and become a suburban sprawl. The entire locality will be significantly and	Remove Warren Hall development.	Not accepted. The Plan will require, through policy HN2 a mix of housing in terms of type and size, and a proportion of affordable housing as set out in policy HN3. The affordable housing requirements in the LDP arise from evidence in the Local Housing Market Assessment (and update) and were informed by a viability assessment undertaken by District Valuation Services. As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site. The housing element at Warren Hall is separated from Higher Kinnerton by a wedge of open countryside and the nearby green barrier has been extended to retain this gap. The business park element of the allocation is already allocated in the adopted UDP and has the benefit of outline planning permission, so the principle of development has been established largely on the extent of the site now re-presented in the LDP. The principle of the use of the land has been established for some time therefore. The edge of Broughton is well defined by the line of the A55(T) and as part of the Warren Hall scheme, extensive strategic landscaping, as part of a green infrastructure strategy will be undertaken, to soften the appearance of the development and ensure

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			detrimentally altered. The greenbelt should not be built over to become 'employment land'. We need to use what we have more carefully, rather than simply removing vast amounts of green space on the assumption it will create employment opportunities. A quick check on RightMove alone to verify what I thought was the case showed there are numerous commercial properties, offices and units available for rental so I question the need to remove such a large area of green space to make way for all this building. The potential size of the Warren Hall development breaches test two of soundness rules given the dramatic impact it would have on the whole nature of the surrounding area.		that a gap exists between the development and Broughton. The Warren Hall site has never been green barrier as it is allocated for development in the existing UDP. The land in question is also not 'green space' as it is presently agricultural land in private ownership. It is the case that at any point in time there will be commercial premises and land available. Indeed, this is why development plans typically ensure that there is an over-provision of employment land to ensure a variety of sites exist in terms of location, type and size to meet the needs of different employers and enterprises. The Plan has two strategic sites whereby Warren Hall seeks to enable a high quality business park and Northern Gateway provides for more general employment development and warehousing and distribution. It is acknowledged that the development of the site will have an impact on the landscape but it must be stressed that the principle of development has already been established in previous development plans and planning permission.
824	STR3b	Object	In summary my clients consider the Deposit Plan is, as drafted unsound. The plan could be made sound by the following actions: 1. Allocating candidate site KH003 for housing. (policy HN1) 2. Deleting the Strategic Mixed Used Development Site at Warren Hall (STR3B) and/or deleting the	Allocating candidate site KH003 for housing. (policy HN1) Deleting the Strategic Mixed Used Development Site at Warren Hall (STR3B) and/or deleting the unsustainable	Not accepted. As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site. The site is also central to the North Wales Growth Vision and Growth Deal where UK and Welsh Government funding

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			unsustainable Housing Allocation from that.` In summary my clients consider the Deposit Plan is, as drafted unsound. The plan could be made sound by the following actions: 1. Allocating candidate site KH003 for housing. (policy HN1) 2. Deleting the Strategic Mixed Used Development Site at Warren Hall (STR3B) and/or deleting the unsustainable Housing Allocation from that ` The WHDS does not demonstrate that this key Strategic Site meets or has been assessed in accordance with Para 4.2.19 of PPW. That requires for sites which are key to the delivery of the plan's strategy, a site specific viability appraisal must be undertaken through the consideration of more detailed costs, constraints and specific requirements. In the absence of such detailed assessment as part of the evidence base for a key strategic site, the plan is unsound. To base decisions on allocating any Strategic Site without the key evidence of its viability is likely to lead to unsound allocations and the risk that this site (and the other Key Strategic Northern Gateway site) will continue to not be delivered. My client and associated land promotion	Housing Allocation from that `	has been identified to provide the infrastructure required to bring sites like Warren Hall forward in a timely manner. There is therefore no shortfall in housing from this site and the delivery of the site is considered to be realistic. The concept of mixed use developments is supported in PPW10 in that employment housing and employment provision are provided side by side, alongside a range of other facilities including hotel, leisure and local retail centre. The site also sits in a gap between Penyffordd / Penymynydd, Broughton and Higher Kinnerton where services and facilities are available, in a sustainable location where walking and cycling links with those settlements can be developed. Whilst the site does not adjoin a settlement boundary, it sits in a sustainable location. The housing element of the site is well defined by clear physical boundaries and impacts on the landscape can be mitigated through green infrastructure strategy. The inclusion of the residential development will improve the viability of the overall scheme, but it would also improve the overall sustainability of the site through the creation of a high quality mixed development. Given that the delivery of the overall scheme is clearly publicly referenced as being dependant on public funding as part of the Growth Deal, the objectors concerns in relation to viability are somewhat academic. Detailed matters in relation to the site at Kinnerton Lane (HK003) are addressed separately under policy HN1.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			partner do not consider the commercial elements of Warren Hall KSS to be viable given its continued constraints, likely development costs and deliverability issues. There is furthermore no evidence of market demand for the uses in the location. The release of housing land at the site is not evidenced anywhere with the LDP as tipping the balance between historic aspiration, past undeliverability and sustainable deliverable place-making for the 21st century. The aspiration for a benchmark “base" Greenfield Land value of £300,000 (para 4.25 Flintshire Viability Study (September 2019) is nowhere evidenced as acting as a cross subsidy for releasing the capital necessary to overcome the significant costs and constraints of delivering the whole of the Warren Hall scheme the WHDS identifies. My client also notes the inclusion of a substantive element of housing allocation within this Strategic Site shown to be accessed directly off Kinnerton Lane. This element of housing would be located less than 200 metres from the North Western boundary of HK003. The Warren Hall Delivery Statement (WHDS) states substantive reporting has been carried out to support the allocation of the site and inter alia to include assessment of the local road network (para 3.3.3). I have, on behalf of my client,		Not accepted. The objector also takes a housing only perspective to development, and in doing so fails to acknowledge the wider purpose and intentions behind promoting mixed use development through sites such as this, and the broader intentions for economic benefits that this can bring, supported by infrastructure funding via the Growth Deal, that just building more homes alone cannot match.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			requested sight of this reporting and have been advised the Council has only published the Delivery Statement with the Plan. It has not been possible to verify the scope, details or content of any of the reporting underpinning the WHDS. The location of housing at Warren Hall would, it its closest point, be just 200 metres or so from HK003. It follows, assuming the reporting underpinning the WHDS is robust, that Kinnerton Lane must be considered suitable to accommodate residential development in this general location. It contradictory for the LPA to conclude that site HK003 is not suitable to accommodate the same quantum of dwellings when a site just 200 metres away, using the same vehicular, pedestrian and cycling infrastructure, is considered to be suitable in highway terms and suited for allocation. Elan Homes Ltd considers it highly likely that housing at Warren Hall will, due to its location within the Masterplan, access to Kinnerton Lane and proximity to the village of Higher Kinnerton be highly reliant on the village for schooling, community and others services, shopping and day to day requirements. The use of Warren Hall for housing would constitute a major intrusion into open countryside, in a location devoid of existing facilities services which would be		

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			unsustainable development. Housing at Warren Hall should be deleted from the plan. It is unsustainable. If it is the case that Warren Hall is not viable without housing then the entire KSS should be removed from the plan. It follows that that the LDP strategy would be unsound. Consideration should at that point be given to withdrawing the LDP.		
1116	STR3b	Object	Objection to Strategic allocation at Warren hall, Broughton and suggestion of alternative site at Higher Kinnerton. Objection to allocation at Warren Hall for the following reasons: Access Volume of traffic on Lesters Lane, a single track rural lane currently used for agricultural Lorries, tractors, surface water. This will affect our land causing flooding, ribbon development. Higher Kinnerton and Broughton will merge, unable to identify each village producing mass development. Warren Hall planning originally permitted to address planning requirements for 30 years ago. Failed to attract industry and use land for original permission. Should not be used for present day housing. I would like to put forward a field adjacent to the village of Higher Kinnerton to be considered for planning. This field is located within the village and has wide, good access onto a main road, Kinnerton Lane, which has a 30mph speed restriction in place. The field has a pavement adjoining it, a main sewer	Removal of allocation at Warren Hall, Broughton and inclusion of alternative site at Higher Kinnerton	Not accepted. The principal access for the business park will be from the new interchange at the A55 junction. A further access will be provided off Kinnerton Lane for the residential party of the site. The issue of traffic using Lesters Lane can be addressed either through a one way system or a road closure which would be implemented in a way to ensure existing access points along the road. The settlements of Higher Kinnerton and Broughton will not merge as a result of the Warren Hall development. The green barrier along the southern edge of Broughton has been extended to the northern edge of the village and the boundary of the strategic site to ensure a gap is retained. The addition of the residential development is at the southern edge of the land at Warren Hall (which already has planning permission for a business park) will not result in development closing the gap between Broughton and Higher Kinnerton. The suggested site will be commented on separately under HN1.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			running through the middle with good access to electric, mater and drainage. I have enclosed an Ordnance Survey map with the location of field I wish to be considered.		
1138	STR3b	Object	Warren Hall. Pragmatically, we recognise the thinking behind the re-designation of the Warren Hall site from mixed commercial use to include housing. This clearly stems from a lack of commercial interest in developing the site. However, despite the 'placemaking' assurances, we are questioning the compliance with national policy, specifically in not creating new communities. The location of the development is seemingly adjacent to Broughton but separated by the A55, it is separated from Higher Kinnerton and Pen-y-ffordd. This is likely to leave this community isolated and effectively a new settlement. The site potentially provides for 300 new houses and they would need to be allocated to sites elsewhere, but that is probably preferable in social terms, to a new isolated community.	The site potentially provides for 300 new houses and they would need to be allocated to sites elsewhere, but that is probably preferable in social terms, to a new isolated community.	Not accepted. Welsh Government in PPW10 recognises the sustainability role that mixed use development can play. The site will comprise high quality employment development alongside 300 houses and a commercial hub with hotel, leisure and retail facilities. Residents will not be in an isolated development but will be part of a mixed use development. Furthermore, the site is located on the edge of Broughton which is a shopping and employment centre of sub-regional importance and which has a range of other facilities and services. The site is also close to Higher Kinnerton village which also have a range of services and facilities. Although the site will not have a full range of facilities and services on site it sits in a sustainable location.
1156	STR3b	Object	Warren Hall. Pragmatically, we recognise the thinking behind the re-designation of the Warren Hall site from mixed commercial use to include housing. This clearly stems from a lack of commercial interest in developing the site. However, despite the 'placemaking' assurances, we are questioning the compliance with	remove Warren hall allocation	Not accepted. The strategic site is an important component of the Growth Deal. The inclusion of housing assists in improving viability but the delivery of the site as a whole will require public funding through the Growth Deal. The business park element is already allocated in the adopted UDP and has outline planning permission, so the principle of development is established. In the UDP the site has been extended and

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			national policy, specifically in not creating new communities. The location of the development is seemingly adjacent to Broughton but separated by the A55, it is separated from Higher Kinnerton and Penyffordd. This is likely to leave this community isolated and effectively a new settlement. The site potentially provides for 300 new houses and they would need to be allocated to sites elsewhere, but that is probably preferable in social terms, to a new isolated community.		the mix of uses broadened to include a local centre and housing which will improve its sustainability. Welsh Government supports the principle of mixed use development and has not objected to the Warren Hall development. Although the site is not adjacent to a settlement boundary, it is clearly not in an isolated position being close to Higher Kinnerton and Penyffordd / Penymynydd (both Tier 3 Sustainable Settlements) and Broughton which is a Tier 2 Local Service Centre. Residents on the strategic site will benefit from living in a high quality development with access to on site employment, leisure and retail development as well as being access facilities and services in nearby settlements. It is not considered that residents will feel isolated.
1219	STR3b	Object	STR3A Northern Gateway and STR3B Warren Hall. Both sites have a poor track record of delivery. The housing allocation at Warren Hall fails sustainability tests and the sequential approach to housing land allocation. Please refer to detailed objection in the pdf file attached below.	With regard to STR3(B) the whole site should be deleted from the Plan and a completion notice served on Welsh Government in accordance with S94 of the Planning Act. At the very least the 300 housing allocation should be deleted. Given the serious shortfall in housing land arising from partial, or total, non-delivery over the Plan period, provision	Not accepted. The objector is concerned about the track record of poor delivery on both these sites in terms of housing and employment and how the Plan is over-reliant on them. However, it is worth noting that the Warren Hall has not previously had a housing element. The North Wales Growth Deal clearly identifies the Warren Hall site as forming a key part of the strategy. The initial projects include 'primary infrastructure, to include a new access road and on site access, electricity, drainage and other services at Warren Hall'. This is referenced in the Welsh Government representations on the Deposit LDP wherein Welsh Government support in principle the economic growth strategy in terms of the scale and location of homes and jobs.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				should be made for a suitable high capacity contingency site in a sustainable location. An example would be candidate site FLI008 in Flint.	Whether the Plan is over reliant on the two sites: It is not considered that the Plan is over reliant on the two strategic sites in terms of housing and employment growth. Turning first to housing, it is worth stressing that the Plan is already delivering, in terms of completions to date, what the Plan seeks to provide as measured against the housing trajectory. If the Council were in the position whereby it had built up a deficit of under-delivery in the first few years of the Plan period, then there might be greater concern about reliance on two strategic sites. Nevertheless, despite Warren Hall being a strategic site, the housing element is not strategic as its 300 dwellings is on a par with the other housing allocations in the Plan. It is not considered that there are any evidenced concerns about the ability of 300 dwellings at Warren Hall to come forward within the Plan period, given that this is the specific focus of the objector. Turning secondly to employment, the two strategic sites serve different market sectors, with Warren Hall aimed at higher quality B1 and B2 development whereas Northern Gateway is aimed also at B8 development. The two sites quite rightly sit prominently at the core of the Plans strategy, particularly given their prominent within the Growth Deal. It is also the case that the Plan has a range of other employment allocations as well as some flexibility provided through land within Principal Employment Areas. Sustainability of location / site: The concept of mixed use developments is supported in PPW10 in that employment housing and employment provision are provided side by side, alongside a range of other facilities including hotel, leisure and local retail centre. The site also sits in a gap between Penyffordd /

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Penymynydd, Broughton and Higher Kinnerton where services and facilities are available, in a sustainable location where walking and cycling links with those settlements can be developed. Whilst the site does not adjoin a settlement boundary, it sits in a sustainable location. The housing element of the site is well defined by clear physical boundaries and impacts on the landscape can be mitigated through green infrastructure strategy. Failure to develop / viability / land banking: .It is acknowledged that the site has not come forward for development despite being previously allocated in the UDP and having the benefit of outline planning permission (not including the housing element). Nevertheless, the mix of uses has been broadened and the site extended to improve the viability of the site and to improve the mix of development in order to improve sustainability. The need for public sector investment in order to bring forward the site, particularly the employment part, is clearly referenced in the Growth Deal. The site is clearly not been land banked by Welsh Government given the public commitment given to securing its development as a vital part of the growth strategy for the region. Lack of conformity with Development Plans Manual: The site has clearly been reviewed and re-assessed has part of the preparation of the Plan and the site area extended and mix of uses broadened. Welsh Government have commissioned a wide range of background studies which were summarised in the Warren Hall Masterplan Delivery Statement. These demonstrate the site is appropriate to be developed as set out in the Plan.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Given that the housing element is for 300 units only it is unclear why this site, by necessity, requires a number of house builders. The Plans trajectory in Background Paper 10 Housing Land Supply shows the site delivering 75 units in years 6-10 and 225 dwellings in years 11-15, at rates of between 30 and 45 units annum, which is entirely achievable for a volume house builder. It is not considered that the allocation is any way non-compliant with the Development Plan Manual. Reliance on windfalls / need for contingency site: The Plan is not reliant on windfalls given that the small site allowance of 50 units per annum and large sites allowance of 50 units per annum, is conservative when comparted with past trends and also having regard to the findings of the Urban Capacity Study. In line with the advice about including a flexibility allowance, in the Development Plan Manual, the Plan incorporates a 14.4% flexibility allowance. There is no requirement from Welsh Government to include within the Plan contingency or reserve sites. Deletion of site / completion notice: Given the strategic context for the site and its role within the Growth Deal it would clearly be inappropriate to delete the site form the Plan. Given that Welsh Government are actively pursuing the development of the site it would be wholly inappropriate to serve a completion notice on a willing development partner. Equally, given the mixed use nature of this site and its respective development types and quantums, the alternative site proposed in Flint is on a wholly different development basis and cannot be sustainably considered to provide a suitable range of alternative and equivalent provision to the Warren Hall

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					strategic site. It clearly therefore fails to represent a more sustainable alternative on any basis. Housing shortfall and need for contingency site: It is unclear from the objector's submission where a 'serious shortfall in housing land' is actually arising from given the size of the housing element at Warren and the emerging picture of delivery at Northern Gateway. There is no need for a further site to be allocated at Flint as there is already the Croes Atti development and the allocation at Northop Road. Furthermore, there is no requirement for the Council to incorporate contingency or reserve sites into the Plan.
1225	STR3b	Object	We doubt that these will be delivered in the plan period and no proven deliverability has been demonstrated. Moreover, allocating a greenfield site (STR3B) in an isolated and unsustainable location does not reflect other policies or PPW10; particularly when better more sequentially sites are available and can be demonstrated to be deliverable	Allocate new site that are deliverable.	Not accepted. This objection offers no explanation or supporting evidence as to why there is doubt that the Warren Hall site will be delivered in the Plan period other than allocating a greenfield site (STR3B) in an isolated and unsustainable location does not reflect other policies or PPW10; particularly when better more sequentially sites are available and can be demonstrated to be deliverable. Given that the objector has proposed an employment site, it is assumed that this objection is concerned with the non-delivery of the employment part of the Warren Hall site. Warren Hall is not in an isolated position as it sits between the settlements of Penyffordd / Penymynydd, Higher Kinnerton and Broughton. It therefore sits at the heart of the growth zone between Wrexham and Deeside identified in the draft National Development

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Framework, being located adjacent to the settlement of Broughton, with its shopping park and major employers. The site is also central to the North Wales Growth Vision and Growth Deal where UK and Welsh Government funding has been identified to provide the infrastructure required to bring sites like Warren Hall forward in a timely manner. In the light of such public and high profile commitment to the delivery of this strategic site, it is unclear what the Objectors concerns are. Whilst the site advocated by the objector, on land adjoining the Evans Business Park, Chester (PE2.9), may be on the edge of a large industrial estate, it is not considered that it is sequentially preferable to the Warren Hall site. The objector's site sits within a green barrier, within a C1 flood risk zone and utilises grade 2 BMV agricultural land, none of which apply to the Warren Hall site. Also, it does not perform a strategic function in the way that the Warren Hall site does so it is difficult to envisage how it represents a sustainable and preferable alternative with the support from the Growth Deal that Warren Hall has.
1227	STR3b	Object	We have significant concerns regarding the overreliance of housing allocations that focus on two strategic sites as set out in policy STR3 (STR3A Northern Gateway and STR3B Warren Hall). Both are allocated for mixed use development with the Northern Gateway expected to deliver approximately 1300 new dwellings and Warren Hall expected to deliver approximately 300 dwellings. Both sites	In terms of the Warren Hall allocation, the Masterplan and Delivery Statement details that the LDP Preferred Strategy acknowledges that the delivery of the	Not accepted. The objector's concerns in relation to the Northern Gateway strategic site have been addressed elsewhere in responding to the same point they made to STR3A. In summary, the recent grant of detailed planning permissions for housing and employment development, and the level of subsequent enquiries from other developers, plus Countryside Properties having commenced construction, confirms that the site is viable and deliverable over the Plan period. A second developer, Keepmoat has reserved matters consent

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			were previous allocations in the UDP with STR3A allocated for a mix of uses including at least 650 dwellings and Warren Hall allocated for employment. However due to constraints they have failed to deliver any housing or employment uses over the UDP period. It is encouraging to note that the Airfields part (Praxis) of the Northern Gateway Strategic Site now benefits from planning permission and its delivery is in the hands of one landowner. We are also aware that the site has attracted interest from a number of housebuilders who are encouraged by site enabling works taking place and servicing the site for available development. In terms of the Warren Hall allocation, the Masterplan and Delivery Statement details that the LDP Preferred Strategy acknowledges that the delivery of the Warren Hall site has been impeded by both site conditions and wider economic influences, and that a wider mix of uses is required to allow for a deliverable and sustainable allocation. We do not dispute this assertion but consider that the site continues to require a significant amount of investment to assist in its delivery. The Delivery Statement does not provide any detail on the funding mechanism to	Warren Hall site has been impeded by both site conditions and wider economic influences, and that a wider mix of uses is required to allow for a deliverable and sustainable allocation. We do not dispute this assertion but consider that the site continues to require a significant amount of investment to assist in its delivery. The Delivery Statement does not provide any detail on the funding mechanism to achieve this, therefore delivery within the identified timescales is questionable.	subject to s106) to develop 120 homes on the southern parcel of the site owned by Pochin Goodman, confirming the collective interest in all housing elements of this site. The Council also understands that this interest extends to Anwyl seeking a development parcel on Northern Gateway. In terms of the Warren Hall mixed use development site, the introduction of housing will improve the viability of the overall development. However, it will also improve the overall sustainability of the strategic site by improving the mix of uses. It is a matter of public record that the Warren Hall site is a key part of the Growth Deal and that funding will be secured for infrastructure investment to bring about the delivery of the scheme. Further technical work will be commissioned by Welsh Government to establish further parameters for the height restrictions placed on development within the site. The provision of 300 dwellings at Warren Hall is not ‘strategic’ in the sense of the level of housing at Northern Gateway and in a strong market area should be capable of being delivered in line with the trajectory in Background paper 10. As stated earlier, the commitment of Welsh Government and National Government to securing funding for infrastructure at Warren Hall through the Growth Deal is a matter of public record.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			achieve this, therefore delivery within the identified timescales is questionable. In addition, the location of Hawarden Airport which is located approximately 2 km to the north-west of the Warren Hall site will inevitably impact on the height of dwellings which can be brought forward on the site. Whilst bungalows would help to provide an alternative mix of housing on the site, the development density and numbers which can be achieved overall is likely to be fewer than envisaged. Whilst we do not object to the Strategic Sites in Policy STR3 being allocated for mixed uses, they will require considerable infrastructure and investment before any development, let alone housing can be delivered and this must be a significant factor when considering whether the Plan provides for a suitable choice of housing sites. The Infrastructure Background Paper 3 which supports the Deposit Draft LDP provides a simple statement in paragraph 4.3 that " Flintshire County Council have adopted a pragmatic approach to show that there are no major 'show stoppers' to the delivery of allocations identified in the plan and/or in the case of the two strategic sites, this has either already been provided or is planned to take place." This		The 300 units proposed at Warren Hall is similar in scale to several of the Plans other housing allocations. Nearby development in Penyffordd / Penymynydd, Broughton and Higher Kinnerton demonstrates that the area is capable of delivering housing development. The Warren Hall site is equally capable of securing 300 units before the end of the Plan period. Welsh Government does not require the identification of contingency sites in the Plan. Instead, it requires that the Plan incorporates a flexibility allowance of at least 10% and the Plan has an allowance of 14.4%. The objector also takes a housing only perspective to development, and in doing so fails to acknowledge the wider purpose and intentions behind promoting mixed use development through sites such as this, and the broader intentions for economic benefits that this can bring, supported by infrastructure funding via the Growth Deal, that just building more homes alone cannot match.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			may be the case but given the previous lack of delivery during the UDP era, it is questionable whether this is as simple as it sounds. Indeed Appendix 2 of the paper details the requirement for significant energy network provision for both Strategic Sites. The provision of such infrastructure is critical to the delivery of the such large sites. Whilst it is acknowledged within the Housing Balance Sheet on page 90 of the LDP, the Northern Gateway Strategic Allocation figure has been discounted by 331 units as they are more likely to be delivered beyond the Plan end date, given the points set out above, we would question whether the 200 unit discount on the Pochin Goodman part of the site should in fact be greater still. Given the lack of delivery during the UDP period we continue to doubt whether it is realistic to assume that the remaining 995 units on the site and 300 units at Warren Hall will be delivered by the end of the plan period. This adds to the need for a realistic contingency figure to be included in the housing requirement figures or the identification of future contingency sites.		
1229	STR3b	Object	Reliance on Key Strategic Sites Policy STR3 It is accepted that there has been a long term vision and growth proposed for the Northern Gateway area and Warren Hall Development site which are proposed to provide for 1625 homes between them	alternative provision should be made available in other highlighted key settlements which are also as	Not accepted. The two strategic sites do form a key part of the Plan strategy but they also perform a key part of the Growth Deal for North Wales in terms of economic growth ambitions for the region.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			over the plan period. There appears to be a heavy reliance on these sites to deliver almost 25% of new homes required over the plan period. It is considered that there are considerable obstacles that could prohibit or at least slow down the delivery of these sites, in particular flood risk and highways capacity that could significantly hamper the delivery of sites within this timeframe. Neither of these issues have been fully investigated for a full built out scenario. Furthermore, strategic allocations can be slower to be built out as the market becomes saturated and delivery rates can slow in subsequent phases as evidenced on the UDP allocation at Croes Atti, Flint. Therefore, alternative provision should be made available in other highlighted key settlements which are also as sustainable in character in line with Policy STR2. These 2 strategic allocations puts a heavy reliance on these Tier 2 settlements providing a quarter of all new housing for the county over the plan period without the necessary services and infrastructure being in place in these areas to support this growth. This obvious over reliance can put strain on the existing local infrastructure and make it more difficult to achieve the housing figures targeted and moreover required to support a growing population. Furthermore, this approach also fails to provide the market with	sustainable in character in line with Policy STR2.	The Plan is not considered to be over-reliant on the two strategic sites. The Plans housing land supply as set out in the Housing Balance Sheet comprises several elements including completions to date, commitments, windfall allowances and detailed housing allocations in addition to the two strategic sites. The Warren Hall residential element is 300 units which is on a par with the Plans other housing allocations is quite capable of being delivered in this location. Not all of the 1325 units have been shown within the housing trajectory as being deliverable within the Plan period (discounted by 331 units). In this context the Plan is not considered to be over-reliant on the strategic sites. It is accepted that large strategic sites can be slow to deliver but the Warren Hall at 300 units is not considered to be of a size which brings about delivery concerns. It is in a strong housing market area and will form part of a high quality mixed use development comprising employment, hotel, leisure and local commercial hub. The site is also close to the Tier 3 settlements of Higher Kinnerton and Penyffordd / Penymynydd and the Tier Settlement Broughton with its major retail and employment offer. Welsh Government has commissioned considerable background studies for the Warren Hall site and there is a public commitment within the growth deal for funding to deliver the infrastructure associated with its delivery. As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			greater choice of where people want to live. Other settlements such as Buckley and Aston which are identified in Policy STR2 as Tier 1 Main Service centres are also considered to be sustainable and arguably more sustainable given the existing level of key facilities and transport connections. It is considered that insufficient sites have been allocated in Tier 1 settlements to support the employment led growth forecast that the LDP housing numbers are based upon in STR1. We therefore object to policy STR3.		housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site. Given the RSL status of the objector, it is disappointing that they are neither aware of this project or not more positively engaged in it to use their resources positively to potentially ensure the intention to deliver high levels of affordable housing here is met, given that is the core business of an RSL. The Plan has sought to provide a balanced approach to housing with the two strategic sites being supported by 11 other housing allocations. It must also be noted that growth will have occurred in many settlements as a result of completions and will occur as a result of existing commitments. Not all growth is achieved through new allocations. A housing allocation is made in Buckley and housing allocations in Ewloe and Hawarden are both close to Shotton / Aston. The Plan ensures sufficient market choice. It must be stressed that Welsh Government in their formal representations on the Plan do not object to either the amount, or the spatial distribution of growth.
1237	STR3b	Object	We doubt that these will be delivered in the plan period and no proven deliverability has been demonstrated. Moreover, allocating a greenfield site (STR3B) in an isolated and unsustainable location does not reflect other policies or PPW10; particularly when better more sequentially sites are available and can be demonstrated to be deliverable.	more sequentially sites are available and can be demonstrated to be deliverable	Not accepted. Warren Hall is not in an isolated position as it sits between the settlements of Penyffordd / Penymynydd, Higher Kinnerton and Broughton. It therefore sits at the heart of the growth zone between Wrexham and Deeside identified in the draft National Development Framework, being located adjacent to the settlement of Broughton, with its shopping park and major employers. As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Concerns in relation to Warren Hall: • Due to Aeronautical / Levels constraints just 22% of the site area can be brought forward as two storey development; this increase to 71% – regardless of which figure is accurate this will impose significant commercial constraints upon new employment interests which we cannot believe be office, leisure or residential developers/operators would be keen to take up. • Whilst there may be capacity on the network to handle the volume of traffic that could be generated by the site there is no assessment of sustainable access; and given it comprises an isolated site divorced and physically unconnected with its closest settlements this is a major concern. Indeed, the location of the residential area to the far south of the site is akin to a new settlement not an urban extension. • The site does involve Grade 3 a land; a range of protected species are to be found and no drainage (FCA) SUD's compliant assessment has been undertaken for this greenfield site. • Significant water supply and electrical supplies will be needed to serve the site due to inadequate capacity levels which currently exist. • No trajectory is provided. • It is understood that WG are imposing constraints on delivery partners (zero		element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site. The site is also central to the North Wales Growth Vision and Growth Deal where UK and Welsh Government funding has been identified to provide the infrastructure required to bring sites like Warren Hall forward in a timely manner. There is therefore no shortfall in housing from this site. The Warren Hall allocation is for a strategic mixed use development which will involve a range of uses and facilities, ste within a high quality environment and strong local housing market area. The housing element will help deliver an employment site which is at the heart of the North Wales Growth Deal. The detailed concerns of the objector are addressed in turn: • The Deposit Plan is accompanied by a Masterplan Delivery Statement which represents a summary of the detailed background work that Welsh Government have commission on the site. The masterplan shows the location of the housing, business park and commercial hub and these are not affected by the height constraints associated with the flight path. It is the higher north western part of the site which is most constrained and the Masterplan clearly shows this as being retained as open land. The aeronautical constraint does not prevent the site coming forward for development. The comments by Airbus Operations are addressed separately.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			carbon housing, bungalow development) that will not make for an attractive commercial proposition.		Further work has now been undertaken in the form of an Instrument Flight Procedure Safeguarding assessment by Cyrrus on behalf of Welsh Government and discussions have taken place with Airbus. The outcome of this work is that development of two or more storeys in height will be acceptable on approximately 54.6ha or 71.2% of the overall site area. These results have been presented to Airbus who consider that further detailed design work at Warren Hall can proceed. • The housing element sits between the settlements of Penyffordd / Penymynnd Higher Kinnerton and Broughton where there is a range of services and facilities within each and major shopping and employment at Broughton and at the scale proposed cannot realistically be considered a 'new settlement' as suggested by the objectors. The Masterplan which accompanied the Deposit Plan for Warren Hall identified the provision of an extensive green infrastructure network across the site to maximise opportunities to promote community cohesion within the site and to enable sustainable linkages with nearby settlements. It clearly shows a network of green infrastructure and walking / cycling routes through the site. The policy requires that the development links in with the Active Travel scheme linking Mold, Buckley and Broughton, which is being developed by the Councils Transport Strategy unit. Consideration will be given to ensuring links between the site and the Active travel route and Higher Kinnerton. Bus services also operate along the A5104 adjacent to the site. It is acknowledged that the site is not an extension to an existing settlement but rather, it forms part of a strategic mixed use site in a

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					highly sustainable location close to several settlements and major employment and shopping at Broughton. • The majority of the site is already allocated in the adopted UDP and has outline planning permission. Although this part of the site has BMV, the principle of development has previously been established. The housing element comprises grade 3b and this is based on an onsite survey and is clearly referenced on the Welsh Government Predictive Agricultural Land Classification Map. In support of the allocation, Welsh Government have undertaken a large number of ecological surveys and whilst there are protected species within the site, they are matters that can be addressed through the detailed design of the scheme in terms of avoidance and / or mitigation measures. The need for SuDS is now a requirement of Welsh Government and this will be developed as part of the detailed design of the scheme. • The need for infrastructure improvements is acknowledged and this is reference in the Growth Deal in terms of the public funding being needed to deliver this. The commitment to fund the necessary infrastructure is a clear demonstration of the importance of the site to the regional growth strategy. • The Deposit LDP is accompanied by Background Paper 10 Housing Land Supply. The summary trajectory in table 3 (as supported by the detailed trajectory in

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					appendix 3) indicates that 75 units will be delivered in years 6-10 (30 in 2023-24, 45 in 2024/25) and 225 will be delivered in years 11-15 (45 per year). In this strong market area a build rate of 45 units per annum is realistic and achievable. • As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site.
1261	STR3b	Object	Do not object to the identification of strategic sites and fully recognise the location and potential benefits of such sites. However, the delivery of economic and housing growth objectives is entirely reliant on these two strategic sites, and any delays on these strategic sites is a clear risk. As the council will be aware, strategic sites are complex to deliver and the expected timescales for development of such sites are often subject to significant slippage. This is particularly apparent with the two LDP strategic sites. Delivery of Northern Gateway (STR3A) is some three years behind expectations and further parcels are likely to be delayed further as a result of the need for further	The LDP should identify further sites across the plan area in accordance with the settlement hierarchy to safeguard for any further strategic site delays.	Not accepted. It is noted that the objector does not object to the principle of identifying strategic sites and recognises the benefits that they bring. Although the two strategic sites form a key part of the Plans growth strategy, the Plans economic and housing growth is clearly not entirely dependent upon the two sites. There is a range of employment allocations offering choice in terms of location, type and size and also additional flexibility officer by the Principal Employment Areas. The Plans housing provision is made up of completions, commitments and windfall allowances, in addition to the two strategic sites. The Warren Hall site allocates only 300 houses which is on a par with the Plans other housing allocations. It is not considered to be of a size which brings about delivery concerns. It is in a strong housing market area and will form part of a high quality mixed use development comprising employment, hotel, leisure and local commercial hub. The site is also close to the Tier 3

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			infrastructure works and securing developer interest, for example. Warren Hall (STR3B) is more problematic as the site had an unimplemented Outline consent for employment led development in 2008, and there is no indication the site will come forward during the plan period. As a result, the LDP should identify further sites across the plan area in accordance with the settlement hierarchy to safeguard for any further strategic site delays.		settlements of Higher Kinnerton and Penyffordd / Pemnymynydd and the Tier Settlement Broughton with its major retail and employment offer. Welsh Government has commissioned considerable background studies for the Warren Hall site and there is a public commitment within the growth deal for funding to deliver the infrastructure associated with its delivery.
1271	STR3b	Object	Gladman are not convinced that the re-allocation of these sites will necessarily result in delivery as suggested within the plan. The council need a greater level of certainty regarding the delivery of these two sites, which are fundamental element of the FLDP. This concern is even more important if the current consultation to revoke TAN1 goes ahead and 5yr land supply is revoked. The council would then be reliant on monitoring of the housing trajectory through the AMR to ensure the delivery of the necessary scale of housing.	The council need a greater level of certainty regarding the delivery of these two sites, which are fundamental element of the FLDP.	Not accepted. The objection provides little in way of detailed comment on each site other than reference to three studies which look at lead-in times and delivery rates, particularly on large sites. Although Warren Hall is a strategic site for a mixed use development, the housing element is not strategic, being similar in scale to some LDP housing allocations. The housing element of 300 units is quite capable of being delivered within the Plan period.
1273	STR3b	Object	Reliance on Key Strategic Sites Policy STR3 It is accepted that there has been a long term vision and growth proposed for the Northern Gateway area and Warren Hall Development site which are proposed to provide for 1625 homes between them over the plan period. There appears to be	alternative provision should be made available in other highlighted key settlements which are also as sustainable in	Not accepted. The objectors concerns in relation to the Northern Gateway strategic site have been addressed elsewhere in response to the same points made to policy STR3A. In summary, the recent grant of detailed planning permissions for housing and employment development, and the level of subsequent enquiries from other developers, plus Countryside Properties having commenced construction, confirms that the site

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			a heavy reliance on these sites to deliver almost 25% of new homes required over the plan period. It is considered that there are considerable obstacles that could prohibit or at least slow down the delivery of these sites, in particular flood risk and highways capacity that could significantly hamper the delivery of sites within this timeframe. Neither of these issues have been fully investigated for a full built out scenario. Furthermore, strategic allocations can be slower to be built out as the market becomes saturated and delivery rates can slow in subsequent phases as evidenced on the UDP allocation at Croes Atti, Flint. Therefore, alternative provision should be made available in other highlighted key settlements which are also as sustainable in character in line with Policy STR2. These 2 strategic allocations puts a heavy reliance on these Tier 2 settlements providing a quarter of all new housing for the county over the plan period without the necessary services and infrastructure being in place in these areas to support this growth. This obvious over reliance can put strain on the existing local infrastructure and make it more difficult to achieve the housing figures targeted and moreover required to support a growing population. Furthermore, this approach also fails to provide the market with greater choice of where people want to	character in line with Policy STR2.	is viable and deliverable over the Plan period. A second developer, Keepmoat has reserved matters consent subject to s106) to develop 120 homes on the southern parcel of the site owned by Pochin Goodman, confirming the collective interest in all housing elements of this site. The Council also understands that this interest extends to Anwyl seeking a development parcel on Northern Gateway. The Warren Hall strategic site comprises 300 units and it is not considered that this is strategic as there are several other housing allocations of a similar size. In combination therefore, it is not considered that the Plan is over-reliant on these two strategic site allocations. As the Warren Hall site is in Welsh Government ownership, it is the intention to make the residential element of the mixed use site available as part of the Welsh Government's programme of making land available to accelerate the provision of affordable housing, and work is ongoing with the North Wales Registered Social Landlords to advance this site. Given the RSL status of the objector, it is disappointing that they are neither aware of this project or not more positively engaged in it to use their resources positively to potentially ensure the intention to deliver high levels of affordable housing here is met, given that is the core business of an RSL. The Plan has made a range of other housing allocations, and delivery in the early years of the Plan period are on track in terms of the Plans proposed housing provision. The distribution of housing allocations has been made in the context of the settlement hierarchy and spatial strategy in policy STR2 and it is evident that the greatest proportion of housing

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			live. Other settlements such as Buckley and Aston which are identified in Policy STR2 as Tier 1 Main Service centres are also considered to be sustainable and arguably more sustainable given the existing level of key facilities and transport connections. It is considered that insufficient sites have been allocated in Tier 1 settlements to support the employment led growth forecast that the LDP housing numbers are based upon in STR1. We therefore object to policy STR3.		has been apportioned to Tier 1 Main Service Centres, including at Buckley. It is not considered that further allocations are required in Tier 1 settlements.
678	STR3b	Support	STR3B Warren Hall Mixed Use Development Site • Welsh Water does not supply water to this area. • A Hydraulic Modelling Assessment (HMA) will be required to determine the point of connection to the public sewerage system and potential developers would be expected to fund investigations during pre-planning stages. The findings of the HMA would inform the extent of any necessary sewerage upgrades, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). • Potential developers need to be aware that this site is crossed by a sewer and protection measures in the form of an easement width or a diversion of the sewer would be required, which may impact upon the development density achievable on site. • Chester Wastewater Treatment Works (WwTW) can		Noted.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			accommodate foul flows from the proposed development site.		
1270	STR3b	Support	An amendment to the text at Paragraph 5.33 is requested to include specific reference to the B2 element of the Warren Hall allocation. At present the supporting text at paragraph 5.33 states that ''The employment element will still comprise B1 development and will need to be of high quality in terms of siting, form, design and materials which respects the setting of the site''. It is requested that this is altered to refer to 'B1/B2 development' to correctly reflect the B1/B2 reference within policy STR3B itself.		The support for the allocation from Welsh Government Department of Economy, Skills and Natural Resources is noted and the findings and conclusions of the Marketing Assessment are noted.
351	STR3b	Support	Policy STR3: Strategic Sites allocates Warren Hall for 300 new homes, 22.7 hectares of B1 and high quality B2 employment land, a commercial hub involving hotel, leisure, local centre and retail; plus associated landscaping and transport links. Airbus' comments on the allocation are provided below and are equally applicable to the following policies and documents, insofar as they reference development at Warren Hall: • Policy STR7: Economic Development Enterprise and Employment • PE1: General Employment Land Allocations • HN1: New Housing • Background Document: Warren Hall Masterplan & Delivery Statement (August 2019) Airbus' position is that the future operation of Hawarden Airport will		It is noted that Airbus do not object to the proposed allocation of the site as a strategic allocation in the LDP. It is also noted that Airbus have made representations on the Airport Safeguarding Policy PC8. It is also a fact that the site has had planning permission for employment development for a number of years. Further work has now been undertaken in the form of an Instrument Flight Procedure Safeguarding assessment by Cyrrus on behalf of Welsh Government and discussions have taken place with Airbus. The outcome of this work is that development of two or more storeys in height will be acceptable on approximately 54.6ha or 71.2% of the overall site area. These results have been presented to Airbus who have responded in writing that further detailed design work at Warren Hall can proceed.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			be protected by the proper application of draft LDP Policy PC8, as amended in accordance with the submitted Airbus objection. Airbus does not object to the Warren Hall allocation, but expresses material concerns / reservations about the sustainability and full deliverability of the strategic allocation, in terms of Airfield Safeguarding and the potential effects on future residential amenity. Warren Hall is situated under the flight path of Runway 04 at Hawarden Airport and within the last section of the approach slope. Under current safeguarding criteria, the ground levels in the area already infringe the approach and take-off slopes and any development in this location may infringe further upon these surfaces. This would erode the safety margins between the safeguarded surfaces and the trajectory that an aircraft has during its instrument approach phase. Airbus comments on potential future, and more stringent, safeguarding rules within its objection to draft LDP Policy PC8. The Warren Hall Masterplan & Delivery Statement specifically recognises the effect of obstacle limitation surfaces on the Warren Hall site and states (paragraph 3.2.2): "We have calculated the difference in the existing ground levels and the obstacle limitation surfaces. Much of the existing ground level of the site infringes the take-off climb surface and approach surface. In		The proposed residential development lies at the southernmost and at the lowest part of the site. It is buffered from the business park element by the substantial woodland corridor which follows Warren Dingle. There is residential development closer to the airport than that proposed at Warren Hall, including the Elan Homes development, allowed on appeal, only 300m to the east of the site.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			broad terms about 16.8 ha (22.3% of the overall site) would be available for two-storey development". In this context It is the European Aviation Safety Agency's (EASA) rules that specify that no new objects should be permitted above the approach surface. EASA Regulation (EU) No 139/2014) - CS ADR-DSN.J.480 Precision approach runways states (extract): see attachment.		
1235	STR3b	Support	We have significant concerns regarding the overreliance of housing allocations that focus on two strategic sites as set out in policy STR3 (STR3A Northern Gateway and STR3B Warren Hall). Both are allocated for mixed use development with the Northern Gateway expected to deliver approximately 1300 new dwellings and Warren Hall expected to deliver approximately 300 dwellings. Both sites were previous allocations in the UDP with STR3A allocated for a mix of uses including at least 650 dwellings and Warren Hall allocated for employment. However due to constraints they have failed to deliver any housing or employment uses over the UDP period. It is encouraging to note that the Airfields part (Praxis) of the Northern Gateway Strategic Site now benefits from planning permission and its delivery is in the hands of one landowner. We are also aware that the site has attracted interest from a number of	In terms of the Warren Hall allocation, the Masterplan and Delivery Statement details that the LDP Preferred Strategy acknowledges that the delivery of the Warren Hall site has been impeded by both site conditions and wider economic influences, and that a wider mix of uses is required to allow for a deliverable and sustainable allocation. We do not dispute this assertion but consider that the site continues to require a	Not accepted. The objector's concerns in relation to the Northern Gateway strategic site have been addressed elsewhere in responding to the same point they made to STR3A. In summary, the recent grant of detailed planning permissions for housing and employment development, and the level of subsequent enquiries from other developers, plus Countryside Properties having commenced construction, confirms that the site is viable and deliverable over the Plan period. A second developer, Keepmoat has reserved matters consent subject to s106) to develop 120 homes on the southern parcel of the site owned by Pochin Goodman, confirming the collective interest in all housing elements of this site. The Council also understands that this interest extends to Anwyl seeking a development parcel on Northern Gateway. In terms of the Warren Hall mixed use development site, the introduction of housing will improve the viability of the overall development. However, it will also improve the overall sustainability of the strategic site by improving the mix of uses. It is a matter of public record that the Warren Hall site is a key part of the Growth Deal

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			housebuilders who are encouraged by site enabling works taking place and servicing the site for available development. In terms of the Warren Hall allocation, the Masterplan and Delivery Statement details that the LDP Preferred Strategy acknowledges that the delivery of the Warren Hall site has been impeded by both site conditions and wider economic influences, and that a wider mix of uses is required to allow for a deliverable and sustainable allocation. We do not dispute this assertion but consider that the site continues to require a significant amount of investment to assist in its delivery. The Delivery Statement does not provide any detail on the funding mechanism to achieve this, therefore delivery within the identified timescales is questionable. In addition, the location of Hawarden Airport which is located approximately 2 km to the north-west of the Warren Hall site will inevitably impact on the height of dwellings which can be brought forward on the site. Whilst bungalows would help to provide an alternative mix of housing on the site, the development density and numbers which can be achieved overall is likely to be fewer than envisaged. Whilst we do not object to the Strategic Sites in Policy STR3 being allocated for	significant amount of investment to assist in its delivery. The Delivery Statement does not provide any detail on the funding mechanism to achieve this, therefore delivery within the identified timescales is questionable.	and that funding will be secured for infrastructure investment to bring about the delivery of the scheme. Further technical work will be commissioned by Welsh Government to establish further parameters for the height restrictions placed on development within the site. The provision of 300 dwellings at Warren Hall is not 'strategic' in the sense of the level of housing at Northern Gateway and in a strong market area should be capable of being delivered in line with the trajectory in Background paper 10. As stated earlier, the commitment of Welsh Government and National Government to securing funding for infrastructure at Warren Hall through the Growth Deal is a matter of public record. The 300 units proposed at Warren Hall is similar in scale to several of the Plans other housing allocations. Nearby development in Penyffordd / Penymynydd, Broughton and Higher Kinnerton demonstrates that the area is capable of delivering housing development. The Warren Hall site is equally capable of securing 300 units before the end of the Plan period. Welsh Government does not require the identification of contingency sites in the Plan. Instead, it requires that the Plan incorporates a flexibility allowance of at least 10% and the Plan has an allowance of 14.4%.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			mixed uses, they will require considerable infrastructure and investment before any development, let alone housing can be delivered and this must be a significant factor when considering whether the Plan provides for a suitable choice of housing sites. The Infrastructure Background Paper 3 which supports the Deposit Draft LDP provides a simple statement in paragraph 4.3 that " Flintshire County Council have adopted a pragmatic approach to show that there are no major 'show stoppers' to the delivery of allocations identified in the plan and/or in the case of the two strategic sites, this has either already been provided or is planned to take place." This may be the case but given the previous lack of delivery during the UDP era, it is questionable whether this is as simple as it sounds. Indeed Appendix 2 of the paper details the requirement for significant energy network provision for both Strategic Sites. The provision of such infrastructure is critical to the delivery of the such large sites. Whilst it is acknowledged within the Housing Balance Sheet on page 90 of the LDP, the Northern Gateway Strategic Allocation figure has been discounted by 331 units as they are more likely to be delivered beyond the Plan end date, given the points set out above, we would		The objector also takes a housing only perspective to development, and in doing so fails to acknowledge the wider purpose and intentions behind promoting mixed use development through sites such as this, and the broader intentions for economic benefits that this can bring, supported by infrastructure funding via the Growth Deal, that just building more homes alone cannot match.

ID	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			question whether the 200 unit discount on the Pochin Goodman part of the site should in fact be greater still. Given the lack of delivery during the UDP period we continue to doubt whether it is realistic to assume that the remaining 995 units on the site and 300 units at Warren Hall will be delivered by the end of the plan period. This adds to the need for a realistic contingency figure to be included in the housing requirement figures or the identification of future contingency sites.		

Policies STR4 to STR9

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
404	STR4: Principles of Sustainable Development, Design and Placemaking	Object	The HBF contend that not all development will be able to meet all of the criteria listed in the policy and the current wording suggests that all development has to meet all of the listed criteria.	The Policy wording should say 'where appropriate' as it does in policy STR5, or make it clear that it may not be possible for all criteria to be met on all developments.	Not accepted. Planning Policy Wales (PPW) places great emphasis on 'sustainable placemaking design principles'. It is therefore vitally important for this strategic policy and the more detailed policies associated with it, to form the basis of all planning decisions and set out how development can achieve positive sustainable, design and placemaking outcomes and minimise any adverse outcomes. Policy STR4 establishes the key planning principles for all development and reflects the aims of PPW. The policy clearly states, 'should' not 'must'. All of the criteria are material planning considerations, some are more relevant than others depending on the type of development, (not all the criteria will be applicable to all developments) the weight to be attached to each issue will be recognised and considered at the planning application stage. Alongside the LDP the Infrastructure Plan has been drawn up which identifies the key infrastructure requirements and helps to understand the viability of each allocated site. This plan is a 'live' document and will be updated as more detailed information comes forward.
546	STR4: Principles of Sustainable	Object	I am writing to object to the Flintshire Local Development Plan. The area I am objecting to is the Ash Lane	Site HWN005- Ash Lane, Hawarden	Not accepted. The Plan has a suite of Strategic Policies and policy STR5 provides strategic guidance on Transport and

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development, Design and Placemaking		Development site HWN005. My concern is regarding the traffic problems around Hawarden Village Church School and I write this as a parent at the school and as one of the school Governors. There are serious concerns that road safety is poor around the school. There have been some near misses between cars and parents, children and prams. The school writes in the weekly newsletter that parents walk rather than drive and park on Cross Tree Lane, but it continues to be a problem. There are frequent traffic wardens at the school gates, at the request of school, to reduce unsafe illegal parking but it continues. This causes traffic to build up in both directions blocking most junctions and the "D " at the school entrance. Cars are parked along the whole length of Cross Tree Lane making 2 way traffic flow difficult. The junction at Cross Tree Lane and Ash Lane is very unsafe to cross and there has been a prolonged advert for a new School Crossing Patrol but the post remains unfilled after over one year. An increase in traffic of new residents commuting to work and possibly doing school drop off will be detrimental to this already difficult situation.	Policy STR4 iv: Ensure that the local highway network either has, or can be upgraded, to provide capacity to accommodate sustainable levels of development; Firstly it has been unclear in plan details regarding site access - "Just from Ash Lane" as stated by the Lead Planner or "Ash Lane and Gladstone Way road access without a through access" from a planner at the open evening in Mancot Hall). With 2 access points it would be expected that half of the traffic would be exiting onto Ash Lane, if it was just Ash Lane access then it would be all traffic. Ash Lane	Accessibility and is linked to other detailed policies. The Ash lane site allocation has been informed by a Transport Study and Highways Development Management Officers have no objection to the proposal. Clearly there are pressures around the school and Cross Tree Lane and the Council's Highways Strategy Team (Streetscene) are considering options for traffic management in the area. Scope exists as part of drawing up the detail of the development to address these issues. It must also be stressed that the site is in a sustainable location and within walking distance of two schools.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				and Cross Tree Lane (where Hawarden Village Church School is situated) have been the subject of repeated traffic monitoring over the last 2-3 years. Local consultations took place this summer because of the current traffic jams and safety issues for the primary school children using these streets at drop off and pick up times (morning, afternoon and 2 at lunchtime time for infant nursery). They held an open session within the school. It was agreed many months ago with the local highway agency that trials of a one-way system could help alleviate this daily congestion - this has not happened yet. More traffic in	

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				this area will impact this congestion further and will make issues of pollution and safety worse. There is access to Ash Lane from the north through Mancot but this also goes past a primary school with school time traffic problems. They are also expecting a one way system trial and this will impact further. The route from Ash Lane to Broughton Shopping Park and Airbus (both major local employers for new residents) going via Sandycroft instead of past the school adds 1.5 miles and 5 min to this 3.2mile 7 min journey and so will be a less preferable route, it is unrealistic to	

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				expect people to use this route. Cross Tree lane is bound in by the cemetery and a wall into the churchyard of St Deniols Church and the local authority offices grounds and a private garden. There is no room for mitigation of increasing the width of this road.	
593	STR4: Principles of Sustainable Development, Design and Placemaking	Object	OBJECTS to Policy STR4. JUSTIFICATION 3.2 Policy STR4 lists 10 criteria in relation to sustainable development which all new developments should achieve. However, not every application will be able to achieve all of the criteria. AMENDMENTS SOUGHT 3.3 Policy STR4 is considered unsound in that it is not appropriate for the area as it sets an unreasonably high bar for applicants and should be reworded to allow some flexibility. It is suggested that it is reworded as follows3: “To achieve this, where appropriate all development should…” 3.4 It is noted that Policy STR5 (amongst others) has the words “where appropriate” in it.	suggested that it is reworded as follows3: “To achieve this, where appropriate all development should…” 3.4 It is noted that Policy STR5 (amongst others) has the words “where appropriate” in it.	Not accepted. Planning Policy Wales (PPW) places great emphasis on 'sustainable placemaking design principles’. This is a strategic policy that seeks to achieve that aspiration by improving the overall quality of design for all new development in the County. It is therefore vitally important for this strategic policy and the more detailed policies associated with it, to form the basis of all planning decisions and set out how development can achieve positive sustainable, design and placemaking outcomes and minimise any adverse outcomes. All of the criteria are material planning considerations, some are more relevant than others depending on the type of development and this is why the policy wording uses the term ‘should’ not ‘must’. Therefore the appropriate

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					weight to be attached to each issue will be recognised and considered at the planning application stage.
740	STR4: Principles of Sustainable Development, Design and Placemaking	Object	UDP Housing Requirement and Historic Rates of Delivery in Flintshire 6.4. Policy STR4 of the now time-expired Flintshire UDP adopted in September 2011 set out the requirement to deliver 7,400 homes during the period 2000 – 2015, an annual delivery rate of 493 dwellings. In comparison, the LDP is proposing a requirement which is 450 dwellings below the previous Plan period requirement at an average delivery rate of 463 dwellings per year. 6.5. The Council's latest Housing Land Monitoring Statement published in April 2018 provides a breakdown of housing completions data in Flintshire since 2007. No information is available for the period 2000-2006 which formed part of the previous UDP period. 6.6. Using the figures set out in Table 1 below, 3,389 dwellings were built between 2007 and 2015 at an average of 376 dwellings per year during the UDP period. This would leave the need for 4,011 dwellings to be built during the UDP period 2000-2006, at a rate of 573 dwellings per year. We would request that the Council provides evidence of delivery rates during this	We would request that the Council provides evidence of delivery rates during this period in order for all parties to establish whether the housing needs during the previous UDP period were met in full or not.	Not accepted. It is accepted that delivery rates during the UDP Plan period did not keep up with what the Plan specified. This is largely down to the economic downturn and its impact on the housebuilding industry. The housing requirement figure for the UDP was calculated in the context of projections and circumstances at the turn of the century. Those circumstances and projections are completely different to those which informed the LDP housing requirement. The relevance of delivery rates between 2000 and 2006 (at a time when the UDP had not been adopted) is not considered relevant to the present debate.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			period in order for all parties to establish whether the housing needs during the previous UDP period were met in full or not.		
640	STR4: Principles of Sustainable Development, Design and Placemaking	Object	In order to address the conflict detailed above, and ensure that the policy is sound, TW requests that the Council: 1 Review Policy STR4 and the reasoned justification in its entirety and provide explicit measurable targets and criteria based on a robust evidence base. This will assist in determining the impact that the requirements have on the viability of developments and it is not adversely impacted upon.	Review Policy STR4 and the reasoned justification in its entirety and provide explicit measurable targets and criteria based on a robust evidence base. This will assist in determining the impact that the requirements have on the viability of developments and it is not adversely impacted upon.	Not accepted. Planning Policy Wales (PPW) places great emphasis on the sustainable placemaking design principles, it is therefore vitally important for this strategic policy to set out all the material considerations relevant to this issue. Policy STR4 establishes the key planning principles for all development and reflects the aims of PPW. The more detailed policies form the basis of all planning decisions and set out more specifically how development can achieve positive sustainable outcomes and minimise any adverse outcomes. The detailed policies are listed at the end of the Policy context table for STR4. Alongside the LDP the Infrastructure Plan has been drawn up which identifies the key infrastructure requirements and helps to understand the viability of each allocated site. This plan is a 'live' document and will be updated as more detailed information comes forward. The LDP also contains a Monitoring Framework which sets out a number of indicators which form the basis for assessing the plans performance. Many of the indicators include matters relevant to the criteria in STR 4 such as loss of green barrier, open space and green infrastructure, community facilities, amount of walking and cycling, levels of welsh speaking in the county and renewable energy capacity. It is not considered appropriate to include detailed targets to be applied to this

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					strategic policy. The policy will therefore be monitored as part of the overall plan.
854	STR4: Principles of Sustainable Development, Design and Placemaking	Object	Strategic policy 5 Creating sustainable places and communities 5.33 To be welcomed but how can FCC deliver this? Not enforceable by FCC unless legislation is changed and FCC has the resources to make sure developers deliver. New surface water drainage powers to LAs could improve the situation but without the resources FCC will be hard pressed. At the moment we see new developments taking scant regard of green spaces, SuDs, and existing green infrastructure. 'Should be incorporated' is weak wording		Not accepted. Although the objector references policy STR5 it would appear that the objector is actually concerned with policy STR4 as para 5.33 is part of the explanatory text relating to policy STR4. The objection should be considered in the context that this is a newly prepared LDP which has been drafted in the light of the relatively new PPW10. Welsh Government has placed greater emphasis on Placemaking, green infrastructure and sustainable drainage and these are all incorporated into strategic and detailed policies. It is not necessarily the case that such requirements are resource hungry and by way of example Welsh Government indicate that SuDS should be cost – neutral.
924	STR4: Principles of Sustainable Development, Design and Placemaking	Object	STR4: Principles of Sustainable Development, Design and Placemaking We generally support the principles that are set out in the Policy. Specifically, we agree that new development should make the best use of land, materials and resources. Whilst the policy does not specify a specific density that development should achieve, it is common practice for new residential development to achieve a minimum of 35 dwellings per hectare (dph) and that through good design and layout, this can be		Not accepted. The general support for the policy is noted. Policy HN2 Density and Mix of Development specifies that a density of at least 30 dwellings per hectare will be sought, but also recognizes that there will be sites where a lower density may be justified. A Plan wide density target of 30dpha is considered to be realistic for the County given the characteristics of its settlements. This is also emphasized by the requirement for SuDS as part of new developments. It is considered that 35dpha is too high a figure to be generally applied across the County.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			adequately achieved on sites, resulting in acceptable residential environments incorporating open space and amenity areas. Density is also a function of the type and mix of housing that can be accommodated on a site. A larger proportion of smaller dwellings may mean an increase in density although this may be as a result of these type of dwellings being in need, and therefore, development should not be rejected on density grounds in such circumstances. We also support the objective of incorporating new connections to existing green infrastructure, as a way of promoting biodiversity.		
1137	STR4: Principles of Sustainable Development, Design and Placemaking	Support	Best and Most Versatile Land Flintshire have engaged with the Welsh Government regularly throughout the development of the LDP on land quality information, validation of surveys and Predictive ALC Map information. The plan notes a loss of 52.8ha of BMV land (34.6ha – Housing allocations; 18.2ha Employment allocations). The Council has taken a pragmatic and sensible approach to protecting BMV land and minimising its loss in the plan. Allocations that would represent a loss of BMV have been well evidenced for an overriding need (sequential test) and a balanced judgement has been made. In conclusion, the Welsh Government is of the view that the Council has demonstrated a sensible		Support is noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and pragmatic approach to considering BMV loss in the context of national planning policy and on that basis no objection is offered.		
1262	STR4: Principles of Sustainable Development, Design and Placemaking	Object	A policy to ensure sustainable development and design is supported in principle. However, the current policy wording is unsound as it places unnecessary and unrealistic burdens on developers. Evidently not all development will be able to meet all policy criteria, particularly where a site in constrained and/or complex where priorities must be balanced. However, failure to comply with individual STR4 criteria does not automatically mean a development is unsustainable. Development should be considered on a site-by-site basis and criteria considered accordingly including the extent to which some elements of sustainability can be achieved. To impose all criteria on all development may impact upon viability and prevent schemes coming forward to the detriment of the economy or the provision of housing. The policy wording should therefore include an element of flexibility and state development should meet the criteria 'where appropriate and relevant'.	The policy wording should therefore include an element of flexibility and state development should meet the criteria 'where appropriate and relevant'.	Not accepted. Planning Policy Wales (PPW) places great emphasis on 'sustainable placemaking design principles'. This is a strategic policy that seeks to achieve that aspiration by improving the overall quality of design for all new development in the County. It is therefore vitally important for this strategic policy and the more detailed policies associated with it, to form the basis of all planning decisions and set out how development can achieve positive sustainable, design and placemaking outcomes and minimise any adverse outcomes. All of the criteria are material planning considerations, some are more relevant than others depending on the type of development and this is why the policy wording uses the term 'should' not 'must'. Therefore the appropriate weight to be attached to each issue will be recognised and considered at the planning application stage.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1278	STR4: Principles of Sustainable Development, Design and Placemaking	Object	A policy to ensure sustainable development and design is supported in principle. 762	STR4: Principles of Sustainable Development, Design and Placemaking	Object	The Higher Kinnerton Village Plan sets out a vision for the future of Higher Kinnerton and its future development from 2018 to 2030 and FCC have confirmed the plan would be a material consideration in progressing the LDP.		Not accepted. The Council has worked pro-actively in assisting Higher Kinnerton Community Council in their preparation of the Village Plan. This is in the context of Welsh Government advice in PPW10 (para 1.28) that 'Place Plans are non-statutory documents.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Through consultation with village residents, the steering group identified the following themes to be developed for the plan: ? Protecting our environment and open spaces. ? Promoting community life and social cohesion. ? Community growth through sensitive development. ? Supporting commerce in the community. The Higher Kinnerton Village Plan takes each of these themes in turn, setting out the background and then, based on what we were told by residents in the survey, proposing a set of key objectives which can be delivered.		They may be prepared at the initiation of the local community and are a powerful tool to promote collaborative action to improve well-being and placemaking'. The status of Place Plans has always been somewhat unclear but PPW10 has clarified this with the guidance in para 1.28 of PPW10 'Place Plans should support the delivery of LDP policies and are adopted as supplementary planning guidance'. Further guidance is set out in para 5.7 of the draft development Plans Manual 3 where in para 5.7 Welsh Government state 'Place Plans should be in conformity with the development plan and adopted by the LA as SPG to the plan (chapter 9). They can inform an LDP review, be prepared in parallel with an LDP, or following adoption, providing there is a sufficient 'policy hook' within the plan. They cannot duplicate or introduce new policy, nor can they de-allocate sites identified in the adopted development plan. Place Plans are not part of the statutory development plan; instead they add detail to the adopted plan'. Once the LDP is adopted there is clearly scope to look at how the Place Plan sits with the LDP and for consideration to be given as to how and when it can be adopted as SPG to support the Plan. In the meantime the Place Plan will be treated as a material planning consideration although the weight to be attached to it is not the same as SPG.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1061	STR4: Principles of Sustainable Development, Design and Placemaking	Object	STR4: Principles of Sustainable Development and Placemaking – we welcome proposals to: ii) respond to local context and character, respect and enhance the natural, built and historic environment and be appropriate in scale, density, mix and layout; v) contribute to the well-being of communities, including safeguarding amenity, the public realm, provision of open space and recreation, landscaping and parking provision in residential contexts; vi) incorporate new and connect to existing Green Infrastructure, promoting biodiversity. However, we would suggest that the multi-functional nature of GI is recognised and the importance of landscape character and local distinctiveness, which applies to all proposals is included. 5.31 – refers to historic settlements and a rural landscape with high quality built environment and to heritage assets including historic parks, gardens and landscapes and that design should reflect this and have regard to local distinctiveness and site context. We advise that reference to landscape character should be included here to ensure all aspects of local distinctiveness are covered.	we would suggest that the multi-functional nature of GI is recognised and the importance of landscape character and local distinctiveness, which applies to all proposals is included. 5.31 – refers to historic settlements and a rural landscape with high quality built environment and to heritage assets including historic parks, gardens and landscapes and that design should reflect this and have regard to local distinctiveness and site context. We advise that reference to landscape character should be included here to ensure all aspects of local	Not accepted. STR4 is a strategic policy which sets out the requirements for sustainable placemaking design principles and highlights the issues through the set of 10 criteria. Policy STR13 Natural and Built Environments, Green Networks and Infrastructure provides strategic guidance on the issue of green infrastructure, as well as the natural and built / historic environment. The issues of green infrastructure and landscape are included in more detail in policies on landscape character and local distinctiveness are found in policies EN2 Green Infrastructure and EN4 landscape Character. In para 5.31 the list of historic assets includes landscapes therefore any development will need to consider landscape character. The plan should be read as a whole.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				distinctiveness are covered.	
147	STR5: Transport and Accessibility	Object	Site HWN005 - Ash Lane, Hawarden Policy STR4 iv: Ensure that the local highway network either has, or can be upgraded, to provide capacity to accommodate sustainable levels of development; Firstly it has been unclear plan details regarding site access ("Just from Ash Lane" as stated by the Lead Planner or "Ash Lane and Gladstone Way road access without a through access" from a planner at the open evening in Mancot Hall). With 2 access points it would be expected that half of the traffic will be coming out onto Ash Lane, if it was just Ash Lane access then it would be all traffic. Ash Lane and Cross Tree Lane (where Hawarden Village Church School is situated) has been the subject of repeated traffic monitoring and local consultations took place last year because of the current traffic jams and safety issues for the primary school children using these streets for drop off and pick up times (morning, afternoon and 2 at lunchtime times for infant nursery). It has been agreed with the local highway agency that trials of a one-way system will help alleviate this daily congestion - this has not happened yet. More traffic in this area will impact this congestion further and will make issues of pollution and safety	The magnitude of this development exceeds the local road infrastructure currently and so the size of development needs reducing.	Not accepted. The Ash Lane allocation is informed by a Transport Study and there is no objection from the Council's Highways Development Management officers. A response to the other representations on site HWN005 relating to highways matters is made separately.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			worse. There is access to the Ash Lane entrance from the north through Mancot but this also goes past a primary school with school time traffic problems. Also the route from Ash Lane to Broughton Shopping Park going through Sandycroft adds 1.5miles and 5 min to this 3.2mile 7 min journey and so will be a less preferable route. Cross Tree lane is bound in by the cemetery and a wall into the churchyard of St Deniols Church and the local authority offices grounds and a private garden. There is no room for mitigation of increasing the width of this road.		
292	STR5: Transport and Accessibility	Object	Transport is a key major factor in the Deeside/Wrexham/Chester triangle and this has been identified and reinforced over a considerable period of time. It was a key issue in the Wales Spatial Plan and successive strategies and partnerships have emphasised its importance. The cross-border travel pattern for journeys to work, leisure, shopping is dependent on the coordinated strategies and programmes of the constituent local authorities. A key part of Chester's transport strategy is the Chester Western Relief Road which has been considered and consulted upon. There are two options, both of which involve passing through/upgrading of the highway network in Flintshire. The first	Refer to and set out the degree of cross-border cooperation and agreement (or otherwise) on this key issue.	Not accepted. Nothing in Policy STR5 conflicts with the Chester Western Relief Road proposal which is part of Chester's transport strategy. Reference is included in the supporting explanation to maximizing the benefits of regional transport infrastructure investment (para 5.38) and to cross border working with CWAC and others to deliver improved vehicular access to Chester and Broughton (para.5.41) – this project is still on-going.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			passes through Saltney, across the river and along Bumper's Lane and on to Sealand Road. The second skirts the west of Saltney, crosses over the river at Ferry Lane and continues on to Sealand Road to the Park and Ride site. The Plan makes no reference to the CWRR either in principle or to the specific route options and how it may impact on the overall cross border transport network. This is a serious shortcoming and casts doubt as to the degree of cross-border cooperation in both planning and transport policy. It is of such importance that reference should be made to it in strategic policy.		
553	STR5: Transport and Accessibility	Object	This representation is made on behalf of a Trust which owns an area of land at Kelsterton Farm, Connah's Quay (Appendix 1). This land covers approximately 40Ha (98.8 acres) and is located south of Chester Road, between Connah's Quay and Flint. Given the site's size and its proximity to two 'Main Service Centre' settlements, we consider that this site provides a future opportunity for a range of land uses including residential, employment and roadside uses. Outlined below is our response to the Flintshire Deposit Plan Consultation which provides comments on the following policies detailed in the draft plan: STR5: Transport and Accessibility (Policy 5) Policy STR5	Allocate site located south of Chester Road, between Connah's Quay and Flint	Not accepted. The support for the general aims of the policy is noted. While the policy does not specifically reference new roadside facilities it does reference 'new development and transport infrastructure' and incorporates criteria against which proposals can be assessed. The Council is also aware of the Welsh Government's aim (para. 5.3.19 of PPW Edition 10) for there to be an increase in freight movement by rail and water rather than by road. Any proposals for roadside facilities can be considered on their merits against the Plans framework of policies and national planning guidance.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			'Transport and Accessibility' aims to deliver sustainable economic growth and development through the maintenance and enhancement of an integrated, accessible, usable, safe and reliable transport network. Whilst we support the general aims of this policy we object on the basis that it does not provide any support for new road side facilities which are an important component to the transport network. Therefore they should be promoted through this policy. Holyhead Port provides an important trade gateway to North Wales. As Wales' third biggest port it handles approximately 5.2 million tonnes of freight per year (2018), over 95% of which is via roll-on/roll-off or wheeled cargo containers. These figures1, show that despite a minor decrease in 2017 of 15,000 tonnes, there has been a general rise in the amount of freight handled by the port over the past decade, growing from 3.4m tonnes in 2008 (a 53% increase) and averaging a 402,000 tonnes per year increase in the last 5 years. Recent investments in the port reflect this growth with port operators Stena Line agreeing in 2018 to invest more than £4 million in upgrades to infrastructure and choosing the Holyhead to Dublin route as the first		

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			European route to take delivery of its new generation ferries in 2020. Crucially, the new vessel will offer over 3,000 lane meters of freight capacity, a 50% increase on the vessel it will take over from.		
807	STR5: Transport and Accessibility	Support	Our client supports Policy STR5, which recognises that the provision of an integrated, accessible, usable, safe and reliable transport network underpins the Council's economic ambitions. The policy confirms that transport infrastructure should facilitate accessibility to employment opportunities, and also promotes road and rail improvements. The movement of freight by rail is also supported. The supporting text to Policy STR5 recognises the current challenges affecting transport in the Deeside area, which is also the focus for existing and emerging economic initiatives. The plan also notes that high quality transport links and improvements to accessibility are vital to support economic growth. Our client welcomes the acknowledgement of this within the Deposit LDP. The Plan recognises the need for transport improvements within the Deeside area and gives support to the emerging proposals, including improved rail and road links. Our client supports proposed improvements such as Deeside Parkway, which will support economic growth opportunities		Support is noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			within the area. The Tata Shotton works benefits from rail access and road access and must be considered in the context of investments/improvements coming forward under this policy.		
823	STR5: Transport and Accessibility	Support	Policy STR5 (Transport and Accessibility) Policy STR5 of the Deposit Plan states: "…Where appropriate new development and associated transport infrastructure should therefore: Promote the implementation of an integrated transport solution in Flintshire, involving road, rail, bus, park and ride / share and active travel improvements…". Bourne Leisure endorses the Council's approach to the implementation of an integrated transport solution, including active travel improvements, "where appropriate". Draft Policy STR5 is consistent with paragraph 3.35 of PPW which states: "For most rural areas the opportunities for reducing car use and increasing walking, cycling and use of public transport are more limited than in urban areas. In rural areas most new development should be located in settlements which have relatively good accessibility by non-car modes when compared to the rural area as a whole. Development in these areas should embrace the national sustainable placemaking outcomes and, where		Support is noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			possible, offer good active travel connections to the centres of settlements to reduce the need to travel by car for local journeys." (Lichfields emphasis).		
1019	STR5: Transport and Accessibility	Object	Paragraph 5.37 – the Council recognises the intention to protect the line of the preferred route (the "red route") within the LDP, but notes that this does not extend into England (and therefore Cheshire West and Chester). • Paragraph 5.41 – the Council welcomes that the Chester Broughton Growth Corridor is referenced, but suggests that the text is amended from "…options to deliver improved vehicular access to Chester and Broughton" to "…options to improve strategic cross border connectivity and accessibility between Chester and Broughton and the wider sub-region".	Paragraph 5.41 – the Council welcomes that the Chester Broughton Growth Corridor is referenced, but suggests that the text is amended from "…options to deliver improved vehicular access to Chester and Broughton" to "…options to improve strategic cross border connectivity and accessibility between Chester and Broughton and the wider sub-region".	Not accepted. It is considered appropriate that the LDP shows protected routes within the LDP area only, though the Council acknowledges that the red route extends beyond the Flintshire County border. If the Inspector considers that the section of the red route defined by policy PC10, beyond the County boundary, should be removed from the proposals maps then the Council would have no objection to amending the proposals maps accordingly.
1002	STR5: Transport and Accessibility	Object	Transport / Highways impacts The Council is currently engaged in ongoing work between the two		Not accepted. It is not considered appropriate to include reference to the Strategic Road or sub regional network under Policy STR5 as

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			authorities, Wrexham Council and Welsh Government to seek to improve the operation of the highway network around Chester and NE Flintshire, to improve accessibility and help support economic development opportunities. The two Councils are also involved in the North Wales and North East Wales Metro project that will support the development of an integrated transport network. It is noted that the two major strategic sites identified in the LDP (Northern Gateway and Warren Hall) are already committed schemes. Cheshire West has previously identified concerns in relation to potential impacts on the A road network especially the A55/ A483 junction (Warren Hall) and the Sealand Road/ A540/ A5117/ A550 and onward routes (Northern Gateway). As such, it may be helpful if the scope of policy STR5 bullet point (iv) was widened to ensure that the highway network outside of Flintshire has (or could provide) sufficient capacity to accommodate levels of development, in addition to the "local highway network" – this could be by reference to the Strategic Road Network, and/or the sub-regional network.		the County as Highway Authority has very limited responsibility for delivery of schemes on these networks. PPW (para. 5.3.29 references Trunk Roads and Motorways as the Strategic Network. The Explanation to Policy STR5 does reference sub regional and regional initiatives (para. 5.3.6). The policy is also supported by a detailed policy PC5.
1063	STR5: Transport and Accessibility	Object	STR5: Transport and Accessibility – we advise including reference to Green Infrastructure networks here, which can include walking and cycling routes and	we advise including reference to Green Infrastructure	Not accepted. Reference is already included in Policy STR5 to Green Infrastructure networks. Bullet point (vi) states 'Provide walking and cycling routes, linking in with active travel

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			significantly enhance the experience and encourage walking and cycling. 5.39 – we recommend linking Active Travel proposals to the Green Infrastructure Strategy SPG. 6.5 – with regards to tourism developments and opportunities arising from the AONB and Flintshire's attractive rural landscape, we suggest reference to Dark Skies.	networks here. 5.39 – we recommend linking Active Travel proposals to the Green Infrastructure Strategy SPG. 6.5 – with regards to tourism developments and opportunities arising from the AONB and Flintshire's attractive rural landscape, we suggest reference to Dark Skies.	networks and green infrastructure networks'. No further wording is necessary in the criteria. Reference is already included in the Plan, in the explanation for Policy EN2 (Para.12.10) as follows: 'Green Infrastructure should be planned so that it integrates with existing rights of way and pedestrian and cycle routes (including Active Travel Routes) as well as other identified nature conservation and green space assets. This Policy will be supported by an SPG on Green Infrastructure'. Para 6.5 is part of a general introductory section leading into the Plan's Economy policies and it is not considered necessary for reference to be made to Dark Skies. The Plan has a detailed policy (EN5) regarding the AONB and policy EN18 addresses light pollution in the policy wording and reference Dark Skies initiative in the explanatory wording. The Plan needs to be read as a whole.
146	STR6: Services, Facilities and Infrastructure	Object	Site: HWN005 - Ash Lane, Hawarden Objection School places for new house owner families and existing local children: Currently the infant and junior school years in Hawarden Village are fully subscribed and similarly in Sandycroft Primary school. This site would be expected to lead to these sites having over-capacity. More children in family houses in the planned allocation for housing plot	Detailed proposals of how to increase local primary school capacity in line with the estimated population growth. Mitigation other than children needing to travel	Not accepted. There is no objection from the Education Authority to the LDP or to this allocation. The Education Authority is assessing how additional school capacity can be established. It must be stressed that this allocation is not scheduled to deliver housing completions until 2023/24 so there is sufficient time to address this.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			would be in relatively close proximity to Hawarden Village Church School thereby would take up new places there leading to Hawarden and Mancot residents being unable to attend and having to travel out of immediate local area for schooling. This unfair on local families currently setting up for local schooling. It is also again Council policy (local children should have access to local education facilities and not have to travel out of area for education). Hawarden High School (The Highway, Hawarden) has concerns regarding capacity with John Summers School in Queensferry recently closing (July 2017) and many schoolchildren now have to use Hawarden High School increasing intake numbers. Further significant local population increases will make access to the local state High School more difficult for existing residents of Hawarden, Mancot, Ewloe, Pentre, Sandycroft and Queensferry.	farther afield to access education facilities	
145	STR6: Services, Facilities and Infrastructure	Object	HWN005 - Ash Lane, Hawarden Objection. Access To GP surgery: (STR6: Services, Facilities and Infrastructure) - Specifically referencing policy 5.47 There is a lot of local people that state they have difficulties accessing GP (The Stables Medical Centre, 27 Glynne Way, Hawarden) appointments. The evidence for this is available from the Healthcare	The magnitude of such a Local Service Centre development plan must be smaller. Potential of 288 houses is a massive site for such a village with limited	Not accepted. Policy STR6 sets out the types of infrastructure and other developer obligations that can be sought in order to mitigate the impacts of development. Criteria iii) specifies health 'facilities' as the LDP and planning system cannot be required to contribute funding to revenue schemes such as the employment of GP's and other medical staff. This is the remit and responsibility of the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Inspectorate Wales Reports from 2017, 2018 and 2019. (www.hiw.org.uk). I have attached excerpts from the last 3 years reports for reference. So despite these reports for 3 years they have been unable to recruit permanent doctors to increase capacity to fit the current local population. Any increase to the local population by such large amounts (250-288 houses would expect a population increase of 500-1000) would further exacerbate strain on access to GP services when clearly they are unable to resolve current access difficulties. The magnitude of this Ash Lane Development plan is not logical or reasonable or balanced (placing such a large new population site with only a single local GP Practice to cope with the change in population). There are no suitable proposals to increase provision to accommodate any additional demand deriving from proposed development.	infrastructure growth.	Health Board. There is no objection to the Plan or this allocation from the Health Board.
191	STR6: Services, Facilities and Infrastructure	Object	The proposal refers to the pre-existing requirement for developers to make a contribution in funds or in kind to the benefit of the community and the prior public consultation to this LDP that set the terms for where future developments will be located. The concept I propose is to have a Community Obligation from developers but this is contributed by them to a County 'pot' that will in its turn be		Not accepted. Where a development would impact upon a community the developer will need to enter into a S106 legal agreement with the Local Authority to provide funds/works to mitigate against the impact of the development. This money can only be spent in accordance with the S106, for example if it is collect for affordable housing purposes it can only be spent on the provision of new affordable housing within that local area, it could not be used to fund other things. If this

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			accessible to bids from across all community areas in Flintshire. A Proposal: There are 3 levels for support: 1. The main providers for public leisure, recreation and sport. 2. Asset Transfers facilitated by FCC. 3. Other small local organisations. Main benefit to the County will be to secure longer futures for community led organisations and enable them to provide additional activities and/or improved facilities for such activities.		money is spent on something other than what the S106 specifies or outside of the agreed area then the developer could legally request the money is repaid by the Local Authority. In April 2010 the Community Infrastructure Levy (CIL) Regulations came into force in Wales. The CIL is a development tax paid by all developers on a £ per square meter basis on developments over 100m2. The contributions are pooled unlike traditional S106 funds and can be used for all types of infrastructure needs within the County. Once the LDP is adopted the Local Authority will explore the viability of producing a CIL for Flintshire. It has not been possible to do this while preparing the LDP due to time and resource issues. Until a CIL is formally adopted the Council will continue to use traditional S106 agreements to mitigate against the impact of development on communities.
413	STR6: Services, Facilities and Infrastructure	Object	objects as nether the policy wording or the supporting text offer advice on how such contributions would be calculated, this creates uncertainty for landowners and developers which in turn could result in development not coming forward. Further uncertainty is created by the potential of CIL being considered but with no indication of timescales or the likely infrastructure requirements, it might cover.	The minimum change required is to cross-reference an SPG in which greater guidance will be provided.	Not accepted. The current policy wording sets out the type of obligations which could be sought and are examples only; the specific obligations will be determined on a case by case basis depending on the nature and location of the proposal at the planning application stage. Details of how the contributions are calculated can be found in the various Supplementary Planning Guidance notes which support the plan. The intention of the policy, it is to provide a framework to seek obligations, in accordance with the tests identified in para 122 of the CIL regulations.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The reasoned justification explains that CIL charging system will be assessed once the plan has been adopted.
347	STR6: Services, Facilities and Infrastructure	Object	I have been instructed to write and advise that the Council's observations are that given that there is no additional development designation being made for rural communities: That infrastructure improvement payments made by all developers be collected and held by the Council That rural communities be allowed to bid for grants from there funds for projects to improve their community facilities.	That infrastructure improvement payments made by all developers be collected and held by the Council That rural communities be allowed to bid for grants from there funds for projects to improve their community facilities.	Not accepted. Policy STR 6 clearly states that '' new development will contribute to the provision of a range of key infrastructure, where necessary, to mitigate the impacts of new development comprising:' It is important to understand that requirements for infrastructure needs as listed, will only be sought **where necessary in order to mitigate the impacts of development**. As with any Section 106 Agreement developer contributions will need to meet 3 tests - • Necessary to make the development acceptable • Directly related to the development • Fairly and reasonably related to the scale and kind of development. Section 106 Agreement contributions need to be directly related to the development in order to address a specific impact and a specific

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					project. Section 106 Regulations state that contributions cannot be 'pooled' to be used for sites or projects other than that which the application is directly related. What the representor is suggesting is a Community Infrastructure Levy CIL. The policy explanation sets out that the Local Authority will be examining the viability of developing a CIL Community Infrastructure Levy following adoption of the LDP. The level of the CIL charge will depend on the viability of the development market which varies across the county. The mechanism for determining the infrastructure needs of different communities in the county will also form part of assessing the options for CIL
641	STR6: Services, Facilities and Infrastructure	Object	In order to address the conflict detailed above, and ensure that the policy is sound, TW requests that the Council: 1 Review Policy STR6 and the reasoned justification in its entirety and provide explicit targets based on a robust evidence base for how developments will contribute to infrastructure provision whilst ensuring that viability of developments is not impacted upon. 2 Omit reference to 'public art' from Part x of the Policy.	that the Council: 1 Review Policy STR6 and the reasoned justification in its entirety and provide explicit targets based on a robust evidence base for how developments will contribute to infrastructure provision whilst ensuring that	Not accepted. The Plan contains a Monitoring Framework which sets out a number of indicators which form the basis for assessing the plans performance. Many of the indicators include matters relevant to the criteria in STR 6 such as affordable housing, green infrastructure, community facilities, amount of walking and cycling, wildlife designations and renewable energy capacity. The policy will therefore be monitored as part of the overall plan. The policy sets out to highlight the need for physical and social infrastructure without being too prescriptive.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				viability of developments is not impacted upon. 2 Omit reference to 'public art' from Part x of the Policy.	TAN 12 Design 2009 recognised the importance of Public Art in the overall design of a scheme or town centre and states in para 5.15.1 'Public art plays an important part in creating or enhancing individuality and distinctiveness, and in raising the profile of our towns, villages, cities and urban and rural landscape'. Para 5.15.4 states 'Public art should be considered early in the design process and be integral to the overall design of a building, public space or place.' Policy STR 6 clearly states that ''new development will contribute to the provision of a range of key infrastructure, where necessary, to mitigate the impacts of new development'' It is important to understand that requirements for infrastructure needs as listed, will only be sought 'where necessary'. As with any Section 106 Agreement developer contributions will need to meet 3 tests - • Necessary to make the development acceptable • Directly related to the development

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					• Fairly and reasonably related to the scale and kind of development. The viability of a development is therefore taken into account. Once CIL is in place, it will replace the Section 106 Agreement system (apart from Affordable housing) negating the chance of double counting.
679	STR6: Services, Facilities and Infrastructure	Support	Policy STR6: Services, Facilities and Infrastructure As a Statutory Water and Sewerage Undertaker Welsh Water aims to ensure that sufficient infrastructure exists for domestic development, and we seek to address deficiencies through capital investment in our 5 year Asset Management Plans (AMP). We put forward a business plan for investment for each AMP cycle and as part of this work we require some certainty in terms of growth areas. An adopted Local Development Plan with allocated sites helps strengthen the case Welsh Water can put forward to our industry regulator, Ofwat, in relation to projects requiring AMP funding. Due to the regulatory, financial and legislative framework that we work within there is potential disparity in the timeframes of our AMP and the LDP. There may be instances where 'lead-in'		Support is noted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			times are required to bring an infrastructure project and associated funding to fruition. As such, where specific infrastructure improvements are required to bring a development site forward in advance of any investment through AMP, we support the provision within the policy that improvements can be delivered via private investment.		
936	STR6: Services, Facilities and Infrastructure		This policy is the pre-cursor to the introduction of a CIL tariff which will have to be based upon an adopted Infrastructure Delivery Plan – it immediately raises viability concerns about the realistic delivery of the strategic sites and we also consider it raises doubt over such aspirations for other non-strategic sites.	it immediately raises viability concerns about the realistic delivery of the strategic sites and we also consider it raises doubt over such aspirations for other non-strategic sites.	Not accepted. Policy STR 6 clearly states that '' new development will contribute to the provision of a range of key infrastructure, where necessary, to Council response mitigate the impacts of new development'. 855	STR6: Services, Facilities and Infrastructure	Object	Strategic policy 6 Supporting a prosperous economy LDP objective 10 2. Encourage the development of town and district centres as the focus of regeneration To be welcomed – but 'encourage' is weak or is FCC is relying on market forces? This is an area where the LDP could be stronger. FCC Planning could be leading on this over the next 10		Not accepted. The objector is referring to a Plan objective, not a policy and it is written as such. The Plan has a strategic policy STR9 Retail Centres and Development which is supported by 5 detailed policies, which have been drafted in line with guidance in PPW10. The role of the LDP is to provide a framework of land use policies and it is not a guide or statement of intent regarding the matters sought by the objector. Policy STR9 refers to the changing role of town centres and the need for a degree of flexibility and also references a tailored approach to be taken for each centre having regard to health checks,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			years: • applying for more grants (such as Townscape Heritage Initiatives) • giving timely guidance to businesses wanting to make changes to their premises such as using upper floors for accommodation and pointing them at potential funding • timely advice for companies wanting to make changes to their buildings in conservation areas • working through planning and enforcement to hold nationals to account when they let their high street premises fall into disrepair 3. Promote a sustainable and safe transport system that reduces reliance on the car The LDP lacks ambition here, there are no new cycle route proposals for Mold apart from Mold to Broughton. We urgently need safe cycle routes from the outskirts of our towns from residential, schools and business / industrial parks into the town centre. Please refer to Mold Town Plan, pages 50 and 51 As bus services are reduced we also need pavements as well as safe cycle		masterplans and action plans. The Council has a regeneration team and these initiatives can all be pursued outside of the LDP. Welsh Government advises in para 3.11 of Development Plan Manual 3 that 'Plans should not be a compendium of policies to cover every eventuality'. • The Council has a track record of securing funding to implement Townscape Heritage Initiatives. However, this is not a matter of the LDP. • The provision of advice about funding for the conversion of upper floors in town centres is not a matter for the LDP • The Council is setting up a pre-application conservation advice service in respect of development proposals involving listed buildings and conservation areas • The Council has legal powers to deal with untidy land and buildings but this is a last resort following attempts to negotiate appropriate action. However, with limited enforcement staff and resources, cases must be priorities. The Transport Strategy Team which is part of the Council's Streetscene & Transportation Service is progressing Active Travel proposals in terms of walking and cycling routes. The Active Travel 'Flintshire Central' Map and the accompanying 'INM Revised Schedule 2'

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			routes from the villages and settlements around towns. Leaving them out of the LDP is a missed opportunity in relation to both town centre vitality, linking communities and reducing carbon emissions		document specifies a series of schemes in and around Mold. As these are being progressed outside of the LDP process it is unclear why the LDP is deficient or lacking ambition. The provision of bus services and pavements is not a matter within the remit of the LDP. The preparation of the Plan, for instance in relation to the assessment of candidate sites has had regard to existing public transport. However, the strategy for and funding of bus services is not a matter for the LDP.
953	STR6: Services, Facilities and Infrastructure	Object	This policy is the pre-cursor to the introduction of a CIL tariff which will have to be based upon an adopted Infrastructure Delivery Plan – it immediately raises viability concerns about the realistic delivery of the strategic sites and we also consider it raises doubt over such aspirations for other non-strategic sites.	viability concerns about the realistic delivery of the strategic sites and we also consider it raises doubt over such aspirations for other non-strategic sites. 1008	STR6: Services, Facilities and Infrastructure	Object	This policy is the pre-cursor to the introduction of a CIL tariff which will have to be based upon an adopted Infrastructure Delivery Plan – it immediately raises viability concerns about the realistic delivery of the strategic sites and we also consider it raises doubt over such aspirations for other non-strategic sites.	doubt over such aspirations for other non-strategic sites.	STR6 sets out the framework for developer contributions and makes it clear that not all the list of infrastructure will be required by all developments. Alongside the LDP an Infrastructure Plan (IP) has been produced which sets out all the Infrastructure requirements for each strategic and allocated sites. The IP is a 'live' document and will be updated as more detailed information comes forward. The reasoned justification for the policy sets out that the Local Authority will be examining the viability of developing a CIL Community Infrastructure Levy following adoption of the LDP. The level of the CIL charge will depend on the viability of the development market which varies across the county. The mechanism for determining the infrastructure needs of different communities in the county will also form part of assessing the options for CIL.
688	STR7: Economic Development, Enterprise, and Employment	Object	We also request the following minor changes be made to policy STR7: Economic Development, Enterprise and Employment – "Supporting the provision of energy related development including new and emerging technologies to assist in the transition to a low carbon Wales." be added to the aims.	We also request the following minor changes be made to policy STR7: Economic Development, Enterprise and Employment – "Supporting the provision of energy related	Not accepted. The representation has been noted however the council disagrees with the proposed change. When the plan is read as a whole policy EN12 and EN13 are specifically for renewable energy and low carbon energy technology and development. Therefore it is considered that the aim is not needed to be added to policy STR7.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				development including new and emerging technologies to assist in the transition to a low carbon Wales." be added to the aims.	
886	STR7: Economic Development, Enterprise, and Employment	Support	PGNGL supports the aims of STR7 which provides additional policy support for the Northern Gateways strategic role to deliver economic growth. PGNGL support the aims of Policy STR7: Economic Development, Enterprise, and Employment particularly criterion i. which supports the role of the Northern Gateway Site in delivering economic growth for the Region. This is consistent with the Deeside Plan, Wales Spatial Plan 2008, and the emerging National Development Framework. 5.4. PGNGL consider that the policy in its current form is appropriate and consistent internally and with PPW. The policy is not overly prescriptive and therefore provides flexibility. In these circumstances, PGNGL consider the Flintshire Local Development Plan in its current form to be sound. 5.5. No changes to STR 7 are sought.		The representation is noted and the council welcomes the support for policy STR7 Economic Development, Enterprise, and employment.
806	STR7: Economic	Support	STR7: Economic Development, Enterprise and Employment Policy		The representation is noted and the council welcomes the support for policy STR7

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development, Enterprise, and Employment		STR7 aims to sustain Flintshire's role as a sub-regional economic hub. Criterion (ii) seeks to enable businesses to invest, innovate, expand and grow, whilst criterion (iii) emphasises Deeside and its area of influence as the economic focus for Flintshire's economic ambition. The recognition of the importance of Deeside, and particularly Deeside Industrial Park, as an area for economic growth is particularly welcomed by our client.		Economic Development, Enterprise, and employment.
826	STR7: Economic Development, Enterprise, and Employment	Support	Policy STR7 (Economic Development, Enterprise and Employment) Policy STR7 of the Deposit Plan states: "In order to sustain Flintshire's role as a sub-regional economic hub, the Plan will support this by: …vii. In rural areas, recognise the continued contribution agriculture makes to the rural economy, whilst also supporting wider rural enterprise, tourism and diversification…". Bourne Leisure endorses the Council's supportive policy position towards tourism in rural areas. Paragraph 5.5.3 of PPW states "in rural areas, tourism-related development is an essential element in providing for a healthy and diverse economy…". Draft Policy STR7 is consistent with national policy and recognises the importance of tourism to the local economy which will help to create an effective Plan.		The representation is noted and the council welcomes the support for policy STR7 Economic Development, Enterprise, and employment.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
911	STR7: Economic Development, Enterprise, and Employment	Object	There is no reference to the economic benefits of mineral extraction. Paragraph 5.4.2 of PPW(v10) states "Minerals…… ……. are also essential to the economy". Minerals provide the foundation and raw materials for the development of housing and infrastructure as well as many other aspects of the economy, including the provision of green energy, and the well-being of society. There is no reference to this in the respective subsections within this policy. "Policy STR16 - Strategic Planning for Minerals", should be referenced in the detailed policy section.	Minerals provide the foundation and raw materials for the development of housing and infrastructure as well as many other aspects of the economy, including the provision of green energy, and the well-being of society. There is no reference to this in the respective subsections within this policy. "Policy STR16 - Strategic Planning for Minerals", should be referenced in the detailed policy section.	Not accepted. The council has noted the representation and believe that the information sought is located within a combination of policies and therefore does not need to be mentioned within policy STR7. Each strategic policy is accompanied by a cross reference to the relevant detailed policies. When the plan is read as a whole STR16 is the specific strategic policy relating to minerals and this policy interlinks with the detailed policies EN23, 24, EN25 and EN26 contributing towards providing the information for minerals. Within these policies it states many of the aspects that minerals provide a foundation for. It is not considered necessary or appropriate for this to be repeated in policy STR7.
917	STR7: Economic Development, Enterprise, and Employment	Object	A private developer is promoting its land to be released from the green barrier designation and for it to be allocated and safeguarded as land to meet specific future development needs that will be required during the development plan period. The masterplan proposals put forward addresses specific identified need which respond to the sustainable	The masterplan provides a unique opportunity to develop an appropriate physical gateway to North Wales. The Council has failed to take	Not accepted. The LDP has allocated sufficient land for development to meet identified needs during the Plan Period and additional allocations are not required. It is considered that the Northern Gateway is a well-established site along with the Warren Hall strategic site which is deliverable and other employment areas allocations as well as flexibility provided by numerous Principal Employment Areas. The focus of the Plan is

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			opportunities which the site itself presents, these are: - • Safeguarding land for the proposed Welsh Government trunk road improvement works; • Lorry Park (10 acres / 4 hectares) • Service Station Facilities (20 acres / 8 hectares) • Data centre (40 acres / 16 hectares) • Hotel / conference facilities (5 acres / 2 hectare) • Residential development (19 acres / 7.5 hectares)	account of the gateway implications of the Red Route and how this traverses across the candidate site and the northern edge of the Deeside Industrial Park. It is clear that the Council's aspirations, as presented under Employment Allocation STR3A 'Norther Gateway Mixed Use Development Site' is more aligned with the connectivity of the 'Blue Route' which is no longer being pursued by the Welsh Government. Compton Group consider that the introduction of the Red Route makes this site a highly	on delivering growth through the development of the two strategic sites as these form a key part of the Growth Deal. The candidate site is located between Deeside Industrial Park and the Flintshire / Cheshire County boundary and it is currently designated as green barrier land. Flintshire's green barrier designations have been reviewed as part of the LDP process and the Sealand – Cheshire Boundary (N River Dee) has been assessed and found to be meeting the purposes of a green barrier as defined in Planning Policy Wales. Development would also result in the loss of a large swathe of grade 2 BMV agricultural land. The submission proposes development on the back of the Welsh Government red route road scheme but there is no evidence yet that this will be delivered within the Plan period. The site is also sited with zone C1 flood risk on NRW's Development Advice Maps and it is not clear how the objector considers that a mixed use development(including residential) can meet the justification tests in TAN15 given that the site is greenfield land. It is considered that the proposal for the inclusion of the site next to the red route located at land North of Shotwick Road, Deeside Industrial Estate is not necessary or appropriate.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				sustainable location for new employment opportunities, which will have direct links to England and North Wales.	
937	STR7: Economic Development, Enterprise, and Employment	Object	This policy suggests that that focus will be upon the two Strategic Employment sites at Northern Gateway and Warren Hall - yet neither have demonstrated deliverability and there is a mismatch between the jobs target and the amount of employment identified. It recognises the contribution agriculture plays to the local economy but fails to recognise the need to protect BMV land.	This policy suggests that that focus will be upon the two Strategic Employment sites at Northern Gateway and Warren Hall - yet neither have demonstrated deliverability and there is a mismatch between the jobs target and the amount of employment identified. It recognises the contribution agriculture plays to the local economy but fails to recognise the need to protect BMV land.	Not accepted. The policy notes that the strategic sites will provide employment however the policy also states that general employment sites that are part of the LDP will provide employment along with additional flexibility provided by numerous PEAs. The Council has engaged extensively with landowners to ensure that the sites allocated are deliverable and can realistically be brought forward for development over the plan period. It is accepted that the Northern Gateway site has been slow to get off the ground. However, significant investment in flood defence and transport infrastructure has been undertaken by Welsh Government and reserved matters approval given to one phase of housing and a large storage and distribution warehouse on the northern part of the site and one phase of housing on the southern part. Developer interest is being expressed in other phases of the development. This more positive outlook and the confidence that commencement of development on site has created, confirms the Council's assertion that the site can be

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					predominantly delivered during the Plan period. With regards to Warren Hall, the site has outline planning permission for a business park and a hotel. The relevance of the sites importance to the regional growth agenda is also important. There is a clear commitment in the Growth Deal, through the North Wales Economic Ambition Board, to delivering the Warren Hall site. The objector has not explained what is meant by a mismatch between the jobs target and the amount of employment land identified, and the Council are satisfied that from the combination of strategic sites, and the wider employment portfolio, there is more than sufficient context to facilitate the job growth aimed for by the Plan. Given that PPW10 provides a clear context for the protection of Best and Most Versatile agricultural land it is not considered necessary for this to be included in the Plan.
1164	STR7: Economic Development, Enterprise, and Employment	Object	Category C Strategic Policy 7: Economic Development, Enterprise, and Employment – clarity on the strategy for telecommunications Whilst the importance of telecommunications and associated infrastructure is recognised in the plan, the Plan does not set out a strategy for engaging with mobile operators to identify areas of		Accepted. In preparing the LDP the Council has consulted the telecommunications operators and providers and no representations have been made on the Plan. Nevertheless, the Council notes the representation and welcome the guidance on the need for a telecommunications policy. If the Inspector considers that the introduction of a telecommunications policy is necessary then

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			poor or no coverage, or develop criteria based policies to guide mobile infrastructure development or location. A strategy for the development of mobile telecommunications (including mobile broadband) is important to support changing working and personal patterns of movement; technology provides opportunities to travel less both in and out of work with subsequent benefits for sustainability and climate change.		the Council would suggest the following wording: Telecommunications and Digital Technology Infrastructure Proposals for telecommunications and digital technology infrastructure will be assessed in the context of technical and operational requirements and permitted where: i. The development contributes towards the objectives of future proofing development and regeneration proposals or forms part of the planned development of a wider network; ii. The development incorporates all reasonable measures to minimise any significant adverse impact due to the siting and external appearance of the apparatus, and the design minimises impact caused by its visual appearance; iii. There would be no significant adverse effect on natural heritage, the historic environment, or amenity of neighbouring residents; iv. The application is accompanied by evidence of compliance with Government guidelines on health impacts of telecommunications infrastructure. 'Facilitating digital communications is key to Flintshire's plans to accelerate growth in the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					County in the context of the Growth Deal which recognizes the need to 'Upgrade digital networks and infrastructure access the region to support the functionality, competitiveness and growth of the indigenous business sector..'.. Modern, fast, affordable and secure telecommunications and future proofed digital connectivity infrastructure can stimulate business innovation, enable high-value economic activity and drive-up productivity. For residents, it can transform their communications, home computing, on-line shopping, entertainment facilities, as well as enable effective home working. The potential benefits that telecommunications and digital communications can offer individuals and organisations are recognised, for example in terms of working from home, which can assist in creating a sustainable future by reducing the need to travel. Telecommunication facilities may have special needs and technical considerations, which require them to be installed in particular locations to work effectively. However in sensitive locations the erection of telecommunication towers and antennae can have a significant adverse effect on the quality of the urban and rural environment. Clear guidance with respect to the development of telecoms infrastructure is contained within section 5.2 of PPW10 and TAN19 Telecommunications, which is not repeated in this policy. Applications for telecoms and digital infrastructure developments will

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					therefore be assessed against National Planning Policy and Guidance. In accordance with national planning policy, the Council encourages operators to share telecoms masts. Operators will be required to submit evidence that opportunities for mast sharing and alternative sites have been fully explored. Careful siting, design and disguise, including landscaping and screening, can make developments less obtrusive and enable them to blend in with their surroundings'.
827	STR8: Employment Land Provision	Support	Paragraph 14.17 (Policy STR8 para 6.17) Paragraph 14.7 (6.17)of the Deposit Plan states: "Employment development in rural areas can make rural communities more sustainable by providing jobs closer to where people live, reducing the distance people travel for their work, and stemming the loss of economic activity from rural areas. The locational requirements of businesses may also be very specific but opportunities should exist through the LDP for other forms of employment and economic activity such as tourism, leisure, services and facilities, and agriculture related." Bourne Leisure endorses the Council's recognition at Paragraph 14.17 (6.17) that opportunities that opportunities should exist through the Plan for employment and economic activity related to tourism, leisure, services and facilities. It is vital for tourism development to have in-principle policy support as		The representation is noted and the council welcomes the support for policy STR8, Employment Land Provisions.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			tourist accommodation, such as Presthaven Holiday Park, require continual investment for maintenance and enhancement so that it can continue to attract the large number of visitors who already help support the local economy through related employment, investment and visitor spending. Paragraph 14.17 of the emerging LDP is consistent with paragraph 5.5.6 of PPW which states that: “Planning authorities should provide a framework for maintaining and developing well-located, well designed and good quality tourism facilities. They should consider the scale and broad distribution of existing and proposed tourist attractions and enable complementary developments such as accommodation…”.		
888	STR8: Employment Land Provision	Object	PGNGL is concerned that Policy STR8 is not clear enough in relation to the allocation STR3. PGNGL supports the aims and objectives of STR8, in particular it supports the commitment to deliver employment at the strategic Allocation STR3. STR3A is identified and an Employment Led Mixed Use Allocation within Policy STR3A. PGNGL is concerned that the mixed use nature of this allocation is not referred to within STR8 and this has the potential to provide uncertainty and lack clarity when applying the provisions of STR8. 6.4. Policy STR8	PGNGL is concerned that Policy STR8 is not clear enough in relation to the allocation STR3.	Not accepted. Northern Gateway is specifically addressed by policy STR3A and is also mentioned in PE1 which lists employment allocations and HN1 which lists housing allocations. Policy STR8 is intended to provide broad strategic guidance on the provision of employment land and is not intended to be site specific. When read as a whole, the Plan is considered to provide appropriate reference to and explanation of the importance of the Northern Gateway site without the need for it to be referenced in policy STR8.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			criterion iv seeks to safeguard existing employment sites and premises. As indicated earlier, in relation to Policy STR3, PGNGL are concerned that the Proposals Map includes land at John Summers Buildings and Grounds within Principal Employment Area PE2.11. This is not consistent with Allocation STR3A or the extant outline consent (application ref: 050125) and the opportunity for a hotel or community uses at this location. PGNGL maintain that this area of land and buildings should be within STR3A. Further, PGNGL support the need to safeguard employment sites and premises, where they are demonstrated to provide an important role in meeting future economic needs. However, PGNGL are concerned that the explanatory text does not provide sufficient flexibility over the plan period. The explanatory text does not recognise the role of some non B class uses in supporting the overall function of an employment area and its overall sustainability, and as such places unduly onerous requirements through policy PE6, Proposed Change 6.8. To overcome the objection and address soundness matters, the Council should: • PGNGL consider that Criterion iii should be reworded to reference the strategic 'employment led mixed use development at STR3A', in order to provide greater clarity with		The John Summers listed buildings and associated land clearly fall within the boundary of the outline planning permission for the southern half of the Northern Gateway site. Policy STR3A also references in criteria 'x' the need to secure sensitive re-use of the listed buildings and grounds. In this context there is clearly a mapping error on the proposals maps whereby the boundary of the strategic site allocation would have been extended to include the listed buildings and the boundary of the Principal Employment Area to be drawn back to the edge of the railway line. It is requested that the Inspector agrees to this as a mapping change to be addressed in the final version of the proposals maps. The specific guidance in STR3A provides for an appropriate mix of development at Northern Gateway and it is not considered necessary for either STR8 to provide further clarification on other uses within employment sites as this is set out in policy PE6. In response to the objectors requested changes it is considered:

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			regards to the overall nature of the strategic allocation. • The Proposals Map should be amended to include John Summers buildings and grounds within STR3A. • Amend the Explanatory text to explain the circumstances where and what type of alternative uses will be supported.		i) Not necessary for criteria iii to be amended when the strategic sites are referenced elsewhere in the Plan ii) The proposals maps can be amended to show the core boundary of the Northern Gateway strategic site allocation and the Principal Employment Area The protection of employment land and acceptability of other uses is addressed in policy PE6
938	STR8: Employment Land Provision	Object	We consider that the policy must make provision for new employment on sites that are currently outside of the settlement boundary to facilitate expansion of existing enterprises that happen to be located inside the settlement boundary. As it stands the policy only allows development (through re-use of suitable buildings and land) which is a little vague and unclear.	We consider that the policy must make provision for new employment on sites that are currently outside of the settlement boundary to facilitate expansion of existing enterprises that happen to be located inside the settlement boundary. As it stands the policy only allows development (through re-use of suitable buildings and land) which is	Not accepted. The representation is noted and the council does not agree that any change is necessary to the wording. Policy STR8 seeks to provide general strategic advice on the provision of employment and is not intended to cover all eventualities as it is supported by a suite of more detailed Development Management Policies. Policy PE5 provides guidance on the expansion of existing employment enterprises and policy PE3 permits employment development outside settlement boundaries subject to satisfying certain criteria. Clearly, the Plan needs to be read as a whole and it is evident that there is policy to provision to consider the expansion needs of existing businesses.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				a little vague and unclear.	
999	STR8: Employment Land Provision	Object	Policy STR8 – provides for a strategic and local supply of employment land. Paragraph 6.13 promotes wider regional growth and ambition beyond Employment Land Review estimates and paragraph 6.14 states there is only a need for 28.5 ha based on historic take up. There seems to be a significant oversupply of employment land, but the explanation suggests this is required for regional growth (rather than specific to Flintshire). Is this referring to the North Wales regional growth, or does it include cross boundary Mersey Dee Alliance and the Cheshire West and Chester area?	Clearer policy: There seems to be a significant oversupply of employment land, but the explanation suggests this is required for regional growth (rather than specific to Flintshire). Is this referring to the North Wales regional growth, or does it include cross boundary Mersey Dee Alliance and the Cheshire West and Chester area?	Not accepted. The representation has been noted and it is considered that an appropriate level of employment land has been allocated within the County to identify the Growth needs over the plan period in accordance with the findings contained within the ELR. Typically, development plans in Flintshire have provided an oversupply of employment land to ensure a sufficient choice in terms of location, size and type of site, to meet the need of different commercial operators. The Plan allocates a greater amount of employment land than would be strictly required as a result of previous take up rates. This is to reflect the positive growth strategy within the Plan and its contribution to achieving wider regional growth. It is also in recognition that Flintshire's portfolio of employment land and sites is well established with a choice of development opportunities where the Employment Land Review has not identified suitable alternative uses for these sites and has not recommended deletion of them. This portfolio of employment sites is therefore sufficiently flexible to facilitate the Plans job growth figure without the need for large scale new employment allocations or the expectation that all of the Plans employment will be taken up.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1170	STR8: Employment Land Provision	Object	Employment Growth Strategy Details on the Council's employment growth strategy are set out in Section 3 of the Deposit Plan. The evidence base to inform the employment strategy is the 2015 Employment Land Review, which has not been updated since. This previous Review has assessed the employment land and premises in Flintshire; in doing so, no sites were considered to warrant de-allocation or allocation for alternative uses such as housing; this is confirmed in paragraph 3.52 of the Deposit Plan. Accordingly, the housing needs of the County need to be met by other sources of land supply. It is noted that two strategic sites are identified for release through the LDP; these comprise the Northern Gateway at Deeside, and Warren Hall in Broughton, both of which will support employment uses. Paragraph 3.51 of the Deposit Plan refers to the fact that the jobs target of 8,000 – 10,000 jobs is ambitious in the context of job projection scenarios which have been prepared on behalf of the Council. Our Client welcomes the jobs targets, which reflects the role that Flintshire has to play as a sub-regional economic hub and a leading contributor to the Welsh economy as a whole. It is however imperative that sufficient employment land and premises are made available during the Plan period to retain and attract investment into the		Not accepted. The representation has been noted and it is considered that sufficient employment land has been allocated within the County to identify the Growth needs over the plan period in accordance with the recommendation contained within the ELR. The Employment Land Review 2015 has analysed employment land and premises demand, supply and need to 2030. ELR's should be updated every five years and therefore the current ELR is in date. This is reinforced by the fact that the ELR has been supplemented by further work from the same specialist consultants, namely the Flintshire Further Employment Growth Scenarios Oct 2015 and the Employment and Housing Advice April 2019. The Plan contains two strategic sites, the employment allocations in PE1 and additional flexibility provided by the principal Employment Areas in PE2 and a flexible policy approach. This should provide for sufficient choice of location, type and size of site to meet the needs of commercial operators. Along with the employment allocations the Plan has sought to make positive provision for housing including a healthy 14% flexibility and this includes numerous housing allocations that are supported by an Infrastructure Plan. With regards to meeting different housing needs, Policy HN2, paragraph 11.6 states "To ensure that mixed and balanced communities are

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			County. This will require a mix of employment sites and premises to meet the commercial needs of developers/operators. At the same time, it will be essential that new infrastructure is provided to support the planned jobs growth. This includes new housing provision around the County, delivering a mix of affordable, family and aspirational housing for workers such that they can access their own home at a price which is within their financial means and affordability bracket.		created the Council will expect developers to provide an appropriate mix of dwelling size and type to meet local housing needs, making reference to the evidence within the latest Local Housing Market Assessment and avoiding residential schemes that are dominated by larger properties with four or more bedrooms" This will ensure developments achieve a good mix of property type and sizes to cater for all needs and demands. Policy HN3 will also seek to ensure affordable housing is provided.
297	STR9: Retail Centres and Development	Object	The "town centres first" policy is very much supported and this objection is more to do with the fact that the policy is not pro-active enough. Having policies which "support the delivery of...." will not bring about the necessary flexibility, drive and commitment which is needed if the county's town centres are to either retain, or achieve, vibrancy and vitality. The policy must be more specific and determined in being committed to master plans and action plans and using planning mechanisms such as its compulsory purchase powers to assemble land which have vacant or underused buildings to bring in a range of compatible new uses to the centres and the fringes recognising that it might not be just about retail.	Need a firm commitment to producing a programme of action plans which will include land assembly using appropriate planning powers to bring about change.	Not accepted. Policy STR9 is a strategic policy which is signposted to other more detailed Development management Policies. It sets out a strategy of seeking to support town, district and local centres through an appropriate set of planning policies. The third para of the policy wording specifically references health checks, masterplans and action plans. These initiatives can be pursued by the Councils Economic Development Team within the policy framework set by the LDP and it is not considered necessary or appropriate for the LDP to try to set out the detailed strategy and programme for each town centre as this will change over time. The Council has given consideration to the use of CPO powers to buy up land and buildings in order to facilitate town centre regeneration projects. It remains a course of action that could be utilized subject to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					availability of finance. It would be inappropriate for the Plan to commit the Council to such actions, as they are more appropriately considered outside of the Plan making process.
796	STR9: Retail Centres and Development	Object	The British Land Company PLC objects to the failure of the Deposit Plan to suitably allocate land to accommodate identified comparison retail need in Flintshire County Borough. The Flintshire Retail Study identifies a net sales need of 508 sqm over the plan period to 2030 and states: "… the Council should plan for a small amount of comparison retail floorspace in the long term" (para 5.28). The assessment of comparison retail need is considered to be flawed on the basis that it incorporates planning permission ref: 49292, relating to 4,355 sqm gross floorspace (3,520 sqm net) at Saltney Retail Park as "committed floorspace". As confirmed by Flintshire County Council, no submissions have been made in respect of the pre-commencement conditions and as such, the planning permission therefore cannot have been lawfully implemented. As the permission has not been renewed by way of Section 73 application, the permission is understood to have lapsed in December 2018. In view of	The Flintshire Retail Study identifies a net sales need of 508 sqm over the plan period to 2030 and states: "… the Council should plan for a small amount of comparison retail floorspace in the long term" (para 5.28). The assessment of comparison retail need is considered to be flawed on the basis that it incorporates planning permission ref: 49292, relating to 4,355 sqm gross floorspace (3,520	Not accepted. The Retail Study clearly references in para 6.6 (first bullet point) a monitoring and review process including the 'implementation of existing retail commitments' and recognises that 'non-implementation of commitments or the expiry of existing planning permissions will release additional capacity'. The implications of the expiry of the Saltney Retail Park planning permission will increase the overall Plan period requirement from 508sqm (new sales) to 4028sqm (net sales). The UDP made six retail / commercial allocations and only one of these has been implemented. This demonstrates the difficulty in allocating relatively small sites across a large number of centres, which could serve to prevent other sites coming forward. Given the number of centres it is still the Council's belief, even with an increased comparison floorspace need, that a flexible approach which allows the market to bring forward sites or sites to be identified through regeneration activities, is appropriate for the County.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the above, the permission can no longer be considered as a "commitment" and therefore should be removed from the calculation of retail need. As a result, the estimated comparison retail need figure in 2022 is considered to increase by 3,520 sqm net sales (£17.16m PCA Turnover). As a result, this takes the comparison net sales need figure from -1,767 sqm to +1,753 sqm in 2022 and from +508 sqm to +4,028 sqm in 2030.	sqm net) at Saltney Retail Park as "committed floorspace". As confirmed by Flintshire County Council, no submissions have been made in respect of the pre-commencement conditions and as such, the planning permission therefore cannot have been lawfully implemented. As the permission has not been renewed by way of Section 73 application, the permission is understood to have lapsed in December 2018. In view of the above, the permission can no longer be considered as a	

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				"commitment" and therefore should be removed from the calculation of retail need.	
1022	STR9: Retail Centres and Development	Support	Town Centre policy It is noted the previous stages of the LDP included the intention to declare Broughton Retail Park a 'town centre' whereby unrestricted retail and leisure development could take place, and in response Cheshire West and Chester was concerned to understand the potential impact on town centres in Cheshire West and in particular, on regeneration proposals in Chester City centre. Therefore, the Council is pleased to see, and supports the approach set out in paragraph 6.23 that Broughton Shopping Park will remain outside of the retail hierarchy.		Support is noted. The Council sought views on the status of Broughton Shopping Park by including it within the retail hierarchy in the Preferred Strategy. However, in the light of the findings of the Retail Study it was reconsidered and left outside the retail hierarchy comprising traditional town, district and local centres, and left as a sub-regional shopping centre.

Policies STR10 to STR16

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
12	STR10: Tourism, Culture, and Leisure	Support	The Greenfield Valley Trust welcomes policy STR10 with its support for sustainable tourism development capitalizing on existing assets such as the Greenfield Valley.		The Council has noted and welcomes the support for Policy STR10 Tourism Culture, and leisure.
349	STR10: Tourism, Culture, and Leisure	Support	We are supportive of the principle of this policy but we consider it to be too focused on the Tourism and Leisure elements with little on Culture. Flintshire is home to Theatr Clywd which is a major producing theatre and an important cultural facility for the surrounding area. We suggest the policy wording is amended to give explicit support to the theatre along with other cultural venues by including culture throughout the policy and supporting text. For example: Supporting new and extended tourism, LEISURE AND CULTURAL development which is appropriate to its location and enhances the existing offer within Flintshire;	Stronger reference and support for cultural venues as described above, in particular Theatr Clywd.	The Council has noted and welcomes the support for Policy STR10 Tourism Culture, and Leisure. The council welcomes the suggested wording alteration. If the Inspector considers that the wording of the policy could be improved to clarify that it seeks to protect from development rather than promote development, the Council would have no objection.
802	STR10: Tourism, Culture, and Leisure	Object	The British Land Company PLC object to the current wording of Policy STR10 on the basis that the policy wording should remain consistent with the policy title and specifically refer to “i. supporting	the policy wording should remain consistent with the policy title and specifically refer to “i. supporting new	The council has noted the representation and welcomes the suggestion. If the Inspector considers that the wording of the policy could be improved to clarify that it seeks to protect from development rather than promote

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			new and extended tourism, culture and leisure development which is appropriate to its location…".	and extended tourism, culture and leisure development which is appropriate to its location…".	development, the Council would have no objection.
830	STR10: Tourism, Culture, and Leisure	Support	Policy STR10 (Tourism, Culture and Leisure) Policy STR10 of the Deposit Plan states: "The intrinsic appeal of Flintshire's natural and built environment makes the County an attractive destination for sustainable tourism development. Development that capitalizes on these assets and creates a year round broad appeal will be supported. Particular emphasis will be placed on: … v. Enabling a range and choice of tourism accommodation to meet a variety of needs from short visit to long stay." Pg 4/14 17958241v6 Bourne Leisure endorses the Council's approach in supporting year round tourism and its flexibility in the development of a range of tourism accommodation to meet varying visitor needs. This emphasis is important to the effective delivery of emerging Objective 14 given the contribution that tourism makes to the local economy and to Flintshire as a whole. Providing Flintshire with an opportunity and support to extend the tourist season will have		The Council has noted and welcomes the support for Policy STR10 Tourism Culture, and Leisure.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			significant social and economic benefits to the residents of the County. Draft Policy STR 10 is consistent with PPW which states that tourism is "…vital to economic prosperity and job creation in many parts of Wales" (paragraph 5.5.1) and that "the planning system encourages tourism where it contributes to economic development, conservation, rural diversification, urban regeneration and social inclusion, while recognising the needs of visitors and those of local communities…" (paragraph 5.5.2).		
1065	STR10: Tourism, Culture, and Leisure	Object	STR10: Tourism, Culture and Leisure – with regards to promoting accessibility to Flintshire's landscape we advise recognition that this must be done in tandem with sensitive management (noted in 6.28 but could be in STR10).	we advise recognition that this must be done in tandem with sensitive management (noted in 6.28 but could be in STR10).	Noted. The council acknowledges the representation. However, as the Plan is meant to be read as a whole as policies interlink, the Council disagrees with this Representation and believes that the current wording of Policy STR10 (and associated policies) is sufficient. The proposed additional information is noted in 6.28 and within part (iv) which reads: *'Conserving and enhancing Flintshire's natural, built and cultural heritage;'*
25	STR11: Provision of Sustainable Housing Sites	Object	This strategic policy fails to address the knock on impact of the drive for more affordable housing (or any other type of housing) increase on the scale proposed by FCC. The impact is one on the	This strategic policy fails to address the knock on impact of the drive for more affordable housing (or any other type of	Not accepted. The LDP and all site allocations within it are informed by a robust evidence base. Gathering this evidence base involves consultation with statutory consultees including education, health, highways and utility companies to identify if the site would be

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			schools, doctors and infrastructure in the proposed areas of development. the local schools (that any responsible parent would want there child attending) are massively over subscribed with no plan by FCC to build to address this problem. Likewise with local doctors surgeries and the support network which again is over subscribed or push to breaking point. Turning to the local infrastructure - no provision is made for these improvement, FCC seem to adopt the view that this is not an issue, but obviously they have not conducted the appropriate due diligence to understand the impact that new housing on the scale being proposed will have on the local area...	housing) increase on the scale proposed by FCC. The impact is one on the schools, doctors and infrastructure in the proposed areas of development.	suitable and sustainable to develop, and what the impact the development would have on each service/facility. For instance, Betsi Cadwaladr University Health Board are a Member of the Key Stakeholder Forum which met during the earlier engagement phases of the Plans preparation. All of the sites allocated within the plan have been through this rigorous process and statutory consultees have not identified any major constraints that would prevent a site from being developed sustainably. In addition to this, an Integrated Impact Assessment (IIA) has been conducted by an independent specialist to assess the Plan and allocated sites, to ensure they are sustainable. It must be stressed that the Plans new allocations will not deliver completed houses until 2023-24 and will be developed over a number of years. The impact of development will therefore not be felt in ‘one hit’ and there is sufficient time for both the Heath Board and the Education Authority to support the delivery of growth that is identified in the Plan. There is no formal objection from either statutory body to the Plan nor allocation. No objection to the Plan or allocations has been made by the Local Education Authority. The commentary of the Wrexham LDP Inspector referenced in detail above, establishes that it is normal practice for new development to address capacity issues

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					through developer contributions. The new allocations will not deliver completed houses until 2023-24 and will take several years for the development to be completed. The impact on infrastructure will therefore be gradual and will not be in 'one hit'. This gives the Local Education Authority time to address how the growth in the Plan can be accommodated in terms of school capacity. The Planning Service continues to work with the LEA to secure appropriate mitigation for the delivery of planned LDP sites. No objection to the Plan or allocation has been made by Betsi Cadwaladr University Health Board. Flintshire has a number of relatively new Primary Health Care Centres and the issue is one of lack of sufficient staff including GPs, rather than a lack of facilities as also commented on by the Wrexham LDP Inspector above. As stated in the preceding paragraph in relation to education capacity, there is ample time for the Health Board to plan for how it intends to meet the health care needs of the Plan's growth levels. The Council continues to work with the Health Board in securing the appropriate provision of infrastructure such as health for the delivery of LDP sites.
40	STR11: Provision of Sustainable Housing Sites	Object	Policy STR2.The settlement hierarchy does not allow sufficient flexibility for the even distribution of new development across the County which is primarily being directed to the eastern half. The	The settlement boundary in Trelawnyd should be changed to include part of site TLD001 and policies STR2,	Not accepted. The LDP does not seek to apportion development spatially in an even manner across the County. Rather, it seeks to distribute growth towards the most sustainable settlements and sites in accordance with the settlement hierarchy which is embodied in

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			rigidity of the settlement hierarchy definitions mitigates against a more balanced distribution of housing development. As there are more Tier 3 and 4 settlements in the west there should be more allocations or settlement boundary changes to compensate for this uneven distribution where this would not create harm. STR11.Following from the above the amount of new housing opportunities in Tier 3 and 4 villages will be very limited and especially in the west. It is very likely that criteria vi of this policy will not be met as the opportunities for cross subsidy from windfall sites in small villages with restrictive settlement boundaries will be limited and so small as to make schemes unviable.	STR11 and HN1 amended accordingly to allow more flexibility of housing opportunities in Tier 3 and 4 settlements especially in the west of the County.	policy STR2. This means that every settlement in every tier does not need to accommodate new residential allocations, instead growth is predominantly directed towards the higher tier settlements (main and local service centres and sustainable settlements) where there is greater access to services and facilities. Tier 4 and 5 (Defined Villages and Undefined Villages) will see a smaller proportion of growth due to the size and function of these settlements within the settlement hierarchy. It would be unsustainable to direct a larger proportion of growth into these areas ahead of the Tier 1, 2 and settlements. STR2 still enables residential development within tier 4 and 5 settlements, but on a scale that is appropriate for the character and role of these settlements, and with a focus on delivering local needs housing. Trelawnyd is a Tier 4 Defined village, therefore can accommodate small scale residential development to meet proven local needs, either on windfall sites within the settlement boundary or small scale exception schemes on the edge of a settlement boundary. In the case of windfall sites within the settlement boundaries, market dwellings may be permitted where essential to subsidise the delivery of affordable housing on site. Although it is acknowledged that the new allocations are in the eastern half of the County, it must be stressed that the Plans housing supply comprises more than just new

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					allocations. The Housing Balance Sheet comprises completions that have already taken pace in the first 4 years of the Plan period, housing commitments that have a valid planning permission at present and allowances for small site and large site windfalls. As part of this wider housing supply there will be scope for housing in the western part of the County. The settlement of Trelawnyd has a relatively compact shape with development to the north and south of the A5151 London Rd. The southern part of the settlement features a conservation area and to the west and north of the settlement is the Clwydian Range and Dee Valley AONB. The candidate site promoted by the objector adjoins the western edge of the settlement on the south side of the road and forms part of the designated AONB. This is a statutory landscape of national significance where PPW states 'National Parks and AONBs are of equal status in terms of landscape and scenic beauty, and must both be afforded the highest status of protection from inappropriate developments'. There is a firm and defensible edge to existing built development and the site forms an integral part of the wider agricultural landscape which affords far reaching views across the AONB. Development on the site would harm the character and appearance of the locality. Land on the eastern edge of the settlement on the north side of London Rd offers scope for an affordable housing exceptions scheme where there would be no harm to the AONB.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The objector seeks revisions to policy STR11 to allow more scope for housing in tier 3 and 4 settlements in the West of the County, and specifically site TLD001 in Trelawnyd. As set out above TLD001 is not considered appropriate for allocation in policy HN1.
159	STR11: Provision of Sustainable Housing Sites	Object	STR11 The policy indicates that the availability of housing land will be monitored over the plan period to ensure a continuous and adequate supply to enable the delivery of the overall housing requirement. However, the policy contains no mechanism for bringing forward alternative sites should the Plan fail to deliver. The monitoring section (Section 13) indicates that, should the housing land supply fall below 5 years for 2 consecutive years, the Council will "keep monitoring, further investigate and review as required". This is extremely vague and provides no mechanism for bringing sites forward to meet the shortfall in the 5 year supply should this occur. It is an important national requirement as set out in PPW and TAN1 that Councils are able to continually show a 5 year supply of deliverable sites for housing. Where this cannot be met	The monitoring section (Section 13) indicates that, should the housing land supply fall below 5 years for 2 consecutive years, the Council will "keep monitoring, further investigate and review as required". This is extremely vague and provides no mechanism for bringing sites forward to meet the shortfall in the 5 year supply should this occur. Need to identify contingency sites to be brought forward if the plan fails to deliver.	Not accepted. The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a contingency to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify specific contingency sites, and there is presently no requirement in PPW10 or the Development Plan Manual to do so. A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility/contingency to ensure a sufficient housing supply and Welsh Government in their formal comments on the plan have no concerns about the housing growth provided. If TAN1 is revoked then this will have knock on effects for the Plan and particularly the monitoring arrangements. The monitoring indicators have been drafted in the light of guidance in Welsh Government Development Plans Manual 3. At present there is no Welsh Government requirement for the Plan to have

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			there must be a mechanism in place to allow this to be achieved. Simply monitoring and further investigation will not achieve this and will therefore fail to meet soundness Test 2 in that the Plan will not seek to meet assessed needs. The Council's LDP 10 (Background Paper on Housing Land Supply and Delivery) sets out at paragraph 3.0.1 that "the delivery of the housing supply and the maintenance of a 5 year housing land supply throughout the plan period are essential to the achievement of the Plan's aims". As delivery of the 5 year housing land supply is central to the Plan's aims it is crucial that the Plan has a system in place for bringing forward alternative sites should the housing land supply fall short. The identification of contingency sites which could be brought forward in such circumstances would be an appropriate response. However, the current Plan does not identify contingency sites and will therefore lead to planning by appeal should the housing land supply figure fall below 5 years. It is of note that this is exactly what happened in relation to the UDP. Failure to have a mechanism in place within the Plan (such as identification of contingency sites) would lead to		contingency sites. If Welsh Government issue revised guidance then this will be considered in the run up to and at examination.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			planning by appeal in the latter stages of the Plan (which was precisely the situation which arose as a result of under delivery of the previous UDP). Without such a mechanism the Plan will fail to meet Test 2 set out in Background Paper 2 on Soundness in that it will not provide appropriate mechanisms to seek to meet assessed needs. Neither will it meet Test 3 in that the Plan would not be sufficiently flexible to deliver housing needs.		
250	STR11: Provision of Sustainable Housing Sites	Object	Objection 5: Housing targets in the plan need to be adjusted again to reflect better information from WG about the outlook for future dwellings requirements Recently, the Welsh Government has significantly scaled down the projected number of homes needed by 2038, given the number of completions already made (see p 51 of the Draft National Development Plan). The Draft NDP now states that around 19400 houses are required over 10 years in total in the counties of Conwy, Denbighshire, Flintshire, Gwynedd, Anglesey, Snowdonia and Wrexham. Most of these 19400 houses are already identified and sitting “in the bank” as committed sites awaiting action. This is yet	Revise and lower the housing targets Remove site H1.6 as it is land of last resort for development purposes under PPW and not needed if housing target is made more realistic and less aspirational.	Not accepted. PPW10 states that the latest Welsh Government Local Authority level household projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) form a fundamental part of the evidence base for development plans. These two pieces of evidence have formed the starting point for calculating the housing targets within the LDP, further considerations need to be taken into account including the appropriateness of the projections for the individual local authority area and any other relevant evidence. Population and Household projections are based upon past trends. Therefore the global economic crisis in 2008 has resulted in lower household projections as new households have not been able to afford to move out of their family home etc.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			another indication that there is currently no overwhelming pressure to develop on greenfield sites and to sacrifice BMV agricultural land. Stats Wales shows that the unrounded figure is 19447, using the Central Estimate Variant. If we remove the data for the last 8 years to 2038 and simply use the first 12 years (to fit in with the Flintshire Deposit LDP period) this gives a figure of 15175 across North Wales. Per annum, this would mean 1265 dwellings across the six counties of North Wales. Flintshire is roughly 22% of North Wales according to Stats Wales data, indicating roughly 278 dwellings for Flintshire based on official WG data. The paper "Indicative Impacts of 2017 projections" has Table 1 comparing nine different scenarios/projections, using WG data; the annual average dwellings requirement calculated for each scenario is 340, 270, 270, 260, 290, 320, 240, 250 and 410. The scenario average is 294. The gap between WG figures and FCC's projections is significant because the Deposit LDP suggests that there is "need" for 500+ p.a. dwellings in Flintshire alone. FCC's figures are not about housing "need" as such, just non-		In April 2014 Welsh Government wrote to all Local Authorities in Wales advising caution when projecting forward low household projections as this would not deliver the growth needed to meet current and future housing needs. In this letter Welsh Government emphasised the importance of not relying solely on Welsh Government projections, highlighting the need to consider all sources of data. The LDP is focused on promoting and enhancing Flintshire's role as an economic hub and is a driver for growth both locally and regionally. Therefore the strategy of the LDP is focused on supporting economic growth and the need to secure continued economic recovery and resilience. This ambitious approach to economic growth and the housing needs identified by the evidence base has directly informed the growth option chosen for the LDP. Welsh Government have not raised any objections to the growth level within the plan. In January 2020 Welsh Government published a series of explanatory notes on the NDF, including a note on housing need. This states that "The national and regional estimates do not reflect the impact of future policies or events and are not a Housing Requirement for Wales or the Regions. However, the estimates do provide part of the evidence and context on which Housing Requirements can be based. While it is expected that there will be a clear alignment between the estimates of housing need and the Housing Requirements set out in LDPs and SDPs, they are not the same and

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			guaranteed jobs. Furthermore, the Welsh Government has recently stated that the 5 year housing supply rule is revoked, so FCC's targets do not need to be set so high. Not compliant with PPW paragraph 1.21.27 Deposit LDP Para 5.9 FCC have chosen to ignore Welsh Govt data and to press on with jobs/housing targets that are too high to be supported within Flintshire given population, migration and demographic trends Para 7.9 & 7.15 the Welsh Govt no longer requires a 5 year supply so putting forward site H1.6 (agricultural land) is comletely inappropriate and unnecessary.		therefore are not expected to match" As stated above The Council need to consider a wider evidence base to determine the housing requirement within the LDP, and it would be contrary to Welsh Government advice to simply revise the LDPs housing requirement in line with the NDF and projections data. That said in their formal comments on the plan Welsh Government state they have no comments regarding the level of homes and jobs proposed and also consider the LDP to be in broad conformity with the NDF.
405	STR11: Provision of Sustainable Housing Sites	Object	The HBF suggests that the final paragraph of the policy is not required as it does not add anything to the policy as it does not provide anything that a developer would need to comply with.	Remove the final paragraph of the policy, which can be included in the supporting text if required, although this is covered by national policy.	Noted. Policy STR11 seeks to set the scene in terms of establishing planning principles to be delivered as part of housing allocations and windfall sites. The last part of the policy wording is merely setting out that the Plan will seek to achieve a 5 year housing land supply and that this will be monitored. If TAN1 is revoked then it may be necessary for this section of the policy as well as the monitoring arrangements to be revisited. However, until guidance is issued by Welsh Government it is not possible to do this.
327	STR11: Provision of Sustainable Housing Sites	Object	One of the key objectives of the Planning System in Wales as descibed in Planning Policy Wales is to identify a supply of land to	A reduction in the reliance on small and windfall site in favour of the allocation of	Not accepted. The Council does not accept that too much reliance is placed on the contribution of large and small windfall sites in the LDP housing land supply. BP10 (section

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			support the delivery of the housing requirement to meet the differing needs of communities across all tenures, this requirement is expressed in mandatory terms. Whilst National policy envisgaes that the use of criteria based policies for the release of site is a possibility the preference is to identify site and allocate those areas of land which are deliverable. In our view the plan places too much emphasis upon the deliverey on small and windfall. We are of the view that the council have failed to identify suffoicient land that is e free, or readily freed, from planning, physical and ownership constraints, and economically viable in order to support the creation of sustainable communities. We are aware of land which has been assessed during the course of the plan perparation process was considered to be suitable (Green) for development as part of the assessment of Candidate Sites. Appendix 1 of the plan should be revised to idenfty land at Halfway Field	sites including the Halfway Field Carmel Site	2.5) explains that an analysis of past trends has been carried out and this is detailed in Section 4.3 of the Flintshire Urban Capacity Study (June 2019) undertaken by Arcadis. This approach accords with the latest National guidance as contained in Development Plans Manual Edition 3: Consultation Draft (June2019). The Draft Manual advises (para. 5.63) that 'an urban capacity study can inform the identification of site allocations and assist to demonstrate delivery of windfall allowance in the Plan'. Both the Arcadis Study and BP10 explain that large and small windfall site contributions used in the Plan are significantly lower than the level of past completions achieved from these sources. It is also the case that the representative body of the development industry, the HBF, agree that the allowances are appropriate. The objector has mis-interpreted the candidate site colour coding where green did not signify suitability for development, but was a more general assessment of potential compliance with the Preferred Strategy. Halfway Field at Carmel (CAR001) has been assessed as a candidate site but was not considered suitable for allocation within the plan for the following reasons: (BP8) Whilst Carmel is identified as a Sustainable Village the site relates poorly to the main built form of the settlement which

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					apart from development on Mertyn Lane is confined between the A5026 along the northern edge and Carmel Road along the southern edge of the settlement. The UDP Inspector considered that the development of the site would 'result in an unacceptable intrusion into the countryside which would be incongruous and poorly related to the built form of the settlement'. The site is better related to the open countryside to the west and beyond Golch Farm to the north. Development of the site would result in urban encroachment extending beyond a well-defined edge and is not considered suitable to be allocated.
360	STR11: Provision of Sustainable Housing Sites	Object	The Plan has no specific policy or proposal to meet the needs of housing for an ageing population and those with dementia. please refer to attached document. Please note that 2 other files are being forwarded separately by email direct to Planning Policy. Paragraph 7.16 refers to the need to provide for more specialist needs housing. It makes particular reference to the ageing population. However, apart from reference to the need for bungalows, other forms of housing suited to meeting the general housing needs of elderly residents, and more specialist forms of accommodation	Have a specific policy and proposal site for housing for the elderly, namely a retirement village on candidate site FLI008.	Not accepted. The Strategic Policies and Development Management Policies within the Meeting Housing Needs sections of the LDP are fully equipped to consider applications for specialist accommodation such as retirement housing for the elderly. Therefore it is not necessary to include a specific policy for this type of housing. Paragraph 11.6 of HN2 specifically recognises the need to provide housing to meet the needs of an ageing population stating “a significant part of this need is driven by the growing older population (65+), therefore the housing needs of older people should be reflected in residential development proposals, which could include the development of bungalows.” The objector also wrongly assumes that the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			such as sheltered housing, it gives no further direction. The Plan contains no specific development management policy or proposal in the Plan to actually take this forward and meet the aims/outcomes of PPW and Well-being Act. The Plan fails to actively address these issues and has had no regard to the pressing evidence that has been emerging for the last 5 years and more.		sole responsibility and mechanisms to plan for the specialist needs of an aging population and those with dementia is the preserve of the LDP. In doing this the objector ignores other areas of Council policy and strategy related to housing and social care which specifically and successfully target such needs in a Flintshire context. A clear example of this is the Council's programme of extra care facilities. The extra care facility in Flint has a dementia specific element to it which is in a town centre location unlike the objection site.
362	STR11: Provision of Sustainable Housing Sites	Object	The housing requirement for Flintshire over the plan period is met through a mixture of commitments, completions to date, allowances for small sites/windfalls and allocations. Commitments are defined as "Sites where a planning permission exists, usually referred to in the context of housing and employment figures." The number of units included as commitments is 1,771 – more than a quarter of the housing requirement. Delivery of the housing requirement in the Plan is therefore heavily dependent on those sites which already benefit from planning permission. Given that high degree of dependence on commitments, they should be specifically allocated for housing in the Plan. This will		Not accepted. The Plans Housing Balance Sheet which supplements policy STR11 has base date of April 2018 which coincides with the findings of the April 2018 Housing Land Availability. Compared to the Plans requirement of 6,950 and total provision of 7,950 units, a commitments figure of 1,771 units is not considered to be excessive. The HBF has supported the Plans approach to commitments and there is no objection from Welsh Government to the effect that the Plan is over-reliant on commitments. The Plans Housing Balance Sheet represents the position as at April 2018. It would be wholly inappropriate and unnecessary for the Plan to allocate every commitment. The Plans approach is in line with Development Plans Manual 3 and there is no objection from Welsh Government. It is unclear whether the objector is taking a theoretical position or whether it is related to a specific site. The representation does not explain or help the Council to

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			provide certainty that, even if sites are not build out under their current planning permissions, the principle of housing development will still be acceptable and those sites can still contribute towards the supply of new homes later in the Plan period. If a site is suitable for new homes now, it will also be suitable later in the Plan period – the policies in the Plan should reflect this. This will also ensure that the Plan provides certainty for both the public and developers, as is required by PPW. Nowhere in the emerging plan is a distinction drawn between an allocation and a commitment; nowhere in PPW is a distinction drawn (or supported) between an allocation and a commitment. It is unclear why the emerging Plan intends to separate the sites in this way. The plan seemingly classifies sites differently based on whether or not they had planning permission at an arbitrary point in time – when the Plan was being prepared. Whilst it may be appropriate to identify which allocations already benefit from planning permission in order to support the deliverability of those sites, there is no need to treat them differently in policy terms. In		respond fully. If a committed site has planning permission which happens to lapse then it is i) necessary to consider the reasons why it lapsed and ii) determine any fresh planning application in the light of the present national and local planning policy context. It is making a sweeping assumption to adopt a stance that just because a site previously had planning permission that it will, as a matter of course, be granted planning permission again. The Plan is accompanied by a Glossary of Terms which explains what an 'allocation is' and what a 'commitment' is. The only sites recently granted planning permission, that have warranted a settlement boundary change are those speculative sites granted planning permission (either by the Council or on appeal) in the context of TAN1 and the [then] policy of attaching considerable weight to planning proposals which increased housing land supply. Given the context in which these speculative sites were i) submitted and ii) determined, it would be perverse for them not to deliver and expire.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			fact, the contrary is true – there is every reason to treat allocations and commitments equally in policy terms. The settlement boundary has been amended in many places to accommodate the commitments, however, it is unclear what status these sites will have should the extant permissions expire. They will be within the settlement boundary and therefore Policy 17 will apply, however, they will not be allocated. To ensure that the Plan will effectively achieve its objective of delivering the homes that Flintshire needs, those housing sites which currently benefit from planning permission should be specifically allocated for development in the Plan.		
249	STR11: Provision of Sustainable Housing Sites	Object	The housing targets are based on FCC's ambitions/desires, not on underlying proven need According to Stats Wales, population in Flintshire is set to increase only slightly - 2811 more people in Flintshire up to 2030, then static for the following decade or so. The Welsh Government has produced two sets of data on population for Flintshire. Stats Wales shows that	Revise the targets in line with NDP and latest Welsh government data	Not accepted. PPW10 states that the latest Welsh Government Local Authority level household projections for Wales, alongside the latest Local Housing Market Assessment (LHMA) form a fundamental part of the evidence base for development plans. These two pieces of evidence have formed the starting point for calculating the housing targets within the LDP, further considerations need to be taken into account including the appropriateness of the projections for the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the 2011-based calculation of the number of required dwellings in Flintshire gives the figure of 190 (average p.a.) and the equivalent for the WG's 2014-based calculation is 250. Flintshire CC's own "Technical paper: population and household projections with dwelling and employment impacts, November 2017" also predicts modest growth based on WG data (in Table 2.1). The FCC planners however have taken the view that both sets of WG data were "not felt to provide sufficient evidence to change the preferred strategy……. they remain at a very low baseline level for Flintshire and not one that would provide for a positive job growth related plan strategy which the Council has committed to." They then present their own ambitious preferred growth strategy that sets a target of 509 dwellings p.a. However, according to the Housing Land Monitoring Report of 2018, the annual completion rate over the first three years of the Plan period, 2015-2018 was already running well above target at 564, which should take pressure off the need to develop inappropriate sites such as H1.6. There is insufficient reasoned justification offered Not compliant with PPW paragraph		individual local authority area and any other relevant evidence. Population and Household projections are based upon past trends. Therefore the global economic crisis in 2008 has resulted in lower household projections as new households have not been able to afford to move out of their family home etc. In April 2014 Welsh Government wrote to all Local Authorities in Wales advising caution when projecting forward low household projections as this would not deliver the growth needed to meet current and future housing needs. In this letter Welsh Government emphasised the importance of not relying solely on Welsh Government projections, highlighting the need to consider all sources of data. The LDP is focused on promoting and enhancing Flintshire's role as an economic hub and is a driver for growth both locally and regionally. Therefore the strategy of the LDP is focused on supporting economic growth and the need to secure continued economic recovery and resilience. This ambitious approach to economic growth and the housing needs identified by the evidence base has directly informed the growth option chosen for the LDP. Welsh Government have not raised any objections to the growth level within the plan. In January 2020 Welsh Government published a series of explanatory notes on the NDF, including a note on housing need. This states

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			1.11, 1.19 Deposit LDP Para 5.8 Flintshire's aspirations are excessive given all the accumulated evidence showing difficult economic times ahead. Para 5.9 shows that FCC have chosen to ignore Welsh Govt data and to press on with jobs/housing targets that are too high to be supported within Flintshire given population, migration and demographic trends		that "The national and regional estimates do not reflect the impact of future policies or events and are not a Housing Requirement for Wales or the Regions. However, the estimates do provide part of the evidence and context on which Housing Requirements can be based. While it is expected that there will be a clear alignment between the estimates of housing need and the Housing Requirements set out in LDPs and SDPs, they are not the same and therefore are not expected to match" As stated above the Council need to consider a wider evidence base to determine the housing requirement within the LDP, and it would be contrary to Welsh Government advice to simply revise the LDPs housing requirement in line with the NDF and projections data. That said in their formal comments on the plan Welsh Government state they have no comments regarding the level of homes and jobs proposed and also consider the LDP to be in broad conformity with the NDF.
426	STR11: Provision of Sustainable Housing Sites	Support	Note the reference made in paragraph Para 7.9 of the consultation document will need revising prior to examination if the welsh assembly bring forward to proposed changes to revoke TAN1. Policy STR11 notes that housing land will be monitored and maintained over the plan period as part of the annual monitoring report. The monitoring of housing	Para 7.9 of the consultation document will need revising prior to examination if the welsh assembly bring forward to proposed changes to revoke TAN1.	Noted. The Council welcomes support for Policy STR11. Subject to the Welsh Governments findings on the recent consultation on TAN1, the Council would not object to the removal of references to TAN1 if the Inspector considers it relevant. This would also necessitate changes to the Plan's monitoring arrangements but until guidance is issued by Welsh Government it would be inappropriate to amend the Plan.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			delivery and the trajectory will become of increasing importance if the Welsh Government proposals to revoke TAN1 are brought forward. Gladman believe that the housing trajectory should be considered in detail through the examination process.		
406	STR11: Provision of Sustainable Housing Sites	Object	The HBF contends that it's unreasonable for a policy to 'expect' developments to comply with criteria. Also, the current wording suggests that developments must meet all the criteria this is unlikely to be the case.	The policy wording should be amended to make it clear that development should attempt where possible or appropriate to comply and that it will not always be possible to meet all the criteria.	Not accepted. The aim of policy STR11 is to ensure the sustainable delivery of housing sites across Flintshire. Removing the sentence "The delivery of new housing on these sites will be expected to" would dilute the impact of this policy and limit the sustainability of new residential schemes. It is essential that this sentence remains to ensure applications meet these key sustainability criteria, which will result in the efficient development of land for housing purposes. This strategic policy seeks to set the scene in terms of some key planning principles in respect of ensuring sustainable housing sites. In the light of the objectors stance that the criteria set an 'unreasonably high bar', each of the criteria is considered in turn below: i) Affordable housing – the provision of affordable housing is a key priority of Welsh Government in PPW10. The Plan reflects this and the policy is signposted to a more detailed policy HN3 Affordable Housing. ii) Making most efficient use of land – a key planning principle, whatever the size of

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					development is to make the most efficient use of land through an appropriate density. iii) Securing a mix of housing on a site is also a well established principle. Clearly there will be some developments where this is not possible, but this will be the exception rather than the rule. iv) The requirement to provide for specific housing needs is caveated by term 'where appropriate' recognising this will not be applicable to every site. v) Making provision for infrastructure to mitigate the impacts of development is a well established planning principle and must be related in scale and kind to the development concerned. Making vi) The last criteria is explicitly only applicable to rural areas and not every site. Having looked at each criteria in turn and how they represent well established planning principles and good practice, it is unclear why the objector would not embrace them as part of planning residential developments rather than arguing that they are onerous and unreasonable, which is contrary to the principles of sustainable development.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
412	STR11: Provision of Sustainable Housing Sites	Support	supports the Councils approach to windfall sites and commitments as identified with the Housing Balance sheet and the level of flexibility proposed. also supports the spatial strategy and the mix of both larger and smaller sites proposed.		Noted. The Council welcomes the support of the Home Builders Federation for policy STR11 and in particular the Councils approach in the Housing Balance Sheet regarding windfalls, commitments and the level of flexibility.
591	STR11: Provision of Sustainable Housing Sites	Object	STR11 The policy indicates that the availability of housing land will be monitored over the plan period to ensure a continuous and adequate supply to enable the delivery of the overall housing requirement. However, the policy contains no mechanism for bringing forward alternative sites should the Plan fail to deliver. The monitoring section (Section 13) indicates that, should the housing land supply fall below 5 years for 2 consecutive years, the Council will "keep monitoring, further investigate and review as required". This is extremely vague and provides no mechanism for bringing sites forward to meet the shortfall in the 5 year supply should this occur. It is an important national requirement as set out in PPW and TAN1 that Councils are able to continually show a 5 year supply of deliverable sites for housing. Where this cannot be met there must be a mechanism in place to allow this to be achieved.	However, the policy contains no mechanism for bringing forward alternative sites should the Plan fail to deliver. Need to identify contingency sites to be brought forward if the plan fails to deliver.	Not accepted. The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a contingency to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify specific contingency sites., and there is presently no requirement in PPW10 or the Development Plan Manual to do so A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility/contingency to ensure a sufficient housing supply and Welsh Government in their formal comments on the plan have no concerns about the housing growth provided. If TAN1 is revoked then this will have knock on effects for the Plan and particularly the monitoring arrangements. The monitoring indicators have been drafted in the light of guidance in Welsh Government Development Plans Manual 3. At present there is no Welsh Government requirement for the Plan to have contingency sites. If Welsh Government issue

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Simply monitoring and further investigation will not achieve this and will therefore fail to meet soundness Test 2 in that the Plan will not seek to meet assessed needs. The Council's LDP 10 (Background Paper on Housing Land Supply and Delivery) sets out at paragraph 3.0.1 that "the delivery of the housing supply and the maintenance of a 5 year housing land supply throughout the plan period are essential to the achievement of the Plan's aims". As delivery of the 5 year housing land supply is central to the Plan's aims it is crucial that the Plan has a system in place for bringing forward alternative sites should the housing land supply fall short. The identification of contingency sites which could be brought forward in such circumstances would be an appropriate response. However, the current Plan does not identify contingency sites and will therefore lead to planning by appeal should the housing land supply figure fall below 5 years. It is of note that this is exactly what happened in relation to the UDP.		revised guidance then this will be considered in the run up to and at examination.
629	STR11: Provision of Sustainable Housing Sites	Object	We have concerns in relation to the delivery of the Northern Gateway. In our view more realistic delivery assumptions should be	The supply of housing land identified is insufficient to meet the housing requirement.	Not accepted. Work has now commenced on the Northern Gateway site which comprises a number of phases and developers, including a social housing provider. The delivery

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			applied, and a significant reduction in the anticipated quantum of development over the plan period. We also have the following concerns in relation to the housing trajectory provided at Appendices 3 and 4 of LDP10: • The windfall allowance should not apply from 2018/19, as such sites should already be committed. The earliest any windfall allowance should commence from is 3 years after the base date (i.e. 2021/22). • There is insufficient justification for applying build rates of 45dpa to several sites. This raises uncertainty as to whether the following sites will be completed in full during the plan period: Warren Hall, Broughton ? Holywell Rd/Green Lane, Ewloe ? Ash Lane, Hawarden ? Land between Denbigh Rd. & Gwernaffield Rd, Mold Whilst the plan claims to provide a 14.4% flexibility allowance, the reality is that it is necessary to apply a deduction to anticipated future completions to reflect the fact that not all allocated or consented sites will come forward, and this is reflected in the trajectory at Appendix 4 of LDP10. When this is applied the surplus for the whole plan period is only 7 dwellings (0%). We therefore question whether there actually is	Additional flexibility should be provided within the supply of housing land, and alterations should be made to the proposed distribution. We therefore consider that additional flexibility should be provided within the supply, by increasing the proportion of development to be distributed to the rural areas, and specifically the Tier 3 Sustainable Settlements.	assumptions used take account of information provided by landowners and developers. On the issue of windfall allowances, it is considered fully justified to incorporate the small sites allowance, (which averages 60 units per annum) in the housing supply trajectory from 2018/19, as these are units which are not included elsewhere in the supply. It can be seen from the trajectory that the allowance of 60 pa is significantly lower than recent completion rates on small sites, of 87, 102, and 104 units per annum for 2015/16, 2016/17 and 2017/18 respectively. With regard to the large sites windfall allowance, this is not applied from 2018/19 in the trajectory. As referenced in para. 2.5.6 of LDP10 it is acknowledged that 'in practice it is likely that the contribution from large windfall sites will be less in the very early years as they will be sites which did not have planning permission at 1.4.18". For this reason the trajectory does not include any large windfall units in 2018/19 and reduces the contribution in years 2019/20 1nd 20/21 to 20 and 40 units respectively. It should also be noted that sites granted planning permission subject to the signing of a section 106 agreement are not included in the main supply and would therefore be likely to contribute to the windfall supply in these early years (as explained in para 2.4.2 of LDP 10. All allocations have been assessed in terms of deliverability within the plan period. The

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			sufficient flexibility inbuilt within the plan, particularly in light of the issues with the trajectory identified above. We therefore consider that additional flexibility should be provided within the supply, by increasing the proportion of development to be distributed to the rural areas, and specifically the Tier 3 Sustainable Settlements.		allocations at Warren Hall, Ewloe, Hawarden and Mold are in strong market areas, with house builders already in place to develop the Hawarden and Mold sites, and discussions taking place between the Ewloe site promoter and another house builder. The Warren Hall site forms a key part of the regional growth bid and has attracted interest from a number of developers. The Council are satisfied that there is significant developer interest in all of the allocations, and that 45dpa is fully achievable on all of the mentioned sites. Additional flexibility within the rural areas is therefore not needed. The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a contingency to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify specific contingency sites. A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility/contingency to ensure a sufficient housing supply. Even if the Council were to accept the objector's stance, which it does not, it would not be logical or sustainable to look for more housing in predominantly rural lower tier settlements, in preference to higher tier service centres.
670	STR11: Provision of	Object	There is an overreliance on windfall sites and an overreliance on longstanding commitments	In order to meet the test of Soundness the following changes are	Not accepted. The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement,

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Sustainable Housing Sites		which have failed to be delivered. The Consequence is that the overall housing target figure is too low and the scale and nature of allocations put forward and commitments relied upon will fail even to meet that understated target. In order for the plan to be effective and to deliver it is necessary to substantially increase the overall housing target and to identify far more suitable, available and deliverable sites The Plan proposes a housing target of 7950 units. An analysis of the sites listed in Appendix 1 demonstrates that a number of those sites have had planning permission or have been around for a considerable period of time and have not been delivered. They should be removed from the allocated sites resulting in the need to accommodate another 342 units The strategic site at Warren Hall (STR3B) near Broughton is isolated and does not have any relationship to facilities. It is therefore not a sustainable option for residential development and the lack of facilities mean that even if residential development comes forward in that location the need for facilities will delay delivery over many years. It is unrealistic to expect that allocation to be brought forward and therefore that	required. (i) Increasing the overall level of housing provision to at least 10,500. (ii) Increase in the number of new allocated housing sites by at least 2500. (iii) The removal of Llys Ben site at Northop Hall from the Green Barrier.	which provides a contingency to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify specific contingency sites, and there is presently no requirement in PPW10 or the Development Plan Manual to do so. A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility/contingency to ensure a sufficient housing supply. The Council are confident that the committed sites and allocated sites within the LDP will deliver as intended. Significant work has gone into checking the deliverability of the allocated sites that were previously included within the UDP to ensure they will deliver in line with the housing trajectory. Therefore the Council are satisfied that additional sites are not needed to replace these allocated sites. The objector refers to the Plan having an overreliance on windfalls. The Plan makes an allowance for small sites of 60 dwellings per hectare and 50 dwellings per annum on large sites. This is a conservative estimate based on past trends and the Urban Capacity Study demonstrates there is sufficient capacity for the trend to continue. The level of windfalls compared to the Plans overall requirement is not considered excessive or inappropriate and has not been objected to by Welsh Government. The representative body for

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			represents a further shortfall in housing Council's target per annum: 7950 To meet that target it is necessary to: Increase the allocations by 660 to allow for over-reliance on windfall sites. Increase the allowance by 300 to allow for the non-delivery of the Warren Hall site. Increase the allowance by 342 to allow for non-delivery of sites within Appendix 1. Increase the allowance by 16% or 1272 units to reflect under-provision against the past five years delivery pattern. These figures taken together suggest that there should be an overall housing target of 10,500 units which is very significantly more than the number put forward by the Council and is more reflective of the amount of allocations that will be needed to deliver housing and the Council's jobs-led strategy. Sites to accommodate a further 2500 units are needed. Remove Llys Ben Northop Hall from Green barrier and allocate more housing increase overall housing numbers		developers the home builders federation (HBF) also agree the levels are appropriate. Therefore It would be unreasonable to reduce the windfalls figure by 660 units. The objector claims the Plan has an overreliance on longstanding commitments which have failed to deliver. The commitments have been subject to review throughout the Plan process and the Council has not sought to include long standing sites which haven't delivered. Each site that the objector questions are looked at in turn below. But it is clear that the objector has failed to refer to the latest available land supply statement as that clarifies the correct position with the sites referred to as follows;: Whitleys Depot, Buckley – this site is under construction with the 2019 Housing Monitoring Study identifying 11 units under construction. The developer is Whitley, a well known local house builder. Summerhill Farm, Caerwys – this site is under construction with the 2019 Housing Monitoring Study showing 5 units under construction. The developer is Quatrefoil Homes. Station Yard / Depot, Coedtalon / Pontybodkin – Reserved matters approval (055798) was granted on 13/09/19. East of Gronant Hill, Gronant – Full planning consent was granted on 03/08/18. A subsequent application for amended ground

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					levels was approved on 09/09/19. Progress has also been made in discharging pre-commencement conditions and Wates are fully committed to delivering the scheme. Kinnerton Lane – Higher Kinnerton – Elan Homes as at April 2019 had built 31 units and a further 12 were under construction. Bromfield Timber, Mold – the site has an extant planning permission. Although the site has been excluded from the 5 year housing land supply in the 2019 Housing Land Monitoring Statement, this does not mean that the site will not be developed in the Plan period. Sewage Works, Sychdyn – Stewart Milne Homes had at April 2019 built 33 units and 10 were under construction. Altbridge House, Whitford - As part of work on the 2019 Housing Land Monitoring Study it has been established that following a change of ownership that there are no plans for immediate development. Further, the planning permission on the site has expired so the site is not included in the land supply in the 2019 housing land monitoring report Clearly, the objectors analysis of the above sites is inaccurate and it would be entirely unreasonable to delete 342 units from the commitments figure as the sites referred to are all deliverable.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The Warren Hall site is in a strong market area and forms a key part of the regional growth bid. The site is not isolated as it sits between Penyffordd / Penymynydd, Broughton and Higher Kinnerton. The site is a mixed use development and in a sustainable location. The objector is unclear as to what facilities are lacking and how this will delay or prevent development coming forward. It would be unreasonable to delete the 300 units from the Housing Balance Sheet. Equally the site at Warren Hall is in closer proximity to a service centre with significant facilities than the site the objector promotes at Llys ben to its nearest service centre. The objector seeks an increase to 'the allowance by 16% or 1272 units to reflect under-provision against the past 5 years delivery pattern'. However, the objector offers no further explanation to this and how the figures have been arrived at. The first four years of the Plan period has seen on average completions ahead of the Plans annualised requirement of 463 units. But directly in line with the average level of plan provision at 530dpa. It is not clear what the under-delivery in the last 5 years is. The objector concludes that taken together these should result in an increase to the overall housing target to 10,500 units. However, the Plans housing requirement is based on a projections / growth led approach which is already in excess of Welsh Government projections. The objectors

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					approach appears to be to delete significant units from the Plans' supply side of the Housing Balance Sheet and then add them to the housing requirement figure. This is not an appropriate way in which to formulate the Plans overall housing requirement. Also at 10,500, the objector provides no evidence to explain how such a proposed requirement of 164 dpa above current delivery rates can be provided for other than by a small site at Llys Benn, what the additional sites are.
759	STR11: Provision of Sustainable Housing Sites	Support	Policy STR11: Provision of Sustainable Housing Sites Our Client agrees with the core principles of this Policy, namely the need to direct new housing development towards sustainably located, economically viable and deliverable sites. There is a clear and urgent need for more affordable housing in Flintshire, and this needs to be reflected through the Council's housing requirement as well; as the site-specific policy requirements. Low density development should be avoided, providing for the efficient use of land. A mix of house types and tenures should be supported informed by an understanding of local needs; this in turn will require up-to-date evidence/information held by the Council as part of its Local Housing Market Assessment. Our Client welcomes		The Council welcome support for policy STR11.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the commitment by the Council to continue to monitor the housing land supply position and housing delivery in the County on an annual basis, reported through an Annual Monitoring Report. This will require regular dialogue with the development industry in order to ensure a robust position on housing supply and delivery is established		
763	STR11: Provision of Sustainable Housing Sites	Object	a) The Community Council and the village community recognise the need for new housing in the county and accept that Higher Kinnerton may accommodate some of this growth over the life of the LDP. However, the community feels that development should not come at the cost of a continuing decline in local infrastructure (road, transport, access to health provision, education) and local village amenities (post office, shops, pubs). These vital services have not kept pace with the growth of the community. The recent design of residential developments has also contributed to the growth and reliance of residents' use of their cars as the main means of transport and has added to parking problems within the village. This problem has been recognised nationally in a recent project	Given the situation which arose with the affordable housing units at Babylon Fields in Higher Kinnerton, the criteria for affordable housing needs to ensure affordable housing is genuinely affordable for those in need of housing and whose needs are not met by the open market	Noted. Policy HN2 sets out the criteria for the density and mix of new dwellings, paragraph 11.6 of the reasoned justification states "In order to meet the variety of needs in Flintshire, a range of housing must be provided on sites. The Local Housing Market Assessment identified a particular need for smaller one and two bed units to meet the increasing need from single person households. A significant part of this need is driven by the growing older population (65+), therefore the housing needs of older people should be reflected in residential development proposals, which could include the development of bungalows. To ensure that mixed and balanced communities are created the Council will expect developers to provide an appropriate mix of dwelling size and type to meet local housing needs, making reference to the evidence within the latest Local Housing Market Assessment and avoiding residential schemes that are dominated by larger properties with four or more bedrooms" This

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			document (Transport for New Homes 2018). b) With an aging population nationally and locally, serious consideration needs to be given on how housing should be provided for this section of our community, as well as the provision of affordable housing to encourage younger people to settle in Higher Kinnerton. This to ensure that we have a balanced mix of accommodation types available to provide for the newly enlarged community. c) Given the situation which arose with the affordable housing units at Babylon Fields in Higher Kinnerton, the criteria for affordable housing needs to ensure affordable housing is genuinely affordable for those in need of housing and whose needs are not met by the open market		will ensure developments achieve a good mix of property types and sizes to cater for all housing needs and demands. Affordable Housing will be delivered at 70% market value for low cost home ownership dwellings to eligible applicants from the Tai Teg register. Intermediate rental dwellings will be let at no more than 80% of private rental values. Applicants must meet specific eligibility criteria in terms of their income and any local connection criteria. This will ensure that only applicants who cannot afford to buy or rent on the open market are offered a property, and that they can afford to live in the property.
795	STR11: Provision of Sustainable Housing Sites	Object	Notwithstanding the conclusion in relation Policy STR1 that the housing requirement should be increased, it is also considered that there are significant problems with the assumptions related to the delivery of sites. In the first instance, the approach to the windfall contribution from large sites is questioned on two bases': a. Whilst Background Paper No 10 (BP10) indicates that windfall	Notwithstanding the conclusion in relation Policy STR1 that the housing requirement should be increased, it is also considered that there are significant problems with the assumptions related to the delivery of sites. In the first instance, the approach to the	Not accepted. An analysis of past windfall contributions is contained in Section 4.3 of the Flintshire Urban Capacity Study (June 2019) undertaken by Arcadis. This approach is in line with the latest National guidance as contained in para.5.6.3 of the Development Plans manual, Edition 3, Consultation Draft (June 2019). The Urban Capacity Study sets out (in Table 4.8) the rate of completions on large windfall sites over an 18 year period and shows that

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			contributions over 18 years have been considered and have resulted in an average of 116 pa, this needs to be treated with considerable caution, even with the assumed discount on past rates. The reason for this is that the UDP was not adopted until 2011 and then time expired in 2015, outside of this period it is likely that all sites coming forward were windfalls so the statistics are most unlikely to reflect a normal rate of delivery of such sites alongside an adopted plan. Furthermore, Flintshire has experienced a sub-5 year land supply for a considerable period of time which has resulted in peripheral sites being released, frequently on appeal, which will then also have been treated as windfall sites. Notwithstanding the discount on past rates that has been applied, it is clear that the contribution from large windfall sites that has been assumed is significant and having regard to the above, requires significantly more justification than has been provided to date.	windfall contribution from large sites is questioned. Whilst it is not suggested that none of the above sites will come forward in the Plan period, it is clear that there are significant concerns in relation to a number of the sites and particularly in relation to the assumptions on timing and rates of delivery. These concerns impact on the overall number of allocations that are required, and particularly so in the early years of the Plan period where additional sites that can make an early contribution are considered necessary. For the above reasons, and having regard to our Clients representations in relation to Policy STR1, it is considered that the Housing	these have averaged 116 dwellings per annum. However it is acknowledged (in para. 4.3.19 of the Study) that this past level of completions is unlikely to be achieved throughout the LDP period for a number of reasons including 'the lack of an up to date development plan and the lack of a five year housing land supply, leading to a number of applications and subsequent appeals'. As a consequence the Council has taken a cautious approach and rather than the past average of 116 dwgs per annum, a significantly reduced large sites windfall allowance figure equating to 50 dwgs per annum has been used in the LDP. This is considered to be a conservative and justifiable figure. It is acknowledged that the UDP was not adopted until 2011 and the plan period only extended until 2015. Analysis of actual windfall completions on large sites during this period (Table 4.8 in the UCS) shows that they actually averaged 118 pa, indicating that large windfall completions were not higher during the period when the County did not have an adopted development plan. It is also the case that the representative body of the development industry, the HBF, agree that the windfall allowances are appropriate.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				Balance Sheet at paragraph 7.11 of the Deposit Plan requires significant amendment to reflect a more robust approach to housing need and delivery. Having regard to the need for additional housing sites, Redrow Homes have proposed two such sites that they consider entirely suitable in relation to Policy HN1.	
584	STR11: Provision of Sustainable Housing Sites	Object	The policy indicates that the availability of housing land will be monitored over the plan period to ensure a continuous and adequate supply to enable the delivery of the overall housing requirement. However, the policy contains no mechanism for bringing forward alternative sites should the Plan fail to deliver. The monitoring section (Section 13) indicates that, should the housing land supply fall below 5 years for 2 consecutive years, the Council will "keep monitoring, further investigate and review as required". 			the housing land supply figure fall below 5 years. It is of note that this is exactly what happened in relation to the UDP. Failure to have a mechanism in place within the Plan (such as identification of contingency sites) would lead to planning by appeal in the latter stages of the Plan (which was precisely the situation which arose as a result of under delivery of the previous UDP).		
594	STR11: Provision of Sustainable Housing Sites	Object	OBJECTS to Policy STR11. JUSTIFICATION – POLICY TEXT Policy STR11 lists 6 criteria in relation to the provision of sustainable housing sites. The wording of the policy states that new housing on these sites will be "expected" to meet all of the criteria. All criteria are unlikely to be relevant in every case therefore the policy wording and supporting text should be amended. AMENDMENTS SOUGHT – POLICY TEXT Policy STR11 is considered unsound in that it is not appropriate for the area in light of the evidence. Moreover, it does not reflect Development Plans Manual (Edition 3) which states that an LDP should be succinct and clear (see Paragraph 3.11). Policy STR11 is not appropriate for the area as it sets an unreasonably	The wording of the policy states that new housing on these sites will be "expected" to meet all of the criteria. All criteria are unlikely to be relevant in every case therefore the policy wording and supporting text should be amended. AMENDMENTS SOUGHT – POLICY TEXT Policy STR11 is considered unsound in that it is not appropriate for the area in light of the evidence. Moreover, it does not reflect	Not accepted. The aim of policy STR11 is to ensure the sustainable delivery of housing sites across Flintshire. Removing the sentence "The delivery of new housing on these sites will be expected to" would dilute the impact of this policy and limit the sustainability of new residential schemes. It is essential that this sentence remains to ensure applications meet these key sustainability criteria, which will result in the efficient development of land for housing purposes. This strategic policy seeks to set the scene in terms of some key planning principles in respect of ensuring sustainable housing sites. In response to the objectors stance that the criteria set an 'unreasonably high bar', each of the criteria is considered as follows: i) Affordable housing – the provision of affordable housing is a key priority of Welsh Government in PPW10. The Plan reflects this and the policy is signposted to a more detailed

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			high bar for applicants and should be reworded to allow some flexibility. It is suggested that it is reworded as follows (consistent with our submissions in respect of Policy STR 4): Delete the following paragraph: “The delivery of new housing on these sites will be expected to.” And replace it with the following paragraph: “To achieve this, where appropriate all development should…	Development Plans Manual (Edition 3) which states that an LDP should be succinct and clear (see Paragraph 3.11). Policy STR11 is not appropriate for the area as it sets an unreasonably high bar for applicants and should be reworded to allow some flexibility. It is suggested that it is reworded as follows (consistent with our submissions in respect of Policy STR 4): Delete the following paragraph: “The delivery of new housing on these sites will be expected to.”	policy HN3 Affordable Housing. ii) Making most efficient use of land – a key planning principle, whatever the size of development is to make the most efficient use of land through an appropriate density. iii) Securing a mix of housing on a site is also a well established principle. Clearly there will be some developments where this is not possible, but this will be the exception rather than the rule. iv) The requirement to provide for specific housing needs is caveated by the term ‘where appropriate’ recognising this will not be applicable to every site. v) Making provision for infrastructure to mitigate the impacts of development is a well established planning principle and must be related in scale and kind to the development concerned. vi) The last criteria is explicitly only applicable to rural areas and not every site. Having looked at each criteria in turn and how they represent well established planning principles and good practice, it is unclear why the objector would not embrace them as part of planning residential developments rather than arguing that they are onerous and unreasonable.

954	STR11: Provision of Sustainable Housing Sites	Object	Despite the laudable expectation of this policy almost every (draft) housing allocation sites fails to meet this policy and have failed to demonstrate deliverability. The supporting text suggest the LHMA identifies an n affordable requirement of 228 units per annum; so, over a 15- year plan period this equates to 3,240 dwellings. We would question how this can be delivered; especially by small windfalls and strategic sites. There is a belief that additional sites must be identified and that Reserve/Plan B sites are required in the event allocated sites simply do not deliver. 10% flexibility allowance - As advocated by PPW10 – this should be applied here not later and be up to 15% as advocated also by the FCC Arcadis Urban Capacity Study June 2019 report. Housing Completions (3 years 2015 - 2018) - The level of completions has been good but the reason for this is that UDP allocated sites have failed to deliver and there has been a reliance upon windfalls and the UDP has expired Committed sites with PP (as at 1 April 2018) - Discount by 50% - there is a genuine concern that 50% of the identified sites will not come forward, the evidence to support	Allocate additional sites as contingency.	Not accepted. The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a contingency to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify specific contingency sites, and there is presently no requirement in PPW10 or the Development Plan Manual to do so. A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility/contingency to ensure a sufficient housing supply. The Council are confident that the committed sites and allocated sites within the LDP will deliver as intended. Significant work has gone into checking the deliverability of the allocated sites that were previously included within the UDP to ensure they will deliver in line with the housing trajectory. It is the fact that the committed sites are deliverable that has resulted in delivery rates in the early years of the plan matching the average level of provision, and as the trajectory indicates allocated sites will contribute after the plan is adopted. This is logical and sustainable, therefore the Council are satisfied that additional sites are not needed to replace these allocated sites. The objections in respect of the Housing Balance Sheet are addressed in turn:

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			their delivery is non-existent Windfalls - There is an over reliance on both types of windfall sites; larger windfall sites should be realistically allocated and smaller windfalls reduced in number and together they should not represent any more than 10% of the total requirement - i.e. there cannot be a reliance on the delivery of ad hoc development to help quantify housing delivery. The Authority have undertaken an Urban Capacity Study and know what sites are available and should identify those that are deliverable for housing. There is a belief that additional sites must be identified and that Reserve/Plan B sites are required in the event allocated sites simply do not deliver		There is no set requirement in draft Development Plan Manual 3 as to where the flexibility allowance should appear in the Housing balance Sheet. Wherever it appears, the key fact is that the over-allocation by 1000 units representations a 14.4% flexibility allowance.The level of completions is partly due to speculative housing sites (outside settlement boundaries) but it is also due to UDP sites and windfalls within settlement boundaries coming forward. The commitments included in the Plan have been as a result of a review of sites and only includes sites which are capable of coming forward during the Plan period. The objector provides no explanation as to which sites will not come forward or the reasons why and merely resorts to reducing it by an arbitrary 50%. The objector is referenced to the latest land availability statement which explains the development status of all commitments, which does not support the unsubstantiated assumptions made. The Plans housing provision is not over-reliant on windfalls. The Plan makes a conservative allowance of 50 units for large sites and 60 units for small sites when compared with past trends. The role of the Urban Capacity Study was not to identify allocations but to determine whether scope exists to deliver the allowances identified in the Plan. The objectors approach is to remove all large site windfalls from the Housing Balance Sheet which is not

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					appropriate or necessary. There is no objection from Welsh Government to the effect that the Plan is over-reliant on windfalls. The industries representative body HBF agree the allowances made are appropriate. The objector appears to discount all 300 units at Warren Hall Strategic Site. The aeronautical constraint does not apply to the housing part of the site. The site is supported by a Transport Assessment and is not divorced as it sits between 3 settlements and also involves a mixed use development which is a sustainable form of development. The housing part of the site is grade 3b based on an on-site survey. The presence of protected species does not preclude development and comprehensive surveys have been undertaken. The bulk of the site also has a planning permission for the business park. A SuDS compliant scheme will be drawn up for the site, but given the amount of green infrastructure proposed in the masterplan this should be possible. The objector proposes the deletion of 394 units at Northern Gateway . A response on this is provided to the objectors concerns in policy STRA. The objector seeks a reduction of 676 units from the list of 11 housing allocations in HN1. However, the objector does not identify which sites wont deliver either in whole or part and the reasoning why other than a general reference 'We believe that many sites have a

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					variety of significant constraints affecting site deliverability and viability; yet no such work has been done'. Several of the allocations already have planning permission and a number have preferred housebuilders on board. The allocations are in sustainable settlements and strong market areas and can be delivered within the Plan period. The objector concludes that instead of an overprovision of 1000 units there is an under provision of 2611 units, with a need for additional sites. These findings are considered to be vague and lacking in evidence and do not challenge the soundness of the plan.
969	STR11: Provision of Sustainable Housing Sites	Object	Despite the laudable expectation of this policy almost every (draft) housing allocation sites fails to meet this policy and have failed to demonstrate deliverability. The supporting text suggest the LHMA identifies an n affordable requirement of 228 units per annum; so, over a 15-year plan period this equates to 3,240 dwellings. 					to be vague and lacking in evidence and do not challenge the soundness of the plan.
979	STR11: Provision of Sustainable Housing Sites	Object	OBJECTION is to the'' Over allocation / flexibility 1000 / 14.4%'' element as it is an over flexibility which does not meet the LPA's statement of 'Sustainable Development' permeating through the plan. It gives housing developers a n excuse to get the extra 1000 houses in the plan period. The Earth's resources are scarce so the LPA must not help in that scarcity. The ONS 2018 Population Growth state a Decline in Wales Housing Population will decline by 0.9% by 2043 . But Brexit will increase the decline as already there is a 'Lemming 'exodus from UK by EU Citizens (See further down objections to the LPA's Housing growth data)	Reduce the number of housing allocations within the plan. Reduce the flexibility allowance of 14.4%	Not accepted. The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a contingency to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. Welsh Government's Development Plans Manual (Edition 3) requires LDPs to include a flexibility allowance of at least 10% with para 5.59 stating 'This means that a flexibility allowance must be embedded into the plan'. Flintshire's LDP includes a flexibility allowance of 14.4% to enable the plan to respond to changes in circumstances that may affect site deliverability. The Council are satisfied that this flexibility allowance is appropriate for the LDP, and have received no objections from Welsh Government regarding the level of 14.4%.
987	STR11: Provision of Sustainable Housing Sites	Object	Despite the laudable expectation of this policy almost every (draft) housing allocation sites fails to meet this policy and have failed to demonstrate deliverability. ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					e) The objector proposes the deletion of 394 units at Northern Gateway . A response on this is provided to the objectors concerns in policy STRA. f) The objector seeks a reduction of 676 units from the list of 11 housing allocations in HN1. However, the objector does not identify which sites wont deliver either in whole or part and the reasoning why other than a general reference 'We believe that many sites have a variety of significant constraints affecting site deliverability and viability; yet no such work has been done'. Several of the allocations already have planning permission and a number have preferred housebuilders on board. The allocations are in sustainable settlements and strong market areas and can be delivered within the Plan period. The objector concludes that instead of an overprovision of 1000 units there is an under provision of 2611 units, with a need for additional sites. These findings are considered to be vague and lacking in evidence and do not challenge the soundness of the plan.
642	STR11: Provision of Sustainable Housing Sites	Object	Whilst TW supports the inclusion of a policy promoting sustainable housing sites, it is not clear within the policy what the mechanism is	In order to address the conflict above and ensure that the Policy is sound, TW requests	Not accepted. The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a contingency to enable the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			for identifying additional housing land in the event that allocated and committed sites do not deliver a five-year housing land supply, as detailed in the supporting trajectory Notwithstanding the above, TW has concerns over the generality of the policy, in particular parts i, ii and iv. Part i requires new housing to facilitate affordable housing relative to local need and viability. Whilst TW welcomes the reference to viability considerations, it is not clear what is required of this policy in regard to affordable housing provision. TW would question whether it is required, as there is a separate affordable housing Policy (Policy HN3) which covers this provision Part ii of the Policy requires housing sites to "make the most efficient use of land through appropriate density of development". As currently worded, the Policy is vague and ineffective and does not provide certainty to developers as to what is required and the range of densities that would be acceptable. Whilst TW supports the Council in allowing flexibility, the Policy needs to quantify what is meant by 'appropriate density In respect of Part iv, whilst TW acknowledges the need to provide housing suitable for all population sectors,	that the Council: 1 Provides clarity regarding the required density on development sites. 2 Gives due consideration to meeting the upper end of the objectively assessed housing needs and the benefits this will bring to the area and to ensure sufficient sites are allocated to meet this need and reduce reliance on windfall sites. 3 Ensure that the need for specific housing is considered as separate to the objectively assessed need, and that the evidence base is amended to consider the financial implications of delivering such units.	plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify specific contingency sites, and there is presently no requirement in PPW10 or the Development Plan Manual to do so A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility/contingency to ensure a sufficient housing supply. If TAN1 is revoked then this will have knock on effects for the Plan and particularly the monitoring arrangements. The monitoring indicators have been drafted in the light of guidance in Welsh Government Development Plans Manual 3. At present there is no Welsh Government requirement for the Plan to have contingency sites. If Welsh Government issue revised guidance then this will be considered in the run up to and at examination. The Council does not accept that too much reliance is placed upon windfall sites within the LDP. An analysis of past windfall contributions is contained in Section 4.3 of the Flintshire Urban Capacity Study (June 2019) undertaken by Arcadis. This approach is in line with the latest National guidance as contained in para.5.6.3 of the Development Plans manual, Edition 3, Consultation Draft (June 2019). The Urban Capacity Study sets out (in Table 4.8) the rate of completions on large windfall

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the identified needs must be based on robust and sound evidence. It is not clear from the Council's Local Housing Strategy that the requirement for specific housing has been considered separately to the objectively assessed housing need. It is important that these housing requirements are considered separately, given that the needs of the future occupiers are different. Furthermore, it does not appear that the cost of delivering specialist housing has been considered within the Viability Report, it is important that the cost to deliver these requirements are based on robust evidence so as not to impact the viability of development proposals. TW supports the provisions of Part iii of the policy which states the need for balanced developments requiring a mix of housing units.		sites over an 18 year period and shows that these have averaged 116 dwellings per annum. However it is acknowledged (in para. 4.3.19 of the Study) that this past level of completions is unlikely to be achieved throughout the LDP period for a number of reasons including 'the lack of an up to date development plan and the lack of a five year housing land supply, leading to a number of applications and subsequent appeals'. As a consequence the Council has taken a cautious approach and rather than the past average of 116 dwgs per annum, a significantly reduced large sites windfall allowance figure equating to 50 dwgs per annum has been used in the LDP. This is considered to be a conservative and justifiable figure. With regards to the criteria i), ii) and iv) of Policy STR11 it must be stressed that this is a strategic policy which sets the scene in terms of establishing principles to be embodied in housing sites, and where in relation to the well-established principle of reading the plan as a whole, there are data led policies related to STR2 that provide the clarity sought to illustrate this; i.) This criteria is merely flagging up that the provision of affordable housing is an important consideration as explained in PPW10. Further specific guidance is set out in the signposted policy HN3 which sets out the affordable housing requirements.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					ii.) This criteria seeks to make the best use of land which is a well established planning principle. It is signposted to Policy HN2 which sets out a minimum density of 30dph with flexibility within the policy to address site specific constraints. The actual density to be achieved on a particular site is based on the specifics of the site, the development proposed and its surroundings.. iv). The aim of this criteria is to encourage a range of dwelling types in order to cater for different housing needs "where appropriate". It is not intended that specialist housing will apply to every housing allocation or windfall site, although the provision of house types that meets the needs of an ageing population is something that developments should be mindful of. Each application will be assessed on its merits and the evidence of specialist housing need within that area at that time. Where such needs are evidenced and are included within the proposed development, bespoke viability testing would need to be carried out to account for potential additional costs.
1177	STR11: Provision of Sustainable Housing Sites	Support	Policy STR11: Provision of Sustainable Housing Sites Our Client agrees with the core principles of this Policy, namely the need to direct new housing development towards sustainably		The Council welcomes support for policy STR11.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			located, economically viable and deliverable sites. There is a clear and urgent need for more affordable housing in Flintshire, and this needs to be reflected through the Council's housing requirement as well; as the site-specific policy requirements. Low density development should be avoided, providing for the efficient use of land. A mix of house types and tenures should be supported informed by an understanding of local needs; this in turn will require up-to-date evidence/information held by the Council as part of its Local Housing Market Assessment. Our Client welcomes the commitment by the Council to continue to monitor the housing land supply position and housing delivery in the County on an annual basis, reported through an Annual Monitoring Report. This will require regular dialogue with the development industry in order to ensure a robust position on housing supply and delivery is established.		
705	STR11: Provision of Sustainable Housing Sites	Support	Policy STR11: Provision of Sustainable Housing Sites We agree with the core principles of this Policy, namely the need to direct new housing development towards sustainably located,		The Council welcomes support for policy STR11

			economically viable and deliverable sites. There is a clear and urgent need for more affordable housing in Flintshire, and this needs to be reflected through the Council's housing requirement as well; as the site-specific policy requirements. Low density development should be avoided, providing for the efficient use of land. A mix of house types and tenures should be supported informed by an understanding of local needs; this in turn will require up-to-date evidence/information held by the Council as part of its Local Housing Market Assessment. We welcome the commitment by the Council to continue to monitor the housing land supply position and housing delivery in the County on an annual basis, reported through an Annual Monitoring Report. This will require regular dialogue with the development industry in order to ensure a robust position on housing supply and delivery is established.		
743	STR11: Provision of Sustainable Housing Sites		To ensure that the Plan will effectively achieve its objective of delivering the homes that Flintshire needs, those housing sites which currently benefit from planning permission should be specifically		Not accepted. The Deposit LDP has a Housing Balance Sheet accompanying policy STR11. The Balance Sheet clearly explains in the notes accompanying the commitments that it is calculated as at the Housing Land Monitoring Study date of 01/04/18. It is not

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			allocated for development in the Plan. We trust that the above comments are useful and will be given due consideration. Please do not hesitate to get in contact should you wish to discuss any of our comments further.		possible for the Deposit LDP going out to consultation in September 2019 to have been based on the findings of the 01/04/19 Study given short timescale. It is clearly not possible for the Plan to be completely up to date in terms of every planning permission. In the event that during the Examination an updated Housing Balance Sheet is necessary, then planning permissions will be picked up as part of the Pans supply.
925	STR11: Provision of Sustainable Housing Sites	Object	We welcome the intention of the policy in that new housing will be directed to sustainably located, economically viable and deliverable sites. We have no objection to what is expected to be delivered on such sites, including affordable housing, whilst making efficient use of the site. Whilst the policy is acceptable in principle, it is not considered a suitable alternative for allocating sites instead. By allocating sites for housing, the Council can devise site specific requirements for individual sites that will ensure that the various expectations set out in STR11 can be met. An allocation or allocations would provide greater certainty that these can be met and delivered rather than waiting for individual sites to come along ad hoc. The provision of sustainable housing sites by allocating land for development	Allocate more sites: The land to the rear of 81 Drury Lane, Drury, is located within the settlement boundary and in our view would be a suitable site for a housing allocation. However, the Council have decided that it is not worthy of an allocation and instead have opted to rely on windfall developments coming forward to meet its needs instead. We do not consider this a sound approach as there is a risk that the objectives of the Plan will not be delivered and therefore, it does not	Not accepted. The LDP includes a 14.4% flexibility allowance (1,000 dwellings) in addition to the 6,950 housing requirement, which provides a contingency to enable the plan to respond to unforeseen circumstances or any delay to sites coming forward. Therefore the LDP does not need to identify specific contingency sites and there is presently no requirement in PPW10 or the Development Plan Manual to do so. A flexibility allowance of at least 10% is supported by Welsh Government within the LDP Manual (Edition3), therefore the Council are satisfied that the plan contains adequate flexibility/contingency to ensure a sufficient housing supply. Policy STR11 is a strategic policy which seeks to set the scene in terms of the provision of sustainable housing sites, whether they are allocations or windfalls. It needs to be read in conjunction with policy STR3 and HN1-3. It is established practice to include an allowance for windfalls and the Plan splits this

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			may help the Council redress its previous poor performance on housing delivery. It cannot currently demonstrate a five year supply of housing and the gap between what is needed and what is being constructed is getting wider. Positive planning through the allocation of sites, in our view, will help ensure that the Council will be able demonstrate a five year supply of housing upon adoption of the Plan and will enable it to prevent ad hoc applications that do not necessarily accord with the spatial development strategy. The Housing Balance Sheet set out following paragraph 7.11 includes an allowance of 600 dwellings for large site windfalls i.e. sites larger than 10 dwellings. We contend that a more appropriate approach would be to allocate sites instead rather than waiting for windfalls of this size to come along. The supporting text at paragraph 7.13 refers to site search sequence when identifying new allocations, which includes previously developed land and/or under utilised sites located within existing settlements in the first instance. The land to the rear of 81 Drury Lane, Drury, is located within the settlement boundary and in our	meet Test 3 as it is not effective.	into a small sites allowance of 60 units per annum and a large sites allowance of 50 units per annum. The allowances are conservative based on past trends and considered realistic going forward, based on the findings of the Urban Capacity Study. The HBF have agreed that these levels are appropriate. The Council accepts that the objection site at bank lane is located within the settlement boundary of Drury. In principle, the site is acceptable for housing development as a 'large site' windfall provided that it meets other planning policies. That said the site was identified as having windfall potential by its inclusion within the settlement boundary of the UDP, and given the objectors view that it is sustainable enough to allocate, then by definition it must also be equally sustainable to develop as a windfall. However, the objector has repeatedly submitted planning applications for a housing development which goes beyond the settlement boundary and into green barrier land and also land which is BMV agricultural land. Bank lane is considered to represent a firm and defensible boundary to the settlement and to the green barrier. In view of the considerable uncertainty that the objector is willing to pursue an acceptable development within the settlement boundary, it would be entirely inappropriate to allocate the site in the Plan. Given that there is if fact no certainty of the sites deliverability.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			view would be a suitable site for a housing allocation. However, the Council have decided that it is not worthy of an allocation and instead have opted to rely on windfall developments coming forward to meet its needs instead. We do not consider this a sound approach as there is a risk that the objectives of the Plan will not be delivered and therefore, it does not meet Test 3 as it is not effective.		
27	STR12: Provision for Gypsies and Travellers	Object	By proposing an increase in pitches for travelers you will be failing to deliver on your objective to 'Ensure communities have access to a mix of services and facilities, such as education and health, to allow community life to flourish, and meet the needs of particular groups such as the elderly' You again fail to consider the impact on the local community. Ewole green school continues to grow class sizes at the detriment of the individual pupils.	By proposing an increase in pitches for travelers you will be failing to deliver on your objective to 'Ensure communities have access to a mix of services and facilities, such as education and health, to allow community life to flourish, and meet the needs of particular groups such as the elderly'	Not accepted. Welsh Government has placed a statutory duty through the Housing (Wales) Act 2014 on local authorities to make provision for sites for Gypsies and Travellers where a needs assessment identifies need. This is translated into national planning guidance by para 4.2.35 of Planning Policy Wales which states 'Local authorities are required to assess the accommodation needs of Gypsy and Traveller families and to allocate sites to meet the identified need'. The para goes on to say 'Where a Gypsy and Traveller Accommodation Assessment (GTAA) identifies an unmet need, a planning authority should allocate sufficient sites in their development plan to ensure that the identified pitch requirements for residential and/or transit use can be met. Planning authorities will need to demonstrate that sites are suitable for development and deliverable in the identified timescales'.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					In preparing a development plan it is necessary to consider the housing needs of all members of society and this includes the needs of Gypsies and Travellers. The Plan has identified a need through its Gypsy Traveller Accommodation Assessment (GTAA). The role of the LDP is to safeguard land in the development plan through a land use allocation to meet that need. Following an assessment of Council owned land the Plan has sought to meet the identified need by seeking the extension of existing authorised sites where existing families have expressed to the Council a need to meet their extended family's needs. The objector's reference to objective 1 under 'Enhancing Community Life' in para 3.41 refers to 'communities' in its widest sense and there is a legitimate need to ensure that Gypsies and Travellers, as well as the 'settled' residents, have access to services and facilities such as education and health. In the absence of an objection to the site by the Local Education Authority, the additional educational needs arising from the increase in pitches should be able to be met.
13	STR13: Natural and Built Environment, Green Networks and Infrastructure	Support	The Greenfield Valley Trust supports policy STR13 in respect of the protection it affords to the historic assets and green environment of the Greenfield Valley and surrounding area.		The representation is noted and the council welcomes the support for policy STR13

682	STR13: Natural and Built	Object	The site at Llys Ben is roughly rectangular in shape and is	propose site at Northop Hall, Llys Ben	Not accepted. The existing UDP green barriers have been reviewed in line with PPW10. Each

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Environment, Green Networks and Infrastructure		bounded to the east and the south by existing residential development comprising predominately large detached properties. To the west of the site is the Northop Hall Pavilion with carparking, formal play area and football pitches. The site is only open on its northern boundary beyond which is agricultural farmland. It therefore is contained with the existing urban form of Northop Hall. Outside of its Green Barrier designation the site does not have any particular landscape importance attached to it and is identified by Carl Taylor BA (Hons) Dip LA/CMLI as having "a poor-quality landscape".		has been reviewed against the criteria in PPW10 alongside whether there is persistent development pressure. The presence or otherwise of 'landscape quality' considerations is not a factor to be taken into account in the designation of a green barrier as the key consideration is 'openness'. The site was submitted as an omission site in the UDP and was considered by the UDP Inspector who did not recommend the inclusion of the site. The Inspector commented in respect of the green barrier 'In this case because I find the site relates well to the countryside and other open land such as the playing fields to the west, it forms part, albeit a small part, of the green barrier and allocation of/development on it would undermine the objectives of the designation'. The findings of the UDP Inspector are still considered relevant in the context of the LDP.
773	STR13: Natural and Built Environment, Green Networks and Infrastructure	Object	In relation to the FCC's strategic policy for Natural and Built Environment, Green Networks and Infrastructure the key comments in the context of the Village Plan thematics and objectives and from the Community Council's perspective as a key stakeholder in the LPD process are as follows: a) The Deposit LDP has designated the former candidate sites HK10 &	The Deposit LDP has designated the former candidate sites HK10 & HK13 as falling within a Green Barrier. It is proposed that the former candidate site HK03 and the land to the south & east of the property known as The Mount, Lesters	Not accepted. The purpose of the Policy EN11 Green Barrier is to ensure the protection of the openness of key areas and locations between and around settlements. Background Paper No1 Green Barrier Review shows the results of the LDP review of green barriers and states about the green barrier around Higher Kinnerton EN11. 14. ''This large (464 ha) green barrier forms a strategic gap between Broughton/Bretton and Saltney and the Cheshire border. It comprises open and flat

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			HK13 as falling within a Green Barrier. It is proposed that the former candidate site HK03 and the land to the south & east of the property known as The Mount, Lesters Lane should also be designated as a Green Barrier. The community wish to conserve and protect the rural setting of the village which has already been compromised by the Kinnerton Meadows development which was granted permission on appeal. By extending the proposed Green Barrier as proposed, this would ensure that both the existing village and the new proposed Warren Hall development, whilst forming part of the same community, maintain their own identities and rural settings which residents indicated that they value so much through the Village Plan Survey. The extension would also protect the two Grade II Listed buildings on the edges of HK03 as well as the footpath into the village which would provide an important rural link between the existing and new community. b) Higher Kinnerton Community Council has adopted the aims and ambitions set out in the Wellbeing of Future Generations Act, Flintshire County Council's "A Wales of Cohesive	Lane should also be designated as a Green Barrier. The community wish to conserve and protect the rural setting of the village which has already been compromised by the Kinnerton Meadows development which was granted permission on appeal.	land where development would harm its open character and appearance. The A55 provides a firm and defensible boundary to any expansion southwards of Broughton. However, the location of the extended Warren Hall strategic site on the south side of the A55 (and the need to consider a further extension southwards) would result in a narrow gap between Warren Hall and Higher Kinnerton. This is emphasised by the recent Elan Homes planning permission which extended Higher Kinnerton north westwards, towards Warren Hall. It is therefore considered necessary and appropriate to retain this green barrier and extend it south westwards to include land at the junction of Kinnerton Lane and Lesters Lane and extending along the north side of Main Road to the County boundary.'' The green barrier boundary should follow a defensible physical feature on the ground and Kinnerton Lane is the most suitable boundary in that location. Green barrier should : -not be designated where normal open countryside policies would be sufficient • not be drawn wider than necessary to achieve their purpose • be drawn where there is significant and sustained development pressure • not unnecessarily duplicate other policy

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Communities" and a "Healthier Wales".		designations • not need to possess any intrinsic inherent landscape, nature conservation or other quality. It is considered appropriate to use the Kinnerton Lane as the boundary in this location which will create an adequate barrier between Higher Kinnerton and the Warren Hall development without creating a barrier wider than necessary. As such it is not considered necessary to designate the Candidate site HK003 as green barrier.
835	STR13: Natural and Built Environment, Green Networks and Infrastructure	Object	Policy STR13 (Natural and Built Environment) Policy STR13 of the Deposit Plan states: "Development will identify, respect, protect, enhance and connect Flintshire's environmental assets, to create a multifunctional network of natural and historic resources. To achieve this all development will: …" Bourne Leisure endorses the Council's commitment to protecting and enhancing Flintshire's environmental assets. However, as drafted, Policy STR13 is not consistent with national policy as it is more onerous than PPW, which states that planning authorities should "…enable complementary [tourist] development such as accommodation and access to be	Policy STR13 should be amended as follows: "Development will identify, respect, protect and, where possible, enhance and connect Flintshire's environmental assets to create a multifunctional network of natural and historic resources. To achieve this all development will, where appropriate: …"	Not accepted. This is a strategic policy that sets out high level principles which seek to protect and enhancing the County's environmental and historic assets. An aspiration that is set out in national planning policy and one which the Council fully advocates and supports as is reflected in the policy wording of the accompanying detailed policies such as EN1. Not all development will affect all the criteria listed on this policy but it is important to highlight all the issues to ensure that all developments have considered them.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			provided in ways which limit negative environmental impacts and consider the opportunities to enhance biodiversity." (paragraph 5.5.6). Paragraph 6.4.21 also states that enhancements should be achieved wherever possible. Each proposal should be considered on its own merits. Draft Policy STR13 therefore fails the first test of soundness (Does the plan fit?). In order to be consistent with national policy and therefore sound, draft Policy STR13 should be amended as follows: "Development will identify, respect, protect and, where possible, enhance and connect Flintshire's environmental assets to create a multifunctional network of natural and historic resources. To achieve this all development will, where appropriate: …" (proposed amendments underlined). Without the amendment to ensure the emerging Plan is sound, the draft policy risks creating unreasonable requirements which may not be achievable in every circumstance which in turn would risk making the plan undeliverable.		
940	STR13: Natural and Built Environment, Green Networks	Object	Para 16.13 states that Policy STR13 does not mention BMV because it is covered in PPW10 yet, this is considered	Para 16.13 states that Policy STR13 does not mention BMV because it is covered	Not accepted. Welsh Government advice is very clear on this issue and states that PPW policies should not be repeated in LDP's. LDP Manual Edition 3 states in paragraph 3.11 '' A

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	and Infrastructure		unacceptable given that PPW10 states that BMV must be protected.	in PPW10 yet, this is considered unacceptable given that PPW10 states that BMV must be protected.	LDP should be focussed, succinct and relevant to the key issues it is seeking to address. It should not repeat national policy.''
1048	STR13: Natural and Built Environment, Green Networks and Infrastructure	Object	Habitats Regulations Assessment We have significant concerns regarding the suitability of the Habitat Regulations Assessment (HRA). This is due to the screening decisions reached in the HRA. We believe that policies PE2, PE13 and PE14 have been screened out to early in the process. Policy PE2 defines areas where certain types of employment development 'will be permitted'. As such, these areas must be assessed through the HRA process. Policies PE13 and PE14 give assurance that features of 'nature conservation' must be given appropriate consideration in any future application. However, the areas defined by these policies lie within and immediately adjacent to protected sites, and as such, we consider that they cannot be screened out from the HRA at such an early stage.		Partly accepted. Policy PE13 is a policy which seeks to carefully manage static caravan and chalet development and it identifies an area in the coastal strip between Talacre, Gronant and Gwespyr where new static caravan development is not permitted. This is because of the cumulative impact of historic static caravan development in this area on the flat, open coastal landscape and the fact that the area is sensitive in terms of international nature conservation designations and flood risk. The policy approach is carried over from the UDP and it is considered that the NRW have misinterpreted the policy wording, particularly as the explanatory text provides a clear explanation as to what the policy is seeking to achieve. Nevertheless, the Council considers that should the Inspector at examination be of the opinion that the policy could be amended to make clearer the intention of the policy then the Council would not oppose this. Policy PE14 is a policy which seeks to carefully manage development in the Greenfield Valley. The Greenfield Valley is designated in the Plan on account of its diverse natural and man made assets and character. The policy approach is carried over

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Before a plan can be postponed to a lower tier or to project level assessment, there are clear requirements in order to ascertain that there would be no adverse effect on the integrity of a European site (Appropriate Assessment). Flintshire CC as LPA may only rely on mitigation measures in a lower tier plan, or at project level (i.e. to postpone) if the following three criteria are all met: i. The higher-level plan assessment cannot reasonably predict effects on a European site in a meaningful way; whereas ii. The lower tier plan or project level, which will identify more precisely the nature, timing, duration, scale or location of development, and thus its potential effects, will have the necessary flexibility over the exact nature, timing, duration, scale and location of the proposal to enable an adverse effect on site integrity to be avoided; and iii. The HRA of the lower tier plan or project is required as a matter of law or Government policy. We would welcome further		from the UDP. In respect of new development proposals, the policy may use the words 'will be permitted' but this is qualified by the remainder of the policy which states 'where they do not detract from the tourism potential of the valley or harm areas or features of landscape, nature conservation or historic value. The Council does not consider that the policy actively promotes development which would potentially be harmful to areas of flood risk, historic assets or international nature conservation designations. Nevertheless, it considers that should the Inspector at examination be of the opinion that the policy could be amended to make clearer the intention of the policy then the Council would not oppose this. Policy PE2 identifies Principal Employment Areas which recognise existing defined area of employment development. The policy allows for 'in effect' new employment development to come forward as 'windfall' development. The policy wording is clear that proposals would only be permitted where it 'is of an appropriate type and scale for both the site and its surroundings'. Development proposals would also need to satisfy other policies in the Plan (as the Plan needs to be read as a whole) and therefore be assessed against policies relating to flood risk. Nature conservation and built heritage. Nevertheless, NRW interpret the policy as being akin to 'allocating' land for employment development. As with the other two policies the Council would not object to the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			discussion with the Policy team regarding this matter.		Inspector identifying an amended policy wording. Although to varying degrees it is considered that NRW has misinterpreted the three named policies, it is considered NRW have raised concerns about whether the HRA has fully complied with law and legislation. It is therefore proposed that, the Council's specialist consultants be asked to undertake a supplementary addendum to the HRA to specifically appraise these policies'.
1066	STR13: Natural and Built Environment, Green Networks and Infrastructure	Object	Policy STR13: Natural and Built Environment, Green Networks and Infrastructure – NRW would welcome reference in this section to Geodiversity.	NRW would welcome reference in this section to Geodiversity.	Not accepted. Criterion iii of the policy states ''Conserve, protect and enhance the quality and diversity of Flintshire's natural environment including …. . The use of the word 'including' means that the list is not exhaustive and so the policy can relate to geodiversity. Geodiversity is also mentioned in the explanation paragraph 8.10. It is not considered necessary for the policy to be amended.
760	STR13: Natural and Built Environment, Green Networks and Infrastructure	Support	Policy STR13: Natural and Built Environment, Green Networks and Infrastructure 6.35. 			to flooding. The Flood and Water Management Act 2010 reinforces the obligations for developers to incorporate sustainable drainage systems into their developments.		
690	STR14: Climate Change and Environmental Protection	Object	We request that the following minor changes be made to other policies STR14: Climate Change and Environmental Protection – "Supporting the development of infrastructure necessary for the transition to a low carbon Wales, on suitable sites, such as those designated under Policy ENxx." be added to the aims.	We request that the following minor changes be made to other policies STR14: Climate Change and Environmental Protection – "Supporting the development of infrastructure necessary for the transition to a low carbon Wales, on suitable sites, such as those designated under Policy ENxx." be added to the aims.	Not accepted. Policy EN13 Renewable Energy and Low Carbon Energy Development permits proposals for renewable and low energy carbon subject to certain criteria. The Council have carried out a Renewable Energy Assessment which has identified the Indicative Local Search Areas in order to focus this type of development in the most appropriate locations. It is considered unnecessary therefore to have an addition policy setting out allocations for energy storage infrastructure.
856	STR14: Climate Change and Environmental Protection	Object	STR14 1V flood risk sites – Mold Flood Alleviation Scheme stage 2 has been shelved and there is no reference in the LDP as to how this will now be delivered in Mold apart from HN1 6 land between Gwernaffield Road and Denbigh Road. The water is from the hills around Mold including Gwernymynydd and Gwernaffield and the scheme will have to be	Remove Mold Site - Flood Risk concern	Not accepted. Housing Allocation HN1 (6) does not fall within an area of C1 or C2 flood risk as defined on the Development Advice Maps produced by NRW. A pocket of surface water floodrisk exists to the north west of Alwyn Close which can be addressed as part of developing a SuDs scheme for the development. The north western part of the candidate site sits within a C2 flood risk area within the DAM and accordingly the site boundary has been drawn back to exclude this

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			more than one new estate and any potential changes to Factory Pool Lane 8.20 'Encourages' is not enough for the next 10 years and the climate change emergency that WG has announced – new developments 'must' include energy efficiency measures – solar PV and HW on houses, district heating schemes for developments of scale, farm-scale AD to power lighting on new developments close by – this would be ideal for the dairy farm at Rhual and the new Gwernaffield Road and Denbigh Road, Mold proposals (eg the AD at Holt)		flood risk area. The brief design guidance for this site in the written statement in policy HN1 stipulates that development, with the exception of the new access road onto Denbigh Rd, will not take place on the land between Pool House lane and Denbigh Rd in order to provide a landscape buffer and to incorporate a suds lagoon or attenuation pond. NRW have been consulted on the Deposit Plan and they have no statutory objection to the site. In this context the Plan, and the specific allocation are compliant with PPW and therefore do not fail the tests of soundness. The Mold Flood Alleviation Scheme which secured planning permission will not be delivered in its approved form, largely due to budgetary pressures. A revised scheme is presently being looked at. Therefore, it is necessary for the allocated site to be designed in such a way that it can work effectively with any future flood alleviation scheme. In terms of energy efficiency, new development will have to adhere to all new Building Regulations that come into force over the plan period. The purpose of this policy is to set a strategic framework to reflect the Well Being Act and PPW support the authority in its aim to help tackle climate change. Policy EN12 seeks to ensure that larger housing and commercial schemes seek to maximize the use of renewable energy measures as an integral part of the development. The Council

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					cannot insist though that all new development incorporates renewable energy. In a broader context the Welsh Government has consulted on tougher requirements for new housing development but this is unlikely to be implemented in full until 2025. The decision as to whether existing farms or businesses incorporate renewable energy technology into their operations is entirely a matter for them to decide upon. The Plan provides appropriate guidance in policy EN13.
644	STR14: Climate Change and Environmental Protection	Object	In order to address the conflicts above and ensure that Policy STR14 is sound, it is requested that the Council: 1 Considers whether the policy is necessary and justified; and, 2 On the findings above, amend Parts iii, v and vii of the Policy and the justification to provide a clear strategy as to how developers are to demonstrate sustainable, energy efficient design and how the Council will implement it and at what point during the application process	1 Considers whether the policy is necessary and justified; and, 2 On the findings above, amend Parts iii, v and vii of the Policy and the justification to provide a clear strategy as to how developers are to demonstrate sustainable, energy efficient design and how the Council will implement it and at what point during the application process	Not accepted. Planning Policy Wales (PPW) and the Well Being Act, place great emphasis on the sustainable development of land and the need to be able to adapt to climate change. This is a strategic policy that seeks to achieve that aspiration by hi lighting the main factors which influence climate change and show how planning can play a role in dealing with this important issue. It is therefore vitally important for this strategic policy and the more detailed policies associated with it, to form the basis of all planning decisions and set out how development can achieve positive sustainable places. All of the criteria are material planning considerations, some are more relevant than others depending on the type of development, therefore the weight to be attached to each issue will be recognised and considered at the planning application stage. In terms of Criterion iii the Sustainable Drainage Systems associated with all new developments is

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					covered in more detail in Policy EN15 Water Resources and PC3 Design. SUD's regulations since January 7th 2019, state that all new developments of more than 1 house or where the construction area is of 100m2 or more will require sustainable drainage to manage on-site surface water. For Criterion v. in terms of energy efficiency, new development will have to adhere to all new Building Regulations that come into force over the plan period. For Criterion vii detailed policies PC4 and EN 14 are relevant.
1067	STR14: Climate Change and Environmental Protection	Support	we welcome reference (vi) to the protection of the environment from light pollution.		The representation is noted and the council welcomes the support for policy STR14
836	STR15: Waste Management	Object	i Maximising the use of secondary and recycled aggregate." Whilst Bourne Leisure recognises the importance of ensuring that the County has sufficient waste management facilities and mineral resources, the amenity of any nearby sensitive receptors, including holiday accommodation, should be protected from any adverse impacts associated with waste management, resource recovery activities and minerals extraction, such as noise, odour and visual impacts. Failing to protect amenity is likely to result in operators not being able to attract new and repeat visitors to the local	following addition to Policy STR16: "Whilst meeting the needs of mineral resource management, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed mineral extraction/processing facilities."	Not accepted. Policy STR16 is a strategic policy which sets out the general approach that has been taken in the plan with respect to facilitating sustainable management of mineral resources in Flintshire. Point iv of the policy states that we will ensure that new mineral extraction is located so as to minimise impacts on communities and the environment. Strategic Policy STR14 sets out the general approach in point vi that new development will have regard to the protection of the environment in terms or air, noise and light pollution Also, Policies PC2, EN18, and EN27 provides detailed criteria against which planning

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			area with direct and indirect consequences for the local economy, including retaining jobs. This in turn would undermine delivery of the emerging Plan. As such, Bourne Leisure proposes the following addition to Policy STR15: "Whilst meeting the needs of waste management facilities, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed waste management facilities." (proposed additions underlined) The Company also proposes the following addition to Policy STR16: "Whilst meeting the needs of mineral resource management, the amenity of residents and other land users will be protected from the potential adverse impacts of existing or proposed mineral extraction/processing facilities." (proposed additions underlined) The proposed amendments will align Policy STR15 and Policy STR16 with PPW which states that, "The planning system has an important role to play in facilitating sustainable waste management by providing a framework for decision making which recognises the social, economic and environmental benefits that can be realised from the management of		applications (including minerals applications) will be assessed. Policy PC2 sets out the general requirements for development which includes a number of criterion including point a. which would ensure development harmonises with the surrounding area, point b. "where all development should, where appropriate not have a significant adverse impact on the safety and living conditions of nearby residents, other users or nearby land/property, or the community in general, through increased activity, disturbance, noise, dust, vibration, hazard or the adverse effects of pollution." Policy EN18 will also provide safeguards to ensure that new development would not create an increased risk of noise, vibration, odour, dust, light or other pollution or hazards. Policy EN27, specific to secondary and recycled aggregate applications will ensure that they development would not have an adverse impact on residential amenity through noise or dust. It is considered that, when the Plan is read as a whole, there are detailed criteria based policies within the Plan that will safeguard the amenity of residents and other land users from any potential mineral development that may be proposed and assessed by the LDP. Therefore there would be no need to change Policy STR16 as suggested as this would repeat policy already contained within the LDP.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			waste as a resource to meet the needs of society and businesses, whilst at the same time: protecting the amenity of residents, of other land users and users affected by existing or proposed waste management facilities." (paragraph 5.13.1). The proposed amendments would also align Policy STR16 with paragraph 5.14.42 of PPW which states that "minerals workings should not cause unacceptable adverse environmental or amenity impact…". The proposed amendments to Policy STR15 and STR16 would mean that these elements of the Plan would satisfy the test of soundness.		
181	STR16: Strategic Planning for Minerals	Support	The Coal Authority supports this policy which identifies that mineral sterilisation will be a consideration when development proposals are being considered.		Noted
299	STR16: Strategic Planning for Minerals	Object	Policy STR16: Strategic Planning for Minerals While the Town Council wish to support the importance of minerals in the area, it has concern regarding the details given for Caerwys quarries. It is felt that we wish to object and express concern to the proposals for an extension at Ddol Uchaf for the following reasons. In Test 2 it	The area should be protected for the natural environment along with sensitive considerations for residents living close and within the 100m buffer.	Not accepted. STR16 provides the Strategic Policy which sets out the general approach that has been taken with respect of sustainably managing mineral resources in Flintshire, and the wider region. Policy EN25 provides details of the allocations set out in the plan to demonstrate how a sustainable supply of minerals can be provided for. Policy EN26 provides the criteria to which minerals

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			states that allocation should be logical, reasonable and balanced, together with being clear and focused. The proposals state that the extension would be increased from 5.2 ha to 10 ha. This would be doubling the site, is this reasonable and balanced? We object. The plan allocation is inappropriate for the area in light of evidence that would be required, is this clear and focused? We object and express concern. The area should be protected for the natural environment along with sensitive considerations for residents living close and within the 100m buffer. We object and express concern. The transport infrastructure would be a concern due to the vertical and horizontal alignment of the A5122 into and through Caerwys and on to the A55. Express concern. Other objections include affecting Footpath 27; effects on the ecology in a SSSI ; will affect archaeology and visual impact on the AONB. Thank you for your time and understanding for this small town of Caerwys. The Town Council would be happy to discuss this further if required		development will be assessed at the planning application stage. The extension in Ddol Uchaf has been proposed by the developer as an extension to the area adjacent to their existing consented area at the site (which currently lies dormant). It is logical to propose an extension to an existing quarry site where there are known mineral resources as the necessary infrastructure will be located on site associated with their current consent, once it recommences operations at this site. Furthermore, it is reasonable to propose an extension, as opposed to the allocation a new site to meet the aggregate needs of the county, and wider region given that the tonnages required by the emerging RTS second review (at least 3.543 million tonnes) would not support the creation of a new quarry site. The allocation is clear and focused as the site is clearly defined in the proposals map. The emerging RTS second review has indicated that Flintshire needs to find an additional 3.543 million tonnes (at least) which this allocation would contribute towards as it is anticipated it would yield 1.4 million tonnes. Therefore it is considered to be reasonable and balanced. Concerns raised by the Town Council would be addressed at the planning application stage in terms of highways. As stated within the Minerals Background Paper, planning permission was granted in 1989 for an access

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					into the quarry directly off the A541 and therefore the B52122 would not be required to be used to access any extension. The planning application could address vehicle routing to avoid travel through the village of Caerwys, a temporary or permanent diversion of the public footpath would be required should the allocation be developed. However, this would be undertaken under different legislation. The effects of mineral working in this site would be assessed through the environmental statement that would accompany the planning application which would assess amongst other things, the effects on ecology, archaeology, the visual impact from the AONB and also residential amenity. The Minerals Background Paper also addresses these issues to provide evidence that the application is likely to be acceptable in planning terms. The working area would be refined in the planning application to ensure that there would be no residential properties within the 100m buffer zone.
908	STR16: Strategic Planning for Minerals		Strategic Policy STR16 – Strategic Planning for Minerals We would express our surprise as to why the strategic minerals policy is contained within a chapter entitled "Valuing the Environment". This approach emphasises the fundamental disconnect between society's understanding and its need for minerals. The policy would be better located within Section 6 of the Preferred	The policy would be better located within Section 6 of the Preferred Strategy, "Supporting a Prosperous Economy".	Not accepted. The Plan should be read as a whole document and therefore, the particular section that the minerals policies are located is not significant. Equally, minerals development does have an impact on the environment which is why the minerals policies are located where they are. This does not affect the soundness of the plan.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Strategy, “Supporting a Prosperous Economy”. Minerals supply is fundamental to economic growth We support the principle of seeking to avoid the sterilisation of mineral resources from inappropriate development, however, it would be helpful for the Council to indicate which minerals resources it intended to safeguard from sterilisation. We would suggest that this approach should be extended to cover minerals infrastructure. At point iii, the proposed policy states that the Council will contribute “towards the regional supply of mineral through the allocation of 1.4 million tonnes of sand and gravel and 3.84 million tonnes of crushed rock through the extension to existing quarries, in collaboration with Wrexham County Borough Council”. This is not a true reflection of the Regional Technical Statement (first review) which requires new allocations totalling at least 1.4 million tonnes of sand & gravel and at least 3.84 million tonnes of crushed rock (our underlining). It is appreciated that the RTS is scheduled for review, however, the policy as worded does not accord with current RTS requirement. Further, we believe that the wording which states “through the extension to existing		The Minerals Background Paper provides the evidence base in which the Minerals Policies have been developed. The Minerals Background Paper (in section 5) provides justification why surface coal and clay are not safeguarded through the LDP. All limestone, including industrial limestone (non-aggregate limestone) is safeguarded through the mineral safeguarding areas shown on the constraints plan, and through Policy EN23. There is also a Mineral Buffer Zone (as defined in Policy EN24) applied to the operational quarry Cefn Mawr that supplies industrial limestone to Padeswood Cement works. The Minerals Background Paper also provides evidence how non mineral Candidates Sites within the Buffer Zone of Cefn Mawr quarry have been assessed. Policy EN26 (and other policies in the plan) provides the criteria in which proposals for non-aggregate minerals would be assessed. The Minerals Background Paper provides details relating to Cefn Mawr Quarry in relation to the life of planning permission to 2042 which is beyond the plan period. Therefore, it is not necessary to plan for additional need for industrial limestone during this LDP.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			quarries" may prove overly restrictive and may limit potential sites being brought forward for allocation. Such wording does not accord with PPW which states that "such a policy should not rule out the possibility of new workings where these may be environmentally more acceptable". The important consideration is to ensure a continuing and adequate supply of minerals to accord with PPW. It is not clear how the Council will address non-aggregate minerals within the plan. We would suggest the Council needs to address this. Further, we note Policy STR4, ii) states "Respond to local context and character, respect and enhance the natural, built and historic environment, and be appropriate in scale, density, mix, and layout;"		Furthermore, the LDP is not supposed to repeat national policy contained within PPW10. Page numbers will be checked with a final draft as page numbering will change in the final draft. STR16 provides the Strategic Policy which sets out the general approach that has been taken with respect of sustainably managing mineral resources in Flintshire, and the wider region. Policy EN23 provides a detailed policy which states which minerals would be safeguarded. This policy also includes point e) which includes essential infrastructure. To provide certainty, the Council would not object to Mostyn Docks (which could be used for the landing of minerals such as sand) and Padeswood Cement Works railway sidings being shown on the Proposals Map should the Inspector consider that this annotation would improve the Plan. The comments in relation to point i are noted and the Council would not object to the change of wording as drafted below, should the Inspector consider that the change of wording would improve the Plan. "i. Protecting minerals from unnecessary sterilisation by directing new development away from areas underlain by mineral of economic importance or where this is not possible through the requirement for prior

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					extraction in accordance with the criteria set out in Policy EN23." STR16 provides the Strategic Policy which sets out the general approach that has been taken with respect of sustainably managing mineral resources in Flintshire, and the wider region. Policy EN24 provides the detail of how Mineral Buffer Zones would be applied. The comments are noted and, the Council would not object to the change of wording as drafted below, should the Inspector consider that the change of wording would improve the Plan. "ii. Reducing the conflict between minerals development and sensitive development through the use of buffer zones as identified on the Proposals Map and applied through Policy EN24." With regards to point iii. of Policy STR16, the comments are noted and the Council would have no objection to the Inspector considering the suggested change to the policy wording which retains the intention of the policy as originally drafted. Suggested change of policy wording: iii. Flintshire will contribute to the regional supply of minerals in collaboration with Denbighshire and Wrexham County Borough Councils to accord with the apportionment

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					figures contained in the published Regional Technical Statement" It is suggested that the Council would have no objection to include the reference to the Appendix A (North Wales) of the RTS in the RJ within para 8.27, if the Inspector considers that this would improve the Plan. Flintshire has no specific building stone quarries. There is limited resource available in the County and no demonstrable need for this type of mineral. The LPA served prohibition orders on a number of quarries that supplied the building industry for historic buildings as there was no demonstrable need. However, should one ever arise in the future it is considered that there is sufficient flexibility in Policy EN26 for this to be considered. Furthermore, this issue can be reconsidered at future LDP reviews. The comments are noted. The Policies and RJ was drafted prior to the second review of the RTS being published for consultation. Therefore, at the time of the Plan going on deposit, the first review of the RTS was the evidence base in which the Council used in the drafting of the policy and the RJ and therefore the figures quoted are from the first review of the RTS as the second review was not available at the time of publication.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Policy EN26 provides a criteria based policy which allows for non-allocated sites to come forward. The Council feel that this policy provides flexibility for other sites to come forward to meet future demand. However, should the Inspector feel that the Plan could be improved by amending the wording of this paragraph, the Council would not object to the following wording to Paragraph 8.27 of the RJ. "The RTS and accompanying appendix for North Wales identifies the level of need for mineral at the regional level, and then apportions this to individual local authorities. A need for additional sand and gravel has been identified in Flintshire as well as crushed rock. It is proposed to meet the need through the extension of existing quarries. Detailed allocations are identified on the Plan and on the Proposals Map. In addition to this, new site development may also be required to meet future demand in addition to the extensions proposed as allocations. Further allocations may be proposed on subsequent reviews of the LDP to meet the identified need of the RTS." The Minerals Background Paper provides the evidence base for the minerals policy. It is inherent within PPW10 as the representor states that minerals are essential to the economy. It is considered not necessary to repeat national policy.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Noted, should the Inspector feel that the Plan could be improved by amending the documents listed within the 'key evidence', the Council would not object to the following to be added to the table providing the Policy Context: - North Wales Regional Aggregate Working Party Report, - RTS second review (consultation draft) - Minerals Technical Advice Note 1 (MTAN1) Noted, should the Inspector feel that the Plan could be improved by amending the documents listed within the 'monitoring', the Council would not object to the following to be added to the table providing the Policy Context: - North Wales Regional Aggregate Working Party Report,
1029	STR16: Strategic Planning for Minerals	Object	Minerals and Waste The Council notes that the LDP proposes to meet future minerals requirements by allocating extensions to existing sites and that proposals for the management of waste, will generally be allowed on employment sites, which should meet Flintshire's waste	To improve clarity, or help answer questions about the policy meaning and how it will be assessed, the Council would make the following	Not accepted. The explanatory text and the Minerals Background Paper refer to collaborative working and provide further explanation with regards to the nature of collaboration. The Flintshire LDP deposit draft, and the figures contained in strategic policy STR16 was published prior to the consultation draft

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			requirements. To improve clarity, or help answer questions about the policy meaning and how it will be assessed, the Council would make the following observations: • STR16 (iii) – it is not clear whether the text 'in collaboration with Wrexham County Borough Council' relates to sand and gravel and crushed rock only, or just crushed rock. What does 'in collaboration with Wrexham County Borough Council' mean? How has the contribution been split between the individual authorities? • STR16 (v) – does it explain anywhere what is meant by 'appropriate restoration' or 'specific environmental and community benefits'?	observations: • STR16 (iii) – it is not clear whether the text 'in collaboration with Wrexham County Borough Council' relates to sand and gravel and crushed rock only, or just crushed rock. What does 'in collaboration with Wrexham County Borough Council' mean? How has the contribution been split between the individual authorities? • STR16 (v) – does it explain anywhere what is meant by 'appropriate restoration' or 'specific environmental and community benefits'?	RTS second review. In reality more sand and gravel, and crushed rock is required to be identified through the LDP; at least 3.543 million tonnes and 35.9 million tonnes respectively. Flintshire will work in collaboration with Wrexham County Borough Council, and Denbighshire County Council to provide for the minerals needs of the region for both the provision of sand and gravel and crushed rock. With respects to Wrexham and crushed rock, Flintshire had already committed to provide for Wrexham's crushed rock requirements through a statement of Common Ground published through Wrexham's LDP process. The RTS second review now recognises that Wrexham is so heavily constrained due to the location of crushed rock in relation to the AONB, it is not reasonable to require Wrexham to provide crushed rock and as a result is not required to make any provision within their plan. Therefore it is inherent that Flintshire will work collaboration with Wrexham with respects to Crushed Rock. As Denbighshire has a large landbank of crushed rock due to a number of mothballed sites in the County, Flintshire will produce a sub-regional Statement of Collaboration with Denbighshire to assist with the required apportionment identified for Flintshire. Furthermore, Flintshire will need to work in collaboration with Wrexham to meet its

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					apportionment figure with respects to Sand and Gravel. Yes: It is suggested that the Council would have no objection to change the wording of point iii to reflect the new figures in the RTS second review to: iii. Flintshire will contribute to the regional supply of minerals in collaboration with Denbighshire and Wrexham County Borough Councils to accord with the apportionment figures contained in the published Regional Technical Statement." Each quarry site will have specific restoration requirements which will be derived from the type of mineral that has been excavated, and the way in which mineral has been excavated. Therefore it would be difficult to present a prescriptive policy to define what is meant by appropriate restoration, as this will vary from site to site. STR16 is the strategic policy, which this requirement for restoration is then continued and presented in Policy EN26 which prescribes the criteria for minerals development. Policy EN26 provides a criteria based policy for which minerals development will be assessed. Criteria iv and v have been included within the policy to ensure that proposals for mineral development include restoration and aftercare provision which would be assessed at the planning application stage. Each

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					proposal would be considered on a case by case basis, and on its own merits. All minerals development would have characteristics specific to the individual site and restoration for sand and gravel quarries may be different to a hard rock quarry. Therefore, it would be difficult to prescribe in the policy what specifically it should include. Each planning application will be required to provide details of restoration, which will be assessed at the application stage. Therefore, there is no need to prescribe details within this policy.

Policies PC1 to PC12

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
276	PC1: The Relationship of Development to Settlement Boundaries		Dear Sir, Flintshire LDP Consultation Document and LDP08 Candidate Alternative Sites I have reviewed the above documents and in principal support your plan, however I wish to make the following comments. 1. There appears to be no commitment to Education or Healthcare Services! With the perceived increase in housing there must be an increase in families and therefore children requiring education, where are the new schools? With the increase in our aging population there will inevitably be an increase in the need for healthcare services, apart from your commitment to increase social services for home care/visits I see no future infrastructure in your plan. 2. As a resident of Higher Kinnerton the proposed Strategic site of Warren Hall including approximately 300 new homes, all to be located within the existing Parish boundary of Higher Kinnerton, there will undoubtedly be significant impact on the village amenities ie school, church, village hall, scout hut etc. This should eliminate future housing development here not only in this LDP but beyond! 3. Viewing document LDP08 I note ALL Candidate Sites pertaining to		Noted. The Deposit Plan has not allocated nor included within the settlement boundary the candidate site HK008. The objector appears to be supporting the Deposit LDP in this context. In terms of the other points made: 1. No objection has been made to the Plan by statutory service providers such as the Local Education Authority and the Betsi Cadwaladr University Health Board. The Plan's new housing allocations will not see housing completions until 2023/24 and will be developed over a number of years. There will not be one 'big hit' by development and there is time for infrastructure capacity to be put in place. The LPA continues to work with the LEA and BCUHB towards achieving this. 2. The Warren Hall site sits between the settlements of Penyffordd / Penymynydd, Broughton and Higher Kinnerton where new residential development can access services and facilities in each settlement. It is unclear why the objector considers that additional patronage for a church, village hall and scout hut in Higher Kinnerton is a negative. It is also the case that the Warren Hall mixed use allocation seeks to provide on-site facilities with hotel / leisure and a commercial hub providing for instance local shopping facilities. 3. It should be noted that HK011 is a slightly different site boundary to HK008, but is essentially the same parcel of land. It is also accepted that the recommendation is worded slightly differently. However, with the exception of the opening sentence on the response to HK011 the assessment commentary is identical. The key point here is that the site has not been allocated in the Plan nor included in the settlement boundary because of the level of growth experienced in Higher Kinnerton and the provision of 300 dwellings at nearby Warren Hall Strategic Site. However, both the UDP Inspector and the present site assessment recognises that in planning terms the site would represent a sensible rounding off of the settlement form. 4. The Council does not consider the commentary needs to be revisited. The site has been submitted by a developer in the form of an objection to the Plan and the Council will oppose that objection.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Higher Kinnerton HK003 to HK013 have been recommended as “not suitable for development” apart from HK008 which “has not been allocated”. This site is identical to HK011 which has been allocated as “not suitable for development”! I urge you to re-evaluate HK008 to “not suitable for development”. 4. Our Village Plan noted “the rural approach to the village” was highlighted as “very important” to the residents. There were also “concerns at the level of development” taking place which would “transform the village into another dysfunctional mass of commuter housing”. Again I urge you to re-evaluate HK008. Your humble servant		
15	PC1: The Relationship of Development to Settlement Boundaries	Object	We have objected, not because we disagree with the policy in principle, just its specific limits in this case. The limit was drawn incorrectly previously and remains nonsensical, in our view. It was discussed in the UDP Inquiry and we have now proved that the site can properly be included in the settlement. We have a topographical survey and ecological surveys to prove this if required. Include, Gwernymynydd is a settlement which stretches along the A494 for over a mile with the application site located towards the middle of it. This site is the only part of that frontage which is outside the boundary. Underused land on the opposite side of the road is		Not accepted. This site (Lys Newydd, A494, Gwernymynydd) is also the subject of a separate objection (id 223), from the same agent, seeking the allocation of the site under policy HN1. An outline planning application on the site for 28 dwellings (060696) has been submitted in February 2020 which is under consideration. The settlement boundary for Gwernymynydd in the vicinity of the site has not been previously incorrectly drawn. At the time of the UDP public inquiry there was sufficient land within the settlement boundary to deliver housing development and the Inspector did not recommend that the site be included in the settlement boundary. It must be borne in mind that in the UDP Gwernymynydd was a category B settlement and that the spatial strategy allowed for planned growth through allocations in category A, B and C settlements. The Inspector did not recommend the inclusion of the site within the settlement boundary. The settlement boundary in the Deposit Plan is considered to be firm and defensible in excluding a large tract of greenfield land located prominently along the A494(T)

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			within the settlement and would appear eligible for development. Development of this site would appear to be wholly in character with the community. Development would provide a modest increase in the size of the community to assist in maintenance of the school, community facility and pub. This site is visibly within the settlement boundary (albeit not on the plan) The Inspector is urged to read the previous UDP inspector's report and agree with what we believe was clearly the conclusion that subject to a satisfactory access the site should be included within the settlement.		In its response on the objection to HN1 the council concluded that provision for growth exists within the settlement boundary of Gwernymynydd and in nearby Mold. It is not considered necessary or appropriate for the settlement boundary to be amended, particularly to include a site where there are concerns about its impact on the form and character of the settlement and in the light of concerns over ecology and topography and uncertainty over access. Despite acknowledging that the present planning application may address some of these concerns, the site is not considered to be appropriate to be included within the settlement boundary.
43	PC1: The Relationship of Development to Settlement Boundaries	Object	Objection to Candidate Sites: PYF001/PYF002/PYF003/PYF004/PYF006 for the following reasons: Penyffordd has been afforded more than its fair share of development. Llinegar Hill is the main access into Penyffordd and the surrounding villages, the Hill has no footpaths, it is single carriageway and has a very bad blind bend, the hill is dangerous. I object to any more development in the Penyffordd area that involves using 'open countryside' I object to any more development in the Penyffordd area on the grounds that enough of the countryside surrounding Penyffordd has already		Noted. Each of the sites referenced by the objector have been responded to below: PYF001 has not been allocated in the LDP and remains outside of the settlement boundary. PYF002, land north of Coed Mor has been included within the settlement boundary of Pen y ffordd as the site has been granted planning permission for 23 dwellings (055398). PYF003 includes the area of land submitted under PYF002. Only the land shown in PYF002 has been included within the settlement boundary, the remaining land submitted under PYF003 has not been allocated within the LDP for development and remains outside of the settlement boundary. PYF004 has not been allocated for development within the LDP and remains outside of the settlement boundary.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			been taken for development and Penyffordd has been allowed to expand quite considerably, without any improvement to the infrastructure. I object to any form of development being granted to any site unless provisions are taken to improve the safety of Llinegar hill.		PYF006 has not been allocated for development within the LDP and remains outside of the settlement boundary. There are no allocations for development in Pen y ffordd within the LDP, there are however three committed sites with planning permission which will provide growth for the village over the plan period. These include; 27 dwellings at Llys Dewi (057971) where 6 units were complete as of the 1st April 2019 with 21 units under construction 23 dwellings on land off Coed Mor which is also candidate site PYF002, as of the 1st April 2019 these units had not been started. 8 dwellings off Rhewl Fawr Road (053603) which also had not been started as of 1st April 2019. In considering each planning application, the comments of the Highways Development Management Officer would have been taken into consideration and these have not raised the need for road improvements to Llinegr Hill.
154	PC1: The Relationship of Development to Settlement Boundaries	Object	HWN005 - Ash Lane, Hawarden This green barrier land will cause coalescence of Mancot and the Upperdale area of Hawarden, The character of these 2 areas is quite significant with the size and style of houses being of a large house and grounds and spacing in Hawarden compared with Mancot. As such merging these 2 areas removes their distinct village identity.	Specific avoidance of village coalescence.	Not accepted. See response to ID 150 EN11 Green Barrier. The UDP Inspector did not consider that the drawing back of the green barrier as part of recommending the allocation of the site for housing, would harm the function of the green barrier. Although the site allocated in the LDP is slightly larger than that recommended by the UDP Inspector, the green barrier review Background Paper demonstrates that it will not harm the function of the green barrier. The settlement boundary of Hawarden and Mancot already adjoin each other in the adopted UDP to reflect that there is already coalescence between the two settlements. The LDP seeks to retain the southern and higher land as green barrier on either site of the Gladstone Way. This will ensure that the green barrier around the historic part of Hawarden remains intact.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The purpose of policy PC1 is to set out the significance of settlement boundaries in the Plan in terms of the different approaches to considering development proposals within and outside settlement boundaries. The overriding objective when delineating settlement boundaries is to ensure that they follow clear physical features on the ground in order that they create firm and defensible boundaries to settlements. Settlements have been reviewed as part of the Plan preparation and amended to take account of planning permissions, cartographic errors and new development allocations. In the case of the Ash Lane housing allocation it is considered that the new settlement boundary is firm and defensible in that it follows a clearly identifiable hedgerow and seeks to protect the higher and visually more prominent southern part of the site. The settlement boundary and the green barrier work together to ensure that the gap between the historic part of Hawarden and the site is retained. The settlements of Hawarden and Mancot are already joined as reflected in the adopted UDP. The settlement boundary for Hawarden includes the main (or historic core of the village) and the part of the village between the railway line and Gladstone Way. It also includes the development on the east side of Gladstone Way including Park Avenue and Kennedy Drive. The settlement boundary between Hawarden and Mancot runs from the west of Paddock Way, the northern end of Park Avenue and the rear gardens of properties on Brookleigh Avenue to join Cottage Lane. The two settlements are already coalesced and have been for several decades. The amendment of the settlement boundary and the allocation of the site at Ash Lane will infill this wedge shaped gap between existing development (on three sides) in the form of a logical and well defined urban extension. This is complemented by the retention of a green barrier on the prominent and sensitive rising land between the site and Gladstone Way and therefore retains a green barrier around both Hawarden and Mancot.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
194	PC1: The Relationship of Development to Settlement Boundaries	Object	The settlement boundary for Buckley should be adjusted to encompass land at Megs Lane SUMMARY OF REASONS • The site is well placed in relation to Buckley, a main service centre, and a principal location for new housing development which reinforces and contributes to sustainable settlements. • The site is genuinely capable of being delivered and could be brought forward rapidly subject to planning approval. • The site is capable of fulfilling the various other development criteria set out in the Deposit Local Plan. • The site does not materially harm or undermine the Green Barrier. • Even if the site is not to be treated as a formally allocated site, the Deposit Plan nevertheless requires a supply of large windfall sites in order to fulfil its housing requirement over the plan period. This is an appropriate site from which to achieve such a contribution. • The Deposit Plan acknowledges there is a lack of suitable and appropriate brownfield land in the County (para 11.2). Greenfield sites are therefore required to fulfil future housing requirements. By virtue of the extent of the Green Barrier surrounding Buckley, some release of Green Barrier land will be required.	Adjustment to settlement boundary on the Proposals Maps	Not accepted. The settlement boundary along the southern edge of Buckley is considered to be well defined and logical. It follows the rear gardens of the ribbon of residential properties along the south side of Megs Lane and is firm and defensible. In respect of the objection which seeks the allocation of the site for housing in policy HN1 (id193) it is considered that the site is not necessary or appropriate to be allocated for housing, particularly in respect of the impact on the green barrier. For the same reasons it is not considered necessary or appropriate for the site to be included in the settlement boundary.
258	PC1: The Relationship of	Object	Objection 7: Mold may be a Tier 1 settlement but it is a special case that must be recognised in planning	Revise the settlement strategy and the unique	Not accepted. The objector has made objections to a raft of policies throughout the Plan as part of an objection to the allocated site HN1.6,

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Development to Settlement Boundaries		decisions As a Tier 1 Settlement, Mold is an anomaly: it is an attractive location as a small town with reasonable services but it also has three significant factors that require deeper analysis and a more nuanced approach to development. Firstly there is no rail connection. Secondly, Mold is one of the few (relative) bastions of Welsh-speaking in Flintshire. Thirdly, its road connections are amongst the most congested for commuters. All of these factors should lead to Mold being treated as a special case but I can find no such analysis of such significant factors, taken together. Not compliant with PPW paragraph 2.19, 4.1.4 to 6, 4.1.36, 5.4.13 Deposit LDP Para 5.13 allows for some nuancing of the settlement strategy but does not choose to do so for Mold which has unique features to be considered Para 5.30 & 5.31 Despite the stated commitment to local distinctiveness, historic assets and unprotected assets, this plan does not actually apply this when assessing settlements and sites Para 5.35 & 5.39 An integrated planning and transport strategy would not put such large development in Mold which has no railway station and links up with congested routes, and will not benefit directly from Growth Track 360. Mold not a sustainable location and no key transport	characteristics of Mold as a Tier 1 settlement	including policy PC1. This objection overlaps with the objection to PC1 (id256). As part of the Key Message consultation document published for comment during the early pre-deposit engagement stages of plan preparation, some 81 settlements were the subject of settlement 'audits' which sought to establish the sustainability of settlements but considering location, scale, character, role and level of services and facilities. When grouping the initial results, Mold featured in the 1st grouping (Fig 2 on p35 in the key Messages document, https://www.flintshire.gov.uk/en/PDFFiles/Planning/Revised-Key-Messages-LDP.pdf). This clearly translated into Mold being a Tier 1 settlement, along with Aston & Shotton, Connahs Quay, Holywell, Queensferry, Buckley, Flint and Saltney. The County does not have particularly 'large' towns in the sense that none of the settlements are even approaching the size of say Wrexham. Instead it has a number of modest sized towns, each with their own history, character and role. Mold is not the only Tier 1 settlement to not have a railway station as Saltney, Connah's Quay, Queensferry and Holywell do not. In successive development plans, Mold has been included in the upper tier of the settlement hierarchy and this includes the Clwyd Structure Plan, the Delyn Local Plan and the adopted UDP. The purpose of the settlement hierarchy in each development plan has been to form the basis the making decisions about how development is to be distributed spatially across the County. The preparation of each Plan provides the opportunity to take into account the issues and considerations raised by the objector such as transport, landscape, historic assets and welsh language. Mold is a vibrant town which is the administrative centre for the County and sits well in terms of the growth triangle concept of Wrexham Chester and Deeside in the former Wales Spatial Plan and the principle of Wrexham and Deeside as a focus for growth in the draft NDF. It is not

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			proposals line up to benefit it directly. Para 5.47 states development will only be permitted where there is adequate infrastructure or suitable proposals to accommodate additional demand/problems deriving from proposed development and to address deficiencies. The Plan ignores issues of transport, community cohesion, crime, habitat, Welsh Language, and unexplored issues regarding Physical Environment Deprivation score under WIMD in Mold West Ward and Site H1.6		considered that the settlement hierarchy and spatial strategy in respect of Mold is contrary to PPW10 or the NDF. Mold has always been in the highest tier of settlements from the Clwyd Structure Plan through to the Delyn Local Plan and the UDP. The LDP adopts a consistent approach as the settlement audit and settlement hierarchy work in the Key Messages document clearly shows that Mold meets the criteria for being classed in the upper tier of the settlement hierarchy and site comfortably along the other settlements identified within Tier 1. Despite Mold having a number of particular attributes, such arguments could be advocated in respect of other settlements and it is not considered that Mold is a 'special case'. Rather, the attributes identified by the objector are material planning considerations to be had regard to in making planning decisions.
312	PC1: The Relationship of Development to Settlement Boundaries	Object	Objection 24: Mold's unique combination of environment and of culture is being undermined by the pressure of being treated as an undifferentiated Tier 1 settlement Mold's success as a thriving town (according to Mold Town Council) must surely be because it is different history to other Flintshire towns. It has a prettier, more countrified, and more green setting, has a mixed economy of mixed arable/dairy farming, a livestock market, a street market, a farmers' market, light industry, tourism, Mold Food & Drink Festival, Mold Blues & Soul Festival, and a high level of cultural assets in Theatr Clwyd, St Mary's Church and Bailey Hill Castle Park in the centre of town. It has a quirky mix not found elsewhere in the county and could so easily be unbalanced by unsuitable	Reconsider Mold as a special case of Tier 1 settlement due to its status in preserving the Welsh Language, its lack of a railway station, the importance of agriculture and the livestock market, its richness of history in the close vicinity and its attraction as a visitor destination.	Not accepted. The objector has made objections to a raft of policies throughout the Plan as part of an objection to the allocated site HN1.6, including policy PC1. This objection overlaps with the objection to PC1 (id256, 258 and 262). It is accepted that the attributes of Mold are many and varied and is what attracts many people to live, work and visit Mold. However, it is not accepted that additional residential development in the form of a well-defined urban extension alongside existing estate type development is harmful to the historic, retail and cultural character and role of the town. Despite commenting on the various attributes of Mold compared to other towns in Flintshire, the objector does not identify specific evidence as to why a housing allocation is inappropriate within the town, nor why the allocated site would cause demonstrable harm to the town. The other matters raised in the objection have been responded to in other objections.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			developments that are too ambitious and fast growing for a modest-sized town and its services to support. Failure to support the continuation of agriculture and to protect land that is actively farmed would lead to a fundamentally different Mold, a less distinctive Mold, and a diminished asset for Flintshire in marketing itself as a good county in which to live and work. Agriculture and farming are known to be very important contributors to Mold's mixed economy and its rural North Wales hinterland. A recent survey cited in the Mold Town Plan revealed that around two-thirds of town centre users confirmed that the Livestock Market was an important factor in bringing visitors into the town. (See Livestock Market Survey Report, August 2015). All of this keeps Mold going as a busy town. Displace agriculture and you displace the retail offering and the success of the town. Not compliant with PPW paragraph 2.19 Deposit LDP Para 6.27 pays lip service to the importance of tourism to the historic town of Mold. Also nods to importance of cultural identity as expressed through the significant Welsh Language in Mold. But the Plan proposes no special language plan to protect these important issues In section 12, EN8 refers to the need to protect listed buildings and their settings. Development on site H1.6		

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			creates adverse effects on listed buildings in the vicinity.		
256	PC1: The Relationship of Development to Settlement Boundaries	Object	Objection 6: The Plan's settlement strategy needs to be more nuanced in response to the UDP Inspector's advice and WG advice The UDP to Settlement Inspector criticised the UDP for being backward-looking in its approach to the designation of settlement boundaries and relying on historic settlement patterns to justify the avoidance of coalescence. The Inspector at that time expressed the view that a "settlement boundary on a plan does not define identity or cohesion of a community" (S3.5.37): identity is formed by the community itself, and its cultural interests, not by the local authority and its boundary line drawn on a plan. There is some limited discussion of this point in the new LDP but no real evidence of a rethink nor any concession to the idea that - in some strictly controlled cases - coalescence might make more sense 4.1.4 to 6, 4.1.36, 5.4.13 Deposit LDP Para 5.13 allows for some nuancing of the settlement strategy but does not choose to do so for Mold which has unique features to be considered Para 5.30 & 5.31 Despite the stated commitment to local distinctiveness, historic assets and unprotected assets, this plan does not actually apply this when assessing settlements and sites Para 5.35 & 5.39 An integrated planning	Reconsider UDP Inspector' advice on settlement strategy	Not accepted. The objector has made objections to a raft of policies throughout the Plan as part of an objection to the allocated site HN1.6, including policy PC1. The settlement strategy in the adopted UDP has been reviewed comprehensively as part of the preparation of the LDP. The much earlier Key Messages consultation document set out options for a revised settlement hierarchy based on a comprehensive series of settlement audits to establish a sustainability evidence base on every settlement. The Strategic Options consultation document set out the preferred settlement hierarchy and set out a number of options in terms of how to distribute growth spatially across the County. The chosen means of spatially distributing growth was set out in policy STR2. In the Key Messages document section 4 of Appendix 2 references the comments of the UDP Inspector and presented 6 options for comment. This included an option of combining settlements into urban areas. The outcome of the consultation was that a refinement of the 3 tier settlement hierarchy into a 5 tier settlement hierarchy based on existing settlement boundaries was the most appropriate option for the County rather than seeking to define urban areas. It must be stressed that whilst there is only a brief reference to this in the Deposit Plan written statement, it is comprehensively addressed as part of earlier stages in the Plan's preparation and specifically the preparation of the Preferred Strategy where during the public consultation the objector had an opportunity to comment. This is still available on the Council's website as part of the timeline of the Plan's preparation. It is not necessary or appropriate for every detailed issue or previous document to be referenced in the Deposit Plan. The UDP Inspector's comments were more specifically aimed at areas where settlements had merged such as Buckley, Drury, Mynydd Isa and the Deeside settlements. The Council considered a number of approaches to defining settlements, including the use of 'urban areas' but favoured a

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and transport strategy would not put such large development in Mold which has no railway station and links up with congested routes, and will not benefit directly from Growth Track 360. Mold not a sustainable location and no key transport proposals line up to benefit it directly. Para 5.47 states development will only be permitted where there is adequate infrastructure or suitable proposals to accommodate additional demand/problems deriving from proposed development and to address deficiencies. The Plan ignores issues of transport, community cohesion, crime, habitat, Welsh Language, and unexplored issues regarding Physical Environment Deprivation score under WIMD in Mold West Ward and Site H1.6		new 5 tier settlement hierarchy as set out in the Strategic Options document. It is of note that the objector is concerned about a housing allocation in Mold. In the UDP Mold was a category A settlement and in the LDP is a Tier 1 Main Service Centre, i.e. in the highest tier of settlements and where in both circumstances is categorized in this way to reflect the Town's level of sustainability. Mold is a free standing settlement and not one where it would be reasonable to consider an alternative approach of defining the settlement. There is no objection from Welsh Government to the Plan's spatial strategy and it is not accepted that the Plan is contrary to PPW10. The other matters raised in the objection have been responded to in other objections.
262	PC1: The Relationship of Development to Settlement Boundaries	Object	Objection 10: The Plan does not recognise that some locations are spatially more important for their contribution to local identity and to character than for housing Topic Paper 7 notes the importance of the Clwydian Range AONB; the urbanised and industrialised character of Deeside and Wrexham; the need in Flintshire for a high-quality year-round tourism offer; and the need for areas of restraint on development on green wedges. Clearly, building a large housing development on a highly visible and attractive countryside route into (and area of) Mold puts the	Remove site H1/6/MOL044/MOL 045 in order to retain the surrounding landscape value and to prevent what the UDP Inspector called (in regard to this site) "significant incursion into countryside"	Not accepted. The objector has made objections to a raft of policies throughout the Plan as part of an objection to the allocated site HN1.6, including policy PC1. This objection overlaps with the objection to PC1 (id256 and 258). The spatial strategy of the Plan as set out in STR2 sets out to apportion development across the first three tiers of the settlement hierarchy with proportionately a greater amount of development being directed to Tier 1 Main Service Centres. The identification of a housing allocation in Mold is entirely consistent with the Plan's spatial strategy. The town of Mold is constrained by the line of the A494(T) by pass to the south, by the River Alyn floodplain to the east and north and by the narrow gap between Mold and Gwernymynydd to the south west. The north western part of the town provides the only logical direction for growth. The allocated site has no landscape or ecological designation or protection

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Spatial Strategy in conflict with the Deposit LDP. Development on such a site severely undermines the location-specific landscape character of Mold. This town is not simply the urban "Tier 1 settlement" of the planner's jargon. It is a small, quirky rural town and its north-west edge is comprised of rolling hills, trees, sheep, green fields, cows, cowpats, crops, mud, birds, bats, moles, hedgerows, a few houses, some cars and a few tractors. Furthermore, the MOL045/H1.6 site, Gwernaffield Road/Denbigh Road with its wide views across the rolling hills of Gwernymynydd, Gwernaffield, Moel Fammau, the historic Rhual and Gwysaney estates, does not feel like "urban edge" – it feels like countryside. Ironically, photographs of this green countryside on either side of Gwernaffield Road have often featured in publicity material for Mold Town Council, highlighting the essential green nature of the small market town of Mold and its sense of place. There is no point in producing a spatial review if it does not inform planning decisions, and crucially, shape the underlying discussions that precede the decisions to release sites. All of this somewhat undermines the FCC claim in the Housing Land Monitoring Report Para 3.5 that "the LDP will ensure that sites can be identified based on a rigorous and transparent assessment and against an agreed spatial strategy		attributed to it. Whilst it represents undulating farmland this is the same in parts of the County and on the edge of many settlements. The site is well contained by Pool House Lane and does not create a precedent for further westward expansion between Gwernaffield Road and Denbigh Road. This part of Mold does not have a particularly sensitive built edge as it comprises for the most part of 1970's /80's estate type development of bungalows, dormer bungalows. The Council consider the allocation of the site at Denbigh Road, Mold to be appropriate and sustainable for this Tier 1 settlement, and the extension of the settlement boundary to incorporate this allocated site is logical.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			rather than on an ad hoc basis." Not compliant with PPW paragraph: 1.19, 2.19, 3.40, 6.0.2 Deposit LDP and Spatial Strategy paper in conflict.		
587	PC1: The Relationship of Development to Settlement Boundaries	Object	Comments in Relation to Site PEN037 The policy seeks to locate development within defined settlement boundaries as defined on the Proposals Maps. It is important therefore that the settlement boundaries are drawn to realistically reflect the character of the settlement and to follow long term defensible boundaries. If settlement boundaries do not follow firm and defensible physical boundaries on the ground, it is likely to lead to developments being approved outside of settlement boundaries during the plan period (particularly if housing delivery falls short). This would weaken the ability of the policies in the Plan to perform towards the end of the plan period. Our specific concerns in relation to this policy relate to the settlement boundary drawn around the village of Penyffordd (and in particular site PEN037). It is of note that, in granting planning permission on appeal for the adjoining field under appeal reference APP/A6835/A/17/3182034 the Inspector assessed the visual containment of the site. He confirmed that in visual terms the site has well defined visual envelope. He noted that Penyffordd already touches the A550 bypass over considerable	Add additional sites in Penyffordd	Not accepted. This response should be read in conjunction with the response to the objection seeking allocation of the site in HN1 (id586). The process of defining settlement boundaries is to firstly, follow existing urban form and patterns of development, utilising firm and defensible boundaries, but secondly, it is to define where development may take place within the Plan period. There is no requirement for, nor is it reasonable to drawn settlement boundaries in a manner so as to enable longer term development opportunities or for example through the provision of 'contingency sites' which are not part of national planning guidance. The longer term options for development are more appropriately considered as part of a future Plan review. In the Council's response on HN1 (id586) it is considered that it is not necessary or appropriate for the site to be allocated for housing, and for the same reasons it is not considered necessary or appropriate for the site to be included in the settlement boundary'

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			lengths and the proposed development would not significantly affect views of the countryside from that road or further afield. The Inspector's conclusion was that the loss of the field would not materially affect the rural character and appearance of the wider area and that, "the A550 would provide a defensible boundary". That assessment can be applied equally to the adjoining site (PEN037). The A550 would provide a long term defensible boundary for both sites (as it does for the remainder of Penyffordd).		
619	PC1: The Relationship of Development to Settlement Boundaries	Object	The settlement boundary at Newlands, Drury should be amended to include this land and the land should be allocated as an additional site for residential development. The property known as Newlands is currently located outside of the settlement boundary in the adopted UDP, within the Green Barrier, and the LDP Deposit Draft proposes to continue these designations. We consider that due to the specific characteristics of the property and its relationship to the village of Drury, the property should be included within the settlement boundary for Buckley. The site is located off Drury New Road, Drury. A site location plan is enclosed. The site comprises the	The settlement boundary should be amended to include this land and the land should be allocated as an additional site for residential development.	Not accepted. The objector proposes that the site would be suitable for one or two dwellings. This site is therefore too small to be allocated within the plan. The objector states that the proposed site at Newlands should be included within the settlement boundary as it does not appear divorced from the settlement. The intervening land between the commercial units and the dwelling (Benbradagh) adjacent to Newlands comprises greenfield land, clearly defining the divorced nature of the distinct gap and character break between the settlement and Newlands. The inclusion of DRU006 within the settlement boundary would result in a ribbon of development into the open countryside and the green barrier between Drury and Buckley, which would not be a logical extension of the settlement boundary. The objective of the green barrier designation is to retain the open nature of the countryside around the settlement and to protect the open countryside between Drury and Buckley from further encroachment. Built

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			garden of the dwelling. The garden is very large for a house the size of Newlands. Consequently, the surplus land represents a potential development opportunity for 1 or 2 dwellings. A planning application for the erection of one dwelling (reference: 038321) was refused in December 2004. The site is located within the Green Barrier; albeit it comprises the garden of a dwelling which is located on the edge of the village. Our client has therefore sought a change to the settlement boundaries through the emerging LDP and has submitted representations at various stages of the process, including representations to the Candidate Site Submission process. It is strongly disputed that the two dwellings (Newlands and the property known as Benbradagh to the north) are divorced from the settlement. They directly adjoin the curtilage of commercial units associated with the adjacent garden centre / farm shop to the north.		development in this location would undermine the function and openness of the green barrier. During the UDP plan period from 2000 to 2015 Drury/Burntwood, saw a 26.7% level of growth, which as a Category B settlement with a growth band of between 10% and 15 %, is a very significant level of growth. In terms of the LDP period a recent application (ref 058212) for the demolition of 1 and 2 Woodside Cottages and erection of 23 new dwellings, adjoining this site was allowed on appeal. The site cannot be included as a housing commitment as planning permission was granted after the base date of 01/04/18 for the Plan's housing balance sheet. The site therefore represents a windfall site and will form part of the Plans overall housing land supply for the Plan period. Also, another adjoining site at Bank Lane has been subject to various applications in recent years (058489 – outline 66 dwellings refused, 090160 – outline 66 dwellings refused). At present a full planning application (060587) for the demolition of 81 Drury Lane and construction of up to 56 dwellings has been refused and an appeal is ongoing at the present time (May 2020). Rather than devise a housing scheme which functions within the settlement boundary, as recommended by the UDP Inspector, the applicant has sought to extend the application site boundary beyond the settlement boundary in order to increase on-site housing density by siting open space to the east of the settlement boundary. Given that there are concerns about the manner in which the site was being proposed for development in the planning applications it was not considered appropriate for the site to be allocated in the Plan. Both these examples demonstrate that there are development opportunities within the settlement boundary of Drury/ Burntwood as windfall sites, provided that appropriate development schemes are put forward. It is anticipated that these will provide for an adequate level of growth for Drury/ Burntwood over the Plan period.
769	PC1: The Relationship of Development	Object	Policy PC1: The Relationship of Development to Settlement Boundaries 7.13. For the reasons set out earlier in this Representation,	There is a lack of non-greenfield land on which to build within settlement	Not accepted. The Council set out in its Preferred Strategy document a broad apportionment (accompanying policy STR2) of development between the different tiers of settlement hierarchy. The apportionment set out in the Deposit Plan is broadly consistent with that. There is no

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	to Settlement Boundaries		there is a need to review the settlement boundaries around the Tier 3: Sustainable Villages to accommodate additional housing growth. There is a lack of non-greenfield land on which to build within settlement boundaries and that is one of the exceptional circumstances for the release of greenfield sites through the LDP. In view of our Client's land interests, this includes the settlement boundaries of Northop Hall, Drury and Carmel	boundaries and that is one of the exceptional circumstances for the release of greenfield sites through the LDP. In view of our Client's land interests, this includes the settlement boundaries of Northop Hall, Drury and Carmel , there is a need to review the settlement boundaries around the Tier 3: Sustainable Villages to accommodate additional housing growth.	objection from the Welsh Government in their formal representations on the Plan, indeed they have supported in principle the amount of growth and spatial strategy. The objector considers that the review of settlement boundaries has not produced sufficient opportunities for development in Tier 3 sustainable settlements. The objector considers that this is the case in Northop Hall, Drury and Carmel where a site is promoted. Northop Hall has clearly seen development both within the UDP Plan period and the early part of the LDP Plan period with the allocation at Cae Eithin and a subsequent extension to that site. It is not considered that an additional allocation is necessary or appropriate in the settlement. The specifics of the site promoted at Wellfield Farm will be commented on separately in terms of HN1 under rep 1267. Drury saw a high level of growth in the UDP Plan period and land is still available within the settlement boundary for further development. In this context the objectors assertion that insufficient land exists in the settlement boundary is puzzling as the site they promote at Woodhouse Cottage is already within the settlement boundary of Drury in the UDP and the LDP. Furthermore, planning permission has been granted (appeal ref 3209704) on the site for 23 dwellings. The site will become part of the Plans housing supply as part of an update to the Housing Balance Sheet from April 2018 to 2019. Carmel has seen only limited development in recent years but the site promoted by the objector at Holway Rd was firmly resisted by the UDP Inspector. With the exception of the housing on Mertyn Lane and the sporadic dwellings north of the A5026, development in Carmel is to the south of the main road. This long straight road marks a strong physical demarcation between the built up area and the countryside. Extending the settlement boundary to enable development on the site would result in urban encroachment extending beyond a well-defined edge. The specifics of the site promoted will be commented on separately in terms of the rep 783 to policy HN1.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					In conclusion the site at Drury is already within the settlement boundary and it is not appropriate or necessary for the sites at Carmel and Northop Hall to be allocated or included in the settlement boundary.
956	PC1: The Relationship of Development to Settlement Boundaries	Object	This policy is vague and does not enable existing facilities to expand beyond the settlement boundaries.		Not accepted. The purpose of policy PC1 is to set out the significance of settlement boundaries in the Plan in terms of the different approaches to considering development proposals within and outside settlement boundaries. It is not considered to be vague. The Plan must be read as a whole and this policy clearly references policies elsewhere in the Plan whereby guidance is provided on certain types of development which may be permitted outside settlement boundaries. The objector refers to the policy not enabling existing 'facilities' to expand beyond settlement boundaries. In the context of the objection seeking the extension of the Mancot settlement to allocate land it is not clear what 'facilities' means. In the absence of any suggested changes to the Plan it is not clear what the objector is seeking with regard to policy PC1. The objector's promotion of the site for housing in HN1 is responded to in representation id959. It is concluded that it is not necessary or appropriate for the site to be allocated and the same applies to the settlement boundary.
971	PC1: The Relationship of Development to Settlement Boundaries	Object	This policy is vague and does not enable existing facilities to expand beyond the settlement boundaries.		Not accepted. The purpose of policy PC1 is to set out the significance of settlement boundaries in the Plan in terms of the different approaches to considering development proposals within and outside settlement boundaries. It is not considered to be vague. The Plan must be read as a whole and this policy clearly references policies elsewhere in the Plan whereby guidance is provided on certain types of development which may be permitted outside settlement boundaries. The objector refers to the policy not enabling existing 'facilities' to expand beyond settlement boundaries. In the context of the objection seeking the extension of the Broughton settlement to allocate land it is not clear what 'facilities' means. In the absence of any suggested

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					changes to the Plan it is not clear what the objector is seeking with regard to policy PC1. The objector's promotion of the site for housing in HN1 is responded to in representation id974. It is concluded that it is not necessary or appropriate for the site to be allocated and the same applies to the settlement boundary.
989	PC1: The Relationship of Development to Settlement Boundaries	Object	This policy is vague and does not enable existing facilities to expand beyond the settlement boundaries.	This policy is vague and does not enable existing facilities to expand beyond the settlement boundaries.	Not accepted. The purpose of policy PC1 is to set out the significance of settlement boundaries in the Plan in terms of the different approaches to considering development proposals within and outside settlement boundaries. It is not considered to be vague. The Plan must be read as a whole and this policy clearly references policies elsewhere in the Plan whereby guidance is provided on certain types of development which may be permitted outside settlement boundaries. The objector refers to the policy not enabling existing 'facilities' to expand beyond settlement boundaries. In the context of the objection seeking the extension of the Mold settlement to allocate land it is not clear what 'facilities' means. In the absence of any suggested changes to the Plan it is not clear what the objector is seeking with regard to policy PC1. The objector's promotion of the site for housing in HN1 is responded to in representation id991. It is concluded that it is not necessary or appropriate for the site to be allocated, particularly given the impact on the green barrier, and the same applies to the settlement boundary.
774	PC1: The Relationship of Development to Settlement Boundaries	Object	In relation to the FCC's Development Management Policy for the Relationship of Development to Settlement Boundaries and Infrastructure the key comments in the context of the Village Plan thematics and objectives and from the Community Council's perspective as a key stakeholder in the LDP process are as follows: a) There is concern		Not accepted. The Warren Hall strategic site does not fall within the settlement boundary of Higher Kinnerton. The settlement boundary of Higher Kinnerton follows the well-defined physical feature which is the public right of way which forms the edge of the Elan Homes development. The objector's comments in respect of the proposed housing at Warren Hall has been commented on separately in a series of representations on other policies.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that with a major development at Warren Hall with up to 300 new homes being constructed on part of the site that falls within the settlement boundary of Higher Kinnerton, this presents a serious challenge to maintaining social cohesion for the expanded community. Going forward, plans need to be developed to ensure Warren Hall can be integrated in a way that promotes cohesion and mitigates the potential for any negative impacts of such a large single development includes the impact on the community, the environment and the open countryside.		
1011	PC1: The Relationship of Development to Settlement Boundaries	Object	This policy is vague and does not enable existing facilities to expand beyond the settlement boundaries.		Not accepted. The purpose of policy PC1 is to set out the significance of settlement boundaries in the Plan in terms of the different approaches to considering development proposals within and outside settlement boundaries. It is not considered to be vague. The Plan must be read as a whole and this policy clearly references policies elsewhere in the Plan whereby guidance is provided on certain types of development which may be permitted outside settlement boundaries. The objector refers to the policy not enabling existing 'facilities' to expand beyond settlement boundaries. In the context of the objection seeking the extension of the Buckley settlement to allocate land at Bryn Awelon it is not clear what 'facilities' means. In the absence of any suggested changes to the Plan it is not clear what the objector is seeking with regard to policy PC1. The objector's promotion of the site for housing in HN1 is responded to in representation id1013. It is concluded that it is not necessary or appropriate for the site to be allocated and the same applies to the settlement boundary.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
820	PC1: The Relationship of Development to Settlement Boundaries	Object	HCAC005 With reference to the site not being within the settlement boundary. I am only requesting one, what would be discreet dwelling very close to the existing settlement boundary of Hope. Over the years small dwellings have been tastefully enlarged into larger dwellings out with the settlement boundary without any impact on the countryside and I would ask you to please reconsider my application as I would be more than willing to work with the planning department to achieve a satisfactory outcome of any development. With reference to the large garden at Primrose Cottage being added to sporadic development. I am not sure this would be the case as the land to the south of Primrose Cottage is made up land which used to be a pond and ditch shown on old plans of the site. With regard to the access off Pigeon House Lane. As the site is on the outside of the bend on Pigeon House Lane, I have visibility to Well House in one direction and beyond the crossroads with Stryt Isa in the other direction making it safe to access the road. I would be prepared to recess my access to enable any visiting vehicle making deliveries etc., to be off the road. I would also ensure a turning area within the property to ensure no reversing of vehicles out onto the road. With reference to paragraph 4 regarding footpaths I am unable to see how the occupancy of	Inclusion of candidate site HCAC005	Not accepted. Primrose Cottage lies on the northern side of Pigeon House Lane and on the eastern side of Stryt Isa. The site adjoins the eastern boundary of Primrose Cottage and forms a long thin site with hedgerows and trees along its boundaries. The settlement boundary for Hope already follows a ribbon of development along Stryt Isa, with Primrose cottage and the proposed site located outside of the settlement boundary at the junction of Stryt Isa and Pigeon House Lane. The junction of these two roads is clearly part of the open countryside, featuring wide grass verges and hedges. Although there are existing dwellings Primrose Cottage and Ffordd Las just outside of the settlement boundary, they appear as sporadic dwellings in an open countryside setting rather than as part of the physical form and pattern of built development of Hope. The inclusion of the proposed site within the settlement boundary would necessitate the inclusion of the large garden at Primrose Cottage, increasing pressure for built development and extending the ribbon of development, which would be harmful to the open countryside. The proposed site and Primrose Cottage relate better to the open countryside than the built form of Hope, therefore they have not been included within the settlement boundary of Hope.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			one dwelling would require this as a condition.		
1206	PC1: The Relationship of Development to Settlement Boundaries	Object	Land at Bryn Y Baal Candidate site MYN006 regarding extension to settlement boundary and roll back green barrier EN11(10). Please refer to attached document The green barrier in this location is relatively narrow but part of the rationale for extent of green barrier designation is that they should not be excessive both in number and extent. Paragraph 4.13 of the existing UDP explains. A review was undertaken as part of the preparation of the LDP. Each green barrier was subject to an assessment that had regard to the need to make provision for development allocations where sites conformed with the Plan spatial strategy and detailed site assessment process. Such allocations should not harm the openness of the green barrier nor the purposes for designating the green barrier. This is somewhat pointless as Inspectors at appeal would consider virtually anything to affect its open character. In considering this candidate site the key factor is whether or extending the settlement boundary would be materially harmful to green barrier purposes.		Not accepted. The objector's representation in respect of the green barrier has been responded to under policy EN11, Rep 92. The objector's representation seeking its allocation as a residential gypsy and traveller site under HN8 is considered in id91. The proposed extension of the settlement boundary, and the removal of this site from the green barrier is small, however it would appear illogical to the current pattern of built form of Mynydd Isa and result in harm to the function of the green barrier and open countryside. As stated by the objector the site was subject to an appeal (Appeal Ref: APP/A6835/A/17/3175048) in August 2017, for the refusal of outline planning permission for 5 dwellings (056672). The inspector dismissed the appeal stating; "The site lies within the Mold – Mynydd Isa/Sychdyn/New Brighton green barrier which was designated for the purpose of safeguarding the open countryside around these settlements and preventing the settlements from merging into one another. The development would comprise the construction of some 4 dwellings and associated works on a site that would protrude out into the rural gap between Mynydd Isa and New Brighton. As such it would be harmful to the rural character and appearance of the area and to the openness of the green barrier, and it would erode the gap between the 2 settlements, contrary to UDP Policies GEN3 (in respect of development in the open countryside) and GEN4 (in respect of development in the green barrier). The site was considered as a potential development site at the UDP preparation stage but the UDP Inspector rejected it as it was considered to have more in common with the countryside than the settlement and to make a contribution towards the green barrier, "albeit it in a small way". That situation has not changed. Although a relatively small site which is only a small part of the green barrier, the harm due to its development for

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			The planning authority acknowledges that the site's contribution to the green barrier is small and seeks justification for this view by referring to 2 appeal decisions. The first appeal was in relation to an enforcement notice where the main issue related to the lawfulness of the use as a builder's yard over a period of time. This failed on the basis that there was insufficient evidence on the balance of probability that it had existed for 10 years although it was acknowledged that this only fell short by a matter of 2 months. The second appeal was in respect of the refusal of application reference 056672 for residential development where the Inspector concluded that harm to the green barrier designation outweighed the merits of residential development put forward at the appeal. It should be noted however that he also stated, "If the site was not located in a green barrier, these arguments would be finely balanced". The critical issue here is that the Inspector's decision was based on the policy that existed at the time. The difference now is that the green barrier is being reviewed as part of the development plan process and Inspectors' comments should therefore be considered in this context. In declining to make a small change to the settlement boundary the planning authority consider that the		housing would warrant considerable weight (in accordance with PPW advice). The green barrier has been reviewed as part of the LDP process, this review has resulted in the retention of the green barrier between Mynydd Isa and New Brighton, particularly the swathe of land to the east and west of Bryn Y Baal Road which plays a vital role in preventing the coalescence of the two settlements. The green barrier has already been reduced to the north of this site along the A494(T) at New Brighton, a further reduction would be harmful to the function of this green barrier. The objector states that the extension of the settlement boundary would appear to be a logical rounding off of Mynydd Isa. The extension would in fact result in the settlement boundary protruding in a ribbon style of development and not result in a rounding off of the settlement at all. The objector argues that the Council have removed land at Ewloe from the green barrier for residential development, however the allocated site at Ewloe is over 950m south from the settlement boundary of Connah's Quay at the nearest point, there is over 750m of green barrier between this allocation and Connah's Quay and over 1100m of green barrier from the settlement boundary of Shotton to the North East of the site. The green barrier between the objector's proposed site and New Brighton would be reduced to 120m at the narrowest point as an area of land at New Brighton, to the north east of the A494 has already been removed from the green barrier, leaving a total distance of 280m from the settlement boundary of New Brighton. The removal of the allocated site at Ewloe is not comparable to the objector's site at Mynydd Isa, where the green barrier is significantly smaller. Although the A494 separates Mynydd Isa from New Brighton, this is still an important green barrier which is already very small, therefore it would be detrimental to extend the settlement boundary and reduce it any further.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			site does not relate well to the form and pattern of nearby development. This is not the case and view of the physical form of the existing built settlement clearly shows that this is a logical extension and rounding off and fits with the principals that the authority has adopted in other new allocations adjacent to settlement boundaries. These include the much larger sites including the housing commitment at Mynydd Isa and new allocations at Abermorddu, Penyffordd, Ewloe Green, Mancot, Mold, New Brighton. All of these have substantially greater impact in terms of scale and character. The planning authority also state that the site has “greater association in character and appearance with the open land between the two settlements”. This is simply not true. The site is a triangular enclosed area with the well-defined former hard surfaced former highway between the site and the established hedgerow. The land beyond consists of open fields in agricultural production. Not only is it significantly different in character but it has no realistic beneficial use for agricultural purposes. The site is hard surfaced and, without substantial security fencing, is liable to incidents of fly tipping and other unauthorised activity.		

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			It is a matter of fact that extending the settlement boundary would narrow the gap which separates the Bryn Y Baal from New Brighton. This measures some 350m with the A494 Mold by-pass passing through the centre of this gap. The reduction in the gap if the settlement boundary were redrawn would be some 50m, i.e. 15%. This would not be visually significant and the perception of the green barrier and its role would not be damaging due to the existence of the strong defensible boundary. All development, by definition, has an effect but in this case that effect is not so damaging as to outweigh a very modest development in a highly sustainable location. The site's current status as green barrier should not be an impediment at this stage to development of the site. When producing a new plan it is incumbent on the authority to review the green barrier and make adjustments in the context of development need and sustainability. It has already done so at Ewloe where a large 10 ha site within the green barrier has been allocated to provide up to 300 dwellings. This is a major incursion into the green barrier with a substantially greater impact on landscape character than this small site at Bryn Y Baal which is well related to the existing settlement pattern. 3.8 Ysgol Mynydd Isa Primary		

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			School is within 0.4km and the Argoed High School is 0.7km away. It is 0.8km to the local clinic, library and convenience store in Mercia Drive. The nearest public open space is only 250m to the east at Bryn Road with the Argoed Sports and Social Club within 800m. Access to public transport is excellent with a bus stop 50m away on the main road. In sustainability terms it is far superior to housing land allocations that the planning authority has proposed. This is merely a statement of fact rather than any argument that this site should in any way substitute for those allocations. The proposal to redraw the settlement boundary to allow for a very modest development of two dwellings constitutes a very sustainable form of development. This modest contribution to housing land supply would not result in any material harm to the character of the area and, in the context given above, would not prejudice or weaken the green barrier in terms of actual effect and the policy overall.		
941	PC1: The Relationship of Development to Settlement Boundaries	Object	This policy is vague and does not enable existing facilities to expand beyond the settlement boundaries.		Not accepted. Policy PC1 which sets out the relevance of settlement boundaries is not considered to be vague. It clearly identifies that development within settlement boundaries is acceptable in principle and sets out circumstances where development may be acceptable outside settlement boundaries in a number of criteria. Criteria b. clearly refers to

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					'the specific forms of employment development as set out in the employment chapter'. It is also unclear why the objector is criticizing policy PC1 in respect of settlement boundaries, when the objector is seeking the inclusion of land with a Principal Employment Area, The small part of the industrial estate which lies within the Flintshire boundary is identified by a Principal Employment Area and not a settlement boundary. One of the employment policies in the Policy PE 3 Employment Development Outside Allocated sites and Principal Employment Areas does allow for new industrial office and warehousing development under certain conditions. However, in the context of the objection relating to the expansion of existing facilities, this is specifically covered in policy PE5. It is not considered necessary or appropriate for PC1 to make provision for expansion of existing development when this is addressed by policies elsewhere in the Plan. The specific site promoted by the objector on the edge of Chester will be commented on under separate policies.
972	PC1: The Relationship of Development to Settlement Boundaries	Object	It is difficult to see how the (draft) strategic housing/employment sites (especially Warren Hall) and (draft) housing allocation sites will manage to meet and comply with this policy.		Not accepted. As part of preparing the Plan, settlement boundaries have been reviewed. In the case of housing allocations in HN1 the settlement boundaries have been revised accordingly. The objector appears to be arguing that housing allocations should be within the existing UDP boundaries yet puts forward many sites for housing development which would warrant settlement boundary changes. The objector offers no explanation as to what the objection is saying or seeking. It is the case that the Warren Hall and Northern Gateway allocations do not have a settlement boundary. The sites were allocated in the adopted UDP and did not have a settlement boundary. Both are mixed use allocations in a strategic and sustainable location. The mere fact they do not have settlement boundaries does not question their appropriateness to be allocated in the Plan.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1101	PC1: The Relationship of Development to Settlement Boundaries	Object	I am writing to inform you that the original forms handed in in May 2014. That the land to the rear of Rosemount was then classed as Agricultural land. Since then I have been granted a Lawful Certificate of use dated 18th Sept 2018 (code No 058731). On this basis I would like the inspectors appointed to include the Candidate Site within the settlement boundary. It is my belief that it is now in the residential curtilage of Rosemount and not land located in the open countryside. I do believe the plan fits the tests of soundness as it is appropriate for the area. The site does not over shadow any other aspect and runs in line with existing housing developments to the east namely Bryn Eithin. As I have now obtained the Lawful Certificate of use I would like the line to now moved around my property and not through it.	Include Candidate site GYM002 Land to the rear of Rosemount Gwernymynydd within the settlement boundary.	Not accepted. The settlement boundary in the vicinity of the objection site includes the frontage development on the A494 as well as the estate type development at Llys Enfys and Bryn Eithin, which lies to the east. The settlement boundary then includes the frontage land to the north of the objection site, comprising the existing dwelling 'Rosemount' and the adjacent plot which has planning permission for a single dwelling. The settlement boundary then runs westwards along the A494(T). The delineation of the settlement is considered to represent a firm and defensible edge to built development. The objection site forms part of Clwydian Range and Dee Valley AONB which is a statutory landscape designation. The boundary of the AONB follows the edge of the built development at Bryn Eithin. That built development is well screened from the AONB by the steep wooded bank which runs along the edge of Bryn Eithin. The site forms a linear belt of open meadow land which sits between the belt of woodland to the east and the belt of woodland to the west which slopes down to Ffordd Maeshafn to the west. The objection site sits at the northern end of the swathe of land and forms a small paddock area. The objection site was the subject of a lawful development certificate application for use as domestic garden in connection with Rosemount. A certificate was issued on 18/09/18. However, the fact that the site is part of the garden area to Rosemount does not mean that it should be automatically included in the settlement boundary. In preparing the Plan, settlement boundaries have been drawn in a manner so as to clearly define the extent of built development. The implication of including land within a settlement boundary is that development proposals will be acceptable in principle. The site measures 0.21ha and could accommodate some 5-6 dwellings. This would relate poorly to the built form and pattern of development in the settlement and would create a precedent further releases of land to the south. Development on the site would not meet the test of either conserving or enhancing the natural beauty of the AONB.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Although the objector promotes a maximum of 3 dwellings (one of which could be an affordable unit), the site is capable of accommodating some 6 dwellings. It would result in a pressure for development which would appear as an 'island' of development and not form a logical extension to the settlement. The extant planning permission is considered to form the logical extent of built development in the settlement. Further extensions of built development on the site and beyond would be harmful to the character and appearance of open countryside and the AONB. Highways Officers consider the site to be unsuitable as there is no suitable access to the adopted highway. The objector has submitted an outline planning application (ref 061007) for the construction of two affordable dwellings and one private dwelling which is under consideration.
1182	PC1: The Relationship of Development to Settlement Boundaries	Object	For the reasons set out earlier in this Representation, there is a need to review the settlement boundaries around the Tier 3: Sustainable Villages to accommodate additional housing growth. There is a lack of non-greenfield land on which to build within settlement boundaries and that is one of the exceptional circumstances for the release of greenfield sites through the LDP. In view of our Client's land interests, this includes the settlement boundary of Penyffordd.	There is a lack of non-greenfield land on which to build within settlement boundaries and that is one of the exceptional circumstances for the release of greenfield sites through the LDP. In view of our Client's land interests, this includes the settlement boundary of Penyffordd.	Not accepted. This response should be read in conjunction with the response to the objection seeking allocation of the site in HN1 (id1179). The Council set out in its Preferred Strategy document a broad apportionment (accompanying policy STR2) of development between the different tiers of settlement hierarchy. The apportionment set out in the Deposit Plan is consistent with that. There is no objection from the Welsh Government in their formal representations on the Plan, indeed they have supported in principle the amount of growth and spatial strategy. The objector considers that the review of settlement boundaries has not produced sufficient opportunities for development in Tier 3 sustainable settlements. The objector considers that this is the case in Penyffordd / Penymynydd where a site is promoted. However, it is patently the case there is more than sufficient land within the settlement boundary of Penyffordd / Penymynydd given the three appeal decisions at Rhos Rd (North), Hawarden Rd and Chester Rd and a more recent appeal decision at Rhos Rd (South). The settlement has seen a large scale of development and a rapid pace of development at the end of the UDP period and beginning of LDP period and it is not considered necessary or appropriate for further sites to be provided in the Plan period. The settlement boundary for Penyffordd / Penymynydd has already been

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					amended to take account of the first three appeal decisions and will need to be further amended to take account of the recent appeal decision. In the Council's response on the HN1 objection it is considered that it is not necessary or appropriate to allocate the objection site and it is also not necessary or appropriate therefore to be included within the settlement boundary.
316	PC1: The Relationship of Development to Settlement Boundaries	Support	I wish to confirm my support for the LDP as it stands. In particular the plans for the boundary envelope presently described for Pantymwyn, namely plans numbered Pant001, 002, 003, 004, and 005. It is noted that other than one that is residential, they are all either agricultural or greenfield sites, and therefore excluded from development.		Support noted.
319	PC1: The Relationship of Development to Settlement Boundaries	Support	Supports settlement boundary as shown in LDP and objecting to a new development by Tan Y Felin, Greenfield for the following reasons Access to new estate, either via Tan Y Felin, Ffordd Dwyfor or School lane are already busy and added traffic would make it dangerous and have an impact on local residents. More traffic on Greenfield Road which in turn would cause bottle necks at the top of the well hill and onto the coast road. It will be dangerous for our children and elderly to cross the busy roads, there have been quite a few accidents on this road. The road leading all the way up Tan Y Felin and Ffordd Dwyfor is already a busy road, with cars parked on road sides as the houses		Support for the settlement boundary excluding land at Tan y Felin Greenfield is noted.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			developed here at least 25yrs ago have inadequate drive ways, bringing more people to the area will make the matter worse! During winter months, November to April, the top of Tan-y-Felin becomes isolated. Even the slightest hint of icy conditions make the roads impassable, Tan y Felin extends for approximately 800 metres and the ground rises nearly 50 metres from its conception at the B5121 to the present highest point at Tros Yr Aber. Extra housing could only compound the present situation, more families could be cut off from their daily routine, daily income could be lost and children could miss school time. If there was ever a serious accident that required immediate assistance from the services, fire, police, ambulance, then property and lives could be at risk. Present estate roads would be hard pushed to cope with extra traffic. Greenfield is made up of green fields and part of those would be lost, plus protected animals and species, owls, bats and badgers would be lost. Schools are almost full, who would provide the funds for a bigger school and teachers. Has any survey taken place to ensure that nationally protected species, such as great crested newts, are not also resident? Doctors and Dentists, we have none in Greenfield and currently have to go to our nearest town Holywell and getting appointments is hard enough now and it would be		

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			even harder if we have a larger population. Putting even more pressure on our services.		
356	PC1: The Relationship of Development to Settlement Boundaries	Support	Amendment is sought to the existing settlement boundary of Drury and Burntwood. Amendment 1 relates to the northern part of the settlement boundary. It is requested that the existing settlement boundary is adjusted eastwards to align with the ward boundary. This will provide a common boundary for both the settlement boundary and the ward boundary on the line of the former Hollins lane. A plan is attached denoted as appendix 1.This will enable the existing properties and curtilages to be included within the settlement boundary and not left isolated outside the settlement boundary. Amendment 2 relates to the southern part of the settlement boundary. It is requested that the existing settlement boundary is adjusted to Include the existing built properties and curtilages on Drury New Road. No future development is requested outside the existing curtilages of the existing properties. Adjusting the settlement boundary modestly will provide a sense of belonging to the Drury and Burntwood Settlement without eroding the green barrier outside of the existing curtilages. A plan is attached as appendix 2.	Amendment to the existing settlement boundary of the Drury & Burntwood settlement shown on the proposals maps.	Not accepted. Each suggested amendment to the settlement boundary of Drury will be addressed in turn: Amendment 1 - The amendment is not small scale in that it seeks to extend the settlement boundary by including some 2.7ha of intervening land. The inclusion of this land within the settlement boundary would bring with it an acceptance in principle of new development. Given the site area this could accommodate anything up to 81 dwellings. The suggested amendment includes a small woodland and pasture land wrapping around a number of randomly located dwellings. The present settlement boundary is presently well defined by the rear of residential properties on Dinghouse Wood and by Bank Lane. Given that there is already unannotated land within the settlement boundary on the south side of Bank lane, it is unclear why the objector seeks to include another large area of white land. Settlement boundaries are not drawn in order they replicate administrative ward boundaries but to i) mark the edge of existing built form and ii) define areas where development is deemed acceptable in principle, or not as the case might be. The proposed amendment to the settlement boundary would necessitate an equivalent drawing back of the green barrier. The incremental drawing back of the green barrier would unnecessary and unacceptable as to begin the process of incrementally eroding the green barrier reduces its role and purpose, and its integrity as per the comprehensive review undertaken as part of the Plan process. The northern part of the land was previously put forward as candidate sites (DRU005) and was not accepted by the Council on account of the harm to the openness and the role of the green barrier in protecting the edge of built development. The inclusion of additional land to the south of DRU005 would have an even greater impact.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Amendment 2 - The settlement boundary in this part of Drury is unchanged from the adopted UDP. On the western side of Drury New Road it follows the well-defined edge of development at Mornington Crescent. On the eastern side of Drury New Road the settlement boundary includes Drury Farm and Broad Oak and includes the substantial areas of hardstandings associated with the farm shop. The settlement boundary then follows the well-defined edge of built development along Newton Drive. It would be inappropriate to include the farm buildings and greenhouses associated with Lesters Farm Shop, within the settlement boundary as these are facilities that typically exist in open countryside and therefore have a relevance and logic to be located there, and do not need to be included with a settlement boundary in order to continue functioning as a farm shop or to better relate them to the settlement. It would be too easy to see such an argument or request repeated in multiple similar contexts where farms exist near to settlements which would be counter to the purpose of what a settlement boundary is for. The suggested settlement boundary would include the farm buildings, land to the south of Broad Oak and the dwellings of Benbradagh and Newlands both of which sit in large plots. The total area proposed for inclusion is 0.95ha and therefore does not represent a small settlement boundary change. From the edge of built development at Mornington Crescent, the settlement boundary would extend a further 118m and from the existing settlement boundary on the eastern side of Drury New Rd, the settlement boundary would extend a further 151m into open countryside. Settlement boundaries are delineated so as to differentiate between built development and open countryside, and do not either contribute to or take away from the separate identification of community identify and cohesion. They are simply a planning tool. It must therefore be borne in mind that inclusion of land within a settlement boundary implies that development will be acceptable in principle. In looking at this particular settlement boundary it is considered that the land and its use relates more closely to open countryside than it does to the built form and pattern of development in the settlement. The inclusion of the land within the settlement could result in scope for some 25 to 30 new dwellings. The proposed settlement boundary would not result in a logical delineation as it would result in a

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					finger of land extending along Drury New Road. Despite claims that this would not result in pressure for development, two candidate sites were submitted in the vicinity of Newlands seeking housing development. Both of these candidate site requests have not been accepted and as such there is no need to amend the settlement boundary. The objection not only has implications for the settlement boundary but also for the green barrier. The green barrier review concluded the need to prevent the coalescence (or threat of coalescence) between Buckley and Drury by retaining the green barrier. The extension of the settlement boundary and consequent drawing back of the green barrier would create pressure for further releases from the green barrier along the eastern side of Drury new Road.
832	PC1: The Relationship of Development to Settlement Boundaries	Support	Policy PC1 (The Relationship of Development to Settlement Boundaries) Policy PC1 of the Deposit Plan states: “Outside settlement boundaries new development will be permitted for: … c. development related to agriculture, minerals extraction, rural diversification, tourism, leisure and recreation, and existing educational and institutional establishments, provided there is no unacceptable impact on the social, natural and built environment and subject to complying with other Plan policies…”. Bourne Leisure endorses the Council’s positive approach to development related to tourism and recreation outside of settlement boundaries. The emerging Policy is appropriate in the light of the evidence for tourism and will help to deliver Objective 14. Further, draft Policy PC1 is consistent with PPW which states: “Whilst the		Support is noted

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			protection of the open countryside should be maintained wherever possible, the expansion of existing businesses located in the open countryside should be supported provided that there are no unacceptable impacts." (paragraph 5.6.4).		
927	PC1: The Relationship of Development to Settlement Boundaries	Support	PC1: The Relationship of Development to Settlement Boundaries We support the policy and agree that development proposed within settlement boundaries as defined on the Proposals Map will generally be supported. We note that the land at Drury Lane, Drury, is wholly within the settlement boundary and as such, is considered suitable for residential development.		Support Noted.
645	PC2: General Requirements for Development	Object	Policy PC2 provides general requirement for new developments. Consideration of Policy 9.2 TW considers that the policy, as written is vague and ineffective. The principles of design are covered within Strategic Policies, as well as supporting Policies PC3 and PC4. TW considers that Policy PC2 is, therefore not required. Neither the policy or supporting text provides justification for its inclusion and it does not provide parameters by which developers could measure where they accord with the Policy. Tests of Soundness 9.3 TW considers that the Council fails to meet the following tests of soundness: 1 Soundness Test	TW considers that Policy PC2 is, therefore not required. Neither the policy or supporting text provides justification for its inclusion and it does not provide parameters by which developers could measure where they accord with the Policy. Tests of Soundness The policy as currently worded is vague and	Not accepted. The purpose of policy PC 2 is to set out generic criteria to be used to assess all development proposals. The use of the words 'should, where appropriate' ensures that the criteria are expressed as policy requirements where they are most relevant and it is recognised that the listed criteria may not be relevant to all developments. It is made clear in the explanation that the plan should be read as a whole and that this policy is a single reference point for commonly use criteria to ensure all development considers the most important issues that are likely to have an impact. In response to concerns regarding duplication of policy criteria, matters listed under Policy PC2 may be referred to in other policies, however these policies are area/topic-specific or specific to certain types of development, whereas the generic policy criteria of PC2 are intended to apply to all types of development, where relevant.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			3: The policy as currently worded is vague and ineffective and not required. Recommended Change 9.4 TW would recommend that the Council omit this Policy from the FLDP.	ineffective and not required. Recommended Change 9.4 TW would recommend that the Council omit this Policy from the FLDP.	
779	PC2: General Requirements for Development	Object	In relation to the FCC's Development Management Policy for General Requirements for Development the key comments in the context of the Village Plan thematics and objectives and from the Community Council's perspective as a key stakeholder in the LDP process are as follows: a) Whilst Higher Kinnerton Community Council has adopted the aims and ambitions set out in the Wellbeing of Future Generations Act and Flintshire County Council's "A Wales of Cohesive Communities" and a "Healthier Wales", there is concern that with a major development of 300 new homes within the boundary of Higher Kinnerton creates a serious risk of a significant adverse impact on the safety and living conditions on nearby residents, other users of nearby land/property, or the community in general, through increased activity, disturbance, noise, dust, vibration, hazard, or the adverse effects of pollution. Going forward, any planning permission should ensure the development of Warren		Noted. The purpose of policy PC 2 is to set out generic criteria to be used to assess all development proposals. The use of the words 'should, where appropriate' ensures that the criteria are expressed as policy requirements where they are most relevant and it is recognised that the listed criteria may not be relevant to all developments. It is made clear in the explanation that the plan should be read as a whole and that this policy is a single reference point for commonly use criteria to ensure all development considers the most important issues that are likely to have an impact. In response to concerns regarding the Strategic Site at Warren Hall, this policy will help to mitigate against any adverse impacts which may result from this development on the surrounding area. Conditions will be attached to a planning permission and the issue of developer contributions will also be addressed at the full planning application stage.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Hall is controlled in such a way that mitigates the negative impacts of such a large single development via appropriate planning conditions, planning obligations or CIL charges (as appropriate).		
837	PC2: General Requirements for Development	Object	Policy PC2b (General Requirements for Development) Part b. of draft Policy PC2 states: "All development should, where appropriate: not have a significant adverse impact on the safety and living conditions of nearby residents, other users of nearby land/property, or the community in general, through increased activity, disturbance, noise, dust, vibration, hazard or the adverse effects of pollution." Bourne Leisure considers that it is essential for the amenity of those staying in holiday accommodation to be protected so that operators can continue to attract the large number of visitors who support the local economy through jobs, investment and visitor spending. As drafted, part b of Policy PC2 fails the first test of soundness as it does not align with national policy which seeks to prevent adverse effects upon amenity. For example, in relation to air and noise pollution, PPW states "Proposed development should be designed wherever possible to prevent adverse effects to amenity…" (paragraph 6.714). Bourne Leisure therefore proposes the following amendments to part b of Policy PC2:	Bourne Leisure therefore proposes the following amendments to part b of Policy PC2: "All development should, where appropriate: not have a significant unacceptable adverse impact on the safety and living conditions of nearby residents, other users of nearby land/property, or the community in general, through increased activity, disturbance, noise, dust, vibration, hazard or the adverse effects of pollution." (proposed amendments underlined and with strikethrough). The proposed amendments to Policy PC2 part b would mean that	Not accepted. The purpose of policy PC 2 is to set out generic criteria to be used to assess all development proposals. The use of the words 'should, where appropriate' ensures that the criteria are expressed as policy requirements where they are most relevant and it is recognised that the listed criteria may not be relevant to all developments. It is made clear in the explanation that the plan should be read as a whole and that this policy is a single reference point for commonly use criteria to ensure all development. It is considered that the use of the words ''significant adverse impact'' does mean 'unacceptable'. If something is 'significantly adverse' then it is by its very nature unacceptable. A|so the use of the term 'other users of nearby land/property' would relate to the amenity of people using holiday accommodation in the county. It is therefore considered unnecessary to add the word ''unacceptable''.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			““All development should, where appropriate: not have an significant unacceptable adverse impact on the safety and living conditions of nearby residents, other users of nearby land/property, or the community in general, through increased activity, disturbance, noise, dust, vibration, hazard or the adverse effects of pollution.” (proposed amendments underlined and with strikethrough). The proposed amendments to Policy PC2 part b would mean that this element of the Plan would satisfy the tests of soundness.	this element of the Plan would satisfy the tests of soundness.	
942	PC2: General Requirements for Development	Object	It is difficult to see how the (draft) strategic housing/employment sites (especially Warren Hall) and (draft) housing allocation sites will manage to meet and comply with this policy.		Not accepted. The purpose of policy PC 2 is to set out generic criteria to be used to assess all development proposals. The use of the words ‘should, where appropriate’ ensures that the criteria are expressed as policy requirements where they are most relevant and it is recognised that the listed criteria may not be relevant to all developments. It is made clear in the explanation that the plan should be read as a whole and that this policy is a single reference point for commonly use criteria to ensure all development considers the most important issues that are likely to have an impact.
1068	PC2: General Requirements for Development	Object	PC2: General Requirements for Development – a) we recommend including that development should contribute to Green Infrastructure.	a) we recommend including that development should contribute to Green Infrastructure.	Not accepted. The plan should be read as whole. Policies EN2, STR4, STR6 and STR13 all include reference to provision of or protection of Green Infrastructure. It is not considered necessary to include it in PC2.
957	PC2: General Requirements for Development	Object	It is difficult to see how the (draft) strategic housing/employment sites (especially Warren Hall) and (draft) housing allocation sites will manage to meet and comply with this policy.		Not accepted. The plan should be read as whole. Policies EN2, STR4, STR6 and STR13 all include reference to provision of or protection of Green Infrastructure. It is not considered necessary to include it in PC2.

182	PC2: General Requirements for Development	Support	The Coal Authority are pleased to see that land instability is identified within the policy criteria as an issue which should be addressed as part of development proposals.		Support is noted
681	PC2: General Requirements for Development	Support	Policy PC2: General Requirements for Development We support the inclusion of this policy and the requirement that all development should, where appropriate, not result in or be susceptible to problems related to foul and surface water drainage.		Support is noted.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
771	PC2: General Requirements for Development	Support	Policy PC2: General Requirements for Development supports 7.14. Our Client has no objection to the requirements of this Policy. The themes set out within the Policy are largely consistent with national guidance contained in PPW10 and relevant Technical Advice Notes and typically reflect what would be expected of good design and good practice.		Support is noted.
646	PC3: Design	Object	Policy PC3 seeks a high standard of design in new developments and sets out general design parameters for new developments. Consideration of Policy 10.2 TW acknowledges the importance of ensuring that new developments are of a high quality and that they respect the local vernacular and character of the surrounding area. In this respect TW broadly supports the principles of Policy PC3, however it objects to the Policy in its current wording as it is too general and not implementable. 10.3 For example, part e requires 'suitable provision of space about dwellings…' however it is not clear within either the policy or supporting text what the space standards are. Similarly, Part g requires all new development to 'incorporate Sustainable Urban Drainage Schemes', however the policy does not reference the potential viability implications or site constraints that may require alternative design solutions. 10.4 It is not clear to TW	Recommended Change 10.6 In order to address the conflicts above and ensure that Policy PC3 is sound, it is requested that the Council: 1 Considers whether the policy is necessary and justified; and, 2 On the findings above, amend Policy and the justification to provide a clear strategy as to how developers are to demonstrate how they will implement the design requirements	Not accepted. The purpose of this policy is to improve the overall quality of design for all new development in the County, an aspiration that is set out in national planning policy and one which the Council fully supports through the policy wording and accompanying SPG. In terms of the policy wording being too general, a specific Supplementary Planning Guidance Note No2 Space about Dwelling is available which give developers full details of the expected standards. Alongside the SPG information there is guidance on the SUDS systems available on the Councils Website. The Council firmly believes that if developers engaged fully with the pre application planning process and follow the existing guidance available around the appraisal of site context and design (TAN12) and with the use of SPG's that will aid their understanding of the design requirements for each site. The SPG Notes will be reviewed and adopted once the LDP has been adopted.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that the Policy is required above applicable nationally described standards set out in PPW and TAN12. Tests of Soundness 10.5 TW considers that Policy PC3 fails to meet the following tests of soundness: 1 Soundness Test 2: The policy is not specific or supported by robust evidence. 2 Soundness Test 3: As worded Policy PC3 is vague and ineffective. The Policy fails to provide thresholds for achieving these requirements listed in Parts a to g. Recommended Change 10.6 In order to address the conflicts above and ensure that Policy PC3 is sound, it is requested that the Council: 1 Considers whether the policy is necessary and justified; and, 2 On the findings above, amend Policy and the justification to provide a clear strategy as to how developers are to demonstrate how they will implement the design requirements		
1070	PC3: Design	Object	PC3: Design – a) we recommend including use of colour and use of lighting here and e) refers to amenity space, landscaping and planting – this should all be included as part of a comprehensive landscape scheme. Unclear what 'landscaping' refers to. SPG Space Around Dwellings is referenced. We recommend comprehensive design guidance SPG including spaces, buildings, scale, form, materials, colour, lighting as a holistic guide to buildings and	we recommend including use of colour and use of lighting here and e) refers to amenity space, landscaping and planting – this should all be included as part of a comprehensive landscape scheme. Unclear what 'landscaping' refers	Not accepted. It is not considered necessary for criteria a) to refer to lighting when lighting is specifically mentioned in criteria e. Criteria a refers to 'design' and 'materials' and these terms are quite capable of considering 'colour' and other issues such as 'texture' without specific reference in the policy wording. The policy has sought to include the key terms. In criteria e) reference is made to landscaping and uncertainty as to what this means. In a common sense meaning, the dictionary definition of 'landscaping' is 'the process of making a garden or other piece of land more attractive by altering the existing design, adding ornamental features, and planting trees and shrubs'. As part of looking at the design of a development it is good practice to consider the role that landscaping can play in the scheme.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			landscape. NRW would welcome reference in this section to including opportunities to enhance and interpret geodiversity when designing schemes.	to. SPG Space Around Dwellings is referenced. We recommend comprehensive design guidance SPG including spaces, buildings, scale, form, materials, colour, lighting as a holistic guide to buildings and landscape. NRW would welcome reference in this section to including opportunities to enhance and interpret geodiversity when designing schemes	The Council has a series of adopted SPG's and appendix 2 of the written statement identifies those SPG's which the Council intend to review and adopt. Given the design guidance in TAN12 Design and the increased emphasis on Placemaking in PPW10 that a comprehensive design guide for the County is either necessary or appropriate. The Plan needs to be read as a whole and the objector has submitted a separate objection to policy EN6 seeking reference to geodiversity.
889	PC3: Design	Object	Policy PC3 establishes a checklist to ensure that new development embrace the objectives of good design. PGNGL support the aims and objectives of policy PC3, and further support the acknowledgement within paragraph 9.8 of the explanatory text that the criteria will not be applicable to all types of development, such as utilitarian buildings. 7.4. PGNGL consider that it is important to retain the sentiment of paragraph 9.8 and considers that the explanatory text should be expanded and amended in relation to key employment areas	To overcome the objection and address soundness matters, the Council should: • Provide greater flexibility in the explanatory text paragraph 9.8, in relation to scale on strategic employment locations such as STR3	Not accepted. The purpose of this policy is to improve the overall quality of design for all new development in the County, an aspiration that is set out in national planning policy and one which the Council fully supports through the policy wording and accompanying SPG. That the policy wording should address the need of employment areas, the policy clearly states ''should, where appropriate'' which allows for the flexibility as suggested by the representor. The Council firmly believes that if developers engaged fully with the pre application planning process and follow the existing guidance available around the appraisal of site context and design (TAN12) and with the use of SPG's that will aid their understanding of the design requirements for each site. In this way developers will be fully aware of requirements early on the development process.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			where the current scale of buildings may not reflect the scale of buildings required for modern manufacturing processes and that may still be acceptable given the nature of the existing uses surrounding. PGNGL consider that these amendments are required in order that the plan is sufficiently flexible and does not unnecessarily constrain economic growth. 7.5. PGNGL consider that the requirements as explained in the explanatory text are not sufficiently effective and do not provide an appropriate strategy. PGNGL consider that the Plan in its present form could fail to deliver sustainable development in accordance with the policies in the Framework and is not consistent with national policy. In these circumstances, we do not consider the Flintshire Local Development Plan, in its current form, to be sound. 7.7. However, PGNGL consider that with increased flexibility within the Explanatory Text the Local Development Plan can be found sound. PGNGL will continue to work with the Council to develop appropriate modifications to the Local Development Plan. Proposed Change 7.8. To overcome the objection and address soundness matters, the Council should: • Provide greater flexibility in the explanatory text paragraph 9.8, in relation to scale on strategic employment locations such as STR3.		The SPG Notes will be reviewed and adopted once the LDP has been adopted.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
214	PC3: Design	Support			Support is noted.
833	PC3: Design	Support	PC 3 Design. Bourne Leisure endorses the Council's approach for development to, where appropriate, respect and enhance the site and its surroundings; retain existing landscape and nature conservation features and incorporate opportunities to enhance biodiversity; and to protect and enhance the historic environment. The emerging policy takes a proportionate and pragmatic approach to delivering development, recognising that the criteria may not be applicable to every project. Under the heading "Tourism", PPW states that planning authorities should "…enable complementary development such as accommodation and access to be provided in ways which limit negative environmental impacts and consider the opportunities to enhance biodiversity." (paragraph 5.5.6). Paragraph 6.4.21 of PPW also states that enhancements should be achieved wherever possible. Therefore, draft Policy PC3 is consistent with national policy and once adopted will help to deliver the Objectives of the Plan.		Support is noted.
717	PC3: Design	Support	Policy PC3: Design We support the need for "good design." This includes the use of quality materials, landscaping and open space, and sustainable urban drainage systems all of which form key components of		Support is noted

			sustainable development for current and future generations. We also support inclusive accessibility standards and adaptation to climate change, all of which contribute to the creation of a sense of place, quality of life and well-being.		
772	PC3: Design	Support	Policy PC3: Design 7.15. As a leading housebuilder in North Wales, our Client has a full and comprehensive understanding of what entails “good design.” This is reflected through their housing developments, all of which are built to a high standard. This includes the use of quality materials, landscaping and open space, and sustainable urban drainage systems all of which form key components of sustainable development for current and future generations. Our Client is also familiar and compliant with inclusive accessibility standards and adaptation to climate change, all of which contribute to the creation of a sense of place, quality of life and well-being.		Support is noted.
1174	PC3: Design	Support	Policy PC3: Design Our Client supports the need for “good design.” This includes the use of quality materials, landscaping and open space, and sustainable urban drainage systems all of which form key components of sustainable development for current and future generations. Our Client also supports inclusive accessibility standards and adaptation to climate change, all of		Support is noted.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			which contribute to the creation of a sense of place, quality of life and well-being.		
1157	PC4: Sustainability and Resilience of New Development	Object	PC4 must be enforced. Wales cannot reach its carbon target of 2030 if any new houses are built not using sustainable energy sources.		The comments are noted but it is stressed that the issue of energy efficiency / generation measures have been incorporated into Building Regulations. Welsh Government has recently consulted on proposals, in the context of its declared climate change emergency, for tougher new standards for new housing in terms of energy, to be implemented in full by 2025. At present there is no requirement in PPW10 for every new house to incorporate renewable energy. Nevertheless, Policy EN12 seeks to ensure that new larger scale development maximizes the potential for renewable energy.
1071	PC4: Sustainability and Resilience of New Development	Object	PC4: Sustainability and Resilience of New Development – c) we welcome the inclusion of 'incorporating planting, landscaping and design features which mitigate the effects of climate change' but advise that these elements all form part of a comprehensive landscape scheme and recommend that reference is made to Sustainable Management of Natural Resources (SMNR). Similarly, 9.11 and 9.13 should reference SMNR and comprehensive, integrated landscape scheme for the development.	we welcome the inclusion of 'incorporating planting, landscaping and design features which mitigate the effects of climate change' but advise that these elements all form part of a comprehensive landscape scheme and recommend that reference is made to Sustainable Management of Natural Resources (SMNR). Similarly, 9.11 and 9.13 should reference SMNR and comprehensive, integrated	Partly accepted. The aim of the policy is to ensure that the main principles of sustainable development are taken into account and incorporated at an early stage in the design process. Support for the c) of the policy is welcomed. The terminology 'Sustainable Management of Natural Resources' is clearly referenced in PPW10 and it is not clear why it is essential for this to be repeated in the explanation to the policy. However, if the Inspector considers that reference to SMNR would improve the understanding and implementation of the policy then the Council would have no objection to this.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				landscape scheme for the development.	
1142	PC4: Sustainability and Resilience of New Development	Object	PC4 must be enforced. Wales cannot reach its carbon target of 2030 if any new houses are built not using sustainable energy sources.		The comments are noted but it is stressed that the issue of energy efficiency / generation measures have been incorporated into Building Regulations. Welsh Government has recently consulted on proposals, in the context of its declared climate change emergency, for tougher new standards for new housing in terms of energy, to be implemented in full by 2025. At present there is no requirement in PPW10 for every new house to incorporate renewable energy. Nevertheless, Policy EN12 seeks to ensure that new larger scale development maximizes the potential for renewable energy.
662	PC4: Sustainability and Resilience of New Development	Support	Policy PC4: Sustainability and Resilience of New Development We support the inclusion of this policy and its requirement that development should utilise sustainable construction techniques to maximise water conservation		Support is noted.
928	PC4: Sustainability and Resilience of New Development	Support	PC4: Sustainability and Resilience of New Development We do not object in principle to the objectives of the policy. However, we do object to point e) which refers to incorporating renewable energy technology. In our view, energy reduction and efficiency is covered by building regulations and we see this as dual control. As such, it is not necessary as it is adequately addressed outside of the planning system.		Noted. The aim of the policy is to ensure that the main principles of sustainable development are taken into account and incorporated at an early stage in the design process. Support for the objectives of the policy is welcomed. The Council recognises the need to strike the correct balance between promoting change and the better quality of life that sustainable housing creates on the one hand and inhibiting development by placing onerous requirements on developers, on the other hand. LDPs should not duplicate or contradict national planning policy or legislation such as building regulations. The Council is aware that Welsh Government, in view of its climate change emergency declaration, has recently consulted on proposals to introduce tougher requirements on housing development in terms of energy with a view to this being implemented fully by 2025. In this broader context of the increased importance in PPW10 on energy, it is considered reasonable and appropriate for the Plan to reference the need to consider renewable energy. The wording of criteria e is qualified by the term 'where appropriate' and must be read in conjunction with EN12.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
778	PC4: Sustainability and Resilience of New Development	Support	Policy PC4: Sustainability and Resilience of New Development 7.16. Our Client has no objection to the requirements of this Policy. The themes set out within the Policy are largely consistent with national guidance contained in PPW10 and relevant Technical Advice Notes and typically reflect what would be expected of sustainable development which is capable of enduring		Support is noted.
414	PC5: Transport and Accessibility	Object	object to criteria d (a requirement for 10% of spaces to have electric charging points) as this is not currently supported by national legislation. This is a subject which should be dealt with at National policy level to ensure consistency across Wales and to ensure it is in line with Building Regulation requirements.	Criteria should be removed.	Not accepted. Criterion d. clearly states that it only applies to 'non-residential' development. This is in accordance with para 4.1.39 of PPW10. In the context of recent Government announcements about phasing out of fossil fuel powered vehicles, the policy approach is quite appropriate and in line with PPW10.
691	PC5: Transport and Accessibility	Object	No actual sites are mentioned in detail, consequently no land protected. There is not a procedure for a planning application to be tested. Consequently an application would be approved to the detriment of railway transport. In addition to railway enforcement land needs to be protected for: Bus access and turning Cycle storage Park and ride According to the actual site and the catchment.	No actual sites are mentioned in detail, consequently no land protected.	Not accepted. The Deposit plan recognizes (para. 9.21) that it is not able to directly influence existing public transport facilities and services, and (para.9.22) that the Policy must be read and implemented in the context of budgetary pressure on public transport services. The Policy therefore lists criteria against which new development proposals can be assessed. The Council acknowledges that no specific sites are referenced in the Deposit plan. PPW 10 (para.5.3.3) advises that 'Blight should be kept to a minimum by including in development plans only schemes which are likely to commence within the Plan period.' In the context of this policy it is unclear what 'railway enforcement' means. Also the objector does not identify any specific sites or schemes that need to be safeguarded for the types of facilities listed. It must be stressed that many of these can be progressed without land being safeguarded in the Plan.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
784	PC5: Transport and Accessibility	Object	In relation to the FCC's Development Management Policy for the Protection of Disused Railway Lines the key comments in the context of the Village Plan thematics and objectives and from the Community Council's perspective as a key stakeholder in the LDP process are as follows: a) To develop and enhance green infrastructure, the community and external agencies should be engaged with to develop a 'walkable' wildlife corridor along the old railway line embankment running between Bennett's Lane and Main Road including working with FCC to support the development of the Active Travel network and with local land owners to gain access to unused and currently unavailable parts of the old railway line to create new public rights of way wherever possible. b) A planning obligation should be a prerequisite to any development so secure a financial contribution from the developer via a S106 agreement to promote the development of the Active Travel Network including routes along disused railway lines.		Not accepted. The aspirations of the Community Council in relation to the future use of the disused railway line in Kinnerton are in no way hindered by the Policy. The suggestion that a planning obligation should be a prerequisite to any development to secure a financial contribution from the developer via a S106 agreement to promote the development of the Active Travel Network is not accepted. An agreement can only be included if it meets the statutory tests, ie it is necessary to make the development acceptable in planning terms, it is directly related to the development, and it is fairly and reasonably related in scale and kind'.
1072	PC5: Transport and Accessibility	Object	PC5: Transport and Accessibility and PC6: Active Travel – we advise that these policies should make reference to Green Infrastructure and the importance of walking and cycling along green routes.	we advise that these policies should make reference to Green Infrastructure and the importance of walking and cycling along green routes.	Not accepted. The Plan needs to be read as a whole and advice in respect of green infrastructure is set out in EN2.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
720	PC5: Transport and Accessibility	Support	We support the need for new development to be sustainably located; this goes hand in hand with the sustainability objectives expressed in national guidance. We actively promotes walking and cycling within our development schemes through the provision of dedicated pedestrian and cycle linkages where possible. This will continue to be the case. The impacts of new development should continue to be assessed as part of the development management process, particularly in relation to network capacity and road safety. The flexibility towards parking standards expressed in paragraph 4.1.53 of PPW10 should feed down into the development management process, and it is noted that there is recognition to this effect in paragraph 9.17 of the Deposit Plan. This will allow for much greater flexibility in respect of car parking provision on a site by site basis, and particularly given that some sites will be more sustainably located than others (particularly in relation to access to public transport services).		Support is noted.
780	PC5: Transport and Accessibility	Support	Policy PC5: Transport and Accessibility 7.17. Our Client supports the need for new development to be sustainably located; this goes hand in hand with the sustainability objectives expressed in national guidance. Our Client actively promotes walking and cycling within their development		Note that representation 720 supports the need for new development to be sustainably located. Re Rep. 780, Para. 9.17 requires developments to provide appropriate levels of parking in accordance with the maximum parking standards approach embodied in para 4.1.53 of PPW10 and does recognise that this para. ‘stresses that Parking standards should be applied flexibly and allow for the provision of lower levels of parking…’

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			schemes through the provision of dedicated pedestrian and cycle linkages where possible. This will continue to be the case. The impacts of new development should continue to be assessed as part of the development management process, particularly in relation to network capacity and road safety. The flexibility towards parking standards expressed in paragraph 4.1.53 of PPW10 should feed down into the development management process, and it is noted that there is recognition to this effect in paragraph 9.17 of the Deposit Plan. This will allow for much greater flexibility in respect of car parking provision on a site-by-site basis, and particularly given that some sites will be more sustainably located than others (particularly in relation to access to public transport services).		
1175	PC5: Transport and Accessibility	Support	Policy PC5: Transport and Accessibility Our Client supports the need for new development to be sustainably located; this goes hand in hand with the sustainability objectives expressed in national guidance. The impacts of new development should continue to be assessed as part of the development management process, particularly in relation to network capacity and road safety. The flexibility towards parking standards expressed in paragraph 4.1.53 of PPW10 should feed down into the		Support is noted.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			development management process, and it is noted that there is recognition to this effect in paragraph 9.17 of the Deposit Plan. This will allow for much greater flexibility in respect of car parking provision on a site-by-site basis, and particularly given that some sites will be more sustainably located than others (particularly in relation to access to public transport services).		
595	PC6: Active Travel	Object	OBJECTS to Policy PC6. JUSTIFICATION 5.2 The policy states that: “New development proposals should ensure that people have access to employment, education, healthcare and other essential services and facilities as a result of:” 5.3 Six criteria are then set out. 5.4 It is simply not realistic that all sites will meet this statement. For example Part (f) of the policy states “the incorporation of existing public rights of way as an integral part of the design and layout of the development”. 5.5 Again, whilst this may be desirable, it is not always achievable and sometimes public rights of way need to be diverted to allow for development. AMENDMENTS SOUGHT 5.6 Policy PC6 is considered unsound in that it is not appropriate for the area as it sets an unreasonably high bar for applicants and should be reworded to allow some flexibility. This could be achieved by the first paragraph of the	5.6 Policy PC6 is considered unsound in that it is not appropriate for the area as it sets an unreasonably high bar for applicants and should be reworded to allow some flexibility. This could be achieved by the first paragraph of the policy being reworded as follows: “The Council will promote active travel, in appropriate schemes, through”:	Partly accepted. It is accepted that the criteria within the policy may not apply to every development, particularly smaller scale development in rural areas. If the Inspector considers that the policy would be improved by adding after ‘should’ the words ‘wherever possible’ then the Council would have no objection to this.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			policy being reworded as follows: "The Council will promote active travel, in appropriate schemes, through":		
694	PC6: Active Travel	Object	No actual sites are mentioned in detail, consequently no land protected. There is not a procedure for a planning application to be tested. Consequently an application would be approved to the detriment of railway transport. In addition to railway enforcement land needs to be protected for: Bus access and turning Cycle storage Park and ride According to the actual site and the catchment.	In addition to railway enforcement land needs to be protected for: Bus access and turning Cycle storage Park and ride According to the actual site and the catchment	Not accepted. The Deposit plan recognizes (para. 9.21 that it is not able to directly influence existing public transport facilities and services, and (para.9.22 that the Policy must be read and implemented in the context of budgetary pressure on public transport services'. The Policy therefore lists criteria against which new development proposals can be assessed. The Council acknowledges that no specific sites are referenced in the Deposit plan. PPW 10 (para.5.3.3) advises that 'Blight should be kept to a minimum by including in development plans only schemes which are likely to commence within the Plan period.'
775	PC6: Active Travel	Object	In relation to the FCC's Development Management Policy for Active Travel the key comments in the context of the Village Plan thematics and objectives and from the Community Council's perspective as a key stakeholder in the LPD process are as follows: b) The proposed Warren Hall outline plan shows many footpaths and cycleways running through the development. The development should provide a well thought out network of footpaths and cycleways that not only connect to Flintshire County Council's active travel routes but also provided connectivity to the existing village with the aim being to link both parts of the community with a new integrated walking and cycle network. Any development should promote and enhance the value the		Noted. The masterplan clearly shows a network of green infrastructure and walking / cycling routes through the site. The policy requires that the development links in with the Active Travel scheme linking Mold, Buckley and Broughton, which is being developed by the Councils Transport Strategy unit. Consideration will be given to ensuring links between the site and the Active travel route and Higher Kinnerton.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			environment with more green spaces, footpaths and cycleways, as recommended by the Transport for New Homes Study, and provide facilities for a growing environmentally friendly transport system.		
958	PC6: Active Travel	Object	We do not believe that STR3B can meet this policy.		Not accepted. The Warren Hall site lies close to two potential Active Travel routes. The first route is a strategic route between Mold, Buckley and Broughton and on to Deeside which runs along the A5104 which runs along the site frontage. Funding is being applied for to deliver this route. A longer term variation of the same route is to cross over the A55(T) from Dobshill to enter Broughton via Old Warren. Policy STR3 clearly references the need for sustainable transport links with the route and nearby settlements. The Council's Transport Strategy team are also looking at achieving links between this Active Travel route and the village of Higher Kinnerton, with a potential route along either Kinnerton lane or Lesters lane. It is considered that the site can achieve sustainable transport links either by walking, cycling or the bus services which passes the site.
973	PC6: Active Travel	Object	We do not believe that STR3B can meet this policy.		Not accepted. The Warren Hall site lies close to two potential Active Travel routes. 695	PC7: Passenger Transport	Object	No actual sites are mentioned in detail, consequently no land protected. There is not a procedure for a planning application to be tested. Consequently an application would be approved to the detriment of railway transport. In addition to railway enforcement land needs to be protected for: Bus access and turning Cycle storage Park and ride According to the actual site and the catchment.	In addition to railway enforcement land needs to be protected for: Bus access and turning Cycle storage Park and ride According to the actual site and the catchment.	Not accepted. The Deposit plan recognizes (para. 9.21 that it is not able to directly influence existing public transport facilities and services, and (para.9.22 that the Policy must be read and implemented in the context of budgetary pressure on public transport services'. The Policy therefore lists criteria against which new development proposals can be assessed. The Council acknowledges that no specific sites are referenced in the Deposit plan. PPW 10 (para.5.3.3) advises that 'Blight should be kept to a minimum by including in development plans only schemes which are likely to commence within the Plan period.' In the context of this policy it is unclear what 'railway enforcement' means. Also the objector does not identify any specific sites or schemes that need to be safeguarded for the types of facilities listed. It must be stressed that many of these can be progressed without land being safeguarded in the Plan.
209	PC7: Passenger Transport	Support	Support		Support is noted.
348	PC8: Airport Safeguarding Zone	Object	Paragraph 9.24 is the only explanatory text within the draft LDP which relates to Policy PC8: Airport Safeguarding Zone. The paragraph is not consistent with national policy and both the paragraph and LDP, as a consequence, fail to properly and clearly explain the implications of the Policy and its application. As such, it fails to properly address a key issue. The aerodrome safeguarding process is included in UK legislation / guidance as an integral part of the planning system. The relevant national policy is set out in Circular 01/2003 Safeguarding of Aerodromes, Technical Sites and Military Explosive Storage Areas; and The Town and Country Planning (Safeguarded	Paragraph 9.24 should be amended as follows and supplemented with further paragraphs as set out below. 9.24 Airbus currently owns the airport and is the main user. However, other uses include Police, Air Ambulance and Military helicopters, Military Training Jets and Private Business Jets, as well as flight training. Alongside	Accepted. The Council would be agreeable to an amendment to the wording of the final sentence of Para 9.24 to read 'Consultation will be carried out with the Airport operator and the Civil Aviation Authority' if the Inspector considers that this would improve the implementation of the policy.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			aerodromes, Technical Sites and Military Storage Areas) Direction 2002 (updated December 2016). The Direction identifies, contrary to the current wording of paragraph 9.24, that the consultation process operates between Flintshire County Council, as the Local Planning Authority (LPA), and the 'consultee' defined as the owner or operator of the aerodrome (in this case Airbus). Further, the Civil Aviation Authority (CAA) is only consulted, by the LPA, in circumstances where it proposes to grant permission subject to conditions, contrary to the advice of the consultee. As above, the LDP also needs to better explain safeguarding in order that the requirements are fully transparent to future applicants for planning permission. Airbus would also note, for the Authority's information, that airfield safeguarding is not a 'fixed' regime and may well change over the LDP period. In brief: • The ICAO (International Civil Aviation Organization) is reviewing the current OLS (Obstacle Limitations Surfaces) which determine the safeguarding criteria for aerodromes at present. The new surfaces are going to be approved in 2021 and become effective from 2024; • The CAA and DfT are currently reviewing the status of Public Safety Zones (PSZ) in the UK. Although a PSZ is not yet established at Hawarden Airport, there is a possibility that in the	Airbus other companies based at Hawarden include Aerocare, Raytheon UK and NWMAS all of whom provide aircraft maintenance facilities on site. Aviation Park Group offer a range of services including Aircraft handling, overnight parking, hangarage and passenger services. 9.25 The safeguarding zone for Hawarden Airport is defined on a safeguarding map issued by the Civil Aviation Authority. This defines certain types of development that, by reason of their height, attraction to birds or inclusion of or effect upon aviation activity, require prior consultation with the Airport owner or operator. Government advice in OPDM Circular 1/2003 'Advice to Local Planning

In the context of this policy it is unclear what 'railway enforcement' means. Also the objector does not identify any specific sites or schemes that need to be safeguarded for the types of facilities listed. It must be stressed that many of these can be progressed without land being safeguarded in the Plan.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
782	PC9: Protection of Disused Railway Lines	Object	Through consultation with village residents, the steering group identified the following themes to be developed for the plan: ? Protecting our environment and open spaces. ? Promoting community life and social cohesion. ? Community growth through sensitive development. ? Supporting commerce in the community. The Village Plan takes each of these themes in turn, setting out the background and then, based on what we were told by residents in the survey, proposing a set of key objectives which can be delivered. As with many rural communities, the industrial revolution brought many changes, not least to the railway and Kinnerton's own station. The railway was dismantled in the 1960s but still provides a focal point as a popular footpath and public open space. In relation to the FCC's Development Management Policy for the Protection of Disused Railway Lines the key comments in the context of the Village Plan thematics and objectives and from the Community Council's perspective as a key stakeholder in the LDP process are as follows: a) To develop and enhance green infrastructure, the community and external agencies should be engaged with to develop a 'walkable' wildlife corridor along the old railway line embankment running between Bennett's Lane and Main Road including working with FCC to support		Not accepted. The aspirations of the Community Council in relation to the future use of the disused railway line in Kinnerton are in no way hindered by the Policy. The suggestion that a planning obligation should be a prerequisite to any development to secure a financial contribution from the developer via a S106 agreement to promote the development of the Active Travel Network is not accepted. An agreement can only be included if it meets the statutory tests, ie it is necessary to make the development acceptable in planning terms, it is directly related to the development, and it is fairly and reasonably related in scale and kind'. Developing a walkable wildlife corridor is something that can be developed outside of the LDP. It would be inappropriate for the Plan to safeguard further sections of the former railway line as an active travel or other route in the absence of firm evidence that the project is viable and deliverable.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the development of the Active Travel network and with local land owners to gain access to unused and currently unavailable parts of the old railway line to create new public rights of way wherever possible. b) A planning obligation should be a prerequisite to any development so secure a financial contribution from the developer via a S106 agreement to promote the development of the Active Travel Network including routes along disused railway lines.		
133	PC10: New Transport Schemes	Object	Plough Lane Link Road, Shotton.	Remove Plough Lane Link Road, Shotton.	Not accepted. The Plough Lane Link Road scheme would remove traffic from the B5129 through Shotton and has Preferred Route status. While the previous planning permission has lapsed the scheme is currently included in the Council's Highways Capital Programme. The scheme will be considered further as part of a number of other studies including the Chester Broughton Growth Corridor Study and the Flintshire Integrated Transport Proposals. The safeguarding of the route under Policy PC 10 reflects the above, but it is acknowledged in the Plan (para. 9.29) that the route 'has fallback potential as a sustainable transport corridor such as a walking/cycling route'.
170	PC10: New Transport Schemes	Object	I am writing with SHOTTON TOWN COUNCILS comments on the 'Deposit Flintshire Local Development Plan (LDP) Consultation 30th September – 11th November 2019. Shotton Town Council OBJECT to the Plough Lane Link Road in the Local Development Plan as it would be Detrimental to Peoples enjoyment of this area which has been Designated an area of Peace and Tranquillity with Wepre Park. It would also be Detrimental to Protected Species in the area.	OBJECT to the Plough Lane Link Road in the Local Development Plan as it would be Detrimental to Peoples enjoyment of this area which has been Designated an area of Peace and Tranquillity with Wepre Park.	Not accepted. The Plough Lane Link Road scheme would remove traffic from the B5129 through Shotton and has Preferred Route status. While the previous planning permission has lapsed the scheme is currently included in the Council's Highways Capital Programme. The scheme will be considered further as part of a number of other studies including the Chester Broughton Growth Corridor Study and the Flintshire Integrated Transport Proposals. The safeguarding of the route under Policy PC 10 reflects the above, but it is acknowledged in the Plan (para. 9.29) that the route 'has fallback potential as a sustainable transport corridor such as a walking/cycling route'. The route seeks to provide improved access between Aston Park Road (and the A55) adjacent to the Deeside Community Hospital and. It runs along Aston park Road with spurs to north and south along Shotton Lane.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Passing under the railway line the route follows Killins Lane for 100m before turning north to run along the western edge of the railway line to meet Chester Road East at Shotton. The Councils constraints maps indicate that there is only one historic asset along the route which is an archaeological feature relating to the former Shotton brickworks within the linear strip of open land to the west of the railway line. There are no landscape or natural environment designations along the route. The boundary of the SSSI and SAC lies 210m to the west of the route. The Council has created the Taliesin Nature Area on land between the Well House primary School and Killins Lane but this is not directly impinged on by the route. Clearly as detailed design work for the route is progressed it will be necessary to have regard to any indirect effects on the SSSI / SAC. There is no objection to the route from NRW.
697	PC10: New Transport Schemes	Object	No actual sites are mentioned in detail, consequently no land protected. There is not a procedure for a planning application to be tested. Consequently an application would be approved to the detriment of railway transport. In addition to railway enforcement land needs to be protected for: Bus access and turning Cycle storage Park and ride According to the actual site and the catchment.	In addition to railway enforcement land needs to be protected for: Bus access and turning Cycle storage Park and ride According to the actual site and the catchment	Not accepted. This representation does not relate to any of the schemes referenced under policy PC10. In the absence of comments on specific safeguarded road schemes it is not possible to this general representation which has been made to several Plan policies.
981	PC10: New Transport Schemes	Object	OBJECT to the inclusion of the Plough Link Road land safe- guarding in the plan, reasons being: 1. That it has been in the precious plans for 30 yrs,(advised) and there has been no plan to date of the actual road envisaged to be built, nor funding	EW.EU request Plough Ling Road land safe- guarding be deleted and the corridor become an Active Safe Travel	Not accepted. The Plough Lane Link Road scheme would remove traffic from the B5129 through Shotton and has Preferred Route status. While the previous planning permission has lapsed the scheme is currently included in the Council's Highways Capital Programme. The scheme will be considered further as part of a number of other studies including the Chester Broughton Growth Corridor Study and the Flintshire Integrated Transport Proposals. The safeguarding of the route under Policy PC 10

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			requested from the Welsh Government to provide the funding. EW.EU request it be deleted and the corridor become an Active Safe Travel Route for walking and cycling	Route for walking and cycling	reflects the above, but it is acknowledged in the Plan (para. 9.29) that the route 'has fallback potential as a sustainable transport corridor such as a walking/cycling route'.
1074	PC10: New Transport Schemes	Object	PC10: New Transport Schemes – we advise that this policy should refer to landscape and other environmental considerations, mitigation and potential enhancements. PC11: Mostyn Docks, by contrast, refers to environmental effects in relation to the Dee Estuary.	we advise that this policy should refer to landscape and other environmental considerations, mitigation and potential enhancements. PC11: Mostyn Docks, by contrast, refers to environmental effects in relation to the Dee Estuary.	Not accepted. The Plan needs to be read as a whole and advice in respect of landscape and other environmental considerations is contained in other policies in the Plan, eg PC3, PC4, EN4 & EN7. The specific reference to environmental considerations in PC 11 reflects the sites location in the Dee Estuary which is a European Marine site comprising a number of designations including SSI, a Ramsar site and a Special Area of Conservation.
1188	PC10: New Transport Schemes	Object	The LDP has not considered the impact of climate change on Holywell and Flintshire, with the ambition of the UK to be carbon neutral by 2030, a target date within the lifespan of this LDP. The case for a railway station to be reopened at Greenfield has been well made, and a must if we are to embrace the green agenda with land available for green industrial expansion to match for example the Kingspan development which is now carbon neutral. The need for walking, cycling, public transport, local employment and housing is urgently needed and was clearly illustrated in the County Council's recently successful funding application to	The LDP has not considered the impact of climate change on Holywell and Flintshire, with the ambition of the UK to be carbon neutral by 2030, a target date within the lifespan of this LDP. The case for a railway station to be reopened at Greenfield has been well made, and a must if we are to embrace the green agenda with land	Not accepted. Policy PC10 safeguards transport schemes which are being progressed by either Welsh Government or the County Council. These schemes are either those which feature in the Welsh Government National Transport Finance Plan and the Regional Transport Plan for North Wales or the Council's Capital Programme. There is no known scheme that has been agreed with landowners, and key stakeholders or funding secured to deliver a new or re-opened railway station at greenfield. Schemes should only be safeguarded or protected in the Plan. The site comprises part of an existing scrapyard adjacent to the railway line. The candidate site submission form previously submitted to seek the designation of the site for a station assumed that the land was Council owned which it is not. The land is either owned by the scrapyard or by Network Rail and the Council is unaware of any agreement reached in terms the land being available to accommodate a new station.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Welsh Government's Local Transport Fund (LTF), for developing the active travel routes through Greenfield Valley. This grant application did refer to a large scale housing development at Pen Y Maes which now appears to have been discarded from the LDP.	available for green industrial expansion to match for example the Kingspan development which is now carbon neutral. The need for walking, cycling, public transport, local employment and housing is urgently needed and was clearly illustrated in the County Council's recently successful funding application to Welsh Government's Local Transport Fund (LTF), for developing the active travel routes through Greenfield Valley. This grant application did refer to a large scale housing development at Pen Y Maes which now appears to have been discarded from the LDP.	The land is accessed off Station Road on its western boundary whilst to the north is vegetation alongside the railway. The site is dissected by a railway bridge which carries Dock Road. The site is used as a scrapyard and there is no indication that it is either available or suitable for a railway station. There is also no evidence that a railway station at Greenfield is necessary or feasible in terms of funding, customer numbers, impact on journey times / speeds etc. Highways Officers consider that the land is potentially suitable subject to a Transport Assessment. Access is available from Station Road however capacity on Station Road is limited. Appropriate car / bus / cycle parking / waiting / turning facilities would need to be provided. No such Transport Assessment has been provided. In the absence of evidence, justification and established proposals for a new station, it would be inappropriate to make an allocation in the Plan. Only sites which are realistic and likely to be delivered within the Plan period should be allocated in a development plan. Welsh Government confirm in para 7.18 of the draft Development Plan Manual 'While an LPA should ensure that adequate provision is made for development and infrastructure when preparing its LDP, it is important that proposals are realistic and likely to be implemented over the plan period'. Proposals for a new station could be considered against national planning policies in PPW10 and local planning policies, either in the adopted UDP or the LDP when adopted. The lack of an allocation or designation in the UDP will not prevent proposals being progressed by the Town Council and other parties, including the Council.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
554	PC10: New Transport Schemes	Support	This representation is made on behalf of a Trust which owns an area of land at Kelsterton Farm, Connah's Quay (Appendix 1). This land covers approximately 40Ha (98.8 acres) and is located south of Chester Road, between Connah's Quay and Flint. Given the site's size and its proximity to two 'Main Service Centre' settlements, we consider that this site provides a future opportunity for a range of land uses including residential, employment and roadside uses. We note that Policy PC10 outlines five new transport schemes that are safeguarded on the proposals map (Appendix 3). This policy is significant to the site because the A494(T)/A55(T)/A548 Northop to Shotwick Interchange Improvement (Point 1) proposed 'red route' cuts through the north western edge of the site, with the site of the remodelled Kelsterton junction falling on their land. We support this policy and its objective to take pressure off the existing A494/A55 and make more efficient use of the existing transport infrastructure.		The support for Policy PC10 is noted.
60	PC11: Mostyn Docks	Support	CPAT welcomes the intent of this policy to control the potential adverse effects of development on historic environment features		Support is noted.
776	PC12: Community Facilities	Object	In relation to the FCC's Development Management Policy for Community Facilities the key comments in the context of the Village Plan thematics		Noted. The aim of the policy is to ensure that community facilities are retained wherever possible and to encourage the development of new social and community facilities in sustainable locations.

ID	Title	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and objectives and from the Community Council's perspective as a key stakeholder in the LDP process are as follows: a) Through the Village Plan survey the continuing importance of our shop, public houses, village hall and scout headquarters were regularly hi-lighted and their usage needs to be sustained and encouraged. b) Part of Flintshire's Health, Community, Wellbeing and Cohesion document states "The role of the LDP or the key objectives will enable all local residents the opportunity to have access to quality housing, services, shops and leisure, recreational and sports facilities". The community of Higher Kinnerton has experienced over many years the decline of local services and the loss of a permanent post office creates an unnecessary problem for those in the community who are unable to travel freely out of the village or those who want the convenience of a traditional post office for basic services.		
237	PC12: Community Facilities	Support	Policy PC12- Community Facilities: The intention to minimise the loss of essential community facilities serving rural and other communities has the full support of the Joint Committee.		Support is noted.

Policy PE1

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
84	PE1: General Employment Land Allocations		Support	However the employment allocation at PE1.2 contains a number of historic assets and these will require assessment prior to development		The Council has noted and welcomes the support for Policy PE1 employment Allocations and noted the presence of historic assets. As this is an allocation and the Council are unable to predict exactly what use will be proposed for the site, or how this is laid out, it is difficult to assess any impact until a proposal is submitted as a planning application. The issue of impact on heritage assets and the potential for any mitigation can be incorporated as part of considering an application.
115	PE1: General Employment Land Allocations		Object	Connahs Quay Power Station: The representation specifically relates to the northern site within Connahs Quay Power Station. this land should be proposed as employment use to help meet the strategic employment land requirements within the plan period. the deposit plan does not take into consideration the unique qualitative benefits that the northern site has. The non-allocation of the site puts at risk the potential for national and regionally significant infrastructure project.	The northern site within Connahs Quay Power Station should be allocated as employment use.	Not accepted. The representation has been noted regarding land to the north of the Connah's Quay Power Station (CON89). However the council disagree with the objector. It is considered that sufficient land has been allocated for employment development within the County to identify the Growth needs over the plan period in accordance with the recommendation contained within the Employment Land Review, 2015. Specifically, policy EN13 within the LDP provides advice on renewable energy developments. It is unclear from the representation whether the site is being promoted for renewable energy development, non-renewable energy development or more general employment development. The site was not allocated for employment in the adopted UDP nor was it included in a Principal Employment Area. The submission contains no sustainability appraisal of either the site or the proposed uses which is of concern given the potential constraints present. With regards to the site, the land sits within Zone C1 flood risk and abuts the boundaries of the Dee Estuary SAC and SSSI and it is considered that the site better relates

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						to the open countryside and performs an important role in providing a buffering between the power station and the nature conservation designations. The representation is unclear in that it contains two maps showing the boundary of the Northern Site, of which Fig 1 includes a western portion of land (containing lagoons) which is part of the SSSI/SAC/SPA. Therefore it is not considered appropriate to allocate the site for an employment or energy generation use without having knowledge of what the proposal is. However the LDP contains guidance on renewable and low carbon energy development proposals in policy EN13 and also policy PE5 provides guidance on the expansion of existing employment uses, which may be applicable. Despite the words of support from the Welsh Government Department for Economy and Transport (North wales Regional Team), there is not considered to be sufficient detail or justification within the submission to warrant allocating such a sensitive site. The focus of the Plan is to deliver the two existing strategic sites of Northern Gateway and Warren Hall as these are key to the North Wales Growth Deal. It is not considered that the delivery of these sites would be assisted by identifying further large scale employment allocations, particularly in the absence of exactly what the need is for development on such a site.
117	PE1: General Employment Land Allocations		Object	The representation relates specifically to the Southern site within Connahs Quay Power Station. Uniper propose that the southern site is re-allocated for	To allocate the land to the south of Connah's Quay Power Station as an employment site under Policy PE1.	Not accepted. The representation has been noted regarding land to the south of Connah's Quay Power Station (CON090). However the council considers that sufficient land has been allocated for employment within the County to identify the Growth needs over the plan

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				employment use to help meet Flintshire Strategic employment land requirements. Deposit Draft Policy PE1 does not allocate the subject site for general employment uses, which is inconsistent with the adopted UDP and the evidence base for the Deposit Draft Plan. Suggested amended is to allocate the site as an employment site and employment area under Policy PE1.		period in accordance with the recommendation contained within the Employment Land Review, 2015. The candidate site was allocated in the UDP as EM1(7) - Former Power Station, Connah's Quay however the site was not listed as an allocation in the LDP. The 2015 Employment Land Review concluded that the site should be excluded from the realistic employment land supply because it was a site held for the expansion of an individual firm i.e. E.ON UK. The site cannot be developed separately from the power station and is assumed will be retained for associated uses. Additionally, the site has no obvious vehicular access and appeared to be dependent on the adjacent site / energy development for access. It contains buildings and structures associated with the former gas fired power station and will need reclamation and de-contamination measures. The land is situated within Zone C1 flood risk and is in close proximity to the Dee Estuary SAC, SPA and SSSI and it is considered that these represent constraints which the objector has not addressed. Previous planning applications for a converter station on the site were refused. The objector has now provided an updated position with the effect that the site is not now being held by the adjacent operator as expansion land, has been recently marketed, can be accessed from the local highway network and is now available for general employment development. However, the objection was lacking in detail in terms of provision of a vehicular access, suggested layout, and timescales. It is unclear whether the site is to be promoted in its present condition or whether it is to be reclaimed, and redeveloped as serviced industrial plots.

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						Given the sensitive location of the site in terms of constraints it is of concern that background and technical evidence has not been put forward as part of the submission. It is accepted now that the site is available for development and that it is a brownfield site which has previously been allocated for employment development in the UDP. However, given the lack of certainty in terms of necessary technical evidence to demonstrate that constraints can be overcome, It is not considered that there is sufficient confidence with which to allocate the land at present. Similarly, it is not considered that the site and the existing adjacent power station could reasonably be included within a new Principal Employment Area boundary as part of policy PE2. In conclusion given the site constraints and the lack of technical evidence to overcome them, the site is not considered appropriate at this point in time to be allocated for employment under policy PE1 nor is it considered suitable to be included, along with the adjacent power station, in a new Principal Employment Area within policy PE2. However, if the objector can provide the necessary technical evidence then this could be reviewed at examination.
663	PE1: General Employment Land Allocations			The following provisions are applicable to all proposed employment allocations in the LDP: • Water mains required for any potential development can be acquired through the water		The council welcomes the comments and has noted the representation. All provisions will be taken into consideration at planning application stage.

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				requisition provisions of the Water Industry Act 1991 (as amended). • Any proposed site which requires the provision of non-potable water for process use will need further examination to understand how this requirement could be delivered. • Sewerage required for any potential development site can be acquired through the sewer requisition provisions of the Water Industry Act 1991 (as amended). • Should potential end users of these sites require the discharge of new or amended trade effluent then the written consent of DCWW is required. • Under no circumstances would we allow surface water runoff from the proposed development to be discharged into the foul or combined public sewerage system. • The proposed employment allocations represent a substantial area of land for development for which the potential demands are unknown at		

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				present. It is essential that we understand these demands in order to allow us to assess the impact on our assets. It may be necessary for water and sewerage modelling assessments to be undertaken to establish how we would provide the water supply and where the proposed development could connect to the public sewerage system. At this moment in time our response is based on domestic demands only. 1. Chester Aerospace Park, Broughton 2. Manor Lane/Hawarden Park Extension, Broughton 3. Drury New Road, Buckley 4. Greenfield Business Park Phase 2 5. Greenfield Business Park Phase 3 6. Broncoed Industrial Estate, Mold 7. Mold Business Park 8. Adjacent Mostyn Docks 9. Chester Road East, Queensferry 10. ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
890	PE1: General Employment Land Allocations		Support	support the allocation of STR3A, however are concerned that the Proposals Map does not include the John Summers building within the allocation. XXX support the allocation of STR3A for Employment, to deliver 72.4 ha of employment land alongside the wider allocation which includes Housing, and commercial and community facilities. The Allocation is consistent with the Deeside Plan which considers that the Northern Gateway site is crucial to the economic growth ambitions of the region. It is consistent with the Wales Spatial Plan (2008) which identifies Deeside as a primary key settlement, a key regeneration area, key business sector and hub. Further, the emerging National Development Framework which identifies Wrexham and Deeside as a National Growth Area that are nationally significant. The NDF promotes their	To overcome the objection and address soundness matters, the Council should: Amend the Proposals Map to include the John Summers buildings and grounds within allocation STR3A • Ensure flexibility of uses for the John Summers Buildings consistent with the outline permission and allocation STR3A. • Amend policy or explanatory text to ensure that the Plan is sufficiently flexible to support non B1, B2, B8 uses that are suitable for location on General Employment areas and can contribute to the overall function of the employment area.	The representation is noted and the council welcomes the support of PE1. With regards to the John Summers listed building and associated land clearly fall within the boundary of the outline planning permission for the southern half of the Northern Gateway site. Policy STR3A also references in criteria 'x' to the need to secure sensitive re-use of the listed buildings and grounds. In this context there is clearly a mapping error on the proposals maps whereby the boundary of the strategic site allocation would have been extended to include the listed buildings and the boundary of the Principal Employment Area to be drawn back to the edge of the railway line. It is requested that the Inspector agrees to this as a mapping change to be addressed in the final version of the proposals maps.

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				continued Growth and regeneration and the focus for large scale employment opportunities and housing growth. 8.4. The uses identified are broadly consistent with the extant outline consent Application Ref 050125 "Outline application for employment-led mixed use development, incorporating logistics and technology park (B1, B2, B8) with residential (C3), local retail centre (A1), hotel (C3), Training and skills centre (C2, D1), new parkland, conversion of buildings, demolition of barns; associated infrastructure comprising construction of accesses, roads, footpaths/Cycle paths, earthworks and flood mitigation/drainage works" Approved on 14/05/2014, and the subsequently approved S73 application , ref: 056540 approved on 1/3/2018, which revised the quantum of residential development from 600 to 770 dwellings.		

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				8.5. XXX is however concerned that the allocation is not consistent with the designations shown on the Proposals Map. Allocation STR3 explicitly includes the John Summers Listed Buildings and grounds stating under criterion x 'sensitive reuse of John Summers Listed Buildings and Grounds'. The inclusion of these buildings is consistent with the outline planning permission ref 050125. The Proposals Map, however excludes the existing John Summers buildings from allocation STR3A. XXX consider that the Proposals Map should be revised to ensure that the John Summers buildings are included.		
944	PE1: General Employment Land Allocations		Object	We do not believe that sufficient employment land is identified and that a host of these sites will not come forward during the plan period.	Allocate more land for employment purposes.	Not accepted. The representation has been noted, however the council disagree with the objector. It is considered that sufficient land has been allocated within the County to identify the Growth needs over the plan period in accordance with the recommendation contained within the Employment Land Review, 2015. Furthermore, there is further flexibility inherent within the boundaries of the 30 Principle Employment Areas in terms of facilitating employment development through the re-use or re-

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
						purposing of existing sites and buildings within existing employment areas.
1052	PE1: General Employment Land Allocations		Object	Policy PE1: General Employment Land Allocations We have concerns regarding a number of the sites allocated under this policy as they are in flood risk areas but have not been appropriately assessed for deliverability by way of a Flood Consequence Assessment (FCA). This includes PE1.1, PE1.2, PE1.4, PE1.5, PE1.6, PE1.8, PE1.9, PE1.10, PE1.12. Full Details in appendix 1	We have concerns regarding a number of the sites allocated under this policy as they are in flood risk areas but have not been appropriately assessed for deliverability by way of a Flood Consequence Assessment (FCA). This includes PE1.1, PE1.2, PE1.4, PE1.5, PE1.6, PE1.8, PE1.9, PE1.10, PE1.12. Full Details in appendix 1	Not accepted. The representation has been noted and the Council, as agreed with the objector, have commissioned further work as part of the SFCA to assess the flood risk of the employment areas that are all existing sites reviewed and carried forward from the existing development plan, and not new sites. Where an employment site may be affected by flood risk, which is classed as 'less vulnerable development' in TAN15, at the planning application stage a developer will be required to submit an FCA as a supplementary document to illustrate how the consequences of flooding have been assessed, and what appropriate flood risk mitigation can be put in place. This is difficult to assess for an allocation as there is no definitive proposed use for the site at the development plan allocation stage, but the general SFCA work will indicate the developable areas of the employment sites.
879	PE1: General Employment Land Allocations		Object	The land is identified within the settlement boundary of Buckley, which is supported, however, the site of the former Dimplex factory is included in the Principal Employment Land designation - PE2.7 (Little Mountain Industrial Estate, Buckley) and part is allocated for future employment expansion	Remove the site of the former Dimplex factory, Drury New Road from the Principal Employment area PE2.7 and from the future employment expansion area under policy PE1.3	Not accepted. The proposed land was allocated as employment within the UDP in 2000 and has been allocated as employment again within the LDP. Proposals for the use to be changed to residential is considered inappropriate due to the site is not situated wholly within the settlement boundary additionally, the site is located in close proximity to the wildlife designation. Any submission of a planning application for housing would need to be considered against the site allocation and long-established use the site for employment purposes, and housing allocations already allocated as part of the LDP.

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				under Policy PE1.3 (Drury New Road, Buckley), as defined on the Proposals Map. This objection is raised to the land being included in the designation and part allocated, on account of the fact that the land does not best serve for employment purposes, either currently or for future consideration, and would better serve for an alternative land use, e.g. residential allocation. Justification for the exclusion of the land from the principal employment area designation is provided within the accompanying Commercial Viability Assessment Report, which concludes as follows: The subject site is situated on the eastern fringe of the urban settlement of Buckley and sits within the development boundary. The site comprises a vacant, detached manufacturing unit and an area of allocated employment land and a further area of land		The site was originally allocated in the UDP for employment purposes and has been re-allocated under Policy PE1 (PE1.3) of the Flintshire Local Development plan as part of Principle Employment area PE2.7. It is also allocated for future employment expansion. There is no intention to de-allocate the employment allocation in the LDP from this site.

ID	Title	allocated site:	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				which is not available for development for ecological reasons. XXX have been marketing the manufacturing building since the former tenant took the decision to vacate in May 2018. During this period, they have not received a single offer for the building.		
1249	PE1: General Employment Land Allocations		Object	There is also PEN 015 that I would like to include as formal business use, I withdrew my request for PEN 016 on your recommendation, but feel around the station does need to be taken more advantage of for employment or business opportunities.	There is also PEN 015 that I would like to include as formal business use, as land around the station does need to be taken more advantage of for employment or business opportunities.	Not accepted. The site comprises a narrow rectangular block of land at the north end of the railway station car park, on the eastern edge of the railway line. It has been used as a contractor's storage compound but is presently empty and contains no buildings or structures other than security fencing. Highways Officers consider the site to be unsuitable for the following reasoning 'Limited width access road, poor junction alignment and lack of junction visibility make this unsuitable to cater with any additional traffic, but accept that the site has had previous uses'. The Employment Land Review has identified that there is sufficient employment land to provide flexibility in terms of location, size and type of employment development. There is no need for further employment allocations in the Plan. In this context, and in view of the access constraint, it is not appropriate to allocate the site, particularly as it sits within open countryside. If a development proposal does come forward for specific employment development on the site then it can be assessed against Policy PE3 of the LDP.

Policy PE2

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
242	Policy PE2: Principal Employment Areas	Object	Stoney Beach Quarry & Pinfold Lane Quarry, Alltami 1. Principal Employment Area Table 18.3 Deposit Plan September 2019 Ref Number PE2.2 refers to Flintshire Council's Alltami Depot, Alltami as an Employment Area. 2. The Council is requested to include the adjacent land as a Principal Employment Area as shown outlined red on the attached plan also including the blue land within third party ownership. Within the red outline are existing significant Employment including the door manufacturing factory, also including an adjacent Welsh Water Maintenance Depot occupied by their appointed contractor, also including a horticultural contracting depot, also including a vehicle haulage depot, the latter two Employment uses / land areas are accessible from the rear access road from the Council's own highways depot (PE2.2) which access road is in shared use by all the Employment uses / tenants occupying our adjacent land as described. 3. In addition there is the third party blue land (shown within the land outlined red) which is also within existing Employment uses. 4. Our submission is for all the land within the red line to be allocated for Employment uses. The areas within the red line shown hatched	Our submission is for all the land within the red line to be allocated for Employment uses. The areas within the red line shown hatched have recycling waste management uses within existing quarries known as Stoney Beach Quarry and Pinfold Lane Quarry and these recycling waste management uses can / should also be designated for Employment uses.	Not accepted. In the vicinity of the objection site there are two Principal Employment Areas. To the west of the objection site and on the north side of the A494 is Alltami Depot which comprises the Council Depot and a range of other industrial units and uses to the rear. To the south of the objection site is Ewloe Barns Wood which is an industrial Estate comprising a range of waste management and industrial uses. The objection site has planning permission for and is used as an Integrated Waste Management Facility comprising a mixed waste treatment facility, a construction waste materials recycling facility, and a contaminated soils treatment facility. Planning Permission was granted on 14/07/2003 at what is known as 'Pinfold Lane Quarry' which is north of the access road for the reclamation of materials (basically inert waste recycling) this is consented until 21 February 2042 and has a condition (no 15) which requires a scheme to be submitted for 'final treatment' of the permitted area, access road and structures. The reason states in the interest of restoration to avoid dereliction from abandoned infrastructure and structures. The present use will take place until 21 Feb 2042, as this is the operation life. The submission of a scheme 'of final treatment' in

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			have recycling waste management uses within existing quarries known as Stoney Beach Quarry and Pinfold Lane Quarry and these recycling waste management uses can / should also be designated for Employment uses.		the interests of restoration and then the implementation of that scheme would be beyond the end of the Plan period. The area to the south is known as 'Stoney Beach Quarry' and this has a consent for an 'Integrated waste management facility comprising a mixed waste treatment facility, a construction waste materials recycling facility, and a contaminated soils treatment facility. This consent is not for a temporary period so has no end date and no requirement for restoration. The planning permission was granted on 23.01.2018 subject to a legal agreement to revoke the minerals consent on the site. However this has not been implemented. Both Stoney Beach Quarry and Pinfold Lane quarry are identified in Policy EN21 as a location of waste management. The minerals background paper at para 8.1.6 states that as there is adequate provision of employment land, this site has not been included as an allocation in the LDP and it is also inappropriate to be included within the Principal Employment Area.
132	Policy PE2: Principal Employment Areas	Object	The Deposit Draft Policy PE2 does not identify the Power Station as a Principle employment Area. The Connahs Quay Power Station is one of the most substantial and longstanding employment sites in Flintshire. The	Uniper suggest that the site is allocated as a principle employment area under Policy PE2. The proposed	Not accepted. PE2 seeks to identify on the proposals map the areas where employment development is in principle likely to take place. The principal employment areas comprise a mixture of, existing employment land and buildings, land or buildings with planning

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			deposit Plan does not take into consideration the unique benefits that the Connahs Quay site provides, which differentiate it from other employment areas within the county and indeed regionally/nationally. Uniper suggest that the site is allocated as a principle employment area under Policy PE2. The proposed amendment will ensure the Deposit Plan is sound.	amendment will ensure the Deposit Plan is sound.	permission (commitments), undeveloped employment allocations and other undeveloped unannotated land. In responding to the objectors representation regarding the Power Station Southern Site (PE1-id117) the Council considers that there are a number of constraints regarding the former coal fired power station and a lack of technical evidence to demonstrate that constraints could be overcome. The Council considers that it is inappropriate for the site to be allocated or included as part of a new Principal Employment Area. In respect of the northern power station site (PE1- id115) the Council considered that in the light of constraints, particularly the proximity / overlapping with ecological designations, and the open undeveloped nature of the site, that it would be inappropriate to be allocated or included in a Principal Employment Area. The existing power station site is different to the other Principal Employment Areas in that it does not have the same diversity of uses and mix of development. This is consistent with other free standing employment developments which are not identified as Principal Employment Areas such as Padeswood Cement Works and the Oakenholt Paper Mill. It is not appropriate for the existing power station to be designated as a new Principal Employment Area.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
684	Policy PE2: Principal Employment Areas	Object	The Flintshire LDP Proposals Map 2 Draft identifies the Site as part of a much larger Principal Employment Area designated under Policy PE2 for B1, B2 and B8 uses. Other economic uses of the site, such as energy uses not falling within B-class definitions, are not explicitly recognised, although the Site appears to be in proximity to a Possible Waste Site designated under Policy EN21, which permits waste management uses subject to detailed criteria in Policy EN22. Boundaries are not shown for this designation. Clarity is requested as to whether the DPL landholding is subject to the designation, and/or whether the designation refers to the Energy Recovery Facility currently being built to the east and anticipated to complete next month.	Clarity is requested as to whether the DPL landholding is subject to the designation, and/or whether the designation refers to the Energy Recovery Facility currently being built to the east and anticipated to complete next month.	Not accepted. PE2 seeks to identify on the proposals map the areas where employment development is likely in principle to take place. The Principal Employment areas comprise a mixture of existing employment land and buildings, land and buildings with planning permission, undeveloped employment allocations and other undeveloped/unannotated land. The policy is not considered too restrictive as the policy purpose is to help control development therefore the policy cannot allow too much flexibility. It is better to treat each proposal on their own merits. With regards to waste management, Policy EN21 directs waste management development to existing or allocated employment sites for B2 uses. The policy provides an 'in principle' acceptance that proposals for waste management would be acceptable on the sites listed within the policy subject to the criteria detailed in Policy EN22. The policy does not provide allocations for waste management. It is an 'area of search' type policy which directs developers to certain areas in the County. In the case of PE2.11, this is a large area which includes the former Deeside Power Station site. The site is not specifically allocated for waste management uses, the Policy provides an 'in principle' acceptance of waste management uses in the general area, subject to compliance with EN22 and other policies within the plan.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
880	Policy PE2: Principal Employment Areas	Object	The land is identified within the settlement boundary of Buckley, which is supported, however, the site of the former Dimplex factory is included in the Principal Employment Land designation - PE2.7 (Little Mountain Industrial Estate, Buckley) and part is allocated for future employment expansion under Policy PE1.3 (Drury New Road, Buckley), as defined on the Proposals Map. This objection is raised to the land being included in the designation and part allocated, on account of the fact that the land does not best serve for employment purposes, either currently or for future consideration, and would better serve for an alternative land use, e.g. residential allocation. Consideration of the overall site (former Dimplex factory and associated vacant land), extending to 3.4 ha, for a residential allocation (under Policy 43 – HN1).	Consideration of the overall site (former Dimplex factory and associated vacant land), extending to 3.4 ha, for a residential allocation (under Policy 43 – HN1).	Not accepted. The proposed land was allocated as employment within the UDP in 2000 and has been allocated as employment again within the LDP as well as being included in the Principal Employment Area. Proposals for the use to be changed to residential is considered inappropriate due to the site is not situated wholly within the settlement boundary additionally, the site is located in close proximity to the wildlife designation. Any submission of a planning application for housing would need to be considered against the site allocation and long-established use the site for employment purposes, and housing allocations already allocated as part of the LDP. The site was originally allocated in the UDP for employment purposes and has been re-allocated under Policy PE1 (PE1.3) of the Flintshire Local Development plan as part of Principle Employment area PE2.7. It is also allocated for future employment expansion. There is no intention to de-allocate the employment allocation in the LDP from this site.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
808	Policy PE2: Principal Employment Areas	Object	Deeside Industrial Park, which includes land owned by Tata, is designated as a Principal Employment Area (PE2.11 Deeside Industrial Park and DARA). Policy PE2 provides support for employment development (specifically Class B1, B2 and B8), subject to it being of an appropriate type and scale for the site and surroundings. Paragraphs 10.2 and 10.3 of the Deposit LDP confirm that the Principal Employment Areas are where most employment development is likely to take place, and within these areas employment development will generally be acceptable. Our client welcomes the designation of the Deeside Industrial Park as a Principal Employment Area and the support for employment related proposals within this area. The policy recognises the importance (and potential) of Deeside Industrial Park as a significant local employment area, where economic growth should be focussed. As the Council is aware, land at Tata's Shotton works is currently one of 18 sites which have been shortlisted (from a long list of 65) as a potential location to provide one of four logistics hubs to support the expansion of Heathrow Airport. If selected, the site would be used as an offsite construction centre. The exact nature of how each site would be used	Whilst the range of uses permitted within Policy PE2 (B1, B2 and B8) is generally supported by our client, the policy should be amended to allow greater flexibility for non B-class uses and ancillary uses. The current wording does not provide any flexibility for other appropriate uses. The policy should be amended to allow for a wider range of uses (where suitable, appropriate and/or of a scale ancillary to the nature to the main employment function of the PEA). Examples (not exhaustive) of such uses could include those relating to education or visitor centres.	Not accepted. The general support for the inclusion of the Tata site within the Principal Employment Area is noted. However, it is not considered that either the general wording of the policy nor this specific PEA should be amended to include reference to 'other' uses. The primary objective of the policy is to facilitate employment development within such areas, subject to satisfying other Plan criteria. It is recognized that there may be other uses that might be acceptable within PEA's but these should be considered on their merits against PE2 and other Plan policies in terms of whether they would complement or have prejudicial implications for the main purpose of the designation. To broaden the scope of the policy would have the effect of weakening the primary purpose of the policy.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			is yet to be established. The shortlisting of the site demonstrates the appropriateness of the site for major employment development, particularly due to its high quality connectivity links (including road and rail) with the potential for improvement. If successful, the proposed Heathrow Hub would be an appropriate form of development within the Principal Employment Area, in compliance with Policy PE7. The proposal would also support the wider economic growth of Flintshire, in accordance with Policy STR7, bringing wide ranging benefits to the local area. Whilst the range of uses permitted within Policy PE2 (B1, B2 and B8) is generally supported by our client, the policy should be amended to allow greater flexibility for non B-class uses and ancillary uses. The current wording does not provide any flexibility for other appropriate uses. The policy should be amended to allow for a wider range of uses (where suitable, appropriate and/or of a scale ancillary to the nature to the main employment function of the PEA). Examples (not exhaustive) of such uses could include those relating to education or visitor centres.		
893	Policy PE2: Principal Employment Areas	Support	Supports the identification of Principal Employment Areas however is concerned that the boundaries for Site PE2.11 include the John Summers Buildings and Grounds .. is concerned	To overcome the objection and address soundness matters, the Council should:	Accepted. The representation is noted and the council welcomes the support of PE2. With regards to the John Summers listed building and associated land clearly fall within the boundary of the outline planning permission

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that Principal Employment Area PE2.11 includes the John Summers buildings and land previously part of the historic Northern Gateway allocation. The inclusion with PE2.11 is not consistent with allocation STR3A in this Plan. It is not consistent with the extant outline consent, reference 050125 and the subsequently approved S73 application, ref: 056540. The inclusion of the John Summers Buildings and grounds within PE2.11 means that any application for alternative use, even those consistent with the outline consent, will subject to the provisions of PE6. This would be unduly onerous given the relevant planning history and could prevent a viable use for the Listed Buildings coming forward and ensuring their long term protection.	• Remove the John Summers Buildings and Grounds from PE2.11 as illustrated on the Proposals Map.	for the southern half of the Northern Gateway site. Policy STR3A also references in criteria 'x' the need to secure sensitive re-use of the listed buildings and grounds. In this context there is clearly a mapping error on the proposals maps whereby the boundary of the strategic site allocation would have been extended to include the listed buildings and the boundary of the Principal Employment Area to be drawn back to the edge of the railway line. It is requested that the Inspector agrees to this as a mapping change to be addressed in the final version of the proposals maps.
945	Policy PE2: Principal Employment Areas	Object	'Within principal employment areas, as defined on the proposals map and listed below, the following types of employment development will be permitted: a. B1 business use; b. B2 general industry; c. B8 storage and distribution provided that the proposal is of an appropriate type and scale for both the site and its surroundings.' This provides no room for expansion of existing employment facilities outside of the defined PEA's. The Evans Business Centre, Cheshire West (PE2.9) we assume is the one located off Minerva Avenue, Sealand IE. We consider that	The Evans Business Centre, Cheshire West (PE2.9) we assume is the one located off Minerva Avenue, Sealand IE. We consider that additional land should be allocated beyond the defined PEA here given its highly sustainable location.	Not accepted. It is unclear why the objector refers to 'assuming' that the Evans Business Centre is off Minerva Avenue. The Principal Employment Area is clearly marked on the proposals maps as PE2.9 and is cross referenced to the written statement on p132 in the table which follows policy PE2. From the objection it is unclear whether the extension to the PEA is a general extension to facilitate non specified employment development or whether it is to facilitate the expansion of a particular firm operating on the existing industrial estate. In terms of the former it is not considered appropriate or

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			additional land should be allocated beyond the defined PEA here given its highly sustainable location.		necessary for the PEA to be extended into a green barrier, into an area of C1 flood risk (where TAN1 would not support the development of a green field site) and grade 2 BMV agricultural land. In terms of the latter there is no detail given as to what the need is for the expansion, the size, the nature and scale of development, in order that a judgement could be made. Although policy PE5 permits the expansion of existing employment uses it is not considered that the policy, in conjunction with other Plan policies and national guidance, would support built development where there are such constraints. In conclusion it is not considered necessary or appropriate to extend the boundary of the Principal Employment Area.
1053	Policy PE2: Principal Employment Areas	Object	This policy defines" areas", specifying that employment development types B1, B2 and B3 will be permitted. However, these areas do not appear to have been adequately assessed in relation to Flood Risk. We are not clear if these are plan "allocations" to which TAN15 Section 10 would need to apply. By way of example Para 10.2 of PE2 refers to "undeveloped employment allocations" and "other undeveloped / unannotated land" which suggests the LDP is allocating land. We also note that while the policy has been assessed, the mapped areas have not been assessed in the IIA. It maybe that PE2 is intended to protect/safeguard	Based on the current information we are concerned with the inclusion of Policy PE2: Principal Employment Areas as the following allocations within the LDP as they lie partially/ wholly within DAM Zone C and have not been demonstrated as suitable or deliverable	Partly accepted. The representation has been noted and the Council, as agreed with the objector, have commissioned further work as part of the SFCA to assess the flood risk of the employment areas that are all existing areas reviewed and carried forward from the existing development plan, and not new sites. Where an employment area may be affected by flood risk, which is classed as 'less vulnerable development' in TAN15, at the planning application stage a developer will be required to submit an FCA as a supplementary document to illustrate how the consequences of flooding have been assessed, and what appropriate flood risk mitigation can be put in place. This is difficult to assess for a Principal

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			existing sites rather that allocate land in which case the Policy should be clearer and specifically should be a criteria-based policy which include reference to site flood risk and the need to demonstrate flood consequence acceptability. We do appreciate that most of the PEAs are concentrated on heavily developed areas, but the Policy would still support new development and potentially large extensions within these areas, without considering flood risk as a constraint. Based on our experience of working in areas constrained by flood risk (particularly the River Dee corridor), we know that it can be difficult to manage flood risk to an acceptable level for new development and substantial extensions. This flood risk is also likely to be increased when considering the impact of climate change. Based on the current information we are concerned with the inclusion of Policy PE2: Principal Employment Areas as the following allocations within the LDP as they lie partially/ wholly within DAM Zone C and have not been demonstrated as suitable or deliverable allocations: PE2.24; PE2.30; PE2.23; PE2.29; PE2.13; PE2.14; PE2.28; PE2.3; PE2.22; PE2.21; PE2.27; PE2.18; PE2.26; PE2.10; PE2.17; PE2.16; PE2.4; PE2.15; PE2.19; PE2.20; PE2.9; PE2.11; PE8	allocations: PE2.24; PE2.30; PE2.23; PE2.29; PE2.13; PE2.14; PE2.28; PE2.3; PE2.22; PE2.21; PE2.27; PE2.18; PE2.26; PE2.10; PE2.17; PE2.16; PE2.4; PE2.15; PE2.19; PE2.20; PE2.9; PE2.11; PE8	Employment Area as there is no definitive development proposals for the site at the development plan preparation stage, but the general SFCA work will indicate the developable areas of the Principal Employment Areas.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1075	Policy PE2: Principal Employment Areas	Object	PE2.17, PE2.18, PE2.19 - We would welcome inclusion in the policy wording/reasoned justification to draw the following to the attention of future developers e.g.: For major sites that lie within the visual setting of the AONB/ face open countryside, attention to boundary planting; use of recessive colours and non-reflective finishes to roofs and building elevations; and the limited use of lighting (designed to dark sky standards) will be important planning considerations. In regard to supporting the delivery of place making development, Environmental Colour Assessment may be required to develop an appropriate colour palette in addition to building design that reflects what is locally characteristic and distinctive.	Add to policy wording : - For major sites that lie within the visual setting of the AONB/ face open countryside, attention to boundary planting; use of recessive colours and non-reflective finishes to roofs and building elevations; and the limited use of lighting (designed to dark sky standards) will be important planning considerations. In regard to supporting the delivery of place making development, Environmental Colour Assessment may be required to develop an appropriate colour palette in addition to building design that reflects what is locally characteristic and distinctive.	Not accepted. The three Principal Employment Areas referenced (Broncoed Industrial Estate, Mold Business Park and Mold Industrial Estate) lie in excess of 1.5km from the AONB designation. They sit within the well-defined physical boundary formed by the A494(T) bypass and form an integral part of the town of Mold. The Plan contains policies PC2 and PC3 which provide design guidance and policy EN5 protects the setting of the AONB. Furthermore, guidance on light pollution is contained in policy EN18. It is not considered necessary or appropriate for such detailed guidance to be attached to the PEA policy for specific PEA's as this could create a precedent for the same to be requested on other specific PEA's. The Plans policy framework enables the NRW concerns to be addressed as part of the consideration of development proposals on their particular merits. It is not considered that the policy should be amended.

Policies PE3 to PE13

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
631	PE3: Employment Development Outside Allocated Sites and Principal Employment Areas	Object	The principle of a criteria-based policy for employment development outside of the Tier 3 settlement boundaries is supported. However, we do have a number of concerns with the policy. 7.2 Firstly, part ii(b) requires that the development "is specifically for a rural activity". However, the policy is to permit new industrial, office and warehousing development. National planning policy is strongly supportive of the rural economy but does not say that it should be restricted to only 'rural activities'. This element of the policy should be deleted. Secondly, part ii(c) the development is of an appropriate scale and well related to the form of the settlement and does not exacerbate ribbon development or result in a fragmented pattern of development. The part we take issue with is "exacerbate ribbon development". It will be extremely difficult to fulfil parts ii(c) and ii(d), which refers forming a logical site boundary, if infilling along a road (which could be interpreted as ribbon development) is restricted. We therefore consider that the	National planning policy is strongly supportive of the rural economy but does not say that it should be restricted to only 'rural activities'. This element of the policy should be deleted. We therefore consider that the reference to ribbon development should be deleted.	Not accepted. Policy PE3 simply provides guidance on the assessment of new employment development which is outside of either allocated employment sites or principal Employment Areas. The policy provides guidance firstly, on sites within settlement boundaries and secondly on sites outside settlement boundaries. It forms part of a suite of development management policies in relation to employment development. The council notes the representation however with regards to Criteria (ii) part B referring to rural activity, the policy as a whole provides a number of options for development outside settlement boundaries. It is considered that the suggestion to remove part B would allow numerous types of development and the purpose is to help control development within the smaller areas that are allocated in Tier 3 and 4. With regards to ribbon development this is not deemed acceptable for any proposed use within any tier and therefore it is vital to ensure policy PE3 also does not allow for ribbon development. Therefore the council does not agree with the deletion of this part of the policy.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			reference to ribbon development should be deleted. Finally, for the reasons set out elsewhere within this statement, the presence of the Green Barrier around Northop, when combined with other constraints, means that the policy is unlikely to result in the development of any sites around Northop. Therefore, the policy does not negate the need to consider the need for allocations within the village, and also the restrictive nature of the proposed Green Barrier boundaries.		The green barrier has been reviewed and it is considered that the green barrier around Northop is justified and is needed to ensure that the Tier 3 is not subject to overdevelopment. It is considered LDP01 Background Paper Green Barrier Review provides a robust review of existing Green Barriers and that the decision to designate the site as Green Wedge is appropriate. The LDP has allocated sufficient land for development to meet identified needs during the Plan Period as set out in LDP10 Background Paper 10 Housing Land Supply and additional allocations are not required.
946	PE3: Employment Development Outside Allocated Sites and Principal Employment Areas	Object	Whilst this policy is welcomed the fact is that the PE2.9 PEA is located in/adjacent to the City of Chester which for the purposes of this LDP is not identified in the settlement hierarchy – this needs to be rectified.	PE2.9 PEA is located in/adjacent to the City of Chester which for the purposes of this LDP is not identified in the settlement hierarchy – this needs to be rectified.	Not accepted. Policy PE3 simply provides guidance on the assessment of new employment development which is outside of either allocated employment sites or principal Employment Areas. The policy provides guidance firstly, on sites within settlement boundaries and secondly on sites outside settlement boundaries. It forms part of a suite of development management policies in relation to employment development. The Plans settlement hierarchy identifies settlements within the administrative boundary of Flintshire. Chester is a settlement within Cheshire West and Chester City and only a small part of that settlement, in the form of an employment area, crosses over in Flintshire. The LDP recognizes this as a Principal Employment Area, but this does not automatically lead to the need for it to be shown

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					as a settlement boundary. Many of the Principal Employment Areas delineated on the edges of Flintshire's settlements are not included within settlement boundaries. It would not be appropriate for Chester to be identified as a settlement within the LDP settlement hierarchy.
61	PE4: Farm Diversification	Support	XXX welcomes the intent of this policy to conserve traditional architectural and historic features where appropriate in restoration or conversion schemes		The Council has noted and welcomes the support for Policy PE4 Farm Diversification.
1076	PE4: Farm Diversification	Object	PE4: Farm Diversification - we advise that all development should not be harmful to landscape character and tranquillity.	we advise that all development should not be harmful to landscape character and tranquillity.	Not accepted. The council notes the representation however the Council disagrees with this Representation and believes that the current wording of Policy PE4 (and associated policies such as PC2 and PC3) strikes the right balance between enabling appropriate development in rural settings. The Plan needs to be read as a whole and it is not necessary for criteria to be repeated unnecessarily through numerous policies. The proposed farm diversification policy includes wording that any new proposal cannot have a harmful effect on the surrounding area, thus implying the character and tranquillity of a setting.
896	PE6: Protection of Employment Land	Object	XXX considers that PE6 is unduly restrictive in its present form. XXX consider that PE6 is unduly restrictive and the provisions within PE6 should recognise the role that some non B1,B2, B8 uses have in supporting the wider function and overall sustainability of an Employment Area. Further, it should acknowledge that some Sui	To overcome the objection and address soundness matters, the Council should: • Amend Policy PE6, and the associated explanatory text, to introduce additional	Not accepted. This representation is noted and the council disagrees to the rewording of the policy to include other employment uses. It is considered that the most important and main employment uses that are vital to an area are those categorised as B1, B2 and B8. Nevertheless the policy does go on to state that it would be unreasonable to prevent other uses or development *'However, the policy recognises that there will be circumstances where it would be unreasonable to prevent other uses or development.'* Further details in

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Generis uses are more appropriately located within Employment Areas. XXX consider that the policy and Explanatory Text should be amended to provide greater flexibility over the Plan period. 10.4. The Plan is its present form is not effective or appropriate. It is considered that the Plan, in its current form, could fail to deliver sustainable development in accordance with the policies in the PPW.	flexibility regarding non B1, B2 and B8 uses that support the function of Employment Locations or are more appropriately located in Employment Areas.	relation to justifying employment are provided in Background papers: ELR 2015 and Employment and housing advice 2019. It is considered that the objectors suggested wording offers too much flexibility and therefore uncertainty about retaining employment land and buildings. It is better to treat each proposal on their own merits.
800	PE7: Retail Hierarchy	Object	XXX objects to the non-allocation of Broughton Shopping Park as a designated town centre in the current Deposit Plan, contrary to the preceding proposed allocation within the Preferred Strategy. This objection relates primarily to policies STR9, PE7, the proposals map, as well and the broader commentary in the Deposit LDP relating to Broughton Shopping Park (principally paragraphs 6.20, 6.22 and 6.23). PPW v.10 (and previous iterations) indicate that: "Planning authorities should establish a hierarchy of retail and commercial centres in their development plan strategy, identifying boundaries on the proposals map" (para 4.3.10). In	This objection relates primarily to policies STR9, PE7, the proposals map, as well and the broader commentary in the Deposit LDP relating to Broughton Shopping Park (principally paragraphs 6.20, 6.22 and 6.23). PPW v.10 (and previous iterations) indicate that: "Planning authorities should	Not accepted. The Broughton Shopping Park has been outside the retail hierarchy in previous development plans based on the fact that it is an out of town regional shopping park. The Plan's preferred Strategy did propose the reconsideration of the inclusion of the Shopping Park within the Retail Hierarchy as a town centre. This picked up on the fact that the 'offer' of the Shopping Park had broadened over time, particularly in respect of the cinema and leisure / restaurant developments. The findings of the Retail Study and the continued 'town centres' first principles within PPW10 led to a reconsideration of the Retail Hierarchy whereby Broughton Shopping Park was recognised as a sub-regional shopping centre. The Retails Study states in para 6.17 'Broughton Shopping Park comprises an out-of-town retail park rather than a traditional town or district centre,..'

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			this regard, the Flintshire Preferred Strategy (November 2017) stated: "In many respects the biggest retail and leisure offering within the County is that of Broughton Shopping Park. This out of town shopping park has been omitted from the retail hierarchy in previous development plans, in order to reinforce its 'out of town' location and to prevent it attracting smaller scale retail and other uses which might compete with nearby defined centres, by controlling the scale and nature of retail and other proposals which arise. Nevertheless, the scale and composition of the shopping park has changed since its inception with the subdivision of retail units and a broader shopping 'offer'. It has also seen recent major investment in leisure development in the form of a cinema and accompanying restaurants…" (para 6.3.5)	establish a hierarchy of retail and commercial centres in their development plan strategy, identifying boundaries on the proposals map" (para 4.3.10). In this regard, the Flintshire Preferred Strategy (November 2017) stated: "In many respects the biggest retail and leisure offering within the County is that of Broughton Shopping Park. This out of town shopping park has been omitted from the retail hierarchy in previous development plans, in order to reinforce its 'out of town' location and to prevent it attracting smaller scale retail and other uses which	Whilst the retail offer of the park has broadened over time, it does not fulfil the role of a town centre nor does it have the character of a town centre. In a typical town centre it is usual to find a range of uses including retail, other commercial, employment, leisure uses and public / civic facilities and services. Broughton Shopping Park does not have this multi function role and is still predominantly retail. It also does not have the character of a typical town centre whereby the town centre is the focal point of a surrounding residential neighbourhoods. By contrast the Broughton Shopping Park is very much on the edge of the settlement, and it is this distinction and the outcome of the retail Study that has informed the status of Broughton Shopping Park outside of the retail hierarchy in the deposit LDP. The Retail Study comments on the Retail Hierarchy as follows: 'However, we advise that currently, Broughton Shopping Park should not be allocated as a defined town centre. BSP is an out-of-centre facility with no policy protection and there is no justification for BSP to be a defined centre within the Development Plan. As set out in Paragraph 4.6 of Technical Advice Note 4 (November 2016), through time, destinations [such as out-of-centre retail parks] should be assessed as to whether these centres have matured into retail and commercial centres in their own right, offering the same level of service provision and being as accessible as traditional centres. Main town centre uses typically include retail, leisure, entertainment, and more intensive sport and recreation uses, offices, arts, culture and tourism development. The offer at BSP is predominantly retail, cinema and restaurant uses. In our view, BSP does not contain the same level of service provision as traditional centres and

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				might compete with nearby defined centres, by controlling the scale and nature of retail and other proposals which arise. Nevertheless, the scale and composition of the shopping park has changed since its inception with the subdivision of retail units and a broader shopping 'offer'. It has also seen recent major investment in leisure development in the form of a cinema and accompanying restaurants…" (para 6.3.5)	until it does, BSP should not be a defined centre within the Development Plan. BSP should be monitored and further assessments on this issue should be made in the future'. In view of the findings of the Retail Study and in the context of national policy in PPW10 which has a town centres first principle, the outcome of the reconsideration of the status of BSP outlined in the Preferred Strategy, has been undertaken in the preparation of the deposit Plan. The park's non-inclusion in the retail hierarchy is fully justified. The Welsh Government in their formal comments on the deposit LDP are supportive of the strategy of the plan stating that they have "no issues" in this respect. There is nothing to indicate that the non-inclusion of BSP in the retail hierarchy affects the soundness of the LDP.
1	PE10: District and Local Centres	Object	I think the wording of PE10 itself is clear and well-balanced and does seek to maintain and promote the range of facilities communities want to see in Flintshire's District and Local Centres. I am however concerned that the further guidance given within Para 18.25	I would propose a revision of the final sentence of Para 18.25 so it reads as follows:- "As a consequence proposals for retail and non-retail	Partially accepted. It is accepted that the second sentence of para 10.25 pre-determines that non retail commercial uses are more difficult to accommodate in district and local centres and that it would be better if each type of use is considered on its merits. If the Inspector considers that the objectors suggested amendments to para 10.35 improve the implementation of the policy then the Council would have no objection to this.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			does somewhat contradict PE10, as it implies a bias against proposals for commercial uses which are not A1 Retail within Local Centres. Looking at my most local Local Centres of Broughton Hall, Penyffordd, Hope/Caergwrle, Buckley – Lane End and Hawarden I see an existing range of retail and non-retail commercial uses which are all equally valued by those communities. I doubt that the ratio of retail to non-retail uses in these locations is significantly different to that within the District Centres. Clearly, due to the generally larger size of District Centres, the scale and range of individual retail and non-retail uses will be greater, but I don't see any following justification for applications for proposals for non-retail commercial in Local Centres to be treated differently to similar proposals in District Centres. I think that would be at odds with how our Local Centres look today and how they should continue to look in the future in order to best serve the needs of their communities. I think the key differences in the way proposals should be looked at differently in Local Centres to District Centres are already in the Policy, and these	commercial uses may be more difficult to satisfactorily accommodate in such Local Centres, and the importance of safeguarding residential amenity will be a key consideration." I believe my proposed amendment will mean that proposals in Local Centres will be more fairly accessed on the basis of their own individual merit, rather than against an arbitrary pre-judgement.	

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			are that in Local Centres commercial uses should be intended to meet the "day to day needs of the local neighbourhood" and that "safeguarding residential amenity will be a key consideration".		
180	PE11: Edge and Out of Town Retail Development	Object	Flintshire County Council has published the Deposit Local Development Plan Deposit Draft (LDP) for consultation. XXX has been instructed by Aldi Stores Ltd to review the deposit LDP and has prepared this representation on behalf of the operator. In particular XXX notes concern with regards to draft Policy 39: PE11 'Edge and Out of Town Retail Development' within the Flintshire LDP.Within PPW: Retail Impact Assessments Paragraph 4.3.25 states that retail developments outside designated retail and commercial centres, and which are not located on an allocated site, can impact on the viability and vibrancy of a centre [our emphasis]. The PPW does not include the word 'attractiveness'. In addition, TAN 4 Retailing and Town Centres does not make any reference to 'attractiveness'. It is therefore considered that the use of the word 'attractiveness' within draft Policy 39: PE11	It is therefore considered that the use of the word 'attractiveness' within draft Policy 39: PE11 appears to create a test in itself and can be subjective. XXX therefore strongly recommends that the word 'attractiveness' is removed from draft Policy 39: PE11, as it is not clear how 'attractiveness' can be tested.	Not accepted. Welsh Government identifies in para 4.3.3 PPW a number of overarching objectives for retail and commercial centres. The guidance states that 'the planning system must' followed by three bullet points and the second bullet points references 'sustain and enhance retail and commercial centres' vibrancy, viability and attractiveness'. The word 'attractiveness' is mentioned in para 4.3.7, 4.3.16, 4.3.22 and 4.3.39 of PPW. In particular, para 4.3.20 of PPW states '…. New out-of-centre retail developments or extensions to existing out-of-centre developments should not be of a scale, type or location likely to undermine the vibrancy, attractiveness and viability of those retail and commercial centres that would otherwise serve the community, and should not be allowed if they would be likely to put development plan retail strategy at risk….'. In the context of PPW it is quite appropriate for policy PE11 to refer to 'attractiveness'.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			appears to create a test in itself and can be subjective. XXX therefore strongly recommends that the word 'attractiveness' is removed from draft Policy 39: PE11, as it is not clear how 'attractiveness' can be tested. XXX has also reviewed the Town Centre boundaries across the county as Aldi has stores within many of those centres and has no comments in this regard. It is concluded that the Flintshire LDP in its current form is unsound, for reasons provided above.		
1024	PE11: Edge and Out of Town Retail Development	Object	However, the Council has some concerns regarding policy PE11 and how planning applications for out of town retail development at Broughton Retail Park would be assessed. The Council considers that the impact assessment (bullet point (c)) should in addition consider harm to designated retail centres that are outside of Flintshire (i.e. Chester City Centre) rather than just Town, District and Local Centres designated by the LDP. Chester is a sub-regional shopping centre and contains the Northgate development, which is a key retail and leisure regeneration scheme, identified in the Cheshire West and Chester Local Plan (Part	Furthermore, the Council considers that the threshold of 2,500 m2 for the application of a Retail Impact Assessment is too high, as a development of this size could cause unacceptable harm to the vitality, attractiveness or viability of another designated centre. A threshold of 1,000 m2 is considered more appropriate, and would be in line	Not accepted. The policy wording summarises the approach taken in PPW10 with regard to retail impact assessments. Para 4.3.26 states 'All retail planning applications or retail site allocations of 2,500 sq. metres or more gross floorspace that are proposed on the edge of or outside designated retail and commercial centres should, once a need has been established, be supported by a retail impact assessment'. It is not considered appropriate or necessary for the Plan to deviate from well established guidance in PPW. If the Inspector considers that the wording of criteria c of policy PE11 would be improved by referring to impacts on retail centres outside the County boundary, then the Council would have no objection to this.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			One). Furthermore, the Council considers that the threshold of 2,500 m2 for the application of a Retail Impact Assessment is too high, as a development of this size could cause unacceptable harm to the vitality, attractiveness or viability of another designated centre. A threshold of 1,000 m2 is considered more appropriate, and would be in line with the Cheshire West and Chester Local Plan.	with the Cheshire West and Chester Local Plan.	
238	PE12: Tourist Accommodation, Facilities and Attractions	Object	Policy PE12 – Tourist Development: The committee considers that criteria c) and d) relating to 'non-permanent accommodation' (such as chalets, pods, glamping and tents) and new build tourist facilities outside existing settlements do not provide adequate environmental safeguards to control inappropriate development affecting the AONB. There has been a noticeable increase in proposals for chalet or similar developments in particular over recent years which can be extensive and generate significant change in the character and appearance of an area to the detriment of the AONB. The committee does not consider chalet development to be non-permanent'. Notwithstanding the	Notwithstanding the additional guidance set out in the supporting text, the committee would recommend that the need for enhanced environmental safeguards for such development within the AONB or its setting should be specifically articulated in the policy.	Not accepted. The Council considers that the current wording of Policy PE12 (and associated policies) strikes the right balance between enabling appropriate tourism development and protecting the rural resource that tourists come to the area to enjoy. Policy PE12 provides adequate protection for the AONB. There are policies elsewhere in the LDP that deal with landscape and other environmental impacts which will be taken into account in relevant cases, including a specific AONB policy EN5, that states *'in assessing the likely impact of development proposals on the natural beauty of the AONB, cumulative impact will also be taken into consideration.'*

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			additional guidance set out in the supporting text, the committee would recommend that the need for enhanced environmental safeguards for such development within the AONB or its setting should be specifically articulated in the policy.		Simply repeating guidance in PE12 that is already within EN5 will not bring with it any additional protection to the AONB. The objectors suggested revision to the wording of the policy is not considered to be necessary.
839	PE12: Tourist Accommodation, Facilities and Attractions	Object	Policy PE12 (Tourist Accommodation) Policy PE12 of the Deposit Plan states: "The development of new or extensions to existing self-catering and serviced tourist accommodation and tourist attractions and facilities will be permitted within the defined settlements where proportionate in scale to the site and its surroundings. Outside defined settlement boundaries development will be supported in the form of: a. The extension to existing tourist accommodation and facilities; or b. The conversion of existing buildings whereby in accordance with TAN6: …. c. Non-permanent accommodation such as chalets, pods, glamping and tent camping sites; …" Bourne Leisure endorses the Council's aspirations in draft Policy PE12 to permit the extension of existing self-catering and serviced tourist accommodation inside and outside	The emerging policy should be amended as follows: ""The development of new or extensions to existing self-catering and serviced tourist accommodation, and tourist attractions, and associated or ancillary facilities will be permitted within the defined settlements where proportionate in scale to the site and its surroundings…"	Not accepted. The council notes the representation however the Council disagrees with this Representation as criteria d addresses the objectors concerns, criteria d states that: d. new build tourist attractions and facilities outside settlement boundaries if: 1. an open countryside location is essential; 2. the proposal cannot be accommodated within an existing building or within a defined settlement boundary; 3. the development is based upon a geographically restricted resource or activity. The occupancy of tourist accommodation will be restricted to holiday use only.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			of defined settlement boundaries. The approach will contribute to achieving draft Objective 14. However, Policy PE12 should ensure that the development of on-site facilities that are ancillary to tourist accommodation are also explicitly supported through this policy to ensure there is no ambiguity in the application of the policy once the plan is adopted. The emerging policy should be amended as follows: ""The development of new or extensions to existing self-catering and serviced tourist accommodation, and tourist attractions, and associated or ancillary facilities will be permitted within the defined settlements where proportionate in scale to the site and its surroundings…"		Therefore the council believes that the current wording of Policy PE12 (and associated policies) strikes the right balance between enabling appropriate tourism accommodation and protecting the surrounding area. Clarification is not needed to add the development of on-site facilities that are ancillary to tourist accommodation are also explicitly supported through this policy to ensure there is no ambiguity in the application of the policy once the plan is adopted as this can be categorised within the policy as 'other facilities' which is mentioned within the policy.
1054	PE12: Tourist Accommodation, Facilities and Attractions	Object	These policies designate large areas of land as being suitable for tourism land use as well as directing that specific development 'will be permitted'. The tourism policies outlined above relate to areas that lie partially within Zone C1 and/or Zone C2, as defined by the DAM and within the 1%/0.5% (1 in 100/1 in 200) and/or 0.1% (1 in 1000) Annual Exceedance Probability (AEP) event flood	We would advise that to overcome this issue the Policy needs to include specific criteria to appropriately guide future development away from flood risk areas.	Not accepted. The Council considers that the current wording of Policy PE12 (and associated policies) strikes the right balance between enabling appropriate tourism development and protecting the rural resource that tourists come to the area to enjoy. It is considered that the objector has misinterpreted policy PE12. The policy provides general support for tourism development in settlement boundaries and then adopts a criteria based to tourism development outside settlement boundaries. The policy does not designate any specific parcels of land or large tracts of land for tourism development on

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			outlines according to our Flood Risk Map. We would advise that to overcome this issue the Policy needs to include specific criteria to appropriately guide future development away from flood risk areas. The Shoreline Management Plan (SMP) policy must be considered in relation to continued development of tourist accommodation within the Talacre area. It should be noted that the SMP policy for Policy Unit 11a PU4.4 which covers the northern section of coast (the sand dune system) at Talacre is 'managed realignment' for Epochs 1 (20 years), 2 (50 years) and 3 (100 years). We therefore object to a Policy which concentrates further development in this location.		the proposals maps. Any tourism areas which arise in flood risk areas will need to be assessed against policy EN14 as well as PPW10 and TAN15. Additional criteria are unnecessary. Relevant proposals will not be considered in light of policy PE12 alone but in the context of all other relevant planning policies.
239	PE13: Caravan Development in the Open Countryside	Object	Policy PE13 – Caravan Development in Open Countryside: Given recent trends to replace static caravans with chalets it should be clarified whether this policy or PE12 applies to chalet development. Although this policy does contain environmental safeguards in criteria a) i)-iii), the committee would recommend that specific reference should be made to the sensitivity of the AONB and the need to conserve and enhance	The Joint Committee would therefore recommend that consideration be given to defining a new PE13 area restricting such developments in the Wheeler Valley area similar to the restrictions in place in the Talacre,	Not accepted. The council notes the comments on policy PE13, however does not agree to the rewording of the policy as the council believes that the policy strikes the right balance between enabling appropriate development and protecting natural area. The policy title and subject matter is 'caravan' development and will include all forms of holiday accommodation which fall within the definition of a 'static caravan' and will include lodges and chalets. Any proposed development located within close proximity or within an AONB will have to comply with policy EN5, Area of Outstanding Natural Beauty that states ' Proposals for development outside the AONB that would detract unacceptably from its setting will not be permitted.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the AONB and its setting when considering such proposals. In addition, there has been significant growth of static caravan and chalet sites in the Wheeler Valley area over recent years and the committee is of the view that the area has now exceeded its capacity to absorb such development without causing further harm to the AONB or its setting. The Joint Committee would therefore recommend that consideration be given to defining a new PE13 area restricting such developments in the Wheeler Valley area similar to the restrictions in place in the Talacre, Gronant and Gwespyr area.	Gronant and Gwespyr area.	All proposals should include details of the extent of landscaping proposed, and reflect the importance of protecting features which are identified as important. Developers are encouraged to use LANDMAP to assist in assessing the character of the local area.' The areas identified by the representor are not all located within AONB additionally, the area is not comparable to the area around Gronant and Talacre where there are restrictions to caravan development. The Gronant area has a flat topography and has a scale of holiday caravan parks that has impacted on the landscape historically. It is also a sensitive area in in terms of international nature conservation. Although Afonwen area has a number of existing caravan parks and proposed new pars and extensions to existing parks, it does not has the scale of development that is present in the Gronant area. Furthermore, the landscape is more varied and should be more capable of absorbing each development. If a caravan proposal/extension was to be submitted for planning each site will be assess on its own merits and will assess the cumulative impacts.
841	PE13: Caravan Development in the Open Countryside	Object	PE13 (Caravan Development in the Open Countryside) Significant investment by Bourne Leisure is made at it parks, resorts and hotels to achieve this. Should planning policies fail to support such investment the ability of the Company to continue to attract new and repeat visitors will result in stagnating facilities which will be	On this basis, the following amendments are required to ensure that this element of the Plan would satisfy the tests of soundness: "a. The development of new	Not accepted. The council notes your representation however disagrees with the policy rewording. The current wording of Policy PE13 (and associated policies) strikes the right balance between enabling appropriate caravan development and protecting the rural resource that tourists come to the area to enjoy. The objector refers to investment in its parks and the need for a positive planning framework to facilitate further investment. The policy seeks to prevent 'new' sites in the

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			a harmful outcome for the Company and would, in turn, have wider detrimental effects on the local economy (e.g. reduced employment and local spending). It is vital therefore for the LDP to have a positive planning framework to facilitate the delivery of this investment and the delivery of the Plan objectives. The draft Policy provides a generally positive framework for static caravan accommodation in Flintshire. The emerging policy recognises the need to be consider any extensions to existing parks in the context of the individual sites and that appropriate landscaping can be used to mitigate impacts of development. However, there is a need to include greater clarity on some of the aspects of the emerging policy in order for the Plan to be found sound. Without it, the Plan risks being unclear and potentially not being deliverable in terms of Objective 14. Whilst there is a defined gap between Talacre and Gronant this should not mean that all development would be unacceptable, particularly where development is not on the coastline itself. Further the existing tourism infrastructure provides significant	static caravan parks accommodation will be permitted outside the Talacre, Gronant and Gwespyr area (as defined on the proposals map) where:iv. There would be no material harm to the landscape character and environmental quality of the surrounding area, either individually or cumulatively with other sites in the vicinity; and v. The scale of the proposal together with the number, siting and layout of unit	Gronant area but does allow for appropriate extensions to existing sites, subject to satisfying criteria. The objector has put forward amended policy wording in the form of an additional criteria under criteria (a). However, the subject matter referred to is already addressed in other policies in the Plan i.e. EN3, EN4 and EN6. The Plan needs to be read as a whole. It must be stressed that the ‘gap’ referred to by the objector is sensitive for a number of reasons, including green barrier, flood risk and nature conservation and therefore the Plan is quite justified in seeking to prevent further new caravan development, given the amount of such development already in situ.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			benefits to the County and the need to continue investing in the Parks is vital for reasons set out above. On this basis, the following amendments are required to ensure that this element of the Plan would satisfy the tests of soundness: “a. The development of new static caravan parks accommodation will be permitted outside the Talacre, Gronant and Gwespyr area (as defined on the proposals map) where:iv. There would be no material harm to the landscape character and environmental quality of the surrounding area, either individually or cumulatively with other sites in the vicinity; and v. The scale of the proposal together with the number, siting and layout of unit		
1055	PE13: Caravan Development in the Open Countryside	Object	These policies designate large areas of land as being suitable for tourism land use as well as directing that specific development ‘will be permitted’. The tourism policies outlined above relate to areas that lie partially within Zone C1 and/or Zone C2, as defined by the DAM and within the 1%/0.5% (1 in 100/1 in 200) and/or 0.1% (1 in 1000) Annual Exceedance Probability (AEP) event flood	We would advise that to overcome this issue the Policy needs to include specific criteria to appropriately guide future development away from flood risk areas.	Not accepted. The objector is considered to have misinterpreted the policy wording which sets out that caravan development will be specifically excluded from the Talacre, Gronant and Gwespyr area. This is further explained in the latter part of para 10.36 and is an approach carried over from the UDP. Outside of this area, the policy adopts a criteria-based approach to consider subsequent proposals for caravan related development. If the Inspector considers that the policy can be worded more clearly with regard to the approach to development

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			outlines according to our Flood Risk Map. We would advise that to overcome this issue the Policy needs to include specific criteria to appropriately guide future development away from flood risk areas. The Shoreline Management Plan (SMP) policy must be considered in relation to continued development of tourist accommodation within the Talacre area. It should be noted that the SMP policy for Policy Unit 11a PU4.4 which covers the northern section of coast (the sand dune system) at Talacre is 'managed realignment' for Epochs 1 (20 years), 2 (50 years) and 3 (100 years). We therefore object to a Policy which concentrates further development in this location.		in the Talacre, Gronant and Gwespyr areas then the Council would not object to this. Any concerns regarding flood risk will be assessed at the application stage and development will only be permitted if the proposal complies with relevant local and national flood risk policies. Additional criteria are unnecessary. Relevant proposals will not be considered in light of policy PE13 alone but in the context of all other relevant planning policies.
14	PE14: Greenfield Valley	Support	welcomes the inclusion of a specific policy about the Greenfield Valley in the Development Plan reflecting its importance to the county as a focus for tourism as well as a site of environmental and heritage importance. However the Trust would welcome a rewording of the policy to include a positive encouragement for development proposals that would enhance the tourism potential of the valley as long as they do not harm current	XXX would welcome a rewording of the policy to include a positive encouragement for development proposals that would enhance the tourism potential of the valley as long as they do not harm current attractions	Not accepted. This representation is noted and the council welcome the support of Policy PE14, Greenfield Valley. The suggestion of rewording the policy to ensure that the policy includes the positive encouragement for development that would enhance tourism without causing a detrimental impact on the surrounding area is not accepted as when the plan is read as a whole, the purpose is to ensure that any proposed development enhances the area without causing any detrimental harm to the surrounding area. It is believed that the current policy wording is sufficient.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			attractions or areas or features of landscape, nature conservation or historic value.	or areas or features of landscape, nature conservation or historic value.	
62	PE14: Greenfield Valley	Support	XXX welcomes the intent of this policy to prevent harm to the historic value of the important industrial remains at the Greenfield Valley		This representation is noted and the council welcome the support of Policy PE14, Greenfield Valley.
1056	PE14: Greenfield Valley	Object	These policies designate large areas of land as being suitable for tourism land use as well as directing that specific development 'will be permitted'. The tourism policies outlined above relate to areas that lie partially within Zone C1 and/or Zone C2, as defined by the DAM and within the 1%/0.5% (1 in 100/1 in 200) and/or 0.1% (1 in 1000) Annual Exceedance Probability (AEP) event flood outlines according to our Flood Risk Map. We would advise that to overcome this issue the Policy needs to include specific criteria to appropriately guide future development away from flood risk areas. The Shoreline Management Plan (SMP) policy must be considered in relation to continued development of tourist accommodation within the Talacre area. It should be noted that the	We would advise that to overcome this issue the Policy needs to include specific criteria to appropriately guide future development away from flood risk areas.	Partly accepted. It is considered that the objector has misinterpreted the policy. It recognizes that the Greenfield Valley is an important tourism attraction but that it is also an important resource for its recreation, landscape, nature conservation and historic importance. The policy does not seek to encourage or promote new development but instead permits new development where it does not detract from its features and character. The Development Advice maps illustrate that only small areas along the edge of Greenfield Valley are located within Zone C1, with a section located at the weir and next to Dyke Wats being located in C2. Any issues arising from flood risk will be dealt with on a site specific basis against policy EN4 and PPW/TAN15. However, if the Inspector considers that the wording of the policy could be improved to clarify that it seeks to protect from development rather than promote development, the Council would have no objection.

ID	Title	Support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			SMP policy for Policy Unit 11a PU4.4 which covers the northern section of coast (the sand dune system) at Talacre is 'managed realignment' for Epochs 1 (20 years), 2 (50 years) and 3 (100 years). We therefore object to a Policy which concentrates further development in this location.		

Policy HN1.1 to HN1.6

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
211	HN1.1 Well Street, Buckley	Object	The development of the site for residential use would significantly increase the amount of traffic travelling along Well Street, resulting in a significant loss of amenity to the residents of Well Street as a result of traffic noise and a remarkable increase in background noise levels. Increased traffic would undoubtedly make it dangerous for residents, particularly on the lower part of Well Street, leaving and entering their properties from the road. The lower part of Well Street is a narrow lane, with limited visibility and limited areas for vehicles to pass, especially to pass large agricultural vehicles. Increased traffic would also result in danger to horse riders and horses entering the livery stables, also located along Lower Well Street.	Removal of allocated site Well Street, Buckley	Not accepted. The Deposit LDP consultation has received over 1200 representations on various aspects of the plan strategy, allocations and individual policies. To ensure all points within this large volume of representations are answered the Council have grouped and summarised representations made on allocated sites together and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. **General** Buckley is located in the east of the County and it is the second largest settlement in the Plan Area. Buckley has been classified as a Main Service Centre in the LDP because of its strategic role in the delivery of services and facilities. The candidate site is located on the south western side of Buckley and is situated within the existing settlement boundary and allocated for housing in the existing UDP. The principle of development is already broadly established. The site is bounded by residential development comprising mainly of semi-detached properties on two sides, to the north along Monza Close and the east by Langford Crescent. Well Street is the boundary to the south. Mature hedgerows define the south and western boundaries. To the west adjoining the site is the Bryn Y Pys Farm complex. It represents a logical extension to the settlement within well-defined physical boundaries and is

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					in a sustainable location having regard to its location within a Main Service Centre. The site was allocated as part of the UDP - HSG1(3) for 162 units and is unconstrained, but was not developed due to delays by the owners Welsh Government in releasing the site to the market. Recently, the site was considered as part of the Councils SHARP scheme in collaboration with the developer Wates. Subsequently to this interest, the site is now in the final legal stages of being sold to a Regional Housing Association who are designing a housing scheme in readiness to submit a planning application for a mixture of open market and affordable homes. The latest information from the Regional Housing Association as at March 2020 is that an outline planning application is likely to be submitted by the end of April 2020. Clearly, this timescale may be impacted by the implications of Covid-19. The fact that the site is in the process of being bought by a willing developer shows that there is genuine developer interest in the site. In addition to the lack of technical constraints it is therefore likely to be developed within the plan period and given the site's location within the settlement boundary, is also capable of early delivery prior to the adoption of the LDP, something that the objectors alternative site cannot. It is important to point out that the undeveloped allocated sites in the UDP have been considered like any other Candidate site and have been through the Candidate Site Assessment process like all of the other sites. Only those previously allocated sites where we consider that they are still sustainable and deliverable and will come forward have been allocated. Also the LDP takes a different approach to the UDP. Whereas the UDP had a more

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					dispersed distribution of allocations with many smaller sites, the LDP has a more focused approach to distributing allocations to the most sustainable settlements. The aim of this strategy is to ensure that allocations are in the most sustainable locations and of a scale to be attractive to house builders so that they are likely to be more deliverable. In relation to the Well Street site, whilst there has historically been delays in Welsh Government releasing the site to the market, there has now been a step change in circumstances with the involvement of a Regional Housing Association who are in the final stages of purchasing the site in order to subsequently develop it, and where an application is already being prepared. This clearly demonstrates that the site is viable and deliverable within the LDP time period. **Traffic** The site is already allocated in the adopted UDP and located within the settlement boundary so the broad principle of developing the site is established. The site's suitability for development was investigated thoroughly as part of the UDP Public Inquiry, in the light of objections to the allocation. The UDP Inspector concluded that the site was suitable for development and recommended that it should be allocated in the Plan. As part of the consideration given to the site at the UDP Public Inquiry, matters relating to highway access and traffic impact on the local network were considered. The UDP Inquiry Inspector commented on highways matters

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					[page 337 paragraph 11.37.6 of the Inspector's Report] as follows "Access/highways to the site is potentially from Daleside, a cul-de-sac serving semi-detached houses and/or Well Street, a through road serving houses at its northern end. To the south Well Street narrows and takes on the character of a country lane until it links in with Rose Lane, a similar road running between the A549 and the A5118. Both Daleside and Well Street to the north have junctions with Springfield Drive/Nant Mawr Road. There is no doubt that development at Well Street would add to existing traffic. However, there is the potential to design the Well Street access to discourage traffic travelling south. Unless the road is physically closed I acknowledge that not all traffic would be discouraged from travelling south, but it would nevertheless reduce the amount of traffic. The nature of Well Street and Rose Lane mean that walkers and riders already have to be vigilant when using the lanes. Whilst the development may add to the number of vehicles, it would not fundamentally change the rural character of the lane. A consequence of discouraging southbound trips would inevitably mean more traffic travelling north and using the Springfield Drive/Nant Mawr Road junctions. Whilst because of their width, alignment, pavements and lighting these are better able to accommodate more traffic, conditions are not ideal and I accept that bends, parking and the like affect road conditions. However, the access review of August 2007 and the traffic survey of September 2007 indicate that conditions are not such that the road system could not satisfactorily accommodate the anticipated growth in traffic from the development". In paragraph 11.37.8 of her report, the Inspector went on to state that "It is inevitable that traffic flows will vary depending on the season, day and time. I visited the

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					locality of the site at different times and saw varying traffic conditions. However, nothing I have seen, read or heard convinces me that the local road system cannot accommodate the additional traffic which would be generated by the development. In this respect I have looked at the more distant junctions including with Mold Road. If there is an access from Daleside it will inevitably result in more vehicular movements, but it would only be domestic and traffic normally associated with housing areas. The situation would to my mind be no different to many other housing areas nor result in material harm to people's living conditions". Notwithstanding the time since the UDP Public Inquiry, it is the view of the Council that the Inspector's comments from the UDP inquiry still stand. The highway authority have reviewed the principle of allocating the site as part of the LDP and have stated that a Transport Assessment will be required to support the development of the site and in relation to the present network, consider that the Inspectors comments are still valid, in that the roads leading to the site can accommodate the increases in traffic without detriment to the amenity of existing residents and road users. Highways officers have also considered the lower more rural part of Well Street and have commented '' whilst the principle of residential development has been accepted, a junction layout that will limit additional movements onto the rural section of Well Street will be required along with roads laid out to adoptable standard and appropriate cycle provision.''

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The allocation of the site under policy HN1 is accompanied by summary guidance which clearly references the need for the site access onto Well Street to be designed so as to prevent right turn. Environmental health officers have also been consulted and have not objected to the proposal in terms of noise or air pollution. Also in terms of air pollution – The North Wales Authorities Collaborative Project '2019 Air Quality Progress Report' states that 'The North Wales Authorities have not declared any Air Quality Management Areas (AQMAs) and as a result, have not published an Action Plan'. **Support** Comments are noted.
715	HN1.1 Well Street, Buckley	Object	This Policy provides details of the proposed housing allocations across the County which are expected to come forward during the currently proposed LDP period up to 2030. Table 3 of Background Paper 10 contains details on each of the proposed allocations. It is noted that two of these sites comprise previous allocations in the UDP which failed to come forward; these are land at Well Street in Buckley for 159 dwellings, and Highmere Drive in Connahs' Quay for 150 dwellings. Paragraph 2.15 of the Background Paper states that information obtained from developers and landowners	Deletion of allocations at Well Street Buckley and Highmere Drive, Connah's Quay due to issues around deliverability. these should be replaced with alternative sites with more certainty around delivery.	See response to id 211

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			suggests that there is confidence these two sites will come forward. However, the same paragraph then goes on to state that the flexibility allowance is proposed in the event that they do not. We object to the continued allocation of these two sites; they have failed to come forward consistently since the UDP was adopted in 2011, and there is evidently no certainty that they will. Whilst there may be some tentative developer interest in them, unless there is a firm legal/option agreement in place, that will not necessarily translate into delivery. Accordingly, it is our position that these sites should be deleted as proposed housing allocations, and replaced with deliverable sites; of the 41 sites allocated in the UDP, 13 of these sites failed to come forward. Hence, it is unclear why these two sites have been treated differently to the remaining 11 sites.		
1209	HN1.1 Well Street, Buckley	Object	Policy HN1: New Housing Development Proposals 7.2. Table 3 of Background Paper 10 contains details on each of the proposed allocations. It is noted that two of these sites comprise previous allocations in the UDP which failed to come forward; these are land at Well Street in Buckley for 159 dwellings, and Highmere Drive in Connah's Quay for 150 dwellings. Paragraph 2.15 of the	Removal of allocated sites at Well Street Buckley, and Highmere Drive Connah's Quay due to deliverability concerns and replacement with alternative sites to ensure the housing	See response to id 211

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Background Paper states that information obtained from developers and landowners suggests that there is confidence these two sites will come forward. However, the same paragraph then goes on to state that the flexibility allowance is proposed in the event that they do not. Our Client objects to the continued allocation of these two sites; they have failed to come forward consistently since the UDP was adopted in 2011, and there is evidently no certainty that they will do so with known issues around land assembly and aspirational land values. Whilst there may be some tentative developer interest in them, unless there is a firm legal/option agreement in place and/or a clear disposal strategy in place by the respective landowners, that will not necessarily translate into delivery. Accordingly, it is our Client's position that these sites should be deleted as proposed housing allocations, and replaced with deliverable sites; of the 41 sites allocated in the UDP, 13 of these sites failed to come forward. Hence, it is unclear why these two sites have been treated differently to the remaining 11 sites.	supply is deliverable.	
1179	HN1.1 Well Street, Buckley	Object	Policy HN1: New Housing Development Proposals This Policy provides details of the proposed housing allocations across the County which are expected	it is our Client's consideration that additional housing land should be	See response to id 211

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			to come forward during the currently proposed LDP period up to 2030. In addition to the two proposed strategic allocations, 6 sites are allocated in the Tier 1 'Main Service Centres,' 3 sites in the Tier 2 'Local Service Centres,' and 2 sites in the Tier 3 'Sustainable Villages.' In total, 11 sites are allocated, plus the two strategic allocations. This contrasts starkly to the 41 site allocations under Policy HSG1 of the previous UDP. Table 3 of Background Paper 10 contains details on each of the proposed allocations. It is noted that two of these sites comprise previous allocations in the UDP which failed to come forward; these are land at Well Street in Buckley for 159 dwellings, and Highmere Drive in Connahs' Quay for 150 dwellings. Paragraph 2.15 of the Background Paper states that information obtained from developers and landowners suggests that there is confidence these two sites will come forward. However, the same paragraph then goes on to state that the flexibility allowance is proposed in the event that they do not. Our Client objects to the continued allocation of these two sites; they have failed to come forward consistently since the UDP was adopted in 2011, and there is evidently no certainty that they will. Whilst there may be some tentative developer	released at Tier 3 of the settlement hierarchy to accommodate this outstanding need.	

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			interest in them, unless there is a firm legal/option agreement in place, that will not necessarily translate into delivery. Accordingly, it is our Client's position that these sites should be deleted as proposed housing allocations, and replaced with deliverable sites; of the 41 sites allocated in the UDP, 13 of these sites failed to come forward. Hence, it is unclear why these two sites have been treated differently to the remaining 11 sites. Given our earlier comments regarding the underplayed role of Sustainable Villages in the Deposit Plan, it is our Client's consideration that additional housing land should be released at Tier 3 of the settlement hierarchy to accommodate this outstanding need.		
1280	HN1.1 Well Street, Buckley	Object	There is genuine risk that proposed allocations cannot be delivered, either at all or in the timeframes envisaged. Several sites have been simply carried forward (rolled over) from the current LDP despite concerns with delivery. The Local Development Plan ('LDP') Manual (Edition 2) identifies the requirement for a new form of measuring the deliverability of sites, and whether they have a realistic chance of coming forward over the next	Allocate additional sites	See response to id 211

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			5 years. It states “When putting forward sites, developers and landowners should include sufficient data to allow a robust assessment to be made (see section 6.4.1&2) including affordable housing, community infrastructure and that the development is financially viable.” The draft LPD Manual 3 (which was consulted on by Welsh Government in September 2019) then goes a step further. Table 18 in draft Manual 3 states that historic allocations should only be ‘Rolled Forward’ from previous plans where ‘careful justification’ is given that there has been a ‘substantial change in circumstances to demonstrate sites can be delivered and justify being included again’. This is relevant as many of the proposed housing allocations have been simply ‘Rolled Forward’. The table at Appendix 2 shows the housing allocations and our analysis of realistic deliverability. It identifies 6 of the 11 housing allocations are undeliverable in the next 5 years and a further 4 have questionable delivery over the plan period. This has significant implications for the 5-year supply position and overall delivery of the plan. For example, the Buckley Site		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			(emerging Policy HN1, Site 1) was first identified in the UDP preparation stages in 2004. The site has no obvious developer interest, and the allocation contradicts the Councils adopted Speculative Housing Development Proposals SLD / Developer Advice Note. There is no progress towards submission of a planning application and the site has stagnated since 2004.		
1288	HN1.1 Well Street, Buckley	Object	Of the eleven housing allocations set out in the above policy, we would question the deliverability of the following 2 allocations: HN1-1 Well Street, Buckley (159 units) and HN1-3 Highmere Drive, Connah's Quay (150 Units). We are also concerned that the Council are continuing to rely on these sites which were previously allocated in the UDP (HSG1(3) and HSG1(5)) despite these not delivering housing over the previous plan period. Well Street, Buckley - This site is owned by the Welsh Assembly Government. The site is considered to be in a good market area however the site has not been delivered in the previous plan period and we have seen no evidence to demonstrate the Site can be delivered now. It is unrealistic	Inclusion of additional sites.	See response to id 211

The inclusion of these Sites within the Housing Land Supply which total 309 units are highly questionable without significant further evidence that takes account of site constraints, developable area and the overall viability of development		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
1292	HN1.1 Well Street, Buckley	Object	Of the eleven housing allocations set out in the above policy, we would question the deliverability of the following 2 allocations: HN1-1 Well Street, Buckley (159 units) and HN1-3 Highmere Drive, Connah's Quay (150 Units). We are also concerned that the Council are continuing to rely on these sites which were previously allocated in the UDP (HSG1(3) and HSG1(5)) despite these not delivering housing over the previous plan period. Well Street, Buckley - This site is owned by the Welsh Assembly Government. The site is considered to be in a good market area however the site has not been delivered in the previous plan period and we have seen no evidence to demonstrate the Site can be delivered now. It is unrealistic that this site will be developed within the forthcoming plan period. Highmere Drive, Connah's Quay - The site has been allocated for development in the previous plan. It is also in a good market area and there have been previous offers made to purchase the land by various parties which have been unsuccessful Based on the issues highlighted above, we consider there is a realistic prospect	Allocate additional sites.	See response to id 211

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			these Sites will not deliver the quantum of housing envisaged over the life of the emerging Local Plan. The capacity and deliverability assumptions are overly optimistic. The inclusion of these Sites within the Housing Land Supply which total 309 units are highly questionable without significant further evidence that takes account of site constraints, developable area and the overall viability of development		
664	HN1.1 Well Street, Buckley	Support	Well Street, Buckley, 159 units A water supply can be provided for this site. The public sewerage network can accept potential foul flows from this development site. The proposed growth in the Buckley Wastewater Treatment Works (WwTW) catchment area would require improvements which would need to be funded through our Asset Management Plan (AMP) or potentially earlier through developer contributions.		See response to id 211
1238	HN1.2 Broad Oak Holding, Mold Road, Connah's Quay	Support	Broad Oak Holding, Mold Road, Connah's Quay, 32 units This site has planning permission and we have no further comment to make. Welsh Water made representations on this site through planning application 058583. Potential developers need to be aware that this site is crossed by a water main and protection measures in the form of an easement width or a diversion of the main would be required, which may		Support Noted.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			impact upon the housing density achievable on site.		
597	HN1.3 Highmere Drive, Connah's Quay	Object	OBJECTS to the inclusions of 150 dwellings from Policy HN1 (3) - Highmere Drive, Connah's Quay within the housing trajectory. It should be noted in passing that there is no objection to the principle of developing the site. 7.2 By way of background it is material to note that the site was allocated in the UDP (2000 – 2015) – see Policy HSG1(5) Highmere Drive but the site didn't come forward due to the owner's unwillingness to sell the site at that time. However, it is said that the owner has demonstrated a renewed commitment, supported by key background studies providing reassurance that the site is now available, viable and deliverable. 7.3 According to the Development Plans Manual Edition 3 allocations rolled forward from a previous plan will require careful justification for inclusion in a revised plan: "There will need to be a substantial change in circumstances to demonstrate sites can be delivered and justify being included again. Clear evidence will be required that such sites can be delivered. The sites should be subject to the same candidate site process requirements as new sites i.e. they must be demonstrated to be sustainable and deliverable. If an LPA	Given that the UDP covered a 15 year period and that it expired over 4 years ago there has been plenty of opportunity for this site to come forward. On the basis of past performance, we consider that the prudent approach to take would be to allocate the site but make no allowance for it in the housing trajectory.	HN1.3 Highmere Drive Not accepted. The Deposit LDP consultation has received over 1200 representations on various aspects of the plan strategy, allocations and individual policies. To ensure all points within this large volume of representations are answered the Council have grouped and summarised representations made on allocated sites together and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. General Connah's Quay is located in the north east of the County and it is the largest settlement in the Plan Area. Connah's Quay has been classified as a Main Service Centre in the LDP because of its strategic role in the delivery of services and facilities. The candidate site is located on the western side of Connah's Quay and is situated inside the existing settlement boundary. The site is bounded by residential development to the north at Courbet Drive and Degas Close. A high voltage overhead line defines the whole length of the eastern boundary beyond which is residential development comprising mainly of semi-detached properties. The western boundary is marked by a hedgerow and contains semi mature/mature trees.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			wishes to retain such sites but cannot evidence they will be delivered, i.e. for aspirational or regeneration purposes, they can still be allocated in the plan but not relied upon as contributing to the provision. It will not be appropriate to include such sites in the windfall allowance. They should be treated as 'bonus sites'." 7.4 Given that the UDP covered a 15 year period and that it expired over 4 years ago there has been plenty of opportunity for this site to come forward. On the basis of past performance, we consider that the prudent approach to take would be to allocate the site but make no allowance for it in the housing trajectory.		The site was allocated as part of the UDP - HSG1(5) Highmere Drive, but did not come forward due to the owners unwillingness to release the site. The site was included by the Council as a Candidate Site to ensure that it was assessed in the same consistent manner as all other candidate sites. It must be stressed that Connah's Quay is a strong housing market area where there is a proven track record of sites being developed in successive Plan periods. There is also no public opposition to the site compared to other allocated sites. Given that this site was previously allocated in the UDP and had been agreed as a sustainable allocation by the UDP Inspector, prior to the site being re-allocated in the LDP, assurances were sought from the owners and their agent that this site was genuinely available given that there are no constraints to its development, and this has brought about a renewed commitment to the site being released to the market. A Transport Assessment and an additional technical note, and Agricultural Land Classification background studies were unilaterally undertaken by the owner and the Council is aware that discussions are taking place between the landowner and a number of interested housebuilders. It must also be stressed that a planning application could come forward at any time as the site is within the settlement boundary due to it being previously allocated in the adopted UDP. Given that there is now market interest in the site with negotiations ongoing about a scheme to deliver 150 units, this removes any concerns about viability and deliverability of this previously allocated site. Discussions with Highways have confirmed that there is suitable site access.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Notwithstanding the site's previous allocation in the UDP, there has been careful consideration given to the re-allocation of this site in order to be compliant with the Development Plan Manual 3. It is considered that the site is a robust allocation which has the potential to be developed early within the LDP period as demonstrated in the trajectory in Background Paper 10 Housing Land Supply. The site is quite properly allocated and included in the trajectory and that there is no case for the site to remain in the Plan but be excluded from the trajectory.
764	HN1.3 Highmere Drive, Connah's Quay	Object	Policy HN1: New Housing Development Proposals 7.2. Table 3 of Background Paper 10 contains details on each of the proposed allocations. It is noted that two of these sites comprise previous allocations in the UDP which failed to come forward; these are land at Well Street in Buckley for 159 dwellings, and Highmere Drive in Connah's Quay for 150 dwellings. Paragraph 2.15 of the Background Paper states that information obtained from developers and landowners suggests that there is confidence these two sites will come forward. However, the same paragraph then goes on to state that the flexibility allowance is proposed in the event that they do not. Our Client objects to the continued allocation of these two sites; they have failed to come forward	Removal of allocated sites at Well Street Buckley, and Highmere Drive Connah's Quay due to deliverability concerns and replacement with alternative sites to ensure the housing supply is deliverable.	See response to id 597

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			consistently since the UDP was adopted in 2011, and there is evidently no certainty that they will do so with known issues around land assembly and aspirational land values. Whilst there may be some tentative developer interest in them, unless there is a firm legal/option agreement in place and/or a clear disposal strategy in place by the respective landowners, that will not necessarily translate into delivery. Accordingly, it is our Client's position that these sites should be deleted as proposed housing allocations, and replaced with deliverable sites; of the 41 sites allocated in the UDP, 13 of these sites failed to come forward. Hence, it is unclear why these two sites have been treated differently to the remaining 11 sites.		
1190	HN1.3 Highmere Drive, Connah's Quay	Object	Policy HN1: New Housing Development Proposals This Policy provides details of the proposed housing allocations across the County which are expected to come forward during the currently proposed LDP period up to 2030. In addition to the two proposed strategic allocations, 6 sites are allocated in the Tier 1 'Main Service Centres,' 3 sites in the Tier 2 'Local Service Centres,' and 2 sites in the Tier 3 'Sustainable Villages.' In total, 11 sites are allocated, plus the two strategic allocations. This contrasts starkly to the 41 site	it is our Client's consideration that additional housing land should be released at Tier 3 of the settlement hierarchy to accommodate this outstanding need.	See response to id 597

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			allocations under Policy HSG1 of the previous UDP. Table 3 of Background Paper 10 contains details on each of the proposed allocations. It is noted that two of these sites comprise previous allocations in the UDP which failed to come forward; these are land at Well Street in Buckley for 159 dwellings, and Highmere Drive in Connahs' Quay for 150 dwellings. Paragraph 2.15 of the Background Paper states that information obtained from developers and landowners suggests that there is confidence these two sites will come forward. However, the same paragraph then goes on to state that the flexibility allowance is proposed in the event that they do not. Our Client objects to the continued allocation of these two sites; they have failed to come forward consistently since the UDP was adopted in 2011, and there is evidently no certainty that they will. Whilst there may be some tentative developer interest in them, unless there is a firm legal/option agreement in place, that will not necessarily translate into delivery. Accordingly, it is our Client's position that these sites should be deleted as proposed housing allocations, and replaced with deliverable sites; of the 41 sites allocated in the UDP, 13 of these sites failed to come forward. Hence, it is

1258	HN1.3 Highmere Drive, Connah's Quay	Object	There are inconsistencies in the way the council has assessed potential sites, with reference to the assessment of our client's site. Background Paper 9 'Assessment of Candidate Sites and Alternative Sites' (2019), which forms part of the LDP evidence base, discusses the site (ref: BROU001) and states: 'The site is well defined by existing roads and wraps around existing residential development… Although the site is in close proximity to Bretton, the configuration of the site and its relationship with Bretton would ensure that development would not harm the present character and appearance of	Need to allocate more sites.	See response to id 597

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the settlement…' 'The site is considered suitable at present for consideration as an allocation.' [NJL Consulting emphasis] The evidence base is clear that the site is appropriate for residential development and should be considered for allocation, yet an allocation has not been taken forward. However, other less sustainable and less deliverable sites are allocated. For example, Northop Road (Flint) has no planning consent (two applications from September 2017 (ref: 057565) for 20 units and April 2018 (ref: 058314) for 145 units remain undetermined) and has identified constraints to delivery, yet the site is allocated. The same applies to the New Brighton (Cae Isa) site (Site 10), which is proposed to be allocated for 105 units but there is no clear evidence of delivery yet clear evidence of constraints. Two further sites are proposed for allocation despite previous planning applications being withdrawn or dismissed on Appeal. The Highmere Drive (Connah's Quay) allocation (Site		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			3) was promoted for 185 dwellings in 2005 (ref: 043873) but a subsequent Appeal was withdrawn in 2008 and there has been no progress on the site. The Wrexham Road (Hope) allocation (Site 9) was subject to a now withdrawn planning application from 2018 (ref: 058163), and there has been no further progress. Therefore, the council's assessment of sites is inconsistent. There is a need for additional sites to be allocated, such as Bloor's site BROU001.		
1282	HN1.3 Highmere Drive, Connah's Quay	Object	There is genuine risk that proposed allocations cannot be delivered, either at all or in the timeframes envisaged. Several sites have been simply carried forward (rolled over) from the current LDP despite concerns with delivery. The Local Development Plan ('LDP') Manual (Edition 2) identifies the requirement for a new form of measuring the deliverability of sites, and whether they have a realistic chance of coming forward over the next 5 years. It states "When putting forward sites, developers and landowners should include sufficient data to allow a robust assessment to be made (see section 6.4.1&2) including affordable housing, community infrastructure and	Allocate additional sites.	See response to id 597

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that the development is financially viable." The draft LPD Manual 3 (which was consulted on by Welsh Government in September 2019) then goes a step further. Table 18 in draft Manual 3 states that historic allocations should only be 'Rolled Forward' from previous plans where 'careful justification' is given that there has been a 'substantial change in circumstances to demonstrate sites can be delivered and justify being included again'. This is relevant as many of the proposed housing allocations have been simply 'Rolled Forward'. The table at Appendix 2 shows the housing allocations and our analysis of realistic deliverability. It identifies 6 of the 11 housing allocations are undeliverable in the next 5 years and a further 4 have questionable delivery over the plan period. This has significant implications for the 5-year supply position and overall delivery of the plan. The Highmere Drive allocation (emerging Policy HN1, Site 1) was also first identified in the UDP preparation stage in 2004. There is no developer attached to the site and there has been no planning application since an application for residential development		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and subsequent appeal were dismissed prior to 2008. The site has been identified since 2004 and has been included in the 5-year housing land supply since 2010, with no progress made so far. There is no clear evidence to demonstrate deliverability, therefore we consider the site should not be allocated. Furthermore, the LDP approach to assessing potential allocations is inconsistent and this further undermines the soundness of the sites which are simply rolled forward.		
1239	HN1.3 Highmere Drive, Connah's Quay	Support	Highmere Drive, Connah's Quay, 150 units A water supply can be provided for this site. The public sewerage network can accept potential foul flows from this development site. Connah's Quay Wastewater Treatment Works (WwTW) can accommodate foul flows from the proposed development site.		See response to id 597
566	HN1.4 Northop Road, Flint	Object	I have been instructed by Flint Town Council to register an objection to the proposed housing allocation at Northop Road, Flint (Ref. HN1-4) for up to 170 dwellings. the site in question is located at the extreme southern end of the town and it extends into open countryside. The site is some distance from Flint Town Centre itself which is not within reasonable walking distance. On this basis, it is highly probable that future	Removal of Northop Road Flint allocation.	HN1.4 Northop Road Flint Not accepted. The Deposit LDP consultation has received over 1200 representations on various aspects of the plan strategy, allocations and individual policies. To ensure all points within this large volume of representations are answered the Council have grouped and summarised representations made on allocated sites together and prepared one response covering all points made in support and in objection to the site. Therefore the

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			residents would be reliant on private motor vehicles to go about much of their daily business. To this end, the proposed allocation conflicts with Planning Policy Wales which states that minimising the need to travel, reducing reliance on the private car and increasing walking, cycling and use of public transport are important considerations when selecting sites for new residential development (paragraph 3.38). It also conflicts with policy STR4 of the emerging LDP which states that new development should be accessible and connected, allowing ease of movement. For these reasons, it is asserted that the proposed allocation is not a sustainable location for such a significant amount of housing. Accordingly, it does not meet the first test of soundness ie. it does not fit with the aspirations of national planning policy and the principles of sustainable development. In light of the above, the Council is respectfully invited to reconsider the soundness of this proposed housing allocation.		following response may cover additional issues to those raised by the objector. **General** Flint is a large settlement and is Categorised as a Tier 1 settlement which has a wide range of facilities, services and employment. The town has the benefit of a main line railway station and has good bus links to Chester, Mold and Holywell. In the UDP (and the previous draft North Flintshire Local Plan) it was seen as a sustainable location for growth with the Croes Atti development representing a main focus for this. Since the development of Croes Atti has made good progress in recent years it was felt appropriate that this Tier 1 sustainable settlement was capable of supporting an allocation in the LDP. The Northop Road site was considered at the time of the UDP and originally allocated in the deposit UDP. At that time the site at Croes Atti had gained planning permission for over 600 dwellings but had not commenced at the time of the UDP Inquiry. The allocation was subsequently removed from the deposit plan by proposed change PC322, in order to allow the development of the large site at Croes Atti to be brought forward given its committed status. Although not allocated for housing or included within the settlement boundary in the adopted UDP, the land was not designated as green barrier in order to allow future consideration of the site as a housing allocation when the UDP was reviewed as part of progressing the LDP.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The UDP Inspector supported the Council's proposed change PC 322 which was to delete that part of allocation HSG1(11) between Halkyn Road and Northop Road and in doing so commented - ''The Croes Atti site will provide a mixed use development to be phased over the duration of the plan. I consider the planning permission on that site to be a material change in circumstances that justifies the review of the allocations in Flint. Given its scale it is reasonable not to release a further substantial area of land in Flint until progress has been made on its development. It is for this reason that PC322 deletes HSG1(11) and amends the settlement boundary accordingly. '' The inspector also states in Chapter 4 GEN5:5 '' I support the deletion of the allocation between Halkyn Road and Northop Road. 4.78.5. In order to introduce a degree of permanence to the identified green barriers and ensure that they will not fundamentally change again; and in the knowledge that the LDP preparation will inevitably bring about some changes, the areas where it is considered there may be potential for further development have not been included within the green barrier. I consider this is a sensible approach which will ensure a level of consistency with future plans. In this case the Council does not discount the possibility that the area may be considered appropriate for development in the future and on that basis does not designate it a green barrier.'' The location of the site is within reasonable distance of the town and main facilities. The site is within 1200m of Flint town centre and there is a convenience store at the garage on Northop Road directly opposite to the site. Also

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					there is a local shopping parade some 450metres from the site with a range of outlets including a convenience store, takeaways, other businesses and a pub serving food. The nearest bus stop is on Northop Road approximately 120 m from the site where the number 28 bus runs an hourly service to and from Flint town centre (where there are with good links to Chester and Holywell) and Mold on Monday to Saturday. Flint High school is 300m from the site and there are also three primary schools, Cornist School, Gwynedd School and St Marys Catholic Primary School approximately 1500m distance from the site. The site is also within easy reach of Active Travel Routes around Flint being approximately 250m from Route FL9 and 1100m to FL6/1 and FL6/2. The site is therefore considered to be within reasonable walking distances of a wide range of services and facilities, both locally and in the town centre. There is also a good bus service linking the site with Flint and Mold The site is considered to be in a highly sustainable location. As such it does fit with the aspirations of the national planning policy. Two planning applications have also been submitted by separate house builders on this site demonstrating that there is genuine developer interest and that the site is capable of being developed early on in the plan period. The two planning applications were submitted on a speculative basis in the light of the [then] 'considerable' weight to be attached to increasing housing land supply in TAN1. The applications are accompanied by a large number of background studies. However, the Council

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					considers that the site should be developed on a more coordinated basis with a single vehicular access to serve both sites rather than two vehicular accesses. This will enable a much improved layout in terms of placemaking considerations. Discussions with both applicants indicate that this is achievable. With the exception of some further ecological work, which will be aided by the single point of access and more coordinated approach to delivering the site, the Council is unaware of any other constraints. The representor mentions that there are ‘’identified constraints’’ to the delivery of this site but makes no further comments on what those constraints are. The site is in the control of two developers who have agreed to work together to bring it forward, it therefore has the potential to make a contribution to the housing supply from 2021 as set out in the trajectory. Traffic Flintshire Council’s Highway Development Control department have been consulted and have not objected to the allocation of this site. Highways have stated that “It would appear possible to construct a junction (roundabout) on Northop Road that would be appropriate to serve a development of this size however careful consideration would need to be given to the existing petrol filling station.” **Alternative sites at Oakenholt** The objector suggests that alternative sites at Oakenholt would be more suitable than the allocation at Northop

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Road due to the planned new road to link the A55 with the M56. However the objector has not provided a site for the Council to consider. The existing Croes Atti development, at the base date of the Plan's Housing Balance Sheet (April 2018) still had 378 units remaining to be constructed and it would be inappropriate to locate further growth in one part of the town. The Plans approach of locating development in two parts of the town is more balanced and sustainable. The land for the planned new road (Red Route) has been safeguarded on the LDP proposals map, however the road is not under construction and timescales are presently unclear, therefore it would be premature to locate further growth at Oakenholt at this stage, using the objector's logic. The Northop Road allocation is a sustainable option, with no objection from Highways. Flint is a Tier 1 settlement capable of accommodating this growth sustainably.
164	HN1.4 Northop Road, Flint	Object	Proposed Housing development Northop Road flint. I wish to object to this part of the plan because 1 the planning inspectorate ruled against this land in the last plan because the inspector wanted to avoid developments that only provide housing to those who will just leave to work away from the community, this site will do that as residents will just turn right every morning and head to the a55 to work elsewhere. Also it will add not just	Removal of allocated site	See response to id 566

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			160 extra vehicles to Northop Road daily but double that as every family has two cars plus additional online shopping delivery plus all other online delivery products. This will add to an already overused road consisting of heavy lorries and fast moving traffic. Another reason given by the inspector was that flint already has sufficient provision for housing due to the large development at Oakenholt. The comments made were that 650 house still to be built. The proposed development plan shows that flint has the largest number of houses where permission is already granted still to be built. I would suggest that flint does not need the Northop road development at this time. If further development is to be granted I would suggest that Oakenholt is better placed given that congestion will be eased via the new red route planned to link the a55 with the m56

1256	HN1.4 Northop Road, Flint	Object	There are inconsistencies in the way the council has assessed potential sites, with reference to the assessment of our client's site. Background Paper 9 'Assessment of Candidate Sites and	More sites need to be allocated	See response to id 566

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			Alternative Sites' (2019), which forms part of the LDP evidence base, discusses the site (ref: BROU001) and states: 'The site is well defined by existing roads and wraps around existing residential development… Although the site is in close proximity to Bretton, the configuration of the site and its relationship with Bretton would ensure that development would not harm the present character and appearance of the settlement…' 'The site is considered suitable at present for consideration as an allocation.' [NJL Consulting emphasis] The evidence base is clear that the site is appropriate for residential development and should be considered for allocation, yet an allocation has not been taken forward. However, other less sustainable and less deliverable sites are allocated. For example, Northop Road (Flint) has no planning consent (two applications from September 2017 (ref: 057565) for 20 units and April 2018 (ref: 058314) for 145 units remain undetermined) and has identified constraints to delivery, yet the site is allocated. The same		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			applies to the New Brighton (Cae Isa) site (Site 10), which is proposed to be allocated for 105 units but there is no clear evidence of delivery yet clear evidence of constraints. Two further sites are proposed for allocation despite previous planning applications being withdrawn or dismissed on Appeal. The Highmere Drive (Connah's Quay) allocation (Site 3) was promoted for 185 dwellings in 2005 (ref: 043873) but a subsequent Appeal was withdrawn in 2008 and there has been no progress on the site. The Wrexham Road (Hope) allocation (Site 9) was subject to a now withdrawn planning application from 2018 (ref: 058163), and there has been no further progress. Therefore, the council's assessment of sites is inconsistent. There is a need for additional sites to be allocated, such as Bloor's site BROU001.		
1284	HN1.4 Northop Road, Flint	Object	There is genuine risk that proposed allocations cannot be delivered, either at all or in the timeframes envisaged. Several sites have been simply carried forward (rolled over) from the current LDP despite concerns with delivery.	Allocate additional sites.	See response to id 566

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			The Local Development Plan ('LDP') Manual (Edition 2) identifies the requirement for a new form of measuring the deliverability of sites, and whether they have a realistic chance of coming forward over the next 5 years. It states "When putting forward sites, developers and landowners should include sufficient data to allow a robust assessment to be made (see section 6.4.1&2) including affordable housing, community infrastructure and that the development is financially viable." The draft LPD Manual 3 (which was consulted on by Welsh Government in September 2019) then goes a step further. Table 18 in draft Manual 3 states that historic allocations should only be 'Rolled Forward' from previous plans where 'careful justification' is given that there has been a 'substantial change in circumstances to demonstrate sites can be delivered and justify being included again'. This is relevant as many of the proposed housing allocations have been simply 'Rolled Forward'. The table at Appendix 2 shows the housing allocations and our analysis of realistic deliverability. It identifies 6 of the 11 housing allocations are		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			undeliverable in the next 5 years and a further 4 have questionable delivery over the plan period. This has significant implications for the 5-year supply position and overall delivery of the plan. For example, Northop Road (Flint) technically has no planning consent (two applications from September 2017 (ref: 057565) for 20 units and April 2018 (ref: 058314) for 145 units remain undetermined) yet is allocated. No clear evidence of delivery.		
367	HN1.4 Northop Road, Flint	Support	1.3 The Site was promoted at earlier stages of the Local Plan process (Candidate Site references FLI007 & FLI015). Anwyl Land currently have legal agreements in place with two of the three landowners that own land forming part of this draft Allocation – by way of Promotion Agreements. Discussions are taking place with the remaining landowner regarding a collaboration agreement. All landowners agree there are no ransom situations in terms of access, and it is noted the proposed Allocation is to be served by a single access. The Site Location Plan at Appendix 1 confirms the area of land currently controlled by Anwyl Land, and the Illustrative Layout at Appendix 2 demonstrates how the site can be served via one vehicular access from Northop Road, via two separate planning application (which is		Support noted See response to id566

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the subject of the draft collaboration agreement between all of the interested parties). 1.4 The Draft Allocation identifies 170 dwellings within the LDP Deposit Draft (Allocation HN1-4 Land at Northop Road) and these representations demonstrate why the Site is deliverable. Please also see attached Representation due to word restriction limits for this question		
1240	HN1.4 Northop Road, Flint	Support	Northop Road, Flint, 170 units Welsh Water has made representations on this proposed site through planning application 058314. A water supply can be provided for this site. The public sewerage network can accept potential foul flows from this development site. Flint Wastewater Treatment Works (WwTW) can accommodate foul flows from the proposed development site.		See response to id 566
1241	HN1.5 Maes Gwern, Mold	Support	Maes Gwern, Mold, 160 units This site has planning permission and we have no further comment to make. Welsh Water made representations on this site through planning application 056742 and 058992.		Support Noted.
283	HN1.6 Land between Denbigh Road and	Object	Clearly, MOL025/044/045 is a long way from being the best option for a number of reasons which singly and cumulatively make it a poor choice compared to some of the other sites available: (1) it is the most actively	Reassess the H1.6 site and retain the UDP Inspectors' judgement of this site as a countryside site. The	**HN1.6 Land Between Denbigh Road and Gwernaffield Road, Mold** Not accepted. The Deposit LDP consultation has received over 1200 representations on various aspects of the plan strategy, allocations and individual policies. To ensure all

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Gwernaffield Rd, Mold		farmed of these sites; (2) it sits most prominently within a green landscape, visible from major approaches to Mold (3) is the most obviously "open countryside" site of them all with rolling hills on three sides. (The UDP Inspector alluded to the "significant incursion" into the countryside represented by developing this site); (4) has the least favourable location in terms of the road infrastructure; (5) has a significant mains trunk water pipe on site prone to emergency flooding; (6) is a flood risk; (7) sits in close proximity to a chemical factory (8) it sits in an area of Physical Environment Deprivation according to The Welsh index of Multiple Deprivation (12th worst out of 1909) In the Housing Land Monitoring Report Para 3.5, FCC claim that "the LDP will ensure that sites can be identified based on a rigorous and transparent assessment and against an agreed spatial strategy rather than on an ad hoc basis." That should surely apply to all the site assessments and documents but as shown above the assessments are not objective, rigorous or transparent. There is insufficient reasoned justification offered Not compliant with PPW paragraph: 1.19, 3.40	assessment is not objective as commented elsewhere. Close study of Background Paper 8 reveals that in the assessment of the largest sites in Mold, they all repeat the mantra that the MOL025/044/045/H 1.6 site is preferable for development, but the reasoning is inconsistent, citing features that could just as easily apply to the H1.6 site. The other sites (e.g. MOL002, MOL007, MOL019, MOL024, MOL041) are said to be: open countryside, too conspicuous in the landscape, not very urban etc. It seems clear to me that the assessor has decided that the H1.6 site is to be the sacrificial lamb that will not be	points within this large volume of representations are answered the Council have grouped and summarised representations made on allocated sites together and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector. **Petition** A petition with 102 signatures has made the following objections: • Scale of allocation • Increased traffic • Wildlife • Agricultural land • Water pipe • Sewerage problems • Surface water / fluvial flood risk These points are addressed below. **Compliance with PPW** The Plan and the choice of allocated sites has been prepared in the context of the latest version of Planning Policy Wales (version 10). The Plan is supported by a Sustainability Appraisal which forms part of a broader Integrated Impact Assessment (IIA). The spatial distribution of growth across the County is based on a revised settlement hierarchy which is informed by a comprehensive series of settlement audits which sought

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
				defended/protected, in order to save the other sites. Perhaps they feel that there has been "enough development already" in the south/south west area of Mold. If so, I would point to the UDP Inspector's guidance, last time around, that he/she was not convinced by the argument that an accessible area needs a period of respite (see S3.5.38 of the Inspector's report).	to establish the sustainability of each settlement and its position in the revised settlement hierarchy. Mold is clearly a Tier 1 settlement which is a sustainable location for accommodating planned growth and the Background Paper 'Candidate Sites' provided a summary explanation as to whether each site was or was not suitable to be considered as an allocation. The site between Denbigh Rd and Gwernaffield site is clearly an edge of settlement site. The Plan is considered to be in conformity with PPW. **General** The Plan preparation has involved a number of distinct stages, each of which has involved engagement and consultation. The Deposit Plan was in the public domain (as part of reports to Cabinet and Council) several months before it was made available for consultation in September 2019. The Plan was available in Council offices and libraries, permanent exhibitions were in place at Offices and libraries and drop in sessions were arranged including one in Mold in the early part of the consultation process. Elected Members and members of Town and Community Councils were given the opportunity to attend briefing sessions at County Hall ahead of the consultations. The Plan was advertised by public notice, by prominent exposure on the Council's website, by direct mailings to those persons who had requested to be added to a mailing list, by the placing of site notices at the sites of housing allocations and by social media posts by the Councils PR team. It is not possible to write to every household in the County. The Plan has embraced a growth led strategy in the broader context of North East Wales forming part of the

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Growth Bid, and the draft NDF confirming that Wrexham and Deeside are seen as a focus for growth. The Council is required by Welsh Government (Development Plan Manual 3) to have a flexibility allowance of at least 10%. The Welsh Government commented on the Plan Strategy 'The Welsh Government is generally supportive of the spatial strategy and level of homes and jobs proposed and has no fundamental concerns in this respect.' The existing haulage business is accessed off Pool House lane and the allocation will allow for access to be retained to the property / business. The allocation will also restrict residential development to the land to the south of Pool House Lane which result in a buffer between housing and the haulage business. The site may be in an area of Physical Environment Deprivation based on the Welsh Index but it is not explained why this should prevent new development from providing a quality residential environment which would benefit future residents. In respect of air quality, the North Wales Authorities Collaborative Project '2019 Air Quality Progress Report' states that 'The North Wales Authorities have not declared any Air Quality Management Areas (AQMAs) and as a result, have not published an Action Plan'. In respect of proximity to Synthite there are residential properties closer than the allocated site, which is separated by a buffer of open land. No objections to the allocation have been made from Health and Safety Executive or from any other statutory consultee. In respect of flood risk there is no objection from NRW to this allocation. The IIA has been undertaken on behalf of the Council by specialist consultants Arcadis using well established procedures and guideline and based on

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					experience of undertaking IIA and Sustainability Appraisal of projects, plans and strategies. The IIA is clearly presented and explained and is considered to be compliant with Regulations. The Plan has been prepared over a number of years and through a number of distinct stages where documents have been the subject of engagement and consultation. The Plans preparation has been overseen by a small working group of Members who are drawn from the planning committee but whose role in relation to the LDP is to oversee its production and make recommendations to the Council's Cabinet. The membership has remained stable throughout the process to ensure familiarity with the Plan and consistency in considering its progression. It would not be reasonable for every supporting document to be considered by Planning Strategy Group, and this would also apply to Cabinet and then Full Council. The recommendations to Cabinet and Full Council recognised that the Plan had been endorsed by Planning Strategy Group and produced in line with and justified by an extensive evidence base. A comprehensive range of documents have been provided as part of the consultation and it is the purpose of this consultation to enable interested parties to make representations both to the plan and the supporting evidence. Clearly there will be differences of opinion of certain documents and it is the purpose of examining the Plan to enable these to be considered. Clearly objectors have opinions about the Council's evidence base and the degree to which it supports the Plan's allocations, but whilst the various documents mentioned are criticized by objectors, there is

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					no clear evidence or alternative assessments submitted that add weight to these opinions. Existing housing is closer to Synthite than the proposed housing on the allocated site would be. There is also a buffer between the allocated site and the Synthite site which is formed by the land on the south side of Denbigh Road. No representations have been made by Health and Safety Executive or from any other statutory consultee. The settlement audit for Mold identifies a base dwelling stock of approximately 4,500 dwellings for Mold and in this context it is not accepted that the 246 anticipated yield from this site is disproportionate to the size or character of Mold. The town has a range of employment opportunities and is the administrative centre for the County and is less than 10 miles and less than 20 mins from Deeside Industrial Park. Mold is one of the County's most vibrant Main Service Centres and is a sustainable location to accommodate growth. There are no green belts in the Plan. The land to the north west of Mold is not green barrier as there is no risk of coalescence with any nearby settlements. **Non-conformity with Mold Town Plan** FCC has worked with Mold Town Council on a number of recent studies including Mold Sense of Place Study, the Mold Opportunity Sites Study, the Mold Town Plan and the Mold Green Band project and whilst it helped resource the production of the Town Plan, this was done independently by the Town Council. The Mold Town Plan

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					identified that the north western part of Mold was the preferred area for the future growth of the town. It identified sites on the north and south of Gwernaffield Road but only proposed that half the width of each site was developed. Rather than working with firm and defensible physical boundaries, the Town Plan sought to create new artificial boundaries in the belief that this would reduce visual impact of development in the landscape. The Town Plan approach would necessitate all access from Gwernaffield Road or from existing residential estate roads. Instead, the LDP seeks to work within existing landscape features and to provide a new vehicular access off Denbigh Road which can relieve pressure from existing estate roads and known pinchpoints at Dreflan. There is therefore close conformity both with the principle of growth in this location and the quantum of growth in the LPD period, but where the LDP approach is a more sustainable use of land and also has the potential to facilitate more sustainable future growth and development in this location, which can be considered as part of a review of the LDP. **Alternative Sites** Mold has strategic spatial constraints in terms of the direction for growth which, in combination, point to the north west of the town representing the most suitable and sustainable option for further growth. This has also been recognised by the Town Council as part of the Town Plan. The River Alyn Valley to the north and east of the town represents a flood risk constraint, the green barrier seeks to protect the relatively narrow gaps between Mold and outlying settlements, particularly between Mold and Mynydd Isa to the north east and Mold and

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Gwernymynydd to the south west. The A494(T) bypass to the south of the settlement effectively provides an outer edge to the expansion of the town. The north western part of the town is therefore the only location free from such strategic spatial constraints. It is not accepted that land to the north and south of Ruthin Rd is within the 'Mold boundary'. To the north of Ruthin Rd the settlement boundary follows the edge of existing built development and land to the west is part of the green barrier between Mold and Gwernymynydd. To the south of Ruthin Road the land also forms part of the green barrier between Mold and Gwernymynydd and is part of a very attractive and sensitive gateway to Mold given its visibility from the A494(T) and Ruthin Rd and the presence of the listed former Mold Jail. Development of this land would harm the purpose of the green barrier between the two settlements and also harm the setting of an important historic asset. The Pen y Bont site may sit within the line of the A494(T) bypass but it does not fall within the settlement boundary for the town which follows the line of existing built development at Woodlands Road. Successive development plan Inspectors and a planning appeal Inspector have concluded that the site forms an integral part of the green barrier between Mold and Mynydd Isa. Adopting a sequential approach it is entirely inappropriate to seek to develop land within a green barrier ahead of land to the north west of Mold which is not within a green barrier. In preparing a development plan and identifying housing allocations it is necessary to balance a number of

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					planning constraints and considerations. Therefore agricultural land must be considered alongside other considerations such as green barrier and flood risk. The preparation of the Plan has involved a comprehensive assessment of agricultural land and the Plan has sought to minimise the loss of BMV land in accordance with national policy. The approach was explained in the Background Paper and Welsh Government has supported in principle the approach taken and has not objected to the allocated site between Denbigh Rd and Gwernaffield Rd. The Plan's housing balance sheet accompanying policy STR11 includes an allowance for windfalls in the form of large sites (10 units or more) and small sites (9 units or less). The Plan adopts a conservative allowance for each type having regard to past trends and the findings of the Urban Capacity Study. This might include apartment schemes or the conversion of vacant buildings as well as residential units above shops. However, it would be entirely inappropriate for the Plan to be too reliant on this form of housing supply as it would be difficult to establish deliverability and the objectors provide no evidence to quantify where or how much potential housing would be available and deliverable from such sources to clarify what is meant by "contribute substantially". It is for this reason that the Plan adopts a modest level of windfall allowances and identifies sustainable housing allocations which are viable and deliverable, providing greater certainty. **Environment Natural**

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					The North Wales Authorities Collaborative Project '2019 Air Quality Progress Report' has established that there are no Air Quality Management Areas identified in the County. There is not considered to be any sources of pollution or noise which would prevent residential development on the site from taking pace on this site. It is not considered that a residential development of 246 houses would harm the living conditions of existing residents and other receptors in terms of pollution and noise. The site is part of a swathe of rolling open countryside. The site is well bounded by strong physical features formed by Pool House Lane and its hedgerows and this will form a strong edge to the settlement. The site is considered to form a logical urban extension to the settlement. Furthermore, no built development will take place on the northern part of the site between Denbigh Road and Pool House Lane and this will enable the provision of SuDS drainage infrastructure as well as acting as a landscaped buffer when the site is viewed from Denbigh Road. The UDP Inspector only considered the land between Pool house Lane and Gwernaffield Road and considered at that time that the site represented a significant incursion into open countryside. It must be borne in mind that the UDP Inspector was satisfied that there was sufficient provision in Mold as a result of allocations at that time so there was no need to look at additional land releases. This is a new Plan and plan period where new housing sites need to be identified and a larger parcel of land is being considered, which brings about other benefits.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					With the exception of perimeter hedgerows the only features within the site are a group of mature trees. Given the sites agricultural use, improved grassland is of low ecological value. The provision of green infrastructure and landscaping within the site as well as the retention of trees and hedgerows will enable ecological and biodiversity improvements to be made. The comments on individual sites in Background Paper 8 in terms of landscape character and whether sites better relate to open countryside or urban form must also be considered in the context of a wide range of other assessment factors and material planning considerations. The summary assessments in BP08 are only a summary of whether or not a site is suitable or not to be allocated and is the 'front- end' of a detailed assessment database. It is the case that in terms of strategic constraints including flood risk, green barrier designations and the line of the bypass, the north western part of the town is the only practicable area of search for housing allocations. This is also recognised in the Mold Town Plan produced by the Town Council. **Environment Historic** Bailey Hill is a Scheduled Ancient Monument which lies at the northern edge of the town centre and within the conservation area boundary. It is a distinctive landscape feature which is visible from many parts of Mold and the surrounding landscape. The edge of the SAM boundary lies some 470m to the east of the housing allocation and is separated by existing residential development. It is not considered that residential development on the allocation

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					would harm the setting of the SAM and there are no objections from Cadw. The Alleluia Monument is a stone obelisk on a pedestal erected in 1736 to commemorate the alleged 'Alleluia Victory' of the Britons over the Saxons in AD 420 and is a grade II listed structure. It is located on the south side of Gwernaffield Road some 440m to the west of the allocated site but is sited to the west of a substantial woodland belt which effectively screens the monument from the allocated site. It is unclear how housing development on the allocated site would harm the setting of the monument. To the west of Mold lies the Rhual Estate which comprises a range of listed buildings, a historic park and garden, a scheduled ancient monument and archaeological assets. There is also a zone of essential setting which extends southwards and eastwards and narrows to as it extends eastwards to a point on the western side of the junction of Gwernaffield Rd and Pool House Lane, to the west of Groed-Onnen Cottage. There are no built / historic designations within the allocated site and the zone of essential setting does not directly adjoin the site boundary. The archaeological asset comprising the Alyn Tinplate factory pond, lies outside the boundary of the allocation. There is no objection to the allocation from Cadw. **Traffic / Transport** The allocation of the site provides a new access onto Denbigh Road which is an ‘A’ road. Highways

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					Development Management Officers have no objection to the creation of a new access, nor to the impact of traffic generated from the development, on the road network. Rather than using existing residential estate roads to access the development, the principal access will be a new road from the A541. This ensures that the main direction of traffic seeking to access Mold or the highway network, will be along the A541 and directly over the mini roundabout, rather than the alternative which would have been for traffic to emerge onto Gwernaffield Road and then access the mini roundabout via Dreflan, which is known to be problematic. Although the development will result in additional traffic on the surrounding road network not all vehicles will travel along the same road at the same time. Given that the development will incorporate a new road and access onto Denbigh Road it is unclear why objectors consider that it will increase traffic on Gwernaffield Rd. There is no requirement for traffic lights at the new junction with Denbigh Rd as a T-junction arrangement is adequate to serve the site. It is possible to catch service 5 from Mold Bus Station and arrive at locations within Deeside Industrial park between 6.42 and 6.48 and the last bus back to Mold is 18.03. It is therefore possible to travel for work purposes. It should also be stressed that Mold includes existing sources of employment as well as employment allocations to facilitate further employment development. Traffic from the Hendre Quarry is routed through Rhosesmor and not along the A541 into Mold.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					It is considered that Denbigh Road can accommodate traffic arising from the site. **Flooding / Drainage** The boundary of the allocation lies outside the flood risk area as defined in the NRW Development Advice Map accompanying TAN15 Flood Risk. Pockets of surface water flooding on the site can be addressed through a sustainable urban drainage scheme which will limit surface water run-off from the development to the same rate as from a greenfield site. A SuDS scheme will be worked up as the site progresses to the development management stage. The Council is aware of high pressure water pipes across the site and these can be taken account of through the layout and design of the development and easements retained to ensure access for any maintenance. **Services / Facilities / sustainability** The site is approximately an 800m walk to the health centre and approximately 1100m from the Lidl Store on Denbigh Road. A convenience store and fish and chip shop are found in the local shopping parade on Elm Drive a walk of 700m from the edge of the site. The Cross in the middle of the town centre is approximately 1200m from the site. Service no.6 provides an hourly service between Mold and Pantymwyn along Gwernaffield Rd whilst on Denbigh Road service 14 provides a bus every 2 hours between Denbigh and Mold and service 126 an hourly bus service between Mold and Holywell. This edge of town allocation is clearly accessible on foot and by bus to

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
					a range of facilities and is only approximately a 1200m walk from Mold Bus Station where other key services are available: • X4 – Mold, Broughton, Chester every 30 mins • 5 – Ellesmere Port, Deeside Industrial park, Queensferry, Buckley, Mold every 1 hr • 28 – Flint, Mold • 29 – Mold, Wrexham • X1 – Ruthin, Mold, Chester. Residents of the new development will be able to access facilities and services without being wholly dependent on a private car for all journeys. The comments of Welsh Water are noted and will be addressed as the site progresses. The site is in close proximity to Mold Community Hospital / Heath centre and there is no objection to the Plan from Betsi Cadwaladr University Health Board. **Deliverability and Availability** The site allocation benefits from a preferred housebuilder who have unilaterally undertaken a range of background and technical assessments. There is no evidence that the site is either unviable or undeliverable.
301	HN1.6 Land between Denbigh	Object	Objection 19: The H1.6 site has drainage issues but there little discussion or a Drainage Plan The Gwernaffield catchment area for rainfall	REmove the site from the allocation as it is perfectly good agricultural	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Road and Gwernaffield Rd, Mold		is known to have a dry soil that experiences very fast run-off during extended period of rainfall. The topography is such that water drains towards the River Alyn, and the site of H1.6 is in its path. As such, this sloped site also experiences fast run-off due to the slope and its own soil characteristics. Since January 2019, the Welsh Government has more stringent policies on Drainage Planning (over and above the normal planning function) with regulatory power. I have not come across a Drainage Plan in the documentation so believe that this LDP is non-compliant. Not complaint with PPW paragraph: 1.34(i) Referral required, 3.40, 6.6.3, 6.6.16, 6.6.22, 6.6.26 Deposit LDP Para 7.3 states that housing development will be directed to the most sustainable and viable locations. This clearly does not apply to site H1.6 which is not sustainable and not viable Para 8.15 notes the risk of localised flooding but fails to explore this issue fully in the case of site H1.6 and the Gwernaffield rain catchment area and its specific characteristics under extreme rainfall conditions and the effect on the sloped site of H1.6	land but potentially very poor land for development as the site has known drainage issues that have beern omitted from the non-objective assessment	
303	HN1.6 Land between Denbigh	Object	Objection 20: A high-maintenance major trunk high pressure water main cuts across the H1.6 site and has had two catastrophic burst recently causing	Remove Site H1.6 from the allocation as it is unsuitable and the assessment	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Road and Gwernaffield Rd, Mold		local flooding and disruption The candidate site assessment simply states that a “waterbody” crosses the land. In fact there are two Dwr Cymru/Welsh Water high pressure water pipes running across the field requiring that a large section of the site would be given over to easement. One pipe is the Alwen Aqueduct, a major trunk mains pipe supplying water to private consumers and industrial sites in Mold and NE Wales (see leaflet) which has had at least two catastrophic bursts in the winter of 2018/19 , causing several days of flooding and the closure of Factory Pool Lane and flooding in Synthite industrial premises. The contractors, Waterco, were unable to stem the flow on this pipe that is almost 100 years old, eventually closing the water supply at Loggerheads, thereby denying service in Mold while they struggled to solve the problem (The Waterco website has an information leaflet on the aqueduct – see next page). Emergency flooding such as this would present real problems to a housing development, and the people of Mold yet there is no analysis of this in the site assessment document. Not compliant with PPW paragraph: 3.40, 6.6.5, 6.6.9, 6.6.10, Deposit LDP Para 7.3 states that housing development will be directed to the most sustainable	process did not fully recognise the potential problems	

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			and viable locations. This clearly does not apply to site H1.6 which is not sustainable and not viable Para 8.19 states that the quality of water supply and how surface water is treated has to be balanced but significant features on the H1.6 site are ignored – the underground Alwen Aqueduct		
307	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection 22: Excessive traffic on the A541 In the Deposit plan, under "Minerals", the recommendation is to reopen the Hendre quarry and to excavate some 11 million tonnes of limestone. This may be a worthy project but that limestone will need to be transported off site most likely along the A541, further exacerbating the Denbigh Road into Mold and potentially further exacerbating the issues to do with Physical Environment Deprivation. To the above can be added the impact of lorries linked to the construction period of any housing development which would put even more pressure on the road system, with all traffic on the A541 having to queue through the (accident prone and narrow) mini-roundabout at the junction with Dreflan. Construction traffic would need to enter and exit the site via Denbigh Road, as it would be unsupportable for those lorries to use the Gwernaffield Road/Dreflan route, an exclusively residential area with its tight 90 degree turn that all traffic has to	Remove site H1.6 from the allocation as the Hendre quarry additional traffic will be pushing the capacity of the A541 without the addition of traffic from 246 new houses. Needs a transport impact assessment.	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			crawl through. Following construction stages, the problem would then be continued by the increased pressure on the A541 from residential users entering and exiting the development. The Paper on “Agricultural land” makes this comment: “A constraint to the westerly expansion of Mold is that the existing road network is poor in terms of its capacity and suitability to serve further development.” I cannot find a Transport Assessment in the documentation that assesses the risks and impact on all residents. Not compliant with PPW paragraph:, 3.21, 3.40, 4.1.4 to 4.1.6, 4.1.47, 4.1.56, 6.7.14		
311	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection 23: The LDP and its supporting papers fail to acknowledge that the MOL045/H1.6 site is not particularly well placed either in terms of proximity to services on foot, or access through congested routes to employment and vital services The site assessment in the Plan does not give due consideration to the fact that the nearest shop (Lidl) is one mile away from a central point on the site and the majority of shops, doctors’ surgeries, schools and facilities are on the other side of town. The location is such that most journeys of children to school will be made by car. Most shopping journeys will be by car. Most journeys	Remove site H1.6 from the allocation, It is not a sustainable or viable site and many factors have been missed in its assessment within the Plan	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			to the doctor will be by car. The lack of a railway station means that most journeys to work will be by car. All of this exacerbates emissions and makes the site less sustainable compared to others in Mold. The site does not have access to Mold bypass, and is in the wrong location for ease of access and safe traffic routes. The A541 is a very busy road with many heavy lorries and commercial vehicles as well as cars. New traffic coming off the development would be substantially polluting the road into Mold especially at rush hour, on route to the work destinations mainly in Deeside, Merseyside and NW England. This makes it a non-sustainable site against Planning Policy Wales' guidelines. Cars coming out of the development would be tempted to use rat runs through (1) Gwernaffield Road and Dreflan and (2) Black Brook, a country lane (to bypass the queues on the A541 into Mold and back up towards the A494). Dreflan/Pwll Glas/Gwernaffield Road has a 90 degree turn in the road, and many houses without driveways, so that cars are parked on the road. There would need to be extensive upgrading of the A541 and traffic lights to make all¬¬¬¬¬ this safe. The proposed development would make a significant impact upon the local residential area given the extra		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			volume of traffic and is not compliant with the Well Being Act. Not compliant with PPW paragraph: 1.34(ii) Referral required, 3.21, 3.40, 4.1.4 to 4.1.6, 4.1.13, 4.1.36, 4.1.56		
359	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection 25: The Gwernaffield Rd/Denbigh Rd site (and its unique mix of open countryside, farming culture, historic buildings/features, landscape setting) is a gateway into Mold that sets off all of its assets The MOL45/H1.6 site sits about 300 metres from the historic monument, the Allelujha Monument of 1736 commemorating a historic battle in AD420 between the Britons/Welsh and the Picts and Saxon. A late 19th century map (see photo on next page) shows the site , also the position of the original “Factory Pond” at the northern edge of the site, and a Tumulus. Also close to the site is Bailey Hill, a 11th Century Motte and Bailey Castle currently undergoing regeneration under a Heritage Lottery Fund grant of over £1million. The Deposit LDP fails to properly assess the historic and cultural value of the site in this regard. This route into Mold has sufficient appeal and historic assets to support the tourism/visitor offer, which in turn leads to a mixed and resilient local economy. The quality of the landscape in this site is much higher than on other allocated sites in the Mold	Remove site allocation H1.6 and preserve the special character of the north west corner of Mold. Visitors from North Wales use this route and it forms part of the appeal of a small market town with historic and cultural assets as well as a significant proportion of Flintshire's Welsh speakers.	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			area. It is in a different, higher league yet this environmental context is essentially ignored by the LDP's assessment of the site, despite the Welsh Government's instructions to assess environmental context when considering development. The undeveloped north west corner of Mold is the last piece of green land that maintains the identity of Mold as a rural town. It contributes strongly to the character and history of Mold, its landscape and history. FCC should recognise this and protect it. Not compliant with PPW paragraph: 2.19, 3.40, 6.0.2, 6.3.3 to 6.3.4		
361	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection 26: Development on site H1.6 would result in loss of habitat connectivity and very old mixed species hedgerows. Whilst there may be not appear to be any rare creatures on the site – only rooks, gulls, starlings, swallows, sparrows, tits, goldfinches, robins, woodpeckers, hedgehogs, badgers - there is a significant corridor of ancient hedgerow running along both sides of Gwernaffield Road and Factory Pool Lane. Faced with climate change, strange weather patterns and loss of habitat, we cannot be complacent about any living creatures, and some birds and mammals once thought common are now becoming endangered. These old hedgerows are old, mixed species	Remove the site allocation H1.6 and preserve the old mixed species hedgerows that form an important part of the biodiverse ecosystem of the area. Hedgerow Regulations should be applied	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			ash, hazel, oak, sycamore, blackthorn, hawthorn, holly and ivy and not replaceable in the short or medium term and so habitat connectivity might be lost for a long time. FCC does not appear to have consulted the Hedgerow Regulations on this matter. Not compliant with PPW paragraph:3.40, 6.4.3, 6.4.4, 6.4.7, 6.4.21, 6.4.25 Deposit LDP Para 12.8 notes the importance of green infrastructure but states that new development “may” be required to “contribute” to green infrastructure. This means that an old hedgerow of significant length on the H1.6 site is not protected if development goes ahead. Para 12.26 refers to Hedgerow Regulations but I see no reference to this in the LDP in relation to site H1.6 or any other site		
449	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection to allocation at Gwernaffield Road/Denbigh Road Mold. We are greatly concerned about the impact of the proposed development on neighbouring residents. The increase in traffic will lead to even more congestion and greater number of accidents at the mini roundabout, and will also increase pollution and noise levels in the area. At peak times traffic along Denbigh Road is already backed up from the King Street roundabout to the mini roundabout at Dreflan and beyond. The	Remove allocation at Gwernaffield Road/Denbigh Road Mold	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			proposed 246 houses could potentially lead to another 500 vehicles regularly travelling along this road, several times each day. We do not think that this is in accordance with the plans aims to providing a sustainable environment with an improved quality and well-being to local residents of Mold.		
453	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection to allocation at Gwernaffield Road/Denbigh Road Mold. We have run a haulage business adjacent to the site for over 40 years and are very concerned about any negative impact this proposed development will have to the running of this business.	Removal of the allocation at Greenfield Road/Denbigh Road Mold	See response to id 283
534	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objections to Gwernaffield Road Denbigh Road Mold site site 1. Quantity of houses required - the projections within the LDP of 6,950 house plus 14% flexibility and the provision of 8000 to 10,000 jobs is too high. Estimates of housing needs, evidence from the National Development Framework, brownfield sites and the number of house for sale in Mold all show that these figures are too high. 2. Selection and categorisation of the green barrier-land shown in green strips on the attached map shows land within the Mold boundary with good access to the by-pass, land within the by-pass is preferable as the by-pass was built to alleviate traffic, set the town boundary,	Removal of the Gwernaffield Road / Denbigh Road Mold allocation	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			to prevent coalescence and facilitate traffic infrastructure as it exits Mold. 3. Assessment of Gwernaffield Road Denbigh Road Mold –Agricultural Land quality Grade 2 and 3, no highways infrastructure, increased congestion on Denbigh Road, no traffic management plans and road safety issues of using minor roads such as Black Brook. Flood risk, air quality and pollution issues. 4. Water Main –two high pressure trunk water aqueducts mains run through the site, 2 significant busts in the last 12 months. 5. Road Safety – increased traffic on Gwernaffield Road, Park Avenue and Dreflan. Bus services do support travel to Deeside for work with services to meet 24hr shift pattern services from Flint Mancot and Connahs Quay but not Mold. 6. Land quality and use of farm land - the land is Agricultural Grade 2 and 3a.		
604	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	I wish to register our opposition to the building plans on a field between Denbigh Road and Lon y Waun. The field seems to be exceptional agricultural land judging by the cattle and the crops that have been grown there over recent years. It's a healthy open air area which is enjoyed by many in this part of Mold. However, our main reason for opposing this is the inevitable and significant increase in traffic it is bound to cause locally. This	Removal of allocation	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			is likely to increase safety risks including local children and those starting to make use of the roads for cycling. The development is sure to increase the number of accidents involving local road users particularly near to Dreflan. There's a danger of increasing risks from the impacts of pollution on the health of the local population, particularly children and the elderly. There is also talk that there are water mains on the site. When you consider there are better places to build, I would be grateful if you could please take these objections into consideration.		
268	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	MOLO25/44/45 The plan fails to mention the existence of two high pressure trunk water aqueducts running across the site that burst twice last year causing disruption to residents water supply and flooding to the area and Synthite factory which closed A541 Denbigh road for several days whilst contractors battled to stem the flow. If these bursts had occurred within a residential area it is likely properties would have been flooded. The plan fails to mention that the Mold West ward is very poorly rated in the lowest 10 for Physical Environment, according to the Welsh Index of Multiple Deprivation. This index measures;	Remove allocation.	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			• Air Quality • Pollution • Proximity to industrial sites e.g. Synthite • Flood risk The increased congestion on the A541 will lead to poorer air quality, increased noise, disturbance, dust and hazards along this stretch of road. This would appear to be contrary to PC2 of the LDP which states that any development should not have a significant adverse impact on the safety and living conditions of nearby residents, other users of nearby land/property, or the community in general, through increased activity, disturbance, noise, dust, vibration, hazard, or the adverse effects of pollution.The site on Gwernaffield Road/Denbigh Road is the third largest (246 houses) and most prominent piece of actively farmed land proposed for development in the Deposit Plan excluding Warren Hall (300) and the Northern Gateway (1000). The latter two are declared strategic growth sites in officially designated growth areas close to manufacturing and Flintshire's employment land opportunities. Mold is not cited by the Welsh Government as being an area where high growth is being encouraged or targeted, so a 246-dwelling site is not "needed" in the		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			strict sense of the word, nor appropriate. The size of the site is disproportionate to Mold's environment, history, character and culture, and would severely harm the landscape and its contribution to the charm and historic assets of Mold and Flintshire. PPW 10 states 'grades 1, 2 and 3A should be considered as a finite resource for the future and considerable weight should be given to protecting such land from development because of its importance'. It states that this land should only be developed if lower grade land is unavailable or available lower grade land has an environmental value recognised by a landscape, wildlife, historic or archaeological that out-weigh the agricultural consideration. The plan fails to mention the very busy A541 road. I understand vehicular access is to be onto the A541 Denbigh Road. I believe that vast majority of these vehicles will travel into Mold to access facilities and employment. This will greatly increase traffic flows on the Denbigh road into Mold. There is currently congestion at peak times at the King Street roundabout with tailbacks to the mini roundabout serving Dreflan/Gwernaffield road. It is reported that there are frequent minor accidents at the mini roundabout and increased		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			traffic is likely to result in additional problems I believe motorists will make use of Black Brook Road to Sychdyn to gain access to the A55 and to Flint. Motorists will also use Gwernnafield rd/ Dreflan to try to take advantage of the priority right of way at the mini roundabout, this road has a sharp bend which because of cars parked by people's houses often causes traffic to come to a halt in order to negotiate this bend. It is highly dangerous now and will not accommodate an extra 500+ cars each day. I am not aware of any plans from Flintshire C.C. to improve the Denbigh Road or Gwernnafield/Dreflan to accommodate the increased traffic flow. PPW10 (para5.35) requires development plans to set out an integrated planning and transport strategy. The Infrastructure Plan supporting the LDP states that a full Transport Assessment is necessary for the site MOL008/MOL044/MOL045 but does not appear to have been produced under the Road Traffic Reduction Act 1997. PC5 of the LDP on page 119 states new development proposals must be supported by appropriate transport infrastructure, and depending on the nature, scale, location and siting of the proposal, will be required to Mitigate any significant adverse effects upon the transport		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			network that arise from the proposed development including improvements to transport infrastructure and traffic management where required. Flintshire C.C. at its Council meeting on 23rd July 2019 approved the content of the Flintshire Deposit local plan 2015-2030 to go out to consultation. At that meeting the plan was presented to the members but none of the numerous background supporting documents were made available to them to consider or approve. The background documents are now available as part of the consultation and contain considerable amount of detail that helps to explain the deposited plan. All papers should have been made available to all council members prior to the council approving the plan.		
284	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection 16: Candidate Site Assessment 'Scoring' Methodology is very poorly explained and executed The LDP's Appendix E "Assessment of Site Allocations" is a very poor assessment document. It suggests that sites are being "scored". This infers it is an objective process. It is not. The site factors are assessed by placing them on a non-continuous scale of effects (Major positive; positive; neutral; adverse; major adverse; uncertain; positive/adverse), but there is no rigorous underpinning methodology to	Reassess site H1.6/MOL044/MOL 4045 as the assessment methodology is weak and not objective and incomplete.	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			show how the decisions are actually being made. The “Scoring” system used by the IIA (which is not explained or referred to in the “Candidate Sites Assessment Methodology” May 2015 paper) yields it mysterious results for the Gwernaffield Road/Denbigh Road site and some of the assessments are worthy of closer attention. I will focus on the anomalies within the assessment. The plus rating (i.e. positive effects) is given to: • Education – states that one primary school is 1km away also a secondary school and they do have some spaces. But this housing development is for 246 houses, so where will the extra children be educated? And there might well be other developments at the same time, with children all competing for the same few spaces. Appears to be oblivious to the fact that Mold West Ward is in the very bottom 10% for Education Deprivation in Welsh Index of Multiple Deprivation. The + score is therefore puzzling. Neutralizing to zero would be more appropriate • Welsh Language – notes the proximity of 2Km to a Welsh medium secondary school and Welsh medium primary school and this seems to be enough to win this factor a double plus. The “analysis” does not assess the number of places needed by the children in the 246 houses, plus other		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			development sites in Mold. Nor any assessment of how many parents would want/expect their children to attend a Welsh medium school in Mold i.e without key info the double plus "score" is simply optimistic guesswork. The analysis is full of anomalies, weak methodology, and subjective assessments.¬¬ If the Planning Committee cannot show how it arrived at its site allocation decisions via a detailed explanation of methodology (in Appendix E, LDP) and had no Green Barrier Review and no Habitats Regulations Assessment review to inform site assessment then the process and the decisions are unsound. There is insufficient reasoned justification offered Not compliant with PPW paragraph: 1.19, 3.4, 6.7.9		
286	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection 17: This Deposit Plan advocates using up a finite resource – good quality agricultural land – for housing The Gwernaffield Rd/Denbigh Rd site forms part of the central belt of Grade 2 land stretching through Denbighshire "all the way into Mold" (Flintshire LDP Background Paper 9, p5). There is little or no Grade 1 land in Flintshire so this type of land represents the best and most versatile quality land in our county, and helps to ensure the viability of the farming community and agriculture in our area. It is an	Para 7.3 states that housing development will be directed to the most sustainable and viable locations. This clearly does not apply to site H1.6 which is not sustainable and not viable Para 7.9 & 7.15 the Welsh Govt no longer require a five	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			irreplaceable resource that enhances biodiversity and makes the county more resilient to future environmental change and to climate change. It is also clear that we need to become more self-sufficient in food production and to reduce food miles and the air-freighting of food across continents. Although there is evidence that PPW's hierarchy of questions regarding agricultural land usage has been considered, there is no explicit outline of the relevant answers (that I can find) in relation to the Gwernaffield Rd/Denbigh Rd site). So this is my analysis: • lower grade land sites are available and, furthermore, they are not being as actively farmed for both arable and dairy farming as occurs on the Gwernaffield Rd/Denbigh Rd site • the alternative sites (of lower grade land) are arguably of much lower significance to the landscape and character of Mold than the Gwernaffield Rd/Denbigh Rd site • lower grade land is available within the bypass to the south of Mold, closest to the urban area and the majority of services such as schools, doctors' surgeries, bus routes, and the bypass roads out of Mold. The Inspector of the UDP noted that development on the Gwernaffield Rd/Denbigh Rd site would represent "significant incursion into open countryside". It should also be noted	year supply and in putting forward this site of agricultural land the LDP is in breach of PPW rules and not the most appropriate use of the land In section 9, the list of PC2 requirements (a-f) are all breached by the development of site H1.6 In section 9, the list of PC5 requirement b and c are breached by the development of site H1.6 Changes required to remedy the above	

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			that the Background Paper on the treatment of agricultural land was also only made available in September 2019 so this is another document which could not influence the decisions of Flintshire CC. Again, this is fundamentally unsound, given the sensitivities of the sites under consideration. Not compliant with PPW paragraph 1.19, 1.34(ii) Referral required, 3.40 Deposit LDP Para 9.3 Site H1.6 by virtue of its scale and size (capacity for 246 houses) is prominent in the landscape and will harm the character and nature of that area/setting for listed buildings and historic assets		
300	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection 18: Proposed H1.6 site entrance/exit is not resilient against climate change There are unacknowledged issues of resilience and sustainability attached to this site. Flood risk is discussed elsewhere, but there are a few additional points to be made here. In the Habitats Regulations Assessment paper (a paper that was not available until September 2019), on page 50 there is a description of the Gwernaffield Rd/Denbigh Rd site in Mold as “Open countryside in the UDP, abutting settlement boundary. Flood risk on part of MOL044. Site comprises two areas of grazing pasture on northwest edge of Mold”. The plan	Remove the site from the allocation.	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			accompanying the LDP (showing the site designated at H1.6) cuts off part of MOL044, presumably to remove the portion that is plagued by flooding, however, problems remain. In terms of positioning a new exit for a development onto the A541 there are two options: (1) use the existing Factory Pool Lane exit, in which case there is a blind bend obscuring the view of traffic approaching from Denbigh towards Mold; or (2) create a new exit further west from Factory Pool Road, which would improve visibility around the blind bend, but this would put the new exit/junction back into the flood risk area of MOL044 and into the A541/Flood Zone B (see online flood risk map on next page, provided by Natural Resources Wales). Option (1) would require traffic lights on the junction, creating more standing traffic and emissions in an area of known Deprivation of Physical Environment. Not compliant with PPW paragraph: 1.34(i) Referral required, 5.7.3, 6.6.26 Deposit LDP Para 7.3 states that housing development will be directed to the most sustainable and viable locations. This clearly does not apply to site H1.6 which is not sustainable and not viable		
306	HN1.6 Land	Object	Objective 21: Development of site H1.6 could aggravate the pre-existing	Remove site H1.6 from the allocation	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	between Denbigh Road and Gwernaffield Rd, Mold		Physical Environment Deprivation levels in Mold West Wards, a factor not explored in the LDP. Missing information from Appendix A , Spatial Option assessment paper and other assessments as follows: (1) the “lowest 10%” Education Deprivation score on the Welsh Index of Deprivation in Mold West Ward; (2) the impact of proximity to the Synthite chemical factory to H1.6 site is ignored. But in another assessment of candidate sites, Mold Alex was deemed unsuitable for development due to its proximity to Synthite. In fact, Synthite is more or less equidistant to Mold Alex and to the H1.6 site. This is not a rigorous and objective assessment (3) the assessments also consistently fail to record that the Mold West Ward is very poorly rated in the lowest 10% for Physical Environment, according to the Welsh Index of Multiple Deprivation. Mold West 1 scores 12 out of 1909, and Mold West 2 scores 129 out of 1909 (where 1 is worst and 1909 is best). This index measures (i) Air quality/pollution, (ii) Proximity to industrial sites (e.g. Synthite?) and (iii) Flood risk. Surely some analysis should take place before a site is allocated, but the Deposit Plan ignores this abysmal performance and it is not even referenced in the site assessment. This	as there are multiple problems that are not being explored before producing the Plan	

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			omission is curious given the Preferred Strategy IIA report of October 2017 clearly states (under Figure M-3) that low scores on Physical Environment may impact on well-being or quality of life of those living in an area. Also the Welsh Government has promoted the Well Being Act of 2015 to protect people in Wales. No analysis of this issue - barely even recognising its existence –means the Plan is clearly in breach of regulatory guidelines. There is insufficient reasoned justification offered Not compliant with PPW paragraph: 1.19, 3.21, 3.40, 5.4.15, 6.7.4 to 6.7.7, 6.7.9, 6.7.16 Deposit LDP Para 8.1 stresses the need to protect habitats and to ensure the environment is one which can play a key role in the health and well being of its communities. Yet in the case of site H1.6, the LDP has not explored the underlying reasons for the extremely poor scores in Mold West Ward for Physical Environment and Education. No analysis and no recognition of an important underlying problem which needs to be understood before proposing housing development which might aggravate the problem.		
358	HN1.6 Land between Denbigh	Object	Objection 25: The Gwernaffield Rd/Denbigh Rd site (and its unique mix of open countryside, farming culture, historic buildings/features, landscape	Remove site allocation H1.6 and preserve the special character of the	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
	Road and Gwernaffield Rd, Mold		setting) is a gateway into Mold that sets off all of its assets The MOL45/H1.6 site sits about 300 metres from the historic monument, the Allelujha Monument of 1736 commemorating a historic battle in AD420 between the Britons/Welsh and the Picts and Saxon. A late 19th century map (see photo on next page) shows the site , also the position of the original “Factory Pond” at the northern edge of the site, and a Tumulus. Also close to the site is Bailey Hill, a 11th Century Motte and Bailey Castle currently undergoing regeneration under a Heritage Lottery Fund grant of over £1million. The Deposit LDP fails to properly assess the historic and cultural value of the site in this regard. This route into Mold has sufficient appeal and historic assets to support the tourism/visitor offer, which in turn leads to a mixed and resilient local economy. The quality of the landscape in this site is much higher than on other allocated sites in the Mold area. It is in a different, higher league yet this environmental context is essentially ignored by the LDP’s assessment of the site, despite the Welsh Government’s instructions to assess environmental context when considering development. The undeveloped north west corner of Mold is the last piece of green land that	north west corner of Mold. Visitors from North Wales use this route and it forms part of the appeal of a small market town with historic and cultural assets as well as a significant proportion of Flintshire's Welsh speakers.	

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			maintains the identity of Mold as a rural town. It contributes strongly to the character and history of Mold, its landscape and history. FCC should recognise this and protect it. Not compliant with PPW paragraph: 2.19, 3.40, 6.0.2, 6.3.3 to 6.3.4		
364	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection 27: The Plan is insensitive to the disproportionate size of the proposed Gwernaffield Rd/Denbigh Road site which is an actively farmed field on the edge of open countryside. The site on Gwernaffield Road/Denbigh Road is the fourth largest (246 houses) after Hawarden (288), Warren Hall (300) and the Northern Gateway (1000). It is a prominent piece of actively farmed land and feels like open countryside. It seems strange to locate such a large 246-dwelling site in the least accessible corner of Mold, in a town some distance from Deeside, in a location where it is not “needed” in the strict sense of the word, on a greenfield last resort site. Nor is it appropriate in terms of the character of the town. The size of the site is disproportionate to the scale of Mold’s environment, not in harmony with the scale of landscape, and would be detrimental to the quiet residential area in that part of town and also detrimental to its residents. Not compliant with PPW paragraph 3.21, 3.40, 6.7.9. Deposit LDP Para 12.15	Remove site H1.6 from the allocation and revise the plan, proposing more realistic targets for employment and hence houses. Also recognise that the recent Welsh Govt NDF makes it clear that fewer houses will need to be built at the country is ahead of schedule and population and migration patterns show only limited growth in Flintshire for teh next 8 years then a period of static population size. Also FCC have stated that they have "ample choice" of sites (in para	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			states that new development must sit comfortably in its landscape setting. Clearly this is at odds with development on site H1.6 which was classed as open countryside under the UDP	3.67) of LDP, therefore there is insufficient reasoned justification for using agricultural land for a housing development of this size and in this location, where the road infrastructure is poor, where there is a very real risk of flooding, and in the town of Mold where there is no railway station to transport workers sustainably. This is a very poor location for a large housing development	
446	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection to allocation at Gwernaffield Road/Denbigh Road Mold. I believe that the assessment that have been undertaken leading to this site being proposed are unsound due to the following reasons: This land has been actively farmed for many years, with the local farmer regularly fertilizing, cropping and grazing cows The current landscape is high quality with views towards Mold Famau and the Clwydian range. I am therefore concerned about	Removal of allocated site at Gwernaffield Road, Mold	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the visual impact any such development would have. I am concerned about the substantial increase in traffic along the Denbigh Road. As a local resident I am already aware of considerable congestion and minor accidents that have occurred along this busy road. Any additional traffic would significantly increase safety hazards got both commuters and pedestrians. I am not aware of any proposals from the Council to improve the traffic problems on Denbigh Road. There are two high pressured water mains running across the entire site and these mains have burst recently resulting in flooding to the field, Denbigh Road and the local factory. This caused major disruption to the entire area. If houses were to be built on this site, any further bursts nearby would cause significant disruption and flooding to new households.		
450	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection to allocation at Gwernaffield Road/Denbigh Road Mold. We are opposed to the development of this green field for housing purposes. We are particularly concerned about the use of good quality agricultural land being uses for housing. We consider that there are sites around Mold that have a lower quality of agricultural land which will have less impact on the environment. Some of these sites have	removal of allocated site at Gwernaffield Road/Denbigh Road Mold. allocation of brownfield sites around Mold instead	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			easy access to the Mold Bypass and will have less impact on Mold Town Centre and shorter journey times for people. Recently there has been a growth in the provision of new flat developments for the elderly and young in Mold. We consider that further sites should be found to meet this obvious need within close proximity to the town Centre. We therefore question the need for a large housing estate on the fringe of Mold which is some distance from all amenities and will result in more residents to travel, probably by car. We note that there are a number of vacant premises and unused accommodation above shops and we feel that more work could be done to encourage the redevelopment of derelict spaces and improvement of vacant properties with the town Centre itself. This could contribute substantially to the housing provision.		
857	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Gwernaffield Road and Denbigh Road, Mold – FCC paid for the Mold Town Plan to be developed and Mold Town Council consulted residents and businesses at various stages of the two year process to make sure it reflected what people wanted. MTC took the process seriously and met on numerous occasions over the period to consider the FCC candidate sites and their impact on the town. Section H1 of	Removal of allocation. LDP does not reflect the Mold Town Plan. Rather than filling in on either side of Gwernaffield Road behind the existing ribbon housing, the LDP suggests a large new	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the Mold Town Plan reflects the outcomes of this process. Pages 34, 35 and 38, 39 show the sites MTC identified for housing growth. The LDP does not reflect this and has sited all the housing growth on the west side of Mold at just one site between Gwernaffield Road and Denbigh Road, for 246 units. Rather than filling in on either side of Gwernaffield Road behind the existing ribbon housing, the LDP suggests a large new development which will lead to a stagger in the Mold boundary. In future this will inevitably lead to challenges to develop another equally large housing estate across Gwernaffield Road – just as is happening now with Gower Homes on Ruthin Road Mold, to line up with St Mary's Park. By following the Mold Town Plan there would be a similar number of houses, spread out across two sides of the road with access at different points, which would reduce their impact on the landscape, roads in that area, and be more easily assimilated in west Mold. Drainage and potential for flooding are issues that will need carefully resolving before the Gwernaffield Road and Denbigh Road proposals go ahead. The field in front of Pool House, Denbigh Road is prone to flooding now. Emissions and waste from the Synthite factories on Denbigh	development which will lead to a stagger in the Mold boundary. In future this will inevitably lead to challenges to develop another equally large housing estate across Gwernaffield Road – just as is happening now with Gower Homes on Ruthin Road Mold, to line up with St Mary's Park. 			Road are monitored by NRW due to the toxic nature of the chemicals they are producing and transporting from and to the site. As could be seen from the flooding on Denbigh Road earlier this year any excess water onto that site causes problems due to the fact that NRW will not automatically allow accidental surface water from the site to be pumped into the River Alyn. The recent flooding was caused by a leak in the major water pipeline passing across the proposed housing site, because there were problems turning the flow off. It would be essential for any new housing to be sited well clear of that pipeline and it's flood area so any new homes were not flooded if the same thing happened in the future.

I am not aware of any proposals from the Council to improve the traffic problems along Denbigh Road. There are two high pressured water mains running across the entire site and these mains have burst recently resulting in flooding to the field, Denbigh Road and the local factory. This caused major disruption to the entire area. If houses were to be built	Removal of allocation	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			on this site any further bursts would cause significant disruption and flooding to the new households.		
1062	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection to allocation at Gwernaffied Road and Denbigh Road, Mold. I believe the assessments that have been undertaken leading to this site being proposed are unsound due to the following reasons: The land has been actively farmed for many years, with the local farmer regularly fertilizing, cropping and also grazing his cows. The current landscape is high quality with views towards Mold Famau and the Clwydian Range. I am therefore concerned about the visual impact any such development would have. I am concerned about the substantial increase in traffic along the Denbigh Road. As a local resident I am already aware of considerable congestion and minor accidents that have occurred along this busy road. Any additional traffic would significantly increase safety hazards for both commuters and pedestrians. I am not aware of any proposals from the Council to improve the traffic problems along Denbigh Road. There are two high pressured water mains running across the entire site and these mains have burst recently resulting in flooding to the field, Denbigh Road and the local factory. 			This caused major disruption to the entire area. If houses were to be built on this site any further bursts would cause significant disruption and flooding to the new households.		
1088	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection to Allocation at Gwernaffield Road & Denbigh Road, Mold. Concerned about the impact of proposed housing on neighbouring residents. The increase in traffic will lead to even more congestion and a greater number of accidents at the mini roundabout, and will also increase pollution and noise levels in the area. At peak times traffic along Denbigh Road is already backed up from the King Street roundabout to the mini roundabout at Dreflan. The proposed 246 houses could potentially lead to another 500 vehicles along this road. We do not think that this is in accordance with the plans aims to provide a sustainable environment.	Removal of allocation	See response to id 283
1090	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection to Allocation at Gwernaffield Road & Denbigh Road, Mold. 			is already backed up from the King Street roundabout to the mini roundabout at Dreflan. The proposed 246 houses could potentially lead to another 500 vehicles along this road. We do not think that this is in accordance with the plans aims to provide a sustainable environment.		
1102	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	HN1(6) Land between Denbigh Road and Gwernaffield Road Mold. We believ the LDP is flawed .1. We were not properly consulted. 2. the Housing targets in the plan are excessive. 3. the site is currenty open countryside grade 2 agricultural land. 4 the land is green belt. 5. ther are trees and birds on the site. 6. Adverse effects the site is on the edge of Mold away from facilities on the character of the area. 7. the plan fails to mention the 2 high pressure waterpipes running through the site 8. the site is close to the synthite works. 8.The road infrastructure is inadequate. 9. increase In demand for health care	Removal of allocation	See response to id 283
1105	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objects to HN1(6) Land between Denbigh Road and Gwernaffield Road, Mold. We are opposed to the development of this green field for housing purposes. We are particularly concerned about the use of good quality agricultural land. There are other sites around Mold of lower quality land which will have less impact on the	Removal of allocation, look at alternative sites around Mold with lower quality agricultural value.	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			environment. Some of the site have easy access to Mold bypass and will have less impact on Mold town centre with shorter journey times for people. There have been new flats in Mold for elderly and the young, further sites should be found to meet this need within close proximity to the town centre. Question the need for a large new housing estate on the fringe of Mold away from all amenities. We note that there are a number of vacant properties and unused accommodation above shops and we feel that more work can be done to encourage the redevelopment of derelict spaces improvement of vacant properties within the town itself. This could contribute substantially to the housing provision and should be considered further in the LDP.		
1248	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection to Denbigh Rd Mold Site: 2. GREEN BELT AREAS AROUND MOLD We wish to challenge the methodology of using green barriers to prevent coalescence around Flintshire towns and settlements. PPW10 (Planning Policy Wales Edition 10 December 2018) states that green barriers can be used to prevent the coalescence of large towns and cities from other settlements. In paragraph 4.1 of the LDP you appear to wish to amend the definition to suit the types of	Remove Allocation	See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			settlements in the County. We would contend for example Mold is not a large town, as its population in the 2011 census was 10,058. We do not regard this as a large town. 3. CANDIDATE SITE ASSESSMENTS OF MOL025 & MOL045 LAND NORTH OF GWERNAFFIELD ROAD, MOLD AND MOL044 LAND ADJACENT POOL HOUSE, DENBIGH ROAD, MOLD We understand candidate sites were subject to an assessment form, considered by a council group. A summary of the outcome of this assessment is then published in Background paper 8 Assessment of Candidate Sites and Alternative Sites. • WATER MAINS • MOLD FLOOD ALLEVIATION SCHEME • LAND QUALITY • HIGHWAYS		
1250	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Object	Objection to allocation at Gwernaffied Road and Denbigh Road, Mold. I believe the assessments that have been undertaken leading to this site being proposed are unsound due to the following reasons: The land has been actively farmed for many years, with the local farmer regularly fertilizing, cropping and also grazing his cows. The current landscape is high quality with views towards Mold Famau and the Clwydian Range. I am therefore concerned about the visual impact any	Removal of allocation	See response to id 283

This caused major disruption to the entire area. If houses were to be built on this site any further bursts would cause significant disruption and flooding to the new households.		
325	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Support	The Site has been allocated for 246 dwellings within the LDP Deposit Draft (Allocation HN1-6 Land between Denbigh Road and Gwernaffield Road). The Council has acknowledged that the allocated site represents a logical development opportunity on the edge of a Main Service Centre which is highly sustainable and close to existing services, employment opportunities and is well served by public transport and		See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			the surrounding road network. Part of the Site is also included within the Mold Town Plan (2017-2030) which acknowledges the need for Mold to accommodate new homes to meet growing housing needs. Our client strongly supports this allocation and will work closely with Flintshire County Council in the future to ensure residential development on the site is delivered in a timely manner. the site is available now. Investigations to date have concluded that there are no known constraints that would affect delivery of housing commencing on site within 5 years and so the site offers the opportunity for the early delivery of a high-quality residential development that will provide both market and affordable housing and would make a valuable contribution to addressing housing land supply in Flintshire. The Vision Document which supports this representation summarises the detailed technical investigations which have been undertaken to support the development of this Site for housing. The technical investigations have enabled the development of a Parameters Masterplan which is now proven to be deliverable in the context of Site constraints, this includes matters such as drainage, highways and ecology. Detailed reports can be		

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			provided to the Council on request. The IIA which supports the Flintshire LDP assesses each housing allocation and reasonable alternative sites against the IIA objectives and are presented in Table 6-4 on page 57 of the document. The Site between Denbigh Road & Gwernaffield Road (H1.6) scores favourably or neutral on 9 out of the defined 18 objectives. The contribution the site will make to boosting housing supply and employment provision in the County is noted. The neutral or minor negative effects can be overcome through mitigation. The assessment within the IIA therefore clearly reinforces the allocation for the Site.		
1242	HN1.6 Land between Denbigh Road and Gwernaffield Rd, Mold	Support	Land between Denbigh Road and Gwernaffield Road, Mold, 246 units A water supply can be provided for this site. Potential developers need to be aware that this site is crossed by strategic 19” and 20” water mains and an easement width would be required which may impact upon the housing density achievable on site. A Hydraulic Modelling Assessment (HMA) will be required to determine the point of connection to the public sewerage system and potential developers would be expected to fund investigations during pre-planning stages. The findings of the HMA would inform the extent of any necessary sewerage		See response to id 283

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed	Council response
			upgrades, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). Mold Wastewater Treatment Works (WwTW) can accommodate the foul flows from the proposed development site.		

Policy HN1.7

Due to the large number of representations received to this allocation, and the fact that a number of common issues were raised by objectors, a collective response has been provided at the end of this table which covers all of the points raised within each of the individual representations.

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
22	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Not enough infrastructure yet more green belt land lost to cheap nasty housing, the roads can't cope now, I believe it will pose a risk to life scenario with the amount of traffic. Just do your jobs properly and see that this will finish Ewloe and the surrounding area off as a community. Your trying to turn this area into a city with nothing to support it which long term will turn Ewloe into an overcrowded dump	Remove Ewloe site
44	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Flintshire Local Development Plan. Site Reference: EWL017. Name / Location of Site: Land West of Hilltop Close and South of Holywell Road, Ewloe. I am registering my objection to the proposed development of the new housing estate outlined in the Flintshire Local Development Plan, site reference EWL017. As a local resident, my reasons are many: 1. This proposed location is a greenfield site, brownfield sites in the county must be considered as a priority before existing farm land is utilised. 2. The building disruption would be considerable and work has already begun on the Old Boars Head Public House site, which is already a disruption. 3. The traffic that will be generated with regard to this new development will be considerable. Traffic along Holywell Road is already congested at peak times and queues are frequent. 4. Additional pressures on Ewloe Green Primary School (which is already oversubscribed) is a concern. 5. Ewloe is already overdeveloped with commercial buildings that generate traffic congestion.	Removal of allocation.
48	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	I would like to object to the proposed development plan of Holywell Road in Ewloe which goes around and to the sides of Circular Drive. I feel that a development of this scale will negatively impact on the area, not only will it increase traffic on already clogged up roads, the loss of green space and footpaths will have a detrimental effect on a lot of the local residents. At a time when the country is supposed to be aiming to become more self sufficient with Brexit and global warming, I do not see the benefit of building all over farm-land. The schools in Ewloe and Hawarden are already full to bursting and it is nigh on impossible to get a Doctors appointment at the moment because they are also full. Surely the unused and derelict land in towns in Flintshire, not to mention the houses already lying empty would be better than building all over green space. Ewloe has already had it's fair share of new housing estates, very few of which can be afforded by first time buyers. I accept that houses need to be built, but there needs to be the local infrastructure to support them, which Ewloe Green does not have.	Removal of allocation.

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
55	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objections to policy: HM!, STR11, H1.7, Appendix - Deposit LDP, IIA, Site Allocations Assessments. Proposed site in Ewloe Green: massively increased population in the area school are full and oversubscribed doctors surgeries in the area struggle to provide care for existing patients currents roads and layouts are inadequate for such increase in traffic that this development will bring.	The A494 roundabout gives access to the B5127 and B5125. This area is already under severe traffic pressure at various times. Road access needs improving. school and doctors provisions need to be put in place.
163	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the development of housing on the allocated site in Ewloe because houses will be built on a wetland area, under which are a large number of bore holes supplying spring water, some of which is used for drinking. Not only will building on such land put at risk clean drinking water but will cause possible flooding as well. On the grounds that many more houses will inevitably increase the amount of traffic thus increasing pollution and the danger from the number of cars. On the basis that building a large number of houses there will create massive light pollution. on the grounds that building a large number of houses there will destroy substantial amounts of flora and fauna and so be environmentally unsound. on the grounds that the local infrastructure for water and sewerage is rickety and at breaking point. Building more houses on the proposed sites would therefore be a disaster.	Remove allocated site at Ewloe
167	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	I am emailing on behalf of Northop Hall Community Council, who have considered the Local Development Plan in detail and would like their views to be noted as part of the consultation process. Northop Hall Community Council wish to state that they have no objections to the Local Development Plan but would like to express great concern, that improvements are needed at the junction of Holywell Road and Mold Road at Ewloe. Traffic regularly backs up along Holywell Road in the mornings, with a log jam at Ewloe roundabout in the evenings and the Community Council feel, that a large new development in Ewloe could only make the situation significantly worse.	Improvements needed to the Junction of Holywell Road and Mold Road, Ewloe.
169	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the Ewloe allocation which will invade a designated UDP green barrier. The community has struggled for decades to live with the remnant, poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose.	removal of allocated site in Ewloe

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
175	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the Ewloe allocation which will invade a designated UDP green barrier. Because homes will be built on a wetland area, under which a large number of bore holes supplying spring water some of which is for drinking. Not only will building on such land put at risk clean drinking water but cause flooding as well. On the basis that building a large number of houses that will create massive light pollution On the grounds that building a large number of houses there will destroy substantial amounts of flora and fauna and so is environmentally unsound On the grounds that local infrastructure for water and sewage is rickety and at breaking point. Building more houses on the proposed sites would therefore be a disaster. The community has struggled for decades to live with the remnant, poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose.	Removal of allocated site in Ewloe
186	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	The comments relate to the proposed housing development on 13 acres of green belt land with access routes impacting Holywell Road - Ewloe, Green Lane - Ewloe, Old Mold Road - Ewloe and Pinfold Lane - Northop Hall (see plans attached) Environmental Impact: 1. The development site encompasses a natural wetland area 2. Just beneath the surface of the field, adjacent to Holywell Road, are significant water ways which feed the residents of Holywell Road & Stamford Way's bore holes 3. The site's underground water tributaries feed directly into Wepre Country Park which supports, in addition to its ancient woodland, numerous species mammals/birds/fish/amphibians/vegetation/plants. Highways Impact - 1. The policy department confirmed that the Highway's department had yet to fully assess the Health & Safety risk of increased traffic along the country roads which has already seen a 500% increase in traffic since the completion of the following developments Education Services Impact 1. It is worth noting that during the St David's Park development, a new primary school was pledged; this school failed to materialise as the section 106 funds were diverted to other projects. Traffic Pollution Impact - NHS Impact - 1. The owners of the following properties, The Bungalow, Thornfield, and Newbridge Farm have legal easements through the site, allowing unrestricted access to conduct works and inspections on the underground pipe network.	Removal of allocated site at Holywell Road/Green Lane Ewloe.
190	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the Ewloe allocation which will invade a designated UDP green barrier. I do not believe this is a sound plan. Local schools are over-subscribed now! Pupils are already using mobile classrooms at Ewloe Green. There is no scope to extend this school. Negative impact on road safety at and around Ewloe Green School. Already a dangerous area for pedestrians. The community has struggled for decades to live with the remnant, poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose.	Removal of allocated site in Ewloe

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
196	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the Ewloe allocation which will invade a designated UDP green barrier. The community has struggled for decades to live with the remnant, poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose.	Removal of allocation at Ewloe
198	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the Ewloe allocation which will invade a designated UDP green barrier. Excessive tree and hedgerow removal can affect drainage, soil stability, wildlife habitat and appearance of the area. Stress on infrastructure, over development of Ewloe Green. Highway safety. Already struggling with heavy traffic in Ewloe Green. Traffic generation to the whole area. Overlooking/loss of privacy by new development. The community has struggled for decades to live with the remnant, poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose.	Removal of alloacted site at Ewloe
441	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	I would like to add my objections to the Local Development Plan, specifically the proposed development between Holywell Road and Green Lane. I have outlined my objections below: the proposed site is in green barrier land, The Ewloe Green area is already struggling with its local infrastructure. The LDP states that “Tier 1 Main Service Centres” are the preferred locations for new housing developments. Traffic in the area is already pushed to the limit especially at rush hour and school pickup/drop off times. Several environmental issues also make this site unsuitable for this development. These are: 1. The New Inn Brook and the ancient woodland near the site is a SSSI and SAC 2. National Resource Wales maps shows that the site has known surface water flooding issues 3. There are aquifers serving local bore holes in the area. Any damage to these could result in flooding 4. Access to the site would require drainage ditches to be re-routed 5. A footpath goes across the site that is regularly used by local walking/rambling groups	
445	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	I wish to submit my objections to the Ewloe Green allocation: • It goes against FFC policy of accommodating “modest” levels of growth in the Tier 2 classification that Ewloe has been given. It is the largest development included in the LDP • There is not the infrastructure to support such a development in the area directly going against PPW (3.38) • Going on from infrastructure, there is currently school place issues in the school nearest the site and there is on going issues with doctor spaces. One of the health centres serving the area is under special measures. • Significant highway/traffic issues that would be exacerbated • It does not promote a sustainable and safe transport system in the area-lack of public transport links • The high school that serves the area has no safe route to the school from this site. Pupils of the local	Removal of allocated site at Holywell Road /Green Lane Ewloe.

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
				high school currently have to cross two busy, dual lane slip roads without any safety precautions; i.e. crossings etc • Environmental/wildlife concerns • The site is in the green barrier as defined by the UDP • It is the only “new” site to be considered in the LDP housing allocations and the two sites which have been combined to form the Ewloe Green allocation were both classed as “amber” in the initial candidate site appraisal and have been placed in the LDP ahead of sites classed as “green”. • The green barrier needs to protect the SSSI and SAC in the vicinity. • There is a risk of coalescence between Ewloe, Shotton, Aston and Connah’s Quay if the green barrier is built on. I would like to also object to the extension proposal of the traveller’s site on Magazine Lane. There was heavy objection to this when it was finally passed.	
447	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	We are writing this email to OBJECT to the proposed housing development at Holywell Road/Green lane, Ewloe, Deeside, Flintshire. This is green belt land and I believe that it is national policy NOT to build on such land. Access to the site would have a huge impact on both traffic and pollution levels on already congested roads making it unsafe. I feel that the local infrastructure has not been considered and this development would have a huge impact on local schools, doctor's surgeries and roads. Local schools are already at full capacity due to the closure of other schools in the area. Parking at these schools is already a major concern. It is a struggle to get an appointment at the local doctor's surgery.. Local roads, especially Holywell Road, Mold Road and St David's Park Road, are already ridiculously busy, even more so at peak times, which causes a knock on effect on other roads including Carlines Park estate. Hundreds more cars increases pollution, something which the council are clearly already concerned about hence the introduction of the new speed limit along the A494. I would also like to point out that the FLDP Consultation Portal is not at all user friendly	Removal of allocated site at Holywell Road /Green Lane Ewloe.
477	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation Ewloe Environmental Impact - emissions from traffic, loss of trees, impact on wildlife Inadequate Infrastructure – traffic issues, Coalescence of villages – further urban sprawl as Buckley draws ever closer to Ewloe	Removal of allocation at Ewloe
485	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	I am writing to you as a Community Councillor for Ewloe and governor of a local school in regards to the Local Development Plan. I have had a large number of people speak to me regarding future developments in the area and their concerns over them. These concerns not only come from people living in the vicinity of the proposed sites but people from all over the Ward of Ewloe and the area Hawarden Community Council covers. Concerns raised include: The effects to local services included GP surgeries, dentist and local hospitals People are struggling to get appointments to been seen by a GP already extra people in the area would	Removal of Ewloe allocation.

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
				just make this situation worse. The impact on our primary schools and high school I believe several schools are already over subscribed. The environmental impact to the area. Not only expanding the size of Ewloe by building past the current boundaries but we will be losing green fields forever. Also recently the A494 Aston Hill has had average speed cameras place there this is not for speed but because of pollution any homes build locally now would only add to the pollution. The extra traffic to the area Not only this have a environmental impact as mentioned above but also an impact to the condition of our roads and the safety of our children and pedestrians I could go into a lot further depth into each of these concerns but know you will be receiving much more correspondence from others regarding the LDP so wanted to keep it as brief as I could. Please keep all these concerns in mind when making your final decisions.	
550	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocated site Ewloe. The proposed sites are not suitable I believe it would increase the likelihood of flooding and the destruction of local ecology and habitat with a SSSI and SAC sites within a mile, not to mention the already appalling traffic conditions	I don't think a single change is required but a complete revision of the whole plan, there is plenty of vacant land i.e. MOD Sealand previously used for residential purposes.
560	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe No more building. Schools, roads etc. too overcrowded already	No more building. Schools, roads etc. too overcrowded already
562	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation in Ewloe The proposed sites are not suitable not only on the environmental factors e.g bat habitats, lack of infrastructure, poor road layout, leading to increased congestion and pollution, no local GP practices, schools are full. All in all the Council has not done its due diligence.	Build on a plot that has less pressure (quieter area) i.e. the land where the allotments are on upper Aston hall lane that the Council already own.
570	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green	Object	Objection to allocation at Ewloe Taking greenbelt before using up all the Brownfield sites is totally unacceptable. Greenbelt is full of nature/wildlife, including Badgers, the trees, some are very mature, and the hedgerows go back hundreds of years, by building on here you are taking away history too. You are also taking away public footpaths which run through this greenbelt	Brownfield should be used before taking Greenbelt

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
		Lane, Ewloe		land. Air pollution would be increased during construction and then from the extra cars/vans attached to the new houses. How will the drainage system cope if you take away the existing trees which soak up gallons of water per day and help with air pollution. Traffic will also be increased greatly, traffic is already very heavy in this area, and is already going to increase due to the new development on Boars Head site. This additional traffic will be dangerous and is unacceptable. Green Lane is a single track lane, this makes it inappropriate and unacceptable to have access to a new housing development. This site does not have suitable access. The school traffic is already very busy and parking is a big problem at Ewloe Green. Ewloe Green Primary is already oversubscribed and using teo porta cabins as classrooms. Hawarden High has some spaces but would not be able to take all the children that the new housing would create and therefore would be full. Doctors and Dentists are struggling to cope now, they would not cope with any more new houses. Th local cemeteries are now nearly full. Local bus service is reduced	You have no infrastructure!
572	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe The pressure on local GP Practices are already high, and are struggling with the volume of patients now. There is a shortage of GPs at our local practice, they have 8,500 patients and only 2 full time and 1 part time doctors at the practice.	Removal of Holywell Road /Green Lane Ewloe allocation.
628	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation in Ewloe Previously developed land and underutilized sites should be considered in the first instance. Whilst it is clearly appropriate for Green Barrier designations to be reviewed as part of the LDP process, it is asserted that the green barrier in this location continues to perform an important function in safeguarding the countryside from encroachment, preventing the coalescence of settlements and maintaining openness. Policy WSTR2 of the emerging LDP directs that Tier1 Main Service Centres should be the main location for new housing development. Ewloe is defined as a Tier2 Local Service Centre and as such is deemed more suitable for more modest levels of new housing development. It is asserted that the proposed housing allocation in Ewloe conflicts with the logical approach within the housing strategy. The allocation would almost double the part of Ewloe and would amount to a disproportionate increase in size. This allocation is larger than the largest residential allocation in Tier1 (246 dwellings in Mold). The site does not enjoy a sustainable location. The majority of local services are not within reasonable walking distance, whilst public transport services are limited. To this end, the proposed allocation is also in direct conflict with PPW which states that minimizing the need to travel, reducing reliance on the private car and increasing walking, cycling and use of public transport are important considerations when selecting sites for new residential development. The land sits adjacent to New Inn Brook, which is a wildlife site that continues on from the Deeside and Buckley Newts SAC. On this basis it is not unreasonable to	Removal of allocation at Ewloe

On this basis it is not unreasonable to suggest that a range of ecological issues could frustrate the development of the site or at least reduce the number of dwellings that could realistically be delivered.	Removal of allocation at Ewloe
683	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Having applied for Planning Permission in 2012 to build a bungalow on my own land I was rejected. That this area was green belt. Why now is there positive plans to build directly up to the back of the same property? Has the green belt been abolished in this area. As it has previously in Green Lane for the Travellers.	Removal of allocation
102	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to housing allocation at Ewloe, and Gypsy traveller site extension Magazine Lane, Ewloe As part of your consultation procedure for the L.D.P I write to contribute observations on both the proposals to develop land at the rear of the Ewloe Green Estate which borders on Holywell Road Ewloe and Green Lane, Ewloe Green plus the proposed extension to the gypsy site in Ewloe Green. Holywell Road and Green Lane developments: Coalescence Infrastructure: Services, - The local school in Mold Road Ewloe Green is usually full to capacity each year, heavy, drainage in this area is problematic as evidenced by the number of times the	Removal of housing allocation at Ewloe, and Gypsy traveller site extension Magazine Lane, Ewloe

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
				road at the junction of Maes Hewitt has had to be excavated. traffic air pollution Road Safety: Access to Ewloe Green School from Holywell Road involves the use of inadequate pavements, Magazine Lane Gypsy Site: it now stands out garishly.	
172	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the Ewloe allocation which will invade a designated UDP green barrier. The community has struggled for decades to live with the remnant, poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose.	Removal of allocated site at Ewloe
178	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the Ewloe allocation which will invade a designated UDP green barrier. Local amenities Inadequate to cope with increased traffic. More Green Barrier land taken up for development The community has struggled for decades to live with the remnant, poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose.	Remove allocated site in Ewloe
179	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the Ewloe allocation which will invade a designated UDP green barrier. B5125 Road inadequate to take volume of traffic and junction between Mold Road and B5125 congested enough already. Local school overstretched already. The community has struggled for decades to live with the remnant, poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose.	Removal of allocated site in Ewloe
187	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the Ewloe allocation which will invade a designated UDP green barrier. The community has struggled for decades to live with the remnant, poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose.	Removal of allocated site at Ewloe
189	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Object to the Ewloe allocation which will invade a designated UDP green barrier. I do not believe this is a sound plan. This proposal would greatly increase pollution and carbon emission levels. This would not be acceptable. Traffic volume along Holywell Road and at Green Lane are already very high and these routes are extremely congested. Local schools are already oversubscribed, pupils are using mobile classrooms now! This no scope to extend Ewloe Green school. This proposal would negatively impact road safety for adults and children alike. Despite the traffic crossing on Mold Road, any increase in traffic volume would make it	Removal of allocated site at Ewloe

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
				very dangerous. The community has struggled for decades to live with the remnant, poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose.	
444	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	objection to Ewloe Green I have been told that the candidate sites have not been ranked as it is stated they should be in the Local Development Plan Manual – Edition 2 at 5.3.4.11. Without this information members of the public could not assess different similar sites and make comparisons. I contend that this breach of the rules has made the consultation impossible for the public. The Ewloe Green site was in the green barrier in the UDP but has been placed in the LDP ahead of local candidate sites which were not in the UDP green barrier. Policy GEN 4 in the UDP describes an updated stronger green barrier policy with a strong degree of similarity with Green Belts, it states at 4.13 that there has been a "strategic and consistent review of existing green barriers The LDP background paper 1, Green Barrier Review states in the review for GEN 4 (12) where the Ewloe Green site is located "there is a chance that the settlement boundary could be compromised and resulting in the threat of coalescence of Ewloe Green, Shotton and Aston and part of Connah's Quay." It then goes on to justify the compromise of the settlement boundary "two candidate sites have been allocated for housing. Although this requires a drawing back of the green barrier.....". Furthermore, it states that New Inn Brook, a wildlife site "acts as a firm and defensible boundary" while in fact to protect the wild life it will be necessary to retain the current green barrier space between it and the settlement boundary. It has been stated that there are aquifers serving numerous bore holes in the area under the ground proposed for the Ewloe Green housing allocation site. The B5125/B5127 junction is a major bottleneck during peak times and can cause traffic to back up onto The Highway.	Removal of allocated site at Holywell Road /Green Lane Ewloe.
466	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation Ewloe Environmental Impact - emissions from traffic, loss of trees, impact on wildlife Inadequate Infrastructure – traffic issues, Coalescence of villages – further urban sprawl as Buckley draws ever closer to Ewloe	Removal of Holywell Road /Green Lane , Ewloe allocation.
547	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Ewloe: Petition attached with 146 signatures. I wish to object to Flintshire County Council's Local Development Plan, as I feel that the Planning Dept./ Policy Makers have not shown due diligence in developing parts of the plan strategy, policies and assessments with particular regard to the allocation for housing of site reference number H1.7 (EWL017 and EWL020). CONTENTS: RELEVANT SOURCE MATERIAL INCLUDING: IMPACT ASSESSMENTS LDP AND WELSH GOVERNMENT OBJECTIVES FCC LDP POLICIES TESTS OF SOUNDNESS	In conclusion then, I would like to urge Flintshire County Council to rethink the strategy which unduly and inappropriately allowed

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
				(WELSH GOVERNMENT AND FCC) APPENDICES: EVIDENCE TO BACK UP MY REPRESENTATION IIA Objectives and Sustainability Appraisal (Integrated Impact Assessment) IIA for Housing Development Site H1.7-First Page	the allocation of site H.17 ewl017/ewl020 (Holywell Road/Green Lane), and which will also facilitate the redrawing of the settlement boundary, thus removing the green barrier status afforded to the land in the UDP and allowing further encroachment onto the open countryside. I feel that the plan has been rushed through after the UDP expired and more thought, and in particular more public consultation should have gone into producing it. To make it sound then this would therefore have to be remedied with regard to areas where it is unfit for purpose.
549	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocated site Ewloe Environment, Fields, Fauna, Wildlife, Greenbelt area, air pollution from extra cars, possibly 390+, schools, doctors, dentists, land drainage, floods by houses Holywell Road, ancient system. Not fit for purpose. Dangerous junctions, especially busy times 8:30-9:00 Danger to school children 3pm-7pm. Horrendous extra traffic from Northop hall when houses built on Plas Isaf site, plus traffic from fisheries, Buckley, Mold all passing green lane junction opposite school. Danger to all, especially children at school. More traffic joining A55. More pollution from increased traffic.	Remove allocated site at Ewloe
557	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	I am writing to give my observations on the proposed sites EWL017 (Holywell road, Ewloe) and EWL020 (Green Lane, Ewloe).With regards to the test of soundness of the above proposals i would like to comment as below; EDUCATION The sites, as stated by the Site Allocations Assessments by ARCADIS are within 500m of EWLOE GREEN PRIMARY SCHOOL and indeed 2km of HAWARDEN HIGH SCHOOL. Both these schools are full as is indeed PENARLAG PRIMARY SCHOOL, EWLOE, and HAWARDEN PRIMARY SCHOOL,	Removal of allocation at Ewloe

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
				HAWARDEN. These 3 primary schools serve Hawarden and Ewloe. HIGHWAY/TRAFFIC/SURFACE WATER/MINERALS I am advised that to this date there has not been a traffic assessment for the proposal The NRW map shows that there are known surface water flooding issues on the site and that just south of the site there is a significant size C2 flood zone area. There is no certainty that the proposed highway improvements can be delivered due to drainage and ecology issues.. The mineral resources map shows the area as a Category 1 Aggregates Safeguarding Area. It is contrary to Welsh Government guidance to sterilise the mineral resources. HEALTH As stated by the allocation assessment the Site EWL017/EWL020 is situated within 1-4km of a GP surgery. Ewloe and Hawarden are serviced by 3 GP Practices. Hawarden surgery is full , the overflow are being directed to Broughton GP surgery notwithstanding the high population in Broughton including the new developments. Ewloe is serviced by the 2 surgeries in Buckley ACCESS As stated by the allocation assessment the Site EWL017/EWL020 is located within 500m of a bus stop, 1.8km of Hawarden Railway Station and 500m of a key service centre. The reality regarding these quotes are that the key service centre consists of one small shop and 2 takeaways (fast food). . EMPLOYMENT The industrial estate on St David's Park, has grown considerably over the last several years. This in itself does show employment opportunities, what it fails to highlight is the excess vehicles that commute to this area daily adding to the traffic chaos which already causes major issues in this vicinity, which brings me onto traffic emissions. BIODIVERSITYAs stated by the allocation assessment the Site EWL017/EWL020 is within 500m of Connahs Quay Ponds and Woodland SSSI (not adjacent) and within 500m of Deeside and Buckley Newt Sites SAC (not adjacent). The proposed development could potentially affect priority of protected species, such as breeding birds, as the site is c	
569	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	I have been instructed by my client to object to the proposed housing allocation for up to 298 dwellings on land at Holywell Road/Green Lane, Ewloe Green (Ref. HN1-7) in the strongest possible terms. The site in question currently lies within the Green Barrier as defined by the adopted Flintshire Unitary Development Plan (UDP). the proposed allocation of this site does not accord with at least two of the tests of soundness in so far as it does not 'fit' with the national planning guidance outlined and it is not of an appropriate scale in light of the settlement hierarchy of the emerging Local Development Plan itself. In addition, the land sits adjacent to New Inn Brook, which is a wildlife site that continues on from the Deeside and Buckley Newts SAC. On this basis, it is not unreasonable to suggest that a range of ecological issues could frustrate the development of the site or at least reduce the number of dwellings that could realistically be delivered. Accordingly, it is strongly asserted that the land at Holywell Road/Green Lane, Ewloe Green is not appropriate for a large scale residential development and the proposed designation does not meet the tests of soundness.	Removal of Holywell Road/Green Lane Ewloe allocation.

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
577	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation in Ewloe Potentially 298 new homes could equate to 600 extra vehicles (2 per home) at a minimum. Consequently volume of traffic making it unsafe for local children going to and from schools. Pollution also an issue. Getting in and out of Ewloe Green estate even more difficult than it is now. the junction at Holywell Road B512 & B5127 is a nightmare now! Due to increased traffic from new housing and office developments.	Removal of Holywell Road/Green Lane Ewloe allocation
621	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation in Ewloe Previously developed land and underutilized sites should be considered in the first instance. Whilst it is clearly appropriate for Green Barrier designations to be reviewed as part of the LDP process, it is asserted that the green barrier in this location continues to perform an important function in safeguarding the countryside from encroachment, preventing the coalescence of settlements and maintaining openness. Policy WSTR2 of the emerging LDP directs that Tier1 Main Service Centres should be the main location for new housing development. Ewloe is defined as a Tier2 Local Service Centre and as such is deemed more suitable for more modest levels of new housing development. It is asserted that the proposed housing allocation in Ewloe conflicts with the logical approach within the housing strategy. The allocation would almost double the part of Ewloe and would amount to a disproportionate increase in size. This allocation is larger than the largest residential allocation in Tier1 (246 dwellings in Mold). The site does not enjoy a sustainable location. The majority of local services are not within reasonable walking distance, whilst public transport services are limited. To this end, the proposed allocation is also in direct conflict with PPW which states that minimizing the need to travel, reducing reliance on the private car and increasing walking, cycling and use of public transport are important considerations when selecting sites for new residential development. The land sits adjacent to New Inn Brook, which is a wildlife site that continues on from the Deeside and Buckley Newts SAC. On this basis it is not unreasonable to suggest that a range of ecological issues could frustrate the development of the site or at least reduce the number of dwellings that could realistically be delivered.	Removal of allocation in Ewloe
712	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Found the FCC Objective portal difficult. Found the language in the Deposit LDP difficult. Object to the proposal to invade a designated UDP green barrier area. The community has struggled for decades to live with the remnant poor design of dangerously congested “B” roads and junctions, connecting the A494 (A55) bottleneck, skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose. This development would increase pressure on an already struggling and insufficient infrastructure – schools, doctors etc. Traffic would increase and prove difficult and dangerous on a number of levels: Fumes and traffic jams.	Removal of allocation at Ewloe
718	HN1: New Housing	HN1.7 Holywell	Object	Objection to allocation at Ewloe Found the FCC Objective portal difficult. Found the language in the Deposit LDP difficult. Object to the proposal to invade a designated UDP green barrier	Removal of allocated site

The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose. My concern is for the lack of school places in particular Ewloe Green that currently has children in portacabins. After being informed at drop in session no emission test has been done, grave concerns for local environment from a massive increase in traffic.	Removal of allocation at Ewloe
816	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation in Ewloe Object to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested B Roads and main junctions, connecting the A494 (A55) bottleneck, skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose. We should not be building on Green lane end of! The field you propose to allow planning on has a natural pond which in heavy rain becomes a lake. Wild geese nested there for years! We also have bore holes in this field. The wildlife consists of badgers, foxes, wild geese, woodpeckers, owls, hedgehogs and bats which all use the 200 year old hedgerows and natural water source/pond. Their habitat will be eradicated. There will be an increase in light pollution which will effect wildlife. Also car emissions will be excessive which has an impact on people's health. The settlement boundaries for Ewloe Green have already been exceeded. We are a village with green areas which are disappearing. Myself and my family regularly walk in these fields, which brings us much joy and helps with our mental health. We used to walk Magazine Lane but can't now as Gypsies dogs attack us. We will have nowhere to walk. The additional 100+ people to the area will put huge strain on already over stretched hospital/doctors/schools/roads/Council services.	Removal of allocation at Ewloe
818	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation in Ewloe Object to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested B Roads and main junctions, connecting the A494 (A55) bottleneck, skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose. This area being proposed for housing development has natural springs and boreholes that supply water to streams and properties. As such this land should remain as green barrier at least. Loss of this green barrier will be bad for people's well-being and mental health. The fields are used regularly by ramblers and dog walkers. Light pollution caused by additional development in this area will further reduce dark nights and the ability to view stars/moon, which is a good relief for mental health. This would	Removal of allocation at Ewloe

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
				also have a negative effect on the nocturnal wildlife on the site, this includes badgers, foxes, hedgerows, bats & owls. There is a natural pond in the area of the proposed housing area. This expands to cover a huge area of the field. This will cause a loss to Wildlife and add to risk of flooding. Loss of former green space from this area. Including the 200 year old hedges, will have adverse affects on the wildlife that use it. Foxes, Badgers, Bats, Hedgehogs, Owls and Jays are all seen and heard here. Additional housing in this area would have further negative impacts to the already struggling infrastructure. Roadways in this area suffer with severe congestion which already causes pollution concerns.

The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation and is not fit for purpose.	Removal of allocation
904	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Hawarden Community Council Objections to Ewloe Green Housing Allocation site within the LDP The basis of these objections is local council member knowledge, Planning Policy Wales (PPW) and Flintshire County Council's own planning policy. As councillors, we have had a huge number of residents contact us with their concerns and objections to this site. When considering any development in an area, we need to ensure that communities have access to a mix of services. Because of this, there are several infrastructure issues within the Ewloe Green/Ewloe and wider Hawarden Community Council area. There are currently capacity	Removal of allocation

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
				issues in the schools within the catchment area of this development already. The health centres in the area are already showing signs of stress due to the amount of service users; one of which is currently under special measures. With the addition of 298 houses this will certainly exacerbate the above issues. Under the LDP, “Tier 1 Main Service Centres” are the preferred locations for new housing developments. Ewloe is defined in the LDP as a “Tier 2 Local Service Centre”. As such, we do not have the facilities/infrastructure to comply with PPW (3.38) “for minimising the need to travel, reducing the reliance on the private car and increasing walking, cycling and use of public transport are important considerations when selecting sites for new residential developments.” We have inadequate public transport links to comply with the policy and have very limited local amenities. In conclusion, the Ewloe Green allocation site needs to be rejected. It goes against planning policy of both FFC and Welsh Government regarding green barriers, safe guarding community identity and coalescence, promoting sustainable and safe transport systems, understanding infrastructure provision, recognising the flood risk in the area, developing brownfield sites over green barrier and protection of agricultural land. Ewloe already had significant growth, over the projected allocation and expectations of the UDP. The area is just not the right site for the size of the development proposed.	
842	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Objection to the proposal to invade a designated UDP green barrier. ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
				and school children. The area is very busy and we don't need more traffic and people at doctors, dentist, shops, and chemists. We have problems already.	
863	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Objection to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and it not fit for purpose. I object to concerns about the flora and fauna of this green barrier, such as badgers and bats. Also I have concerns about the natural spring , drainage and flooding There isn't the infrastructure to support so many houses, cars and people. Sewers are old, roads are massively congested and in poor condition, GP and hospitals are impossibly overloaded already.	Removal of allocation at Ewloe
865	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Objection to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and it not fit for purpose. The traffic coming off the roundabout and waiting to turn right onto Holywell Road often causes the traffic to come to a standstill, the estate opposite the school gets very congested at school times. The school is already full. Building more homes would exacerbate the situation.	Removal of allocation at Ewloe
867	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Objection to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and it not fit for purpose. Increased air pollution from extra traffic. Traffic congestion Holywell Road/Liverpool Road Junction. Already inadequate infrastructure won't cope with such an increase in population and vehicles. Loss of green land and effects on nature/wildlife.	Removal of allocation at Ewloe
871	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Objection to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and it not fit for purpose. The increase in harmful emissions that would result from this development is a major concern. This area already suffers from this issue and I fear the health risks for us all if the development proceeds.	Removal of allocation at Ewloe

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
873	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Objection to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and it not fit for purpose. Ewloe is already heavily populated as it is! Providing road access on an already fast heavily used road is dangerous and endangering public safety. I object to overlooking and causing loss to our privacy from this build not to mention no care to nature conservation which must be taken into account. I object to the noise levels, smells, dirt, disruption and disturbance from building yet more unnecessary not needed houses from trucks and diggers!	Removal of allocation at Ewloe
877	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Object to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation and is not fit for purpose. Drainage is bad enough the extra pressure with more houses would be horrendous The volume of traffic is bad enough now on Holywell Road, Liverpool Road etc. Imagine what it would be like with extra cars in the area. Schools in the area are already oversubscribed including Hawarden high as John Summers School has shut and children from other areas using it. Children walking to school via roundabout will find it really difficult. Very dangerous for both child and driver.	Removal of allocation at Ewloe
881	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Object to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation and is not fit for purpose. Ewloe Green continues to be overdeveloped for housing purposes. The existing site serves a legitimate green barrier function and an alternative brown filed or previously developed site should be found. The existing community schooling and medical facilities could not cope with the rise in local population.	Removal of allocation at Ewloe
885	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Object to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation and is not fit for purpose. Our schools are already full, the road congested, it is already difficult to see a doctor. We are losing our valuable green areas. There are already thousands of empty properties in Wales! We strongly object to the development.	Removal of allocation at Ewloe

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
891	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Object to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation and is not fit for purpose. Although I don't live in Hawarden I and my fellow walking group walk in this area regularly, this proposal would spoil the beautiful countryside around Hawarden.	Removal of allocation at Ewloe
895	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Object to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation and is not fit for purpose. I object to the buildings being on green belt land.	Removal of allocation at Ewloe
903	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Object to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation and is not fit for purpose. The condition of many road surfaces in the area needs attention. What happened to the school promised in the Redrow development	removal of allocation at Ewloe
907	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Object to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation and is not fit for purpose. I believe the infrastructure, schools, doctors and roads do not exist to support the increase in housing planned.	Removal of allocation at Ewloe
909	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Object to the proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested 'B' roads and main junctions, connecting the A494 (A55) bottleneck skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation and is not fit for purpose. There is already a problem with school run parking on the estate, this will only get worse. Also we will lose the use of a leisure activity on Green Lane. Plus added pollution problems.	Removal of allocation at Ewloe
1020	HN1: New Housing	HN1.7 Holywell Rd /	Object	Objection to allocation at Ewloe Road/Highways Infrastructure LDP03 Infrastructure Plan Appendix 2 Table – reference is made to the requirement of a Transport Assessment as improvements are required to the Junction of Holywell Road and Mold Road to increase	Removal of allocation

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
	Development Proposals	Green Lane, Ewloe		capacity. Para 2.54 identifies “Highways improvements in Flintshire”. This junction is not mentioned which leads me to believe no improvements are intended or if they are, why are they not available for viewing? The whole infrastructure including design in this area is dangerously lacking and woefully inadequate and will not support more vehicles. A segment of the A494 including a section which runs directly through the communities of Ewloe and Ewloe Green has had a 50mph limit implemented in recognition of traffic pollution yet you seek to increase the number of vehicles who will connect to/travel through this same area, this is at odds with a LDP which should support and serve its residents. BP8 - Disagree that the irregular shape boundary does not justify significant encroachment/extension into open countryside and loss of green barrier. BP8 – Disagree that the existence of New Inn Brook is no less of a firm and defensible barrier as is the existence of the Wrexham-Bidston railway line which is not deemed a firm and defensible barrier despite it being fixed and substantial infrastructure (see BP1 page 17). I therefore do not agree that the removal of this parcel of land will not harm the integrity of the wider Green Barrier.	
1032	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Objection to the proposal to invade designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested ‘B’ roads and main junctions, connecting the A494 (A55) bottleneck, skirting this site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is not fit for purpose. Drainage & flooding concerns Schools - not enough spaces now, how are you going to accommodate more children? Traffic on Holywell Road and Mold Road – it is congested now so will make it worse.	Removal of allocation at Ewloe
1034	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to allocation at Ewloe Objection to the proposal to invade designated UDP green barrier. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is therefore not fit for purpose.	Removal of allocation

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
1084	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to Allocation at Ewloe Objection to proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested ‘B’ roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is therefore not fit for purpose. I particularly object to the scale of environmental damage that will be incurred through the loss of tree cover and the further loss of natural habitats for birds and small animals.	Removal of allocation
1117	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	HN1 (7) Holywell Road / Green Lane Ewloe. The arrival of this Deposit LDP and the public consultation is woefully less than transparent and accessible. Ward residents have repeatedly said that the consultation portal is difficult to use, the language difficult and the process apparently fragmented across the formal documents to the point that evidence is dispersed and difficult to link. The process should not be so impenetrable and apparently weighted to accept the proposal. There needs to be a far more thorough account taken of the current situation that residents live including the extremely congested B5125/B5127 bordering this proposed site, school places, access to the GP surgeries and loss of amenity of this formerly designated green barrier site (UDP lapsed in 2015). Any design for housing in Ewloe should take in the 'White Elephant' site of the weigh bridge in order to do more than cosmetically adjust desperately dangerous road junctions leading on and off the A494/A55 dual carriageway bottleneck.	The process should not be so impenetrable and apparently weighted to accept the proposal. There needs to be a far more thorough account taken of the currant situation that residents live including the extremely congested B5125/B5127 bordering this proposed site, school places, access to the GP surgeries and loss of amenity of this formerly designated green barrier site (UDP lapsed in 2015). Any design for housing in Ewloe should take in the 'White Elephant' site of the weigh bridge in order to do more than cosmetically adjust desperately dangerous road junctions leading on and off the A494/A55 dual carriageway bottleneck.

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
1197	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	As a resident of Upperdale Hawarden for my entire childhood, and now as a resident of Mancot, I do not believe we can sustain much massive future development. We already have a big water/drainage problem in my street and more development will no doubt increase that issue. Parking for Hawarden Village School creates massive issues for entrance into Mancot, not limited to picking up and dropping off times. Further development with egress on to Ash Lane will only increase those problems in this area but also in Sandycroft, Pentre and onto Cottage Lane. Development would see the district lines between Hawarden and Mancot blurred. As a former resident of Hawarden, I was lucky enough to be able to buy my terraced house in Mancot as an affordable option. I doubt that any future development would provide small houses for people in my position at that time, those who are not on the social housing register. Smaller houses do not bring in the same profit for the developer. The new houses at the top of Overlea Drive prove this to be the case! I would also like to register my objection to the Ewloe site by Green Lane being included in the LDP. My niece and nephew attend Ewloe Green School and aside from the increase in pupil numbers that would result in such a development, the traffic outside the school is already at an unacceptable level. I worry for their health due to traffic pollution, not only at drop off/pick up time but also whilst they are at play due to the proximity of the road. In both cases, Flintshire has already identified other smaller brown sites for development in the UDP. Why are these not developed first?	Removal of allocation at Ewloe
1085	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	Objection to Allocation at Ewloe Objection to proposal to invade a designated UDP green barrier. The community has struggled for decades to live with the remnant poor design of dangerously congested ‘B’ roads and main junctions, connecting the A494 (A55) bottleneck, skirting the site. The scope of this LDP proposal therefore does nothing to alleviate but simply aggravates the situation, and is therefore not fit for purpose. Development would lead to the loss of an area of Grade 3a best and most versatile agricultural land which should be resisted	Removal of allocation
1097	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Object	HN1(7) Holywell Road Green Lane Ewloe allocation. I feel that over the years Ewloe has suffered enough, if the scheme goes ahead the result will be more traffic on Old Mold Road. The latest being the removal of the Boars Head Public House dated 1704 (if it had to go, a missed chance to put in a roundabout at the junction). I've lived in Ewloe all my life so I remember the 'good old days'. I could go on and make a rambling letter but all I now wish to say is that I make you my objection to the scheme.	Removal of allocation
552	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Support	Support for allocation at Ewloe Transport Access It has been noted in supporting documentation, and demonstrated through traffic surveys, not only of the rods bordering site, but as well as roads at major junctions locally, and an analysis of traffic at peak times in the morning and evening, leaving and entering the A494 main dual carriageway. The transport report and proposals conclude the proposals entirely satisfies the full maximum number of housing units to predictable levels, as well as resolving identified existing traffic congestion at	

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
				peak morning and evening times close to the A494, by localised and cost effective road widening and lane management, all within the proposals Green Barrier The site currently lies within the Green Barrier, which covers a large area regionally, The proposals are to remove this site from the barrier; being located as a natural overflow to the existing urban infrastructure, as supported by Flintshire Local Authority. The associated reports noted above look to support the proposals, and have addressed specific concerns such as ecology, landscape, visual impact, soil type and geo-environmental aspects. Ground conditions As part of the proposals, the site has been assessed in terms of minerals and below-ground coal mine presence, The in-depth report notes suitability for housing with some very low coal seams, but not of any specific concerns precluding early development of the site The combined site within the LDP is fully deliverable and appropriate in the context of the Local Development Plan. Discussions with local housebuilder, Anwyl Homes, as well as interest from other local and regional developers, have shown deliverability of the site, promoting employment for local people during the construction stages.	
564	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Support	Support for allocation in Ewloe. More houses in this area would be good for my commute, I've been looking to move closer to work.	The plans for 40% affordable homes would not be suitable
563	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Support	Support for allocation in Ewloe More houses in Ewloe would benefit the local area. It would build the area to a family area and help with the local businesses	I don't think they should build them in Mancot on Ash Lane, But build the community in Ewloe with larger family homes.
565	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Support	The area needs a larger selection of 4 and 5 bedroom houses for growing families to move into.	The plan to have 40% affordable housing is disproportionate to the areas requirements, 10% to 15% is more in keeping.
1113	HN1: New Housing	HN1.7 Holywell Rd /	Support	Support for allocation at Ewloe. More familiy homes are needed in Flintshire.	40% affordable housing is too high. This is not consistent with the local

ID	Title	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
	Development Proposals	Green Lane, Ewloe			area's requirements. 15% would be sufficient.
1243	HN1: New Housing Development Proposals	HN1.7 Holywell Rd / Green Lane, Ewloe	Support	Holywell Road/Green Lane, Ewloe, 298 units A water supply can be provided for this site. A Hydraulic Modelling Assessment (HMA) will be required to determine the point of connection to the public sewerage system and potential developers would be expected to fund investigations during pre-planning stages. The findings of the HMA would inform the extent of any necessary sewerage upgrades, which can be procured via the requisition provisions of the Water Industry Act 1991 (as amended). Potential developers need to be aware that this site is crossed by a sewer and an easement width would be required which may impact upon the housing density achievable on site. The proposed growth being promoted for the Queensferry Wastewater Treatment Works (WwTW) catchment would require improvements which would need to be funded through our Asset Management Plan (AMP) or potentially earlier through developer contributions.	

Council response

HN1.7 Holywell Rd / Green lane, Ewloe

The Deposit LDP consultation has received over 1200 representations on various aspects of the plan strategy, allocations and individual policies. To ensure all points within this large volume of representations are answered the Council have grouped and summarised representations made on allocated sites together and prepared one response covering all points made in support and in objection to the site. Therefore the following response may cover additional issues to those raised by the objector.

General

Not accepted. The categorisation of Ewloe as a Tier 2 settlement is based on the settlement audits which informed the Plans settlement hierarchy as consulted upon in the Key Messages document and confirmed in the Strategic Options consultation document. Ewloe has a good range of facilities and services as well as employment and has good road and bus communications and is close to Hawarden Railway Station. An Inspector in a recent appeal decision stated 'The site is located adjacent to a sustainable settlement which has a range of services and facilities and is accessible by transport modes other than the private car'.

The detailed responses later in the Council's response will set out the level of services and facilities, the public transport, the proximity to other settlements and employment areas and the opportunities for Active Travel being pursued by the Council's Transport Strategy Team. The allocated site is therefore considered to comply with para 3.38 of PPW10 in terms of minimising the need to travel, reducing reliance on the private car and increasing walking, cycling and use of public transport.

In the 15 year UDP period Ewloe saw an actual growth of 16.1% (completions of 367 units) which was just above the indicative growth band of 8-15% for a category B settlement in the UDP. In the first 3 years of the LDP period Ewloe has seen a further 65 completions, largely as a result of the speculative permission Anwyl secured at

Council response
Greenhill Avenue. At the Plans base date for the Housing Balance Sheet of April 2018 there were commitments for a further 40 units giving a growth rate of 4%. Taking into account the units form the allocated site the growth for Ewloe over the Plan period would be 15.2% which is broadly in line with the previous growth bad in the UDP. The Inspector in that appeal decision concluded that the proposal would '…not result in Ewloe having an unacceptable housing growth rate'. The rate of growth in Ewloe is not considered to be excessive and higher rates of growth have been experienced in other settlements. The Council is now preparing a Plan for a new Plan period and Ewloe remains as a Tier 2 settlement which is capable of sustainably accommodating further growth. On the one hand objectors claim a lack of services and facilities and on the other hand claim that Ewloe is overloaded with commercial buildings. It is these commercial and employment buildings, largely centred on St Davids Park, which adds to the role and character of the settlement and adds to its sustainability credentials. The objection does not explain how the scale of building will negatively impact on the settlement as a whole. Objections appear to regard Ewloe Green as a separate settlement whereas it forms part of a larger settlement of Ewloe. In this context the site is not considered to be out of scale or harmful. Ewloe has seen previous housing developments and each has provided the requisite affordable housing. The Viability Study which informs policy HN3 identifies that this allocation should be able to provide 40% affordable housing. Comparing the size of this housing allocation with other housing allocations in other settlements only looks at part of the overall provision. The allocation in Ewloe may be larger than the Denbigh Rd site in Mold but it is the only site in Ewloe whereas in Mold there are two allocations and other committed sites. It is necessary to look at Ewloe as a whole settlement and not just the Ewloe Green part. The presence of sand and gravel and other minerals on candidate sites has been assessed by the Council's Minerals and Waste team and there is no requirement for 'prior extraction' of any reserves. It is unclear whether objectors are suggesting that the site be held back for future minerals extraction as this would surely have detrimental impact on residents and the environment. The IIA recognises that measures can be put in place to secure additional educational capacity. This was also commented on in the Wrexham LDP Inspector's Interim Findings letter where she stated 'The final reason for reducing the housing requirement was that the level of growth identified was considered to place too much strain on infrastructure such as highways, education, schools, council services and health providers. Again, we are not convinced that this is relevant to the assessment of need. Moreover, it is always a requirement for developers to make provision, through planning obligations, for infrastructure to be provided where existing capacity would not meet the additional demands and needs of new development. This would be commensurate with the scale of development'. The Wrexham Inspector also commented 'We heard during the sessions of the shortcomings in the County Borough in the provision of health facilities. The local health Board, which does not object to the LDP, states in its consultation responses that it is not the provision of buildings for additional services which is the issue but the availability of the required workforce. We have little evidence, therefore, that the availability of health services is a compelling reason to prevent or limit residential development'. It must be stressed that the Ewloe site will not deliver completed houses until 2023-24 with 28 completions forecast in the first year and 45 per year thereafter. The impact of development will therefore not be felt in 'one hit' and there is sufficient time for both the Heath Board and the Education Authority to support the delivery of growth that is identified in the Plan. There is no formal objection from either statutory body to the Plan nor allocation.

Council response
The UDP Inspector clearly considered Ewloe to be a sustainable location in recommending housing allocations within Ewloe. A subsequent appeal Inspector also considered that Ewloe was a sustainable settlement. The Settlement Audit which informed the earlier stages in the Plans preparation sets out the range of facilities and services within the settlement, and this was widely consulted upon as part of the Plans earlier engagement phases. The sustainability of the settlement is not just as reflected in the settlement itself but also in the proximity of other nearby settlements such as Buckley, Drury, Northop Hall, Connah's Quay, Hawarden and the Deeside settlements as well as Deeside Industrial Park. The B5125 Mold Road is the route of two key bus services. Service 5 runs between Mold and Ellesmere Port and provides an hourly service calling in at Deeside Industrial Park. Service X4 runs between Chester and Mold and provides a link through Hawarden and runs every 30 mins. The site is also just over 2km to Hawarden Railway Station. Ewloe Green has a convenience store and a number of take aways, a social club and there are further facilities and services in Ewloe. There are also a series of Active Travel schemes as shown on the Flintshire Active Travel Integrated Route Map (Central). A key strategic route is the F6 'Connecting Settlements' route from Mold through Buckley to Ewloe. This links with other localised routes which includes: • EW2-16(1) – a route from Mare Hay Lane along the road to the rear of the Social Club and on to the roundabout. • EW2-16(2) – Route from Mare Hay Lane including the provision of a new footbridge with ramps, over A494(T). • EW2-16(3) – route from footbridge through Lakeside Business Park. • HA2-15(1) – two way cycle track along The Highway between roundabout and Hawarden High School. • SH2-12(1, 2, 4, 5) - shared use cycle and pedestrian lane along the 494(T) Aston Rd from the Ewloe roundabout to Shotton / Queensferry. It is evident that Ewloe, both as a settlement in its own right and in conjunction with nearby settlements and employment areas is a sustainable location to accommodate further growth, and that travel is not wholly car dependent. Policy STR2 criteria a. states that Tier 2 Local Service Centres 'will be the locations for more modest levels of new housing development'. The amount of housing development in settlements is not just made up of new allocations but also completions during the early years of the Plan and existing commitments (as well as possible windfalls). It is not appropriate to interpret the policy as indicating a more modest site size. Ewloe Green is predominantly made up of post war modern estate type development and is not considered on the whole to have a particular character that is different to Ewloe. The two have been considered as one settlement for successive development plans for 25 years. The site size is determined by the fact that the two candidate sites work hand in hand in bringing about a logical urban extension. The site does not have constraints that would prevent its development and the site promoters consider that the site is viable and deliverable in accordance with the Councils trajectory in the Housing Land Supply Background Paper. This site is not the only new housing allocation in the Plan. Each site, whether new or previously considered, needs to be assessed on its individual merits. **Brownfield/Alternative Sites** The Plan preparation has involved the assessment of several hundred sites, the vast majority of which are greenfield. The County has large areas of brownfield or previously developed land particularly along the Dee Estuary. However, these are former mining and heavy industrial areas and often areas where landfill has taken place. These areas

Council response
are affected by flood risk, contamination and their proximity to the Dee Estuary, which is of international nature conservation importance. These areas are not suitable to accommodate residential development which is a 'highly vulnerable' land use in terms of flood risk. It is accepted that there are potentially smaller parcels of unused and derelict land and buildings in towns but these can be difficult to allocate in terms of predicting their availability, viability and deliverability. This is why the Plan makes a conservative allowance for small and large site windfalls as part meeting of the Plans overall housing requirement, thereby recognising that such sites can make a modest contribution to overall supply. A Plan which places too much reliance on such unidentified windfalls is likely to be found unsound. Each candidate site (and alternative site) has been assessed against the criteria in the Candidate Site Assessment Methodology which was previously consulted upon. The assessment is detailed involving in excess of 30 assessment criteria which would have been too detailed to publish as part of the Deposit consultation documents. Instead the Council published a summary assessment of each candidate site in the form of a Background Paper and this took the form of a conclusion on each site. This provided a clear explanation as to why each site was considered appropriate or otherwise to be allocated. There are obviously some constraints to a site being allocated that are not capable of being resolved and this might include flood risk or an ecological designation. However, in the main, many constraints are capable or being either avoided or mitigated. Planning is therefore not black and white and is not always a scientific or numeric exercise. Rather, it is a matter of planning balance in weighing up the evidence before making a decision. Merely totting up scores and allocating the highest scoring is too regimented and simplistic and fails to take account of other considerations or the application of planning judgement. It is acknowledged that para 5.3.4.11 of the Development Plan Manual (2) stresses the need to use a clear assessment methodology in order to rank sites, which can then inform plan allocations needed to deliver the strategy and signpost potential reserve sites which may be required later. However, this version of the DPM has now been superseded by Edition 3 (March 2020) and there is no requirement for sites to be scored or ranked for the obvious reasons given above, that it is not a mathematical exercise. It is documented in the Integrated Impact Assessment that both the allocations and a number of reasonable alternative sites were appraised. Clearly, the reasonable alternative sites are not considered to perform as strongly as the allocated sites. In assessing candidate sites (and alternative sites) the Council has undertaken a consistent and detailed assessment of sites against an agreed methodology. Sites have been assessed against a wide range of criteria, designations and constraints of which green barriers is one. Alongside the assessment of sites is a review of green barriers. In the case of the Ewloe allocation the site is considered a sustainable location and a site which does not harm the overriding purpose of this particular green barrier given the remaining extent of the green barrier. The Plans settlement hierarchy and spatial strategy is based on a comprehensive suite of settlement audits which established the sustainability of each settlement in terms of location, size, character, role and level of services and facilities. The most sustainable settlements are generally located in the eastern part of the County close to major sources of employment. The lack of new allocations in the western part of the County should not be interpreted as there being no growth. There will be existing commitments (planning permissions) and also completions secured in the early years of the Plan period. For instance there are two large site commitments in Holywell, one of which is under construction and a large site commitment at Caerwys which is also under construction. A Council site being promoted by Wates as part of the SHARP scheme also has planning permission at Gronant, along with a further site at Pen-y-ffordd. It is a normal occurrence of the housing market for properties to be for sale or to be empty. This is known as 'churn' and an allowance is made for this as part of preparing forecasts of population and household growth. When projected household growth is converted to dwellings an assumption is added about vacant properties and second

Council response
homes in the stock of 3.1%. The 'Population and Housing Projections Technical Paper' in Nov 2017 which accompanied the Preferred Strategy explains that Welsh Government recommends a notional average allowance of about 4% with a range between 1.5% and 8% depending on local evidence. Each of the 'alternative' sites put forward are commented on in turn: The Northern Gateway site is a key strategic mixed use allocation in the Plan. It forms a key part of the regional growth initiatives and is consistent with the draft NDF which identifies Deeside as a growth area. The site has two outline planning permissions and both parts of the site have a reserved matters approval for housing - Countryside Homes have commenced construction on the first phase of housing on the northern part (300 homes), and Keepmoat have now secured approval for the first phase of housing on the southern part of the site (120 homes). A reserved matters approval exists for a large B8 warehouse and distribution centre. The ethos behind the site is that it is a mixed use development with employment, housing and community facilities and it would be inappropriate to simply re-assign the employment areas to housing. The Gateway to Wales Hotel site recently suffered a fire and is reported in March 2020 to have been bought by a Manchester based developer with consideration being given to a range of uses being considered https://www.dailypost.co.uk/news/north-wales-news/gateway-wales-hotel-site-bought-17875172. The site though is relatively small and is not comparable to the allocated site. Neverthless, the Plans allowance for small and large site windfalls allows for sites such as this to come forward over the Plan period. The former Bengal Dynasty restaurant in Shotton is a small site which is not comparable to the allocated site. The site is capable of coming forward as a windfall over the Plan period. The Halfway House pub on Church Street in Connah's Quay is presently closed. The future intentions of the landowner are not known but it is relatively small and is not comparable to the allocated site. The site is capable of coming forward as a windfall over the Plan period. During the latter part of 2019 land at Hope Hill Farm, Hope was for sale. However, the land is in open countryside and is greenfield land not brownfield and relates poorly to the form and pattern of built development in Hope. The site is not appropriate or suitable to be allocated in the Plan The former Morrisons site Wepre Drive has potential to deliver a retail or commercial development / use and it is inappropriate to be considered for residential development. Preparations are being made for the demolition of the later phases (rear) of County Hall. Development is complicated by the need to retain the theatre, law courts and Llwynegrin Hall and the need to ensure some office space is retained for FCC. The site is also challenging in terms of mature trees, a listed building, green space, protected species and topography. In this context there was considered to be insufficient certainty regrading deliverability for it to be allocated. However, the site has the potential to deliver housing in the form of a large windfall site which the plan's housing balance sheet makes allowances for. The allotments on Upper Aston Hall are not owned by the Council. The allotments were opened by Hawarden Community Council on 08/06/13 and are fully let to local residents through an Allotment Holders Association. The site is not available nor suitable for housing development as it is a valued local community facility.

Council response
Green Barrier The site was designated as part of green barrier (GEN4-12) in the UDP which covers land between Connah's Quay, Northop Hall, Ewloe and Shotton. The Council is required during the preparation of each development plan to review existing green barriers as confirmed in para 3.64 of PPW10 'Green wedges are local designations which essentially have the same purpose as Green Belts.... Green wedges should be proposed and be subject to review as part of the LDP process'. The Council has explained its approach to the review of the green barrier in Background Paper No.1. The overriding objective or function of this green barrier is to prevent the coalescence of the 4 settlements. Given the large extent of this green barrier, the modest drawing back of the green barrier to accommodate the two candidate sites which make up the allocation are not considered to represent a risk to the coalescence of Ewloe with Northop Hall or Connah's Quay. This is because the wooded valley comprising New Inn Brook forms a robust physical feature which prevents the expansion of Ewloe in a north westwards direction. The wildlife site at New Inn Brook (a continuation of the Wepre SSSI, SAC/SPA) would also require a buffer between it and development and this further protects against development. Although the green barrier is reduced by the housing allocation it does not undermine its effectiveness in seeking to prevent the coalescence of settlements. The physical arrangement of the site and green barrier does not result in development being any closer to Buckley. The town of Buckley lies to the south west of Ewloe. Green barriers (or green wedges as defined in PPW10) are not designated based on the quality of the landscape. The suitability and sensitivity of the landscape in terms of accommodating the proposed development is a separate consideration. Planning applications must be determined in accordance with the prevailing development plan in force. The planning application (050275) for a dwelling was refused 07/02/13 against the policies in the adopted UDP at that time on the basis that as the site was in open countryside and a green barrier and that there was no special justification for a new dwelling then the application was contrary to policy. The Council is now preparing a new development plan for a new time period, to meet a new housing need and this has involved a review of candidate sites, settlement boundaries and green barriers. **Site Assessment** The site was assessed against the Preferred Strategy and was classed as an amber site 'The site complies with the Council's Preferred Strategy, however there are site constraints that would need to be overcome to allow the site to be developed' with a further explanatory note 'This includes sites where there are known constraints which would need to be overcome such as highways improvements, flood risk or ecological constraint. This would also include policy constraints such as existing green barrier. It would also include sites where there might be a potential viability or deliverability concern particularly when a site has not come forward'. The fact that a site was classified as amber at Preferred Strategy stage did not mean that it was unsuitable to be considered for inclusion in the Deposit Plan provided that constraints can be overcome. Each of the objectors concerns about constraints will be addressed in turn: • Green barrier – this is addressed above • Agricultural land – it is accepted that the site will result in the loss of grade 3a agricultural land. The Council's approach to minimising the loss of BMV agricultural land is set out in Background Paper 9. Welsh Government has supported in principle the approach taken and has not objected to this housing allocation • Road improvements – there has been long standing concern about the junction between the B5125 Holywell Rd and the B5127 Old Mold Rd at the former Boars Head Inn. This was particularly the case when planning applications on the site of the Boards Head were under consideration. The developer of the allocation will

Council response
implement road improvements by improving the capacity of the junction to enable it to function more efficiently both for new and existing traffic. The provision of a vehicular access to the smaller part of the site off Green Lane will bring about the improvement of the junction of Green lane with the B5127 Mold Rd. • School capacity – This is considered later in the Council's response under 'Infrastructure'. • Sewer – Welsh Water identified earlier in the Plan preparation process that there is a sewer crossing the site. The detailed layout and design of the site will need to take into account the route of the pipe and ensure an easement for future maintenance is provided. • Ecological surveys – An ecological survey of the site has been unilaterally undertaken and submitted by the site promoters and assessed by the Council's Ecologist. Given that the site is improved agricultural grassland it is not of high ecological value with the exception of trees and hedgerows which can be retained in the main as part of a detailed layout for the site. The development would need to provide an Ecological Impact Assessment with appropriate avoidance and mitigation measures. The proximity of the SAC means indirect impacts would also have to be considered and this could be achieved by either using the public right of way network to direct recreational pressure away from the SAC and wildlife site, or through commuted sums towards management works within the SAC and wildlife site. NRW have been consulted and have not objected to the allocation. • Landmap – The NRW Landmap system identifies the following evaluation scores geological landscape (moderate), Landscape habitat (high), visual and sensory (moderate), historic landscape (high) and cultural landscape (high). A Landscape and Visual Impact Appraisal has been unilaterally undertaken and submitted by the site promoter for the site. In terms of the wider landscape character this concludes that the proposal would result in a Slight-Moderate Adverse effect to the positive characteristics of the site and wider landscape. However, it adds that the proposed development would establish over time as an extension of the Ewloe settlement and result in a residual effect of Slight – Moderate Neutral by year 15. The Study recommends a number of mitigation measures including retaining, enhancing the hedgerow boundary that surrounds the site along with design measures such as scale, massing, materials and building type that reflect local vernacular, retain the public footpath for permeability alongside structure planting through open spaces and streetscapes which would help soften the built form. • Character of settlement – The site is well framed by Green Lane and existing development to the south, by existing residential estate type development to the east and by Holywell Rd to the north. The western boundary is defined by mature hedgerows. The site is therefore considered to represent a logical extension to the settlement. Given that the bulk of development in this part of Ewloe is post war estate type development it is unclear why further residential estate type development would be out of character with the settlement, given that this is already the prevailing character of the settlement. • Mining – the site sits within an area where mining has previously taken place. However, there is no objection from British Coal in terms of the presence of any technical constraints to development. A detailed Geo-Environmental study has been unilaterally undertaken and submitted by the site promoter and this has not identified any issues. • Landfill – there is no landfill within the site boundary. A former landfill exists on land adjacent to Ewloe Green Primary School but this is now developed for housing and any legacy from landfill would have been dealt with through mitigation measures. • Sand and gravel reserves – this is commented on elsewhere in the Council's response • Tenant farmer– this is commented on elsewhere in the Council's response **Amenity** Construction nuisance - It is inevitable that a new housing site will bring some disruption as a result of construction, wherever it is located. This is not a compelling reason to remove the allocated site from the Plan. A planning permission can include conditions relating to hours of work and construction arrangements. Most developers will also work to a Construction Management Plan. Ultimately nuisance from a development site will be a matter for Public Protection and Planning Enforcement to address, if any occur.

Council response
Overlooking / privacy / light – The Council already has an adopted Supplementary Planning Guidance Note relating to Space Around Dwellings which seeks to ensure that the residents of new houses and residents of existing houses enjoy satisfactory living conditions in terms of privacy and light. This is a matter for the detailed layout and design of the site to address at the planning application stage and does not affect the principle of development. Air pollution – The Council, through its Public Protection service, is responsible for monitoring air quality and the levels of pollution across the County. This is done through a network of monitoring stations throughout the County. All North Wales authorities contribute to an Annual Air Quality Progress Report in fulfilment of Part IV of the Environment Act 1995. The Reports for 2018 and 2019 show that within Flintshire and indeed across North Wales, there are no Air Quality Management Areas (AQMA) and in consequence has not published an Action Plan. In Ewloe there are monitoring stations at St Davids Close, Ewloe (monitoring station 2), Aston Hill Roadside (3/15), Hawarden High School (ms4), Ewloe Green Primary School (ms46), Aston Hill Roadside (ms3,15), South Bank, Aston Park Rd, Queensferry (ms5,9,10), 4 Belvedere Close, Queensferry (ms16). The conclusion of this evidence is that are no air pollution issues within the County or locally. In addition to this, Welsh Government installed their own continuous monitoring station at South Bank in Aston prior to the consultation for the red/blue route and the Aston Hill improvement scheme prior to that. At no time has the Governments action level of 40 µg/m3 NO2 been exceeded in any year so the Council have not had to make this stretch of road or any other area in Flintshire an Air Quality Management Area. Nevertheless, Welsh Government have introduced formalised speed restrictions along the A494(T) in order to generally reduce air pollution, whereby speed limits have been reduced to 50mph from the DIP junction to beyond Ewloe. It is the case though that speed limits for much of the route (River Crossing to Ewloe) have been 50mph for several years anyway. Welsh Government published the report 'Tackling roadside nitrogen dioxide concentrations in Wales - Welsh Government supplemental plan to the UK plan for tackling roadside nitrogen dioxide concentrations 2017 – Interim Data on NO2 Concentrations for the Motorway and Trunk Road' in September 2019. The report highlights that since 2017 air pollution has reduced at roadside locations and will continue to reduce. A further consideration is that in the longer term, the implementation of the Red Route will have the effect of reducing traffic levels on the A494(T) and will be likely to lead to further reductions in pollution. Continued reductions in petrol / diesel emissions through tighter controls, combined with increasing levels of electric vehicles will also have the likely effect of reducing pollution further. This clearly points to a context of reducing levels of pollution in the area / County over time. The Council's Pollution Control Officer considers it is unlikely that the allocation alone would contribute enough additional pollution to push the levels currently being measured above the government action level of 40 µg/m3. However, the developer will be required to investigate and provide thorough Noise and Air Quality assessments to support any application in order to protect amenity and consider air quality in line with WG legislation and Future Generations Act. Light pollution – The detailed layout and design of the scheme will need to address the issue of light pollution as required by policy EN18 of the LDP. This must be viewed in the context of existing light pollution from existing development and street lighting. PROW – The detailed layout of the site will need to ensure that the public footpath through the site remains as an attractive route, without the need for a diversion. This can be achieved by incorporating the public footpath as part of green infrastructure, so that it retains an open, non-urbanised feel. It is usual for improvements to a public right of way to be secured such as improved surfacing to improve usability. During construction works it may be necessary to temporarily close a public footpath in view of health and safety considerations. However, in this case there is a public footpath to the west of the site which runs from Green Lane to Holywell Road (Newbridge Farm) and links

Council response
in with public footpaths into Wepre Park. There is a further public footpath on the far side of New Inn Brook which again links Green lane with Holywell Road. There is clearly a network of alternative footpaths. Apart from the construction phase, which is commented on above, it is unclear how or why a residential development would result in noise pollution to existing residents of a neighbouring residential development. **Traffic** A Transport Assessment has been unilaterally prepared and submitted by the site promoters, and assessed by the Council's Highway Development Control team. This confirms that the road network has the capacity to accommodate the development. It is acknowledged the road network around Ewloe is busy at the rush hour peaks but this does not mean that additional development cannot be accommodated. The development will provide for the improvement to two junctions to i) facilitate the delivery of the site but also to II) facilitate a significant junction improvement at the junction adjacent to the former Boars Head Inn in order to improve capacity. This is a known long standing problem and in the present financial climate, the junction improvements would be unlikely to be delivered in the absence of developer funding. It is unclear from the objection which country roads have experienced such an alleged increase in traffic. It is accepted that parking problems have occurred on residential roads. However, this is an existing problem and it is unclear how additional housing development which will have its own parking provision, will make this worse. The site is proposed to have two points of access, one onto Holywell Rd and one onto Green Lane. The provision of a through road between the two access points would result in residential estate roads becoming a rat run. Instead the proposed development will deliver an improved junction between Green Lane and Mold Rd and significant improvements to the junction of Mold Rd and Holywell Road including right turn lanes to add additional capacity at the junction. A Transport Assessment has been unilaterally provided by the site promoter which establishes that the road network can satisfactorily accommodate the development. The site is within easy walking distance of Ewloe Green School and its development need not ad to existing problems. The improvement to the junction of Green Lane and Mold Rd may also help improve traffic movements in the area around the school. As referenced above, work is progressing in the Ewloe area in terms of Active Travel which will improve links to Hawarden High School. The Infrastructure Plan lists road schemes that are already identified by Welsh Government or by the County Council, where it is necessary to safeguard the route in the LDP. Examples include the red route identified by Welsh Government and a number of other schemes identified in the Local Transport Plan by the Council. The Ewloe housing allocation is only a proposal at the moment as is the two sets of road improvements proposed (and referenced in policy HN1). Therefore the two proposed junction improvements are referenced in Appendix 2 of the Infrastructure Plan as part of the highways section for this site. The proposed improvements to the Holywell Rd and Mold Rd junction will be carried out by the developer within FCC Highways land i.e. the adopted highway. The proposed improvements to the Green Lane and Mold Rd junction will be carried out by the developer using adopted highway land and also land to the west of Green Lane which is within the control of the one of the site landowners. However, neither the Council nor the developer has any control over land at Weighbridge Rd in terms of major road improvements. Nevertheless, the Council's Active Travel Integrated Network Map shows a proposed Active Travel along Weighbridge Rd.

Council response
Infrastructure No objection to the Plan or allocation has been made by the Local Education Authority. The commentary of the Wrexham LDP Inspector referenced in detail above, establishes that it is normal practice for new development to address capacity issues through developer contributions. The development will not deliver completed houses until 2023-24 and will take several years for the development to be completed. The impact on infrastructure will therefore be gradual and will not be in 'one hit'. This gives the Local Education Authority time to address how the growth in the Plan can be accommodated in terms of school capacity. The Planning Service continues to work with the LEA to secure appropriate mitigation for the delivery of planned LDP sites. No objection to the Plan or allocation has been made by Betsi Cadwaladr University Health Board. Flintshire has a number of relatively new Primary Health Care Centres and the issue is one of lack of sufficient staff including GPs, rather than a lack of facilities as also commented on by the Wrexham LDP Inspector above. As stated in the preceding paragraph in relation to education capacity, there is ample time for the Health Board to plan for how it intends to meet the health care needs of the Plan's growth levels. The Council continues to work with the Health Board in securing the appropriate provision of infrastructure such as health for the delivery of LDP sites. The presence of services and facilities in Ewloe Green and Ewloe is commented on above, with the conclusion that there is a good range of facilities and services in the settlement which are within walking distance of the site. The issue of education capacity is identified and responded to above. The IIA reflects that measures exist to address school capacity. The issue of the public footpath is commented on in detail above. The medical centre in Hawarden village centre is 2.7km from Ewloe, medical centres in Buckley are 2.8km from the site and medical facilities in Queensferry and Shotton are within 4km of the site. The IIA is therefore correct that there are doctors within 1-4km of the site. The history of St David's Park is not a matter for this LDP. The Council has engaged with and consulted internally throughout the Plans preparation. Indeed the Plan has safeguarded two sites for cemetery extensions at Treuddyn and Greenfield. No such need for sites has been identified elsewhere in the County by the appropriate area of the Council. The site adjoins an existing play area at the junction of Greenville Avenue and Circular Drive. The development will also provide on-site play space and open space as well as a Multi Use Games Area (MUGA). In addition the existing public footpath will be sympathetically integrated into a green infrastructure network for the site, so that it remains an attractive walking route. **Environment – Natural** The site is not green space. It is presently agricultural land and with the exception of the public right of way has no right of access to the public and is otherwise private land. The public footpath will be retained as part of the detailed layout of the development and is commented on in more detail earlier in the Council's response.

Council response
Trees and hedgerows, with the exception of hedgerows to secure vehicular access, will be retained as both landscape and ecological features. This is a matter for the detailed design and layout of the development. There is no objection to the allocation from NRW. An ecological survey of the site has been unilaterally undertaken and submitted by the site promoter which has been evaluated by the Council's Ecologist. Whilst the site is close to the SAC and Wildlife Site there is no objection to the principle of development subject to avoidance and mitigation measures. These could involve using the public right of way network to avoid cumulative impacts of recreational pressure on ecological habitats or it can be achieved through commuted sums to contribute towards off site ecological management works. This is commented on under 'Site Assessment' above. The implications of the 1986 Agricultural Tenancy Act is a matter between the tenant farmer and landowner. The Council has no financial interest in or involvement in such arrangements and it will be for parties involved to resolve. The issue of the use of agricultural land is commented on earlier in the Council's response under 'Site Assessment'. The site is not adjacent to the New Inn Brook wildlife site as there is buffer of land between the two. The ecological issues have been commented on above and do not frustrate development or reduce the number of units. The site may be open countryside at present but it is 'improved' grassland where the previous and present agricultural practices have sought to maximize its agricultural productivity. With the exception of trees and hedgerows such land typically has low ecological value. It is accepted that any development will have some impact on landscape through the loss of open countryside. However, the site has an irregular boundary as it follows hedgerows. The undulating nature of the site plus the provision of landscaping and green infrastructure can help to soften the appearance of the development. A Landscape and Visual Impact Assessment has been unilaterally prepared and submitted by the site promoter and sets out the assessment of the site and the proposed mitigation measures. This is commented on in more detail earlier in the Councils response. **Environment – Historic / Heritage** The Council's historic environment mapping records show only one asset in the vicinity which was an archaeological find of a 'finger ring' to the rear of Newbridge Farm. The policy already specifies the retention of hedgerows and trees. **Flood Risk / Water Infrastructure** The site may have small areas which are wet (as indicated on the NRW flood risk maps) this does not equate to the site being a natural wetland. The NRW Advice Map shows that the site is not within a zone C1 or C2 flood risk but that there are pockets of surface water flood risk. NRW have not objected to the allocation. National Legislation requires the use of Sustainable Urban Drainage Schemes to ensure that surface water run-off from the development is no greater than the run-off from a greenfield site. The soil structures within the site will be taken into account in the design of a drainage scheme.

Council response
The findings of the Geo Environmental Report unilaterally prepared and submitted by the site promoter will inform whether and how a SuDS scheme can be satisfactorily designed for the development given existing ground conditions and topography. The intention of SuDS is to sustainably drain the surface water run-off from a development to no more that the equivalent greenfield run off rate. In this context it is not considered that the perceived risk of flooding to adjoining properties can be increased, and an effective SuDs scheme has the potential to provide significant betterment to any present situation. Any surface water problems outside Ewloe Social Club are an existing issue and not related to the proposed development of the allocated site. The detailed design work associated with the improved Green Lane, B5127 junction will address surface water run-off. As explained earlier in the Council's response the allocated site is not within either a C1 or C2 flood risk zone. A detailed Geo Environmental Study has been unilaterally undertaken and provided for the site and this has shown that there are no water abstraction licences relating to the site. In addition, no objection has been made to the site by either Welsh Water or NRW. Any easements or legal rights relating to the site are a civil matter between the site owners and third parties and ultimately the developer. No objection has been made by Natural Resources Wales in respect of the relationship of the site with Wepre Park SSSI/SAC. Welsh Water have made representations on the plan as set out below and confirm that a water supply can be provided to the site and that improvements to the Queensferry WWTW will be required. **Energy** The IIA recognises that both the construction phase of development and the operational phases of development will involve energy usage. However, that energy usage would happen whichever site was allocated in the Plan. Dwellings on the site will be constructed in accordance with the current Building Regulations in terms of energy efficiency. Policy EN12 will also require that new development maximises the potential for renewable or low carbon energy technology. **Welsh Language** The issue of education capacity is addressed above. The teaching of Welsh is a compulsory part of the curriculum for Welsh schools and pupils. **Tests of Soundness** The Councils Delivery Agreement sets out how it intended to engage with and consult consultees, stakeholders and the public. The Council has exceeded statutory requirements. The Plans preparation has involved a number of documents being made available and distinct consultation exercise: • Key Stakeholder Forums • Delivery Agreement consultation • Call for Candidate Sites

Council response

- Candidate Site Assessment Methodology
- Publication of Candidate Site Register
- Key Messages Document
- Strategic Options
- Preferred Strategy and Invitation for Alternative Sites
- Publication of Alternative Sites Register
- Deposit Plan

The key stages have been publicized by public notices, direct mailings to consultees, direct mailings to those on mailing list, availability of documents on web and advance notification to Council Members and Members of Town and Community Councils with an expectation that they would assist in publicizing the Plan locally. The Deposit stage involved site notices for housing allocations and strategic sites. The Council's PR Officers have also used social media to publicise the Plan. The Council has taken all reasonable steps to publicise the various stages of the Plan where the public and stakeholders needed to be involved and there is no requirement in the regulations to consult on Candidate Sites. The Council nevertheless made the register of candidate sites publicly available as soon as it was compiled, complied with changes to Welsh Government regulations to indicate at the Preferred Strategy Stage how the Council felt candidate sites complied with the Preferred Strategy or not, and then published a summary of the assessment and planning view of all candidate sites at the deposit stage.

The Council has used an industry leading specialist consultation portal which is used by a large and growing number of planning authorities in Wales and England. It is disappointing that objectors claim they found it difficult to use but the Council made it clear that the portal was not the only means of making representations as they could also be made via letter, representation form and e-mail. The Council produced two 'step by step' guides to i) register on the portal and ii) how to comment on the portal, and these were available both on the website and in hard copy. The Plan was also made available to physically view at a number of consultation venues.

The Deposit Plan was accompanied by an easy to understand leaflet explaining the Plan and the consultation. The Plan has to meet certain legislative requirements and Welsh Government guidance and it is inevitable that the Plan has to be accompanied by a range of supporting documents and that certain terminology is used and is therefore by definition a complicated document. Objectors did not have to read the whole plan or all supporting documents to understand the allocation of the land at Ewloe.

These matters are addressed in the relevant sections above. In terms of i) The Health Board do not object to this site or the plan as a whole, or on the basis of their inability to meet the demand from the growth that the Plan will facilitate over its plan period. They do not object at all. Provided that the requisite improvements in infrastructure capacity is provided then it is unclear why 300 dwellings will prevent a cohesive community from being enabled. Whilst the process of constructing a housing development will inevitably bring with it some disruption to existing residents, this would be the case whatever site was allocated in the Plan and is capable of being managed effectively via appropriate planning conditions. It is not a reason to question the soundness of the Plan.

The site adjoins an existing post war residential development which is of an estate type character, and which incorporates green space and a play area. In broad terms this is no different to what is being proposed on the allocated site, a housing development which incorporates a green infrastructure network, play area and MUGA. In no way, shape or form can Ewloe Green be described as a 'hamlet' as it has estate type development, commercial development, and an urban context in terms of the road network, proximity to the A494(T) and being part of the wider settlement of Ewloe. The site is not considered to be inappropriate in terms of its context and the Plan is not considered to be unsound in the terms set out.

Council response
The site promoter has invested a considerable amount of time and resources into unilaterally undertaking a comprehensive set of background studies to inform the deliverability of the site which is a key part of demonstrating its soundness. The Council is also aware that initial discussions have also taken place between the site promoter and a number of house builders with a view to identifying a preferred development partner. The identification of a developer by the time of Examination will also assist in demonstrating delivery and therefore soundness. The Plan has been prepared in the light of government guidance and is not considered to be out of accord with PPW10. The issue of the scale of the allocation relative to the settlements categorisation as a Tier 2 Local Service Centre is commented upon earlier in the Council's response. The allocation is considered to be in accord with the Plans spatial strategy. The Plan was made publicly available several months prior to the commencement of the consultation exercise, at the time that is was reported for approval to Cabinet and Council in July 2019. Considerable publicity was given to the consultation in good time before the start of the 6 week period involving direct mailings to people on the mailing list, press notice, articles on the Council website and social media posts. Advance briefings were also given to all elected members as well as to Town and Community Councils. The Council is also aware that public meetings were arranged by the community prior to the start of the six week formal deposit consultation and the drop in session provided in the community was the most well attended of all the sessions provided. It is not clear therefore why or how local people were not aware of the proposal, the consultation, and judging by the high level of response, the various means of making comments on the plan The consultation involved permanent exhibitions, a full range of documents at Ewloe and County Hall and key documents at libraries and Connects Centres. The full range of documents were available on the Council's website through the consultation portal. The consultation exercise was in conformity with, and indeed, in excess of with Welsh Government requirements and was also in line with the Council's Statement of Community Involvement as set out in the Delivery Agreement. Welsh Government require that a development plan is supported by a range of background documents which forms the evidence base for the Plan. The range of documents accompanying the Plan is in accordance with these requirements. They were clearly listed within the Public Notice. Several of these documents are technical in nature but are written with introductions or executive summaries which seek to explain their context and purpose. The Plan is by definition a complicated document, but residents did not need to read the whole plan or all supporting documents, to understand the allocation of this land the Plan, or to make their views known. It is unclear how the consultation process is weighted in favour of this proposal as the Council is merely following prescribed Welsh Government procedures. **Supporting Representations** The support for the allocation is noted and the submitted studies will be useful at Examination in support of the deliverability of the allocation. The support for the allocation is noted. However, the Local Housing Market Assessment (and subsequent Update) clearly reference the need for smaller units of accommodation and that new developments should not comprise solely of 4/5 bedroom units. Policy HN2 seeks to ensure a mix of housing units by size and type to ensure that cohesive communities can be created. The LHMA has identified a need for affordable housing across the County and the Viability Study has assessed the ability of sites within different housing market sub-areas to deliver affordable housing whilst still remaining viable and deliverable. Ewloe sits within a strong housing market sub area where the Viability has demonstrated that 40% affordable is reasonable.

Policy HN1.8

Due to the large number of representations received to this allocation, and the fact that a number of common issues were raised by objectors, a collective response has been provided at the end of this table which covers all of the points raised within each of the individual representations.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
2	HN1.8 Ash Lane, Hawarden	Object	Delineation of Mancot & Environmental Impact This area clearly allows delineation of the village of Mancot, a vibrant community in its own right which this proposed development would subsume into an enlarged Hawarden. The village of Hawarden has been subject to a frankly ridiculous level of expansion and overbuilding over the last three decades. Removal of this green space would choke both Hawarden and Mancot even further. Given the current environmental concerns around carbon and air quality I am appalled at the proposal to use what was set aside as greenbelt rather than the huge swathes of available brownfield sites elsewhere in Deeside. Drainage Issues and Flooding The fields directly behind Park Avenue are prone to flooding with large areas of standing water, exacerbated by the overbuilding in Hawarden which has reduced the land available to soak up rainwater. I am quite sure building on this land would push the water onto existing development causing significant flooding, a problem which already exists in Mancot and Sandycroft. Local Services The schools in Hawarden are currently at capacity with all the attendant issues of car parking, pollution and children having to travel further afield when they do not get the placement of their choice. Despite significant developments in Hawarden in recent decades there have been no new schools. I and my family, including two school age children, have been unable to register at the local doctor's surgery and travel to Broughton. I believe the Broughton surgery is now at breaking point and my mother who also lives in Hawarden is finding it increasingly difficult to get an appointment at her surgery in Shotton. Planning should be holistic, ignoring issues around local services, utilities and highways on the basis they are not included in planning regulations is disingenuous and frankly unacceptable. Highways There are significant local issues with car parking around school, peak hour congestion on the Queensferry roundabout and the adjoining A494, noted by Highways as one of the busiest roads in England & Wales. Additionally, even since the Redrow development adjoining Penlan Street / Bennetts' Lane Turning from Park Avenue or Cottage Lane onto Gladstone Way has been very difficult at peak times. Cottage lane itself is extremely narrow, lacking in p	
9	HN1.8 Ash Lane, Hawarden	Object	In reference to the Park Ave / Mancot plot, the plan will cause the delineation of the village of Mancot, the plot is prone to flooding, local doctors and schools are already full and the surrounding roads are inadequate for the amount of increased traffic.	Removal of allocation.
11	HN1.8 Ash Lane, Hawarden	Object	Housing Allocations Housing Ash Lane HN1.8 Tier 2 Section 8 Ash Lane, Hawarden 288 Homes We object to the proposal to build housing on the land between Ash Lane, Gladstone Way and Park Avenue in Mancot as local schools are already over-subscribed with pupils. there are already significant traffic and safety issues outside of Hawarden Village Church School, Sandycroft Primary School and Hawarden High. Building additional houses will exacerbate this. Building on land prone to flooding could have devastating	As above. Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			implications for existing dwellings and the local environment. The field were the proposed housing is planned is already categorised as a flood risk as are the connected roads in Mancot. (Source National Resources Wales) This development will lead to a further loss of green belt land and will lead to a growth which would go above recommended levels and would result in growth beyond what is sustainable for a village with the current facilities and infrastructure. Increased traffic will lead to increased pollution at a time when the Welsh Government has declared a climate emergency. Local government should be looking to significantly reduce its environmental impact. Further environmental impact will be caused through the loss of wildlife havens such as hedgerows, ditches and mature trees having a detrimental impact upon local wildlife and animals. Previous mining in the area has already led to houses on Park Avenue in Mancot being underpinned. There is limited burial space remaining in Hawarden Cemetery as indicated in a recent BBC News article (11/10/19). It is unjustifiable to build dwellings on the proposed site when this land could be used to extend the cemetery. There are many brown field sites in the area that could be developed instead making the modification of this land unjustifiable. The land is fertile agricultural land and should be protected to ensure future food supply. The Councils preferred strategy document indicates this site is categorised as an amber site having significant constraints that would need to be overcome to allow the site to be developed. such as traffic and flood risk improvements. Back in 2010, the council listened to residents legitimate concerns regarding the flood plain, rain water, old mines and lack of infrastructure (schools full, bad traffic, lack of amenities etc.) when faced with a similar building proposal. As far as I'm aware, none of these issues have been addressed in the following 9 years.	
34	HN1.8 Ash Lane, Hawarden	Object	Proposed Development (Ash Lane) Objection The area dedicated for the proposed development is classified as “Green Belt” land. 1.3. The area of the proposed development is liable to flooding, even in a period of rainfall in June 2019, the area was flooded, schools were closed due to drain surges and flood water and parts of Sandycroft were also underwater. Infrastructure: Given the scale of the proposal, there is no conceivable way local roadways, including access via Ash Lane are able to manage with the additional vehicle traffic. No traffic survey has been submitted, no impact survey on existing road infrastructure or alternatives to provide relief to the local roadways.	Removal of the Ash Lane allocation.
36	HN1.8 Ash Lane, Hawarden	Object	Ash Lane Mancot Traffic and congestion creating disruption which at unacceptable levels along Gladstone Way and existing access causes major problems Regular Long Traffic queues impacting on infant/junior school access Frequently blocked access to Glynne Way & village amenities, affecting motorists and pedestrians Bus routes via G/way cant keep to timetable due to traffic Road safety risk factors, residents have issues exiting driveways on G/way pedestrians have difficulty crossing the roads Number of homes proposed, average household now owns 2/3 cars this immediately increasing local traffic problems. Pollution impacting air quality, there is a need to protect the green spaces and agricultural land increased drainage issues due to concrete Previously mined land creating an increase in flooding and landslip. lack of infrastructure Pressure on schools, GP practices,	Removal of allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
49	HN1.8 Ash Lane, Hawarden	Object	Ash Lane: I strongly object to the above development due to a number of reasons namely: 1. Over crowding at the local schools. 2. Lack of doctors. 3. Flooding in the fields. 4. More traffic in a narrow main road through village. -- 1. The Junior and High schools cannot cope with the number of pupils they already have. The traffic is horrendous already. I have enclosed photos of Cross Tree Lane and Ash lane, as you can see the cars are parked all along Cross Tree Lane from Gladstone Way through to Glynne Way and past the Cemetery in Ash Lane. It is an accident waiting to happen. I cannot imagine what the pressure of cars driving possibly up to 500 hundred more children to school will make. 2. The doctors surgery is beyond capacity already with only two doctors serving 3 surgeries , Hawarden, Saltney and Buckley. You cannot get an appointment with a doctor, only a practice nurse or a pharmacist . I dread to think what an influx of roughly a thousand more people will mean to even trying to seeing those professionals. 3.The fields that you are going to build on are constantly flooded and the drains cannot take the water. The people in Mancot and Pentre have sewage in their garden now without more houses being built. The drains just cannot cope with anymore. 4. Our historic village has a narrow main road and additional traffic will make it dangerous at commuter times and the school run. In essence, there is no infrastructure in place to cope with this development and I urgently ask you to refuse this plan.	Removal of allocation.
51	HN1.8 Ash Lane, Hawarden	Object	Ash Lane: The objection is based on the following: Land drainage and the recent English Office of Environmental Protection (OEP) that is scheduled to also be implemented in Wales. The proposal is at the odd of the OEP and will destroy natural environments. 2014 River Dee Catchment/ Flood Management Plan by NRW says that sea levels will rise and additional development will increase flood risk considerable and indeed, flooding in Mancot has worsened. i.e June 2019 media report saying that water was gushing down Ash Lane flooding properties off Mancot Lane and blocking access to the library. The proposal will worsen the situation. The land is a habitat for many species including brown hare which whilst not protected is still endangered in the UK and classified as a priority species in the UK bio diversity plan.	Removal of allocation.
53	HN1.8 Ash Lane, Hawarden	Object	Proposed Ash Lane / Gladstone Way development Schools – Both primary schools in the area are already over subscribed. Doctors / Dentists– The practices in Hawarden, Saltney and Buckley cannot cope now. They are already over subscribed. Environmental impact through the loss of wildlife havens such as hedgerows, ditches, mature trees would be unacceptable along with removal of further green space when brown belt land exists elsewhere. Vehicles / traffic – A proposed development of 288 houses will inevitably lead to increased pollution at a time when climate change should be the top of everyone's agenda. Limited public transport Environment – Lower Mancot and Sandycroft were flooded this year. Both are in flood risk areas, adverse weather and an inability for the drainage systems and sewers to cope could lead to something similar. I am also aware that the area has a lot of disused mining sites, there is a historic railway line and platform opposite my house.	Removal of allocation.
98	HN1.8 Ash Lane, Hawarden	Object	Objection to Mancot: Ash Lane This would have a detrimental effect on the community of Mancot. Mancot is a village. If this scheme went ahead the amount of traffic generated would be far too much for the village especially now that you are going ahead with traffic calming measures. Mancot would not be a village! You	Removal of allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			have already resisted development here as there would be no distinction between Hawarden and Mancot this reason is still valid. The roads around Mancot would actually not be able to support the amount of traffic that would be generated. The Pollution from the extra vehicles would be unacceptable. There are measures all around the area at the moment to stop the pollution yet this will cause more! According to Natural resource Wales The land at the top of the hill and field itself is categorised as a flood risk and the connecting roads in Mancot leading to Sandycroft which would then have an effect on the excisitng dwellings in Mancot and Sandycroft. The Schools are over subscribed as it is especially with John Summers being closed. Simply there are not enough places for the children. Adding 300 houses I would say at least 400 children. Where are they going to go? The Doctors are at breaking point. Have you tried getting an appointment at the doctors in this area? Impossible. People put of going as they know they have a fight just to get to see a doctor. That in itself causes long term problems as they could then end up with something more serious.	
100	HN1.8 Ash Lane, Hawarden	Object	I would like to take this opportunity to bring to your attention, that there is only 4 years worth of grave spaces left at the graveyard in hawarden. There is also insufficient parking outside Hawrden Junior and infant schools. Wouldn't the land be better used for burial plots and car parking for the local schools? There are 27,000 houses/flats empty in Wales currently. Surely, the use of these premises should be considered before building new ones? I thought it might be worth mentioning the Stables medical centre in Hawarden, Im sure this has been brought to your attention. The GP's surgery there is just a complete disaster. Trying to see a doctor is extremely difficult and frustrating. It can actually take weeks on end before your phone call is even taken. The last 3 times i have been there, I havent even seen a doctor, i have seen a pharmacist on 2 occasions and a practicing nurse on the other occasion. If you go on the Google reviews for the Stables medical centre, you can see other reviews from other people to give you an idea of the state of the medical centre. 9/10 they don’t actually have a GP onsite. Could you let me know if a new medical centre is to be built if these new houses are built on the gladstone fields? As the surgery cant cope with the number of people it has to deal with now, let alone the hundreds that would need it if the houses are built. Just another point i would like to make is that at the moment there is a number of houses due to be built at the airfields in Garden City, with a large section of the land being used for business development, which I have been told no business' have taken up. Wouldn't this be an opportunity to look at this and possibly alter the plans and turn it into a housing development instead?	Removal of allocation.
106	HN1.8 Ash Lane, Hawarden	Object	I recently found out about your prospective plans for a development on the farming / green belt land between Park Lane and Ash Lane in Mancot. I have a number of objections to this proposal, but the most significant regard the facilities needed by any new residents. Namely • the schools on Cross Trees Lane (Hawarden Village and Church School / Primary school) and Leeches Lane (Sandycroft County Primary) appear to be full and since moving into the area 2 years ago I have to time my journeys out of the village to avoid the massive congestion caused at either end of the village. From speaking to neighbours, this has been a problem for many, many years and I do not have any confidence that the current situation will be improved by the Council and that is before the problem is exacerbated by the addition of several hundred	Removal of allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			houses. The congestion caused by parking during school pick-up and drop-off times is very dangerous, especially due to the nearby junctions. • There is a massive issue getting a medical appointment at the Stables Medical Practice (in order to try to get an appointment two weeks ago for my wife I had to call them over a hundred and ninety times before getting through – by which time there were no appointments available). This situation will also get much worse with the proposed new development. • I am very concerned that the development is proposed to go ahead on green belt land. This land serves a useful purpose of separating Hawarden and Mancot and allowing the two villages to coexist each with their own character. As I suffer from depression I also make great use of the green belt land to walk and enhance my mental well being and mental health - the loss of this land would have an effect upon both. I understand the need for more houses, especially affordable options, however I feel that there must be better options available, including a much smaller development or development of alternative sites which are more suited to providing the infrastructure support any new development requires.	
108	HN1.8 Ash Lane, Hawarden	Object	I am sending this email to object to the proposed development plans for Ash lane/ Park Lane in Mancot. I am very concerned about the loss of green belt land that I, and many others, make extensive use of for dog walks and enjoying the closeness to nature. The proposed access via Ash Lane will add to complex traffic issues around school drop-off and pick-up times in particular. It will lead to a virtual merger of Hawarden and Mancot despite the fact that these are currently two distinct communities, each having their own character and sense of “belonging”. I had never experienced this fantastic village feel until moving into Mancot 2 years ago. This would almost certainly be lost. Access to GPs is already extremely difficult, in fact in several cases I have given up and just wait to see my oncologist or surgeon for advice. This would inevitably deteriorate further with the addition of lots more homes.	Removal of allocation.
112	HN1.8 Ash Lane, Hawarden	Object	Ash Lane, Mancot: ruin the character of the village overdevelopment lack of facilities no bus service aging population increased traffic no vacancies in doctors, dentists, schools flood risk due to surface water run off in heavy rain located on a greenfield site which residents use for recreational purposes reduction in farming land	Removal of allocation.
116	HN1.8 Ash Lane, Hawarden	Object	We wish to object to the proposal HN1.8 for housing development to take place on land adjoining Ash Lane, some of which forms part of the agricultural tenancy of our client (for whom we are instructed to make this objection) he is tenant of St Deiniols Ash Farm. We are instructed to object on the following grounds: 1. the land is good agricultural land and forms an important part of his holding and thus his livelihood. Strategic policy 5.2 states that the council's policies should meet the needs of all the community, but this seems to ignore the farming community. 2. building on this land seems to be in contravention of STR13 as it does not protect an environmental asset i.e. valuable farmland. 3. development of this land is going to affect the landscape character in the area (ENV4) and trees, hedgerows and woodlands (ENV7)	Removal of allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
118	HN1.8 Ash Lane, Hawarden	Object	I wish to formally submit my opposition to Ref HWN 005 (HN1(8) Ash Lane housing development. The reasons for my objection are :- Issue of weight of traffic congestion around the School on Cross Tree Lane and Ash Lane is used as a ratrun. Residents of Mancot and Hawarden have great difficulty accessing doctors and dentists due to a deficiency of such professional at local surgeries. Should hundreds more people live in this area there will be greater waits for appointments.	Removal of allocation.
127	HN1.8 Ash Lane, Hawarden	Object	Should this development be approved it will be in direct contradiction to PPW of not building on greenfield sites. The development will also contravene the National Governments Policy of building on Brownfield sites before Greenfield sites. there are Brownfield sites within Flintshire which are not fully utilised for building, one example if the former site of County Hall Mold. I am concerned that if this development gets approved, properties on Lower Mancot and Pentre will suffer more frequent flooding events. Already in 2019 properties in Pentre were flooded. I have tried to find the report into this on FCC's website but it does not appear to have been completed, against FCC's policy of investigating all such flooding events. Should the development go ahead and a massive swathe of green belt land be concreted over less flood water will be absorbed by the land and will flow down the hillside to properties at the bottom of the village.	Removal of Allocated site at Ash Lane
129	HN1.8 Ash Lane, Hawarden	Object	I would like to object in the strongest words to the building of houses on Ash Lane Mancot for the following reasons: The drains and sewage pipes are already unable to cope with the amount of rain fall. As I live at the bottom of the village, we constantly get water problems. It only takes a reasonable heavy shower for my garden to flood from rain water running down the hill both as surface water and in sewage pipes. Please see attached photos of the far end of my garden. Both doctors and dentists are under great pressure due to the number of patients. To get a doctors appointment, you either have to go and stand outside the surgery at 8 am of a morning or try ringing. Due to the number of calls the doctors receive, when you eventually get through, all appointments for that day are gone and you have to go through that same process the next day. Both primary schools (Hawarden and Sandycroft) are oversubscribed. Where would the children be expected to go to school? Or would the current schools be asked to admit more pupils. Surly this would be detrimental to the learning experience? The roads in Mancot were built over 70 years ago. In some places they are quite narrow. There is a plan in progress to try and alleviate the traffic issues but to add at least another 550 cars (presume two per house) would not help even after the new scheme is installed. There is no public transport apart from three buses per day. This would necessitate the need for the home owner to use cars. Not very green in this day and age.	Removal of allocated site at Ash Lane Mancot
135	HN1.8 Ash Lane, Hawarden	Object	The proposed plan to potentially develop the land between Ash Lane and Gladstone way (which I believe is green belt ?) Is in my opinion a ridiculous one. I agree that with the population rising year on year all of the country require more homes being developed, but why oh why is nothing being done in the local area to sort out the already under pressure infrastructure to the residents who already struggle with many problems in Mancot and the surrounding area. You struggle to get a doctors appointment , traffic is a nightmare all through our village and schools are at bursting point . My main concern amongst plenty of other issues regarding this plan is the school on cross tree lane. The situation there at school drop off and	Removal of allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			collection times is bordering on deadly, we are simply waiting for a serious accident to occur before anything seems to be done about it ! The plan would see another 288 homes built, just roughly I guess at maybe another 350 vehicles trying to route through our village as part of their daily commute etc. We see grid lock on Ash Lane and Cross tree lane daily, I m led to believe a survey on traffic was taken whilst Ash Lane was being resurfaced a few weeks ago, if that's the case what a shambles the council are for letting this happen ? The road was closed for several days so was not open for traffic . Like I say at the start of my email there are plenty of reasons to object to this seemingly ridiculous lpd	
139	HN1.8 Ash Lane, Hawarden	Object	Proposed Development - Ash Lane Hawarden Sir, I write to register my concerns about the likely impact of the proposed development. I live on Gladstone Way, therefore I believe I have valid insight. 1) Traffic Gladstone Way - the density and flow along Gladstone Way at peak times are already intolerable. 2) Local Primary and Secondary Schools are at capacity - local children are being offers places Saltney and Hope as Hawarden schools have zero capacity. 3) GP Services - I suffer from a chronic condition requiring check ups twice yearly yet I simply cannot secure an appointment in any Hawarden Surgery. I pay to see a private GP in Chester. 4) Air quality is concerning as is the environmental impact caused by additional private vehicles and impact on water drainage in an area prone to flooding. Please consider the impact of this application before making a balanced decision. I feel a review of the traffic management plan for lower Hawarden would alleviate many of my concerns. During Airbus shift changes, I queue to get off my drive, this can take 5 mins or more. Ironically, even through I work in motorsport (hence I understand the dangers of speed), I would like to see an enforced 20mph speed limit on lower Gladstone Way, this considered as part of the planning process for the proposed new development.	Removal of allocation.
141	HN1.8 Ash Lane, Hawarden	Object	I hereby object to the proposed development of new homes on multiple fields between Gladstone Way and Ash Lane.	Removal of allocation.
156	HN1.8 Ash Lane, Hawarden	Object	Objection to the development of houses on the allocated site at Ash Lane, Hawarden. The Land is good agricultural land and is being used as such - but my main objection to the development is the additional traffic it will create in the area and the pressure on already overstretched local services.	Removal of allocated site at Ash Lane, Hawarden
158	HN1.8 Ash Lane, Hawarden	Object	Objection to the allocated site at Ash Lane, Hawarden. There is no good reason why this green barrier should be destroyed. this land is prime agricultural land, currently sustaining livestock and crops, in addition is supporting a haven for wildlife with badgers, bats and an abundance of birds. within this designated land there are a number of magnificent trees, the felling of which will be detrimental to the ecology system. Some of these are subject to preservation orders. this must not become another concrete zone robbing yet another tract of land of its natural drainage. Following heavy rainfall this immediate area regularly floods and in turn flows into the adjacent gardens. The whole area is riddled with dis-used mine shafts to the effect the land is sinking, in quite recent times a number of properties have suffered subsidence. A development of this magnitude will involve large increases in traffic. Once properties are	Removal of allocated site at Ash Lane Hawarden

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			occupied, assuming 3 per property, traffic movement could approach an additional 4,000 movements per day. Presently there is no frequent bus service serving Mancot village, nor the area of the proposed site. All of which suggests even more use of personal transport will be essential. There is no infrastructure to accommodate these horrendous traffic volumes the present essential amenities will not cope with this proposed development. Education - there are no facilities, the schools are full and unable to cope with further influx of pupils. Medical (and dental) again, no facilities a situation that is currently desperate with the inability to obtain a doctor's appointment, a visit to hospital emergency results in painful waiting times - 15 hours! Law and order, concerns that there is insufficient Police presence for the whole area of Pentre, Mancot and Hawarden. Provision will be required to maintain adequate cover following development of this magnitude. The protection of this green barrier will serve to prevent coalescence of the Hawarden and Mancot communities, whilst the housing allocation will bring this about.There have been enough of Flitnshire villages becoming towns!	
8	HN1.8 Ash Lane, Hawarden	Object	HN1.8 Ash Lane - not supported Issues that have appear to not have been addressed are: Road network - large development - no consideration given to how a large development will affect road network. Already area in Ash Lane/Cross Tree is busy and a proposal to make this one way around the school would worsen the situation around the area. The Gladstone way up to The highway gets very busy and Gladstone Way towards Queensferry gets very congested. Schooling - Hawarden High is an oversubscribed school. Hawarden Village Church School has limited places. Although provision is made to get developers to pay for extra educational provision, is there the land at either site to build extra facilities without losing the recreational facilities. GP/Health Care - Hawarden Surgery is full. It is extremely hard to get an appointment already. Does the HB have a provision to increase capacity at the Surgery? If there is not a current provision this should be a requirement before the land being approved for housing. Substation - where would this be sited and will this put pressure on the existing network Water - document mentions limited flooding but makes no mention of the reasonably regular water mains leaks along Gladstone Way. This has been going on for a number of years and continues despite the upgrade to the sewage network that occurred a few years ago. A large housing estate would put extra pressure on a system that already is struggling to cope Lower Mancot and Sandycroft experienced flooding last year and the conversion of a large area of Green land to housing will have an impact on the ability for surface water to be absorbed and increases the likelyhood of flooding occurring again. The LDP also states that although the site was proposed last time, it wasn't adopted. The reasons for this aren't explained clearly or addressed within the new LDP as to why the site is now considered suitable as nothing has changed within the site. It also states that the owners of the land are in consultation with developers. Is this the reason why the site is being reconsidered rather than addressing the issues which led to the site being rejected last time	Removal of allocation

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
10	HN1.8 Ash Lane, Hawarden	Object	Despite comments on the proposed Ash Lane development, local provision of existing health and education facilities are already saturated and rapidly declining in availability of access. Local residents already have great difficulty in obtaining GP appointments. Increased traffic on the A550 (Gladstone Way) would increase air pollution in this residential area. The council have already spent money, time and effort reducing air pollution on the nearby roads (Aston Hill) so why now transfer the problem here? Whenever there is a problem on the Aston Hill, which is occurring more and more frequently, Gladstone Way is gridlocked. The new estate would be used as a rat run for those trying to avoid such hold-ups. At the beginning and end of every school day Cross Tree Lane and adjoining roads are practically impassable due to the extremely high volume of parked vehicles. This could cause major problems if emergency vehicles needed access. A detailed plan of how these traffic issues are to be resolved is needed before planning permission is granted. Grave concern also exists regarding the increase in both light and noise pollution which would be generated around this historic and picturesque village. Harm to the Grade 1 listed building St Deiniol's Ash Farm.	A re-evaluation of the extent and proximity of the proposed development.
16	HN1.8 Ash Lane, Hawarden	Object	This objection is made on behalf of my wife and I in the strongest possible terms for the reasons outlined below. Mancot is a village with a diverse demographic, ranging from young children, teenagers, middle aged and pensioners. People who have lived here all their lives, people like my wife and I who moved here more than fifteen years ago in the full acknowledgement that we were going to be part of village life. My wife and I are both from Liverpool, a city where we had grown up but which we no longer wanted to live in for the exact reasons we are objecting to this plan. It is a village. There isn't the infrastructure to cope with additional houses. There has been a recent consultation about the 'Safe Routes to School,' due to perceived risks for schoolchildren attending schools and complaints from residents, myself included, about the existing dangers of increased traffic and speeding motorists in the village. As a result a number of traffic calming measures are being introduced, speed limits, sinusoidal humps etc. It seems incomprehensible to add to that existing problem. Schools – Both primary schools in the area are already over subscribed. Doctors / Dentists– The practices in Hawarden, Saltney and Buckley cannot cope now. You can never get an appointment and waiting times are 6 weeks Environmental impact - through the loss of wildlife havens such as hedgerows, ditches, mature trees would be unacceptable along with removal of further green space when brown belt land exists elsewhere. Vehicles / traffic – A proposed development of 288 houses will inevitably lead to increased pollution at a time when climate change should be the top of everyone's agenda. Most if not every household has a vehicle, often multiple vehicles. Increased fumes, increased traffic on the roads, queuing to exit junctions, queuing for petrol, impact on commuting to and from work due to volume, impact on road surface condition which will ultimately lead to road closures and disruption when remedial work is needed. Environment – Area was flooded this year. Both are in flood risk areas, adverse weather and an inability for the drainage systems and sewers to cope could lead to something similar. In addition, rightly or wrongly there will be increased litter from the increase in residents, bins not being emptied, fewer public services. I regularly have to contact Streetscene due to the state of the roads for litter. Lack of local transport - Arriva Wales removed their service.	The development needs scrapping and alternative sites sought instead which will have less of a detrimental effect on a small village.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
26	HN1.8 Ash Lane, Hawarden	Object	the policy does not consider the wider impact of the proposal relating to item 8 (Ash Lane). the knock on impact of such a sized development would be unmanageable within the local community and result in worse outcomes for the existing community, in particular in the areas of schooling, healthcare, and traffic infrastructure.	a proper consultation with local communities on the real impact of the proposals is needed.
38	HN1.8 Ash Lane, Hawarden	Object	Ash Lane Mancot: The proposal would destroy the aspect of the listed property of Ash Farm on Ash Lane. This house of particular historical and architectural note to see its aspect ruined in such a way would be a high loss to the local community and the county.	Removal of allocation.
50	HN1.8 Ash Lane, Hawarden	Object	Ash Lane enclosed is a map illustrating that there are mines located at the back of the white bear public house. This area of Mancot is well known for mines. There is a tunnel that goes from Daniels Ash Farm in Ash Lane to the Church and the Castle. It is considered that the mines could be unstable.	Removal of allocation.
52	HN1.8 Ash Lane, Hawarden	Object	Ash Lane: Increase Traffic - dangerous congestion along Ash Lane/Cross Tree/Gladstone Road due to the school. Cars parking on the bends cause a blind corner. Insufficient Infrastructure - bus routes reduced, local post office closed, library voluntarily run. However Broughton has all these facilities thus the traffic will increase to access these services. Health - no GP surgery or dentist. Graveyard covers a wise catchment area and this attracts even more traffic both for funeral services and to visit. natural springs in the area.	Removal of allocation.
58	HN1.8 Ash Lane, Hawarden	Object	Inclusion of greenbelt land between Ash Lane and Park Avenue in Hawarden and its allocation for housing development in the Local Development Plan (HWN005) Green Belt Provision and Coalescence of Hawarden and Mancot Settlements Lack of Local Knowledge and Transparency Road Networks and Environmental Impact Magnitude of Development	Removal of allocation.
87	HN1.8 Ash Lane, Hawarden	Object	The proposed housing development between Ash Lane and Park Avenue, Hawarden should not happen due to many reasons. This site is a green belt land separating Hawarden from Mancot. Planning for Wales states green belt should not be built on. There are brown field sites from the UDP that have already been allocated but have not been developed for housing yet. These should be developed before green belt land. If this land is built on, it means a huge settlement would be created including Ewloe, Hawarden, Mancot, Pentre, Sandycroft, Queensferry, Shotton and Connah's Quay. This green belt land should be protected to separate these settlements. Also there are flooding concerns, as the field floods regularly throughout the year, particularly in winter. If this new development goes ahead, it will increase the risk of flooding to the land and houses surrounding these fields, especially those on Park Avenue and Ash Lane. There was a big flood in Pentre earlier this year caused by the current developments in Hawarden and the fact those drainage issues have not been sorted, these floods will only get worse with any further local housing developments. Another concern is the transport and road safety concerns for school children. There is a congestion problem in the roads in and around Hawarden already with recent speed restrictions added due to air quality concerns. The primary school on cross tree lane causes huge traffic problems with already parking on Ash lane for this. This will only get worse with more housing here. The schools are	Removal of allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			oversubscribed, so there are already no local school places. It is also really difficult to get a doctor's appointment and I am still registered in Broughton, as I am still unable to register in Hawarden after moving here 10 years ago. My final concern is that we will also lose the unique Hawarden village identity on top of the environment and safety concerns for my children.	
97	HN1.8 Ash Lane, Hawarden	Object	Mancot: Ash lane 1. I feel it is an erroneous move to lose the divide between Mancot and Hawarden. Hawarden is already merged into Ewloe, as any green space dividing the two has been built upon in the recent past. One sprawling site of Ewloe, Hawarden, Mancot, Sandycroft, Pentre, Queensferry and arguably Shotton and Connahs Quay would be a tragic loss to Welsh Village culture. When cultural changes such as these begin they are irreversible and the effect is deep reaching for this and following generations. 2. Current resources in Hawarden are already extremely strained. I have lived in Hawarden since 2009 and yet have never been able to register with the GP practice here. On the numerous occasions I have asked they have replied that they are full and not taking on new patients. Moreover, dentists are full and people are already having to go further and further out of area to find a practice able to take them on as patients. 3. My children attend the Hawarden schools and I can report from daily experience that Hawarden Village Church School is presently a severely problematic traffic situation at both ends of the school day. In the school Newsletter, parents are commonly told that near misses with children have occurred due to the extreme number of cars essentially gridlocked in a space ill prepared to handle them. The proposed development is barely a kilometre or two away from the very epicentre of this traffic nightmare. It's self-evident that the building of more houses which will result in more traffic, will exacerbate the already intolerable and frankly dangerous situation, thus rendering the development ill advised. 4. Hawarden exists as a historic treasure amidst green space. To lose vast chunks of the land that lends Hawarden its identity, and to build right up to and around historic buildings such as the beautiful old farm on Ash Lane, would be to forever alter this unique village. In so doing myriad culture and sense of what has gone before would be stolen from us, our children and all those who are to come after us. It falls to us to protect the beauty around us.	Removal of allocation.
99	HN1.8 Ash Lane, Hawarden	Object	I would like to object to the proposed plans for the above development please. This is green belt land and should not be built on. As a Mancot resident it is here that will potentially suffer the most from these plans. Also, where are the schools, libraries, services for these additional homes? Our school is already struggling for funds for the existing children.	Removal of allocation.
105	HN1.8 Ash Lane, Hawarden	Object	Ash Lane Mancot: On a personal level , having lived in Hawarden for 23 years, the strain on our primary and High School will be immense. When Redrow built new homes on St David's Park the village was promised a new school which did not materialise. We have Inez Doctors Surgery in the village which is already struggling to arrange appointments for the patients already at the surgery.	Removal of allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
107	HN1.8 Ash Lane, Hawarden	Object	I am writing to object to the proposed inclusion of Little Mancot (HN18) in the LDP update. 1, The proposal is inappropriate as it would result in the loss of important green belt land whereas priority should be given to use of brownfield sites 2, The greenbelt site is crucial in separating the Hawarden and Mancot and its loss would adversely affect the distinction and character of the two communities. 3, The scale of the development envisaged would exacerbate the problems already experienced on cross tree lane eg in regard to congestion and traffic safety in the vicinity of the school 4, Local GP and school services are already struggling with current demand and do not have the capacity to meet the large increase the development would require.	Removal of allocation.
109	HN1.8 Ash Lane, Hawarden	Object	I wish to object to the proposal to build more than 280 houses on land between Park Avenue, Hawarden and Ash Lane, Mancot, as detailed in the Local Development Plan. The magnitude of this development would place excessive demands upon the schools within this area - schools which are currently full. The proposal that children on the new housing development could be transported to other schools by buses/taxis provided by the Local Authority is not acceptable as it would mitigate against being part of the local community. Similar pressures would be placed upon GP and Dental practices within Hawarden. I know that local people regularly struggle to get a Doctors appointment when they need one due to the very high demand that currently exists. This will only become worse when hundreds more people are also trying to get appointments. The infrastructure in Hawarden would not be able to support this level of expansion.	Removal of allocation.
111	HN1.8 Ash Lane, Hawarden	Object	I would like to object to the proposed development in Mancot / Hawarden. There are numerous reasons for this but my main concern is the increase in traffic and access/egress around the village. As I'm sure you are aware the traffic on Gladstone Way, Cross Tree Lane and Ash Lane is heavy and congested at the best of times, and horrendous during school time. To build an extra 288 houses would surely make the situation far, far worse both for motorists and pedestrians alike. When there is congestion on the A494 (which there frequently is) motorists come up Gladstone way trying to avoid delays. However, at the top of Gladstone Way, in Hawarden village traffic comes to a standstill and trails all down Gladstone Way, sometimes as far as the Garden Centre. The extra traffic the new houses would create would be a nightmare!	Removal of allocation.
113	HN1.8 Ash Lane, Hawarden	Object	objection to Mancot: schools are full to capacity doctors are full traffic is already an issue there is land that can be used for development elsewhere where it will not impact on peoples happiness	Removal of Ash Lane allocation.
128	HN1.8 Ash Lane, Hawarden	Object	I believe that, if it is approved, this development will go against Flintshire County Council's policy to not coalesce settlements. If houses are built on this land there will be no distinction between Hawarden and Mancot. At present the two villages are disparate settlements with a narrow lane, only allowing one vehicle access at a time, connecting the two. I have lived in Mancot for 81 years and am worried that the village identity is being whittled away by the Council allowing the amount of house building proposed. Should this	Removal of allocated site at Ash Lane Mancot

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			development be approved it will be in direct contradiction to the Welsh Assembly's directive (Planning Wales) of not building on greenfield sites. The development will also contravene the National Governments policy of building on Brownfield sites before building on Greenfield sites. There are Brownfield sites within Flintshire which are not fully utilised for building, one example is the former site of County Hall in Mold.	
138	HN1.8 Ash Lane, Hawarden	Object	Objection to Ash Lane Mancot: Spoil a village and scenic area The introduction of 300 additional properties will not only remove this feeling of village life that we have invested our money, life and family in but it will ruin the area as a whole. traffic issues - make the roads unsafe again, cause parking issues, and have a very negative impact on the immediate environment. Local services such as doctors, and dentists are already very difficult to register for or even get an appointment, the development of new surgeries and services is, in my opinion not a viable solution to this because this would again lead to increased traffic, increased building on village land and increased impact on the environment. you should not be building on Green belt land. Sandycroft school is one of the top performing primary schools in North Wales if not the whole of Wales, the development will have negative impact on the current school day but the future learning of all children.	Removal of allocation.
137	HN1.8 Ash Lane, Hawarden	Object	I am concerned that as part of its Local Development Plan, Flintshire County Council is considering the possibility of making green belt land between Ash Lane Mancot and Park Avenue Hawarden available for the building of nearly 300 additional houses. 1) The use of green belt land 2) Infrastructure 3) Settlement identity	Removal of allocation.
140	HN1.8 Ash Lane, Hawarden	Object	OBJECTION I strongly object to the above LDP proposal, chiefly for the following reasons... 1. Primary School Places As an employee of Flintshire County Council based at Hawarden Village Church School, I have first-hand knowledge that there would be insufficient school places for such a considerable number of new families potentially moving into the area. 2. Access, Traffic & Pollution The existing road systems and parking facilities could not cope with what's an already highly congested area, especially during school run and commuting hours - imagine 288 more houses; therefore a minimum of 576 more vehicles. Access on to either Ash Lane and Gladstone Way would be highly dangerous. 3. GP Facilities As a local resident, the local GP service at The Stables is currently over-subscribed - even more potential patients would jeopardise further the chance of ever getting an appointment. 4. Environment This is prime GREEN BELT land owned by the Gladstone Estate, fringing a Grade 1 listed farm. Enough said. 5. Mancot or Hawarden? Settlements would lose their boundaries and identities, creating a sprawling town rather than two contrasting villages. Joined up by a blot on the landscape of soulless newbuilds. I suggest alternative BROWN BELT land is sourced for all future housing developments across Flintshire, taking full consideration of infrastructure, environment etc. Please register my objections without further ado. Thank you in advance.	Removal of allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
142	HN1.8 Ash Lane, Hawarden	Object	I'm objecting to the proposed development of the fields between Park Avenue and Mancot. My concerns are the increase in traffic and deterioration in AQ. I walk my children to school HVCS and there is chaos on the roads at school times without the increased population.	Removal of allocation.
153	HN1.8 Ash Lane, Hawarden	Object	HWN005 This green field land is high quality farm land and is used as such currently. The land is category 2/3 (only 3 in places where there is a coal seam running through it). This farm land should not be developed for housing. PPW policy states: The Best and Most Versatile Agricultural Land 54. 3.54 Agricultural land of grades 1, 2 and 3a of the Agricultural Land Classification system (ALC)15 is the best and most versatile, and should be conserved as a finite resource for the future. 55. 3.55 When considering the search sequence and in development plan policies and development management decisions considerable weight should be given to protecting such land from development, because of its special importance. Land in grades 1, 2 and 3a should only be developed if there is an overriding need for the development, and either previously developed land or land in lower agricultural grades is unavailable, or available lower grade land has an environmental value recognised by a landscape, wildlife, historic or archaeological designation which outweighs the agricultural considerations. If land in grades 1, 2 or 3a does need to be developed, and there is a choice between sites of different grades, development should be directed to land of the lowest grade.	Protection of high quality farming land as a finite resource in keeping with the National PPW policy. Removal of allocation at Ash Lane.
162	HN1.8 Ash Lane, Hawarden	Object	Objection to the development of housing on land at Ash Lane, Mancot Merging of Hawarden and Mancot - Mancot has its own unique identity and are not joined on to Hawarden. It has a single track road without a footpath which links them in any way. The National Policy is that Green Belts are not built on, and this is a green belt. Insufficient consideration of alternative sites - There are Brownfield sites available which have not been considered yet, these areas have already had buildings or other development ont hem previously. Developers are attracted to this site as it would be a large development and much more easier and more cost effective to develop that a smaller site but that reason in itself does not form part of Flintshire's own criteria. Access to the Ash Lane site - There would be a significant impact on traffic, plus pollution levels especially around the Hawarden Village school, making it unsafe. Local Knowledge - Attention has not been paid to the significant interest and actual conditions and location, focus has been mainly on database scrutiny i.e. maps and charts rather than on the ground assessments. The process lacks transparency. No considerations have been made for impact on schools, surgeries etc. the roads are already blocked at key times and Ash Lane would not cope with more traffic with the junction at the top of Cross Tree Lane already recognised as a dangerous junction with no school crossing patrol. More cars increase pollution something the Council are already concerned about hence the reduced speed limit on the A494. Earlier developments in the local area have led to flooding therefore developing this land would cause Park Avenue and Mancot further flooding. St Deiniol's Ash Farm - one of the oldest occupied buildings which is Grade 1 listed. this development would build right up to the farm house, therefore it would destroy the character of the farm house. The process itself is flawed because it is not compliant with other national policies i.e. Welsh planning don't build on Green Belt. It is not supported by robust,	Removal of allocated site at Ash Lane Hawarden

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			proportionate and credible evidence. it is not clear and focused, therefore, it is overly burdensome and difficult to access.	
176	HN1.8 Ash Lane, Hawarden	Object	Ash Lane • The land is identified as green belt land. • St Deniols Ash Farm, a 16th century building; is one of the oldest, if not the oldest residential building in locality. • The development would mean the coalescence of 2 neighbouring communities of Hawarden and Mancot. • For many years the areas of Mancot, Pentre and Sandycroft have been exposed to flooding. • The current village infrastructure can not withstand further housing development. • Impact on the local environment, though increase pollution levels.	Removal of allocated site at Ash Lane, Hawarden.
199	HN1.8 Ash Lane, Hawarden	Object	I am writing to object against the Park Avenue/Ash Lane Development. Being a resident I have first hand experience of the problems that already exist and with this development the further problems this will cause. Firstly the flooding issue, my garden floods NOW!!!!!! With further development this will make matters worse, any sort of rain the garden is at least an inch under water. Secondly - Doctors, My family and I are patients at the Stables Medical Centre in Hawarden village and it's near on impossible to get an appointment now and with the possibility of an additional 500 plus patients not including children the chances of getting an appointment are going to be slim to non. This could possible have a knock on effect even more so on the NHS as people will go to A&E instead. Also where are people going to park, as the car park will only accommodate approximately 12 cars. Not only do residents park there but parents that take their children to the schools park there as Tinkersdale car park gets full, Cross Tree and Ash Lane is dangerously over used. (Cars are parked both sides of the road) This is a safety issue as with the volume of cars parked it is dangerous for anyone to cross the road and with the extra amount of vehicles from the development this will make matters a lot worse. Conservation wise - We back on to the fields on Park Avenue and every year we get wildlife coming into our garden, for example Hedgehogs, Frogs, Toads, Newts, Bats and Foxes. And we also know that there are Hares and Badgers in the fields behind which will be wiped out if this is allowed to go ahead. Cemetery - As for the grave yard, What is going to happen in the next 5, 10, 20 years time? It might seem trivial to you but for someone that has lived in Hawarden all their life, I want to be buried in Hawarden. So with this proposed development where is the extra land going to come from when the Cemetery is full. As residents we know that it is nearly full already. Green belt land - I have been on the Planning policy wales, what you are proposing contradicts everything that it states in paragraph 4.8.15 and 4.8.16. There is plenty of Brown belt land available close by for example Manor Lane Hawarden, Drury (Airbus), Etna Mount Buckley or opposite the Farm Shop as there are a lot of fields that aren't being used for anything. There is also the old RAF Sealand site which is going to waste.	Removal of allocated site at Ash Lane, Hawarden.
203	HN1.8 Ash Lane, Hawarden	Object	With reference to proposed development Ash Lane/Park Avenue – Mancot I am writing to strongly oppose the development on the following grounds 1 – Increased flooding - the proposed development area is above the Mancot/Sandycroft/Pentre area which due to current and recent developments are very often flooded. Fields adjacent to the B5129 are more or less permanently under water. Only very recently	Removal of allocated site at Ash Lane, Hawarden.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			(Summer term 2019) Sandycroft Primary school was closed due to being flooded. Building such a large development as this would dramatically increase water run off and therefore flooding to areas below it. 2 – Traffic flow from Ash lane heading towards Hawarden. Cross Tree Lane is currently under investigation to become a one way system due to the current levels of traffic particularly during school hours. I actually live off this road and my daughter attends the local school. The road is extremely dangerous to cross at school time. Also out of school hours the road is particularly dangerous due to the sharp dip and then rise of the road with people speeding along it. If more cars are added to this area – it is an accident waiting to happen. 3 – Congestion in Hawarden Village – currently the village is fairly busy with traffic using the village to travel from the expanded Aerospace factory and Broughton retail park. Flintshire is already investigation air pollution on the A494 surely the air quality around two of the local schools – Hawarden High and Hawarden Village Church school will be affected. 4 – Local Schools are currently full. I recently attended the Open day at Hawarden High School as my daughter is due to move up to high school – to be told by the Head that the school is over-subscribed each year. Where are any new children supposed to go to school - Flintshire have recently closed the next nearest school at John Summers and I am lead to believe shelved the proposed plans for the “super size school” in Saltney. 5 – Local Doctors surgery – the current practice at The Stables on Glynne Way is buckling under the volume of people using this surgery. I challenge any councillor to try and get an appointment here. Unless you are seriously looking to improve the local amenities and local road layout – this development would bring nothing but chaos to an already busy area.	
206	HN1.8 Ash Lane, Hawarden	Object	I would like to object to the proposed building of up to 280 houses between Ash Lane and Park Avenue in Mancot. I have lived in Mancot for the majority of my life and have gradually seen buildings swamping the green fields I once played in as a boy playing in the trees and making swings and be able to catch tadpoles in the stream that ran along it when there were no houses existed on the right and side of Ash Lane from the junction of Sunnyside up to Banks Road sadly development of this land took it away from the future generation. This is a green field site with many hedgerows and trees that border the fields on the proposed site, any destruction of these would have an effect on the wildlife that inhabit this area when in an age of saving bees butterflies and insects is becoming more and more important allowing this development to proceed would be a travesty. Therefore I would like you to recognise my objection to this proposal Traffic issues are increasingly causing major problems throughout the village, the amount of cars that are parked outside both Hawarden and Sandycroft schools is dangerous. In a time where a section of Queensferry bypass has been reduced to 50mph to reduce dangerous emissions around that area, we now see a proposed development for 280 houses within a village how much pollution will those extra cars produce? A typical family own an average of two cars this development would potentially be an increase of 560 cars. This would cause mayhem on the roads of Mancot. There are large swages of land on the old Sealand airfield site and the old Shotton steelworks site that are more suitable to development and give premium access to much larger road systems.	Removal of allocated site at Ash Lane, Hawarden.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
219	HN1.8 Ash Lane, Hawarden	Object	I wish to strongly object to the proposed housing development between Park Avenue, Hawarden and Ash Lane, Mancot. On the following basis: 1. They will be building on green belt land 2. This building plan coupled with the additional housing development (Airfields in Garden City, Deeside) will substantially increase the number of children in the area. There will not be enough place at the local primary and secondary schools. 3. More importantly, is the Health and Safety of the pupils at Hawarden Village Church School and Sandycroft School. One school is at the top of the planned access road to the site and the other school at the bottom	Removal of the Ash Lane allocation.
226	HN1.8 Ash Lane, Hawarden	Object	Site 8 - Ash Lane, Hawarden development. The area is classified as Green Belt land. There is a national government reg. intended to limit the use of green belt land for development which has not been taken into account. There has not been, or any public consultation of, alternative sites for development, including brown field sites and those more suitable with regards to infrastructure. The area is liable to flooding, even in a period of rainfall in June 2019, the area was flooded, schools were closed due to drain surges and flood water and parts of Sandycroft were underwater. There is no rectification principle to relive the risk of flooding or risk assessment as to the additional impact of flooding in the local area given the additional demands on local drainage and surface water removal. Infrastructure: Given the scale, there is no conceivable way local roadways inc. access via Ash Lane are able to manage with the additional vehicle traffic. No traffic survey has been submitted, no impact survey on existing road infrastructure or alternatives to provide relief to the local roadways. Traffic increases are already a problem, from ongoing traffic issues on the A494 leading to a programme of repairs on the bridge crossing, to traffic delays on a constant basis at the Chester junction onto the A494 at Deeside. The number of vehicles in the area is already increasing, a significant increase in these numbers resulting from the proposed development will make this problem worse. The subsequent effect is also on pollution in the local area, something clearly important to Flintshire County Council given the recent speed limits imposed on the A494 cited as “pollution reduction” measures. During busy periods the local roadways are dangerously overcrowded, the proposed development would exacerbate this problem and create a dangerous-to-life situation on the local roads. Local schools are already over-subscribed & limited development opportunities at other schools in the area mean that there is almost nil capacity for additional intake. Helathcare, dentist, clinics are over-capacity, consistently no appointments available and no spaces for additions. There is no possibility for these services to absorb this additional burden. No recognition, provision or mitigation in the proposal.	Remove Development at Ash Lane
248	HN1.8 Ash Lane, Hawarden	Object	Ash Lane Mancot: 1. The site is green belt land and should not be built on re Planning Wales own guidelines 2. We have concerns about the coalescence of Mancot and Hawarden,and planning states settlements should not be joined, this has already happened with Hawarden and Ewloe. 3. We should preserve the historic character of our lovely village of Hawarden not have it gridlocked with yet more traffic. 4. We have great concerns about the access to the site, Cross tree lane with access to the school is	Removal of Ash Lane allocation.

ID	allocated site:	support or object	Summary of representation	Summary of changes being sought/proposed
			already very congested and quite dangerous, with no room to make improvements. Cottage lane is bound to become a cut through and has no pavement, and a bad bend for access to Kennedy Drive. 5.Why have the parcels of land identified under URD not been taken up? Is this because this larger site is more profitable to develop? 6.We think it is time planning officers actually came out to see the site, not look at a map and make decisions. The site is in use by the farmer and sheep and cows are grazing on the land now. Birds and wildlife are nesting in the surrounding hedgerows.	
255	HN1.8 Ash Lane, Hawarden	Object	Mancot Ash Lane: This objection covers the following key objections: ? Coalescence of Hawarden and Mancot ? Insufficient consideration of sites ? Jumping to previous UDP solution ? Magnitude of development ? Lack of local knowledge ? Lack of transparency ? Access to the Ash Lane site ? Air Quality Levels In summary, the we believe that the inclusion of the Ash Lane site within the LDP is fundamentally flawed, is contrary to national and local planning policy and not in the best interest of the local or wider Flintshire community. We request that the council withdraws the site. Should the council decide to endorse the Ash Lane Site's inclusion within the LDP, we believe there are various grounds to challenge this decision in the future.	Removal of allocated site at Ash Lane Mancot.
288	HN1.8 Ash Lane, Hawarden	Object	Existing green barrier between Mancot & Hawarden. There is a distinctive green barrier between the two settlements which the proposed candidate site would destroy. It would appear that the planning department are more focused on maintaining a green barrier between historic Hawarden and the rest of Hawarden, then they are with maintaining a well-established Green Barrier between Hawarden and Mancot. This point was made more unreasonable when one considers: (a) Some propertied on Gladstone Way and Park Avenue are at least as old as some within the Historic Hawarden conversation area. (b) If the development of the site at Ash Lane were to go ahead, this Grade 1 listed building would be significantly encroachment by new development; of this were the case, it would make a mockery of the rationale for maintaining a Green Barrier between Historic Hawarden and it's neighbouring areas. (c) The planning department were keen to draw our attention to a map which allegedly formed a Green Barrier between the two communities; however, the ground level context suggests a different reality, given the Green Barriers are in fact playing fields.	Remove site at Mancot: There is a distinctive green barrier between the two settlements which the proposed candidate site would destroy. It would appear that the planning department are more focused on maintaining a green barrier between historic Hawarden and the rest of Hawarden, then they are with maintaining a well-established Green Barrier between Hawarden and Mancot.
294	HN1.8 Ash Lane, Hawarden	Object	Objection to Ash Lane due to safety caused by increased traffic to area which has already had noted issues both at the top and bottom of Ash Lane. I have attached agile but my biggest issue by far is road safety as it is already perilous day both headteachers are constantly addressing this issue without success thus far.

366	HN1.8 Ash Lane, Hawarden	Object	Objection to allocated sites at Ash Lane Mancot I believe that, if it is approved, this development will go against Flintshire County Council's policy to not coalesce settlements. If houses are built on this land there will be no distinction between Hawarden and Mancot. At present the two villages are disparate settlements with a narrow lane, only allowing one vehicle access at a time, connecting the two. Due to the houses on both sides there is no way to increase the width of this lane. Access to the site is proposed to be from Ash Lane. This road and Cross Tree Lane already cause issues with weight of traffic. There is a school on Cross Tree Lane and parents park on the brow of the hills and force traffic on to the opposite side of the road, on a blind bend. Ash Lane is used as a "rat run" for Airbus, Sandycroft and Broughton retail park workers attempting to avoid congestion on Chester Road East between Queensferry and Airbus. It is believed that the traffic survey was undertaken during the period Ash Lane was closed to through traffic due to Flintshire CC re-surfacing the road. It is my belief that the data collected is categorically incorrect and should not be used in the planning decision. The road from Queensferry to Sandycroft, Chester Road East, is already congested at peak times and busy during the day, to add hundreds more vehicles to an already busy road will cause more and more misery for motorists and residents in the affected areas.	Removal of allocated site at Ash Lane, Mancot
375	HN1.8 Ash Lane, Hawarden	Object	Objection to Ash Lane, Mancot. This will have a profound impact on our village. Firstly being safety for residents, Ash Lane is what it says, a Lane! You are proposing to have the entrance to this new development on Ash Lane. Ash Lane is already dangerous with the amount of traffic coming from the schools, Airbus, Broughton Park. If you did a survey on the lane (NOT when the lane is closed for resurfacing) You would see the impact traffic has on the already busy lane. Put another 1000 plus residents and their cars into the mix and it will be total carnage! Green Barrier - The Council's own policy is to safeguard and protect communities and avoid merging villages with other villages. Yet you choose to merge Mancot and Hawarden. Impact on 16th Century Ash Lane Farm and outbuildings. We cannot afford to lose such an important part of our heritage; the impact of your development will destroy the farm. What will happen to the farm and buildings when you start building up to 280 plus homes? The impact on wildlife in the hedgerows and fields will have a serious impact on the surrounding area, and yet you can't find anywhere else to have your development?	Removal of allocated site at Ash Lane, Mancot
397	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot. There is only one main road linking Hawarden to Pentre. Mancot is a village; we have lanes and footpaths. This road has no pavement in several places, and at each end of this road there is an infant/primary school. There are cars parked on this road at several times during the day, as each age group leaves at different times. Judging by the increased number of children who will be using this road, and the volume of traffic it will entail, pollution caused by increased cars waiting at pick up times will become a matter of health and safety. The proposed land is also green belt and should not be built upon. Are there not sufficient brown field sites available in Flintshire?	Removal of allocation at Ash Lane
403	HN1.8 Ash Lane, Hawarden	Object	Objection to allocation at Ash Lane, Mancot Access to the site is proposed to be from Ash Lane. This road and Cross Tree Lane already cause issues with weight of traffic. There is a school on Cross Tree Lane and parents park on the brow of the hills and force traffic onto the opposite side of the road, on a blind	Removal of allocated site at Ash Lane, Mancot
